Essentially democracies are opposed to war—this despite the fact that, in the vital but confused century during which the idea spread, the most advanced nations have started many wars—even wars of conquest.

As I have said before, wherever in the present European crisis you find a true democrat, you find also a pacifist at bottom, for democracy has the instinct of the mass, which does not need war—as an aristocracy may—to "revivify" it; to make it virile again. They are fighting as well as the best—these democrats of France and England—but always with the main hope that the defeat of German military power may give to their sons and grandsons permanent peace.

Democracy believes, like aristocracy, in a higher struggle. But, with a world full of unnecessary suffering and inequalities, a world of natural forces only half subdued, it believes that the surplus soul force of humanity has a better outlet; that it has something wiser and more lovely to do than mere killing. That theory of a state with a separate soul it will not accept. "The greatest good for the greatest number" is the democratic meaning of the state.

Such are the philosophies, such are the aims, of the opposing forces that have renewed in Europe a battle we thought already won.

Now comes in a new political current which vastly complicates affairs—socialism, using that rather hazy word in its broadest sense. In nineteenth-century Europe, and mostly in Germany, rose a school of political philosophers who hoped to eliminate the inequalities and the unnecessary wastes brought about by competition. The movement, as first conceived, was tremendously democratic; many of its founders were also communists—we are getting well enough educated to know that communism and socialism are different things. They had their eyes first on wiping out inequalities of financial circumstance, and only second on the elimination of waste.

HELENKA

By ARTHUR TRAIN

ILLUSTRATED BY IVAN DE IVANOWSKI

"Ce n'est pas pour rien qu'on connait les Russes"

HELENKA LAVORSKA, holding a fresh copy of Chopin's Chant Polonais in G-Flat in her thinly gloved left hand, came slowly out of the Conservatory of Warsaw and paused at the top of the flight of steps leading down into Sigismund Square. Already it was nearly five o'clock, and the November twilight was waning. Here and there in the Krakowskie Przedmiescie blinked scattered lamps. If she was to reach home before dark she must not delay, for it was a long walk across the Alexandrovsk Bridge to New Praga, the suburb on the other side of the Vistula, in which the Lavorskis lived, and there were many drunken soldiers now in Warsaw. Usually her father, who taught in the conservatory where his daughter was a pupil, saw her safely home, but to-day there was a rehearsal of the orchestra at the Filharmonij, in which he was a second violin. Helenka was used to going about alone, in spite of the fact that wherever she went four men out of five turned and looked after her. She had always gone about alone for the simple reason that there had been no one to go with her.

The sunset gun boomed from the citadel, and the flag on the Radziwill Palace fluttered down. From the neighboring barracks came a faint bugle call, and suddenly the electric lights along the Nowy Swiat broke out all at once. Helenka took a fresh grip on her violin case with her right hand and descended to the street. In one way the fact that it was getting dark was a protection. Not so many men would turn and look at her. She was used to it anyway, for they had always done so, ever since she was a little thing with a big mop of flying yellow hair. She took it for granted that they did so to everybody and thought no more about it. But since August, when war had been declared, the streets had been full of soldiers, many of whom were rough and boisterous.

Helenka's father was a nervous, anæmic man, whose long, cigarette-stained fingers were always—even when he was not playing—moving over an imaginary violin. A dreamer from childhood, he still dreamed of the day when the Filharmonij should give a symphony of his own composition and he should conduct it. In his waking moments he lusted fiercely for a free Poland, for the Lavorskis were descended—a long way, perhaps, but still descended—from the old Polish nobility, and several of them in the past had been deported to Siberia for more or less cogent reasons. Jan Miczieslas Lavorski hated a Russian as he loved his violin. As for Helenka, he hardly was aware of her existence except when occasionally he was moved by her playing. Some day, he thought, she might make a musician. In reality she played far better than did he.

Helenka's mother was a tubercular Lithuanian—a Zamoyenski—given to a voracious reading of romances, woolen shawls, and a conviction amounting almost to a religion that fresh air was the root of all evil. She was a talented pianist; dabbled in poetry; and, like her husband, luxuriated in an emotional patriotism fostered and at times rendered actually dangerous by the activity of the Russian authorities.

Thus the Lavorski apartment on the third floor, in the side street in New Praga, was a happy-go-lucky place, where the irregularity in the meals served to accentuate the slight irritability which so often characterizes a household devoted to high art.

Helenka had inherited her love of music directly from both her parents, and indirectly from a widely heterogeneous southeastern ancestry a passionately idealistic temperament. Like them she dwelt in a world of the imagination, peopled only by great and noble souls who, to an orchestral accompaniment of Beethoven or Tschaikovsky, fought and died for Poland or for romantic love. Love! Helenka was eighteen. Her only idea of love was that of an all-sacrificing, soul-devouring passion that transmuted all it touched into a golden purity and transfigured those who experienced it into perfect beings, incapable of wrongdoing. Some day, she dreamed, the shadow of a young, heroic figure would fall across her path—a brilliant musician, poet or patriot—and from the moment of the first look that passed between them there would be complete understanding—Pelléas and Mélisande, Paolo and Francesca!

Meanwhile there was Ignacio. At times she felt that she almost loved Ignacio, but he was so far removed from her ideal that she had never allowed herself to consider the matter seriously. Ignacio was not a brilliant musician, poet or patriot, yet he was nevertheless something of all these, and had Helenka only known it he was much nearer to the man of her imagination than appearances indicated. He was in fact a promising young member of the Filharmonij, much more likely eventually to lead it than her father; but she was so used to Ignacio that it was hard to get up any excitement about him. He was always ready when wanted. Always hanging about—"on tap," as it were. This fact, at Helenka's period of life, robbed the situation of all romance for her. On the other hand he loved Helenka with a doglike devotion, and his uncle Mertwinski, who was a wealthy grain merchant without children, had signified his intention of leaving him everything. Helenka's father and mother were unqualifiedly in favor of the match. But Ignacio was not her ideal. She was quite sure of it, although she could not explain exactly why when her mother asked her. Certainly he was not the golden prince of her reveries.

At the curb Helenka found herself delayed by the passing of a regiment of the Preobrajensky Guards, a stalwart body of men, swinging by confidently in heavy field equipment, bound for the Mokotowski barracks on their way to the western front. But Helenka hardly noticed them. Warsaw had always been full of soldiers ever since she could remember. It was the headquarters of several army corps, and there were barracks and parade grounds everywhere, in which troops were forever drilling, marching and countermarching. Since August the streets had been crowded with them, and the sound of drums and military bands was incessantly in one's ears. At first, even habituated as she was to the varied uniforms of the Czar's army, she was quite thrilled at the sight of so many strange types of soldiers in so many picturesque costumes. Ignacio had pointed them all out to her—the Siberian Fusiliers, the Cossacks of the Don, the Petrograd Guards—who were passing now—the Lithuanian Legion, the dark Bessarabians in their black lambs-wool caps, the Galicians, the heavily booted Finns, the Podolians, and the wild-looking Turkestan and Kirghiz troops. And all day long the artillery was lumbering through the streets, and wonderfully attired officers, on horseback and in great gray automobiles, dashed up and down the boulevards.

"A Thousand Pardons, Mademoiselle! I'm Afraid My Awkward Chauffeur Has Quite Ruined Your Dress"

The last company, followed by the stretcher bearers, plodded by, the crowd dispersed, and Helenka looked for a good place to cross the street, for the thousands of booted feet had churned everything into a sea of yellow mud. She was about to step off the curb under the light of a friendly lamp when an automobile coughed at her elbow and she shrank back just in time to avoid being run down by a huge military motor, the chauffeur of which was struggling with the brakes. The next instant the machine had skidded, bumped heavily against the curb, and projected a stream of liquid mud over the front of Helenka's dress and the roll of music in her hand. She expected to hear only a torrent of half-subdued abuse from both driver and occupant.

Instead, however, the door of the tonneau was thrown quickly open and a tall young man in officer's cloak and kepi leaped to the sidewalk and saluted her with an expression of rueful solicitude.

"A thousand pardons, *panie* [mademoiselle]!" he exclaimed in Polish. "I'm afraid my awkward chauffeur has quite ruined your dress—and your—music!" he added sympathetically.

There was nothing in his apology at which Helenka could possibly have taken offense, had she wished.

"It is nothing, sir!" she stammered, looking at the ground. "It was not his fault."

"But it was! Or rather mine! I pray your forgiveness, mademoiselle."

He had come quite close, and the first slight look of amusement had disappeared from his face. There was something also in his voice that made Helenka raise her eyes.

"Oh ——" she began and found herself unable to proceed. A wave of joyous trepidation swept suddenly over her, for his expression was so kindly and regretful, and above all he was so handsome.

"The poor music!" he continued, taking it from her resisting hand. "Let me see what it is."

He unrolled it and held it to the uncertain yellow light of the street lamp.

"Ah! The divine Moja Pieczotka of Chopin! I can never forgive myself! And perfectly fresh, too! Come, you must let me buy you another," he pleaded.

"No—no!" she murmured irresolutely.

"But I, too, am a musician. I have often played it on my own violin—G-flat, is it not? You must let a brother fiddler make good the damage. Surely there is a music store near by—in the Ujazdowska perhaps?"

He took her elbow gently.

"It will take but a moment in the machine," he urged.

Already he was wiping off the music with his handkerchief and had relieved her of her violin case. Her heart fluttered uncontrollably. She knew it was quite wrong, and yet—he was the most wonderful person she had ever seen. And it was perfectly true that he had ruined her music. If she did not go with him—just to the music store—she would never lay eyes on him again. She could not let him disappear that way, forever!

Already he was drawing her toward the open door of the motor. And then, before she knew how it had happened, she was inside the car and he was tucking a heavy fur robe trimmed with foxtails all about her. Helenka had never been in an automobile before.

II

AN HOUR later Helenka was safely deposited within two blocks of her mother's apartment in New Praga, a new roll of Chopin's music in her hand and a new song in her heart. She had met her ideal at last and, as she had always foreseen, they had understood each other perfectly from the very first moment. There was only one slight hitch in the romantic program, and that was the fact that, while he was both a poet and a musician, he was not a Polish patriot but a Russian officer—a major of Hussars stationed at the front near Lowicz. So far, of course, their

Digitized by Google

acquaintance had been almost conventionally formal. They had gone directly to the music store and bought the music, and then at his suggestion they had motored down to the Zelazna Brama, or Iron Gate, and had tea, to make amends for his rudeness and to show that there was no hard feeling. Of course she had told him who she was and he had told her his name—Major Zamarkroff—Paul Zamarkroff—and how when he was not with his regiment he lived with his aged parents on a farm not far from Moscow.

At first, because he was Russian, she had been rather afraid to talk freely with him; but he soon put her at her ease by assuring her how deeply he had always pitied Poland, and what a great debt the world of art owed to her unhappy country. Then, before she was quite aware of it, she found herself telling him all about her father and mother and her studies at the conservatory; and how when she was a little girl, in order to deceive the Russian authorities who had forbidden any patriotic Polish instruction, her parents had organized a so-called dancing class, and while the orchestra had played in the hallway the children had been taken into a back room and instructed in the history of their country.

Before tea was over they had told each other all their hopes and ambitions, but nothing important had passed between them except that she had promised to meet him in the Lazienki Gardens on the same day of the next week, when he hoped to motor in again from the firing line. If he could not come he said he would drop her a post-card. So after Major Zamarkroff had given her an ecstatic whirl down the Marzalkowska as far as the Russian barracks, he had conveyed her carefully across the bridge and, having kissed her trembling little hand, had put her down to run along home with her violin. Then, having watched her disappear with a last wave of her hand round the corner, he had had his chauffeur take him to Le Cércle de la Noblesse, the smart club of Warsaw.

Prince Paul Zamarkroff was a young Russian nobleman about thirty years of age, with a doting father and mother who believed that nothing was too good for their son, and allowed him all the money he cared to spend. As might have been expected, after experimenting thoroughly in what life had to offer in the way of enjoyment, he had come to the conclusion that, so far as consistent with preserving his neck, there were only two pastimes worth his trouble—love and war—and that anything was fair in either. He was a reckless sportsman, brave, lavishly generous, cynically good-natured and, like most of his associates, highly superstitious. In his dealings with women he was a past master in gentleness.

Le Cércle de la Noblesse was crowded when he entered it and reeked with cigarette smoke. He had intended only to stop for a moment before returning immediately to Lowicz, for he had gone away without leave and his absence might possibly be noted and commented upon. Ordinarily he would have called for a bowl of caviar and a pint of champagne and, after a cigarette, have left the club; but his meeting with Helenka involved a necessary and hence invariable consequence—namely, a game of cards. He firmly believed that to be lucky at cards was to be unlucky in love. Conversely, therefore, if he could lose enough playing *windt*, he could feel certain that the gods looked favorably upon his new acquaintance with Helenka. What if he lost a thousand rubles or so—his muzhiks would earn enough to pay for it! And he would thereby gain in the affair what he called *la confidence*. Accordingly he strolled to the card room and stood in the doorway until those about one of the tables observed him and invited him to cut in. A rather fat officer, in cavalry uniform, was dealing, wheezing audibly as he dealt.

"One—two—and three—and four," he counted, slapping the cards down on the table heavily with a pudgy thumb. "One—two —— By the way, Zamarkroff, have you heard the news?"

Prince Zamarkroff took a six-inch cigarette from an inlaid case.

"That we shall be in Berlin by the first of May?" he inquired. "I've known that a long, long time. I've selected my lodgings there already—furnished."

"All the same," retorted a wiry little officer of artillery, "it's only three hundred and fifty miles. What is that? Nothing at all—once they break!"

"Oh, tush!" exclaimed the first officer. "I mean real news. Listen! The Grand Duke struck his chief-of-staff in the face yesterday!" The artilleryman whistled.

"Dirty business!" he muttered.

There Was a Thundering in Her Ears—and Footsteps Running—a Figure Loomed Behind

"An old trick of his!" nodded Zamarkroff, lighting his cigarette. "What a bear! His ideas of discipline are simply ridiculous! As if you could treat men like children or muzhiks! And make a man a better officer by punching him in the nose!"

"Quite right," interposed the fourth member of the party—a civilian. "You can't do that, of course. His violence is what puts the old boy in the wrong. But his ideas of discipline, as you call them—of obedience, for example—are perfectly sound in my opinion. I'd shoot any man who deliberately disobeyed orders, and I'd hang any man who stole a ruble!"

"Who would there be left?" asked Zamarkroff innocently. "We four, of course! But the rest of the club would be empty!"

"Sh-h!" warned the cavalry officer. "Don't speak so loud! I know a general who has made two hundred thousand rubles since the war began—just in horseflesh!"

"Where can I meet him?" drawled the artilleryman. "I lose so much at this accursed game, I shall have to do something of the sort myself before long!" He picked up his hand. "One on spades."

"Two on hearts," bid Zamarkroff. It was part of his code inevitably to bid on hearts under these circumstances.

"Pass," said the civilian.

"Pass," echoed the dealer.

"Two on spades!" snapped the artilleryman, thus keeping the trump.

"Three on hearts," retaliated Zamarkroff.

"Devil! Three on spades!"

"Four on hearts."

"I retire!" growled his opponent, and Zamarkroff took his partner's hand and spread it upon the table. It contained eleven hearts! Zamarkroff had been bidding on nothing at all, yet could not fail to take every trick!

As the game proceeded the same sort of thing occurred over and over again. With nothing in his hand—and doubling on nothing—he continued to win everything. In half an hour he had won two thousand rubles! The artilleryman rose disgustedly.

"We might just as well have handed you blank checks at the beginning, Zamarkroff!" he groaned.

But to his surprise—and to that of the others—the prince seemed dejected.

"Colonel," he cried disconsolately, "I would give ten thousand rubles not to have won your money. What can I do with it? Please give it to the Red Cross in my name!" He shoved over the pile of notes. "Waiter, a couple of bottles of champagne!"

III

HELENKA found her mother, her worsted shawl drawn tightly about her shoulders, reading Turgenieff's Clara Militch in front of the fire. It was after six o'clock and the table had not been laid for supper.

"It is fortunate you do not inherit my tendencies," remarked her mother at the sight of Helenka's glowing cheeks and the unwonted brightness in her China-blue eyes. "Your walk did you good. Set the table for four. Ignacio is coming. Do be kind to him! He is simply crazy about you!"

But Helenka needed no instructions to be nice to everybody. The walls of her threadbare life had suddenly fallen down. Through the grimy window of the little dining room, where before she could see only oil tanks, there now stretched away the myriad blazing lights of the boulevards, to Lowicz—to Berlin—she could hear the triumphal blare of the Russian national anthem—to Moscow—to the whole world—to the stars even! And she saw a vision of Paul Zamarkroff in full uniform, covered with decorations for bravery, and herself in a wonderful silk dress, playing a duet together upon their violins, in a big room with a raftered ceiling, while two old people, who were not her father and mother, sat before a huge log fire and gazed lovingly at them. And her cheeks grew pinker and her eyes brighter, until when her father and Ignacio came in at seven o'clock they were startled at the sight of her. She was unusually demonstrative with her father, but when Ignacio tried to kiss her she would not let him, although her heart was full of affection for both of them—for everybody. Neither then nor later did she notice that her lover looked worried and that his eyes followed her about the room apprehensively. But he did not, as was his custom, say anything that evening about his hopes for the future; and when she went to say good night and close the front door after him she found him examining the two copies of the Moja Pieczotka, which, when she came in, she had tossed upon the table in the hall.

"Spoiled your music—got mud all over it!" he said in a strange voice. "Don't let the same thing happen to—your life!" and he went quickly out without looking at her.

Helenka's breath stopped and her cheeks went first pale with apprehension and then scarlet with anger. She stood there trembling, listening to Ignacio's steps upon the stairs as they grew fainter and fainter. What did he mean? How dared he say anything like that? Had he seen anything? Well, what if he had? She had done nothing wrong—nothing whatever—nothing that she was not quite ready to tell her father and mother all about—if necessary. It was probably just a chance remark. Ignacio was a melancholy, depressing sort of person anyway. She hated him. Beside Major Zamarkroff he was a yokel—a clodhopper!

She went back to the sitting room and began to talk and laugh excitedly.

"Really," said her mother after a while, "I don't know what is the matter with you to-night, Helenka! Did Ignacio say anything?"

Digitized by Google

Then Helenka was guilty of her first evasion—the first of many which in swift gradation became misrepresentations, prevarications, falsehoods, lies.

"Yes!" she answered with a shy little blush, letting fall her eyes. "He did!"

"I hope you accepted him at last!" exclaimed her mother.

"I—didn't refuse him!" replied Helenka, still telling the literal truth.

IV

TRUE to form Major Zamarkroff met Helenka in the Lazienki Gardens the following week. At first he had been discouraged by the fact of his winning so much at the card tables the very night that he had met her, but she was so ravishingly pretty and innocently charming when he next saw her—so exceeded his recollection of her in fact—that he cast all prudence—all superstition even—to the winds. And because he said that the fact that he was a Russian ought not to prejudice him in her eyes—or in the sight of her father and mother—he succeeded in making an asset out of a liability, for it enabled him to offer a valid reason why they must for a while at least keep their acquaintance secret.

It was at their third meeting, as they were walking at twilight under the chestnut trees of the Saski Ogrod, that he told Helenka of his undying love. He had thought himself in love, he said, many times before, but never had he felt as he now felt toward her. He thought of her every moment of the day and night. He was sick with love for her. Would she marry him—after the war was over? She, poor child, showing in every glance and movement that she believed him utterly, clung to the arm that he pressed round her in the darkness and murmured—as was proper and maidenly—that she must think it over—it was so unexpected—and—yes, of course, she liked him very much indeed. And so, the next time, bundled in furs beside him as they raced along in his gray car, when he asked her she gave a breathless assent, and he crushed her in his arms until she was frightened. Paul only laughed at her; but after that he used to meet her in the automobile often twice a week; and because sometimes they liked to prolong their walks or rides into the evening, Helenka used to take her things over to her friend Sophie Yaska's at Tiraspol, a near-by suburb, and with her mother's consent spend the night there. She made Sophie her only confidante, and Sophie, who knew vastly more of the world than Helenka, acted as a sort of unseen but highly effective duenna.

At last Major Zamarkroff, becoming a trifle *ennuyé* at these somewhat banal, if thrillingly romantic, meetings, proposed one day to Helenka that some evening the following week he should take her to dine at the Hotel Potocki. The suggestion was a dazzling one, especially as it connoted the fact that Paul no longer felt it necessary for them to conceal their engagement. The next instant, however, Helenka was plunged in despair—she had no clothes which could possibly be worn to so smart a place. But Paul made nothing of this objection. He would send her a dress—as many dresses as she wanted—with shoes and—and stockings to match! He would send them to Sophie's, and he would come there to fetch her the night of the dinner. Delighted, Helenka told Sophie about the plan. But this wiser virgin asked why, if Major Zamarkroff was going to abandon secrecy, he did not first make the acquaintance of Helenka's parents. What difference did it make to him whether he went to visit them the day before or the day after the dinner? The first would be more *de rigueur*.

Helenka apologetically repeated her friend's criticism of their little scheme to her Paul, who accepted it generously. Of course he would go to see Helenka's parents then and there if she wished. It merely occurred to him, however, that they might have some hesitancy about allowing her to accept the dress—as a present from a Russian. They might even violently object to him as a future son-in-law! They would not feel that way, of course, after they had known him a while and adjusted themselves to the situation, but just at first —— So if she cared to go to the Potocki at all, it would perhaps be better to take no chances—and go. He could wait on the Lavorskis the next day.

This reasoning was convincing to Helenka, and sufficiently so to Sophie to lead her to say:

"Well—if you want to go so much!"

"Wouldn't you?" challenged Helenka.

Sophie looked at her friend, who could hardly stand still from excitement.

"I suppose I should!" she conceded.

That settled the matter, and the very next afternoon Helenka and Sophie went with Paul to the smartest dressmaker on the Krakowskie Przedmiescie, and there selected a wonderful model of pink silk trimmed with ermine—such as queens wore, he said—with golden epaulets and golden shoes—real golden shoes to match! He would not tell her what it cost, but she was sure it would take all his pay for months. He laughingly admitted as much to Sophie. Had she known that its price was eight hundred rubles she would not have accepted it. A few trifling alterations were necessary to make it a perfect fit, so reluctantly Helenka consented to leave it for that sole purpose—they guaranteed its delivery in time—taking the golden shoes carefully with her.

V

THE Hotel Potocki is situated upon the Ujazdowska Aleja Avenue not far from the Lazienki Gardens. It is a rococo affair of some pretensions.

Its large restaurant will accommodate several hundred persons, its *cuisine* is excellent, its orchestra superb. Here gathered, before the German occupation, the fashionable society of the gay capital for afternoon tea, for dinner and for dancing; and here during the earlier months of the world war the officers at the Russian front congregated whenever they had a few hours of leisure in which to motor in from the trenches and to enjoy themselves. In fact it soon came to be said that while the headquarters of one army corps were at Cracow, of another at Vilna, of a third at Moscow, the headquarters of the Fifth, Sixth and Fifteenth Corps of the Russian Army were at the Hotel Potocki in Warsaw. But when did a bit of scandal ever trouble the tranquil mind of a member of the Russian general staff? Yet that same saying, springing from laughing lip to laughing lip, had before long leaped across the Vistula and the Dvina, reached the Winter Palace, and penetrated even the hardened hearing of Nicholas himself.

With the Russian Army there also poured into Warsaw an influx of fashionable women, the wives, sweethearts and mistresses of officers, from Petrograd, Moscow, Lemberg and elsewhere, women of the world and of the half-world, who likewise made the Hotel Potocki their headquarters. An era of prosperity set in for the management, the like of which it had never known before. The returns from the café and restaurant quadrupled in amount; the wine receipts increased fifteen times. The *concierge* retired on a competence at the end of three months, and a second orchestra was engaged that there might be no dearth of music. With the big guns booming less than fifty miles away, there had never before been such a demand for cut flowers in Warsaw.

The idea of dining at such a palace as the Potocki, of dining in public among a crowd of smart people, above all of dining with such a marvelous person as Paul, filled Helenka with a delicious terror. Yet, because of the fact that his friends would be there and that it would be a public acknowledgment of his regard for her, the occasion took on almost the significance of a betrothal. Helenka had never been to the Potocki and had never known anyone who had been there. When Paul had taken her to tea it had always been in some out-of-the-way place near the Gostinyi Dvor, or Bazaar. But now he was ready to present her to his friends, and although her continued deception of her father and mother gave her some uneasiness she felt a strange relief from a certain undefined apprehension which at times had haunted her. There was no longer to be anything secretive about their meetings! From now on all was to be aboveboard, and she would next day present him to her father and mother, who, in spite of the fact that he was a Russian, could not but acknowledge his worth of character and fall instant victims, just as she had done, to the distinction of his appearance and the captivating charm of his manner.

How Long She Stood There She Did Not Know—When She Came to Herself the Room Was Empty

So upon the day fixed for the dinner at the Hotel Potocki, Helenka, following what had now become almost a weekly habit, told her mother in the morning that she was going to spend the night with Sophie at Tiraspol. She made a miserable hash of it at the conservatory, and on the stroke of four hastened to her friend's house. The dress had already been delivered! The two girls in a frenzy of excitement tore open the box and undid the filmy wrappings. Had there ever been such a dress! It was like that of the fairy princess in the ballet her father had taken her to see the summer before. But for the first time she fully realized that it hardly reached her shoulders!

Her heart sank at the thought of showing herself in public in such a garment. And even if she dared she had no wrap to wear over it. No, the whole mad, delightful plan would have to be given up. Yearningly she pressed the little weightless thing with its ermine trimming to her breast and tried to force back the tears of disappointment. But at that moment Sophie discovered that under another layer of tissue the box contained a wrap to match the dress—also trimmed with ermine! Helenka no longer had any hesitation about wearing it, but gave herself over to the ministrations of her friend. An hour later she stood before the tall glass in Sophie's bedroom, a glorified, unrecognizable Helenka.

"Oh, you are marvelous!" cried Sophie, kissing her. "No wonder he wants to marry you! You look like a grand lady—fresh from Paris or Petrograd. I wish some rich captain would fall in love with me!"

"Oh, he will—never fear!" laughed Helenka. "When you visit us at Moscow I shall invite all the officers I know—and I shall know hundreds then!"

Helenka's toilet having been completed there was nothing for the girls to do but wait until eight o'clock, for Paul had explained that it would be necessary for him first to go to the hotel to bathe and change after his long motor ride from the front. So they sat on the bed in Sophie's room and discussed every phase of Helenka's probable future career. By seven, however, she was already too impatient for dreaming and they moved into the sitting room and began to look out of the window. But a deathlike silence reigned in Tiraspol, and the yellow street lamp opposite showed no pedestrian during the hour except once when a man in a heavy overcoat, not unlike Ignacio in size and build, passed and, glancing quickly up at the girls' faces in the window, hurried on. At ten minutes to eight Helenka put on the wrap and, going downstairs, stationed herself just inside the door so as to lose no time when Paul should arrive.

That he would arrive she never doubted for an instant. Yet she well knew that there was fighting going on near where his battalion was stationed.

THE ECHO

By WALLACE IRWIN

ILLUSTRATED BY F. R. GRUGER

"Is it Possible You Haven't Heard of Sophie Emmett? Sophie of the Disappearing Husband?"

HARLAN Weymouth reached into the open drawer before him and brought out another white lawn tie. This he drew round his collar as ruefully as though it had been the rope that was to hang him. He glared into the mirror at the worldly face which he wore so modishly in public, and wondered if he were a fickle character. Probably. He would try laying the blame on himself, at any rate.

"No," he repeated during the finishing touches in his evening toilet, "Sophie Emmett hasn't changed a bit. I know a clever woman when I meet one, and a diamond can't turn to a pebble in two months.

"Something's happened to make my eyes dull, that's all. I'll take a drink and face the music."

He stepped to the telephone, called the floor clerk and ordered a dry Martini.

Certainly Sophie was still a pleasure to look upon, he reflected during the wait. And her reputation for wit had passed beyond the circle of women's clubs and into the Sunday papers. Hadn't Mrs. Clemworthy—irrevocable old authority on everything discussible among the sort of club women who believe in Mrs. Clemworthys—repeatedly assured him that Sophie was the cleverest woman in New York? As the editor of the city's most intellectual review Weymouth naturally hated superlatives. Yet he had to confess that he had agreed with Mrs. Clemworthy; agreed with her with an obsessing conviction that had driven more ambitious intellectual movements entirely out of his head and set him to penning delicious little essays founded on the pungency of Sophie Emmett's charming and original philosophy.

A knock at the door called him back to the unpleasant duties of the night. He opened to the boy, who held toward him an amber drink on a silver tray.

"Here goes nothing!" Weymouth uttered to himself the inelegant toast and took his cocktail at a gulp. Their two months were up to-night, and he must decide the matter with Sophie Emmett and take his decision, at the appointed hour, to her husband, the silent, sardonic Elijah.

Sophie Emmett was waiting for him in the foyer at Sherry's. He caught the gleam of her pale-coral evening gown and the flash of her dark eyes from a far corner where she sat. The sight of her, merely an impression from a distance, imparted to him something of that original thrill of anticipation which he had felt in their earlier meetings, sometimes casual or stolen. There was nothing furtive in their trysts now, kept openly in the most public restaurants in New York. Old Emmett had seen to all that. Their appearances together might breed scandal, but it was scandal well stage-managed by Sophie's husband, as though it had been billed in enormous letters "Sophie Emmett and Harlan Weymouth, To-night at Sherry's, under the Direction of Elijah Emmett."

Harlan stepped briskly up to the lady in the coral gown and bowed his most urbane bow.

"Late, Harlan!" she smiled at his approach.

Dashed! He had hoped against hope, during that short tour across the foyer carpet, that the original Sophie, the Sophie of the bland, insinuating wit, would be there to greet him with an epigram. But here sat his beautiful changeling, calm in her decorative dullness.

"I like being waited for," he suggested, desperately casting his bait. "It gives me a feeling of power." It fell dead.

"Oh, does it?" she asked, moving her small mouth helplessly.

They walked in together to take their seats at a table for two by the wall. Weymouth now began to understand why civilized men become wife beaters.

He found a chance to study her a moment as she puzzled over the bill of fare. Undoubtedly she had her good points. The upward sweep of her delicately brushed eyebrows, the slant of her coal-black eyes, the spirited poise of her small head, the defiant tip of her nose gave to her person an elfin charm. She might have carried little, tantalizing wings on the points of her smooth white shoulders. She was, in a word, the lively physical embodiment of the Sophie Emmett Idea; the body and the idea which had turned Harlan Weymouth in an hour from a scoffer to a mangled devotee. What an admirable picture she was of brilliancy and quickness, designed to fascinate and destroy an errant knight who, even as a neophyte, had written on his shield in reddest letters "I Hate Dull Women." And surely nothing trite or threadbare could come from those delicate, upturned lips!

"I'll have oysters," she was saying just then. "They're safe in the R months."

"I don't believe you're even pretty!" snarled Harlan Weymouth to himself.

"Are you tired, my dear?" he asked her somewhat hopefully, after their order was given. That must be it.

"Oh, no," she replied with the same terrible brightness she shed upon the dullness of her words. "I had ever so good a nap this afternoon."

Then her comatose state was deeper than the physical. It was a spiritual deadening. His heart sank.

"Why did you ask?" She eyed him directly.

"You seem to be spreading all over the cosmos, like melted butter. I mean to say, you're distraught. You're not entirely with us. Must I get out a search warrant and look for Sophie?"

"Oh," she pouted. Faint hope revived within him—she often pouted on the verge of her famous utterances, glowing in his memory of the Golden Era, two months past.

"Don't you think good friends—as we are—can enjoy beautiful silences together?" she asked solemnly, mincing her words as he had heard so many members of the Medallion Club do. She gave him an appealing look, just as a child would after delivering a set speech. Then she plaintively asked, "Harlan, what's the matter?"

"You must know, Sophie," he answered shortly.

"I haven't the remotest idea."

"That's it—you haven't the remotest idea. Oh, I'm sorry, Sophie. I didn't mean to be rude. But I can't help thinking you're acting some sort of part."

"I don't understand."

From her expression it was obvious to see that she didn't, yet he went on stubbornly:

"Sophie, you're the cleverest woman in New York. People say so. I say so. Mrs. Clemworthy says it unto the Scribes and Pharisees every Wednesday morning. And I've heard you talk like—like the angel Israfel replying to George Bernard Shaw. You had a slant on life. You were seldom at a loss. I went wild over you, Sophie, because I found you the inspired prophetess of lively thinking. You had a glorious viewpoint on yourself and me and everybody else. I don't like ugly women, as a rule; but if you had been as ugly as Medusa I think I should have packed my grip and followed you to the ends of the world."

She was looking blankly at him, offering not a word in her defense, and Weymouth found his temper rising as he went rapidly on:

"I hate dull women. I've deserted the whole adoring tribe of my female relatives and gone to live in a hotel as a protest against verbal stupidity. I'd rather live alone on a mountain top or in the back of a saloon than to listen to warmed-over cant. And that's why I flew to you, Sophie, and kicked over every convention in the world—made this ridiculous bargain with your husband—in order to listen to you forever. And this is how you've been serving me."

He fell suddenly silent, ashamed of his outburst; for Sophie Emmett's little mouth was trembling childishly.

"You're disappointed in me!" she said quaveringly.

"Oh, please don't cry. I know it's only temporary—everybody has lapses. But it seems so unfortunate. Just in the two months when we were to be together, to get used to each other . . . and it's only an hour before we must go to your husband with some sort of decision ——"

"What do you want me to say?" she demanded, her black eyes taking fire. Hope and love raged suddenly in his breast. He had lashed her with words. She couldn't look like that without saying something out of the ordinary.

"Something besides bromidioms, Sophie, that's what I want you to say." He was out with it now, and the task grew easier. "For the past two weeks, I swear, you've been going on like this—telling me that oysters should be eaten only in the R months; that you like many Germans individually, although you're strongly pro-Ally; that the Republicans might have won if it hadn't been for the Hughes Special —— Have a heart, Sophie! I didn't fall in love with you for the purpose of finding out that the sky is blue when the sun shines or that the Rocky Mountains are grand. My Aunt Cordelia, from whom I am now a refugee, has informed me along that line until I'm entirely fed up on the obvious. What I want is Sophie—and I'd like to know where you've been hiding her. Where is the girl I saw that day, sizzling like a comet into the midst of a foggy ladies' discussion with the remark that a club woman in Bohemia is like a High Church clergyman mounted on a motor cycle?"

"Harlan, you're impossible!" she flashed out suddenly. "I'm ashamed—I'm disappointed in you—oh, how can you!"

"My Name's Emmett—
if You Don't Remember
Me, I'm Sophie's Husband"

She reached for the large silk hand bag which occupied a third chair, and fished out a tiny square of lace. This she applied pathetically to her eyes.

His heart sank to even a lower level. He had expended his ingenuity on empty space. The ideal Sophie, the iridescent Sophie, had evaporated by some black magic and left this dull woman in her stead. He had stung her with sarcasms, she had responded with tears. How he hated a dull woman!

"I'm sorry," he found himself apologizing in leaden tones. "I—I merely thought this was the last chance we should have to discuss the matter candidly. I ——"

An intrusive waiter was serving soup. She sat staring at the swimming okra. Presently her fine eyes lit with a sudden inspiration and she delved again into the silken bag. This time she brought out a small gold box which she opened and began staring into the recess. Instinctively he knew she was looking at her nose in a concealed mirror. At last, when she had quite finished patting away the tear stains under her eyes, he went on desperately:

"Of course, if you wish it, I'm going to ask your husband's consent to our marrying."

"You're going to do no such thing!" she snapped, dropping the little box into the silk bag and drawing the string. The tears had left her dark eyes, which were flashing dangerously. "You've gone far enough—you're horrid—I don't like you a bit and ——"

She arose, picked up her bag, dropped a glove, picked it up, gathered a gold-mesh purse from beside her plate, put it in her bag, picked up another glove and then stood facing him defiantly.

"Where are you going?" was his weak appeal.

"Home," said she. "Back to my husband as fast as I can."

"But we—we're not to see him until nine o'clock. We were to go together. It's now only quarter past ——"

"Don't follow me, please!" He stood there with the silly feeling that all Sherry's was witness to another social comedy. Then he settled weakly into his chair, leaving her to sweep down the aisle toward the door.

It was a matter of minutes before he had summoned the waiter and sheepishly paid his bill. Then he was after her flaming course. But in those minutes she had cloaked herself in a furry garment of peacock blue; and before he could snatch his hat and coat from the man at the door her vivid little figure had locked itself in a taxicab which now honked away toward Fifth Avenue.

Weymouth took the downward steps four at a time. It was foolishly unnecessary that she should be running back home like this at the eleventh hour. There was a lack of teamwork in it that offended his sense of order.

"Taxi!" he shouted savagely and plunged into the first open tonneau.

"Where to, sir?" inquired the broad-faced one on the box.

"Follow that yellow car ahead!" demanded Weymouth breathlessly. The driver threw in the clutch so rudely that the structure trembled in its greasy joints, and the pursuit started with a kangaroo plunge that landed them well toward the corner, round which the yellow car was just disappearing. So closely for a while did the pursuer cling to the pursued that Weymouth, under brilliant street lamps, could distinctly see the back of her proud little head silhouetted in the rear window of the yellow car. It was a garlanded head, well poised on a straight white neck, and there were rhinestones twinkling among the coils of her hair.

What plot had that little head been hatching against him? he asked uneasily. Was it Sophie's fault, or her husband's? Could it be possible that she was just the pathetic little fool she had appeared of late? A curious predicament for any sane man to find himself in—curiouser and curiouser, as Alice had said to a Wonderland acquaintance.

It was now six months since Harlan Weymouth had first found Sophie Emmett. To his memory that initial glimpse was like the first sighting of a meteor in a drizzly sky. In capacity of editor and critic of the Spark, that journal of cleverness which the few admired, he had been persuaded against his better judgment to attend a meeting of the Medallion Club. Mrs. Clemworthy, indefatigable member, had extended the welcome in good faith; but it had been Weymouth's intention to write a satirical essay entitled Dull Gilt, showing how wit, like Midas, can be strangled by too much gold.

So Weymouth had gone to a morning session of the Medallion Club and sat in an ornate roomful of fashionable ladies of the sort who "think they think," according to the Weymouthian code. Poor, patient martyr to investigation, he had sat for a long time and sighed himself into a torpor. The topic of the morning was Does Bohemia Exert a Genuine Influence on Civilization?

He had come there thinking this was going to be funny; but already his thoughts were centered on a graceful means of getting out. His slumbrous eyes had wandered over every detail of the room. Mrs. Douglas Clemworthy, shapeless, sitting upright like some florid piece of upholstery, had occupied a chair next him, as though to shut off his escape. Mrs. Hawtry Blucher, displaying her fashionable figure below a faded, simpering face, had been reading for several minutes in her pallid voice. Weymouth had thought with an inner groan of Mrs. Blucher's industrious social secretary—what she must have endured in *tables d'hôte* in order to gather data for that paper on How Bohemia Eats. Weymouth had all but succumbed to sleep upon this thought; but he had still held a corner of his eye on the door. He had hated dull women from infancy. He yawned behind his program. At that instant a broken, sympathetic sigh had emanated from the lady on his left.

It was then that Weymouth had his first glimpse of Sophie Emmett. She, too, was yawning; and as he caught her eye just the ghost of an understanding spark was telegraphed to him to keep him awake until Mrs. Blucher had brought her hopeless eternity to a period. And it was at that moment that his comet, his lawless, splendid meteor in a Paris gown had flared up for him in all her glory.

"Are there any re——" Mrs. Spratt-Cowle, the chairlady, had been about to say "any remarks," but the small, pantherlike young woman on Weymouth's left had decisively gotten to her feet and requested the floor.

"Madam Chairman," she had prefaced her memorable comment, "I hope you'll pardon my asking something. But isn't a club woman in Bohemia something incongruous—like a Church of England clergyman mounted on a motor cycle?"

The Medallion Club laughed. It was easy to see that the Medallion Club appreciated Sophie Emmett, and Weymouth was grateful.

"Why, Mrs. Emmett, I ——" stammered the large lady on the platform.

"I just wanted to know," went on the pretty little irritant. "I realize that women's clubs, taken altogether, do a great deal of good. But the Medallion Club doesn't—it wouldn't know good when it saw it. It only talks about it, the way Peer Gynt talked about the Bogue—and then went roundabout. Now here we are discussing Bohemia. It might as well be Mars—or better perhaps, because some of us have seen Mars through a telescope. But how many of us have gotten nearer Bohemia than Puccini's opera? You can't see Bohemia, you know, the way you see Chinatown—by paying a dollar a head and being taken round by a man with a megaphone. You've got to live Bohemia, and dance Bohemia, and eat Bohemia. That's probably the hardest of the lot—eating Bohemia. Then, of course, you've got to meet Bohemia in its own jungle—jolly, reckless, rakish young art students; actors temporarily unemployed; free, inspired, dusty poets, and what not. It's the what not that makes Bohemia hardest to bear. Ladies, have we investigated? Have we danced and mingled with their perfectly dreadful wine, women and song? Have we greeted the dawn with a lyric and forgotten to shampoo our heads for generations? I should like to know if Mrs. Hawtry Blucher has done any of these things? And if so, when?"

The tall lady reared her fashionable form, and her pallid face took on a coat of scarlet.

"I sometimes think we members of this exclusive circle," Sophie Emmett had gone on suavely, "have reached a plane of development—like yogis and Grand Lamas—where we know all about everything, without bothering our heads to find out about anything. Facts are dull; feminine intuition is bright. Feminine intuition is magical. It leaps to conclusions and pulls the facts up after it. Or, if there aren't any facts, it sits proudly on top of the conclusions and stays there until someone comes to the rescue with a stepladder. By this method we have gone rapidly through Bohemia this morning. Bohemia is finished. Our next topic will be The Human Soul."

"You are mistaken, I think." Mrs. Spratt-Cowle stepped to the edge of the platform to correct her. "Our next topic will be The Panama Canal: Its Use in Case of War."

"I stand corrected," Sophie had said and sat down.

"Does Mrs. Emmett wish to put her remarks in the form of a motion?" Madam Chairman had asked.

"Not necessarily," had been the smiling reply that had adjourned the meeting. The room had broken up into chattering groups.

"For heaven's sake, who is she?" Weymouth had asked eagerly of Mrs. Clemworthy.

"Is it possible you haven't heard of Sophie Emmett? Sophie with the serpent's tongue? Sophie, the spice of the Medallion Club? Sophie of the disappearing husband? You must come right over and meet the most brilliant woman in New York."

Sophie Emmett had given him an inspiring fifteen minutes of her point of view, of ideas that soared high like a fish hawk and plunged deep and true upon their prey. Weymouth, the fastidious dilettante of women and of minds, absorbed her, spongelike, and went away saturated and happy to put her thoughts on paper, to fill the columns of the Spark with the eternal glory of an idealized Sophie.

He had called, of course, at the big, handsome Emmett home in East Sixty-seventh Street; and almost immediately he had told her that she was his literary breath of life. He had been sure of her pleasure in seeing him, for she had

He Stood There With the Silly Feeling That All Sherry's Was Witness to Another Social Comedy

Digitized by Google

come swiftly across the formal rose-and-white drawing-room, her ivory cheeks flushing happily as she held out her hand. She had expressed the Medallion Club so livingly, he told her; and got the response that she, Sophie Emmett, cared too much for women and their work to see it mocked by that pretentious circle of parlor thinkers.

This private interview had brought them together with tremendous rapidity, and he had found himself naïvely relating scraps of autobiography with a freshman's enthusiasm. The rosy spectacles had straddled his nose; she had appeared to him, from that hour on, as some fascinatingly unique orchid, bewitchingly involved.

"Oh, you wouldn't like my husband," she had assured him on that occasion. "Nobody likes him—besides, he would loathe the sight of you. He would have some sort of theory in his pocket by which to condemn you forever. Elijah, you know, lives in a cave and gnaws theories. He's an anchorite. He crawls into his cell upstairs during daylight hours and prowls by night. In his lighter moments he reads Nietzsche and condemns the human race. Of course he isn't decent to go about in society. The old darling, I love him! We've arranged everything splendidly. On Mondays, Wednesdays and Fridays I lock away the world and play cave woman to his cave man. On Sundays, Tuesdays, Thursdays and Saturdays I belong to the world. Isn't it an excellent plan? Few women can enjoy freedom respectably four days in the week."

"If you told him what a perfect savage you'd found, don't you think he might be favorably impressed?" he laughed.

"Probably not," quoth she. "You know how it is with married couples. When a stranger comes into their midst the chances are about eight to one against everybody liking everybody else. It can be worked out mathematically—but I hate figures, they're so truthful."

"Well, let's say we like each other and let it go at that," he had suggested brashly.

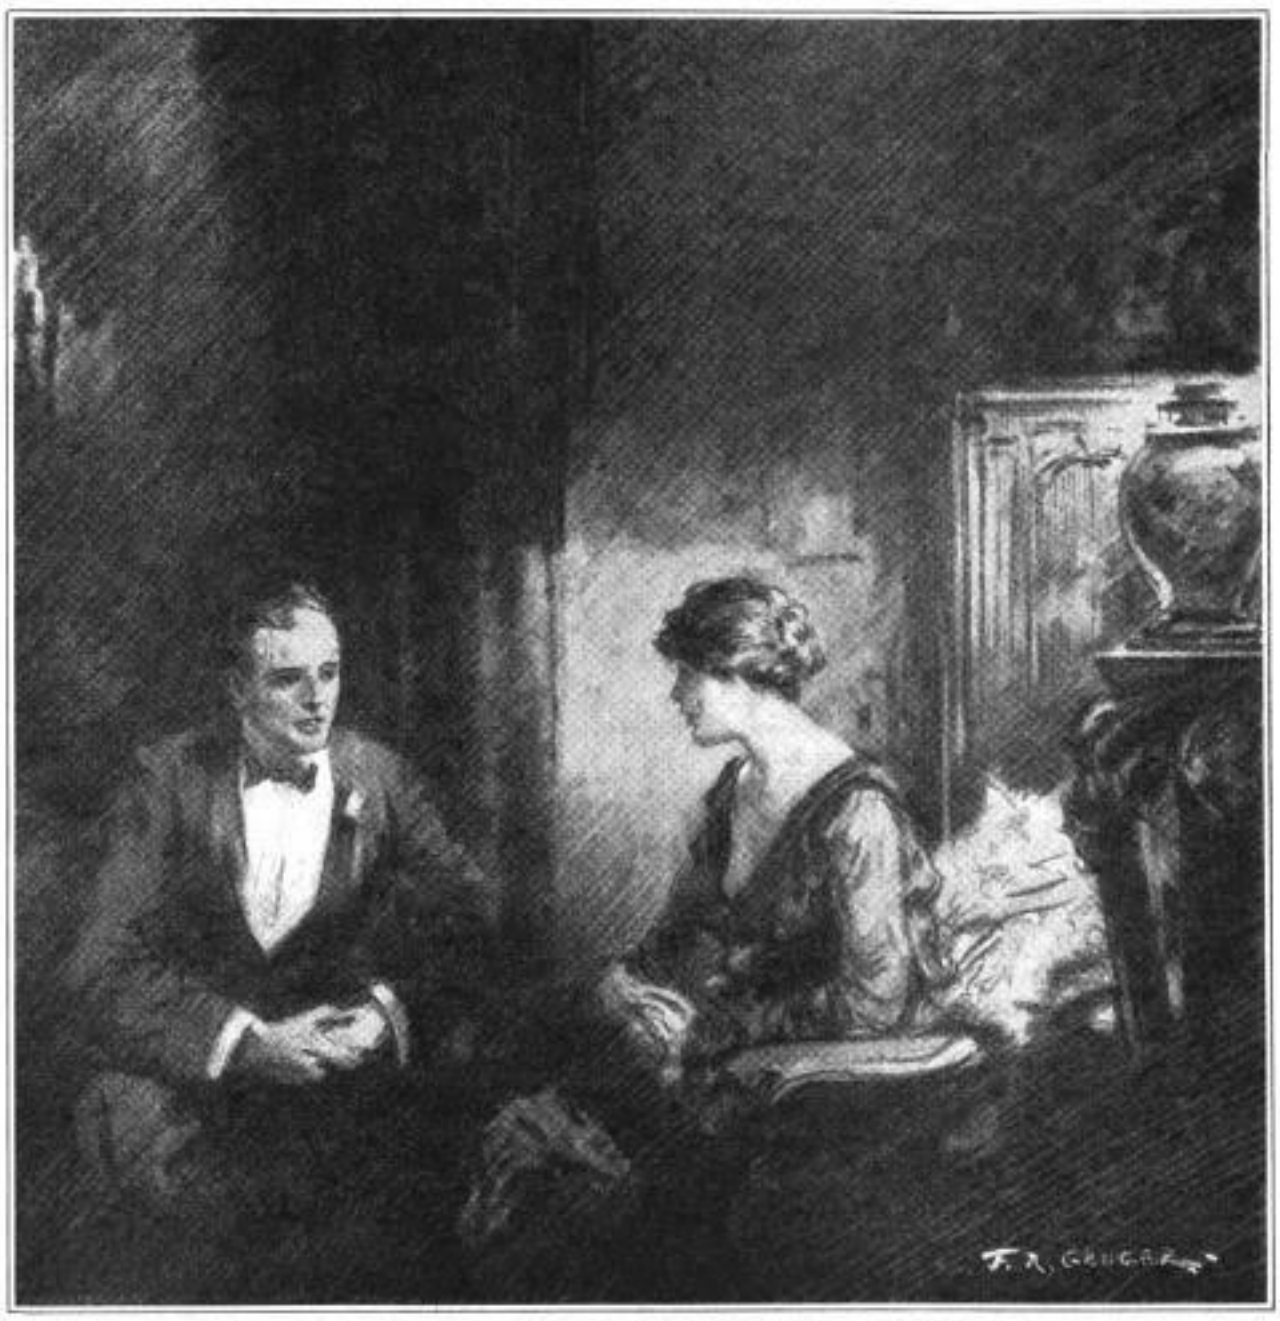
His last request, put with boyish plainness, had grown to be an obvious enough fact. He saw her well and long during the four charmed days in the week. The dour Elijah grumbled somewhere in the background, Weymouth supposed, always grimly obliging to their thickening romance. Weymouth caught Sophie's husband one day when he came for tea. A graying man, fat, uncouth, slightly bald, with sags under his eyes and a mouth that turned down at the corners, he had regarded Weymouth curiously, as a mastiff might sniff at a beetle. Weymouth felt that he had intruded into a family colloquy and reflected, with a novel pang of jealousy, that he had no rights here. Elijah Emmett's replies had been mostly grunts, as he gobbled his tea with scalding haste, spilling a few drops on the waistcoat of his untidy suit.

Somehow that one sight of the mysterious Elijah Emmett had given Weymouth a feeling that his pursuit of Sophie was within the realm of fair game. This thing of joy and fancy chained unhappily to a sullen stone; how could he blame her if she gamboled wildly during her little hours of freedom? And yet Emmett could not be so tyrannous a monster, else he would have forbidden her journeying into the realm of even her discreet adventurings.

"Mondays, Wednesdays and Fridays." She had said it jestingly, but time proved to her adorer that the speech was literally true. Several times he had telephoned on those sacred days, only to be put off with "Oh, I can't. I'm husbanding to-day." Elijah, Weymouth discovered after much painstaking research among club gossips, had gone out into the world almost not at all since their marriage several years ago. He had retired from the stock exchange with a carefully invested fortune, and had given up most of his clubs at the same time. Emmett was a queer fish, they told him—rather clever, but eccentric. What did he do with his time? Oh, he was some sort of fatuous student—scribbled a great deal for his own amusement and collected things—books probably. He made semiannual descents upon his clubs, where he nodded stiltedly at a few graying heads and ate alone behind a newspaper. Emmett had deliberately lost himself in the thickets of New York.

Weymouth's intimacy with Sophie Emmett had progressed with insidious smoothness. Of course they were talked about, because he was a figure of a sort in the world of art, and the fashionable society with which he endured an occasional dinner or opera usually referred to him breathlessly as "a fascinating Bohemian." Sophie, too, had cast aside a troop of gentlemanly flower bearers in order to give free way to his devotions.

Step by step to-night, pursuing her yellow taxicab through the mazes of Manhattan's traffic system, Weymouth could trace the course which had brought them so suddenly into each other's arms.



He had tried his best to keep their intimacy on a Platonic basis. Plato was a poor chaperon, as always. Nimble as they were at thrust and parry, cool as they intended to be in logic and epigram, they could not avoid the keen edge of danger. Weymouth had been the first to feel the wound; and he told her so blunderingly, fully expecting her to laugh him down from her worldly barricade. Instead he was alarmed and a little delighted to find her silent. Obviously Sophie Emmett had no adequate repartee to an emotion to which her quick little nature responded all too well. They were blundering into love.

And on the memorable night, just two months and a day ago, they had gone to the opera together. Of course it was Tristan and Isolde, which no two people who admire the color of one another's eyes should ever see without a padded neutral to sit between them. Love, death and a passionate orchestration, added to the fact that the great vault of the Metropolitan was darkened for the scene, combined to banish scruples as lightly as the swaying of a wand in the hand of an eminent director. Weymouth pressed Sophie's fingers, as naïvely as the art is practiced among callow lovers when the light is low in the moving-picture theaters. She had permitted the caress until the last tragic curtain. And on the way home, after he had taken her in his arms and said several things unworthy of a penetrating thinker—as he deemed himself to be—she had looked up suddenly and declared:

"Harlan, I am going to tell my husband everything."

"Don't do anything crazy, Sophie!" he had pleaded in a panic, for their cab had almost reached the Emmetts' door. "Let me go away for good—I've been insane. I'm sorry."

"No, you're not. And neither am I," she had replied as she had stepped out to run up the white steps of her house. She had given him only the tip of her glove as he unlocked the door for her.

Almost Immediately He Had Told Her That She Was His Literary Breath of Life

Next morning, sleeping late after a surprisingly good night's rest, the telephone beside his bed had disturbed him before nine o'clock, and a sharp New England voice had barked through the receiver:

"Weymouth? Want to see Weymouth!"

"This is he," Weymouth had replied with all the coolness he could command.

"My name's Emmett—if you don't remember me, I'm Sophie's husband." And before Weymouth could formulate a polite syllable the voice at the other end had gone on in harsh, choppy sentences: "Wish you would call on me. To-day—this morning—eleven sharp. Not a quarter past. I'm going out at half past. 'By."

That was all, delivered in the most acutely businesslike tone.

"A new chapter in the code duello," Sophie's lover had reflected, shuffling toward his bath.

He had called promptly at eleven, as Mr. Emmett had so unbendingly suggested. Weymouth found the clumsy, massive, untidy man wiping his eyeglasses behind a fearful chaos of books and papers in a big, bare room full of burdened shelves. The sacks beneath his eyes this morning had suggested the bloodhound. But to his nervous visitor's surprise the bunchy, square face had been twisted to a grin.

"Well, Weymouth," had been his first comment, addressed quite familiarly, as though to a confidential clerk, "so you and Sophie have made up your minds that you're in love with each other."

"Ye-yes. That's about the case." Weymouth had stammered like a schoolboy.

"Humph! She came and told me last night. I wasn't surprised. Thing to be expected." The big man had sat toying with his necktie, an article of antique pattern that he wore askew under his low, unfashionable collar.

"Not surprised a bit. Women have to be suited at any price these days," he went on in his choppy accents. "Suits me all right. Provided, of course, it's genuine. Are you sure about that, Weymouth?"

"Absolutely, as far as I'm concerned," the lover had replied with unnecessary heat.

"Well, Sophie thinks she's just as sure. Said so several times. Now I've made up my mind to take this case in hand. This is my policy: Do nothing to stand in your way. All foolishness to interfere in a genuine love affair. But there's one thing, Weymouth—understand—one thing." He brought a big, stubby finger down on the manuscript before him. "If you're going to marry Sophie and take care of her you've got to be sure first that you'll get

(Continued on Page 57)

Ready! Action! Camera! Go!

Squads of Knights and Soldiers Were Here, There and Everywhere, Scattered Over the Scene as Far as the Eye Could Reach

By ROB WAGNER

HAD I been seeking fame in this tumultuous old world of ours, I should never have given up my job as a leading man; for if there is any public interest in the affairs of the director it has never come to my attention in the slightest degree.

The paints are far more interesting to the world than the painter. When I compare with my present correspondence the letters I used to receive as the ravishing hero of the hair-pants stories, I am forced to believe that romance and notoriety are not for us. It is sad but true that the only photographs of me which are still cherished repose upon the dressers of maiden ladies who have romantic hopes that are eight to ten years overdue. If the press agent sends out a story that a certain film favorite eschews onions, all the fans in the country are worked up over the momentous news; while if it was learned that one of the directors used perfume on his pancakes, nobody would care a bean one way or another.

This does not mean that we are entirely overlooked. The trade papers keep our names quite prominently before the profession, and our mail is mostly from actors—ham and otherwise—who remind us of their amazing qualities, with the hope that we will send for them at once. The love of the human paints for the painter is often very touching.

It is because the general public takes so little interest in our personalities that I have deliberately refrained from obtruding my own importance and have laid more stress upon our failures, successes, obligations and hopes. So it is a sense of proportion rather than innate modesty that makes me stand behind the camera while I take this picture of Movie Land.

Maybe you have heard that movie folk are modest. If so, that information is incorrect; for so well do we think of ourselves that we have reduced our especial worth to an elaborate system of mathematics. One of the sprightliest indoor sports that engages all studios where films are made is to figure the percentage of our relative values to the success of the pictures. Ask a leading man what he thinks of his work and he will reply: "Well, I should say the actor is seventy-five per cent of the picture, the story about fifteen, and the director ten." Some even go so far as to represent the director by a minus sign.

The Female of the Species

THEN up speaks the author: "You fellows make me tired! I'd like to know what you'd do without a good story! The best director in the world can't direct you beautiful dolls to do nothing! My table makes the author sixty per cent, the director thirty, and the actor ten."

At this point we produce our schedule, which makes the director fifty per cent, the story forty-five and the actor five. Then the fireworks!

I'll have to admit that in the last few years my branch of the profession has lost somewhat in importance, for when I first began in the pictures the director was the whole works—he represented probably ninety per cent, the actor ten, and the story nothing. The story is the factor that has gained in importance. It is true a few actors are so enormously popular that they can get by with a poor story and rather indifferent directing.

There is, however, another angle to this fact that seems to me to be pertinent. Often the management will get a spasm of efficiency and employ a star for only a few scenes; then it is up to the director to pad out the story so that by spreading the star very thin he can get the necessary footage. Or, on the other hand, the big boss, having an expensive star on the pay roll, will want him on the screen all the time. So the director has to prune down every other part in order to accomplish this weird result. In either event the story suffers and the director's artistry is woefully handicapped.

I said in my estimate that the actor was only five per cent of the film. Privately I do not really mean this, but my modest figure always gets a wonderful rise out of the actors—and I love to hear them rave. The fact is, a film success depends upon many factors, the failure of any of which can ruin the picture. Given a good story, capable acting, intelligent direction, artistic sets and fine photography, the result will be splendid. But, oh, the temperamental storms that have raged about those percentages!

So far as the director is concerned, there is really no standard by which the excellence of his work can be ascertained, except the result. One obtains success in one way, and another by quite opposite methods. Some directors are excitable, some phlegmatic, some genial. We have one woman director who has arrived famously and has handled some of the greatest stars in filmdom. There may be no sex in brains, but there is in temperament; and there is no doubt that much of her achievement is due to her feminine point of view—especially her uncanny understanding of the male. This woman stoutly maintains that she has a masculine mind; but listen to this story:

Her lead in one picture was a famous foreign star, and, starlike, she thought rather tenderly of one of the men of the cast; but—alas!—he was only second lead.

Now it happened that a very beautiful white costume was made, and the lead and the second both cherished it. Of course the lead had the first call; but what of the foreign lady? She wanted her boy to have it. After a great to-do and much talkly talk it was finally put up to the director. She, femininely wise, walked over, whispered something to the star, and then answered:

"Of course Mr. Blank shall wear the costume—he is the lead and is entitled to the suit if he wishes it."

The star, having been tipped, acquiesced gracefully; but the second lead was very peevish and stood round biting his finger nails and looking quite distraught. When the lead, radiantly triumphant, appeared in his gorgeous white velvet jacket and panties, the director eyed him critically.

"What's the matter, Mrs. S——? Don't you care for it?" asked he.

"Oh, yes," she answered; "but I think it is a little short in the knees, and the coat doesn't fit very well round the neck—it makes you look bottle-shouldered. However, it will do, I guess. Turn round. Well, the truth is, Mr. Blank, it is even a little worse in the back; but I can cut that scene where you have your back to the camera, though it's a good close-up for you. Then, in that other scene, where you sit downstage, I can mask the legs by a table. . . ."

The lead waited for nothing further. He was gone; and in ten minutes he returned with an armful of white clothes, which he tossed to the second lead, who sheepishly went off to his dressing room and put them on. When he returned, the star lady from Russia fairly ate him with her eyes. Though he was exactly the build of his rival, the trousers, curiously enough, were "long enough," and the coat fit "splendidly"! So, at least, the director said. And she insists that she has a masculine mind!

For several years this woman and her husband directed together with great success. To anyone who knows what a personal thing directing is, this feat is a startling accomplishment. The nearest score to their record is that of a man and wife in a Chicago studio who joined forces for just twenty minutes. They say that when he came to at the receiving hospital, and looked up and beheld the nurse, he ducked his head under the bedclothes, as though the poor girl was going to strike him with a skillet.

Art in Handling Crowds

IN HANDLING the fragile temperaments of actors the female is more wonderful than the male; but when it comes to resourcefulness in a situation the male is often remarkable.

We were making some scenes at Redondo one day and were trying to get a little girl to walk disconsolately along the beach—no one noticing her. After working for nearly an hour in an effort to get the people to walk by without stopping or rubbering into the camera, or at the little girl, Ed Donlon, who was directing, called two of the men of the cast together and arranged that they should start a fight about fifty yards up the beach. The pugilists came from opposite directions, met, and began loud vulgar abuse of each other. Needless to say, everybody parading the Boardwalk looked over in the direction of the brawl—and the camera clicked off eighty feet of a disconsolate little girl ignored by everyone walking along the beach.

Street crowds are notoriously difficult to handle. They will never do what you want; and even when you are sneaking them there is always some smart Aleck in the foreground who insists upon looking into the camera and cracking his foolish face.

On one occasion Donlon wished to get a close-up of a crowd looking skyward—it was to be used as a cut-in for an aëroplane story. To hire a lot of extras might have cost a couple of thousand dollars; so he took a chance of getting what he wanted without paying for it. Knowing the psychology of crowds, Donlon took three cameras downtown—where he set one on the sidewalk for the purpose of taking a close-up profile of the crowd he was to assemble; one in a second-story window, shooting straight into the people's faces; and one on top of the building, also shooting down.

When all was ready Donlon stood in the middle of the street, with a megaphone, and began to call directions to one "Ben," who stood on top of the building. The crowd

Digitized by Google

assembled immediately and, seeing the cameras, began, as usual, to rubber right into them. Then Donlon called out:

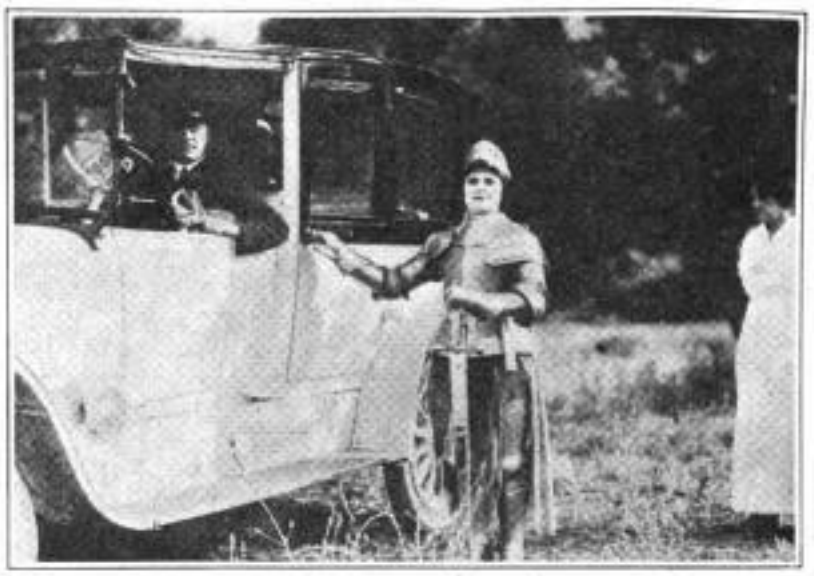
"Is Ben ready to jump?"

And Ben called back: "Just a minute, Ed. I'm a bit nervous. Wait till that yellow car gets by. I think I'll try for the top of that big Pasadena car—it's wider."

Back and forth they called excited warnings and directions, and the crowd was right on tiptoes. They didn't know what was going to happen, but it promised excitement. All this time the camera men clicked that fool crowd into celluloid immortality.

Just at the moment when Ben was going to jump, and the crowd's eyes were riveted on the sky line of the building, a motor sneaked up quietly behind Mr. Ed Donlon and his camera man and they were in and off before the poor sillies could gather their wits together and express their chagrin. Ben and the other camera men made their getaway through the back of the building.

Another responsibility of the director is that for the safety of the actors; for in dangerous situations he assumes supreme command—quite like the captain of a ship. A studio at Long Beach was at work a while ago making some scenes on a point of rocks well out in the ocean and entirely masked from the mainland by a large cliff, though easy of access at low tide.



The picture people had been out there for four hours and had just completed their work when, upon returning round the cliff, they saw that the tide had come in and they were isolated. A wind was coming up and the sea was beginning to run very high. The director knew the rocks would be entirely swept by the waves in another hour; so he ordered the men to take one woman at a time and start for shore. There were forty-two of the latter and only sixteen men; so each man had to make several trips.

Everybody was finally landed safely; but some of the men were all in, the pulmotor being requisitioned for two of them. The director, the last to leave, was so battered on the rocks that he went to the hospital for two weeks.

The Kaleidoscope of Fashion

ON OTHER occasions elaborate precautions are taken, and then, curiously enough, no danger threatens. This same studio wanted to make a picture of two girls being pursued by a mad bull. After arranging for every possible contingency, even to the shooting of the bull, the girls were turned into the field. The bull paid no attention to them. They were then furnished with red parasols; but the bull ate on. Now they were directed to run toward the deadly brute; but the dear old fellow looked up in the friendliest manner and permitted the girls to scratch him between the horns. Finally he ran away where he could be free from annoying humans, and the picture was not secured.

These are a few of the small and immediate problems that fill the life of the director; but we have other and larger questions that constantly keep us bucked up. One is the everchanging taste of the public. A type of picture that is fashionable this season will not be patronized next. So ephemeral is this curious public preference that often it will make most abrupt changes. A few years ago the play most in vogue was that of the dear young girl with the curls who jumped up and down and clapped her hands in sweetest innocence—soft, sugary little plays, in which virtue was stressed with almost gooey intensity. The women especially flocked to these films, and sent notes, flowers and lavender books to the girl who played lead, and finally voted her the greatest favorite of the films.

Geraldine Farrar

Then out of a clear sky came the vampire to spread vice and ruin in her dreadful wake. From the sweet incense of the outdoors we suddenly landed in the heavy, sensuous atmosphere of the vampire trap. These wreckers of homes and ruiners of perfectly good husbands came in droves. They were tiger women, wolf women, tarantulas and other dangerous carnivora. For a year or more these Miss Glums debauched the poor he-men of our fair land with their perfumed intrigues and domestic seditions. But—thank heaven!—this miasmic gloom is on the wane; the vamp made thistles while the sun shone, but her day was short.

We have about decided that it is the women who mold public taste, for they love the unregretted vamps the most. But perhaps the excessive female patronage was due to the fact that men didn't like to go to pictures in which their sex always got the hot end of the poker.

It is not only in female rôles that tastes change. A few years back the Western chap in hair pants was the real thing. I directed no end of those Arizona devils who lassoed express trains to save engineers' daughters. As these fellows did not seem to be rough enough we framed up the lads from Alaska—great cave men who grew their own fur—and they went strong for a few years.

These Northern beautiful brutes always had romantic blots on their escutcheons, usually in the form of some squaw lady whom they had sworn to cherish and obey, but whom they left on the slightest provocation. The provocation's slightness added immensely to the effectiveness of the final dissolve, which showed the two in a snuggly clinch silhouetted against the setting sun on top of the Great Divide.

Just when we were at our wit's end as to how to ring in new changes on the age-old motif of Beauty and the Beast, the public taste changed again. And now it wants the Donald Fairfaxes, who can ride polo ponies, shoot big game, and disport themselves just like real gentlemen in swell clubs and limousines; from the saloon to the salon—all at a day's notice. And we are supposed to keep even with the kaleidoscopic changes of our patrons.

One of the great discoveries of the twentieth century is the recognition of the personality of the child. Tomes have been written about it, the work of mothers and teachers, and other knowing Olympians who thought they knew; but if Madame Montessori wants to be authoritative she will have to direct a child in a moving picture, for only in that way will she ever learn the real truth.

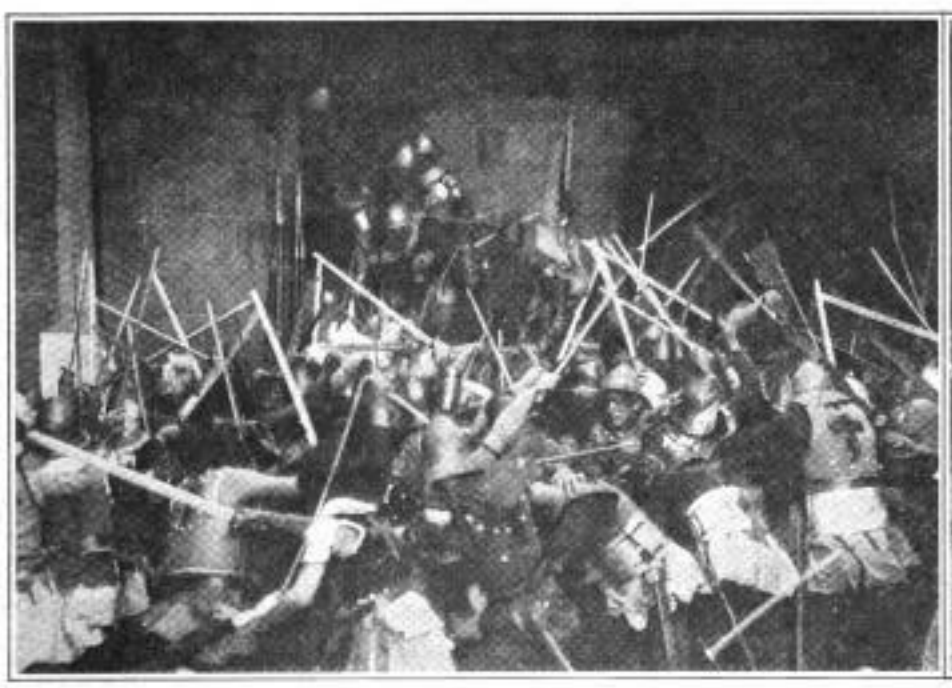
A mere man—one Harry Kay—has had this curious responsibility thrust upon his big, broad back for more than a year now; and what he doesn't know about a child could be printed in bold-faced type on a cigarette paper. Baby Berenice is one of the youngest—just past five—and most accomplished juveniles on the screen to-day, and the villagers who nightly applaud her amazing acting no doubt think she goes about it with the utmost ease and unconcern; but they little know of the extraordinary patience and care that the poor, harassed director went through to get those scenes. True, the child loves to act—what child doesn't?—but she cannot be left to her own devices or we should have a very strange result.

Like all children on the threshold of life, she wants to know. Every scene, no matter how carefully explained in advance, is interrupted by a perfect bombardment of questions. "But, Mithter Kay, why do I have to frown at her? What ith she going to do to me?" Then the whole action must be stopped for ten minutes while the poor soul explains all over again the reason for the frown.

Tact in Handling a Tiny Star

LIKE her older sisters, Miss Berenice at times grows very temperamental; and right out of a clear sky she will announce that she doesn't wish to play any more. These are the times when the director must show his resourcefulness, for her refusal may tie up the whole plant for hours at a time; and, as the overhead charges against a picture may often be as much as a hundred dollars an hour, a delay of any length is a serious concern.

In order to meet these emergencies Kay has resorted to all the old subterfuges and a few new ones. One that sometimes works is to pretend totally to ignore her; and, like some grown-up ladies—and men—she does not like this treatment. Then, simulating great excitement, he calls out: "Now all ready, folks, in your places! Ready! Action! Camera! Go!" Like as not, Miss Berenice is in the foreground, doing her stunt.



If this trick fails Kay pretends to feel all cut up; and, as the child dearly loves him, she will go up and pat him on the back, and tell him she was only fooling and will make the picture after all.

There are times, though, when she goes right up in the air; and then he has to resort to the meanest device in the whole arsenal of male munitions:

"All right, Berenice; I've been thinking that you are not so well suited to the part as Minnie, and I'm going to send for her to take your place."

In a flash Berenice is downstage, as big and indignant as a grown-up leading lady. At that, many scenes have to be made over and over again; and often the story is cut, amplified, rearranged, to fit the whimsical eccentricities of this high-salaried young star.

One of the sweetest things this dear little tot does is to cry in the scene where tears are necessary. One day they

How Any of Them Came Out of That Mess of Jabbing Lances is a Marvel

Real Armor Like This Weighs Two Hundred Pounds to the Man

Digitized by Google

refused to come; so she went and sat in a corner for fully five minutes.

"Mithter Kay," she said wistfully, "I'th been trying to think of something thad; but I can't. If you would thend for Mr. Jackson, and have him come and thpank me, I think I could cry." So much for her sincerity.

In proof that the director is often more important than the actor I want to cite a specific case. A year ago I was handed a very beautiful young thing who had landed in our company through some hook or crook—I suspect it was the latter—and it was up to me to put her over as a lead. Her good looks carried her along pretty well in the small stuff, but when it came to the big scene her lack of training and her ingrowing brains made her hopelessly unequal to the part.

I struggled and labored a whole day and showed her how to act it, down to the last gesture. She failed miserably. Then I called in one of our character leads, a woman of splendid ability, and she took her through the scene time after time. We made twenty-two shots of that one scene, and finally it went off splendidly. The picture was a great success; and as some easy director thought the young lady was a comer he employed her at a fine salary, and went to the bat to make his and her fame and fortune. He made one picture and blew up. The last I heard of the coming star she was working as an extra.

Our profession is full of so many things that I have wandered along, hitting the high spots of interest; but now I must get down to the ground and tell of the crisis, the result of which will determine for many years the place the photo drama will occupy among the fine arts. This crisis we are passing through has been brought about by several factors: Overproduction—one studio alone has more than four hundred thousand feet of film on its shelves; excessive expenditures; the open market at home; and the closing of the European market, due to the war.

A few years ago, when the stupendous profits in motion pictures became known, the financial adventurers, theatrical gamblers and showmen began to jump in; and for the past two or three years the financial side of the industry has occupied the minds of many of the bosses to the exclusion of every other consideration. Companies have been bought and sold like mining stock; mergers and reorganizations have been effected; release companies formed, reformed and dissolved in such kaleidoscopic succession that one scarcely knows from week to week with which company he is working.

This last year the industry has been in such a state of flux that everyone is frightened. Old companies have become suddenly conservative; new companies have splashed in one day and died the next; expenses are being cut and the whole industry reorganized.

The Hated Efficiency Man

A FURIOUS contest rages about the conflicting aims of directors and owners. The latter are bent upon retrenchment, and the former feel that they must go on and on, or die. It is the same old conflict between art and business. In some places art is winning; in others, business; in a few there is evolving a happy marriage.

When men of business began to crowd into the pictures they could not understand the apparent waste and appalling expenditures. Why should pictures that a few years ago cost only ten thousand dollars now cost sixty thousand dollars?

"Why," they said, "do you insist upon paying one thousand dollars a week to an actor who, on the stage, never made more than three hundred dollars? Why do you employ him for fifty-two weeks and have him work only ten or fifteen?"

So they have hired experts—efficiency men—to reorganize the business. These men have now taken hold and their results are interesting, for no doubt they have found fearful waste and leakage; but their remedies are not always happy.

Hurried and harried on every side, the old-time plungers are rebellious and indignant.

"Imagine," said one director to me a short time ago, "trying to get into the spirit of a story with a clear head, and every time you turn round having somebody question your expense or hand you a note saying you are half a day behind your schedule! Or saying that you must turn out so many feet a day! Or asking, 'Why did you employ So-and-So for five dollars when you could have gotten So-and-So for three?' All our studio wants is footage—cheap footage; it doesn't want good stories. And as for art—gad, what's art to them?"

PHOTO. FROM THE BALBOA STUDIO

Like Her Older Sisters This Little Star at Times Grows Very Temperamental

This is given only to show the unhappy spirit of a director when he goes up against the new methods.

The truth is that only tentative estimates can be made of any picture if the director is not to be hamstrung. Many uncertainties enter into the making of the simplest story—the weather, accidents, an unsatisfactory cast, mistakes in scenery, sickness of a lead, unforeseen developments, and many other things beyond the power or clairvoyant vision of any director.

One day, for instance, a director found a beautiful brick wall covered with adobe and surmounted by red tile. As it was romantically old and crumbling, he wanted it for a location in a three-reel story he was directing. After making seven of thirteen scenes he had to return for a week to the studio, as his sets were ready and the stage was needed as soon as he was through shooting. Imagine his chagrin when, on the following Monday, he went out to make the six other scenes at his garden wall and found that the owner had torn it down! After elaborate figuring he decided it would be cheaper to rebuild the wall than to retake the previous scenes at another location.

Even after the most thoughtful preparation a scene may have lost its "punch"—that ever necessary quality. What to do then? Let it go or do it over and have Mr. Efficiency Man call you down? Listen to my indignant friend:

"Now I'll grant that these efficiency fellows have certain qualities; but imagination is not one of them, else they would see that a moving-picture studio cannot be run on the same plan as a canning factory, with so much footage a day, like so much tuna. Unfortunately you cannot can drama when the machinery breaks down or one of the canners gets a pain in the lap; and unfortunately actors and directors have silly stomachs, souls and temperaments, quite unlike canning machines."

This, of course, is the extreme statement of one who is trying to survive business efficiency.

There are other studios, however, with business men in charge who recognize the limitations of efficiency and of the human factor in making a picture. Fortunately I happen to be in one of the latter; and I am very strong for the business policy it manifests, for the reason that its efficiency is expressed in taking burdens—powers, some of the old-time directors call them—from me, which makes my work infinitely less irksome and much more fluent.

In the old days it was my duty to write my own scenario, employ my cast, edit the wardrobe, superintend the building of sets, find my location, and in fact be personally responsible for all the annoying details of a picture, even before I began to direct it. Under the new business management all I do is to direct. In other words, when I enter the studio I do so as an artist who has had all his materials provided for him, his canvas stretched and models properly costumed, so that he may begin to paint immediately.

This new arrangement will perhaps be easier to understand if I show how a great picture is made, from the inception of the idea right through to its final cutting.

One day the scenario department reports that it has received a synopsis for a really remarkable historical drama, submitted by a well-known writer. A consultation between the general manager, managing director and the author is called, and the play discussed. It is decided that Charles Mills, let us say, shall be given the direction of the picture.

Working Out the New Picture

MILLS immediately meets with the author and the play is gone over, from the sets to the psychology of the plot and leading characters. The director differs with the author upon this latter point, and if no agreement is arrived at the general manager settles it. As a rule, in our office, the director is favored, because it is recognized that a successful picture can be made only when the director is in absolute sympathy with his subject and is made wholly responsible for the result.

It is almost impossible for two men to visualize the same pictures from a particular story. The author may have a consciousness of how it would look to him, but he cannot possibly make anyone else see this. If a musician should play a piece called The Babbling Brook, the brooks evolved in the imaginations of the audience would differ with every person. This will perhaps explain the surprise that many scenario writers experience when they go to see a picture they have sold.

When the director is satisfied with his synopsis he turns it over to the continuity department, and after a week or so it turns out a working script. Meantime the director goes about his business, to finish what he has on hand and to dream of his new picture. Of other worries he has few, for a copy of the working script is turned over to the art director and he starts work on sketches for the sets. Another department employs the cast; a prop. plot is made; the costumers, in consultation with the research department, figure their needs; and finally the assistant director arranges the scene plot. When all this is completed the office tentatively figures the cost of production, arranges a time schedule, and the whole organization is set to work.

As time is a vital element in pictures of great cost, it may be necessary to arrange for certain outside locations—easy to make—while the big sets are in process of construction. We do not give the great stage stars yearly contracts and then let them idle away half their time. We employ them for a certain picture at so much a week; and as the salary is very high it is up to us to see the picture through as close to schedule as possible.

At some studios where the old order—or lack of it—still prevails, they have sometimes taken from six to eight months, and even a year, to build a great ten or twelve reel feature picture. With the smooth working of our wonderful

(Concluded on Page 54)

Miss Farrar Lunching With the Director and the Camera Man

BEING NICE TO NELLIE

By George Pattullo

ILLUSTRATED BY CLARENCE F. UNDERWOOD

"WALKIN' out in your stockin' feet right in front of a thousand people!" cried M'sieu Joe Hicks in intense exasperation. "I swan it's the last time you go to a show with me, young woman!"

"Shut up, Joe! You talk awful foolish," retorted madame. "The thousand didn't bother me any.

"They were only roughnecks, anyhow; but, Jane, I ran slap into Mrs. Jimmy Arthurs. I know she'll tell it all over town. And just when I was getting in right too!"

M'sieu Joe took one or two angry strides up and down the room.

"Well, what do you expect? You ain't back in the front row of the chorus now, Patsy; and when you go and ——"

"That'll do!" snapped his wife, and he desisted.

"But what's it all about?" inquired Madame Giraud, laughing. "What's the trouble? You two haven't explained a thing; but you certainly do make this house seem homelike."

"Why, it was like this, Jane: Me and Patsy went to see that new fillum they're all talking about, and we'd no sooner found seats than she took her shoes off."

"My feet were killin' me," madame interposed.

"Well, we watched the picture a while and then Patsy pipes up: 'Joe!' . . . And I says to her: 'What's the matter now?' . . . 'I can't find my shoes,' she says. 'Get down and take a look.' . . . What do you know about that!"

His wife bridled.

"It was no excuse for you acting like you done. Why, Henree, you ought to of seen the way he glared at me; and when he knelt down to hunt under the seats he swore. Yes, you did, Joe Hicks; because I heard you, and a lot of others heard you too. You haven't the slightest regard for decency."

M'sieu Joe waved his arms above his head in maddened resignation.

"All right! All right! Have it your own way, then. I swore. But anyhow, I couldn't find the shoes. They'd slipped off somewheres, or Patsy'd kicked them away while she was watching that woman fall through the glass roof into the soup tureen."

"Yes; but tell them the rest of it. Tell them the rest of it!" insisted madame triumphantly.

"Well, the fact is," continued M'sieu Joe, who could not wholly suppress a grin—"the fact is, Patsy wasn't the only one there who done it. She made me peep along about five rows just as the lights come up, and I'll be dogged, Frenchy, if two women out of every three weren't settin' in their socks. I never *did* see so many queer feet in my whole life!"

"And I had to walk out like I was, Jane. Imagine! But, at that, I don't believe anybody would have noticed if Joe hadn't roared so about it and glared at me every step."

"I suppose," sneered her husband, "that it was my fault."

"Well, you might have told me not to. Or you could have found them if you'd half tried."

"I give up! Sufferin' cats, I give up! Henree," said M'sieu Joe in trembling accents, turning to me, "I ask you, man to man, what do you think of that?"

It is always my ambition, my friend, to pour oil on troubled waters, and here was an opportunity to hand.

"*Eh bien!*" I returned with a smile. "It is indeed your own fault, Joe."

"There now! I told you so!" exclaimed Madame Patsy.

"Because you should have remembered the celebrated maxim of the great Napoleon: 'A man ought never to quarrel with a woman; he should bear her unreason in silence.'"

The effect was all that I could have wished. There was an immediate and prolonged silence. It was broken by my wife.

"Don't pay any attention to him, Patsy," she said apologetically. "He's just trying to be smart. Whenever we get into an argument he springs Napoleon on me."

"I should think you'd get sick of having him flung at you that way every hour of the day," remarked Madame Hicks.

"I do. I never could stand the man, anyway. What was there great about him, I'd like to know? Look at the way he treated Josephine; and she such an angel!"

Josephine? It was now my turn to take a part and set them right on this important point. But before I could get in a word Madame Giraud sat up suddenly in her chair.

I Secured a Table in a Sheltered Corner and We Gave Ourselves Up to the Enjoyment of the Hour

"There! I hear him again. Henree, run up and see what's the matter. One of the twins is crying."

"I heard nothing," I objected.

"What does that prove? Hurry up! I can hear him distinctly, and that's enough. You always try to leave everything to me."

"Har-har!" exploded M'sieu Joe in high glee. "Serves you right, Henree, for going back on me."

How do you account, my friend, for the undeniable fact that mothers are able to hear the wailing of their offspring when not the faintest sound reaches those in close proximity to her? It has often filled me with wonder, likewise furnishing material for most interesting speculations.

I ascended to the bedroom where my noble boys slept in care of a nurse, and found my namesake in the Ethiopian's arms, crying very sleepily. She was crooning to him a lullaby whose absurdity has only to be quoted to be seen:

"Bye-bye, Baby Buntin'; daddy's gone a-huntin'
To ketch a littul rabbit skin to wrap our Baby Buntin' in."

"S-sh!" she warned at sight of me. "Go 'way, or you'll start him off agin."

"What's the matter, Mammy?"

"It's that ol' tooth. You keep off naow, or he never *will* go to sleep."

Was it not prodigious? The ridiculous creature imagined that my sons would not be soothed by my coming! It was characteristic of her. She had a certain deft way with children, it is true, acquired by some fifty years of nursing them; but what is that when weighed against the natural aptitude of a father?

And she was insanely jealous of me. There was no possible doubt of it, m'sieu. She was always fearful lest they display a preference for my companionship, as indeed they would have done had she not taken every precaution to disturb our relations and limit them to the merest fraction of time. In this course, I regret to say, she was abetted by Madame Giraud; but I ascribed the latter's attitude to the blind tenacity with which women will hold together where *bébés* are concerned, regardless of color or differences in station.

"There! He's done gone. Go on, naow!" she whispered hoarsely. "You go downstairs whar you belong befo' he wakes up agin. I'm a-tellin' you. If Miz Giraud ——"

What the woman was about to threaten I do not know, for I retraced my steps. Yes, my friend; rather than spoil the rest of my noble boys by a humiliating wrangle with her, I went back downstairs, where M'sieu Hicks was setting out a card table for dominoes, the only game he could be induced to play, because he always won.

"Here he comes now. Henree, I was just puttin' it up to Jane about you going to the golf tournament with me next week."

"But Henree doesn't play golf."

"Never too late to begin. And he'd have a great time. Besides, he needs a change—and Patsy won't let me go alone."

"I suppose I don't need a change. Oh, not in the least!" said my wife. "Henree could go off for a week and leave me alone with two helpless babies, but—isn't that just like a man, Patsy? They just can't see."

"It's them all over," assented Madame Hicks.

"But listen, girls," my partner persisted: "If Henree comes with me, Patsy can stay here and you two can have a fine gossip together."

"Wait till I'm asked," put in Madame Patsy; and my wife inquired:

"Where is this tournament going to be?"

"Memphis."

Had a reptile appeared in our midst it could hardly have caused greater horror. My wife instantly stiffened, and I knew what was coming. Yes, m'sieu; with lively misgivings I foresaw the avalanche my worthy but bonehead friend had precipitated.

"Memphis, indeed!" she repeated with queenly wrath. "I guess not. I should rather guess not!"

"Why, the town ain't so bad as all that, Jane."

"What it is and what it isn't has nothing to do with it," replied my wife freezingly; and her foot began to tap the floor.

In vain did I signal to M'sieu Hicks for silence. He was insistent.

"Then what's the objection?"

"You know what the objection is as well as I do."

"I do not. Cross my heart I don't! Hope to die if I do."

"That creature!" burst out Madame Giraud.

My partner stared at her a while and then, memory finding the explanation, he burst into peal on peal of laughter. But to me, m'sieu, it was no laughing matter. I knew that the wretched skeleton would again be dragged from its closet and made to gibber. Strong as is my affection for my partner I could cheerfully have throttled him.

And he deliberately incited madame to anger. Yes; he egged her on. Instead of smoothing the impending storm by dropping the topic, as a man of discernment and discretion ought to have done, he gave a demoniacal chuckle and asked:

"You don't mean to say it's on account of Nellie? I thought you'd got over that long ago, Jane."

That is ever his way. The fellow seems to derive a malicious pleasure from stirring up friction between us. Not only my partner, but M'sieu Sam Field is afflicted with this mania. Indeed it appears to be common to many Americans.

En passant, I cannot refrain from deploring the unfortunate habit they have of twisting trifles that were best forgotten into jests. And why, forsooth? Solely to worry and irritate the wives, thereby rendering serious what was in reality a harmless nothing. What a perverted sense of humor it is that seeks to raise a laugh at the expense of domestic tranquillity!

Take the willful fabrications of M'sieu Joe concerning this affair; or those of M'sieu Sam Field. They were identical—equally sinister. The latter has openly asserted that I tickled the beautiful Nellie's toes, and both would have it that my behavior—— But enough, my friend. It is my intention to relate to you every occurrence from the outset in order to forestall the distorted versions that may reach your ears. *J'appelle un chat un chat, et rôlet un fripon.* And when you have heard all I shall leave it to you to say whether Henri Giraud either failed in duty or exceeded the instructions given him.

It all began with the receipt of a letter by my wife. We were seated one morning in the nursery, rubbing the twins with a preparation of camphor, made necessary by the fact that the Ethiopian had thoughtlessly allowed them to crawl on the greensward at the very height of the chigoe season. Their soft pink flesh was dotted with lumps where

Digitized by Google

the savage creatures had burrowed, and my noble boys were moved to frequent displays of annoyance.

Eh bien, we were rubbing them with camphor when the second mail delivery was brought upstairs and madame began to sort it.

"Why, here's one from Nellie Stratton," she announced. "Who is yours from, Henree?"

"Only an advertising circular."

"Let me see," she insisted, and I did so.

One of the forms madame's affection takes is a lively interest in my mail. Now, there are husbands who would churlishly resent this; but look you—I have given it much thought, m'sieu; and my conclusion is that such zealous surveillance is infinitely to be preferred to indifference. Far better an anxious wife than one who does not give a damn what you are up to. Am I right, or am I wrong?

"Who," I ventured, "is Nellie Stratton?"

"A girl I went to school with. She was a Beta and I was a Delta."

"Indeed!"

"Why, she's coming here to visit," she went on excitedly, scanning the pages. "Her aunt lives here, and I never knew it. My, I'll be glad to see her. Dear old Nell! You must be awfully nice to her, Henree. She's a darling! When I was in Memphis three years ago she gave a big dinner dance for me and a luncheon; but I never thought she'd marry Billy Stratton."

"And why not?"

"He was such a stick. I've heard Nell say a dozen times he didn't have enough gumption to swat a fly."

"Is Madame Stratton, then, a bit lively?"

"Gracious, no! Not a bit. You get the most ridiculous notions, Henree. She's as nice as can be. But no girl wants a dead one."

"It is the way of the world," I pointed out. "Have you never observed how men and women invariably marry the ones they start out by disparaging?"

"Huh?" answered my wife, busy reading.

"I merely remarked, my dear, that ——"

"She's coming Friday," she interrupted. "That means we'll have to entertain her. I'll ask her, with Patsy and Minnie and a few others, to lunch; and later we'll give a little dinner—just our friends. That's the very least we can do—isn't it?"

"I suppose so. But when M'sieu Bud Reid was in town and I suggested that we entertain ——"

"There you go again!" she said petulantly. "As if that was the same thing at all! How could we have invited him with the cook we had? Besides, he's a man."

That settled it. I did not argue the point, my friend, but put their socks on Thomas and Henri Giraud and then went for the car. As I assisted the maid in depositing the twins on the seat beside madame, the latter said to me:

"Be sure to get home in time for lunch, Henree. And don't forget that I expect you to be nice to her. She's a darling. I've seen Nell eat a whole plate of fudge and half a watermelon before going to bed, and never even dream!"

"She must, indeed, be an admirable woman!" I exclaimed.

Eh bien, my friend, Madame Stratton arrived to visit her aunt on the designated day, and I caught my first glimpse of her the following afternoon. One glimpse was sufficient to account for my wife's enthusiasm; she was truly a darling, an adorable creature. Hair of glistening silky black; hands and feet like those of a child; and never have I gazed into eyes so limpid and heavily fringed. Of the thousands of eyes that have met mine with a more than passing interest—— But enough. Suffice it to say, m'sieu, they were magnificent.

Her figure was trim and of youthful flexibility; and added to this charm was one more precious still—a fine complexion. It was a sort of mother-of-pearl pink, which deepened to a glorious rose tint on occasion. I noticed it at our introduction. Ah, my friend—— But you would not understand. You Anglo-Saxons are so cold; you lack soul.

"Zowie!" exclaimed M'sieu Hicks, who was present. "She's some home wrecker, Henree! If I was you I'd put hobbles on that boy, Jane. I'm scared to stay round."

"Yes; you're so dangerous," commented his wife.

Meantime Madame Stratton was enchanting everybody with her vivacity and friendliness. My wife fairly beamed upon her. So did M'sieu Field, who had somehow contrived to be there. As though moved by an irresistible impulse, Jane twice seized Madame Stratton in her arms and kissed her on both cheeks.

"I just can't help it," she confessed. "It's so good to see you."

"Just the way I feel about it," spoke up M'sieu Field.

Of the Thousands of Eyes That Have Met Mine With a More Than Passing Interest—— But Enough

I confidently looked to see Madame Stratton crush him; but she dimpled instead.

"Why couldn't you think of that, Henree?" asked my wife reproachfully.

"But never mind, Nell," she continued; "he thinks it, even if he doesn't say it. And he's promised —— I mean you're to treat him just like your own brother while you're here. You mustn't dream of calling him 'Mr. Giraud.' Call him 'Henree.'"

"Henree!" she murmured with an intonation that ravished me, accompanied by a flashing glance from her matchless eyes.

Eh bien, Madame Stratton came to our house for luncheon; and, although I was not present at the meal, because my wife had planned it for ladies only, I nevertheless found occasion to drop in before the guests departed. And I faithfully followed the orders that had been given to me. I was nice to Madame Nellie. I bestowed upon her every attention to which an honor guest is entitled, all with a grace, a finish, that must have surprised and delighted her; for it would be hypocrisy to deny that in the little courtesies which go to sweeten social intercourse I am peculiarly adept. It has always been my aim, m'sieu, to impart to them a subtlety sadly wanting in the manners of my acquaintances; and in this respect I have been eminently successful. What greater compliment, indeed, can a gallant man pay a lovely woman than to make her feel, without embarrassing her, that she is the object of his deepest interest?

So far, all promised well. Madame Giraud smiled gayly on our tête-à-tête, and, when the time came for departure, showed her affection by insisting on escorting the charming Nellie down to the car herself, assigning entertainment of the other guests to me.

My wife was abstracted that night and seemed tired. From time to time I felt her gaze upon me as I read the paper. "I don't know whether to give that dinner for her or not," she said, coming suddenly out of a reverie.

"Oh, we must, my angel."

"How did you know who I meant? And why 'must'?"

"Well," I rejoined, "she is a very amiable woman and she was kind to you when you visited there."

"I don't know as she was so awfully kind—a skimpy little dinner and a luncheon that was deadly. There wasn't a thing to eat that wasn't stone cold."

What was there for me to say? I held my peace, which is ever the wisest course. When I was a bachelor, my friend, I knew women. Yes; there was not a trick or wile of the sex I did not know; not one of their moods I could not instantly fathom. Every bachelor thinks the same. And then I married one. And now—pardon my emotion, m'sieu—now I know that I know nothing.

Next day madame was to do some shopping with her sister, and, rather than eat alone, I planned to meet them downtown at a department-store restaurant.

"We'll be at the fountain at one o'clock," said my wife, following her usual habit of explicit instructions. "But if we're not there by one-fifteen don't wait, because probably something will have detained us."

Promptitude, m'sieu, is one of the habits that marriage has cultivated in me. I was at the fountain a minute before the hour, but they had not yet arrived; so I selected a chair and sat down to wait. A steady stream of ladies passed in and out, and the opportunity to rest amid such surroundings was not wholly unpleasant.

Fifteen minutes slipped by, and still they did not come. I allowed another five for good measure and then rose to depart. As I did so, who should get out of an elevator but the dashing Madame Stratton.

She had on a purple-and-white-striped shantung sport suit, high white shoes whose tops almost reached the knee, and a white hat with purple underbrim. The effect was at once bizarre and captivating.

"This is luck indeed!" I said warmly, hurrying to greet her.

"Oh, oh, oh!" she cooed, wagging a tiny forefinger at me. "What are you doing up here, naughty Mr. Giraud? The men eat on the other side."

"True; but I was to meet Madame Giraud and Minnie. They have not arrived. Perforce I must eat alone."

"And I," she replied, "was to meet Martha here, sharp at twelve-thirty. I wonder where she can be!"

"It is now one-thirty, madame."

She pouted deliciously.

"Is it? I had no idea. Then I suppose I'll have to eat alone too."

"Not necessarily," I hastened to say. "Why should we not join forces and have a cozy little luncheon?"

She considered the proposal gravely.

"You can't have a cozy luncheon here," she pointed out.

"True; but I know a much better place than this."

"I don't doubt it—but is it the sort of place I could go to?"

"Of course, madame. Do you think I would take you anywhere you might regret? No—a thousand times no! We will go to the ladies' room at the club. It will be practically empty at this hour."

"Oh, a few wouldn't hurt," she assured me quickly; and we caught the next elevator down.

Eh bien, I secured a table in a sheltered corner and we gave ourselves up to the enjoyment of the hour. She was an admirable companion, full of wit and sparkling repartee, with never a trace of malice or spite in her glinting shafts, which is a rare and priceless quality in wit, my friend. And the luncheon was perfect. She ate chicken salad; I cite the fact because it proves how innocent she was.

Several other tables were occupied, but I was unable to recognize any of the diners owing to the palms that intervened. Nor indeed, to be frank, did I make any special effort to do so, for Madame Stratton engrossed my attention completely.

It was over all too soon, and the divine Nellie departed in a taxicab for her aunt's house. As for me, I jumped into a prowling jitney and hastened out to the Country Club to receive my first golf lesson.

Wullie Macpheerson, the professional, had just signified its termination when a car drew up under the porte-cochère near which I had been practicing drives, and out stepped Madame Stratton. We recognized each other at the same instant and she waited for me at the door.

"This is luck indeed!" I cried.

"I seem to pursue you, Mr. Giraud."

"If you will keep me posted I will meet you halfway, madame," I said gallantly.

She showed her pearly teeth in a laugh.

"I was just going in for a swim. Do you know whether the water is cold?"

"It is like velvet to-day," I responded. "There are no swimmers in at the present moment, but I talked to several who had been in earlier and they were enthusiastic, madame."

"Isn't there a life guard or somebody round?" she queried. "I hate to go in alone."

"There is no necessity. What an absurd idea! Am I not here? And than Henri Giraud, madame, you will find no more expert swimmer in the club."

"That's the way to talk," she said, dimpling. "I like to see a man who doesn't hate himself."

"I never did," I assured her earnestly.

"That takes a load off my mind. . . . How long will it take you to get ready?"

"My bathing suit is in my locker. I'll be at the diving board in ten minutes."

"Make it twenty," she suggested. "Mine's harder to get on."

Ma foi, m'sieu; I could well believe it when she finally emerged. Not that she wore more suit than I, but she looked for all the world as though she had been poured into it in a molten state, so perfectly did it fit her slim and willowy figure. There are bathing suits and bathing suits, my friend, I assure you. Hers was a revelation; wholly free, moreover, from the taint of suburbanism: A vivid green, and all of a piece, the back so designed as not to interfere with the shoulder muscles. And Madame Stratton had dispensed with stockings.

She came toward me with a timid, bewildering smile and, gazing up into my eyes, asked:

"Well, how do I look?"

"Madame, I beg of you not to ask me. I am the father of a family, and ——"

"Oh, Henree!" she chided. "Do you mind if I call you that? I can't call you Mr. Giraud any more. Besides, Jane told me I wasn't to."

Mention of my wife's name threw a momentary damper on my spirits, but they speedily revived and I proposed that we should go in.

"But I can't swim," she protested. "Let's stay here. You can take a dive and then we'll sit on this board."

No sooner said than done. I walked back about ten yards, and, taking an easy run, described a graceful parabola, cleaving the water with a supple twist in imitation of a porpoise. As I came up for breath far out from shore Madame Stratton clapped her hands joyously.

"Splendid!" she called. "Now come out and amuse me."

Eh bien, I did so with all alacrity, and we sat on the diving board, dabbling our toes in the water, and talked.

Digitized by Google

What we talked about is of no consequence, nor do I remember; but rest assured that any conversation between Henri Giraud and a pretty and sparkling woman could not fail to be entertaining.

Soon, however, I observed that we were not alone. Indeed, a mob appeared to be gathering. The pool is between Number Three and Number Eighteen holes; so that outgoing golfers and those finishing could see us.

The first intimation I had of this was when M'sieu Bill Willis, approaching the home green, glanced our way, wavered in his stance, topped his ball into the lake, and sat down abruptly.

"Hey!" yelled his opponent from the other side. "Take another. That'll make four for you."

"It's your hole," he conceded. "I reckon I'll rest up a while. I'm sort of dizzy."

Next, along came a massive individual from Number Three tee. He was one of a foursome. Having driven off, he was crossing the bridge to play his second, when he espied us on the diving board, and halted. He leaned his arms on the railing, crossed his feet, and just stood there, apparently oblivious to his duty. It was patent that his intention was to remain indefinitely.

"Come on, J. J.! What's the matter? In a trance?" his companions shouted to him.

"I don't want to play any more," he replied; and in proof thereof he presently sauntered down to us and poked amid the grass on the bank with his club.

"Hello, Henree!" he said jovially. "Didn't notice you. Say, did you see a ball come down here?"

"I did not, m'sieu," I answered firmly. "Your ball is well on the other side."

Wholly unabashed by this reception, M'sieu J. J. Taylor eased himself down on the far end of the board and proceeded to join cheerily in the conversation.

"How's the water to-day? I was thinking of going in."

There was nothing to do but introduce him, which I did with a very bad grace. And in another minute here came M'sieu Willis; then another, and another.

"Hello, Giraud!"

"Hello, Henree!"

"Well, well, if there isn't Frenchy! How goes it, old top? I haven't seen you in a coon's age."

Never had I been so popular. They flocked round me. It would appear that each one was anxious for a plunge, and the afternoon was too sultry for golf, anyway.

To Madame Stratton I presented them as they arrived and it was not long before the bank was uncomfortably crowded.

"I'm going to put on my bathing suit," announced M'sieu Taylor.

"Me too!"

"Let's all go in."

I did not view the suggestion with favor, but Madame Stratton hailed it with such enthusiasm that it would have been ogreish to object. Besides, the pool was built for use of the members and was free to any who might care to swim.

Eh bien, they came swarming down to the water, laughing, shoving, running foot races. Never had there been such splashing and horseplay out there. And there sat the charming Nellie on the board, the center of all the hilarity, but as dry as a bone.

"Come on in! The water's fine!" cried M'sieu Taylor with odious joviality.

"I'm afraid!"

"Shucks! I'll take care of you. It isn't up to your neck on this side."

His intent was all too plain. Such treachery was not to be borne. I waded close to him. "Pardon me, m'sieu," I said icily; "but madame is with me."

"Oh, well, if you saw her first," he answered, and swam away; but I could hear him relating the incident, with grotesque embellishments, to the others.

Meantime I had approached Madame Stratton, extending my hand.

"All right! I'll trust myself to you; but I wouldn't to anyone else," she said, so that all might hear.

I was entranced. Why conceal it? A delightful woman had singled me out for special honor; small wonder that I held myself proudly as we stepped cautiously into deeper water.

"Maybe, if you put your hands on my shoulders ——" began M'sieu Taylor.

"Not at all," I cut in. "I will teach madame."

Accordingly I proceeded to show her the rudiments of the art, while the others paddled about, or stood and watched, offering advice whenever the smallest loophole offered. Madame was not a very apt pupil. She was fearful, for one thing, and extremely anxious not to wet her hair. Also, she would suddenly abandon an attempt at mastering a stroke to cling to me. I could not object to this; but I am free to admit that it seriously hampered progress.

It Would Appear That Each One Was Anxious for a Plunge, and the Afternoon Was Too Sultry for Golf, Anyway

"Take it easy," I advised as she threshed about. "Take your time. I've got you."

"But you're tickling me," she said with a sputtering giggle. "Don't hold me so tight." There was a roar of laughter from the barbarians.

Eh bien, the sun sank in the heavens and we all came out.

"It was delightful!" exclaimed Madame Stratton.

"The end of a perfect day," I said; and she flushed.

It was late when I arrived home, and my wife was waiting dinner for me.

"Well, what is it this time?"

"I was taking a golf lesson and we got a puncture on the way back."

"It was a blow-out last time," she rejoined.

This was a matter I did not care to argue.

"Where were you at noon?"

"I was at the fountain, my dear; but you did not turn up, so I left."

"We got there on the stroke of two. Ask Minnie."

"The hour fixed was one o'clock."

"You might have waited a little while, I think! Where did you eat, then?"

"At the club."

"Well, what do you know? Hear anything new? Or did anything special happen?" inquired madame.

Now it would have been easy then to have replied in the affirmative and told her all. Perhaps I ought to have done so; but a premonition made me hesitate. My wife was tired from a grueling day in the shops and I wished to spare her any unpleasantness; for it suddenly came over me that she might not take kindly to the events of the day. The thought had not occurred to me until that moment—upon my honor, m'sieu. Moreover, we were engaged for dancing class that night; and why start a misunderstanding that would mar the evening's enjoyment? No, I would postpone telling her until our return.

"Well? Why don't you answer? Anything happen to-day?"

"Nothing much. Just the usual things. What did you do?"

And then my devoted wife launched out into an exhaustive account of her difficulties in securing draperies and a rug for the dining room, which we had recently done over. She was still at it when we sat down to table and had not finished when the car stopped at the hall where the class met.

The first person to greet her as we entered the lobby was Madame Jimmy Arthurs. She came rushing from the opposite side and kissed my wife with an effusion that startled us both, to say the least, for ordinarily they are not what you could call intimate, m'sieu. To me she gave only a curt nod—rudely, like that. Her conduct was sufficiently puzzling, but I was too tired by the afternoon's exertions to concern myself about it. And Madame Arthurs accompanied my wife into the dressing room.

The moment I glimpsed her face when they came out, I guessed something had happened. But it was not the place to betray apprehension, and accordingly I approached with my customary aplomb to ask for the first dance.

"Did you take Nell Stratton to lunch to-day?" she demanded, ignoring my request.

"Yes, my angel."

"Don't you 'angel' me! How did it happen and why didn't you tell me?"

"I was going to when we got home. Of course, my dear, I did not plan to keep it from you, insignificant though it was. Moreover, that would be impossible."

"Insignificant!" she repeated in a rising voice. "Do you call it insignificant when I have to hear from the lips of another woman that my husband—*my* husband—has been lunching with a creature all alone?"

"Jane, they will hear you!" The reminder served to restrain her for the nonce. "It was perfectly harmless," I urged. "We happened to meet in the restaurant, and each was alone. What more natural?"

"Don't speak to me!" she said between her teeth. "Let's dance."

We did so, m'sieu; but I assure you that my zest for it had fled. For the matter of that, we do not get along in the new dances, anyway. I can dance with anybody but my wife. Do not misunderstand me; Madame Giraud is lightness and grace itself, and she can do them charmingly with any other man. As for me, I have the reputation of being a daring performer, and, given a youthful partner, defy anybody to excel me in the Hungarian Goulash; yet somehow madame and I cannot get along together at all. She asserts that I trample on her instep.

That night was no exception. We floundered about, now halting to start anew, now colliding with couples whom we ought easily to have avoided.

"We never seem to get on together," declared Jane, gulping. "I expect it was never intended that we should. You don't seem to want to try with me. Let's go home."

"I was doing my best," I said with some heat. "Just because I inadvertently touched your toe —— I have seen M'sieu Field walk all over your feet, and all you did was to smile at him and say: 'Nonsense! It didn't hurt a bit.'"

Jane made no reply, but went for her cloak. When we issued on the sidewalk M'sieu Taylor was just alighting from his car.

Digitized by Google

"So here we are again!" he cried. "Where's your little friend to-night, Henree? I dropped round in the hope of seeing her. I swear you're the stingiest person I ever did meet! We practically had to choke him into introducing us, Mrs. Giraud; and then he herded her from the gang all afternoon."

The dolt! The driveling idiot! My wife began to breathe hard through her nose.

"Introduce whom?" she queried sweetly. "Where did all this happen?"

"What! You didn't know? Say, maybe I'm in bad here." He laughed foolishly. "Don't mind what I said, Mrs. Giraud; it was only a little joke—sort of."

"Indeed? Who was the person? And where did it happen?" she persisted frigidly.

M'sieu Taylor was woefully embarrassed. He glanced appealingly at me and wiped the perspiration from his face; then mumbled a few unintelligible words, pretended to hear a summons from above, and responding with "All right, Joe, I'm coming. Well, good night, Mrs. Giraud; sorry I can't wait to explain. So long, Henree!"—he went plunging up the flight of stairs to the hall. Yes; he fled incontinently—beat it!

"Well! That *was* extraordinary, to say the least!" exclaimed madame.

She did not ask for any explanation until we were in the car, headed for home. Then:

"Now tell me about this little friend of yours—the one you were herding from those men. Is this another?"

The words were studiously mild; but the tone—ah, the tone, m'sieu, sent a shudder up my spine.

"Why, it is nothing," I replied with an indifference I was far from feeling. "After I finished my golf lesson I went in for a swim. Your friend, Madame Stratton ——"

"My friend!" she cried in horror.

"To be sure! Is she not?"

"Oh, of course! Of course! Go on! Go on!"

"*Eh bien*, your friend, Madame Stratton, happened to be there too; so I introduced her to J. J. and a crowd of others. They forced me to do so."

"I can well believe that. You'd have kept her all to yourself if you could!"

And then, m'sieu, I knew I was in for it. The revelations, coming as they had, imparted to the day's events a character almost sinister, in madame's mind.

"But listen, my angel!" I implored, endeavoring to place an arm round her. "Surely you know that your Henri ——"

"Don't touch me!" she cried in a tragic voice, and shuddered. "Monster!"

Alas, what was there for me to do? Appeals to reason and to her better nature would be alike hopeless. Therefore I abandoned the effort, angry and sullen.

We drove along in a harrowing silence. After a while my wife said:

"But why didn't you tell me? That's the dreadful part."

"I thought perhaps you might not like it."

She burst into a bitter laugh.

"That'll do! That'll do! So you thought I wouldn't like it, did you? And you wanted to spare my feelings! Very good; oh, fine!"

"If you will listen," I said sternly, "I will explain."

"You'll have a job doing it!"

"Madame," I entreated, "why not view this in the light in which it occurred? Why let your jealousy ——"

"Jealousy!" she echoed. "Me jealous? That's good! Ha, ha!"

"Then, if you are not ——"

"What makes me angry is to see you make such a fool of yourself. That's all. Jealous? Don't flatter yourself!"

And then I played my trump card:

"But you yourself told me that I was to be nice to her and give her every attention."

"You just dare to say that! Do you think I don't know Nellie Stratton better than to be such an idiot?"

"Your own words were that she was a darling, and as nice as could be."

"Listen!" rejoined my wife, leaning toward me to emphasize her argument. "I like Nellie. I always have and I always will. But she has a weakness for men. Yes; her best friend could never deny that. Even at school she was silly. And everybody knows she married Billy Stratton for his money, and nothing else on earth."

And that was as far as explanation ever got us, my friend. No matter what I said, madame returned persistently to the same point. Driven from one contention, she would retreat to another, and finally double back to her original argument, that she was not influenced by jealousy at all—the very idea! Ha, ha! And what should she be jealous of? But she disliked seeing me make a fool of myself publicly and letting a designing hussy come between us. And why hadn't I told her in the first place? And she would never, never get over it so long as she lived!

There were tears, m'sieu, and futile attempts on my part to heal the wound. It would not be healed.

"At least twenty persons have phoned me to-day," she asserted at dinner the next night, "telling me they saw you at lunch and again out swimming with that one-piece green thing. Now tell me the truth, Henree—didn't you go straight from lunch to the lake with her?"

"On my honor, no!"

"Well, it's very peculiar—very! Quite remarkable!"

"I presume," I rejoined, nettled at her manner, "that you have abandoned all idea of the dinner next Thursday night?"

(Concluded on Page 48)

ONE EVERY MINUTE

By Edwin Lefèvre

ILLUSTRATED BY F. R. GRUGER

VI

SHADD'S first impulse was to tell his wife. But he reflected that he could not tell her about the profit he had made in Undersea Craft common without confessing that he had taken out their savings. Instead of crediting him with trebling their little nest egg, she might debit him with recklessness, now that he had begun to make money. That stock would go up, up! When he had made a really big sum he would tell her. Being rich he could stand anything she might say. In fact, she could say anything!

He did not bring up the subject at dinner, because Mrs. Shadd was not feeling well enough to talk. She had caught a cold. By morning it had developed into grippe.

Shadd insisted upon calling the doctor, and he not only got his own breakfast but nursed her with tender devotion. She was too ill to be grateful, but also she was too ill to talk about the expense, and Shadd was content. He sent for Mrs. Shadd's aunt to stay by the patient during Shadd's working hours. He didn't get a trained nurse, because Mrs. Shadd gave him one look—one! Twenty-five a week!

Every day he left the house as late as he dared and the office as early as he could. He forgot about the 200 shares of U. C. common because the patient insisted upon his remembering two thousand other things.

Her convalescence was well under way when he suggested that perhaps she ought to go away somewhere for a few days for a change of air. Instead of beaming gratefully she looked at him fearfully and said:

"You haven't taken money from the bank to pay any of the bills, have you?"

He gained time by asking:

"Do you mean to pay the doctor's bill?"

"Yes, or any other bill. Have you? Tell me the truth."

"I'm Going Home in the Lunch Hour. I'll be Back in Time, Mr. Lipps"

"I have not taken any money from the bank," he told her slowly and distinctly, "to pay any bills. I did not have to!" And he looked her full in the eyes.

"I—I'm glad, dear. I was hoping we shouldn't have to touch it!"

His narrow escape from having to confess the truth filled him with a thousand fears that little by little became the companions of his waking and even of his sleeping hours. He learned from Woodcock by telephone that the market for Undersea Craft had flattened out. Though it was nominally "12 bid, offered at 15," there were no actual transactions in the stock. After looking in his paper and reading these disheartening quotations for a week, he ceased to wish to know what the price was. He thought bitterly that Woodcock should have compelled him to sell out when he could have had $5000 for his 200 shares. It was plain that $2600 had dropped out of his pocket. Also, that not having hearkened to Opportunity's one knock at his door, he could not now tell his wife what he had done with her savings. The fact that he still had a paper profit of $600 made matters worse.

The first morning when his convalescent wife got breakfast for him was both a relief and a care to him.

She was fully recovered! Also, she was in condition to ask about the bank book. He always feared she could tell, by his face, when he was lying.

He beat a girl stenographer to the last seat in the car and opened his newspaper. On the financial page, in big type, he read:

"UNDERSEA CRAFT UP 60 POINTS!"

He had trouble in reading the article by reason of his trembling hands, but he managed to learn that a sudden demand for the stock had sprung up. The explanatory rumors were that the mission of the president of the company, Col. Allen Springer, to London, had proved successful. There was a remarkably small floating supply of a stock that for years had kicked about the Street unhonored and unsung. Then the paper gave the names of the principal buyers and sellers and the record of the sales. Seventeen hundred shares changed hands at 12 to 72. It closed at 60 bid; offered at 65. Such an advance in such a stock had absolutely no precedent.

He jumped to his feet, yelled "Stop the car!" and jumped off. Providence as usual looked out for his limbs and neck.

He stopped at the nearest drug store and called up Francis T. Woodcock & Co. It was 8:21 A.M. There was nobody there to answer, and Wilberforce Shadd had to go to his own office.

He survived until 9:30 A.M. by figuring his profits at the price at which he obviously ought to have sold his 200 shares of Undersea Craft—to wit, the previous day's highest price, 72. That would have given $14,400.

"Gosh," he muttered in awed tones, and figured once more to see if he had made a mistake. Then he figured again, this time for the pleasure of it.

At 9:31 a voice in the office of Francis T. Woodcock & Co. said that Mr. Woodcock had not arrived. He might come at any moment now. Or he might go straight to the Board Room—the "floor" of the New York Stock Exchange.

Driven by desperation and dreadful doubts, Wilberforce Shadd secured permission to absent himself from the office to visit a specialist from which visit he expected his wife to benefit. He would return as ——

"Oh, take your time, man. I hope there is nothing wrong," said Mr. Lipps, the manager, kindly. So low had Shadd sunk that the office behind his back always referred to him as "poor Shadd."

"I hope not," and Wilberforce Shadd's voice actually shook, so that the manager felt sorry.

"Don't return to the office unless it's all right, Shadd."

"I'll know," said Wilberforce desperately, "one way or another in an hour or two."

VII

IN THE subway Wilberforce Shadd did not read the newspaper because it had no fresh news to print about U. C. common. But he utilized the margin of it to do more figuring on. The closing quotations were 60 bid, offered at 65—that is, $12,000 bid; offered at $13,000!

Digitized by Google

But the stock had sold as high as 72. That is, at $14,400.

That, of course, was the price at which he should have sold. Therefore, it was the price at which he ought to figure his profit. At 4 per cent it would mean $576 per annum or more than $11 a week. Added to his salary of $40 it would give him $51 a week. At 5 per cent he would get $720 a year or $60 a month; nearly $15 a week. At 6 per cent, which anybody ought to be able to get with absolute safety, he would receive with unfailing regularity, as long as he lived, $864 per annum, or $72 a month, or $16.60 a week. Without working!

At a pinch, any man could live on $16.60 a week—in the country.

Of course, if he sold at less than 72 he would not get $16.60 a week. Why in blazes had not Woodcock sold at 72? He ought to have known that at that price there was no question of selling or not selling 200 shares of stock. It was a case of getting $16.60 a week.

What man in his sane senses refuses $72 a month for life?

And the price had gone back to 60 bid—a drop of 12 points, of $2400! It would not surprise him if Woodcock, to cover up his negligence, would try to make him sell at any price—that is, at 60.

Then Shadd began to fear that he might not even get 60 for it!

When he opened the door marked "Customers" he was in the frame of mind in which nothing surprises a man, not even 50 for his stock.

"Hello, Shadd! How are you, dear boy?" shouted Mr. Woodcock from the other end of the room, and rushed to meet his dearest friend. The cordiality made Shadd fear the worst!

Woodcock shook hands warmly and went on: "Say, if I had your luck! All right, I'll call it brains! How does it feel, hey?"

He Fainted in Her Arms by the Simple Expedient of Relaxing and Closing His Eyes

Inasmuch as Mr. Woodcock shouted his greeting at the top of his voice, everybody in the room looked curiously at the shrinking Shadd. Woodcock himself was gazing admiringly at his wonderful friend.

Admiration is the most contagious of all aberrations. The eyes of the other customers began to fill with respect as they gazed on Shadd, the great plunger and commission-donor.

"How do you feel?" asked Shadd.

The modest broker naturally assumed that Shadd wished to know his views on the market. He answered:

"Oh, bullish, of course, although I think profit-taking on the bulges, from now on, will ——"

Shadd shook his head, intending to convey that he was not asking for stock-market opinions. Mr. Woodcock and the watching customers naturally assumed that Mr. Shadd disagreed with the head of the firm. The customers, looking from one to the other, wondered who was this man, Shadd, that his differing opinion should visibly depress Mr. Woodcock.

"Well," apologized the broker, "I naturally supposed that you had come to sell ——"

"No," said Shadd, thinking that he would not sell at a loss—that is, at any price below 72.

"It's 84!" said Woodcock. "Surely you aren't going to tell me it's going to 200 this trip?"

"No," said Shadd hesitatingly, "not two hundred." He meant that he would not wait for two hundred to sell. Thinking of 200, however, kept him from thinking that the stock had jumped 12 points, $2400 more than 72, at which price he had wished to sell.

One of the customers couldn't stand it any longer. He approached the head of the firm and whispered out of the corner of his mouth:

"What stock is that, Frank?"

"Mr. Shadd, I'd like to introduce you to Mr. Edson. Bill here would like to know what stock we're talking about."

Bill Edson grinned sheepishly.

"Undersea Craft common," said Shadd with an uneasy smile.

"He owns all we've got in this office," vouchsafed Woodcock proudly.

The customers clustered about the semi-paralyzed owner of the stock that had risen over seventy points in less than forty-eight hours. Henry Rumney, the most inveterate tip-follower in the Street, came in just then, and seeing a stranger surrounded by admiring would-be plungers asked Ben Meiggs:

"Who's the gink?"

"Sh-h!" whispered Ben reprovingly. Feeling called upon further to squelch Henry, he explained: "That's the largest individual holder of Undersea Craft."

"Thellyousay!" gasped Henry.

"Thasswat!" affirmed Ben.

Whereupon Henry approached the crowd of admirers about the multi-millionaire and said, as if he were well paid for saying it:

"Good morning! As I passed the Curb Market just now I heard them bid 90 for your stock. I'd like to ask you what you think of St. Paul?"

Shadd, still dazed by the suddenness of the attack, only half grasped that he was asked his opinion about something he knew nothing about. He recalled some verses he had read about a broker who died suddenly and went to heaven. The broker knocked at the pearly gates, and when they opened, according to the last line of the poem,

He asked Saint Peter: "How's Saint Paul,"

Shadd, afraid to open his mouth but not willing to admit his ignorance, shook his head. Henry Rumney did not wait for anything else. He rushed to the little window behind which a telephone operator held the line of communication with the firm's clerk on the Stock Exchange, and cried: "Say, sell 500 Saint Paul at the market. I thought it looked toppy. Get a hustle on!" and having written and signed the order as he talked Henry went back to the crowd in time to hear Woodcock tell them about Shadd's feat.

"Of course I knew nothing about it, so I told him not to buy. But all he did was to smile and say: 'Frank, you don't know everything.' That was all, wasn't it?" and he looked toward Shadd for corroboration.

Wilberforce nodded blushingly, and Woodcock, still proud of the privilege, went on:

"Even then I didn't want to accept the order, but when he took out his pencil and began to put down in black and white what the company stood to make—well, say, the wonder is he isn't talking a thousand dollars a share."

He made an end of speaking in order to give Shadd a chance to show his wisdom. But Shadd shook his head, whereupon Woodcock told him, that the other customers might see he never withheld praise where praise was due:

"Well, Shadd, I've certainly got to hand it to you, old chap. Just for fun let's see what the stock is now. Remington, get a quotation on Undersea common."

As the broker moved away the customers moved closer. They were afraid to appear too familiar; at the same time they could not keep away from the one man who had acquired the greatest of all secrets: How to beat the Game.

Henry Rumney, who was not bothered by absurd notions of delicacy, asked point blank:

"How much did your stock cost you?"

Shadd looked at him and was really shocked by the eagerness that flamed in the speculator's eyes. He hesitated.

"Of course," put in Ben Meiggs, insidiously viperish, "Rumney doesn't mean to pry into your private affairs."

"Not at all," agreed Henry Rumney. "I mean approximately—on an average."

"I should say," began Shadd, who wasn't sure whether or not he ought to include commissions, "let me see—ah ——"

The silence in the big room was broken only by the click of the ticker, the snap of the cardboard numbers as the boy slipped them into place on the quotation board, and the labored breathing of the waiting customers.

"Ah—$9 a share!"

A gasp that almost made the windows tremble inward followed. From $9 a share the stock had gone to $84. How many thousands of shares did this man own, this great personage with the imperturbable calm, the supreme confidence and the habitual taciturnity?

"Say, why didn't you tell a fellow?" said Henry aggrievedly. But even he had to acknowledge to himself that the stranger was not to blame. "Just my luck! I didn't know you! Gad, I'd have plunged! Nine dollars! Well, what do you think of it now, Mr.—er—I didn't get your name."

"My name," said Shadd, delighted to find himself among such intelligent fellows—"my name is Wilberforce ——"

"Mr. Wilberforce," interrupted Rumney, who thought they were wasting valuable time, "just how high do you think Undersea is going this trip?"

Wilberforce Shadd could not help but think of Hen Wilkins' crazy utterances. He had to, in order to be able to answer questions to which an answer was expected by these men. So he said slowly:

"Of course if they get the order for the $65,000,000 ——"

He was merely recalling that Wilkins had said that the Undersea Craft Company could get a million apiece for sixty-five submarines.

"Geewhillikens!" cried Ben Meiggs.

"Do you think it's going up right away?" asked Henry Rumney. After all, that was what they wished to know, and what all, excepting Henry, feared to ask so bluntly. They looked at Shadd so intently that it disconcerted him.

"I don't think ——" he began.

"That's good enough for me," said Henry Rumney. He was certain that the great Wilberforce was going to say what all tip-givers always say: "I don't think so, I know so!"

Henry, therefore, rushed off to find Woodcock.

"Got that quotation on Undersea?" he yelled.

"Not yet. I thought you said it was 90."

"Naw! I said I thought it was," corrected Rumney impatiently.

An office boy entered and handed a slip of paper to Woodcock, who read it and said:

"Well, you were wrong; it's 85 bid; no offers."

"Gee, and he paid $9 a share for it week before last. Say, Frank, I want to buy a thousand shares ——"

"If you do you'll have to put up about eighty-five thousand bucks."

"What!" yelled Henry Rumney, gazing at Woodcock in horror.

"No margin. Outright."

Henry Rumney was such a good income-provider for the firm that the office allowed him to take verbal liberties. He now shrieked:

"It's highway robbery!"

"It's the first law of Nature," corrected Francis T. Woodcock, Wall Street philosopher, who no longer took chances. "If a stock goes up fifty points in one day, can't it come down fifty before you can ask a man to put up more margin?"

"Aw, you make me tired! I'm going to buy some Undersea Craft and I'm not going to put up a million dollars a share either."

"Certainly not, Henry. I'll see what I can pick up for you. But I warn you—no margin. The banks won't lend on it, and I'm not going to see you lose money ——"

Digitized by Google

"All you'll see me lose," said Henry angrily, "is my temper—if you try to make me believe that you care a hang how much money I lose. Well, make it 500 shares. I'll put up twenty points and keep the margin good."

"Nothing doing."

"Suppose you find out what you can get it for before you begin fighting with me about it, will you, please?" said Rumney with much dignity.

"Eighty-five bid, none offered. That means ——"

"Just hold your horses," said Henry Rumney, and went back to the fountainhead of all knowledge.

"Wilberforce," he said, looking intently at the all-wise, "it's eighty-five bid, none offered. I'm going to buy as much as the law allows." He paused. The head of the firm joined the party at that moment. Rumney glared at him, and went on: "Of course Woodcock has got cold feet and insists on ——"

"For your own sake," interjected Francis T. Woodcock firmly.

"And for your security," said Rumney so bitterly that Woodcock felt he ought to deliver his daily ultimatum once more. He said slowly:

"Gentlemen, no war babies on margin. I haven't got a very strong heart. Anybody who wants me to die suddenly can't be my friend. Why should I care what my enemies think of ordinary, common prudence anyhow?"

"Mr. Woodcock"—Henry Rumney spoke with cold politeness—"nobody is listening to you. I think you should save your vocal cords and use them to tell a waiting customer whether you've got a report on that U. C. yet or not."

"Not yet. Wait a minute! Here it is!" He let a clerk whisper something in his ear, then he said to Rumney:

"There are sixty shares offered at 95. That," he elucidated hastily, "necessitates $5700, exclusive of inadequate commissions and the iniquitous taxes. Fifty-seven hundred cash!"

"That's twice you said it. If you want me to buy that stock," said Rumney determinedly, "you'll have to ——"

"No margin!" from Woodcock.

"Then no order," and Rumney nodded tauntingly.

"I think I'll take twenty ——" began Ben Meiggs hesitatingly.

"That's my stock," hastily interjected Henry Rumney. "Get a gait on, Frank. I'll pay cash if I have to. The sixty shares."

Woodcock gave the order, took Rumney aside and said to him earnestly:

"I'd like to carry that stock on margin for you but we can't."

"You've got Wilberforce's ——"

"He bought it and paid for it in full."

"Geewhillikens!" muttered Rumney, naturally assuming that his dear friend Wilberforce must own thousands of shares of the most sensational of the war brides.

Other customers, influenced by the success of Shadd and the courage of Henry Rumney, sought Woodcock, with the result that the broker received orders for 150 shares. Had they been allowed to speculate on a ten-point margin, they would have bought Undersea Craft by the thousands of shares. They were compelled to be conservative in one of the most remarkable stock booms in history.

"Say, Shadd, come here a minute, will you?" said Woodcock, and took the star customer into his private office.

There he said very earnestly: "You can now get 90 or 95 for that stock. It's all very well for you to say ——"

The broker was speaking so accusingly that Shadd thought that the time had come to cash in. At 95 he would receive $19,000. Too bad it wasn't an even $20,000. Still, worse things could happen. But he did not wish to sell unless $19,000 was all he could get. So instead of saying "Sell," he said:

"What do you want me to do?"

"I want you to make money."

"Well, I'd like to oblige you," said Shadd, not too cordially, fearing the broker might regard his acquiescence as a selling order.

"You've got to take your profit sometime. Suppose you fix your own price and give me a G. T. C. selling order. We can't be calling you up on the phone every minute. You've seen it go up like a skyrocket. Well, when it begins to drop, that's the way it will fall too. Do you want to leave an order to sell it at par?"

At one hundred a share, it meant the $20,000 Shadd had regretted not getting. This at six per cent meant $100 a month as long as he lived.

Woodcock thought he saw unwillingness on Shadd's face. As a matter of fact, it was indecision.

"Then," pleaded the broker, "make it 125."

Francis T. Woodcock ceased to exist for Wilberforce Shadd, for the simple reason that Shadd concentrated on mathematics. He figured that at 125 he would get $25,000. This was so much better than $20,000 that he wished to think calmly whether $30,000 in turn was not better than $25,000.

He did not know just what to do, excepting that he did not wish to do the wrong thing. He must go away and think, and maybe while he was thinking, away from this upsetting office, the stock would rise and be worth more than $25,000. If that happened he surely would sell out. There was no doubt about it. Here he could only think of what it was selling for, not of what it might sell for in the future; and that, of course, was what really interested him.

"Oh, I'll think about it," he told Woodcock desperately.

The broker thought he said it hoggishly, so, to be safe, he warned Shadd: "That's all right. All I ask you is to remember my advice, that's all."

He Jumped to His Feet, Yelled "Stop the Car!" and Jumped Off

There was something so sinister, even menacing, in the broker's request that Wilberforce Shadd promised apprehensively:

"All right; all right. I'll remember it," and left hurriedly.

As soon as he was in the street he inflated his lungs to their fullest capacity. Instantly he became glad to be out of that office; delighted to be alone with his joy. He had made $19,000, which was good; and he was a winner at the greatest of all games, which was better; and he was going to make much more, which was best.

It is good to be alive when a man is getting more, without working, than he had ever dreamed he could get after fifty years of steady grind. And there in that office were men like Henry Rumney and Ben Meiggs, who thought well of him and his business judgment. They knew Wilberforce Shadd for what he was. They did not think him a—well, whatever it was others thought him. They did not mistake his kindliness for nervelessness or his good nature for cowardice.

By the time he reached his own office he was so indignant at the world's misconception of him that he began to enact the tragedy of his married life. He lived it again in detail—afraid of spending pennies and he a rich man—and then, as an epilogue, he dramatized afresh the spontaneous recognition of the real Wilberforce Shadd by unprejudiced character-readers in Francis T. Woodcock's office—the man Wilberforce Shadd had proven himself to be by his possession of 200 shares of the common stock of the Undersea Craft Company, which would settle the war by building submarines for the German Government at a million dollars apiece. He did not know what the profit would be because he did not know how many other boats, besides the sixty-five already built, the company might sell. But it was obvious that the stock would be worth anything the holder thereof wished to get.

"How's your wife, Shadd?" the manager asked him, composing his features in advance to a look of condolence.

"Oh, she's the same." Then he remembered, and improved upon his unpremeditated reply. "There is no new complication," he said. "Thank you, Mr. Lipps."

"That's good."

Shadd tried to do his work as usual, but every now and again he simply had to stop and figure what he ought to get for his 200 shares. He tried various prices—on an ascending scale. Of course he knew he didn't have the slightest chance of getting such prices; but there was no harm in figuring, for example, that at a thousand dollars a share he would be worth $200,000. This at six per cent per annum would yield $1000 a month. That would mean a change of life for him. It would mean comfort, ease, happiness, conditions he had never enjoyed.

"The stock will never go there!" he cried aloud, in order that the hoodoo might hear him. "Never!"

Then he began again—turning his $1000 a month into concrete things; spending his dollars in things he had never thought he would ever get.

VIII

HE WAS very quiet when he reached his home that night. A sense of physical weariness came over him, as though he had walked twenty miles. He did not wish to lie down. What he wished was to stop thinking about Undersea Craft long enough to go to sleep.

He saw with the eye of experience that his wife was in good form—not really frightened but craving to suffer; watching lynx-eyed for an opportunity at martyrdom. He saw that she had resigned herself to death before the curtain rose on the first act. He knew better than to ask if she was not well. Instead he sought to negotiate for a peace-bringing silence.

"I put in a hard day's work," he said in a voice pitched to suggest extreme fatigue, "and I am dog-tired."

"Are you?" she asked, looking very sorry—for herself. It was a fresh cross—to bear the double burden—first of having troubles, and second of having to bear them alone.

"I—I really think I'll go to bed without waiting for supper," he added. Instantly he felt very hungry. It made him so angry that he forgot his fatigue.

"No, you've got to eat something. You can't work and not eat. Although I don't know but by eating less we might ——"

"Please, dear," he pleaded, "don't skimp me to death. And, besides, you need good food to get back your strength. The grippe is no joke. That's why I wanted you to go to Atlantic City."

"Yes, and spend all we have in the bank in one week? I guess not. I'd rather ——" She stopped.

"Die first?" he prompted.

"No!" she denied so violently that he knew he had guessed. He laughed. It gave her the blessing of martyrdom!

"Yes, laugh. Why do we have a roof over our heads ——"

"Because the landlord knows we'd move if it leaked."

He would say anything, even answer a rhetorical question, rather than let her gain any headway.

"Oh, very well. We might as well be paupers ——"

Paupers? With $19,000 at the brokers', that would probably, or rather certainly, become $25,000 in a few days?

"Why, my dear, I might as well tell you ——"

He caught himself abruptly. She would make him cash in at once.

"I'm going to bed," he said, and proceeded hastily to disrobe.

He instantly became hungry as a bear.

"Perhaps after I'm rested, if I don't fall asleep, I might take a cup of tea," he told her weakly.

"I'll keep your supper warm for you. It's cooked and there's no sense wasting it."

But he fell asleep after all and had a hearty breakfast. It was just as well he did, for he could not eat luncheon that day. The market turned weak.

That night he went home a sick man. Undersea Craft common closed at "75 bid; offered at 80."

The sense of his loss was too heavy upon him for him not to look it. His paper profit was now merely 66 points on his 200 shares, or a piffling $13,000. On the day before, at 95, the profit had been $17,000. The tragedy was that he had proved to himself mathematically that when the stock reached 125 he would have $25,000 in cash.

The profit that he had and didn't take! If that wasn't hell, what was?

The moment she saw him, she asked: "Are you sick?" He was, but he must lie about it in order not to have to tell the truth.

"No," he answered. He saw that she was watching and he feared that she might be able to detect his lying.

He had a flash of inspiration. He staggered forward blindly until he reached a rug. He then very carefully sank to his knees and slid sidewise until he was leaning against a chair.

To look as he felt he must think of the most disagreeable thing in the world. He therefore thought of how he would feel if Undersea Craft common should slump back to 10, to 5, to nothing—and on top of it, having to tell her that he had lost their savings after having had a profit of $19,000!

Whatever she saw in his contorted face made her say:

"Wilberforce, darling! I'll get the doctor."

"N-no," he breathed feebly, and fainted in her arms by the simple expedient of relaxing and closing his eyes.

He thought of the next step. He counted sixty slowly, and then opened his eyes, blinked twice and stared at

Digitized by Google

her unseeingly. He was so delighted at perceiving that she was frightened that he nearly forgot his lines. But he managed to whisper weakly:

"Where am I?"

"Oh, Wilberforce!" she whimpered.

He must control his pleasure. He said, so that she barely could hear him:

"What happened?" and tried to rise—very feebly.

"You fainted! Don't try to get up. You went off like ——" She shook her head and drew in her breath sharply.

"Did I?" he said. "I'm sorry, dear."

"I'll get the doctor ——"

"No," he spoke more strongly: "I—I didn't have any lunch. I—we were so rushed! I guess I got a little faint—from emptiness. I can get up"—he caught himself and finished—"if you will help me, dear."

"I'm afraid ——" But she loyally pulled him to his feet. With his hand on her shoulder he walked to an armchair and sat down while she fetched him a drink. He swallowed it meekly—aromatic spirits of ammonia! Then, after he had reassured her several times, she went up to prepare dinner for him.

She did not mention the bank book, and Wilberforce Shadd fell asleep that night almost reconciled to his loss.

For more than a week she did not talk about the bank book, and to fill his cup of happiness Undersea Craft resumed its rise. The advance was more sedate, but it was continuous. It never rose more than two points in one day, but every evening there was the magic plus sign in the column which showed the "net changes for the day."

He called at Woodcock's office, found the broker out, inhaled enough incense from the admiring customers to make him stand pat, and went away thinking that if the bull market kept up he would soon tell his wife all about it. What a day that would be!

Presently the stock resumed its kangaroo career. Mr. Francis T. Woodcock again advised him to sell his Undersea Craft stock.

"You know very well, Shadd, that if anybody had told you this stock would go up to ——"

"Yes," interrupted the meek Shadd accusingly, "you wanted me to give you an order to sell at 18; and again at 20; and again at 75. And you begged me to give you a G. T. C. selling order at 125. Was that good advice? Do you call that a warning to suckers? Now when it's only 165, and everybody knows about some of the business the company is doing, you again insist ——"

"Of course I insist, you da—er—of course I insist. I haven't forgotten that you put up $1800 a few short weeks ago ——"

"Hold on!" said Shadd; "it was $1829. You forgot commission and taxes ——"

This was too much for the exasperated Woodcock, who could not stop thinking of the 150-point slump bound to come some day in that stock of stocks. "You—er—you! You don't know enough of this game to realize that an investment of $1800—of $1829—which increases in less than two months ——"

"Two months and four days," corrected Shadd. He was making money and that was all that really mattered. But he might as well be exact.

"Ugh-h! To think you put up $1800, and now $33,000 stares you in the face and you don't know enough to put that money in your pocket. Thirty-three thousand dollars! Comfort for the rest of your life! Doesn't it hurt you to think of your wonderful mind? Doesn't it?"

In his indignation Woodcock forgot the politeness due to a customer from the head of a commission house.

"No," said Shadd amiably, "it doesn't hurt me to think of the wonderful mind that wanted me to leave the money in the bank and wouldn't let me buy this same stock at $9 a share ——"

Woodcock threw up an elbow defensively. Then he said: "I admit I was wrong about that. But at ——"

"Yes, and at 18 you thought I ought to sell, and at 25 and ——"

"Yes, but, you jack—you Shadd, I made a mistake. I'll admit it. But a stock that pays nothing and sells at 165 is a different proposition. It's tempting Providence ——"

"Providence is all right," said Shadd. "Don't you say anything against Providence. I know it wasn't my brains—nor yours!"

"No, it wasn't. But you don't know what the company really is doing and ——"

"Oh, yes, I know."

"Look here, Shadd, somebody who doesn't know any more than you do tells you something, and you take it in as if it were gospel truth. Undersea Craft might have been a bargain at $9 a share, but at 165 it isn't."

"It's too bad you didn't buy 5000 shares at $9; then you could have sold it at $18."

"Yes, I probably would, for I've learned not to be a hog. If I double my money I think I've done much more than any man is really entitled to."

"Yes, that's true enough. But this is the chance of a lifetime. Do you think there is going to be a big European war every spring?"

Woodcock threw up his hands.

"All right, Shadd. You're like all the rest. You are a wonderful man now. You know it all and a little more. You've been in Wall Street so long that you know that what goes up can't possibly come down until you've sold at the top. All I ask you is to remember that I told you what I knew you didn't want to hear. That's all."

"All right, I'll remember," promised Shadd, remembering only that this was the man who didn't want him to buy U. C. at $9 and advised selling at $14. "I sure will. You're doing your best. If I'm wiped out I won't blame you. I wonder what the price is now? The last quotation was 165."

"I suppose," suggested the broker with a bitter smile, "it's about 500."

"No," said Shadd very seriously, "I don't think it could be that high so soon."

Woodcock choked, and left Shadd to ask an office boy to get a quotation on Undersea Craft common.

Shadd, Meigge and Four Delightful Strangers Spent a Wonderful Afternoon

The boy came back, and Woodcock beckoned to Shadd.

"Last sale, 50 shares at 172. It's 170 bid; none offered."

"That's more like it," exclaimed the devilish Shadd, trying to look businesslike. "You were sure I ought to sell at 165. The extra seven points mean $1400 ——"

"G-g-g-gh!" expectorated the broker, glaring at the office boy.

"And I can't afford," continued Shadd evenly, "to lose $1400. You are a rich man, and you can't understand what a few points in that stock mean to a man like me."

Then Shadd thought what a few points would mean to Mrs. Shadd.

"You can't be very poor," said Woodcock grimly.

"I am," replied Shadd. "Since I took the $1832 out of the Savings Bank I haven't a cent I can call my own."

Neither had Mrs. Shadd, only she did not know it!

"Well, if you can afford to turn your back on a profit of $34,000 ——"

"Thirty-four thousand four hundred," corrected Shadd. "The price was 172, don't you remember? I guess I'll be going."

Brokers are almost as anxious to see their customers make money as the customers themselves. Money-making customers mean a continuous and reliable clientele. You know them and they know you, and the relations are pleasant. So Woodcock entreated:

"Shadd, will you please leave me an order to sell at 200? I don't think it will go there right away, but ——"

"If you don't think it will sell at 200 what's the use of giving you an order?"

"Well, in case of an accident—or a miracle. If it did, and we had your order, we could take immediate advantage ——"

"If it can only go there by an accident or a miracle, couldn't it go higher by another miracle—say to 300 or 400?"

Shadd's face took on a challenging look. The broker ignored the challenge and begged:

"Shadd, give me a selling order at any price. Make it a thousand, but, for the love of Mike, let me feel that you'll sell some day. Do you want to be left with nothing but a scrap of paper?"

"You talk like a German Chancellor," joked Shadd, in order not to have to give a selling order at any price. He felt toward taking his profits as many superstitious men feel toward making their wills—sure death that same night. The stock was rising. Every day meant more money; and he felt healthy. How could he help it?

"Then put in a stop order. Don't let all the profit get away from you once it hits the toboggan slide. Mark up the stop as the price rises; but have your order in."

"What do you mean?" asked Shadd distrustfully. He wasn't going to let the broker enmesh him in technicalities intended to reduce his fortune. The broker's insistence was beginning to take on a sinister aspect. "Well, say it's selling at 170 ——"

"At 172," said Shadd. He couldn't help it.

"Well, give us an order to stop it at 160 ——"

"Do you mean to sell?"

"Yes."

"At one hundred and sixty?" Shadd couldn't help smiling pityingly.

"Yes; to make sure you get at least $32,000 instead of $2000."

"But I've got $34,000 now."

"Yes, but this is in case it starts to break. After refusing to take 172, you ought to be satisfied to get out at 160, and not wait until it is down to nothing."

"Wait a minute. Do you guarantee that if it starts to go down until it sells at 160 it will surely keep on going down to nothing and never go back to above 160 or ——"

"No, I can't guarantee that. But nobody can get poor taking profits. Shadd, I know this is a sucker market, and the less a man knows the more money he makes. But there is a limit to what even a sucker can do in the way of tempting Providence. You make up your mind first that you ought to sell, and then at what price. Then tell me."

"All right, Woodcock. When I know what price I want to get for my stock I'll tell you. Honest, I will! I swear it!" And Shadd looked straight in the broker's eyes. The broker shook his head. Then, not caring whether he lost a customer of the kind that will drive even a Democratic cabinet officer to drink, he began sneeringly:

"I think that of all the ——"

"I'll tell you," broke in Shadd. "I'm going to think about it," and he hurried away. He had no intention of thinking about anything except of not taking his profit too soon. He couldn't seem to be able to make Woodcock see that he was not a hog. He knew stocks went down. Of course they did. But he also knew that neither Woodcock nor anybody else in Wall Street knew everything. Else they wouldn't be in Wall Street, but in their country houses, living! And there was no argument that could alter the one indisputable fact: The longer he held on the more money he made.

It was only a little after one o'clock when he left the office of Francis T. Woodcock & Co. On the way back to his work he admitted with a curious regret that he did not

PHILADELPHIA, JANUARY 27, 1917

Reducing the Cost of Living

THREE committees in New York—one appointed by the legislature, one by the governor of the state, and one by the mayor of the city—recently made a joint report on food costs, after quite diligent investigation.

The report disparages all patented short cuts to reduce the cost of living, such as a chain of public markets, and "eliminating" the middleman without providing anybody to take his place. Far from recommending prosecution of trusts as a solution of the problem, it urges more trusts—that is, more combination and coöperation.

For example, it finds that the cost of milk is needlessly swollen by duplicate delivery services, wagons of several companies running over the same route day after day. So it would permit the big milk-distributing companies to work together under state supervision, which would make sure that the saving through a joint delivery service went to consumers.

It finds that to transport a given article of food from its original destination in the city to the kitchen of the consumer costs much more than to transport it from its place of production, several hundred miles away, to the city. It thinks that might be remedied by better organization of the methods of handling foodstuffs in the city. It recommends organized effort to educate housewives in the purchase and preparation of foods, beginning in the public schools.

It points out that causes beyond the control of city or state have enhanced food prices; but it thinks those causes might well be offset or minimized by combined effort, better organization, coöperation. On the whole, it looks in the opposite direction from those whose panacea consists in attacking combination; and it virtually says there is no panacea, no short cut, no magic remedy.

There are many remedial measures, but effort in unison is the basic ingredient in all of them. Integration, not disintegration, is the method.

What We Might Do

DIRECT money cost of the great war to the end of 1916 is put at sixty billion dollars. This means that inhabitants of the belligerent countries saved the greater part of that sum in two years and five months.

In all these countries a certain amount of capital lay available for investment at the beginning of the war; England and France sold foreign securities and put the proceeds into the war pot; liquidation of some businesses provided further sums. But the amount raised in these ways must have been a relatively small part of the total. The remainder has been saved out of income during the war—that is, the people of the belligerent countries have produced enough to support themselves and yield a balance of well toward sixty billion dollars for their governments to spend on war.

This is the wonderful economic lesson of the war. No one supposed people could produce such a balance above sustenance.

There is still a disposition to regard war finance as a sort of stage money—a mere illusion produced out of a conjurer's hat. But, except that prices are inflated, it is as real as the silver coin in your pocket. Every dollar of it has bought tangible goods—food, clothing, horses, powder, shot, and so on. It shows what a modern nation can do when all its energies are united for the purpose of producing and saving to the utmost. The United States, under like conditions of unity, enthusiasm and organization, could doubtless raise ten billion dollars a year for any purpose to which it laid its will. Of course Europe's saving has been put into a bad investment. The great blue-sky swindler got most of it. But the lesson of what can be done in the way of saving stands.

Public Health Work

PROBABLY three hundred and fifty thousand people die yearly in the United States from preventable causes; also, something like two per cent of the population is disabled from sickness at any given time, and a large part of this is preventable.

The standing problem before public-health boards is: How, with the means at their disposal, to make the greatest possible reduction in this social waste?

Perhaps there has been more coöperation in this governmental field than in any other—a freer circulation of ideas and experience, so that one community has profited by the discoveries of another. Yet the work is far from systematized.

A pamphlet by the Russell Sage Foundation suggests that, with adequate reports on mortality and sickness, communities which have the same general health conditions may, by careful study and comparison, work out a formula for applying their health appropriations with reasonable certainty of getting the best possible results for the money.

The first factor in the formula would be the amount of damage produced by any given cause of sickness and death. The second factor would be the readiness with which this cause yielded to preventive measures. For example, cancer causes much damage, but in the present stage of medical science is not classed as a preventable disease. On the other hand, smallpox causes little damage, but its potentialities of damage are high, and it readily yields to the simple preventive of vaccination. By a sufficiently careful study of adequate data a health board can reduce this to mathematical terms and say, with assurance: "Twenty-four per cent of our appropriation should go to preventing infants' diseases; twelve per cent to tuberculosis." And so on—the figures varying, of course, under different conditions of climate, housing, and the like.

The plan is a suggestion as to what may be accomplished by coöperation among towns.

Taxing Tea and Coffee

IT SEEMS clear that Congress must find more revenue. Last year it had to find more revenue for better national defenses. So it virtually doubled the income tax, laid a Federal inheritance tax and imposed a number of other taxes. But the outlook now is that the additional revenue thus found will fall so far short of increased expenditure that by the end of the next fiscal year there will be a deficit of something like four hundred million dollars. Certain other appropriations, now in prospect, may raise the deficit about half a billion.

No doubt there will be a bond issue to the extent of a couple of hundred million dollars or so; but even then revenue must be increased.

Expenditures cannot be reduced. That would require hard, courageous, intelligent work—something for which, apparently, Congress has neither the time nor the inclination. But revenue can be increased with comparatively little trouble and no disagreeable personal consequences to any congressman.

Among possible sources of more revenue an import duty on tea and coffee is favorably mentioned. At twenty per cent it would yield about twenty-five million dollars a year; and it may as well be levied at once. This is a comparatively easy method of raising revenue; and the way Government is going no comparatively easy source of revenue can long escape.

A duty on tea and coffee would make every household conscious that it is paying Federal taxes. When that stage is reached a revision of the Government's whole wasteful fiscal scheme may be expected; but apparently not until then.

That After-the-War Basis

SINCE the Federal Reserve Board's warning blocked the sale of British and French short-term treasury notes here, the Allies appear to have made every effort to limit their purchases in this country. That was a plain necessity of the situation, for in the closing weeks of 1916 they shipped us a hundred and eighty million dollars of gold to maintain exchange; and a drain of that proportion could not continue indefinitely.

It is reported in Wall Street that, since the warning, war orders to the amount of three hundred million dollars or more, which would otherwise have come to this country, have been diverted to Canada; and that optional orders to the amount of a hundred million dollars, already placed in this country, have been canceled.

Most likely, then, the present year will see a decided falling off in our war business, even if war continues through the year. Only those directly interested will regret it. A gradual descent from last year's dizzy height in this respect—getting down by degrees to an after-the-war basis before war actually stops—will be by no means a calamity.

Nor will the utmost possible dependence upon their own resources be a calamity for the Allies. If they can discover means of making within their own boundaries anything they have been buying from us, their position will be that much stronger when the war ends. A slowing down of the war trade with America may be accepted with equanimity all round.

Government Buildings

FRIENDS of pork cry that Congress will never surrender its right to appropriate public money for public buildings. Nobody we have heard of ever asked it to, or knows of any way, short of a constitutional amendment, whereby it could make that surrender.

Foes of pork urge that public buildings be erected according to the needs of public business, and not according to the political needs of individual congressmen.

That is the whole matter. The American Institute of Architects proposes a board of experts to study the subject broadly and work out a plan under which the construction of public buildings, designed by competent architects, shall be recommended to Congress as public business requires them. The question is whether Congress proposes to consult experts or merely to pursue selfish individual ends.

Pork has not been propitious to architecture. Government architecture, on the whole, lags much behind private enterprise. The Government ought to lead; but it does not—and pork is one of the reasons.

Opportunity in Prison

WOULD O. Henry have found his vocation while in prison if, instead of being given a comparatively light occupation and humane treatment, he had been subjected to the brutal and crushing discipline many prisoners undergo? Would his genius have flowered under such a regimen as is described in that classic of prison fiction, 9009, or in innumerable reports by trustworthy investigators? We think not.

It is quite probable that Cervantes planned and even wrote the first part of Don Quixote while in prison. Mirabeau spent a very considerable portion of his life in durance. Dostoyevsky outlived a horrible imprisonment to produce some of the greatest novels ever written. In other instances very superior gifts have survived imprisonment. But very superior gifts are exceptional.

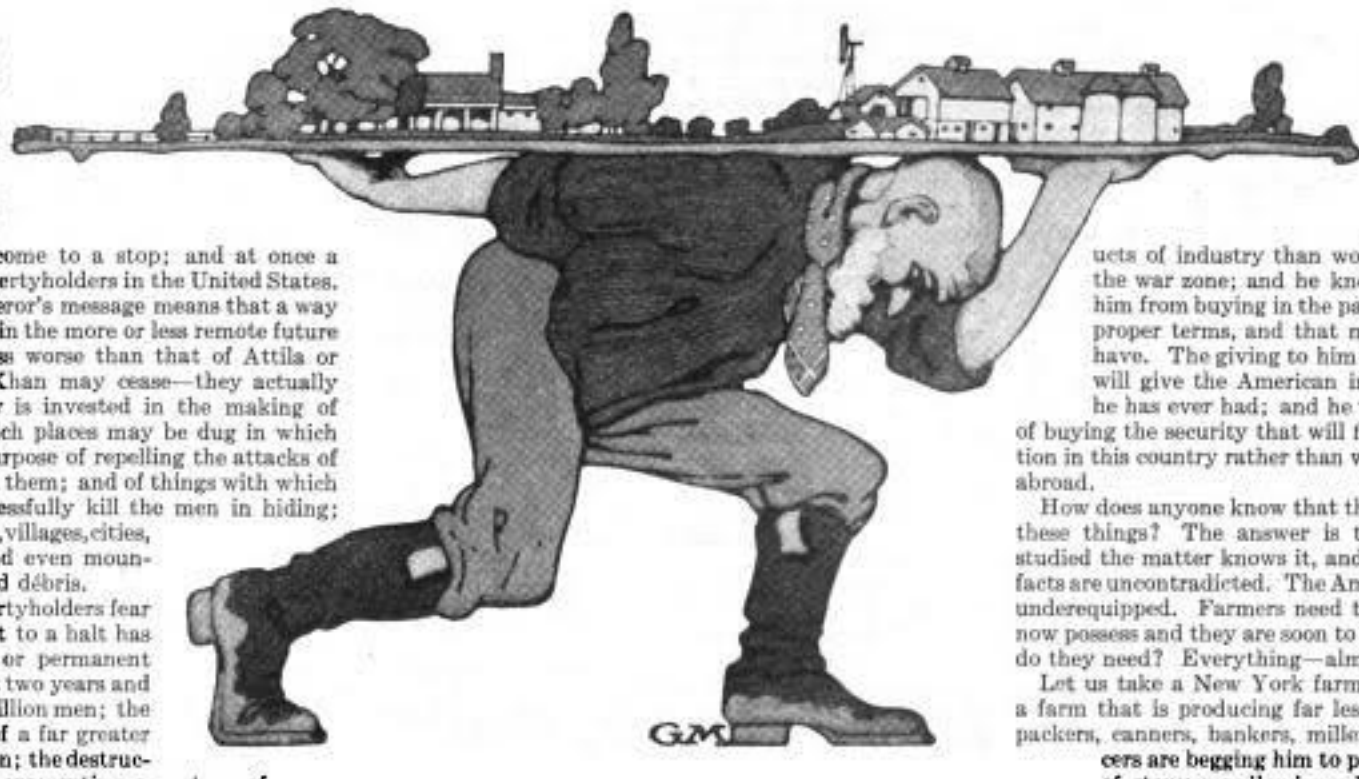
Why should not a prison be always a gate of opportunity to all its inmates? When civilized society takes bodily possession of a man—actually seizes his life and takes the direction of it wholly out of his hands, because he has been directing it badly—why should it not always systematically and intelligently try to find out what he is really good for, and get him at it?

Society cannot be said to make such an attempt. Mostly it subjects him to a rigidly prescribed, uniform, repressive regimen that is as far from discovering and encouraging any budlet of talent—whether to write a book or drive a dray—as a regimen well could be.

Income-Tax Reflections

ACCORDING to the 1916 income-tax returns, Chicago and the adjacent territory contain nineteen fortunate individuals whose incomes exceed five hundred thousand dollars a year; in fact, the combined income of the fortunate nineteen was more than fifteen and a half million dollars.

The temptation to moralize upon a condition in which nineteen families receive an income of more than fifteen million dollars is obvious. One may point out that this income would support fifteen thousand average families.



But, for the moment, we prefer to moralize upon something else. Only four thousand persons out of the three millions or more in the revenue district paid tax on incomes from three thousand to four thousand dollars a year; and another four thousand, on incomes from four thousand to five thousand dollars.

Can it be possible that those figures accurately represent the number of persons in the Chicago district receiving net incomes of the amounts stated? We are constrained to doubt it, much as we hate to from one point of view.

It has been a standing feature of income-tax returns that nearly as many people report net incomes from five thousand to ten thousand as from three thousand to five thousand. True, the range is wider; but our surmise is that a great deal of net income under five thousand dollars simply does not get reported; and for roughly practical purposes the income tax begins above the five-thousand-dollar line.

After the War Orders, What?

By HERBERT QUICK

AS THIS is written, one of the strangest things ever known is taking place in New York. An emperor in Central Europe has sent out a message which remotely hints that the ultimate cataclasm of all the ages may possibly come to a stop; and at once a panic seizes certain propertyholders in the United States. They fear that the emperor's message means that a way may possibly be opened in the more or less remote future by which destructiveness worse than that of Attila or Hyder Ali or Jenghiz Khan may cease—they actually fear it! Their property is invested in the making of things by the use of which places may be dug in which men will hide for the purpose of repelling the attacks of other men seeking to kill them; and of things with which the attackers may successfully kill the men in hiding; things for blowing houses, villages, cities, farms, fields, forests, and even mountains, into fragments and débris.

This work these propertyholders fear may possibly be brought to a halt has resulted in the killing or permanent maiming, within the last two years and a half, of some sixteen million men; the infecting with diseases of a far greater number of men and women; the destruction of moral progress representing a century of slow gains; the wasting of hundreds of thousands of square miles of farms, villages and cities, formerly the dwelling places of fifty or sixty millions of the most peaceful and best-civilized of human beings; and the wiping out of four or five small nations. And yet, because the progress of the most awful catastrophe in human history may possibly be halted within a measurable time, panic seizes the holders of the stocks in hundreds of American corporations, and we hear of suicides, deaths by apoplexy on the floor of the Stock Exchange, and the wiping out of fortunes in a day.

The War Baby steps out of its cradle and pulls down the house.

One might think that there is nothing for the American factory to do but make things for the war; and yet the average American farm is sorely in need of the products of those very factories. The American farmer is and always has been the best customer of the American manufacturer, the American banker, the American merchant and the American railroad; but he is only half as good a customer as he should be. He will, in the near future—the very near future—enter upon a rapid development of his business; and in doing so will place on the order books of the industries of America three dollars of peace orders for every dollar of the war orders which will cease when the nations faint and call the swoon peace.

Farmers Cramped for Capital

WHY has the American farmer not developed this business in the past? Because he has not been properly financed. What prospect is there that he will be better financed in the future? The prospect held out by the Federal Farm Loan Act now rapidly going into operation, under which a governmentally supervised system of finance for the farmer is set up alongside the governmentally supervised system of finance for the merchant, manufacturer and city dweller generally. What reason is there for thinking that this will accomplish for American industries the results hinted at above? Perhaps we had better examine the latter question somewhat more in detail.

A little more than a quarter of a century ago there lay in the Territory of Oklahoma enough good agricultural land to make a smallish state, all unoccupied and as bare as Nature made it. It was that part of the present State of Oklahoma which, as distinguished from the old Indian Territory, was called Oklahoma Territory. On a certain day it was to be opened to settlers. It was the most dramatic showing forth ever seen of the value of the business growing out of supplying the wants of a community of farmers.

The prospective farmers lined up along the Kansas line and waited for the drop of the hat, or whatever other signal was given for the great rush. Lined up with them were as many more who sought to establish themselves as merchants, bankers, doctors, lawyers, dentists, brokers, real-estate dealers, gamblers, parasites—every walk of life and most of its runnings and creepings being represented. And when the time came for the start away they streamed across the prairie, a rush line a hundred miles long—on horseback, in vehicles, on foot—the strong, the swift and the cunning and provident drawing away from the ruck, who labored along, in dust, disgust and despair, to take what was left after the first comers were served.

The business site in Oklahoma City pointed out to me as the best is now owned by the druggist who located it as the reward of his speed in the Great Rush—and Oklahoma City is a real city now, with a powerful business life, a great population, and everything that any great city possesses. It is a greater city than was Athens in its Periclean Age—greater in everything that makes for better human life. Like Athens it is a commercial city; but, unlike the glory that was Greece, its greatness is based on a recognition of the principle of democracy—I know what some might say about that, but I mean real democracy. It is only one of a galaxy of cities in Oklahoma, all of them resting at bottom on the farmers of that state.

The development of rural life, the supplying of the needs of the farmers, has sown cities over the prairies, not only of Oklahoma but of the whole nation. When a county or so in South Dakota was opened up a few years ago towns a hundred miles off felt the new blood of the farmer trade pulsing through the veins of business, and feel it still; while new towns sprang into being in a month, most of which have been prosperous municipalities ever since. Seattle forged ahead of her competitors when she appropriated the business of being the home port of Alaska, with a new population that was insignificant compared with the settled farm population of any good congressional district in the States. The business of financing the operations of a million new farms would be felt to the very ends of the finger tips of American business life.

Suppose there was discovered a farm population of fifteen or twenty millions, needing everything a farmer must have, which could be annexed to American business—even though these people were at the ends of the earth—how would American business feel about the opportunity? It would go wild with excitement. It would call together its greatest financiers and captains of industry, and give uncounted millions to the task of getting this new business. But suppose that these fifteen or twenty million farmers were here in the United States, all about us, scattered from Maine to California and from Key West to Pembina?

The business would be worth ten times as much as if they were in China or Peru; for they would be farmers whose needs are already understood, living along our own railroads, customers already of our banks, shops and factories; men who pay their bills and to serve whom no study is necessary. But there need be no "suppose" about it. There is the equivalent right here at home of the business needs of from ten to twenty million farmer people, unsupplied, well worked out economically, ready to be adequately financed, and absolutely new as a factor in the commercial, manufacturing and financial world. The business to take the place of the war orders is here, and American business should recognize that fact, instead of going wild over the news of peace offers which are impossible of acceptance. For once the American business man should force himself to see the thing that is obvious. He has gone off on enough wild-goose chases.

The American farmer needs more of the products of industry than would rebuild every ruin in the war zone; and he knows it. All that has kept him from buying in the past is lack of money on the proper terms, and that money he is now going to have. The giving to him of this huge line of credit will give the American investor the best security he has ever had; and he will recognize the wisdom of buying the security that will finance peace and production in this country rather than war, or even development, abroad.

How does anyone know that the American farmer needs these things? The answer is that everybody who has studied the matter knows it, and has long known it. The facts are uncontradicted. The American farm is wretchedly underequipped. Farmers need twice the equipment they now possess and they are soon to be ready to buy it. What do they need? Everything—almost.

Let us take a New York farmer, for instance. He has a farm that is producing far less than it should of what packers, canners, bankers, millers, wool dealers and grocers are begging him to produce. A hundred acres of stony woodland needs a woven-wire fence to keep dogs out, and sheep and hogs in. As permanent pasture it is better than the range lands of the West; but he has never had the money to put it to proper use. A Utah farmer said to the Farm Loan Board in Salt Lake City: "I have never had the money so I could farm as well as I know how." So of the average New York farmer. He knows that practically all his arable land needs lime or underdrainage, or both. He will be in the market within a few years for draintile, shovels, picks, ditching machinery, fencing, building materials of all sorts, nails, lumber, roofing, cement, hardware and glass.

When There is Money Enough for All

THERE are a thousand like him within the trade territory of his little town. They will develop greater need of short-time credit at the local banks by reason of being supplied with long-time credit through the Federal Land Bank of the district. They will buy more agricultural machinery of all kinds. They will feel safe in doing these things because they know that the use of money on long-time amortized loans will enable them not only to pay the interest and dues on the loans but also to add from two to five hundred dollars a year each to their labor incomes. This addition to the labor incomes of the thousand farmers will be equivalent to a new pay roll of from a quarter of a million to half a million dollars a year. There is not a single one of the old states of this Union that does not possess its own Oklahoma waiting for the opening.

The American business man should study the purposes for which money may be borrowed under the Federal Farm Loan Act. The first purpose is for the funding or refunding of outstanding indebtedness; the second is for the buying of land by the farmer who has none, or the purchase of more by the farmer who has too little—and of these latter there are thousands. The amount of the loan is so limited that the danger of buying land in undesirable large tracts and holding it for speculative purposes does not seem to exist. The speculator does not cultivate his lands; and the Act gives its benefits only to those who are engaged or about to become engaged in the cultivation of the land to be mortgaged. Its financial pressure will be exerted always, therefore, in the direction of making the farmer a better customer for the American business man.

There has long been a strong moral and intellectual pressure in the same direction. If the farmers of the country had been able last year to accept the advice of the farm papers, the agricultural extension workers, the county agents, the farmers' institute lecturers, and of rural economists generally, they would have swamped the business world with orders. They did not accept this advice—not because they were not conscious of its correctness, but because they had not the money to buy, and could not get it at living interest rates or for a time sufficiently long to enable the investment to pay itself.

Thousands of farms in the United States have been studied for the purpose of determining how much equipment in the forms of power, buildings, machinery, live stock, fertilizers, fencing, and the like, is essential in order that the farmer may earn the best possible income. The business man figuring on the coming rush in farm business

Digitized by Google

may be interested in the methods used in these calculations. The economist first values the land; then the buildings; then the other property used in production on the farm. He takes no account of the products contributed to the family in the form of things consumed by the family, such as house rent, poultry products, vegetables, fruit, and the like—not because they are unimportant, but because to reckon them in would complicate the problem. He charges the farm with interest on the value of the plant, including the land, with taxes, upkeep, depreciation, and the like; credits it with everything sold; and after subtracting the one from the other, and paying the hired farm labor, he calls the remainder the farmer's "labor income."

If he fails to earn interest on his investment at the accepted rate, which in these calculations is usually five per cent, the farmer makes a "minus income"—that is, he gets less than nothing. If his investment is large he may live pretty well on a minus income; but he could do better by selling out and lending the money received—unless mayhap the house rent and the fruit, vegetables, eggs, butter and other truck consumed by the family make up a part or all of the deficit in labor income.

Now fix your eyes on this term "labor income" and note this: Every survey of farms hitherto made shows that there is an optimum ratio between equipment and the whole value of the plant. These investigations show that the money invested on a fully equipped and not over-equipped farm not only pays interest at five per cent on the money necessary fully to equip it but adds to the labor income of the farmer. The facts prove that if he can get money at five per cent, or even six per cent, and spend it in the proper equipment, he will make a profit on his debt.

The farmers know this; and they are preparing to take advantage of the new Federal Farm Loan Act by thousands in order that they may carry out the projects recommended to them by their own experience and urged on them these many years by economists and by the farm press. Every farmer will soon be asking himself whether his ratio of equipment to total property is correct. He may not think of it as the optimum ratio, but that will be the thing he will be feeling about for all the same.

Raw Land at Low Prices

HITHERTO we have been discussing the needs of the six million or so farms now existing in the United States; but the farms that are yearning to be born are quite as important. A survey of the agriculture of the whole country discloses so much undeveloped territory, splendidly adapted to agricultural uses and held out of use by one form or another of hindrance, that the feeling is inevitable that in building great irrigation works for the reclamation of arid tracts we have been far ahead of the actual needs of the agriculture of the nation. Why, one thinks, build expensive dams and entice people from the humid regions, the farming of which they understand, when there is no need of any such project? There may be good reasons, but the scarcity of farming lands is surely not one of them. There are more good acres in New England that ought to be farmed, and are left uncultivated, than in all the reclamation projects of the United States.

Outside the Corn Belt every state has abundant opportunity for the opening up of more farms. The Federal Farm Loan Act is apparently perfectly adapted to the financing of these. Much of this land is covered with stumps and brush—an area larger than all the Corn Belt thus awaits settlement. It is already supplied with railroads, towns, markets and settled government. No pioneering in the old sense is called for. The great landowners have, as a rule, acquired these tracts for purposes other than agricultural—purposes that have, in the main, been accomplished. They are ready to sell; and they must sell at low prices, because the character of the land is such that its value is low. It is low because it is hard to clear and the men who go upon it will be home-makers rather than money-makers, and will have to wait and work for the profits which alone justify high prices for an acre of raw land.

Both the landowners and their prospective land buyers are looking to the Federal Farm Loan Act for the financing of the purchase. The owner will improve the land sufficiently to be able to sell ready-made farms that are so far cleared as to enable the buyer to make a living. This means buildings, livestock, fencing and clearing, which will represent the first ten years' work in the days of our fathers in New York, Pennsylvania or Ohio, and will constitute the irreducible minimum that a farmer of the present day will accept as a farm home.

On such a farm the buyer will obtain a mortgage equal to half its value as appraised by a government expert, and turn the money over to the landowner. He will give a second mortgage if necessary for a part or the whole of the balance. When he has cleared and reclaimed twenty acres more he will return to the Federal Land Bank for a larger loan on a new appraisal. Thus, the former farm hand or tenant farmer or factory laborer will be transformed into a farmer who is frequently in the market for more short-time money from the banks, more manufactured articles, more advertised goods, more musical instruments, books, papers, textiles, and merchandise in general.

I know a Western college professor who bought three or four abandoned Connecticut farms and developed them as orchards. He told me that for a generation, so far as he could learn, those farms had not paid the New York, New Haven & Hartford Railroad, near which they are situated, ten dollars a year of originated traffic. Three years ago they were originating freight by the trainload and were responsible for hundreds of dollars of passenger traffic a year. The orchard business, I believe, may be easily overdone; but, so far as general farming is concerned, every cut-over district in the nation is capable of some such transformation as this.

The cut-over lands of the United States need for use in their reclamation more explosives than the munitions factories can make; more machinery than can be absorbed by all the agriculture of Russia, now in the world's eye as a great coming market; more building materials than ruined Belgium, Northern France, Poland, Serbia, Montenegro and Rumania combined—and our farmers can pay for them. Moreover, there is no need for any struggle in order to get the business. It is our business and cannot be diverted from our industries. What will the establishment of a single farm in the cut-over regions mean for the business of the United States? First, railroad fares in looking the land up. Then more railroad revenues in going to it with the household goods and the live stock.

After that, or preceding it, will come a demand for all the metals, lumber, stone, brick and cement which go into buildings. This means more railroad business. Then comes the fencing, with its demand for steel and lumber. Immediately the farm begins to originate all sorts of business, incoming and outgoing. The home must be furnished. Stump-pulling machinery and explosives must be bought for further clearing. Soon the wheat, cotton, wool, milk, butter, eggs, fruit, pork, beef and forest products begin to move from the farm. The swamp must be drained. Better cattle, hogs and poultry are brought in. That farm has for the first time a bank account, with deposits and borrowings. The dead forest has become alive.

Step-by-Step Financing of Farms

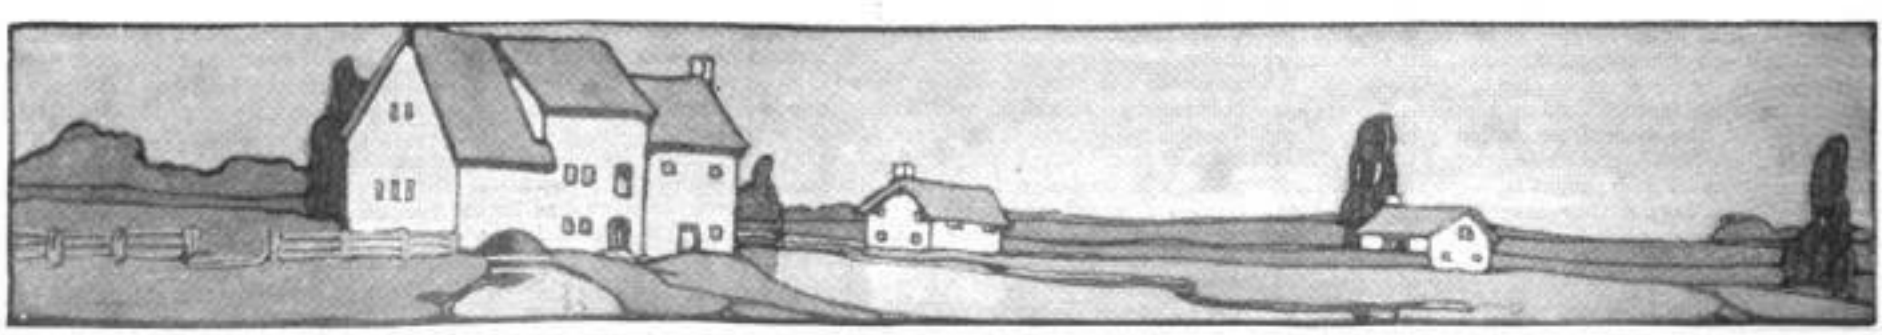
THIS is not a dream; it is just what the people are preparing to do. I could list fifty localities in all sections of the United States in which this work of speeding up the making of the cut-over lands into farms is actually under way, preparatory to the establishment of the Federal Land Banks. Such lands are best financed by the step-by-step system to which the Federal Farm Loan system is adapted. Nothing in the plan is new or untried, and it calls for loans that are perfectly safe. Wherever it has been tried the march of farming improvement has gone on under deforestation conditions with a rush that is unprecedented in changing stump lands to fields. Nor is the establishment of new farms under the impetus of long-time financing confined to the cut-over lands. Old wheat, cotton and tobacco farms are expecting to abandon the one-crop system and adopt safer and more diversified farming. Lands that have become unfit for intensive cultivation through agricultural abuse are to be fenced and made into pastures under careful supervision.

Farmers in the old and rich farming states will build houses for their sons and cut the farm in two or three. Wherever productive improvements have been put off from year to year because repayment of the loan in five years' time was dangerously difficult, the forty-year amortized loan has set the farmer scratching his head and studying. These scratchings and studyings have already resulted in the formation of hundreds and hundreds of National Farm Loan Associations for the borrowing of money on first mortgage under the Federal Farm Loan Act. The greatest buying campaign in manufactured goods this country ever saw is preparing to get under way. Peace is preparing to outdo war in stimulating industry. The quickened pulse of healthful exertion is about to supplant the fevered palpitation of battle.

I do not know how many billion dollars have been furnished by the investors of the United States to the Powers engaged in the present war; but they amount to a staggering sum. These loans were necessary, too, if we were to continue trading with these governments and these peoples. They had not the money with which to buy of us what they needed in munitions, *matériel* of war, and especially foodstuffs and cotton; and if we sold these things to them, as we wished to do, they had to be sold on credit. In these dealings, and the redundant industrial prosperity of our own domestic business, our moneyed classes have accumulated enormous funds of money, much of which is said to be seeking investment in safe and conservative loans. A word of caution has been spoken by the Federal Reserve Board against the too great extension of certain forms of foreign credit.

Safe and Sound Home Securities

THERE will be no need of going abroad for safe and sound securities in the future. The farmers of the United States will offer to the investors of the United States and the world from now on a constantly increasing volume of bonds, issued under government supervision and based on first mortgages, that should take the place of those securities for which one has to go far afield. They will be eagerly sought for by investors—if one may judge by indications that are multiplying at this writing—on their merits, and without any thought on the part of investors as to the public benefits and the stimulus to American industry pointed out in this article; but on a basis of public policy no issue of securities ever had a better claim on American business.



The financing of the buying powers and the buying desires of the American farmer is a safer proposition than the financing of England, France, Italy and Russia in this war. It will develop more business for American factories, banks, merchants and railroads. It will operate to restore the balance between urban and rural life in the United States and thus make for better business forever; while the foreign business has no permanent beneficent effect on American life, but rather tends to stimulate artificial and temporary conditions, which can be normalized only through more or less violent readjustments, like stock-market panics.

The peace business of our farmers, like the war business of Europe, cannot be done on a cash basis. In both cases it must be done on credit. The bonds of the American farmer will soon go on the market alongside the bonds of the European governments. As farsighted financiers, the investors of America should have little hesitation in choosing between them. By investing in the American farm-loan bonds they will fertilize the fields of their own business; while the foreign loan, though necessary perhaps, can operate in the end, like the growing and selling of grain from a farm, only to mine and carry off the soil of American industry.

The field to be developed is almost incomprehensible in its immensity, and lies in the already-covered trade territory of every American manufacturer, merchant, bank and railroad. Maine will call for money to make her a second Wisconsin in staple farming. The great farms of Aroostook County are but the advance guard of a solid agriculture only in its infancy. Maine is a frontier state in part, with the agricultural problems and needs of the frontier; but in the older parts of the state, and in all the rest of New England, New York and Pennsylvania, there is an immense industrial population seeking locations on farms, and plenty of undeveloped lands adapted to grazing, fruit farming, truck and poultry.

One Massachusetts county, through a good county farm bureau, has increased its annual farm production by more than a million dollars a year within the past five years. Every other New England county can do better. All rural New England will soon ask to be financed to a point that will make it master of its own food supply. This is

(Concluded on Page 26)

"We pick them for *you*!"

All these fresh delicious vegetables we select as carefully as if they were intended for one table alone—and that one, *yours*. You could spend all day in marketing, and another day in preparing and cooking what you buy, yet not produce such a perfectly-balanced food-combination as

Campbell's Vegetable Soup

It combines appetizing flavor with wholesome and substantial nourishment.

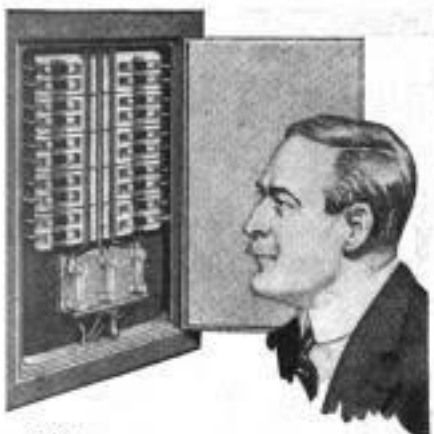
Think of fifteen different vegetables in one soup! Selected white potatoes from Maine, the best Jersey "sweets," fine rutabaga turnips from Canada, choice carrots of the French type—Chantenay, succulent green okra, "baby" lima beans, small peas, tomatoes, celery, Dutch cabbage, and tender corn are all included in this tempting combination.

We add rice, barley, a little delicate leek and onion, fresh herbs, fine spices, and just a touch of snappy red peppers. And we blend all these with a strong nourishing beef stock and a sprinkling of "alphabet" macaroni. Every ingredient lends its own distinctive quality of nutrition or palatable savor.

A good soup once a day at least is positively necessary to the properly-balanced diet.

All authorities recognize this fact.

Why should you ever be without a tasty and strengthening soup-course—or why should you ever bother with home-made soup—when you can always have a supply of this satisfying Campbell "kind" at hand on your pantry shelf?



Asparagus	Clam Chowder	Pea
Beef	Consommé	Pepper Pot
Bouillon	Julienne	Printanier
Celery	Mock Turtle	Tomato
Chicken	Mulligatawny	Tomato-Okra
Chicken-Gumbo (Okra)	Mutton	Vegetable
Clam Bouillon	Ox Tail	Vermicelli-Tomato

"Last year we spent $385 for Fuses

"I know it's insurance—protection against overloads, short-circuits and the effect of lightning discharges

"But now we can buy that insurance cheaper"

ECONOMY renewable FUSES

reduce this cost wherever electricity is used for power, light or heat.

They save 80% of the annual fuse expense because they can be used over and over again.

When an Economy Fuse has opened the circuit to prevent an excessive current flow, a new "DROP OUT" renewal link, accurately rated, is inserted in a few moments—by anyone. This renews the fuse to its original efficiency—makes it ready again to protect the electric circuit against injury.

The "Drop Out" renewal links are accurately rated and plainly marked. Safety is assured under all conditions. *And the renewable feature saves 80% of fuse maintenance expense.*

Economy renewable Fuses are made in all commercial capacities (either ferrule or knife-blade type, according to your terminal connections). 3 to 1,000 amperes in both 250 and 600 volts.

Economy Fuses have been carefully investigated by the U. S. Government Bureau of Standards.

Write for booklet giving further details and our sample offer.

Economy Fuse & Mfg. Co.
Kinzie & Orleans Sts., Chicago, Ill.

(Concluded from Page 24)

quite as much a manufacturing as a farming problem, since wages are determined in the long run by cost of living.

New York, Pennsylvania, Maryland, the Virginias—all these need money for farm development along lines that have been worked out by the farm bureaus and the agricultural experts. They have not the money to farm as well as they know how. New Jersey has half the area of Denmark, and of this about half is only half tilled; and much of it is an actual wilderness that is known to be good farming land if properly developed.

Plenty of Cheap Land

Nowhere in the world, so far as I know, is so much good land to be found at such low prices situated near such markets, unless it be in the wildernesses surrounding Washington and Baltimore, or in the neglected opportunities of Maine and Massachusetts. All up and down the Appalachian regions are huge holdings of land just passing from lumbering to pasturage and general farming.

Some of these are as good grazing lands as those at the foot of the Juras, on which tenants annually pay three times—in rent as pastures for pure-bred Percherons—what this Appalachian land costs.

In the Carolinas the world's greatest acre-yields of corn have been grown; but cotton is still king and for a long time it must be.

Yet there the demand for loans for the requirements of a better system of farming is keen and in most cases intelligent. The same is true of the Gulf States and Tennessee. Meat and dairy products are in the minds of these farmers, with enough in the garden, the orchard, the pork barrel and the corn crib to support the family in spite of the boll weevil. The agricultural advisers know that cotton must be the cash crop; and they are saying less and less about diversified farming and more and more about "safe farming"—which means practically the same thing, but is less likely to lead the farmer too far afield from known methods.

In Tennessee the great Cumberland Plateau was once supposed not to be worth farming, but it needs only lime and good culture. And the splendid farms in the midst of the "barrens" are proving that opportunity is still present in the "Volunteer State."

Kentucky is stirring with discussion of the need for farm loans. Ohio and Indiana are not without their undeveloped regions and their areas of scanty money supply; while Michigan, Wisconsin and Minnesota have as much undeveloped as developed farming land. Southern Illinois needs loans; and, scattered about through the Corn Belt, Illinois, Iowa, Wisconsin, Ohio, Indiana, Missouri, Minnesota, South Dakota, Nebraska and Kansas are centers of interest foreshadowing an active demand for loans if they can be obtained at five per cent or less.

Louisiana and Arkansas are clamorous for loans, many of which will be made to refund mortgages now carried by their banks to the prejudice of the commercial supply of cash.

Texas has everything that any other state possesses, and some things peculiarly Texan—but she has more land looking to the new system for development than any other four states. In all the semiarid region farming is getting on a stable basis. Crops have been found that will mature in spite of drought. Proper farming systems are developed or developing. Live stock is returning to the ranges—only, instead of being as large as townships or counties, the holdings are moderate-sized ranches.

Wherever this safe type of farming may be conservatively financed—and the operations of the great insurance companies have shown that these areas are immense—farm loans will be called for, which may be granted with perfect safety for the financing of active demands for manufactured goods, with all their inevitable stimulus to finance and transportation.

This statement applies to all that immense region lying between the one hundredth meridian and the Rocky Mountains, resting on Texas and New Mexico, and topping out with Montana and North Dakota. Thence, all through the intermountain empire lie the regions of small farms and great ranches. In nearly every irrigated region the farmers are already organized to call for loans on land far more valuable by the acre than most of the farms of the highly developed Ohio Valley. If a plan can be worked out for loaning to holders of irrigated land who have Reclamation Service liens on their lands—loaned with perfect safety—they, too, will call upon this system to supply that lack of working capital from which most of them have been suffering ever since they took up their lands. And it looks as if two Government bureaus ought to be able to adjust matters so as to accommodate an important agriculture, and one with peculiarly insistent claims on the Government.

The Clamor for Funds

The states of the Pacific Coast are clamorous for money. They need it in larger amounts to the acre on much of their land than other farmers in the United States; and where they can show the values justifying loans they may be made with as complete safety as in Iowa or Ohio. I am rather glad to say that, for the present, we need not consider the agricultural demands of Alaska or our insular possessions.

I am glad because in continental United States we have a rather large order. In all these states no class of loans will be considered that are not perfectly safe. In none of them, so far as the writer remembers, did the Federal Farm Loan Board fail to find that the great life-insurance companies or the most conservative loan companies of the Northern States are already making farm loans. There is really very little of the territory that can be said to be "unproved" as loaning territory.

Every farmer borrowing will secure his loan by a first mortgage on two dollars' worth of land to a dollar of loan; and where improvements are considered the value of permanent insured improvements must be five dollars to one. In regions of speculative or overinflated values the loan will be kept within the margin of safety by that provision of the law which makes the productive capacity of the land a principal consideration in appraising. Every farm offered for security must be appraised twice—once by a loan committee of the farmers themselves, and again by an independent appraiser sent out by the Federal Farm Loan Bureau, presumably a loan expert.

The investing public comes in on these loans by the opportunity that will be offered them to buy the Federal Farm Loan bonds. These bonds will be secured by these conservatively placed farm mortgages, dollar for dollar. They will be supported by a Government supervision of both loan associations and land banks, and by the stocks of both and the double liability on the stock of the farm-loan associations—this last item amounting to a primary investment of one dollar for every twenty dollars of loan, and a secondary liability of the same amount on the stock of the local associations.

Each of the twelve Federal Land Banks guarantees its own bonds, principal and interest, and each of the twelve land banks is liable on the farm-loan bonds of every other land bank.

Financing New Business

The bonds will be engraved and printed by the Government, will be protected against counterfeiting by the Secret Service of the United States, and are declared to be instrumentalities of the Government and exempt from all taxation—local, county, municipal, state and national—including the income derived from them. They will, therefore, rank with Government bonds as securities; and should rank higher than many Government bonds, since each of them is secured by every farm mortgage in the system.

They should ultimately sell at as low a rate, for instance, as the Philippine bonds; for no one is likely to rank the obligations of the Philippine Insular Government, with no guaranty by the United States, as better than the farm-mortgage bonds of the Federal Farm Loan system. As a matter of fact, land bonds in Germany and other foreign countries have for many years sold at a rate of interest about as low as and sometimes lower than the bonds of their respective governments. At first, of course, they sell at a rate somewhat higher than the ultimate rate predicted here.

A Buying Campaign

It is not, however, as an opportunity for the investor or the farmer that I am here considering this new system. I am presenting it as a plan for financing the greatest volume of new business for the American industrial world ever offered to a people. The farming world of the greatest agricultural people on earth will be issuing governmentally supervised securities to get the money for a buying campaign hitherto unprecedented.

It will be a buying campaign, not for luxuries, not for unproved things, but for instruments of production that will swell high the tide of commodities in future years; for the carrying out, in the main, of projects of production which have been shown advisable by both farm experience and the researches of experts and specialists.

And, no matter how great this investment may become, it will never be the cause of such panics and scares as those which, as this is written, convulse our boards of trade. A man must be indeed a bear on the United States who doubts its safety—and that sort of bear always goes broke.

California Raisin Pie

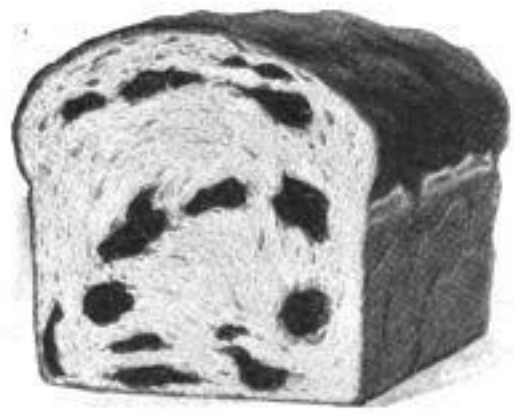
The Energy-Dessert

For Down-Town Lunches, or At Home

In these high-pressure days when wits are needed, we are eating lighter midday lunches. Heavy meals stupefy. Efficiency in food means efficiency in business.

Lunch rooms and restaurants are featuring dishes that provide vitalizing food values in concentrated forms. Note how they are serving raisins.

Raisins are 76% carbohydrate—sugar in the form of fructose, energizing, predigested. So the good that comes from raisins is ready for its work in the body long before that from ordinary foods.



Sun-Maid Package Raisins for Home-Baked California Raisin Pie and other uses.

Mother, treat the family to this delicious California Raisin Pie, made with **Sun-Maid Raisins.** It's an energizing food for active children—both *good* and *good for them.* You can buy these raisins in fresh packages from any grocer. Order them today.

California Raisin Pie Recipe. 1 cup Sun-Maid Seeded Raisins; 1 cup cold water; 1 tablespoon sugar; 1 tablespoon cornstarch; 1 level teaspoon salt.

Wash the raisins, put in saucepan with cold water, bring slowly to a boil. Add sugar, salt and cornstarch, which has been mixed with a little cold water. Boil three minutes. Pour into pie tin, which has been lined with crust, while hot. Cover and brush with cold milk. Bake in oven with quick bottom heat. Lemon flavor may be added if desired.

California RAISIN BREAD

Made with SUN-MAID Raisins

For two years we have advertised that good bakers everywhere are making Raisin Bread after our prize formula which includes Sun-Maid Raisins.

The use of Sun-Maid Raisins in Raisin Bread during that period has doubled nearly six times.

Thus people have shown that they like California Raisin Bread better than any other.

Ask your baker today for a loaf to try. You too will want this bread on your table daily.

Write for our beautiful free recipe book describing scores of ways to serve healthful raisins.

San-Tox

The Face which guides to Service

Service is today's watchword. Service is the watchword of our San-Tox Nurse—service by the druggist in whose store she is—service in the quality of every San-Tox preparation sold.

Is not the San-Tox druggist's offer to return the money on any San-Tox preparation which fails to give utter satisfaction a service such as you would have? Is not such supreme confidence in San-Tox itself an *added* service to you?

For does it not indicate one whose ideals are to be relied upon in every business dealing you have with him?

Such is the "service of purity"—symbolized by the San-Tox Nurse at each San-Tox druggist's window. And that purity speaks in the singular effectiveness of each San-Tox preparation.

All the cleansing wholesomeness possible to the *best* tooth paste is yours with San-Tox Tooth Paste.

All the soothing, beard-softening quality possible to shaving lather is yours with San-Tox Shaving Cream.

And San-Tox Shaving Lotion has a tonic, cool refreshment peculiar to itself alone; San-Tox After-Shave Talcum a smooth, perfecting completeness characteristic of San-Tox purity throughout the whole wide range of San-Tox preparations.

"San-Tox for Purity"—a purity which cannot be cut in price for it will not be cut in quality.

THIS is DIMUNETTE, one quarter actual size. Fully protected by patents, easy to operate, extremely light in weight, of handsome brushed bronze effect and solid construction. It gives all the protection of high priced machines, and will last forever.

$7.50

IN CANADA $10.

How many check-thieves handle *your* checks?

WHAT happens to your checks between the time you sign them and the time the bank returns them? Do you know the character of all the employes of the firms who receive your checks? Do you know that endorsing your check over to a third party is not an uncommon practice? Who finally cashes your checks? Do you know that mail pouches travelling between banks en-route for collection have been stolen, broken open and their contents scattered broadcast?

Think of these things and then think that for $7.50 invested in a Dimunette you can at last get the same kind of protection that the banks themselves employ—the kind that is endorsed by the American Bankers Association—Standard Protection—a process that breaks the paper and forces acid-proof ink into the fibre—for $7.50! Think of it! Can you afford *not* to think of it?

If you have the slightest difficulty in securing the Dimunette of your stationer or office supply dealer, send check, money order or draft to us and we will gladly supply you, charges prepaid.

Waiting in the Wilderness—By Enos Mills

THEY were a pair of hairy woodpeckers apparently engaged in examining a dead aspen. As it was nesting time I lingered to watch them. After taking a number of grubs from beneath the bark of the tree the birds centered their woodpecking work at one spot.

Mrs. Woodpecker pecked a number of tiny holes or dots, forming a circle about two inches in diameter. Then she pecked and hammered away within this circle. Presently this space began to take on the form of a doorway or entrance hole to a nest. The nesting hole was about six feet above the ground, in the trunk of a fourteen-inch aspen. Chips and broken bits flew. The birds worked rapidly, one at a time. While Mrs. Woodpecker worked, her mate watched near by and tried two or three times to take a hand, but she thrust him aside and kept on pecking and hammering until at last she grew tired and his turn came. After three hours a sizable impression was made in the tree, and both birds flew away into the aspen grove. I waited half an hour, but they did not come back. After spending more than an hour looking over a beaver house on the bank of a brook, distant a stone's throw, I returned to the aspen, but the woodpeckers were still away.

The aspen grove in which these birds were working stood within the seclusion of a mountain forest. By it ran the brook from west to east. To the north of the brook, behind the aspen grove, a spruce forest covered the slope. On the south of the brook a pine woods stretched away. Just below the grove, between the pine woods and the brook, was a grassy opening with a pile of bowlders. Through the grove daily passed numerous wild folk besides those who lived in and near it.

Busy was the life in the woods. I had frequent glimpses of wild-life folk, an occasional view of a one-act play in which any number of performers took lively part. Among the birds and small animals there were comedies, courtships, feasts, fights and frolics.

Close to me at one time a weasel, aggressive as a lion, killed a number of mice; and at another time I saw a weasel kill a chipmunk. All these things took place in a bit of the wild across which a primitive man could have hurled his spear.

The unexpected often happened. The hours never dragged; they were enlivened by constant incidents and episodes. Again and again I enjoyed this primeval, poetic place for hours, while I sat unmoved and watchful in the scene. Often I lay on a log or on the ground, or hid in the bushes, or sometimes simply stood like a stump. Wherever I might be, without moving I let ants crawl over me and insects bite me as they would. Frequently there was a shower of rain. When not accompanied by wind or lightning the rain had a softening, subduing effect upon all of the already quiet forest sounds.

The Work of Eleven Days

Two days after I had first observed them, I found the woodpecker homemakers working industriously in the hole, which was now more than three inches deep. Only a part of the chips flew out of the hole as they were cut; the rest were swept out from time to time by Mr. Woodpecker. This feat he performed by leaning back and turning his head quickly, his bill acting as the broom.

Woodpeckers often select the aspen for a nesting site, probably because of its soft, easily worked wood. Frequently they take dead, partly decayed trees, which are most tractable for nest making and are often filled with grubs, ants and other woodpecker food.

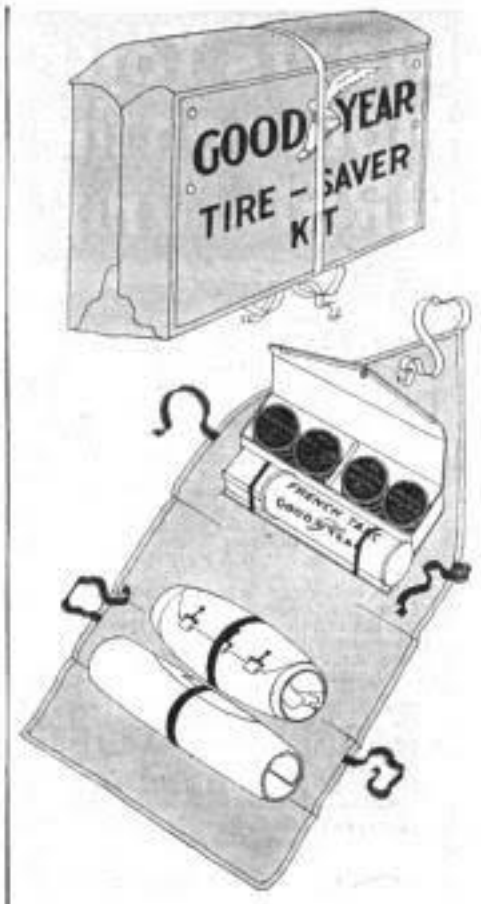
By the fifth day the woodpeckers had cut the hole to a depth of about seven inches. The workers continued at their task, and when it was finished the nest was of average size. Seven inches in the tree the entrance way curved downward into the trunk to a depth of about twelve inches, the lower section having a diameter of six inches. All this was the work of eleven days.

The woodpecker's nest is one of the cleanest and safest and probably the most continuously comfortable of all birds' nests. It keeps out the rain and excludes the extremes of cold and heat. It is perhaps less likely to be discovered by enemies than the nest of any other bird. Rarely does an accident befall it. What a strange, cunning place for young birds to grow up in! How interested they must be the first time they climb up and from the doorway peek into the strange wilderness world!

Successive Tenants of the Nest

Nearly a month elapsed before I was again in the aspen grove. When I tapped lightly on the woodpeckers' tree four agitated bills were thrust out of the doorway. But as they saw nothing to eat, the four red-topped youngsters withdrew their bills and, I suppose, settled back to the bottom of the nest. Presently one of the old birds appeared, and instantly bills receivable were again presented through the doorway. After feeding one of the youngsters the old bird eyed me for a moment with a peculiar look—suggesting curiosity, however, rather than fear. It flew away, and a moment later its mate arrived with a grub in its bill.

I missed the pleasure of seeing the young woodpeckers leave the nest and make their baby start in the wooded world. But one October day I was back in the grove and paused to watch, as usual, the continuous though ever-changing performances. While I was standing near the nest tree a busy chipmunk climbed up and peeped into the deserted woodpecker nest. Then he climbed up a few feet higher, went round the tree and came back to the nest. After several times thrusting in his head and forefeet—each time withdrawing quickly and retreating almost to the grass—he finally found courage and bravely entered. Out rushed a frightened field mouse. A few moments later the chipmunk thrust out his head, and with feet on the edge of the entrance hole he looked round like a young lion. The nest became his winter quarters. One day, a month later, I saw him again thrust his head from this adopted nest. Tracks in the snow at the foot of the tree showed that occasionally he came out.



The following May, when I called, a pair of bluebirds were striking and beating at the chipmunk, who was clinging to the tree trunk near the nest entrance. The chipmunk finally leaped off and retreated into the grove, with the birds in pursuit. Again and again I came to linger at my old place. During the summer five baby bluebirds were raised in this nest. After they were safely brought off and taken in charge by Mr. Bluebird, the mother bird again filled the nest with eggs.

I did not get round to the place again until summer was over. When I did return, the chipmunk who occupied it the previous year, or some chipmunk of the same species and about the same size, was in the nest. More likely it was the same one, for when I threw a peanut to him he made haste to pick it up—a trick he had learned during my visits the year previous.

The next spring when I first went into the grove I heard a wren singing with all his might. What busy, happy, aggressive and confiding little folk wrens are! I was glad when I found that Mr. and Mrs. Wren would keep house for the summer in the woodpecker nest. They had a robin for a near neighbor. The robin's nest was on the top of a high, broken pine stump. Often while I lay or stood watching the wrens a camp bird—the Rocky Mountain gray jay—came to see me, and plainly came with the hope that I should have a bite of something to offer. Of all the other birds that I have seen, none, on first sight, is so trustful of man as is the camp bird.

That winter and the following summer I often saw a tiny owl come out of the woodpeckers' old nest. A pair of owls, I think, must have been nesting there. Anyway, for more than a year it was their wooden-walled home.

That year a pair of woodpeckers, which I think were the same that I had watched two years before, had a nest in the upper

An Easy Mind Goes With It

Not one householder in a thousand ever requires the services of a policeman. Yet every householder gladly pays taxes to support a police department, purely for protection's sake. The comfort of such protection far outweighs the cost.

Not every motorist requires the services of a repairman on the road—few do, in fact. But every motorist feels the *possibility* of needing such services—the lurking fear of tire trouble rides in every car.

In every car, that is, which does not carry a Goodyear Tire-Saver Kit.

For in the cars that do carry this Kit, tire trouble is out of mind—the driver knows he is prepared for any emergency. He may never use the Kit, but he gets the comfort from its protection—day in and day out.

It is a handy package, this Kit—containing all essential first-aids-to-tires: tire putty, self-cure tube patches, inside and outside protection patches, cement, talc, friction tape, valve parts, pressure gauge and the like—complete and compact.

Its cost is trivial when you consider the peace of mind it brings.

Goodyear Tires, Heavy Tourist Tubes and "Tire Saver" Accessories are easy to get from Goodyear Service Station Dealers everywhere.

Starts Your Motor on the FIRST Turn!

No Matter How Cold the Weather

Think what a big advantage it is to you, in these days of low-grade gasoline, to be able to let your car stand for hours in the cold with the full assurance that it will always start on the *first* turn-over.

That is just what we guarantee the Imperial Primer to do on any car in the coldest weather. Drivers of old cars use the Imperial Primer the year 'round to insure quick starting. It is a *necessity*—not an accessory.

This little device is located on the dash of the car and sucks up gasoline from the main line and then sprays it into the manifold near the motor in the form of a fireable mixture which absolutely insures easy cold weather starting.

Imperial Primer

Sprays Vaporized, Fireable Gasoline Into the Manifold

This outfit consists of a small, substantially-made plunger pump, all necessary bolts, connections and tubing furnished, ready to mount on the dashboard of any car, any model. All connections made by the well-known Imperial Compression Couplings. No soldering, flaring or threading required except in the manifold.

Anyone at all "handy" with tools can install the Imperial Primer on his car in an hour's time. Simple but complete directions for installation and operation accompany each outfit.

Forget the old, "mussy," uncertain, time-killing way of trying to get your motor to start. Quit coaxing it with raw, lifeless gasoline. The Imperial Primer puts fireable mixture right at the firing points. Saves batteries—saves your self-starter.

10 Days' Free Trial—Ask Your Garage Man—Write for Free Booklet!

In case your garage man can't supply you, write direct to us. When ordering be sure to give diameter of main gas line tubing. You need an Imperial Primer. Try it! Used by thousands of satisfied motorists. On market 3 years. Never fails.

$5 For Complete Outfit

Imperial Brass Mfg. Co.

end of the aspen grove. I stood near their home a number of times. As they allowed me to approach more closely than other hairy woodpeckers I believe they were my former acquaintances. Though birds of this species often use the same nest for successive summers, or even occupy the abandoned nest of other woodpeckers, this pair had made a new one in a tree in which there was an abandoned nest.

In the upper end of the grove another pair of hairy woodpeckers had a nest. It was nearly twenty feet above the ground. Evidently this pair had used their nest for three summers in succession. A short distance down the brook I one day came upon an abandoned woodpecker nest—probably that of a sapsucker. It was not more than three feet above the ground. Two summers later it was occupied by a pair of hairy woodpeckers.

One day, hearing a rather alarmed "peek, peek," and thinking that something was happening to one of the woodpeckers, I made haste to the brook, where I saw two kingfishers looking upstream. The alarm cry of these birds is very like that of the hairy woodpecker. There on a log sat a mink, evidently the cause of the excitement. The view I had of these kingfishers' heads, as they stood up, reminded me of the heads of two football players. Returning from this inspection I was astonished to see a flicker alight on the side of the nest tree and take a peek into the doorway of the woodpecker nest. The arrival of one of the bird owners made him take a hurried leave.

There are three hundred and fifty known species of woodpeckers in the world. They are found nearly everywhere that there are trees, and in a few treeless places. I believe that there are no woodpeckers in Australia. Of the twenty-five species found in North America one of the smaller and more common is the hairy woodpecker. He is a valuable bird and saves many a tree from insect death.

The Rocky Mountain hairy woodpecker has a length of about nine inches. Although he is whitish beneath, with grayish legs, the general effect when he is at rest is blackish. The outer tail feathers are white tipped, and the wings show spots of white. Just above and below the eye is a narrow white stripe, and a narrow white-and-red stripe crosses the back of the head. The youngsters commonly have a reddish top.

The food of the hairy woodpecker consists of wood borers, spiders, moths, ants and occasionally berries. Though they summer and nest in high altitudes—often nearly eleven thousand feet above sea level—they commonly descend the mountains with the approach of winter and spend the cooler months among the foothills. The Rocky Mountain hairy woodpecker is not so fond of living in orchards and being near people as is his cousin the downy. Although human visitors to his home region do not annoy him he plainly enjoys the seclusion of pathless forests.

The Skunk Family Takes a Walk

These woodpeckers probably mate for life, and they are quietly devoted, enjoying each other's company without demonstration. For a week or two in late spring Mr. Hairy Woodpecker is noisy enough. He simply fills the woods with drumming, drumming.

He calls and calls merrily, with many a change of tone. Often it is keak-keak-keak-kick-kick, whit-whit-whit-whi-wi-wi-i-i-wi. But as soon as the white eggs are laid—there are from three to six—he does his full share of incubating them.

I was standing in an open space one day, watching the movements of a squirrel, when I chanced to see coming toward me Mrs. Skunk and three pretty little skunkies. The only time thus far that I had flinched and hastened from the scene was the day that a swarm of bees thought to light upon me. As these skunks came closer it looked as though I might move shortly. They were walking leisurely, apparently going to a definite place, and all carried their tails elevated at a decorative social angle. Naturally I did not wish to dispute their right to the trail. I held my ground from sheer will power. But they concluded to take a little passageway about six feet in front of me. I stood like a statue to watch them go by. In passing, Mrs. Skunk tilted her head and looked at me out of one eye, but, without changing her pace or saying anything to the children, kept on her way. Nothing happened, but never before did I borrow so much trouble in a few seconds. About thirty feet beyond me Mother Skunk paused and dug out a mouse.

Squirrels were about. One lived in the pines to the south of my watching place; another a short distance to the north. Both of these were Fremont squirrels. This little gray fellow is closely related to the Douglas squirrel of California. He is one of the smallest of the squirrel family. He is fiery, curious and wide-awake. He has as much courage and individuality to his inches as any animal I have ever seen. I often heard one of these squirrels as he clucked, chattered, or talked to himself. Occasionally he denounced with terrific violence a passing animal or intruder.

The first few days that I watched proceedings here the squirrel nearest to my station showed immense curiosity. He was unable to make out what I was about. One day he rushed at me and with a savage outburst threatened either to devour me or to kick me off his premises. As I remained silent and motionless he paused in astonishment. Then he backed up and eyed me eagerly. Again he tried bluff and denunciation. At last, doubtless wondering why I was not moving and whether I should remain long, he gave it up, climbed into his tree and proceeded with his own affairs.

On the day when a swarm of bees started to light upon me I made a lively retreat. This disturbed Mr. Squirrel. He broke out in volleys of peppery chatter that lasted for two or three minutes; then he subsided and sat looking at me. I imagined that he might be thinking or saying to himself, "Well, for the life of me, this is something I cannot understand!"

From dawn until dusk I once watched the activities of this fellow. Though he was sometimes temporarily out of sight I waited, wondering what the next move would be.

He climbed into the tree tops and cut off cones, which fell, bounced and rolled away and appeared to try to land where he could not find them. Often he stopped to look and listen and make sure that no outsider was capturing his cones.

The Busy Life of the Forest

My squirrel friend had a sad end. Lightning one day struck a tree, used by him on the south side of the stream, and killed him. The bolt literally knocked the head off of this tree; and it threw half a dozen young birds out of a nest in a tree near by. Evidently this other tree had been struck twice before. A few years previously a bolt had run down one side, bursting the bark. Through this break a number of beetles made their way, to begin work on the vitals of the tree. But Chief Surgeon Woodpecker was often there, and in a length of sixteen feet along this broken trunk had made sixteen holes and had probably removed many a borer.

Once I saw a large, dignified mountain sheep walk quietly across the grassy opening. He did not see me. On reaching the farther edge of the opening he turned about, recrossed the opening to the bowlder pile and leaped upon it. After remaining there statuesque a while, he reëntered the woods, stood for a moment, and then disappeared.

It was impossible to feel lonesome. Eyes and ears were kept busy, for the show went ever on. It was a one-ring, a three-ring, sometimes a six-ring show all at once. Too often a number of extra-good things were going on together. A squirrel would be up to something, while at the same instant two chipmunks would be having a boundary-line dispute. Along with these a robin might be noisy and pessimistic over something that may not have happened, while a rare warbler that I wanted to see was darting about in the tree tops, and a porcupine was waddling by with dull deliberation.

The birds on the other side of the brook one afternoon set up a great ado, as if some enemy were about to raid them or some other terror were nigh. Of them all the most excited and pessimistic was the mother robin. She flew and darted about without getting anywhere, all the time predicting the worst possible calamity. When things had almost calmed down a broad-tailed humming bird came flying by, scolding hard, plainly much put out because of all this unnecessary hullabaloo. After darting about me for some seconds, with her burnished body flashing and beadlike eyes shining, she alighted like any bird on a neighboring limb. This midget made a comical appearance, aping, as it seemed, all the poses of a real-size bird.

GOODYEAR S-V TIRE

20,000 Pounds 20,000 Miles

THE modern truck, geared to heavy duty, capacious hopper filled to the brim with dense commodity, rushes along over granite blocks and rutty roads, grinds across steel tracks, rumbles through littered alleys, careless of obstacle, greedy to meet the time-saving, weight-moving demands of our pell-mell business structure.

Here is an efficient machine—the most efficient carrier that has come since the locomotive began its work.

* *

Gas makes the giant go. But without rubber it never could do its work.

Without rubber, loaded trucks could go no faster than a horse. All the tremendous modern efficiency of local freighting would be lost.

Rubber—milled and heated sap of a tree, organic, pliant, elastic, seemingly frail—gives the giant full use of its power.

* *

In the S-V Pressed-On Truck Tire Goodyear means to build the solid tire best for heavy commercial motor vehicles.

Reports from every state show we have succeeded. For instance, this letter from the Taylor Milling Company, of Dallas:

"On December 14th, 1914, you equipped our 4-ton Moore Truck with four 36x6 S-V Tires for dual rear wheels. To date they have run 10,233 miles and look good for another 10,000. Our truck weighs, 9,600 pounds, light, and we load 5 tons."

A total weight of nearly 20,000 pounds—think of it! And even under this overload—far beyond our recommendation—these tires served a full 20,000 miles!

Reports like this on S-V Tires are so common that we have ceased to call 20,000 miles an exceptional performance.

S-V's deliver wonderful mileage—habitually. Their *average* service—as reported by 224 users in 64 cities—is 13,704 miles.

Do *your* tires last like this?

Not one cent extra for Firestone Tires on these motorcycles

ELEVEN leading motorcycle manufacturers equip with Firestone Tires, at no extra charge. They recognize the rapidly growing demand for the Firestone extra broad tread, the four heavy fabric layers, the resilient rubber. They know this demand is the natural result of the experience of tens of thousands of motorcycle owners.

These manufacturers realize that Firestone Tires are a valuable aid to better motorcycle performance.

Firestone Tires give you a grip on the muddiest road, the most slippery pavement, on straightaway or turns. Your machine moves more smoothly and comfortably. Finally, you get "Most Miles per Dollar."

And Firestone Motorcycle Tires cost no more if ordered on any of the eleven machines listed here.

(Concluded from Page 30)

Once I looked round just in time to see a coyote leap forward and land upon the grass with forepaws together. Presently he thrust in his nose and pulled out a mouse. At this instant he caught sight of me and edged off sideways, eying me intently. He was not frightened; but apparently he could not make out what I was or what I was doing. He passed, doubled and repassed near by. Then he circled, and when he caught my scent he sniffed the air, but still was not alarmed. He stayed to watch, like a boy in no hurry who had found something new. In the edge of the opening he stretched out on his stomach with his head toward me. Occasionally his nostrils twitched a little, but at no time did he look upon me with fear or suspicion. Soon sounded a whack from the near beaver pond, as if a beaver had dived; and a second later came muffled footfalls through the forest from the opposite quarter. These alarms caused Mr. Coyote to leap up all alert, and presently he hastened away among the shadows.

A number of deer came to visit the place. After eying me closely from a distance of thirty or forty feet they lingered to look round and to take an occasional bite to eat. They were curious about me, but were perfectly at ease, for they had not scented me. Another day three deer, which had not seen me, suddenly caught scent of me and were off instantly. Most animals rely upon their nose for chief scout duty—to tell them when to flee for safety. Deer, beavers and sometimes other animals, which saw me without scenting me, simply took a brief look, then continued their affairs in a normal manner; but usually when they scented me before seeing me they were alarmed and thought that "safety first" required speed.

A mother grouse and her family of youngsters came along while I was sitting on a log. I kept perfectly still. One of the youngsters jumped up on the log and started toward me. Two or three walked close to me, and some of the others passed between my legs and the log. Evidently they took me for a bump or a stump. The mother bird was behind, walking vigilantly and with stately dignity. The youngster on the log came up to me and pecked at a button on my coat. I turned to look. This told the mother that I was alive. It suggested danger. She instantly flung herself at me and struck me a slap on the side of the head. Dropping back she again lunged and beat me with her wings. Her brave behavior was very like that of a hen in defense of her chicks.

A Call From a Coyote

Once, just before sundown, a solitaire lighted on a tall spruce top and poured forth his elemental and eloquent song. It was divinely beautiful in the evening hush of the wilderness. He sang with all his melody and all his might. Often in his enthusiasm he hurled himself upward or outward from the tree top, then settled or returned on easy, outstretched wings, singing all the time. No song that I ever have heard so harmonizes with the silences and the feeling of a mountain wilderness or so completely puts one in tune with the universe as the marvelous melody of this thrush.

Momentarily one day I took my eyes from the woodpeckers. A rabbit came hopping along, completely unmindful of my presence, passed me and presently disappeared among the trees. A minute later a soft-footed coyote came following on the rabbit's trail. Though so near he evidently did not see me, but hurried along and disappeared behind an old pine. I do not know what happened.

On another occasion a flutter of wings and a chirp caused me to turn. Near me a little chickadee was working away at a hole in a dead snag. He was just in the act of spitting out a mouthful of dead wood. Here was another nest builder.

Once a black bear came along and stopped under the pines on a knoll not far from me. Here he rolled over an old ant-filled log. Out rushed ferociously about a million ants. The bear licked these up rapidly, and then looked round with a pleased expression on his face. Presently he came a little closer to me and dug out a mouse. Then he flushed a number of grasshoppers; but in leaping into the air and striking at one of these on the wing he scented me and at once beat a retreat.

One day I left my old watching place and climbed the heights. As usual I moved quietly and slowly, and once on the margin I paused to look round. Lying near a spring in the center of the terrace was a deer—a doe. As I watched her, she nibbled at the plants round where she lay. From the position of one of her legs I judged that it was broken—probably by a bullet. Suddenly the wind warned her that a deadly enemy was near. Instantly she leaped up, forgetful of her broken bones. She stood and smelled, but without discovering me. Watching my chance I slipped away. I had not gone far before darkness advised stopping. I spent the night by a fire, without any bedding.

PHOTO. FROM GEO. P. HALL & SON, NEW YORK CITY

Next morning, advancing in the breeze I climbed up to watch the doe. She lay still nearly all day. Most of the time her ears moved nervously about as she caught sounds from this way and that. When an eagle soared overhead she showed much uneasiness, but moved only eyes and ears. In midafternoon she was startled by the fall of a rock mass down one of the crags near by. A short time after this some mountain sheep appeared on the sky line above, posed, and looked quietly round. From the actions of the sheep the doe evidently concluded that all was well. She struggled slowly to her feet, giving a low call as she arose. Soon I knew that a fawn was having a warm meal. I do not know where the fawn had been hidden. Realizing that the deer should not be disturbed for some days I moved on to enjoy other scenes and left her in possession.

Among the actors who came on the scene at the place where I next watched were a bear and her two boyish cubs. A peppery, curious Fremont squirrel in a tree near by saw them appear. He ceased work, eyed them for a time with lively curiosity, then with apparent contempt. At last he went on with his work, without voicing a protest until later when the cubs engaged in a playful scuffle.

Mother Bear lumbered along under the trees, unaware or indifferent that the squirrel, apparently in his own estimation one of the most ferocious animals in the wilds, might leap down upon her. At one place she stopped, thrust a forepaw beneath the upturned roots of a fallen tree and with a lift and a push thrust the heavy, bulky mass aside. She licked the earth a few times, probably to pick up some bugs or ants, and then started on.

The cubs dropped behind and began digging; they were having a beautiful time. Mother paused, looked, and went back to see what it was all about. They were working with great zest, and she apparently supposed that they had scented something worth while. In the rudest manner she pushed each aside, smelled in the hole, found nothing, and at once started on. The cubs followed.

They came so close to me that I thought surely they would either see or smell me, but they passed me by unnoticed, and a short distance away found chokecherry bushes on the side of a ravine. Mother Bear at once began feasting on the puckery ripe berries. Evidently she cared nothing for conservation, for she crushed down and bit off the bushes. She rose on her hind feet, and with mouth and claws together grasped at the laden ends of the branches. Limb-ends, leaves, berries—all were devoured.

But chokecherries evidently were a dessert for which her youngsters did not care. The berries may have been new to them. At any rate two bites satisfied them. Dessert they surely did not need, for the bulging, rounded little stomachs plainly indicated many helpings of other eatables. Even a bear cub can be filled up.

For a time they lay and relaxed in the sun. Then they rose, stood up and showed off. They struck out like green, awkward boxers. They struck at nothing, sometimes with both paws held low and at an angle, and sometimes with one paw held high. Then they had a wrestling match—clinching, hugging and rolling. Their first belligerent attitude brought rather a vehement protest from the squirrel, which, however, quickly subsided and became a silent spectator. A camp bird also looked on, watching them from the limb of a pine. He observed closely, but he did not appear enthusiastic over the exhibition.

What a number of incidents in this little area! Quite as many may also happen in countless other small spaces. Often I wondered about things that took place when I was away; what quiet, interesting, unseen incidents that I never even suspected were ever occurring.

The aspen grove round the woodpeckers' nest was made up of trees from six to fifteen inches in diameter and from thirty to sixty feet high. Most of their bark was milk white. Under the trees were a few bushes, but mostly grassy spaces in which violets, columbines, harebells, gentians and other flowers bloomed.

In summer, butterflies with painted wings floated and circled over the sunny opening. Rarely did they fold their wings and light. Occasionally one came floating through the woods, following a fairy avenue. Its bright beautiful color gave a charm and an illumination to the forest gloom. Bees visited the flowers, and occasionally a bumblebee buzzed hurriedly through, as if in desperate haste to reach a certain place and knowing well where he was bound for. Grasshoppers, too, in the autumn days enlivened the place. Occasionally a huge fellow leaped out of the grass. A crackling, and the flash of color like a fairy rocket, and he settled back.

The School of Nature

Often I was in the grove when the snowflakes fell, and saw the colored leaves fall one by one. Grandly the moon shone in these scenes. Early morning and evening lights under the trees and through the woods were strange and beautiful. They put the trees at their best and in attitudes different from those shown in the downpouring light of midday.

The aspen grove where I frequently watched the manners and customs of our wild kindred was a much better place in which to study natural history than that afforded by any zoo. I wish that a company of boys and girls might have been with me. How they would have enjoyed these real Nature stories! I am sure they would have been happy. But, thanks to the Audubon Society, to other organizations and to numerous individuals, boys and girls are beginning to watch, enjoy and receive the benefits of knowing the wild people of the woods, who dress in fur and feathers.

John Muir, in writing of his boyhood experiences, says: "The animals about us were a never-ending source of wonder and delight. Nature was wooingly teaching her wonderful lessons so unlike the dismal grim ashes and cinders so long thrashed into us. There, without knowing it, we were in school."

Yes, Mother Nature conducts a delightful outdoor school, and it is open every day of the year. Wherever there is a bit of wildness there are pretty certain to be numerous interesting little wild people. Of course bird reservations are even better places for this kind of schooling and fun. But the greatest of all places for these advantages are our national parks.

Surely one of the best pastimes for children—for anyone—is to wait at a wild-life center and watch the ways of its residents and of its visitors. To do this is pleasant self-discipline. It is constructive. It keeps the eyes open and the senses alert. It gives material for thought and compels thinking. It arouses the imagination and wakes up the creative faculties. The faculty of keen observation, the ability to see accurately and the incentive to watch for things that may happen round us add much to every outdoor day. Such happy experiences as these truly enrich life.

How a paper of pins and a pencil filled a great business need

In a little old store in a Missouri town, a struggling business man learned one day that he had lost an order because "Central" had, through error, reported his telephone "busy" to a hurried customer.

This happened more than a quarter of a century ago, but this petty business loss, this incident that had occurred to others many times before—and since—was the first step toward the solution of one of the big problems of big business.

This man's loss set him to thinking, and his thoughts led him to realize that as long as human operators were used in establishing connections, there would always be human mistakes—that perfect telephone service required a system by which connections could be secured mechanically instead of manually. Day after day he pondered the problem and with a paper of pins, a pencil and an old round collar box, he devised a crude model of a machine which if it could be perfected, would do the work of the operator better and more accurately than the human hand.

Men laughed—as they had laughed at Galileo, Columbus, Morse, Westinghouse, Marconi, Edison. But still the dreamer worked over his pins and pencil and collar box, and thought of the days when business would no longer be hampered by false "busy" signals and wrong numbers.

At last the visionary met the one man who could and would undertake to make his dream come true—Joseph Harris, a man of affairs—with vision. Young and daring, Mr. Harris examined the home-made model and did not laugh; he listened and did not reply "impossible."

Realizing that his own ability lay in organization and finance, Mr. Harris induced a powerful Eastern concern to investigate the possibilities of mechanical telephoning, and the man chosen to make the study was A. E. Keith—still in his twenties, but already a commanding figure in the field of electrical development.

Mr. Keith came, he saw, and was conquered by the idea. Resigning a connection which gave every promise of success and power, he plunged at once into the task of overcoming the enormous technical difficulties that stood in the way of making the dream a reality. For months he worked with incredible concentration—eighteen to twenty hours a day—and gradually the apparatus destined to make telephoning perfect took shape.

Meanwhile Mr. Harris, with equal devotion to purpose, was marshaling capital and building a manufacturing and selling organization for this creation which, he foresaw, must inevitably become a giant among the instrumentalities of modern business. * * *

All this happened many years ago, and today Mr. Harris is President and Mr. Keith Chief Engineer of Automatic Electric Company, the great organization solely devoted to the manufacture of the Automatic Telephone. This equipment is known in all parts of the world. The Governments of Great Britain, Germany, France, Austria, Italy, Canada, Australia, have all investigated it, approved it, adopted it.

Such institutions as Krupp of Germany, the French Ministry of War, the British Admiralty, the Suez Canal Company, the Federal Reserve Bank of New York and hundreds of exchanges in cities of all sizes throughout the world have installed the telephone *without an operator*, and now enjoy telephone service free from the imperfections of the "human factor."

But perhaps the most significant development in the history of the Automatic Telephone has been its whole-hearted adoption by business concerns for interior telephone service.

Executives, engineers and efficiency experts have discovered that this equipment, which has proved so excellent for city use, is ideally adapted to service exclusively within their organizations. They have found that the Automatic Telephone not only saves eighteen seconds on every call made—a week a year for every Automatic user—but that it is so easy and convenient to use that whereas men used to walk instead of talk, with consequent confusion and loss of time, they now turn to the Automatic Telephone, not only in emergencies, but for carrying on the everyday routine of their work.

Its absolute secrecy and unvarying uniformity, the impossibility of its giving wrong numbers or false "busy" signals have freed the telephone from all its former hindrances.

The paper of pins, the pencil and collar box could not be recognized in the present perfected Automatic Telephone system, but they have served their purpose, they have filled a great business need—the Missouri dreamer has been justified.

Interesting literature on request.

How People Think About the War

The Ending of the War—By H. G. Wells

ABOUT the end of the war there are two chief ways of thinking—there is a simpler sort of mind, which desires merely a date; and a more complex kind, which wants particulars. To the former class belong most of the men out at the Front. They are so bored by this war that they would welcome any peace that did not definitely admit defeat—and examine the particulars later. The "tone" of the German Army, to judge by its captured letters, is even lower. They would welcome peace in any form. Never in the whole history of the world has a war been so universally unpopular as this war.

The mind of the soldier is obsessed by a vision of home-coming for good, so vivid and alluring that it blots out nearly every other consideration. The visions of people at home are of plenty instead of privation, lights up, and the cessation of a hundred tiresome restrictions. And it is natural, therefore, that a writer rather given to guesses and forecasts should be asked very frequently to guess how long the war has still to run.

All such forecasting is the very wildest of shooting. There are the chances of war to put one out, and one has to reckon how long it takes to make generals of over fifty into soldiers of the new sort. I have made various forecasts. At the outset I thought that military Germany would be lavish with cavalry and great attacks; that it would fight at about the 1899 level; would be reluctant to intrench; and that the French and British had learned the lesson of the Boer War better than the Germans. I trusted to the melodramatic instinct of the Kaiser. I trusted to the quickened intelligence of the British military caste.

Early Forecasts Abandoned

The first rush seemed to bear me out, and I opened my paper day by day expecting to read of the British and French intrenched and the Germans beating themselves to death against wire and trenches. In those days I wrote of the French being over the Rhine before 1915. But it was the Germans who intrenched first.

Since then I have made some other attempts. I was very hopeful of the Western offensive in 1915; and this year I still count on our continuing push. I believe we were very near something like decision last September; but some archaic dream of doing it with cavalry dashed these hopes. The "Tanks" arrived too late to do their proper work, and their method of use is being worked out very slowly.

Hitherto one has hoped and looked for decision, a complete victory that would enable the Allies to dictate peace. But such an expectation is largely conditioned by such delicate questions as the adaptability of our gentlemen in spurs to high positions, and the readiness and ability of our authorities to get rid of imperfectly successful commanders. A German-American writer has said that the British would rather kill twenty thousand of their men than break one general. Even a grain of truth in such a remark is a very valid reason for lengthening one's estimate of the duration of the war.

Still, there can be no doubt that the Western Allies are playing a winning game upon the Western Front, and that this is the front of decision. It is not in doubt that they are beating the Germans and shoving them back. The uncertain factor is the rate at which they are shoving them back. If they can presently get to so rapid an advance as to bring the average rate since July first up to ten or twelve miles a day, then we shall still see the Allies dictating terms. But if the shove drags on at its present pace of less than a mile and about four thousand prisoners a week over the limited Somme Front—if nothing is attempted elsewhere to increase the area of pressure—then the intolerable stress and boredom of the war will bring about peace long before the Germans are decisively crushed.

But the war, universally detested, may go on into 1918 or 1919. The Allies have a winning game before them; but the British seem unable to discover and promote the military genius needed to harvest the victory. In the long run this may not be an unmixed evil. Victory, complete and dramatic, may be bought too dearly. We need not triumphs out of this war, but the peace of the world.

This war is altogether unlike any previous war, and its ending, like its development, will follow a course of its own. For a time people's minds ran in the old grooves; the Germans were going *nach* Paris and *nach* London; Lord Curzon filled our minds with a pleasant image of the Bombay Lancers riding down Unter den Linden. But the Versailles precedent of a council of victors dictating terms to the vanquished is not now so evidently in men's minds. The utmost the Allies talk upon now is to say "We must end the war on German soil." The Germans talk frankly of holding out. I have guessed that the Western offensive will be chiefly on German soil by next June; it is a mere guess, and it is quite conceivable that the push may still be grinding out its daily tale of wounded and prisoners in 1918.

None of the combatants expected such a war as this, and the consequence is that the world at large has no idea how to get out of it. The war may stay with us like a schoolboy caller, because it does not know how to go. The Italians said as much to me. "Suppose we get to Innsbruck and Labich and Triest," they said; "it isn't an end!" Lord Northcliffe, I am told, came away from Italy with the conviction that the war would last six years.

There is the clearest evidence that nearly everyone is anxious to get out of the war now. Nobody at all, except perhaps a few people who may be called to account, wants to keep it going—and Count Reventlow, and Mr. Leo Maxse—is it not his war?—and the demented Tory harridans, who swear by the Morning Post. Quietly perhaps, and unobtrusively, everyone I know is now trying to find the way out of the war; and I am convinced that the same is the case in Germany. That is what makes the Peace-at-any-price campaign so exasperating. It is like being chased by clamorous geese across a common in the direction in which you want to go. But, we ask, how are we to get out—with any credit—in such a way as to prevent a subsequent collapse into another war as frightful?

And that is why the thought that possibly there may be a side way out, a sort of turning over of the present endlessly hopeless game into a new and different and manageable game, through the introduction of some external factor, creeps and spreads as I find it creeping and spreading.

That is what the finer intelligences of America are beginning to realize, and why men in Europe continually turn their eyes to America with a surmise, with a doubt.

A point of departure for very much thinking in this matter is the recent conversation of speeches between President Wilson and Viscount Grey. All Europe was impressed by the truth, and by President Wilson's recognition of the truth, that from any other great war after this America will be unable to abstain. Can America come into this dispute at the end to insist upon something better than a new diplomatic patchwork and so obviate the later, completed Armageddon? Is there, above the claims and passions of Germany, France, Britain and the rest of them, a conceivable right thing to do for all mankind?

I have been joining up one thing to another, suggestions I have heard from this man and that; and I believe that it is possible to state a solution that will be acceptable to the bulk of reasonable men all over the world. Directly we put the panic massacres of Dinant and Louvain, the crime of the Lusitania, and so on, into the category of symptoms rather than essentials, we can conceive a possible world treaty. Let me state the broad outlines of this pacification:

In the first place, there would have to be an identical treaty between all the Great Powers of the world, binding them to certain things. It would provide:

That the few great industrial states capable of producing modern war equipment should take over and control completely the manufacture of all munitions of war in the world. And that they should absolutely close the supply of such material to all the other states in the world.

That they should set up an International Tribunal for the discussion and settlement of international disputes. That they should maintain land and sea forces only up to a limit agreed upon, and for internal police use only, or for the purpose of enforcing the decisions of the Tribunal. That they should all be bound to attack and suppress any Power among them which increases its war equipment beyond its defined limits.

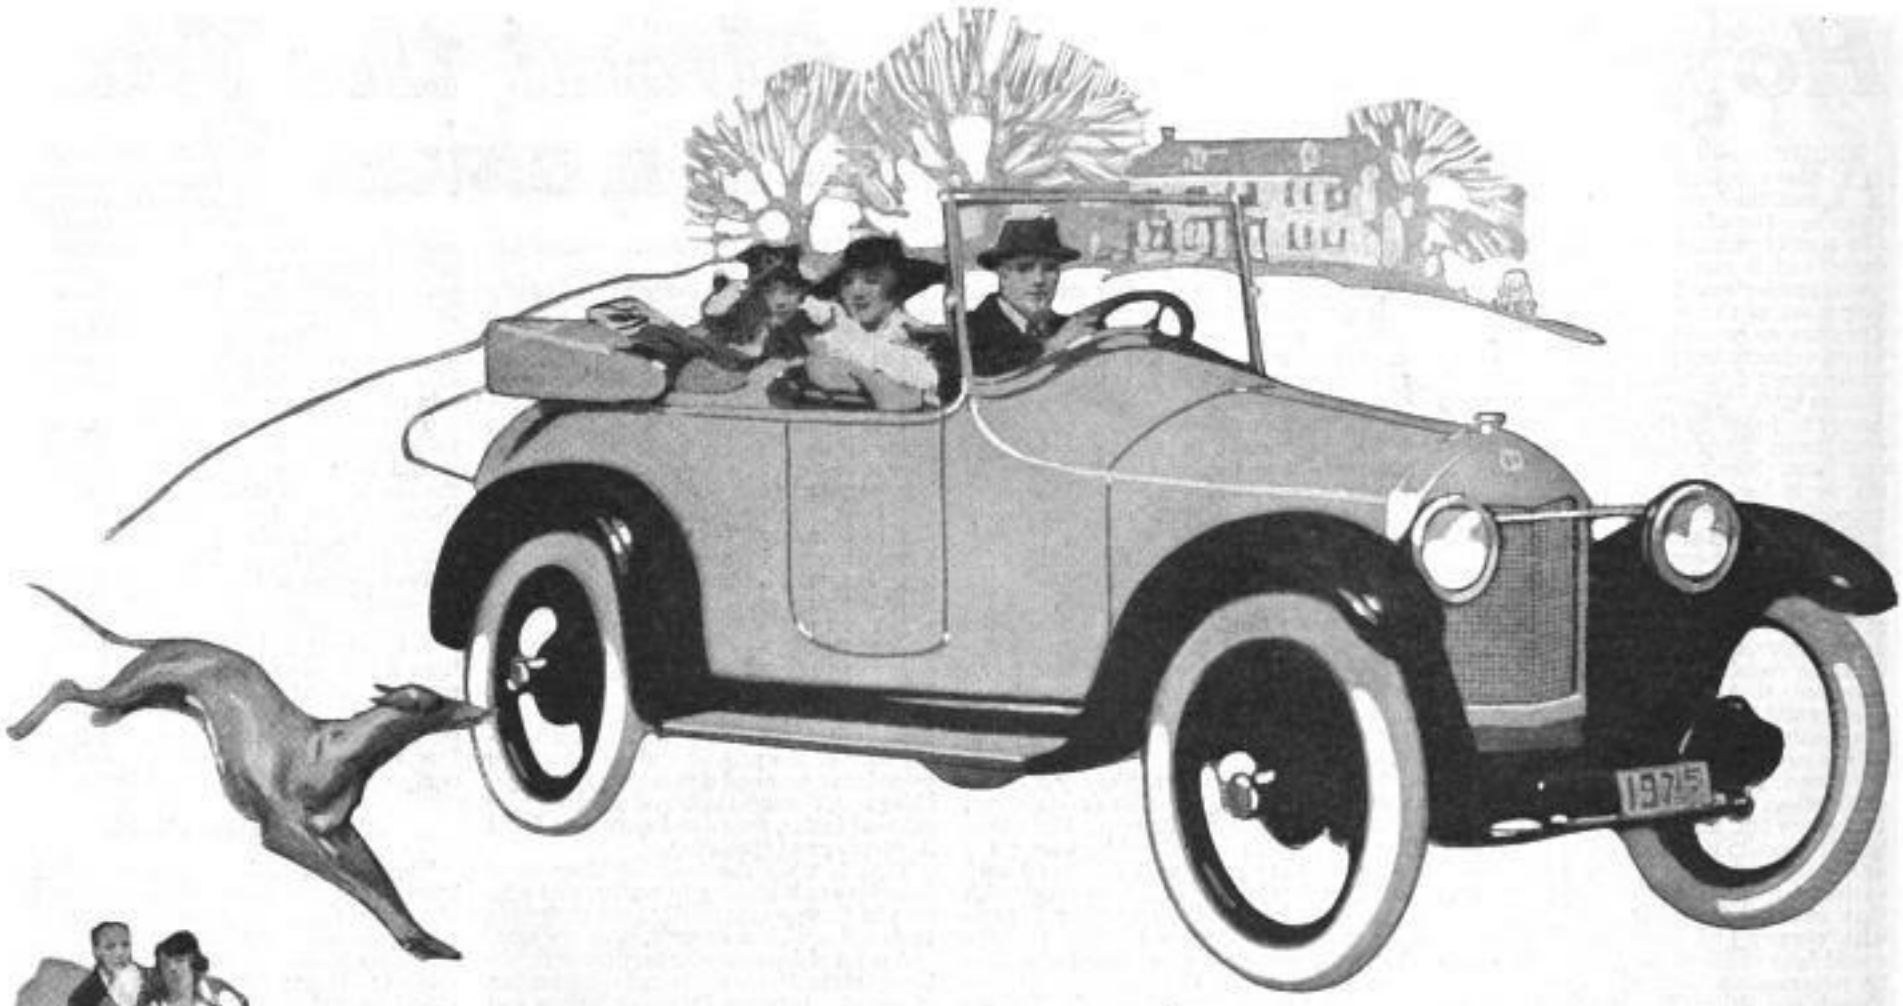
A World State Possible

That much has already been broached in several quarters. But so far is not enough. It ignores the chief processes of that economic war which aids and abets and is inseparably a part of modern international conflicts. If we are to go as far as we have already stated in the matter of international controls, then we must go farther, and provide that the International Tribunal should have power to consider and set aside all tariffs and localized privileges which seem grossly unfair or seriously irritating between the various states of the world. It should have power to pass or revise all new tariff, quarantine, alien exclusion or the like legislation affecting international relations.

Moreover, it should take over and extend the work of the International Bureau of Agriculture, at Rome, with a view to the control of all staple products. It should administer the sea law of the world, and control and standardize freights in the common interests of mankind. Without these provisions it would be merely preventing the use of certain weapons; it would be doing nothing to prevent countries' strangling or suffocating each other.

These things being arranged for the future, it would be further necessary to set up an International Boundary Commission, subject to certain defining conditions agreed upon by the belligerents, to redraw the map of Europe, Asia and Africa.

Moreover, this International Tribunal, if it was indeed to prevent war, would need also to have power to intervene in the affairs of any country or region in a state of open and manifest disorder, for the protection of foreign travelers and of persons and interests localized in that country, but foreign to it.



Such an agreement as that would at once lift international politics out of the bloody and hopeless squalor of the present conflict. But it needs the attention of such a disengaged people as the American people to work it out and supply it with—weight. It needs putting before the world with some sort of authority greater than its mere entire reasonableness. Otherwise it will not come before the minds of ordinary men with the effect of a practicable proposition.

Eight Cylinders Crown The Luxury of Light Weight

Here at last are co-ordinated — in the one car of its kind — those elements of ease, elegance and efficiency which, singly, have made a few of the most notable cars successful.

Applying eight cylinders to the luxuries recognized as distinctively Scripps-Booth, intensifies those luxuries, and adds much more than passing interest to the new

Scripps-Booth Eight

Luxury is here, with smooth-flowing power and swiftness.

Beauty is here, in Scripps-Booth individual fashion—a fashion more copied this year, in high-class chassis, than any previous body design in America.

Handiness and economy are here — elements never before marked in a car of Scripps-Booth qualities.

And in the "eight" all of these qualities intensify the luxury of performance for which Scripps-Booth is already famed.

Eight-Cylinder Four Passenger .	$1285
Eight-Cylinder Town Car . .	$2575
Four-Cylinder Roadster . .	$935
Four-Cylinder Coupé . .	$1450

An expansion of factory output now comes to match the growing public approval of Scripps-Booth's exclusive luxury-with-lightness origination.

The new Scripps-Booth Eight is displayed at the Chicago Automobile Show, beginning January 27th, in the Coliseum, Space E-4, Main Floor; also by all Scripps-Booth dealers.

Scripps-Booth expansion makes possible the addition of dealers in territories which our former output prohibited.

Scripps-Booth Corporation
Detroit, Mich.

(Concluded from Page 35)

I do not see any such plant springing from the European battlefields. It is America's supreme opportunity. And yet it is the common sense of the situation, and the solution that must satisfy a rational German as completely as a rational Frenchman or Englishman. It has nothing against it but the prejudice against new and entirely novel things.

In throwing out this suggestion that America should ultimately undertake the responsibility of proposing a world-peace settlement, I admit that I run counter to a great deal of European feeling. Nowhere in Europe now do people seem to be in love with the United States. But feeling is a color that passes. And the question is above matters of feeling. Whether the belligerents dislike Americans or the Americans dislike the belligerents is an incidental matter. The main question is of the duty of a great and fortunate nation toward the rest of the world and the future of mankind.

I do not know how far Americans are aware of the trend of feeling in Europe at the present time. Both France and Great Britain have a sense of righteousness in this war such as no nation, no people, has ever felt in war before. We know we are fighting to save all the world from the rule of force and the unquestioned supremacy of the military idea. Few Frenchmen or Englishmen can imagine the war presenting itself to an American intelligence under any other guise. At the invasion of Belgium we were astonished that America did nothing. At the sinking of the Lusitania all Europe looked to America. The British mind contemplates the spectacle of American destroyers acting as bottleholders to German submarines with dazzled astonishment. "Manila!" we gasp.

Some Historical Excuses

In England we find excuses for America in our own past. In 1866 we betrayed Denmark; in 1870 we deserted France. The French have not these memories. They believe they had some share in the independence of America; that there is a sacred cause in republicanism; that there are grounds for a peculiar sympathy between France and the United States in republican institutions. They do not realize that Germany and America have a common experience in recent industrial development, and a common belief in the "degeneracy" of all nations with a lower rate of trade expansion. They do not realize how a political campaign, with the slogan of "Peace and a Full Dinner Pail!" looks in the Middle West; what an honest, simple, rational appeal it makes there. Atmospheres alter values.

I set these things down plainly. There is a very strong disposition in all the European countries to believe America fundamentally indifferent to the rights and wrongs of the European struggle; sentimentally interested perhaps, but fundamentally indifferent. President Wilson is regarded as a mere academic sentimentalist by a great number of Europeans. There is a strong undercurrent of hostility, therefore, to the idea of America having any voice whatever in the final settlement after the war. It is not for a British writer to analyze the appearances that have thus affected American world prestige. I am telling what I have observed.

I state these things in order to make it clear that America will start at a disadvantage when she starts upon the mission of salvage and reconciliation, which is, I believe, her proper rôle in this world conflict. One would have to be blind and deaf on this side to be ignorant of European persuasion of America's triviality.

And I will further confess that when Viscount Grey answered the intimations of President Wilson and ex-President Taft of an American initiative to found a World League for Peace, by asking whether America was prepared to back that idea with force, he spoke the doubts of all thoughtful European men. No one but an American deeply versed in the idiosyncrasies of the American population can answer that question, or tell us how far the delusion of world isolation, which has prevailed in America for several generations, has been dispelled. But if the answer to Lord Grey is "Yes," then I think history will emerge with a complete justification of the obstinate maintenance of neutrality by America. It is the end that reveals a motive. It is our ultimate act that sometimes teaches us our original intention. No one can judge the United States yet. Were you neutral because you are too mean and cowardly, or too stupidly selfish, or because you had in view an end too great to be sacrificed to a moment of indignant pride, and a force in reserve too precious to dispel?

Every country is a mixture of many strands. There is a Base America; there is a Dull America; there is an Ideal and Heroic America. And I am convinced that, at present, Europe underrates and misjudges the possibilities of the latter.

Freemasonry in World-Thought

All about the world to-day goes a certain freemasonry of thought. It is an impalpable and hardly conscious union of intention. It thinks not in terms of national but human experience; it falls into directions and channels of thinking that lead inevitably to the idea of a world state under the rule of one righteousness. In no part of the world is this modern type of mind so abundantly developed, less impeded by antiquated and perverse political and religious forms, and nearer the sources of political and administrative power, than in America.

It does not seem to matter what thousand other things America may happen to be, seeing it is also that. And so, just as I cling to the belief, in spite of hundreds of adverse phenomena, that the religious and social stir of these times must ultimately go far to unify mankind under the Kingship of God—so do I cling also to the persuasion that there are intellectual forces among the rational elements in the belligerent centers, among the other neutrals and in America, that will coöperate in enabling the United States to play the rôle of the Unimpassioned Third Party, which becomes more and more necessary to a generally satisfactory ending of the war.

The idea that the settlement of this war must be what one might call an unimpassioned settlement, or, if you will, a scientific settlement, or a judicial and not a treaty settlement—a settlement, that is, based upon some conception of what is right and necessary, rather than upon the relative success or failure of either set of belligerents to make its will the standard of decision—is one that, in a great variety of forms and partial developments, I find gaining ground in the most different circles. The war was an adventure; it was the German adventure, under the Hohenzollern tradition, to dominate the world. It was to be the last of the Conquests. It has failed.

Without calling upon the reserve strength of America, the civilized world has defeated it; and the war continues now partly upon the issue whether that adventure shall ever be repeated or whether it shall be made forever impossible, and partly because Germany has no organ but its Hohenzollern organization through which it can admit its failure and develop its latent readiness for a new understanding on lines of mutual toleration. For that purpose nothing more reluctant could be devised than Hohenzollern imperialism. But the attention of every combatant—it is not only Germany now—has been concentrated upon military necessities; every nation is a clenched nation, with its powers of action centered in its own administration, bound by many strategic threats and declarations, and obsessed by the idea of getting and securing advantages.

It is inevitable that a settlement made in a conference of belligerents alone will be shortsighted, harsh, limited by merely incidental necessities, and obsessed by the idea of hostilities and rivalries continuing perennially.

It will be a trading of advantages for subsequent attacks. It will be a settlement altogether different in effect as well as in spirit from a world settlement made primarily to establish a new phase in the history of mankind.

Let me take three instances of the impossibility of victory on either side giving a solution satisfactory to the conscience and intelligence of reasonable men.

The first—on which I will not expatiate, for everyone knows of its peculiar difficulty—is Poland.

The second is a little one, but one that has taken hold of my imagination. In the settlement of boundaries preceding this war, the boundary between Serbia and northeastern Albania was drawn with an extraordinary disregard of the elementary needs of the Albanians of that region. It ran along the foot of the mountains that form their summer pastures and their refuge from attack, and it cut their mountains off from their winter pastures and market towns. Their whole economic life was cut to pieces and existence rendered intolerable for them.

Now an intelligent Third Party, settling Europe, would certainly restore these market towns—Ipek, Jakova and Prisrend—to Albania. But the Albanians have no standing in this war; theirs is the happy lot that might have fallen to Belgium had she not resisted; the war goes to and fro through Albania, and when the settlement comes—more particularly if it is a settlement with the allies of Serbia in the ascendant—it is highly improbable that the slightest notice will be taken of Albania's plight in this region. In which case these particular Albanians will either be driven into exile to America or they will be goaded to revolt; which will be followed, no doubt, by the punitive procedure usual in the Balkan Peninsula.

For my third instance I would step from a matter as small as three market towns and the grazing of a few thousand head of sheep to a matter as big as the world. What is going to happen to the shipping of the world after this war? The Germans, with that combination of cunning and stupidity which baffles the rest of mankind, have set themselves to destroy the mercantile marine, not merely of Britain and France but of Norway and Sweden, Holland, and all the neutral countries. The German papers openly boast that they are building a big mercantile marine that will start out to take up the world's oversea trade directly peace is declared. Every such boast receives careful attention in the British press. We have heard a very great deal about the German will-to-power in this war; but there is something very much older and tougher, and less blatant and conspicuous, called the British will.

In the British papers there has appeared and gained a permanent footing this phrase: "Ton for ton." This means that Britain will go on fighting until she has exacted and taken over from Germany the exact equivalent of all the British shipping Germany has submarined. People do not realize that a time may come when Germany will be glad and eager to give Russia, France and Italy all that they require of her; when Great Britain may be quite content to let her allies make an advantageous peace and herself still go on fighting Germany. She does not intend to let that furtively created German mercantile marine ship or coal or exist upon the high seas—so long as it can be used as a weapon against her. Neither Britain nor France nor Italy can tolerate anything of the sort.

The Freedom of the Seas

It has been the peculiar boast of Great Britain that her shipping has been unpatriotic. She has been the impartial carrier of the whole world. Her shippers may have served their own profit; they have never served her. The fluctuations of freight charges may have been a universal nuisance but they have certainly not been an aggressive national conspiracy. It is Britain's case against any German ascendancy at sea, an entirely convincing case, that such an ascendancy would be used ruthlessly for the advancement of German world power. The long-standing freedom of the seas vanishes at the German touch. So, beyond the present war there opens the agreeable prospect of a mercantile struggle, a bitter freight war and a war of Navigation Acts for the ultimate control, in the interests of Germany or of the Anti-German allies, of the world's trade.

Now how, in any of these three cases, can the bargaining and trickery of diplomatists and the advantage-hunting of the belligerents produce any stable and generally beneficial solution? What all the neutrals want, what every rational and farsighted man in the belligerent countries wants, what the common sense of the whole world demands, is neither the "ascendancy" of Germany, nor the ascendancy of Great Britain, nor the ascendancy of any state or people or interest in the shipping of the world. The plain right thing is a World Shipping Control as impartial as the Postal Union. What right and reason and the welfare of coming generations demand in Poland is a unified and autonomous Poland, with Cracow, Danzig and Posen brought into the same Polish-speaking ring-fence with Warsaw. What everyone who has looked into the Albanian question desires is that the Albanians shall pasture their flocks and market their sheepskins in peace, free of Serbian control.

In every country at present at war the desire of the majority of people is for a noncontentious solution that will neither crystallize a triumph nor propitiate an enemy, but which will embody the economic and ethnologic and geographic common sense of the matter. But, though the formulas of national belligerence are easy, familiar, blatant and insistently present, the gentler, greater formulas of that wider and newer world pacificism have still to be generally understood. It is so much easier to hate and suspect than negotiate generously and patiently; it is so much harder to think than to let go in a shrill storm of hostility.

It is not with any very strong belief that the United States of America will come forward to play the part of the Unimpassioned Third Party that I suggest that it might do so. I throw out the suggestion, in spite of its considerable improbability, because so I can imagine the end of this war being made the ending of all war in the world. But I admit that the hypothesis demands a proportion of moral and intellectual giants in the American population beyond anything known to us in Europe.

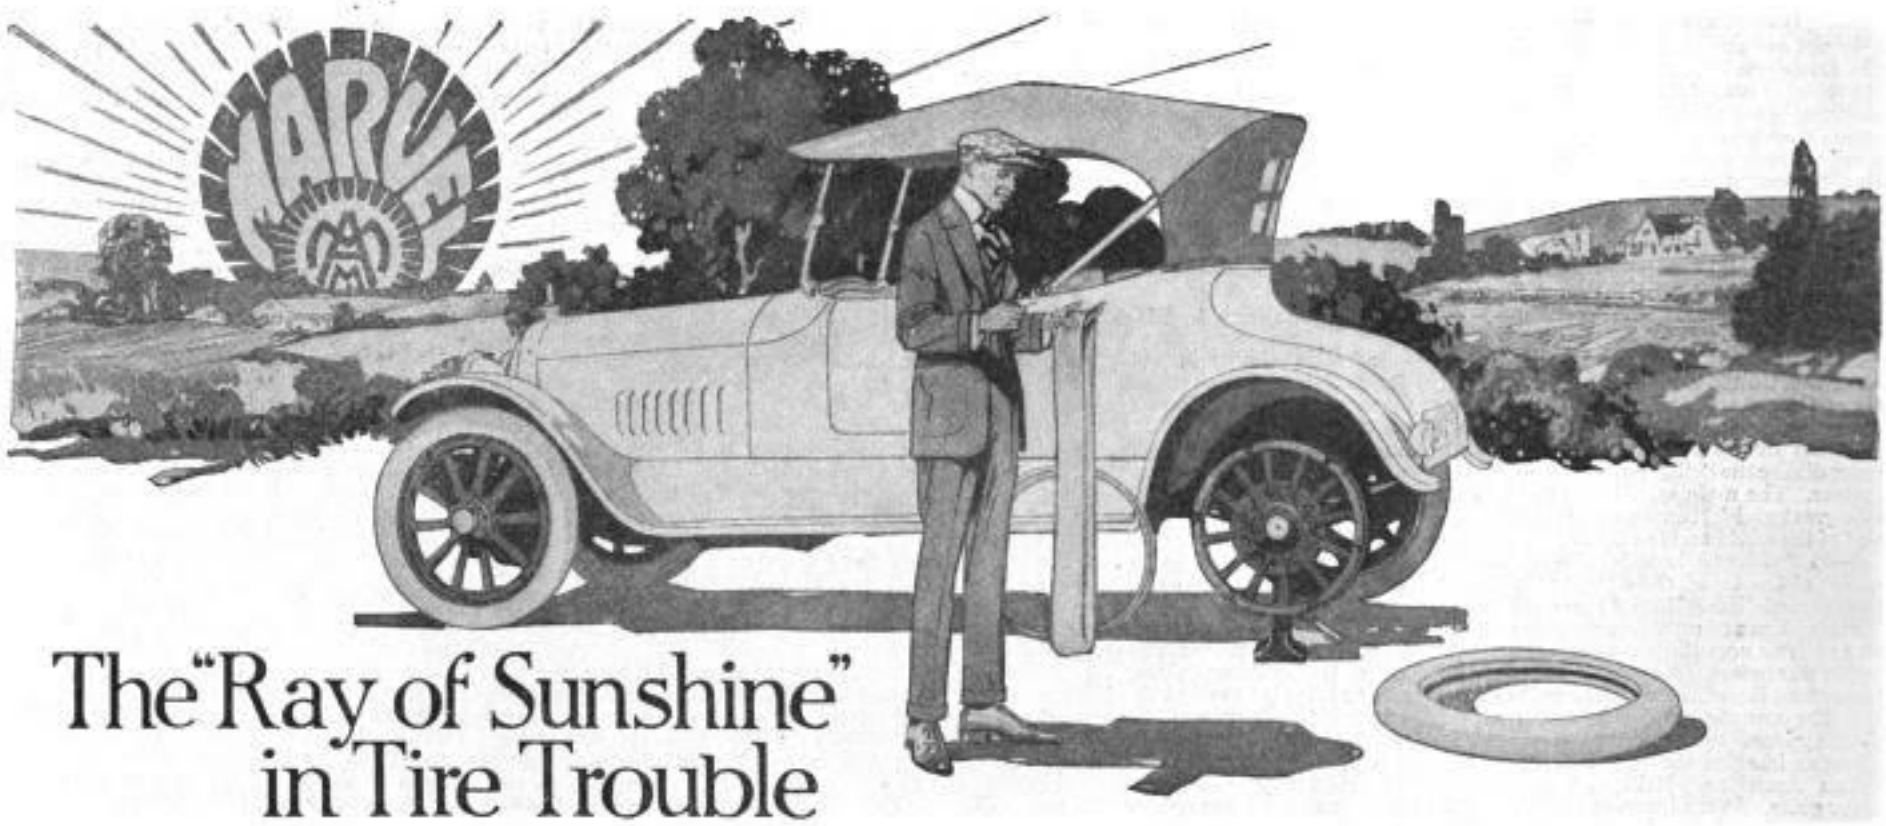
If America Does Nothing

In the case of America doing nothing so magnificent, then I do not really see more than a nominal end to the war. There may be a sort of peace, the peace desired by witless pacifists; it will mean merely that there will be a temporary cessation of gunfire and a transfer of the belligerent energies to a trade struggle, a shipping struggle, and a vast new armament competition which will entirely dwarf that modest "race of armaments" that toddled along before 1914. Except for a few microcephalic idiots this conflict for advantages will bore and exhaust us all indescribably, until it will be almost a relief at last to resume the gun explosions, and the stabbing and mutilating and digging in again. But the next war will have America in. Mr. Wilson has said it.

And then there will be no other state in all the world left, considerable enough to play the rôle of the Third Party. The next war that must convulse mankind, if we cannot end war in this war, will tolerate few neutrals and no noncombatants. Men will have to look to another Power, that is at once above them and within, to assert those external standards of justice which alone can give peace.

They might very well look to Him now—instead of looking across the Atlantic.

These states and empires and *kulture* for which we fight, for which we slaughter our sons, for which we wreck the world, are all no more than foolish and wicked effigies. Germany, the British Empire, Holy Russia—what are these things but great guys set up for men to serve and worship, when they should serve and worship God? What are our kings? What are our "national interests"? All the great religions deny these effigies, declare them idolatrous; all the great religions assert the same truth—that there is but one God for all men, and that He alone is King of the world.



Yet, forthwith they set about hiding and smothering Him and forgetting their own mission in sectarian and national wrappings. But God is indeed the rightful King of the world; he is the God of the Englishman and the Frenchman, the Turk and the German, the Hindu and the American; He calls them all to serve Him and one another. They have but to look up, and they will see Him. And until they do look up and see Him this world is no better than a rat pit—a place slippery and disgusting and wearisome with the tormented stuff of furious and aimless lives.

And if you lack the living imagination to accept God thus—as a fact—then I ask you to accept Him as the only possible formula for the reconciliation and salvation of mankind.

Editor's Note—This is the third of three articles by Mr. Wells.

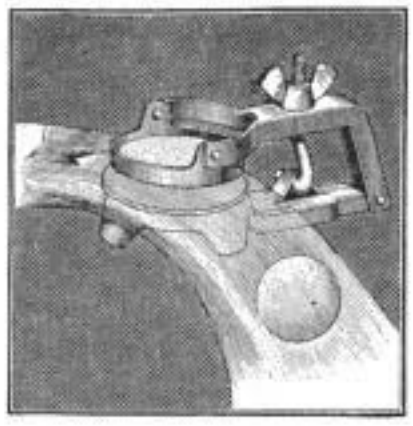
The "Ray of Sunshine" in Tire Trouble

PUT ON A PATCH, EASY AS YOU LIGHT A MATCH

THE best tires made are bound to pick up punctures sooner or later. But more than a hundred and fifty thousand motor car owners are happily forever free from their delays and inconveniences. They are *prepared*—ready at any instant to make permanent tube repairs right when needed—they have equipped their cars with a



MARVEL JR. VULCANIZER

Manufactured under our own Patents No. 1181085 and No. 1180437.

$1.00 OUTFIT COMPLETE

THE Marvel Jr. is easy to use—simple and quick in operation. No experience whatever is needed to make perfect repairs. Instead of gasoline or alcohol, a *chemicalized disc,* little larger than a silver dollar, is used as fuel. This disc burns without flame—applies heat to repair only.

To repair a puncture you simply slip the Marvel Jr. over the patch of uncured rubber, tighten it down with a few twists on the thumb screw. Touch a lighted match to the *chemicalized disc* and in less than five minutes you have a perfect repair—a patch that is part of the tube itself.

Marvel Jr. Vulcanizer $1.00

PACKED in the substantial carton with the Marvel Jr. Vulcanizer are six *chemicalized* heating units, six Marvel Patches, sand paper, and full instructions. Six tube repairs alone are worth more than the cost of the total outfit and this material is furnished with the Marvel Jr. at no extra cost.

Big, in the results it accomplishes, the Marvel Jr. is small enough to slip into your pocket. It is an accessory you will be proud to own—proud to show to your friends.

MARVEL SR. VULCANIZER

The Marvel Sr. works on exactly the same principle as the Marvel Jr. It is designed for both casing and tube repairs. A *chemicalized* heating unit is used for fuel—there is no flame to scorch the casing or tube—all the heat is directed to the repair and the harder the wind blows the faster the Marvel Sr. works. The price of the Marvel Sr. outfit complete with material for a large number of repairs is only $2.00.

MARVEL ACCESSORIES

Marvel Accessories are in every case designed to fill a definite, year-round need. Our new, hundred-thousand-dollar factory is entirely devoted to their manufacture. They are sold by the best dealers in nearly every part of the country. Right today let your dealer show you how easily and simply the Marvel Jr. works—how much it will save you on your tire repair bills.

DEALERS: If you are not selling Marvel Accessories ask your jobber today, or write us direct for full information.

THE MARVEL ACCESSORIES MFG. CO.

MARVEL BUILDING, St. Clair Avenue and E. 73rd St., CLEVELAND, OHIO

By ELEANOR GATES

ILLUSTRATED BY W. B. KING

My Ten Thousand Dollars Was Lost. I Was Dead Certain of That

WELL, Lute Mullen," I says to myself, talkin' out loud like a crazy sheepman, "here you are!" I was standin' at a street corner in Los Angeles, one boot planted on my telescope valise. "Here you are, young feller! And it ain't so different from First Pines, Nevada. The buildin's are a little higher, that's all, and there's more of 'em. Also the streets are some longer at both ends."

Of course there's other differences too. Los Angeles is flat—not a hollow in it big enough to hide a cow. First Pines hangs to the north slope of Eagle Mountain. Steep? I should say!

Why, that mountain's so steep that the goats—well, you won't believe it, but the goats have to wear breechin', so's they can hold back goin' downhill!

Naturally the town hasn't none of them pay-if-you-can-ketch-'em street cars. Nor no oil-drinkin', dust-eatin' chug-chugs. I wasn't used to neither one, and considerable prejudiced against the last named—steerin' gear like a Tahoe steamer, insides of a donkey engine, and a smell like a Piute camp. Yes, and dangerous. Say, with automobiles scootin' two ways at once, a man's got no more chance for his life on the street than if he was exercisin' in a switch yard.

Speakin' of autos I was still standin' on that corner, expressin' opinions to myself, when all of a sudden I seen one. Oh, I'd seen 'em before—in Reno, once. No, I wasn't down there for that reason. But I'd never happened to see one bein' geehawed by a woman. This one was. It was a whoppin' two-seater, too, with a voice on it like a snowplow. And the woman was just only a girl.

"Well, talk about your tomboys!" I exclaims, mighty disgusted. Yes, tomboy is the word I used. Aw, if a man could see ahead!

She reined up right beside me, pullin' a lever or two and pushin' a few buttons. Then she stood up, drawin' off her gloves, and—stared straight at me!

Tomboy or not, I had to admit that she was cute—slim, and not taller'n my shoulder. Don't you hate a beanpole? So do I! And her face! You know, there's faces that are so kind of delicate and sweet that when you come across one of 'em you know exactly what their owners looked like when they were kids. Well, hers was that brand—roundish and pink, with a square little chin, eyes blue as a Sierra lake, and a mouth as scarlet as a snowflower. She was wearin' a sugar-loaf hat pulled down all the way. On the eaves of the hat was a handful of cherries that looked good enough to eat. And blowin' out from under the rim was some light fluffy hair.

Then—still starin'—she spoke!

"Am I in your way?" she inquired, some anxious.

I didn't just catch on to what she meant, but all I had to do was tell the truth. "No, ma'am," I answers.

"That's good." She gives a glance behind her. "But—but where's the camera?" And she begins to look all round.

Off came my sombrero, and pickin' up my valise—it was heavy, I can tell you!—I stepped forwards with my best First Pines bow.

"I haven't seen no camera," I says. "Can I help you to find it?"

She stared at me again. "O—h!" She laughed a ripply little laugh. And three dimples danced a grand-right-and-left into place. "It's not a movie. You're a real cowboy." Which just shows you what I looked like.

The next minute she shed her duster, hopped to the sidewalk, and disappeared into the bank.

The bank was why I'd stopped on that particular spot. Comin' along from the deepot, I'd kept my eye peeled for one. And here loomed up this grand specimen, two stories higher'n its neighbors, all of stone, and with windows as wide as a Silver State freighter. The front door of it was built right flat across its outside corner, and I thought it was locked—which explains my darn-fool waitin'. But now, seein' it wasn't, I clapped on my hat and followed Miss Tomboy. Don't mind tellin' you that I felt a mite chesty.

"Well, that wasn't so worse," I says, "to be mistook for Dustin Farnum!"

Straight in from the door was a small window with "Cashier" in gold letters over the arch. I went up to it. "Howdy"—he was a tony feller with a mighty nice face—"I'd like to speak to the—the boss of this establishment, if it's all the same to you." "President" was what I ought to of said, but I was rattled, and the word ducked when I reached for it.

"I'll see if Mister Gleason is in his office." He motioned me to set down. Polite, wasn't he? The bench I took was covered with fancy leather. And, my, what fine polished wood was everywheres! Elegant? As elegant, by thunder, as a sleepin' car!

He didn't leave his window for one second. But banks has got a system of signals that beats all your Injun sign-talk. So pretty soon a boy—in full-gathered trousers, mind you!—shows up from behind a partition, and he knows exactly what was expected of him.

"This way," he says, swingin' open a door. And I went in to the handsomest kind of a little room. Two people were there, both settin' at desks. One was a old gent with white hair and grizzled eyebrows. The other one was—Tomboy.

"So she's a typewriter," I says to myself. And I was some disappointed. Because the only typewriter I'd ever met up with before was a lanky lady at the First Pines General Merchandise Store. Name, Pearl. Say, but Pearl was homely! Homely enough to stop a clock, as the popular sayin' goes. But this typewriter girl! She gave me a shy sideways glance.

"What can I do for you?" Say, he had on a soft shirt!

"Mister President"—I liked him already—"I'm goin' to ask your bank to put what I got here into the safe." I tapped my valise.

"Ah." He showed he was interested.

I set the valise on a chair and begun to unstrap it. "When I made up my mind to quit the mountains," I explained, "I paid a visit to a certain hawg-back and dug up this."

"Mountains!" he says, lookin' pleased. "Why, my first bank was in Grass Valley."

"You don't say!" Well, I might of guessed it, from the boots he was wearin'. "First Pines, Nevada, boss," I says.

"Here! Shake! And now what you got?"

"A friend of mine was dead set against me fetchin' it down in just this shape," I told him. "'Take a check,' he advised. But 'No,' I answers, 'I'm goin' amongst folks that won't know Lute Mullen from the side of a house. But—they'll know cash.'" Here I lifted the top of the valise.

The president looked. "Well!" he exclaims. Which fetched her over.

I'd spent more or less time in arrangin' my pile. The paper money was laid flat, in neat rows. And holdin' the paper down was my gold twenties, each yellow boy done up separate in tissue paper.

"How much is here?" (The old gent.)

"Ten thousand." (Me.)

"My!" (Her.)

That girl's lashes was so long you could of braided 'em.

Just then the bloomer kid put his head in at the door and named some man's name.

"Can't be disturbed now," says the president, kind of short.

Thought mebbe he didn't like my proposition.

"Ain't it goin' to—to be O. K.?" I asked. "Can't I leave this?"

He smiled. "You can deeposit right now." She smiled too.

"I'm glad. Then I can go buy a meal. I bought a couple of oranges off the peanut butcher on the train, but they didn't satisfy me much."

The cashier comes in. More signals. And "John," says the president, "this gentleman is ——"

"Lute Mullen," I helps out. I was jealous of that young feller already. "And I want to make a deeposit." Oh, I ketch on to a new one!

Never seen a more surprised expression on a man's face.

"Thousands!" he kinda whispers, leanin' over the valise.

"Ten thousand," says the president. "We'll count it here."

John was a corker at countin'. Now I was on intimate terms with every piece of paper and every lump of gold in that valise. I've been more'n ten years collectin' 'em and gettin' acquainted with 'em. He'd counted the whole lot in about fiveminutes, seems like, snappin' the bills and ringin' thetwenties. Then he slipped me a piece of paper that showed they was still mine. Gosh, I hated to think that my gold and paper friends would be mixed up soon with hunderds of other bills and coins, so even I wouldn't know 'em if I was to meet 'em comin' my way through the little window.

As I picked up my valise to go Mister Gleason says: "You seem a very young man."

"Twenty-six, come August." This was January.

"Twenty-six, and you've saved ten thousand dollars!"

"Everything I touch seems to turn out fine." Say, just remember that brag!

"Hope I'll see you again. Do you plan to remain in Los Angeles?"

"We-e-ell," I says —— Fact is, I hadn't made up my mind what I was goin' to do, beyond lookin' round me for a while. But now, happenin' to glance past him to her, why: "I'll make this city my headquarters, sir," I answers. "I aim to put some of my cash into real estate."

"Come and see me if I can help you at any time," goes on the old gent, mighty kind. "I'm here from ten to three 'most every day, and when I ain't, why, my daughter"—here he turned to her and took her hand—"is at her desk. And"—laughin'—"she's got a business head."

So she wasn't a typewriter!

"Learnin' the bankin' trade?" I inquires.

She smiled up at her pa. "I'm taking the place," she says, "of the brother I never had."

Now, wasn't that a mighty pretty idea? Makin' old dad feel good, you savvy. And I'd called that nice thoughtful little lady a tomboy! "You great hulkin' backwoodser!" I says to myself, "you don't deserve no breakfast."

"So," goes on proud pa, "if you come in and I'm away just ask for ——" Here he said her name.

What do you guess it was? Well, think of the nicest girl's name that you've ever heard in all your born life. Come ahead! That's it—Stephanie.

Stephanie! Dignified, not common, and graceful. And it suited her.

"Stephanie," goes on Mister Gleason, "after me."

"You?"

"Stephen—Stephen Gleason, you see."

"Oh." Stephen—Stephanie. Tomboyish after all. But what'll you think about what comes next?

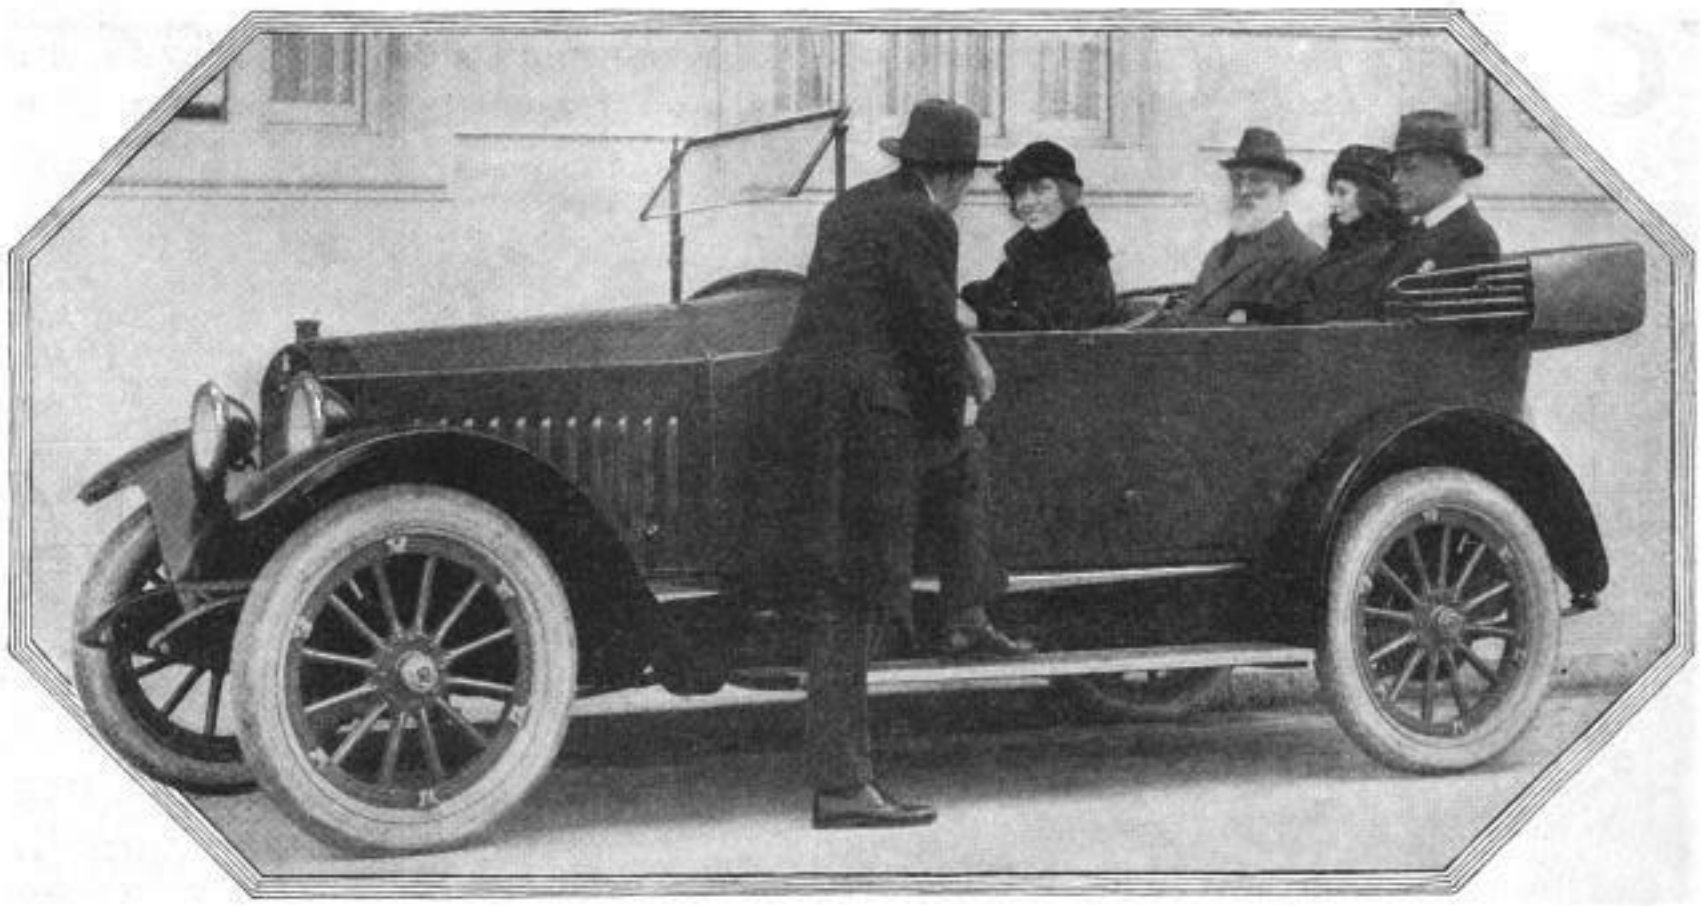
"But we don't call her Stephanie," goes on her pa.

"Ah!"

Now she spoke up. "No. Everybody calls me Billie."

Billie! A girl, and Billie. Gosh! Why, once I had a goat ——

"You think that's a funny name for a girl, don't you?" Tootle—toot—all the dimples into place.



"Well, I—I—I ——" Got out about fifteen of them I's. After that I just had to have somethin'. I made for an eatin' house.

Your Pride in a Liberty

YOU are proud of your Liberty car because it is proof of your own good judgment. It is proof that you have bought wisely and deliberately, on hard business facts.

You have not been influenced by mere statements, by manufacturers' claims, by dealers' words.

You have bought the Liberty on positive proof—on your knowledge of all other cars. And the Liberty proves the soundness of your judgment.

This is the way the Liberty practically sells itself all over the country.

Straight Facts

Never before were you invited to step out of a larger and more expensive car into a five passenger "six" and make the direct comparison.

We ask you to do this with the Liberty and draw your own conclusions.

Never before were you invited to sit in comfort in the back seat while the car drives at full speed over car tracks, ruts, pits, and hollows.

We ask you to do this in the Liberty, to note the long, always easy swing that means your relaxation and motoring comfort. You sit *in* it—not *on* it.

Never before were you invited to push out a clutch pedal with one finger—to pull an emergency brake with one finger—to shift gears from third to second at full speed.

We ask you to do this on the Liberty, and to learn what driving ease really means.

Positive Proof

The Liberty is a solidly built, dependable, honest car, made by men who have been producing high priced cars since the beginning of the industry. It is built to create an enduring and permanent business.

It is especially notable for driving ease and riding comfort—to an extent never before achieved.

It is these features which you must prove to yourself—by the stiffest kind of tests.

So that you—like the thousands of other Liberty buyers—will be proud of your car.

On a solid basis of proved facts.

Get into a Liberty *today*. Prove these statements to yourself. If they are true in every detail you want a Liberty car.

See the Liberty at the Chicago Automobile Show—Armory—Jan. 27th–Feb. 3rd. Five passenger Touring Car, Four passenger Close Coupled Roadster, Detachable Sedan, Victoria, and Shopping Brougham.

(Continued from Page 39)

"Just rope and tie me some ham," I says to a gent wearin' an apron. "Yes, and I don't care if you rob a nest."

Oh, a good appetite, no denyin' it; a jo-dandy appetite. Nevertheless and notwithstandin', I soon begun to see that I was in a blamed queer state. That first day—to start off with—I picked a certain boardin' house just because there was cherry trees in the yard. And if I looked at anybody, all I could think was: "She's got blue eyes." And for two whole days, while I was lookin' at real estate, what I actually did was to travel in a circle. Say I started east, toward Spanish-town, or west, toward the Pacific Ocean. Just as sure as a crow knows its way home I'd land up finally at the bank. Wouldn't know how I got there, but there I'd be.

"Work is what you need, you poor son-of-a-gun," I says, facin' my conscience in the lookin'-glass. And the fool glass says back to me: "Billie."

Well, when I couldn't stand it no longer, I took Mister Gleason at his word and dropped in on him. Hang it all, he was there! But he was more'n nice, made me set down, and took my hat away from me. Miss Billie gives me a little bow, with a smile for good measure, then goes on studyin' a long paper full of numbers.

"Mister Mullen," says her pa.

"Call me Lute, boss."

"Well, Lute, tell me about yourself."

I went back to when I was ten, and just sort of sketched the next sixteen years—the sheep business, then polo ponies, then cattle. "But," I ends up, "I got tired of the hills." I looked out of the office window. It showed into the rear yard. There was hammerin' goin' on out there. And I seen that next to the bank was the back door of an undertakin' place.

"Lute," says Mister Gleason, "you're down from the hills, as you say. But you know a lot of things. Not the same lot of things that the men round here know. But—well, I'm down from the hills, too, and you're pretty much like what I was when I first struck Grass Valley."

"You make me feel kind of at home, boss."

"Glad of it! Now—picked out any property yet?"

"Not yet, sir." If he only knew about my crazy circlin'!

"Well, I've got two good investments in mind. One's here in Los Angeles, the other's in Watrous, the junction town just east. As to Los Angeles, Lute, of course it's always growin'."

Growin'! I should smile! A Los Angeles man told me that his dawg left home one mornin' and stayed away about two weeks. When the dawg made to come back, that end of Figueroa Street was so changed that the poor critter couldn't find the house. No, ma'am! The man complained about it to some animal society. Growin'? Well, don't this story go to show?

"How about a couple of new bungalows over in the north side of town?" goes on Mister Gleason.

That didn't appeal to me strong. Because, judgin' from the little I'd seen, there ain't no kind of bungalow that hasn't been tried on Los Angeles at least once. So I wouldn't undertake to hand the town a new one.

"But that Watrous proposition," I says. "Y' see, boss, a young man cottons to a young place."

"It's a fine buildin'—brick, three stories and all rented. The owner died and his heirs had a row. They want to sell. The property's bound to raise in value."

"Is $10,000 the price?" I was excited. And I noticed that Miss Billie was lookin' at the old gent, eyes big.

He laughed. "The price is $40,000."

"Gee, Mister Gleason!"

"Wait. Ten thousand dollars will handle it—that much down, cash, and a thirty-thousand-dollar mortgage."

"But, boss, I don't know anybody." Then fifteen more of them I's.

"Suppose you pay your $10,000," he explains, "and take over the leases. You'll have a good sum ahead every year to pay on your principal. Before you know it you'll be clear. And I'll take that mortgage for you, at four and a half per cent."

"Daddy!" Miss Billie sprung up, well-nigh strangled him with a hug, and—yes—kissed him.

Say, ever been wound up in a swing? Then you know that swimmy feelin'. I give you my word, there was seven windows to that office, and seven carpenters poundin' away in that back yard. And I had to hold on to my chair. Lordy, what'd happen if she was ever to kiss me!

But why did she kiss him?

"What do you think of the proposition, Miss Billie?" She was back in her chair.

"What do I think of it? Daddy was goin' to buy that property himself."

"Oh." That didn't tell me much.

I begun to reason: Here's a buildin'. He figgered to buy it. Then he turns it over to me. She's good at business. She's glad he ain't goin' to carry through the deal—and lose. She's so glad she kisses him. How's that?

Dead wrong. If it's a bad proposition for father, it's a bad proposition for me. And she's too kind, too sweet, too nice, too unselfish too—so she didn't kiss him because I was to be the sucker. No, she kissed him because he was lettin' me in on a good thing. But, pshaw! That can't be so. She don't know you, Lute. She don't care—you poor imitation of an actor! Just the same, about forty-'leven little hummin'-birds set up a hullabaloo in my heart.

And when I left the office, with the name of the real-estate gent at Watrous, I was so happy that I stopped to shake hands with John. After which he showed me how he wraps up twenties—fifteen of 'em to a roll. He had a wood tray chock full of rolls right inside his window, and he was as unconcerned about it as if they was cookies.

"Whew!" I exclaims. "Ain't this takin' chances?"

He laughed. "If anybody was to grab that tray," he answers, "they wouldn't get so awful much." Careless geezer, wasn't he?

"'No,' I Answers, 'I'm Goin' Amongst Folks That Won't Know Lute Mullen From the Side of a House. But—They'll Know Cash'"

Now I know what you think is goin' to happen: Broad daylight—bank robber—Lute Mullen to the rescue—big article in the papers—and so on, and so on. But that ain't it. To continue:

In no time I was aboard little old Number 7, and she was switchin' her tail through wonderful orange groves, and next through the most gosh-awful desert, on her way to Watrous. "Miss Billie!" sung the wheels of the chair car: "Miss Billie! Miss Billie! Miss Billie!" Just one hour and a half later, here I was, standin' in front of that three-story brick buildin', gazin' up at it, with a big grin on my face, and gooseflesh all up my spine, and—can't deny it—salt water splashin' on my coat lapels. "What'll the First Pines Gazette write about this!" I says to myself. Because on the ground floor was a fine store, a slick-lookin' barber shop and—the post office! Sort of a Government buildin', you see. The second and last floors was the leadin' hotel of the place. Tried to make out the names on all the signs. Every last one of them read "Billie."

When I'd looked till I had a crick in my neck and a crowd round me, I hunted up Mister Jordan. Little man. Funny high voice. Office in a shack by the deepot. His bungalow was north of town—one of a half dozen that was strung along a green lawn. I explained I was goin' to take over the Gleason proposition. Didn't want to wait. My Los Angeles bank would transact all the business. Here I drew myself up.

"Well," says Mister Jordan, "I'll have to ask for a little delay. The owners, Robert and Jennie Howland, are not in Los Angeles at present. It'll take me a month to get their signatures to the deed."

"All right. This is January twelfth. Say we make it February twelfth?"

"Why not make it April first?" he says.

"No," I come back; "what's the use of puttin' it off?"

Finally we settled on March thirteenth. April first would've been bad enough, but note this hoodoo date! I was to turn over thirty thousand dollars through my bank, and he was to give me "a good and sufficient" deed. But he was to fix up a contract right away and I was to pay in my ten thousand dollars. "But hurry that contract, Mister Jordan." "You bet I will, Mister Mullen." Then Number 10 was jerkin' me towards—her. "Mullen Buildin'!" sung the wheels. "Mullen Buildin'! Mullen Buildin'!"

Mullen Buildin' was the name I settled on. And I seen a painter about puttin' the two words on both side walls, from front to back, close to the top, and big enough to be read from incomin' trains. For the sign over the hotel I bought brass letters—MULLEN HOUSE. Wanted 'em gold, like the cashier's, but they come too high. Had all eleven of 'em sent to my boardin' place, and I stood 'em up against the skirtin' of the room, so's I could enjoy 'em. And there was other things to attend to. Was busy every minute of that month. For instance, I had some business cards printed: "Luther Mullen"—no Mister—with "Los Angeles" in the left-hand lower corner, and "Watrous" in the right. Sent a full dozen to First Pines. Next, bought some fly-screens—the kind that has scenery painted right on the wire. There was mountains exactly like old Eagle, with cute little Los Angeles bungalows hangin' to 'em, and ladies and gents dressed up in theater duds whilst they herded sheep. Stood the screens up alongside the brass letters. Then I happened on a barber pole. It was red-and-white, like a stick of candy, and had an electric light inside. You wound up a clock dingus, and she turned for further orders. As I was shuttlin' betwixt Los Angeles and Watrous every day, I put it up to the Mullen Buildin' barber—learnt his trade in 'Frisco! I says: "If you'll go halves on the pole, Jim, I will." He said: "O. K." That pole looked grand in my room. Havin' the red-and-white pole, the next play was to blow myself on awnin's to match—beauties, with Mullen Buildin' painted on the overhang.

One mornin' my contract was ready. It said that I'd bought such and such a lot, bounded this way and that, "with appurtenances thereon." Notice that fifteen-dollar word! I signed it, and wrote out my ten-thousand-dollar check. That was some occasion. Yes, ma'am! Because Miss Billie helped me look through the directories, and through a bluebook—it wasn't blue—to see if we could find Robert and Jennie Howland. Well, we couldn't. That same evenin' I got asked over to the Gleason house, and we set on the side porch, and a Chink brought us fruit punch, which ain't punch no more than a bluebook is blue, and I seen a little bit of heaven—heaven with a garden round it, palms here and there, and beds of violets—a heaven with folks that was home folks.

That was the night I begun to dream. Aw, that dream! It stayed with me, wakin' or sleepin'. Always she was beside me, in the circle of my right arm. Both her little hands was tight in one of mine. Her head was on my shoulder, her hair blowin' against my face.

Of course I had to report at the bank once a day and have my little chin-chin. Sundays, I nearly died. Then come March twelfth. This was the mornin' I was to go to the bank, take the thirty-thousand-dollar check over to Watrous, stay the night at my hotel, and come back March thirteenth with the deed. I started downtown wearin' my best suit. Had a copy of the First Pines Gazette in my pocket. It had somethin' about "our young townsman, Lute Mullen" in it. I aimed to show it to her. Was hikin' along in grand spirits when I seen a fellow just ahead of me stop and look up at the sky. So I stopped. Overhead was floatin' a big leaf—no, it was too big for a leaf; it was about the size of my hat. It lit. It was a piece of burned paper.

The fellow stared at it. "By thunder!" he says over and over: "By thunder!"

"What's the matter?"

"This has blowed all the way here since the fire."

"Fire? What fire?"

"The fire at Watrous."

Watrous!

I didn't go to the bank. Couldn't take that face of mine where she could see it. Besides, maybe my buildin' wasn't gone. Anyhow, I wanted to find out—I wanted to know the worst. I jumped on a train.

Funny what things ketch a man's attention at a time like that! I didn't know but every dollar I owned in the world was swallowed up. Just the same, as we hiked along I watched a fool dawg race the engine. When bad luck gets a stranglehold on your throat, or when the ground splits wide and you see bottom, you'll stop to brush a speck off your cuff.

But after we passed San Bernardino and struck the desert, I set up and took notice, all right, all right. Here was people comin' towards Los Angeles in machines and wagons, with their belongin's piled in the back. A few folks was afoot. Next, smoke—not so much though. And then—jiminy crickets!

It was about ten miles off, I reckon. It reminded me of the time a strange parson turned up at First Pines to hold revivals. The night I heard him, he kept repeatin': "And the fire shall devour 'em—the fire shall devour 'em." "Well, by golly," I says to myself, "in this case the old duck was right!" On the gray stretch of the desert was a black spot—like the shadow of a big bird. Just only a spot!

Recollect that brag of mine—"Everything I touch seems to turn out fine?" Well, Lute Mullen, here's where you come down off your high horse!

We stopped on the edge of the ashes. To the north was that row of bungalows on the long patch of green. I clumb down and hoofed it to Jordan's. He was settin' on his front porch.

"This is awful!" he calls as I come up. "This is awful!" His hand was cold as ice.

"Mister Jordan, don't Robert and Jennie give me back my ten thousand dollars?"

He kind of bristled.

"Mister and Miss Howland will live up to that contract," he answers; "and so will you."

"Well, I won't ask Mister Gleason to pungle up thirty thousand dollars for a pile of ashes on a hot lot."

"I'm not rushin' you, Mullen," he comes back; "take your time."

That sounded pretty decent. "Thank you, Mister Jordan. But—how about the insurance?"

He started up. "Oh, that's the worst of it!" he says. And beginnin' to pace the porch: "That's the worst of it!"

"Mister Jordan! You mean ——?"

Well it seems the insurance companies wasn't crazy about takin' risks at Watrous, the water supply bein' none too good. Jordan's company had an agent that was always talkin' fires. Now the storekeeper had been keepin' an awful lot of gasoline in his cellar. Jordan didn't raise no rumpus about it—he might lose a good tenant.

The New 3-Passenger
Four-Cylinder Roadster
$875 f.o.b. Lansing

THE GO
OF

$875

In These Essentials—*Long Life; Low Upkeep; Consistent Perform*

WE REO FOLK make this assertion in the firm belief that it is one hundred per cent true;—that you can drive a four-cylinder Reo—world-famous as "Reo the Fifth"—longer, farther and for less cost of operation and upkeep than any other five-passenger car in the world.

THAT IS A BROAD STATEMENT—we fully appreciate how sweeping. And yet we have no hesitancy in signing the Reo name to it. And you know what the Reo word is worth.

WE BASE THAT ASSERTION on the experience of the seven seasons that this Reo model has been made in practically its present form, and on the statements of thousands of dealers who have sold, and tens of thousands of owners who have driven, this car.

DOES NOT THE VERY FACT that we have continued to make this model year after year that long time—just refining and improving details as our engineers or body designers found opportunity—

DOES NOT THAT FACT PROVE our sincerity and our great faith in this model?

JUST THINK BACK over those years and recall, if you can, the many, many new models that have come—and gone; the many "revolutionary" inventions that failed to revolutionize; and changes that failed to endure.

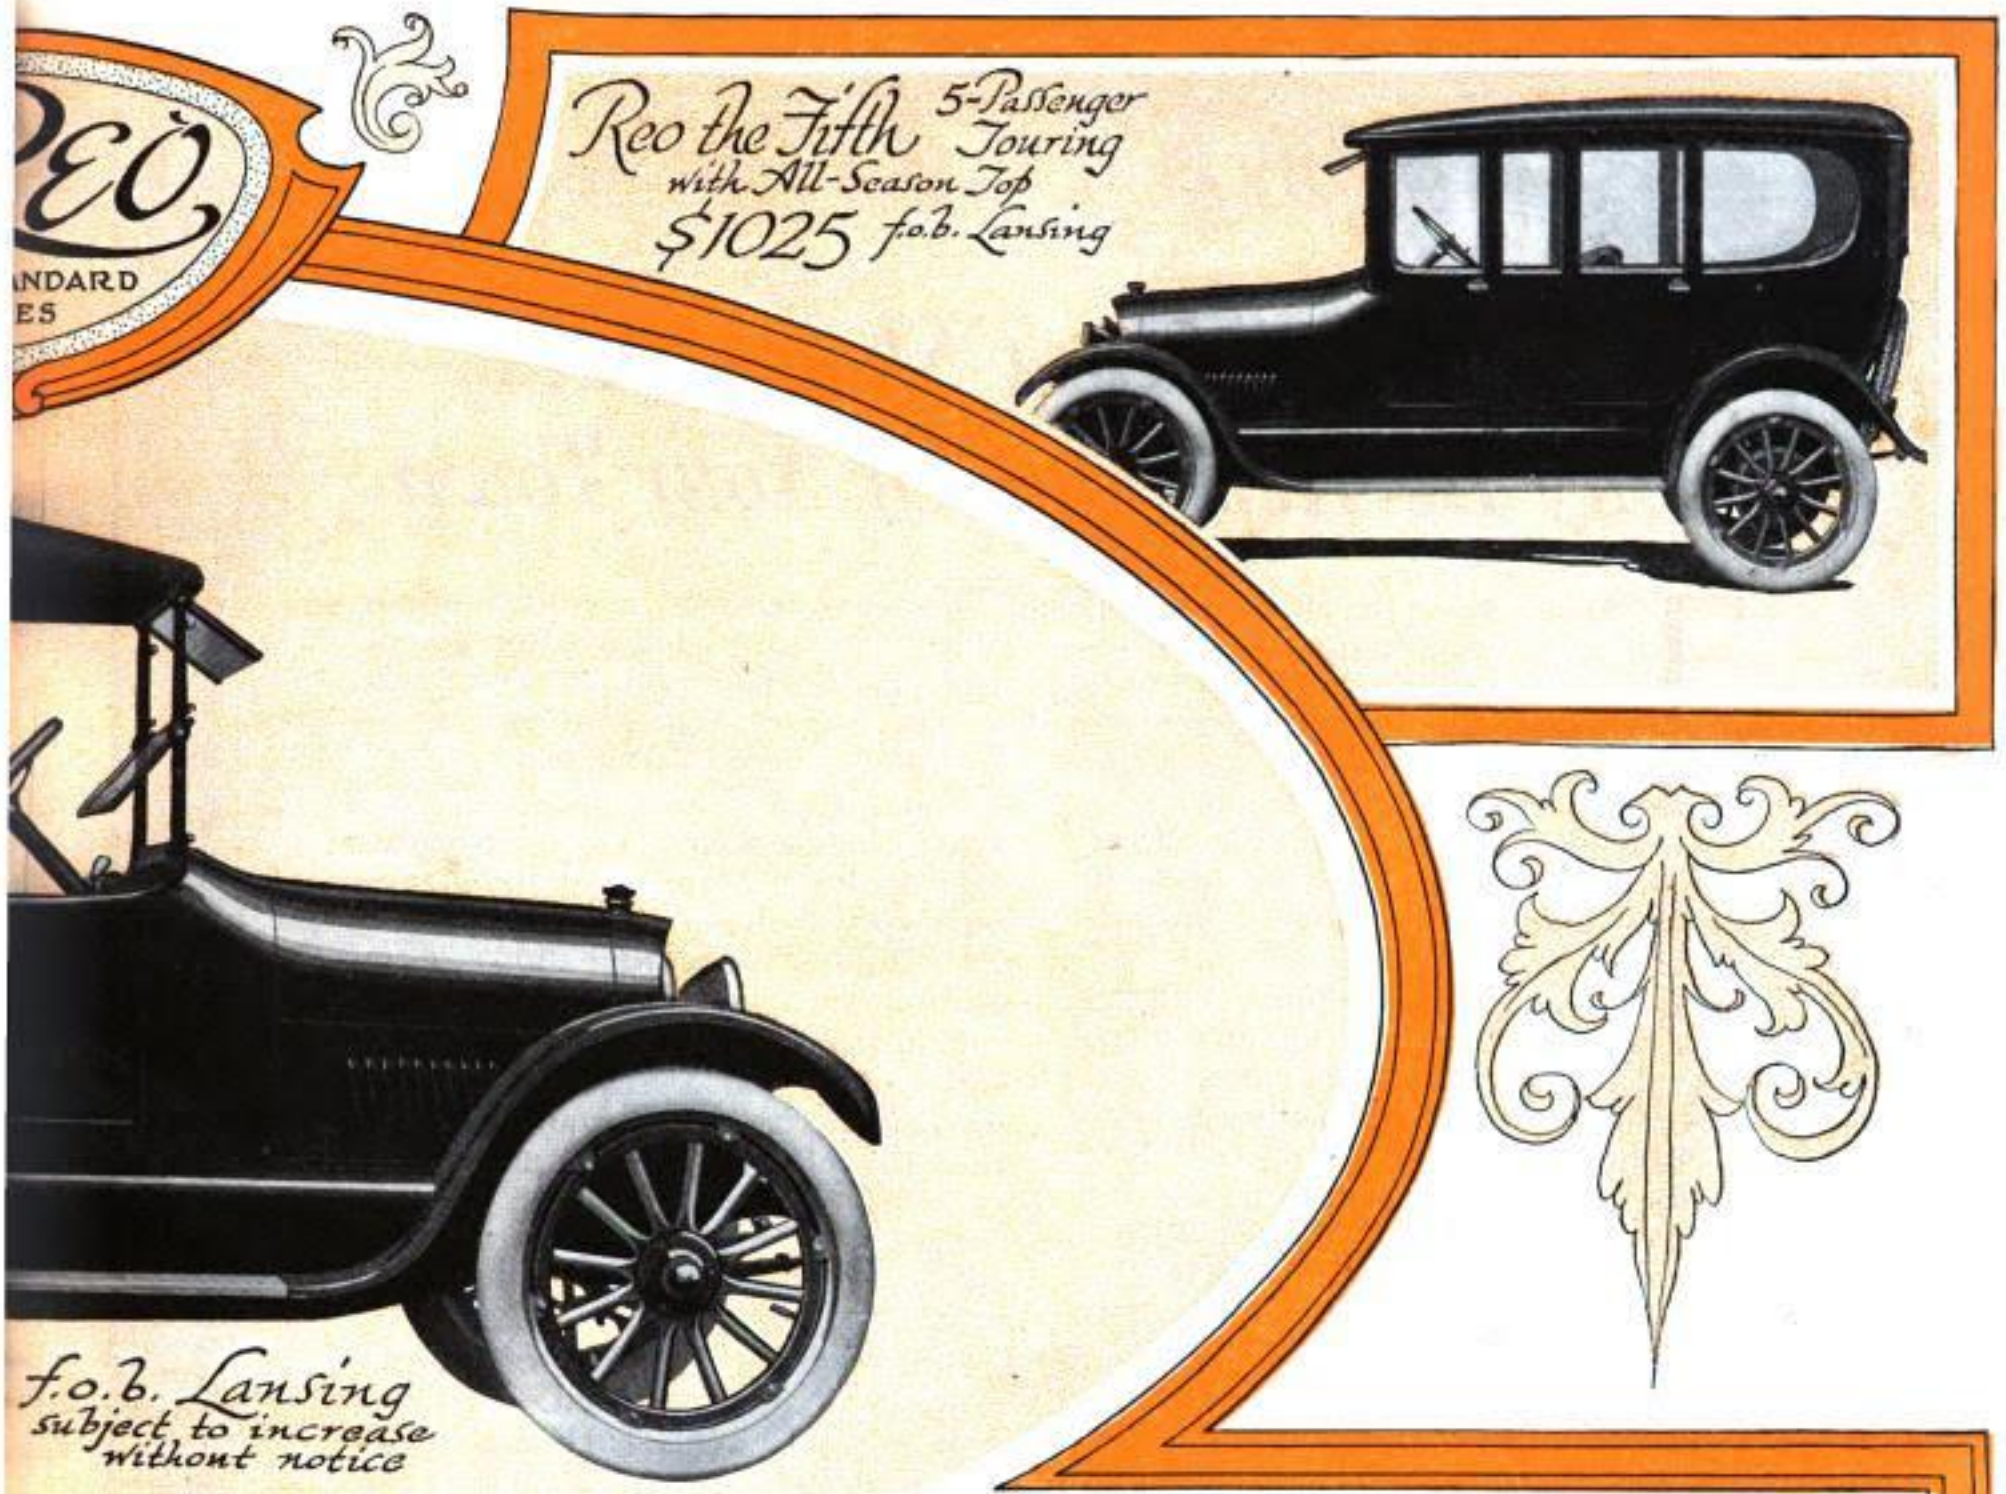
AND STILL, AND STILL REO THE FIFTH has retained in its original form, its perpetual supremacy—has enjoyed each succeeding season, an increased popularity—an increased demand.

WE ASK YOU as an experienced motorist, what are the prime essential in an automobile?

ANSWER THAT out of the fullness of your long experience—for it is fact that few "new" buyers select Reos. This car is most popula among the most experienced. These have learned one great fact—namely—

THAT FIRST COST IS NOTHING—it is a consideration of not eve secondary importance.

THESE ARE THE ESSENTIALS, and we submit that, within reason able limits, first cost should not be the deciding factor.



FOR OBVIOUSLY 'T WERE IMPOSSIBLE to put into a motor ca that quality that is Reo—the materials and the workmanship and th liberal quantity of both—that guarantee Reo reliability and lo upkeep cost and yet compete on a price basis.

"50 PER CENT OVERSIZE in all Vital Parts"—that well-known Re standard, should cost 50 per cent more. As a matter of fact it does no cost that much more, nor do you pay 50 per cent more. Only abou 15 per cent. Reos are sold on a small margin of profit.

SO SMALL, BY THE WAY, that it may be necessary at any moment t increase it—which we reserve the right to do without notice. An Reo sold at this time is sold with the expressed understanding that th sale price will be the list price at time delivery is specified.

ce and "Used Car" Value—Reo the Fifth Is Verily "The Incomparable"

) THE ONLY WAY TO BE SURE of getting a Reo the Fifth at the present price is to buy it and take delivery now—if your local Reo dealer can supply you.

YOU HAVE THOUGHT that that Reo slogan, "50 per cent oversize," was a mere advertising catch-phrase or a kind of harmless exaggeration, we suggest that you go into the matter fully—it is important that you inform yourself—that you know. And you'll find that it is, in fact, an under-statement of the facts—very much so.

OW YOU CAN'T BUILD that kind of a car and sell it at the price of a light "skimpy" car. You can't put Reo strength, Reo quality into it and yet meet a price competition. You can't put super-quality, super-strength and super-service into an automobile and yet meet a price of mediocrity.

E HAVE NEVER TRIED TO. Never intend to. Reo prices like Reo quality, are made here and without regard to—without even considering—prices other makers set on their product.

ND REO LOW UPKEEP COST is a result. The price you are able to obtain for a Reo of any vintage in the "used car market" is a result. The fact that the first Reo the Fifth ever made is still doing excellent service is a result; and the consistency of performance of all Reos—the enthusiastic endorsement of all Reo owners—is another result of that Reo policy.

WE HAVE NEVER STRIVEN to make all the automobiles—only the best. Never tried for vast quantities—only better quality. Never tried to make a dollar out of Reo stock save as it came legitimately from the making of Reo cars and trucks.

WE HAVE BEEN CALLED "OLD-FASHIONED" and sometimes even a Reo dealer whose standing in his community is the result of selling this sterling product, importunes us to change—to make lighter, more flashy, more sensational performers—and to get into the mad price-race.

TO WHAT END? WE ASK—To what end?

HAVE WE NOT ACHIEVED that which is—or should be—the highest ambition of an engineer or a manufacturer or a salesman—a sterling product whose merit is universally recognized and acclaimed—by ally and rival alike?

WE THINK SO—and are content. For many years to come we hope to make this great model—always a little better—never skimping to meet a price.

THE GREAT SPRING DEMAND is already upon us. There won't be enough Reos to go round—never have been. So order—and get delivery—as soon as possible. We shall not strive to meet the whole demand—only to fulfill your ideas and ours of what constitutes a good automobile.

Why The Best Shoe Values May Be Kept Out Of Your Town

THE old style shoe-dealer is *secretive*. He doesn't want his customers to know too much about his business—where he gets his shoes, what he pays for them, or how much he adds to that price.

He believes in Private Labels. *Why?*

Ask him for a standard shoe of known value, and he doesn't keep it. *Why?*

He has his shoes stamped with his own name. There are manufacturers who do that—make anonymous shoes and stamp any dealer's name on them.

Some dealers like to say—"These shoes bear our own name; they are specially created for us"—making a mystery of a simple matter. *Why?*

Then there is the dealer who features a branded shoe, giving it the air of a national Standard Make—when it *isn't national* and it *isn't standard*. He features a name but he wants it weak. *Why?*

When you walk past the store of the local shoe-dealer and see shoes in the window, ticketed "latest styles," what *authority* is back of that style? The local shoe dealer's authority? He may be narrow and local, or badly advised in his style information. When you wear his shoes in Fifth Avenue, New York, Michigan Boulevard, Chicago, or Walnut Street, Philadelphia—you may find they are stylish only in your own town.

There is, perhaps, a golden opportunity right in your town for a shoe-dealer who will supply *authentic styles, verified values,* as good as can be obtained anywhere in America.

Take Regal Shoes, for example. There are fifty Regal Stores in the great Metropolitan Centres; about a thousand special Regal representatives in other towns and cities; and over two million wearers of Regal Shoes.

Consider the great city stores alone and think what a *test,* what a *guarantee,* they are of Regal styles and values. Every Regal Shoe must compete *every day* with every fine shoe in America. If Regals were not right they could not survive, yet Regal does an ever-increasing business.

Now, we have as many of our own stores as we need, or want.

When it comes to special Regal representatives, the difficulty is to find, in each town, the *Regal kind of shoe-merchant.*

The man we want to know is the shoeman who believes in fair profits and a busy store: a man who really wants to give you the Regal *kind of values*—shoes of known merit, verified styles: a man who believes in building up a business as an institution, based on *good faith* and *good service*—not trying to stick a big profit on one pair of shoes.

The whole town would get back of a shoe-store like that. You can see the man hiring more clerks and renting a bigger store.

REGAL SHOES

268 SUMMER STREET BOSTON, MASS.

(Continued from Page 41)

Which might stop my buyin' the buildin', you savvy. But the week I paid over my ten thousand dollars that agent happened along. He seen the gasoline and he raised Ned. And he canceled the policy!

"And I thought a couple of weeks wouldn't matter," whined Jordan. "Then you could straighten the storekeeper out and insure again. So I took a chance."

I walked off, head down. My ten thousand dollars was lost. I was dead certain of that. Lost! Aw, it wasn't the money I cared about—so help me! It was the dream! The dream!

The train was gone out of sight towards the southeast. I couldn't bear to think of waitin' around them smokin' brick piles for a westbound one. I started for Los Angeles afoot.

Along some time that next mornin', as I was passin' a station, here comes a train goin' my way. I got aboard, and laid back in one of them mechanical plush chairs. "You're beaten!" the wheels taunted at me. "You're beaten! You're beaten! You're beaten!"

Funny I didn't think of goin' to see a lawyer that next day. But I haven't got much confidence in lawyers. I hold that a lawyer is a feller that makes a guess about what he can do—and then charges you for it. Also I kept away from the bank. Wasn't no use to talk about spilt milk.

It was about eight o'clock that night when I found the yard with the cherry trees. I stumbled into my room, knockin' over an awnin', puttin' my boot through a fly-screen and shufflin' the brass letters. Stretched myself on the bed, face buried.

"Let me be a weak calf just this once," I says—I reckon you'd call it prayin'—"and I'll try to buck up to-morrow. I will! I will!"

"Boo! Boo!" goes a machine in the street, like as if it was makin' fun of me. Then I heard the gate slam, and steps up the front walk. "After twelve o'clock to-night," I reminds myself, "my rights to the Mullen Buildin' will be a goose egg. Because if that thirty thousand dollars ——" Knock! Knock! Knock! Next: "Is he in yet?" I springs to my feet. Oh, heaven openin' up to a poor cuss! It was her voice! We met in the hall.

"Mountaineer?" Her eyes was anxious—and kind. I could of gone down on my knees to her. Aw, there ain't nothin' beats the tender-heartedness of a woman!

"It's all right, Miss Billie. I can go to raisin' cattle again. You see, they just didn't have enough water to fight with."

"It's going to be all right." She uses better language than me. "Now hurry if you're comin'. Where's your hat, Mountaineer? And bring a heavy coat ——"

To myself I says: "You'll wake up, boy. A man always sees things when he's gone without his meals."

Two winks of her sweet eyelashes, and we was in the big car and scootin' away. Happy? Say, I was with her. For just that I'd lose a Mullen Buildin' once a day!

We stopped at the bank. There was a light inside, and we found Mister Gleason in his office. He was walkin' up and down. "Where you been all day?" he says. And: "You know I got you into this."

"Boss, no man could foresee that fire."

"We could of watched out about the insurance." So he'd heard about that! "And we needn't of been suckers as regards that contract."

"The contract?"

"My lawyer showed me a joker in it to-day—a joker that's as big as Mt. Lowe."

"Boss!"

"Now tell me—quick, too—just what did Jordan say?"

So they'd heard I'd been over. Well, I gave him Jordan's exact words—about "time," and about livin' up to the contract.

"Lute, that contract don't specify that he must turn over to you a certain kind of a buildin'. It describes the lot, all right, but only adds 'with appurtenances thereon.'"

"I remember."

"Appurtenances!" goes on the Boss. "That's where we're stung. Appurtenances is the cellar, Lute—and the tin cans."

"Gee!" Well, I never did like that word.

"Lute, we're goin' to hand that thirty thousand dollars to Jordan before twelve o'clock to-night."

"No! It's good money after bad."

"Listen! He wants you to take time—and default in your payment. Mebbe he wants it because he can't carry out his part of that contract by midnight."

"You mean ——" Christopher Columbus, but I was excited!

Miss Billie's face was all pink. "Suppose the deed burned, Mountaineer," she put in. "He's got to have another, properly signed, by twelve. Well, he's never had any power of attorney, and that brother and sister don't live around here. So ——"

"Hoo-ray! Hoo-roo!"

"Lute," says the Boss, "we'll offer him the thirty thousand. If he can't hand over the deed let him hand over your ten thousand. I find it's in his own account yet."

I reached out my hand. "Give me the thirty-thousand-dollar check, Mister Gleason. I'm on my way to Jordan's."

"A check ain't legal tender."

I didn't understand.

"Mountaineer," says Miss Billie, "we got to take the cash."

"Thirty thousand dollars?"

"Thirty thousand dollars."

I reached for my time-table. I could say the day schedule backwards and forwards; but at night ——

"No more trains," says the Boss.

"It's got to be the car." Miss Billie was changin' the pins in the cherry hat. "I'll drive. Gas, water, new tires—we're ready. All I need is a box."

"But is it safe?"

"We ain't afraid, Mountaineer. Need a good-sized box."

"Billie and me drive everywheres at night," adds Mister Gleason. "There ain't no danger."

"All the same, let's have a man to drive."

"We're losin' time, Mountaineer. Please! That box!"

"Got a revolver, Lute?"

I took it out.

"Here Goes Thirty Thousand Dollars, Johnnie," I Says to Myself

She laughed. "I been wonderin' if you didn't carry one."

"But not on this trip," says Mister Gleason. "A gun only draws fire." Which is true.

"But, Boss, now ——"

"I'm going to drive—you can't scare me. Oh, do find a box!"

"Get the cash all counted," calls back Mister Gleason, on his way to the front office.

"Risk you gittin' hurt, Miss Billie, and your pa's money, and ——"

"You'll find one in the yard," she answers.

I went out. I found a box all right—from the undertaker's. It was the rough, outside-case kind, as big at one end as it was at the other. Hated to take it, but what else could I do? It was a little one, and it had a cover that fitted. Also it had handles.

Miss Billie was used to that undertakin' place. When she seen the box she only nodded, and led me into the front office. There was the Boss and the night watchman—where the cashier was daytimes. They put in the money—rolls, and rolls, and rolls. Then on went the cover. This was when we noticed the little plate on one end of it. And on the plate was a little name. It kind of choked us up.

But we didn't have any too much time. Two nails into that cover, one at each end, and out we toted the box, put it behind the front seat—fitted just right, it was so teeny—and pulled a buggy robe over it. Then Miss Billie took her place at the wheel.

"Boss, I thank you, I thank ——"

"Good luck!"

A kiss for daddy, and we scooted, bound eastwards.

"We'll make for the railroad tracks, Mountaineer."

"All right, girl. Give him his head."

At the edge of town one slim little hand dropped from the steerin' rig. She gave that old machine some kind of a dig in its off shoulder. And the bungalows begun to stand closter together.

"Now, Lute," I says to myself, "this here is a dream." For darned if it didn't seem like one, with the asphalt skimmin' under us, with that thirty thousand dollars behind the seat, and with her leanin' over the pommel, the cherry hat pulled way down, so's only the square little chin was showin'.

But every mile it got realer. My brain started to work again. "Boo! Boo!" we hollered as other machines went by. We were alongside the Santa Fee tracks by now. Our engine breathed like an animal. Could see how it was she loved the car. It minded her like a good kid, and there was no gruntin', no slackin' on the tugs, no call to pity a tired wheel.

Due east lay our road till we reached San Bernardino. Then we turned north, to make through the Cajon Pass. And soon here was the cottonwoods of the Mojave River, which has water in it at that time of the year. "Boo! Boo!"—a cow, if you please! "What's the time, Mountaineer?"—keepin' her eye on the road, you savvy. "Just nine-seventeen, Miss Billie, by your made-in-the-buggy clock." "Boo! Boo! Boo-oo-oo-oo!"

Folks wasn't thick on the road out here, you bet. But pretty soon up tears a car towards us. A man leant out—yelled somethin'. I couldn't catch what he said. Miss Billie didn't pay no attention to him. "Been drinkin'," is what I thought. "Boo! Boo! Boo!"

Then—all of a sudden—a single light ahead. Couldn't be another machine, you see. And it wasn't movin', as a lantern ought to. But it was right in the middle of the road. Yes, and hangin' from a long fence-board!

It stopped us short.

"Say, girl! What ——?" I started to stand.

"Hands up!"

"Don't move!"

One order come from the river side, the other from the tracks. As I raised my hands—and, gee whiz! but I hated to—a man closed in on us from each direction. They was short men, and dark-complected. The righthand one had a gun. The other carried one of them flashlights built like a flute.

Miss Billie took her hands off the wheel, set back, and stared at the feller with the revolver. "Don't shoot!" she begged. Then, before they could ask us for a pocket-book or a watch, she turned half round and throwed the buggy robe onto the back seat. "There!" she cried out. "There! There! Let me show you," pullin' at the cover of the box.

The fellow with the flash got up onto the car step and aimed his light on her hands.

"Here goes thirty thousand dollars, Johnnie," I says to myself. Always call myself Johnnie when I'm sore at bein' a fool. That second I seen an awful queer look come onto his greasy little face. Oh, he was a Mexican, all right. He give a gasp, stared at Miss Billie—and crossed himself!

"*Dee-o me-o!*" he says under his breath—and stepped down and back!

Before I could understand what it was all about, the other Mexican jerked away the fence-board, waved us to go on, and you bet your life we went!

"Boo! Boo! Boo!" And "Oh! Oh! Oh!" this last bein' Miss Billie, bent way over the pommel.

"Aw, little girl," I says, cut to the heart; "aw, it's a shame to have you cry like that! Let's stop till you feel better."

"Oh! Oh!" she answers back. "I'm not crying, I'm laughing!"

She laughed so hard I thought she'd run us off a culvert, or into the willows and the stream. Oh, yes, I knew what'd saved us. That greaser thought—you guessed it! And that's why Miss Billie started to cry a speck after all. Just like a woman! Then she quiets down, and gives me a quick look, eyes shinin', face all smiles. "Mountaineer!" she says.

Aw, Billie Gleason! I took off my hat, leant down to the wheel, and kissed one of them strong little hands.

"Boo! Boo! Boo!"

Expect I ought to say that a shoe came off, or we had to stop for water, or somethin' like that. But no such happenstance held us up. The wind of the Mojave was in our faces, and not a mite too cool. There wasn't even a speck of dust to make the goin' less fine. In fact, the ride was too short. We didn't know we'd got there till we ran smack betwixt two piles of bricks and ashes.

No, it didn't give me no jolt. All I could think of was: "Thank heaven, the money's safe now! The money's safe now!"

We set back on our traces, wheeled, and galloped for the bungalows, where I made myself terrible popular by wakin' up the whole string before I located Jordan's. A head was poked out of a window—a bald head.

"Lute Mullen, Mister Jordan. Please come out."

Down went the window. Then the door opened.

"Well?" he says, meanin': "What're you doin' here at this time of night?"

"This is the 13th of the month," I explains. "I'm to hand you thirty thousand dollars; you're to hand me a deed."

"But look here—"

"You come and look into this car." I started for the road and he follered.

I clumb onto the back seat and got my fingers under that cover.

"What you got?" Oh, he didn't act like a man that wanted thirty thousand dollars.

"This here"—skritt, skritt go the nails—"is the cold cash." At that I lit a match. He looked.

"My soul!"

"Of course you'd like to count it?"

"N-n-n-no."

"No?"

"No use. With Mister Howland in New York and Miss Howland in Chicago, I'll just have to default in the delivery of the deed."

"Why didn't you tell me that yesterday?"

I was mad! "Here I've risked this money, that ain't mine, and the safety of this young lady, and—it's a blamed shame, if you want to hear me!"

"Very sorry." He backed away.

To Goodyear Service Station Men

It is a common error on the part of the average consumer, to believe that the tire manufacturer wants his product to wear out as soon as possible.

Correct him!

Tell him what this Company has done to make tires yield *more* mileage, to give less trouble, longer life, better satisfaction, at lower cost.

Tell him first of the Goodyear No-Hook Bead, its introduction, and what it has meant to the tire buyers of America in eliminating rim cuts, tube pinching, blowing off the rim. Point out to him that this year's improvements alone on this single feature have cost us an extra half-million dollars.

Tell him of the Braided Piano-wire Base in Goodyear Tires, how much it has added to the effectiveness of the No-Hook Bead idea in security, as opposed to the round cables, double cables and wire arrangements commonly used.

Tell him of the Goodyear "On-Air" Cure, an exclusive process costing us this year six hundred thousand dollars in excess of the old method, and what it means to users in reducing the risk of blowouts from wrinkled or buckled fabric.

Tell him of the Goodyear Wrapped Tread construction, and its importance as a guard against inferior tires' going into service. Let him know what it costs us to maintain this feature.

Tell him of the special material used in Goodyear Tires—of the fabric, made to our own specifications because the general market doesn't offer its equal, which tests five per cent stronger than we can buy elsewhere.

Tell him of the advantages of the Goodyear Breaker Strip, and how, built in between the tread and cushion stock, its perforations permit the formation of rubber rivets which hold tread and carcass in an indissoluble unit.

Tell him of the extra material that goes into Goodyear Tires and Tubes, making them larger and stronger, that they will ride easier and wear longer—an item footing close to three and a half millions of dollars extra this year.

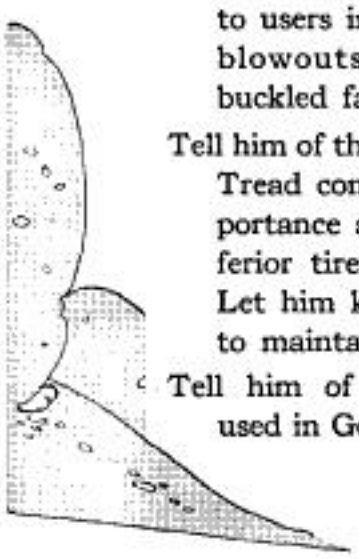
Tell him of the bigger blocks that go into Goodyear All-Weather Treads this year, to give them greater traction and greater non-skid efficiency, at an extra cost to us of more than four hundred thousand dollars.

Tell him of the All-Weather Tread itself, how it is twice as thick as ordinary treads and most effective of all non-skid treads, and how this extra thickness this year costs us more than one and a half millions of dollars.

Tell him that the additional labor and the special equipment required for exclusive Goodyear processes cost us more than three-quarters of a million dollars.

Tell him that the total of sums spent by Goodyear in twelve months to make his tires serve better, wear longer and cost less, exceeds *four and a quarter millions of dollars.* He should know this, for it is spent in his behalf.

And then, as a climax (for it is a climax in tire accomplishment), tell him of the Goodyear Cord Tire—how we developed, improved, perfected it to a point surpassing anything that had gone before—how we made it truly representative of the best we had learned, evolved, hoped for, through all our experience in tire building.



Tell him how, if it costs a little more to buy than other tires, it costs much less to own—and is worth surprisingly more, in point of comfort, distinction, endurance, security, liveliness, power-saving and fuel thrift.

You have a real story to tell the tire-buyer. Just state the facts. They are sufficiently impressive. They evidence the quality of our tires; and the prices we ask in return speak ably enough of the economies we have effected in manufacturing and distribution.

In conclusion, it might be well to reveal how The Goodyear Tire & Rubber Company, through men like yourself, is pursuing a nation-wide plan of tire conservation, by informing tire users in the matters of proper inflation, prevention measures, care and repair.

This point, alone, should refute the error we mention in the opening paragraph of this advertisement.

The Goodyear Tire & Rubber Company
Akron, Ohio

Goodyear Tires, Heavy Tourist Tubes and "Tire Saver" Accessories are easy to get from Goodyear Service Station Dealers everywhere.

Reduce Your Meat and Fuel Bills

Many an expensive cut of meat has been spoiled because of the pot it was cooked in.

The ideal utensil for Potroasting is the

"Wear-Ever"

Aluminum Windsor Kettle

In it you can make an appetizing, nutritious Potroast from one of the cheaper cuts of meat, without water and without grease.

Heat the empty Kettle over a low flame; sear the roast on all sides; then turn down the fire to a mere flicker. Turn the meat when half done.

The wonderful durability of "Wear-Ever" utensils saves you money and eliminates the annoyance of continually buying new cooking utensils. Compare the price of a "Wear-Ever" Kettle with that of the best enamel kettle of the same size. You'll be surprised that "Wear-Ever" utensils can be bought so cheap.

"Wear-Ever" utensils are made in one piece, without joints or seams, from thick, hard sheet aluminum. They take the heat quickly and hold it a long time. There is no coating to chip or peel, no place for food to lodge. Cannot rust—are pure and safe.

Replace utensils that wear out with utensils that "Wear-Ever"

If you have never used "Wear-Ever" we will send you the sample 1-qt. Stewpan as pictured,

FOR ONLY **30c**

if coupon is mailed on or before February 27th, 1917.

"Wear-Ever" utensils are sold by leading hardware, house-furnishing and department stores.

The Aluminum Cooking Utensil Co., New Kensington, Pa., Dept. 18 or (if you live in Canada) Northern Aluminum Co., Ltd., Toronto, Ont.

Send, prepaid, 1-qt. "Wear-Ever" Stewpan. Enclosed is 30c in stamps or coin—to be refunded if not satisfied. Offer good until February 27, 1917, only.

(Concluded from Page 45)

"Guess you are. And I'll just take my ten thousand dollars."

"Do you think I carry large sums around with me like you do?"

"I'd hate to tell you what I think. Come across with the check."

Whilst he was inside I paced up and down. Miss Billie stayed in the machine. Every minute or so I could hear her sigh or give a little sob. We'd covered a hunderd miles, you see, and the girl was tired out.

Then he came back. And here was my ten thousand dollars. I read the check in front of a headlight.

"Good night," says Jordan, tryin' to be pleasant.

"Good *night!*" I answers—just like that.

Slam!—his door.

"Well, Mountaineer?"

I gave her the check. "Oh, little woman, you've saved my hard-earned stake!"

She smiled at me. "You're welcome. Hop in."

I was standin' against the off front wheel. "No, I've got to tell you somethin'. I want to own up. Can't keep it on my conscience no longer. Remember that first time I seen you? Well, I called you a tomboy—that's what I did. A tomboy. Just because you were drivin' a car. And here this same car—aw, will you forgive me? Will you?"

She put a hand on my shoulder. "Dad likes you, Mountaineer," she whispers.

That finished me! "Oh, Billie!" I says to her. "Oh, don't think I'm crazy! Don't get down on me! Billie, I love you! I love you more'n my life!"

"Dear Mountaineer!"

She leant towards me—right into the circle of my arms! "Oh, blue eyes and bobbin' cherries! Oh, blowin' hair, and dear, dear face! Oh, tired little hands—God love 'em! Oh, sweetheart! Sweetheart! Sweetheart!"

It was that dream of mine—come true!

"Oh, Daddy'll be glad too. Let's hurry back."

"With you so worn out? Aw, rest, little girl. Here, I'll wrap this robe around you. And we'll set right here in front of Jordan's till sun-up. No more dark road for me, riskin' your safety and all this cash."

She laughed. "The Mexicans can have it," she says.

"Have it?"

"Oh, we didn't like to tell you, Mountaineer. You're so outspoken, so honest, you couldn't bluff—couldn't carry it off. But ——"

The joke was on me! And on Mister Jordan! You recollect that wood tray full of twenties that the cashier kept right inside his window? Well, he was careless on purpose, in case an auto bandit should happen by. And all them rolls of his—the very rolls we had in the car, with a lot more of the same kind—were just only iron washers!

BEING NICE TO NELLIE

(Concluded from Page 18)

"Dinner for that creature! What do you think I am—crazy? She'll never set foot in my house again so long as she lives. You'll have to go somewhere else to see her—the club, or in swimming."

"Madame, I beg of you!" I entreated. "When I answered all your questions, and told you everything, you agreed not to talk of it further. Then why not let this painful subject drop? Why not forget it?"

"I won't talk about it," she said; "but I can never forget it. To think of you making such a fool of yourself!—that's what gets my goat. The whole town is laughing at you. And everybody feels *sorry* for me! And here I used to pity Annielee when people felt sorry for her behind her back!"

Promises are easily given, but keeping them is another matter entirely. Madame Giraud could no more steer clear of the topic of our luncheon than a novice on a bicycle can avoid a tree. At all hours of the day she would revert to it. At night she would wake me with a question she had forgotten to put more than a dozen times before. Yes; my sufferings were acute, m'sieu.

One night after the Fields, M'sieu Joe Hicks and his wife had been there, and the two gentlemen had been rallying me rather crudely about the escapade, as I was now forced to regard it—late that night Madame Giraud stole out of bed and into the nursery. I thought nothing of that and dozed; but, waking later and perceiving that her bed was empty, I followed to ascertain the reason of her absence.

The nursery was in semidarkness and the Ethiopian slumbered in her bed. Above the wicker nests where my noble boys slept like rosy cherubs bent my wife. I tiptoed to her side before she heard me and, therefore, caught the words she was murmuring into their unconscious ears:

"Oh, my poor, darling, fatherless babes!"

Fatherless, indeed! My patience was exhausted. But I dared not reprove her there lest our talk disturb the twins. However, she could divine from my haughty demeanor that I was ill pleased; and when I whispered that she ought to obtain some much-needed rest she consented to do so.

Yet from the day I met the captivating Madame Nellie at the fountain we have had no secure domestic harmony, m'sieu. The slightest reference to anything remotely suggesting the adventure starts madame on a harangue. Why should she harp on such a matter endlessly? Why do the spheres revolve in their orbits? It is woman's way, m'sieu. Should we ever be blessed with a daughter, which will doubtless be the case, my earnest prayer is that she will have a sense of proportion. There is nothing womankind lacks so much.

And now you know, my friend, why the mere mention of Memphis is painful to me. That city is the residence of Madame Stratton, and I shall never be allowed to go there. Probably we shall never meet again, and a friendship so auspiciously begun will be terminated forever. And for what? Because of foolish jealousy.

"Jealous? Ha, ha! That's a good one! But I hate to see you make a fool of yourself. That's all," madame asseverates.

She tried to make me promise I would never do anything in future without either consulting her first or telling her about it immediately afterward. But I hesitated to do so. Not that I contemplate any affairs; but my dear wife wished to make the pledge a blanket one, covering not only casual meetings with her woman friends, but all my goings-out and comings-in. In short, she desired to keep tabs on my daily schedule by means of this promise. And I would not. Wholly blameless as my life is, I could not brook to have it regulated on the basis of a kindergarten. Therefore I put her off.

"The great Napoleon once said: 'The best way to keep one's word is not to give it,'" I reminded her with a smile.

"You won't promise? Then you must intend to do that sort of thing often!"

"Nonsense, my angel! I will readily agree not to make an engagement of any description with a lady, however close she may be to our family, without first obtaining your sanction. But that I should render you minute reports of every act throughout the day—no! Nonsense!"

And there the matter rests, m'sieu. Finding me obdurate, madame was obliged to be content with this concession, and things now move along much as before.

But the perfect day with Nellie had one salutary effect: it taught me the value of appearances. In future Henri Giraud will show a discreet regard for the conventions.

In this connection I should perhaps relate what occurred at a vaudeville performance last week. It was the opening bill and my wife was anxious that I should take Cousin Glossy, who is visiting us from Arkansas in order to buy clothes.

"I don't feel up to it myself," Jane explained. "I have a splitting headache and little Henree is cutting another tooth. Do you mind taking her alone? I shouldn't ask you, dear, only Glossy adores the theater so."

"I shall be delighted," was my reply.

Yet I went with a sinking heart. My wife's cousin is doubtless an estimable woman, but she possesses an exuberance that is extremely trying to a sensitive nature—especially in public.

She is large, and about thirty years old, with a voice like one of the cowherds who infest her father's farm. And her natural tendency is to be kittenish.

Eh bien, I bought seats well down in front, as madame had ordered, and there Cousin Glossy and I ensconced ourselves with a box of chocolates. The show was a wretched one, full of coarse humor, raucous singing and dances that lacked everything but vim.

To Cousin Glossy, however, it was a carnival of wonders. She gripped my arm until I winced when the lady trapezist took a flying jump. She stared breathlessly at the trained dogs, occasionally relieving the tension by nudging me and remarking:

"Oh, isn't he cute? The li'l' darling!"

She devoured chocolates steadily; and, no matter how feeble the joke, she fairly shook and rocked about, tears trickling down her fat, comely cheeks. Of course it was inevitable that we should attract attention, and twice there were audible titters when Cousin Glossy became hysterical.

It is superfluous to tell you, my friend, that to a man of fine sensibilities the situation was painful. It rapidly grew more so. Glossy lost all control of her risibilities; I began to fear that, unless the performance ended soon, Nature would have its way and our relative would be carried from the house a helpless but still quivering wreck. And I glanced back to make certain the aisles were clear to the exits, and to locate the lustiest of the ushers in order that I might the more readily enlist their aid.

The first person my eye fell on was Madame Jimmy Arthurs. She was sitting with a party of six, I judged; at any rate, two other ladies had their heads close to hers and their escorts were smiling broadly.

M'sieu, I did not hesitate. No! Well I knew what was being whispered behind those programs, and I rose abruptly from my place. Without pausing to apologize to my limp companion, I strode back to the party and, leaning down to them, said earnestly:

"Look you, mesdames—and you, also, messieurs—this lady with me is my wife's cousin."

They gaped at me, too thunderstruck to utter a sound. "So," I ended meaningly, "don't start anything!"

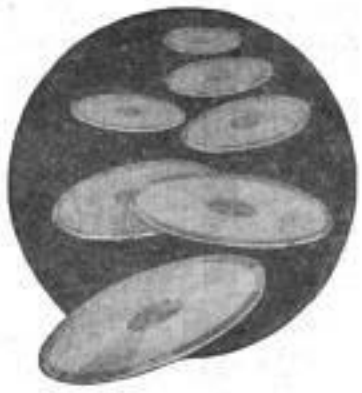
BRUNSWICK

PLAYS ALL RECORDS

All Phonographs In One



THE wonderful Brunswick phonograph was announced several months ago. It was heralded as "all phonographs in one." Naturally there were a few who doubted.

But now folks who have long waited for the ultimate phonograph frankly admit that the Brunswick takes first place.

The combination of all the merits of the many has really been brought about. All over the land those who have heard the Brunswick have been eager buyers. They are spreading the news among other music lovers. The Brunswick is the greatest sensation in the phonograph world.

The House of Brunswick has been famous for generations for its wood-working experts. They have been making fine phonograph cabinets for years. But not until a perfected phonograph was possible could the House of Brunswick afford to bring out the Brunswick phonograph.

Hear this marvelous instrument now. Make comparisons. Learn the saving. We leave the decision to you.

Unlimited Choice

WHEN it was announced that the Brunswick plays ALL records, many music lovers whose libraries had been limited to certain records were won over immediately to the Brunswick.

Hitherto phonograph owners have found that some of the greatest records were barred from their homes. Now the Brunswick removes all limitations.

The Brunswick is equipped to play all records as if on their own machines. The correct sound boxes are furnished. Any needle may be used, including the jewel point, the sapphire ball, steel, etc. All without extra cost.

On the Brunswick any record, whatever make, is given new tonal values. Shadings hitherto hidden are now brought out.

Leading authorities in acoustics helped to design and build the scientifically correct, wooden-walled sound chamber. It is built as delicately as a violin.

Again, we leave it to you to test out all records on the Brunswick to substantiate our claims.

An International Alliance

THE House of Brunswick, sole makers of the Brunswick phonograph, has made an international alliance with Pathé, the world-famous makers of records.

This opens up a hitherto untapped field, bringing to America the exquisite renditions of Europe's famous artists.

This arrangement gives to the owner of a Brunswick all the best American records and all the best European records.

Two sound boxes are furnished with the Brunswick—thereby meeting the requirements of all makes of records.

Experts who have made hundreds of tests say there is no more remarkable combination than the Brunswick phonograph and Pathé records.

So the House of Brunswick is glad to recommend Pathé records.

But remember, the Brunswick plays ANY record. If you already have a collection of records they may be played with a new delight on the Brunswick. Or if the Brunswick is your first phonograph, you have the world to choose from.

THE BRUNSWICK-BALKE-COLLENDER COMPANY

623–633 S. Wabash Avenue, Chicago 29–35 W. 32nd Street, New York

DEALERS—Write for our unusual proposition covering Brunswick Phonographs and Pathé Records

Pathé records, played on the Brunswick, bring such famous artists as Muratore, acknowledged as the world's greatest lyric tenor; Lina Cavalieri, the beautiful soprano; Giorgini; Anna Fitziu, the brilliant young American prima donna, who won such a sensational success at the Metropolitan Opera House; Didur, marvelous basso; Thomas Egan, singer of sweet Irish songs; Ancona—de Cisneros—Galvany—Journet—Ober—Titta Ruffo—Slezak—Urlus—Herman Weil. These are only a few of the world's famous collection of Pathé records of singers. There are also the famous bands, orchestras, choirs, instrumental artists, etc. The Pathé library is perhaps the largest musical collection the world has ever known. London, Paris, Berlin, Milan, Petrograd, all musical centers, contribute. The Brunswick places it at your command, together with *all* other records.

MAKING MEN STICK

By Forrest Crissey

"NOBODY can knock this store in front of me and get away with it!"

I was taking a short cut that brought me alongside the loading platform of one of the biggest department stores in America, when this odd statement smote my astonished ears. Here was a new industrial note, one that had enough of the tang of novelty to stop me short and turn me into a deliberate eavesdropper. The speaker was a small, thin man of middle age whose face had a rich collection of trouble lines. The driver to whom the rebuke was addressed was big enough and strong enough to give the speaker a sound beating with one hand tied behind his back. The occurrence was so remarkable that I determined to follow it up and learn, if possible, just what had inspired this strange and sudden burst of defense from a worker who could hardly be drawing more than fifteen or eighteen dollars a week.

The trail that I followed proved to be full of delightful surprises, for it led to discoveries unsuspected by the average layman who has been led to think that the soul of modern business is only a shade less sinister and unsparing than that of war.

"What made me come back so hard at that big driver when he began to hammer the house?" repeated the grizzled loader. "Well, I'll just tell you if you'll stick round for about five minutes until we knock off for lunch."

Here is the story that he told me between bites into his thick rye-bread sandwiches:

"Mebbe you don't believe in bad luck, but I do. I had it running swift for almost four years straight after I was married. That was when I got a job here. The wife was a little weak naturally, I guess, and the two kids coming as they did—about eighteen months apart—didn't help her any. In paying doctors' bills and all the other expenses that come with sickness and babies, I began to get into debt. There wasn't any help for it. All I could do was to get trusted for the things we had to have, pay for what I couldn't get on credit, and hope that some day I could catch up and pay out.

"We started out in a little flat, but when things began to go wrong I moved into a made-over barn. The only thing that didn't seem as bad as it could possibly be was the fact that I still held my job and was able to work. Of course I was scared stiff for fear that I would lose my job. That's always the way when a fellow must have every day's wages or go under.

"One day, when the kids were worse and things so black I couldn't see an inch before my face, one of the drivers asked what was the trouble. I spilled the whole story into his ears. He told me that the thing to do was to go to one of the head men of the company, the one that looked after the help, and borrow fifty dollars. I told him he was crazy, and that if I tried any such scheme it would cost me my job. But he stuck to it that this house took an interest in everybody on the pay roll, and that it would do almost anything for a man with a good working record."

Why One Man Sticks

"I finally decided to take a chance. I was past the point where any halfway help would do a thing for me except to drag out the misery a little longer, so I headed for the mahogany office and asked for the man the driver had told me about. The minute that man spoke it took all the scare out of me. I told him that I was up against it something fierce; that the wife and babies were all sick; that I was in debt up to my ears, and that the driver had told me to go to the office and ask for the loan of fifty dollars to be taken out of my pay, two dollars a week.

"He said that I'd done the right thing in coming straight to him, and that I was to come again next day and get my answer. They didn't make a practice, he added, of lending money to help, but I could be sure that he would try to figure out some way that would answer the same purpose.

"The next afternoon when I came for my answer I got the jolt of my life. He told me that the wife had been taken to the hospital that morning, where she would have excellent care as long as she needed it, and that I would find the kids in charge of a good reliable woman where they would be kept until their mother was on her feet again.

"When I asked how I was going to pay for all this he said that I wasn't, that the store was doing this on its own account, and that the only way for me to get even was to do the best work I could and always keep looking out for the interest of the concern.

"I expect to stay here till I die, get fired or go on the retired list, and as long as I'm here you bet I'm going to keep both eyes open to see where I can do this store a good turn, besides giving 'em a full day's work as a loader."

Was this extraordinary experience merely a freak of corporation philanthropy, I wondered, or was it a fair example of the workings of a new commercial system intended to inspire men and women to stick to their jobs? For the question of how to make men stick to their jobs has become one of the most acute problems of American industry. Many years it has pressed for recognition, but its seriousness has only lately been clearly seen by the leaders of constructive thought in the labor field. And even yet industry has hardly learned how to measure the injury inflicted upon it by the floater. It has, in fact, scarcely awakened to the steady, increasing and unnecessary toll levied upon the profits of the business by the cost of breaking in new workers.

The Costly Labor Turnover

Not many months ago two manufacturers, both operating plants in the same lively little Wisconsin city, entered into a discussion, over their coffee, of their labor turnover and the element of unnecessary expense involved in it.

"Though I cannot convince myself," said the smaller manufacturer, "that this leak amounts to very much in my plant, the fact that several of the shrewdest men I know, in various lines of manufacturing, insist that the problem is serious, makes me determined to arrive at the truth of the matter as closely as our present system of records will reveal it. The condition is serious enough, in my opinion, to warrant an investigation, and I am going to make the best one I can."

"My employment records," responded the larger manufacturer, "probably won't tell exactly how much it costs us a year to break in new men, but if it is worth while for you to go into this question it is certainly an equally serious matter in my much larger organization."

In about a month these two men had another meeting, and this time they compared the results of their inquiry.

"I'm simply astonished," declared the smaller manufacturer. "As closely as I can estimate from available data, which at this time are neither so complete nor so accurate as I could wish, it costs our concern not less than ninety-six thousand dollars a year to break in new men."

"Make the figures a quarter of a million for my organization," interrupted the other manufacturer. "In fact, I have a sneaking suspicion that more still could be added without making it exceed all the costs, direct and indirect. How much of this is unnecessary I confess I do not now know how to determine; but there is one thing settled beyond question, and that is that I am going to tackle the problem of making men stick, and keep at it until the present awful percentage of unnecessary labor turnover is reduced to something like common-sense proportions." Both of these business administrators, like many others throughout the country, are now giving a large part of their time and thought to this problem. To determine the amount of unnecessary tax imposed by the floaters is, however, no easy matter. It is one thing for a large employer to find out how much it costs him a year to break in new workers, and quite another to arrive at the exact proportion of the expense that is needless.

Few men in the United States have gone farther into this complex question than has Professor Joseph H. Willits, in the Wharton School of the University of Pennsylvania. In a recent discussion, reported in the Annals of the American Society of Political Economy, this authority indicates that the loss involved in the unnecessary breaking in

Why Smoking Makes All Men Comrades

"Have you a match?" asked the sunburned stranger of the successful business man.

It was the busy time of the morning, there was a chilly wind blowing, yet without the least appearance of vexation the business man stopped, unbuttoned his overcoat and hunted through his pockets until he found a match for the stranger.

Why?

Simply because the stranger wanted to smoke and the business man understood that desire. You know, as every smoker knows, what it is to find yourself without a match when you have your pipe all filled and ready to light. Little vexations like this bring out a spirit of friendliness which unites smokers everywhere.

Without hesitation you will approach an unknown person for a pipeful of tobacco, when you'd walk two miles before asking the same man for carfare home. There is something about the friendly haze of tobacco smoke that makes us all comrades.

You realize again the fraternal feeling of smoking in the eagerness with which a man who has just "discovered" some kind of tobacco hastens to inform you of his good fortune. By this unconscious missionary work on their part, men do more to increase the popularity of one brand of tobacco or another than even a great deal of advertising. The man who offers you something new to smoke in this way does so simply in fraternal friendship; you accept in the same spirit.

Now, many of the friends of Edgeworth Smoking Tobacco, as of other kinds, first learned of it from a chance pipeful borrowed of some one who was already using it. The smoker's creed says you shall pass a good thing along.

You may never have been offered a pipeful of Edgeworth. It's not a brand that is being smoked everywhere. We believe you would like it if you tried it. So we want you to let us send you a liberal sample of Edgeworth, free, in order that you can try it for yourself.

You may like Edgeworth, and again you may not. As we said before, it's not a brand that is being smoked everywhere. Yet, among a certain class of pipe-smokers, many of them men who make pipe-smoking almost a fetish, it has a circle of close friends.

We know that if you try it and it strikes your fancy, some tobacco dealer will have made a new Edgeworth customer. So we feel that we are only doing our share in letting you try it at our expense.

If you will send us on a postcard your name and address and the name of the tobacco store you patronize, we will mail prepaid a sample of both Edgeworth Plug Slice and Edgeworth Ready-Rubbed.

Edgeworth Plug Slice and Edgeworth Ready-Rubbed differ only in form. The Plug Slice comes pressed into flat, oblong slices that you can rub up in your hands before putting in your pipe. The Ready-Rubbed is already prepared for the pipe.

The retail prices of Edgeworth Ready-Rubbed are 10c for pocket-size tin, 50c for large tin, $1.00 for handsome humidor package. Edgeworth Plug Slice is 15c, 25c, 50c and $1.00. Mailed prepaid where no dealer can supply, but except in a few isolated cases all dealers have it.

Address your card to Larus & Bro. Co., 1 South 21st Street, Richmond, Va. This firm was established in 1877, and besides Edgeworth makes several other brands of smoking tobacco, including the well-known Qboid—granulated plug—a great favorite with smokers for many years.

To Retail Tobacco Merchants—If your jobber cannot supply Edgeworth, Larus & Bro. Co. will gladly send you a one or two dozen carton of any size of the Plug Slice or Ready-Rubbed by prepaid parcel post at same price you would pay jobber.

(Concluded from Page 50)

of new men ranges, in a general way, from fifty dollars to three hundred dollars an individual, according to the character of the work.

The percentage of the labor turnover he finds equally variable. One case is cited in which the annual labor turnover is five hundred per cent, and the lowest record so far discovered is eight per cent. Between these two extremes stretches a zone of average experience. All who have dug deep into this problem are of one voice in testifying that it is a Pandora's Box of surprises, both to the industrial investigator and to the manufacturer who is determined to stop the leak of unnecessary labor turnover in his own business.

Probably the most advanced position in the actual constructive work of trying to make men stick is occupied by one of the largest and finest department stores in the world. One of the ablest and most experienced executives of the store gives his entire time to the task of creating a house atmosphere that will hold men and women, boys and girls, tight to their jobs in the face of tempting inducements from competitors.

The Crusade Against Errors

Possibly no better illustration could be given of the skill and tact with which the superintendent deals with the difficult individual problems that present themselves at his door, and contrives to establish in the mind of each worker the friendly and interested attitude of that office and of the whole store as represented by himself, than the story of the young saleswoman who suddenly went to pieces and began to pile up an appalling score of mistakes. The store had just started a vigorous and sweeping campaign for the purpose of reducing the number of errors on the part of employees. This great retail establishment at the time had a force of fully two hundred persons who devoted themselves exclusively to the task of adjusting errors. It takes only an instant to make a mistake, but often half a day's time is not enough to correct one. Again, the consequences of a small error are often serious—sometimes involving the loss of a valued customer.

In a store like this one, with a working force of ten thousand employees, the possibilities of error volume are tremendous. To the layman it would seem that a saleswoman who made only one mistake a week must be a marvel of accuracy. Yet if that average were maintained throughout the store the total would be ten thousand mistakes a week, and the task of trying to smooth out ten thousand mistakes in a week is not only an expensive operation, but a decidedly discouraging one, even to a force of two hundred expert adjusters. It is no wonder, then, that the management determined to reduce the volume of mistakes to much smaller proportions.

Naturally this campaign to cut down errors exerted a strong pressure on all of the employees and particularly on those who were a little inclined to be careless. Incidentally it should be remarked that the results of this movement to reduce the current output of mistakes were surprising. At the end of the year it was found that only sixteen employees had made more than ten errors for the whole twelve months. This is enough to indicate the intensity of the campaign that threw the spotlight on the error score and sent many saleswomen "over the carpet" to the various department heads. At the same time the superintendent for workers received reports each day on all employees who were considered in serious trouble or in danger of dismissal.

One day, in the course of this strenuous reform period, the report of a young saleswoman showed that she had made three mistakes on that date. Instantly the official friend of the workers started an investigation. At the end of the week the girl totaled twenty-three errors, and would have been at once dismissed by the department head had it not been for the veto power vested in the executive who carried the responsibility of the big movement for reducing the cost of breaking in new help by making employees stick to their jobs and by making their jobs stick to them.

One fact brought out by the quiet investigation that he made was that her record had been decidedly good up to about two months before, when she had been rather sharply reprimanded by the department manager. This had evidently thrown her into an acute state of anxiety that increased in a cumulative ratio as her volume of mistakes grew. The finish was the championship record of twenty-three errors in one week.

When she received a request to come to the office of the superintendent for workers she burst into tears and said good-by to one or two of her most intimate friends in the department. One glance at her face was enough to make the superintendent move quickly in putting into operation the plan upon which he had decided.

"Miss Blank," he said, "I have sent for you because I believe that you can help me out in a rather delicate task that concerns a young girl at the other end of the department in which you work. She is rather sensitive and high strung and, therefore, capable of the best kind of salesmanship when properly developed. Unfortunately she has lately become a little confused—very likely due to the fact that we are all under peculiar pressure just now in the general effort of the store to cut down the total of mistakes.

"I would like to have you work next to her, get well acquainted with her, and help her, in a tactful way that will not disclose our purpose, to regain her poise and confidence in herself. Right now she is decidedly bewildered. A little clever and sympathetic assistance that she will think spontaneous on your part, instead of inspired by the store management, will very likely help her over the most critical part of her store career and put her on the way to become a useful and permanent employee.

"Of course it is true that she has made quite a number of mistakes lately, but it would be a far more serious mistake than any she has made to allow her to become discouraged over her errors. After you have worked alongside of her for a week, please come and tell me how she seems to you to be coming on."

Miss Blank was too keen to fail to see the similarity between her own case and that of the younger girl with whom she was to work. At the end of the week she again called at the superintendent's office, but this time her face beamed with gratitude and courage. After reporting the entire success of her mission, she volunteered the statement that the experience had been worth everything to herself. The comment of the superintendent on this incident is this:

"Here was a case in which direct and immediate results fully repaid all the outlay of time and effort involved. Four years of training had been invested in this young woman, and that means a very considerable outlay. It would have been bad business to allow that investment to be wrecked, just for the lack of a little intelligent attention. Then, in another way, the house could not in the least afford to have a failure with this saleswoman, because she represented a type of help of the most desirable sort."

Why Good Workers Slow Down

The office of this specialist in the human troubles of workers is always on the alert to catch the slowing-down cases. When a worker with a good record behind him begins to slow down, it is the duty of his immediate superior to report this change in his efficiency to the superintendent. Almost all slow-downs are traceable to one of four causes. Love and domestic troubles take first rank as destroyers of individual efficiency, so far as the experience of this institution is concerned; financial difficulties are a close second; unhappy business relations come in third; while the other cause is ill health. Cases coming outside of these classifications are unusual.

One of the interesting theories of this management is that a raise of wages or salary loses about seventy per cent of its value and effect when given on demand instead of voluntarily. Consequently the motto of this employment expert is "Beat 'em to it." Not only does he believe in the policy of previousness in increasing the pay of the workers, but he makes it a rule, as far as possible, to lift every voluntary advance out of the routine and stereotyped order of things and give it a personal flavor and association.

For example, the other day he sent for a certain boy who had been employed for exactly three months to a day.

"Well, Johnny," was the genial greeting from this executive, in whose hands rest the pay-check destinies of ten thousand workers, "how are you getting on down there in Department Seventeen?"

"I don't know, sir," came the hesitating answer from the grinning boy.

"Well, I know," responded the superintendent for workers. "In fact, Johnny, it's my job to know how everybody that works here is getting on. You are trying hard to make good—and any boy who does that is bound to succeed. Let's see, your birthday is next Monday, isn't it?"

At this statement Johnny's eyes opened wide. The idea that his birthday should be remembered by the big boss of all the workers in this great establishment gave him a jolt. He was due, however, for still another along the same line. "We're going to celebrate your birthday, Johnny," the superintendent continued, "by giving you a little raise in your pay. We are doing this because you show that you are willing to work and want to learn how to do your work well. Just how soon you get another raise depends on how hard and how steadily you keep on trying."

When Johnny left the office he was walking on air. He had a friend in the man at the top, the man who was over all the others, did the hiring and firing, and fixed the amount of wages on every pay check! And hadn't this man shown that he was interested in him by giving him a raise right off the jump?

The Automatic Tickler

What Johnny did not know was that in the great stack of cards on the desk before the superintendent for workers was one bearing his own name, containing a very concise history of his life from the date of his birth down to the moment of his interview, together with much information about his home and the other members of his family. Every day this tickler automatically places before the superintendent for workers the names of those employees who have either been with the firm for exactly three months, or whose cases have been considered and who have perhaps been interviewed three months previously.

In this way the superintendent is able to keep in the most intimate touch with his entire force of workers, and to carry out his "Beat 'em to it" policy in a manner that does not often allow an employee who is doing good work to get ahead of him and ask for a raise. Of course many such requests are received, but the number of them is small in comparison with the volume of those that are raised on the initiative of the superintendent. There is no rule in this establishment that prevents honoring requests for a raise of pay, and it is distinctly understood that the policy of the store is that a request of this kind shall not be allowed to prejudice the chances of the one who makes it.

Few large employers of labor have made a bolder or shrewder stroke along the line of making men stick than a certain railway system, which lately announced a remarkable life insurance plan covering all of its employees who have a continuous service record of more than two years. The benefit under this plan cannot be less than $250 or more than $3000, and its basis, between these two arbitrary limits, is "a sum equal to five per cent of the salary or wage received by the deceased employee during the twelve months immediately preceding his death, multiplied by the number of years of continuous service."

For example, a station agent who had been on the pay roll of the company for twenty years without a break died soon after the plan went into effect. His pay for the last year was $2000. Five per cent of that amount is $100. This, multiplied by twenty—the number of years of service—gives $2000, the amount of the benefit which his widow received. A notable feature of this plan is the fact that it requires no coöperation—no payments, however small—on the part of the employees.

This insurance plan, like the other examples mentioned, is a bit too advanced to be considered as typical of the new attitude, but the fact remains that thousands of employers are awakening to the fact that one of the heaviest burdens of modern business is the breaking in of new help and giving passing entertainment to an army of restless, purposeless floaters; and, what is perhaps even more important, they recognize that men and women, boys and girls, are human beings first, last and all the time, so that in this country at least they will never be mere commercial or industrial pawns to be moved about as if they were blocks of wood. The great secret in making men stick to their jobs is to recognize their individuality at every turn, to make them feel that their rights, capabilities and even peculiarities are taken into consideration in their industrial relationship.

THE SENSIBLE CAR

It is the Chalmers. Neither under-powered, nor over-powered. A 30 that develops 45 H.P. at moderate engine speed. Has a sensible wheel-base—115 inches. Sensible in weight—3005 pounds. Neither a tire consumer, nor a road bouncing car. Quick in getting away. One that responds to brakes at the touch of a foot. Steers easily. Seldom giving shoulder fatigue after a day's drive. A simple chassis. Sound in design. Sound in construction. And therefore, the sensible car.

READY! ACTION! CAMERA! GO!

(Concluded from Page 14)

business organization we are making them in half or a quarter of that time. Our results are quite as impressive and our cost amazingly less.

Let us watch Charles Mills for a while and see how he directed the historical drama that was assigned to him.

Unlike some directors, Mills does not consult his actors in regard to the story. He calls them together and tells them what he thinks of it and what he wants! Turning to a great star employed for this picture, he said: "Now no doubt there are ten ways of making love, and your way may be excellent; but as I have to carry the psychology of the entire story and the relation of one character to another, and the relation of both to the whole, I'll have to insist that love be made the way I want it. That is why I prefer that none of you shall read the script; you might get ideas about your action that I should have great difficulty in changing. This picture has been given me to paint. I have the most wonderful colors that an artist could crave; but you must permit me to mix them as I see fit, for, after all, a picture must of necessity be the work of one man!"

Fortunately the stage stars had brains enough to see the point of Mills' statement. Our stock actors knew all this very well; so they all worked in joyous harmony and, in fact, soon recognized in him a great master.

When the day arrived on which we were to begin the picture, everything, down to the last detail, was in readiness. Each department, jealous of its own efficiency, had with astounding foresight prepared for every contingency. We were to start on a series of small interiors; and, lest there might be fog or cloudy weather, the electricians had in reserve a huge battery of supplementary lights.

Now on the screen in a ten-reel picture you may behold the king in his antechamber perhaps twenty times throughout the story; but when we make the picture all scenes in that location are made at once, so that the set can be struck to make room for another. The scenes made by day are developed at night, so that the assistant director and camera man may see the negative projected in the morning; and, if necessary, a retake can be accomplished while the set still stands.

The Council Before the Battle

We have many stages and there are always half a dozen sets standing, and others in process of building. To avoid any delay the scene men are supposed to keep four days ahead of the schedule. If a large set is delayed we utilize the time in making outside locations.

The small interiors, with only a few characters, are much easier to make, and sometimes we do as many as eight or ten in a day; but when it comes to big scenes the director has to use all the brains at his command and the different departments are put to the big test.

Take, for example, the great battle scene in the picture Mills took: Every evening for a week he motored out to the location, with his assistants and army men, and went over the battlefield in minutest detail. A complete topographical map was made; and finally, at a council of war, just as they have in Europe, the movement of the troops was arranged with absolute precision.

For several days before the battle the field was a scene of utmost activity and apparent confusion: Tents were pitched; the commissariat department set up its stoves and tables; corrals for the horses and dressing rooms for the actors were built; a hospital tent, with three motor ambulances, was installed; camera stands were erected and masked; and stands were built so that the knights, who wore armor weighing two hundred pounds to the man, could mount their horses. In fact, every need possible for the equipment and care of the two thousand soldiers who were to take part in the great battle was anticipated and provided for. The last thing to be installed was a complete telephone system, running all over the landscape, so that Mills could be in communication with his assistants and camera men in every remote part of the field.

Truck gardeners going to market one early morning last August were greeted with a strange sight. A great army of French and English soldiers emerged into the San Fernando Valley to do battle for their kings. They were clad in everything, from gay-colored jerkins to full armor, but were riding in automobiles of every description, from the humble flivver to the huge sight-seeing busses and motor-trucks. When, at eight o'clock, they arrived at the scene of impending carnage they found everything in readiness, from hot breakfast to grease paint; and with Teutonic precision they got down to the business of the day.

By ten-thirty everything was in readiness for the first rehearsal. It was decided that the first day should be entirely occupied with this necessity and the real pictures would be taken on the morrow. Squads and companies of knights and soldiers were here, there and everywhere, scattered over the scene as far as the eye could reach, and all in command of army men, used to discipline and obedience. The order had gone out that the least disobedience meant immediate dismissal.

At ten-thirty Mills, on his observation platform, with the telephone jigger fastened to his head, quietly gave the order to begin. At once troops started to move over that hill and round this; and so perfectly did every unit do his allotted stunt that the director suddenly decided to make the picture at once, and ordered the troops all back in their places and the camera men to make ready.

When everybody was at his post he called up all stations and told them that the real battle would be fought immediately. Before anybody could express his astonishment, he issued an order to station six to send the men out; then in rapid succession he called one station after another, directing the camera at number eleven to begin shooting, or camera number six to cease firing; and so on throughout the whole plan of action.

Mastery of Detail

So completely had he mastered every detail that the battle raged with utmost violence and in perfect accord with the plans. The knights on horseback, having been correctly timed, arrived in a cloud of dust exactly at the moment they were due. And the men, realizing that they were being actually filmed, with small chance of a retake, plunged in with magnificent recklessness.

How any of them came out of that mess of plunging horses, jabbing lances and swirling broadswords without injury is a marvel! Needless to say, many of them were hurt, some very badly, and the ambulances were not installed in vain; yet fortunately nobody was killed.

The greatest achievement was the splendid harmonious working together of many departments, which made it possible to take so great a scene without rehearsal. The smoothness of the system was no less remarkable than that of a great circus—and theirs is a daily routine, while this show lived but once.

After the big battle there were innumerable close-ups and many small scenes, which kept us on the battlefield for three days more; but a few years ago—and many companies even to-day—we would have required several weeks to get the pictures of those four days.

But, with all our careful management, there is always the human factor looming up to edit our success.

Once, in one of the smaller battle scenes, Mills called to station seven, where some soldiers were standing at ease, and said:

"Present my compliments to the gentleman standing by the tree, and tell him that knights of the Middle Ages did not smoke."

I used to be pretty well discouraged when I was making pictures whose sole bid for popularity was their "punch"—or the vulgar display of money in their making; then I fell afoul of the adventurous theatrical gamblers, and what was left of my artistic soul was killed and quite indecently buried. But, fortunately for me, I had been a conscientious director, always struggling toward the stars; so I got to heaven.

And here I have been for a year, with all my dreams come true—men of brains as my associates; real artists designing the sets; plenty of money intelligently expended; and when we get good stories we make notable productions—the joy of our lives.

Editor's Note—This is the second of two articles by Mr. Wagner.

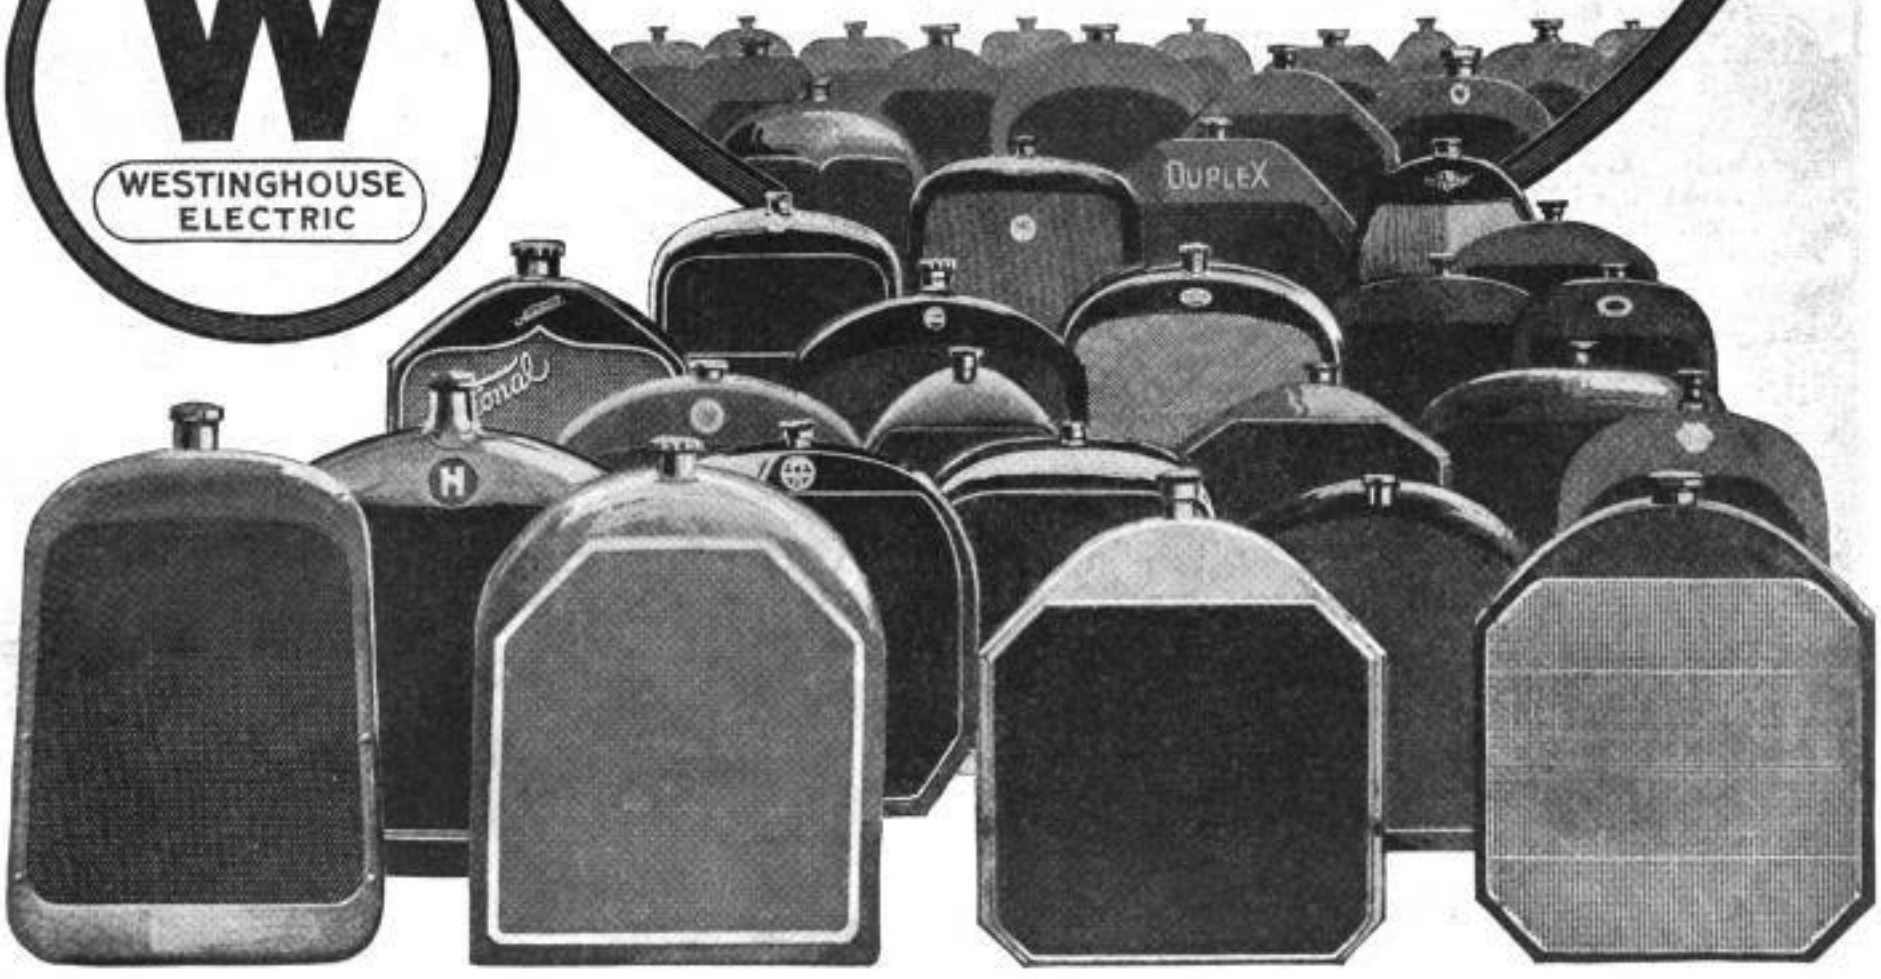
Symbols of Standards

The distinctive designs of radiator and name-plate that differentiate one automobile from another are more than mere marks of identification.

Each is a symbol of a standard of quality in automobile building. Each suggests the kind of service to be expected from the car and therefore from every important part—by which the performance of the whole car is measured.

And certainly among the most important parts of the modern car is the electrical system.



Westinghouse Electrical Equipment has played its part in helping establish the car-character for which stand the symbols of Pierce-Arrow, Locomobile, F. I. A. T., Stearns, Hupp, Chalmers, National and many other makes of automobiles.

Not alone in the quality of the cars of which it is a part is Westinghouse Equipment first, but also in the number of builders who use it.

And this in spite of the fact that it costs more, because it represents the efforts of the highest type of electrical and mechanical engineers, the most skillful workmanship and the use of the finest materials.

What no tire-maker has ever done before

We've established throughout the United States, in a year's time, a tire success from every standpoint of performance, popularity and sales—established it with distributor, dealer and user. The General Tire stands out as the tire that stands up.

A doubly protective guarantee

The service must be 5000 miles or more—never less. The actual mileage is greater than the guarantee. The General distributors and dealers are anxious to protect your interests, because our liberal guarantee protects theirs.

And we've done what no tire-maker has ever done before, because we did in the first place what no tire-maker *had* ever done before.

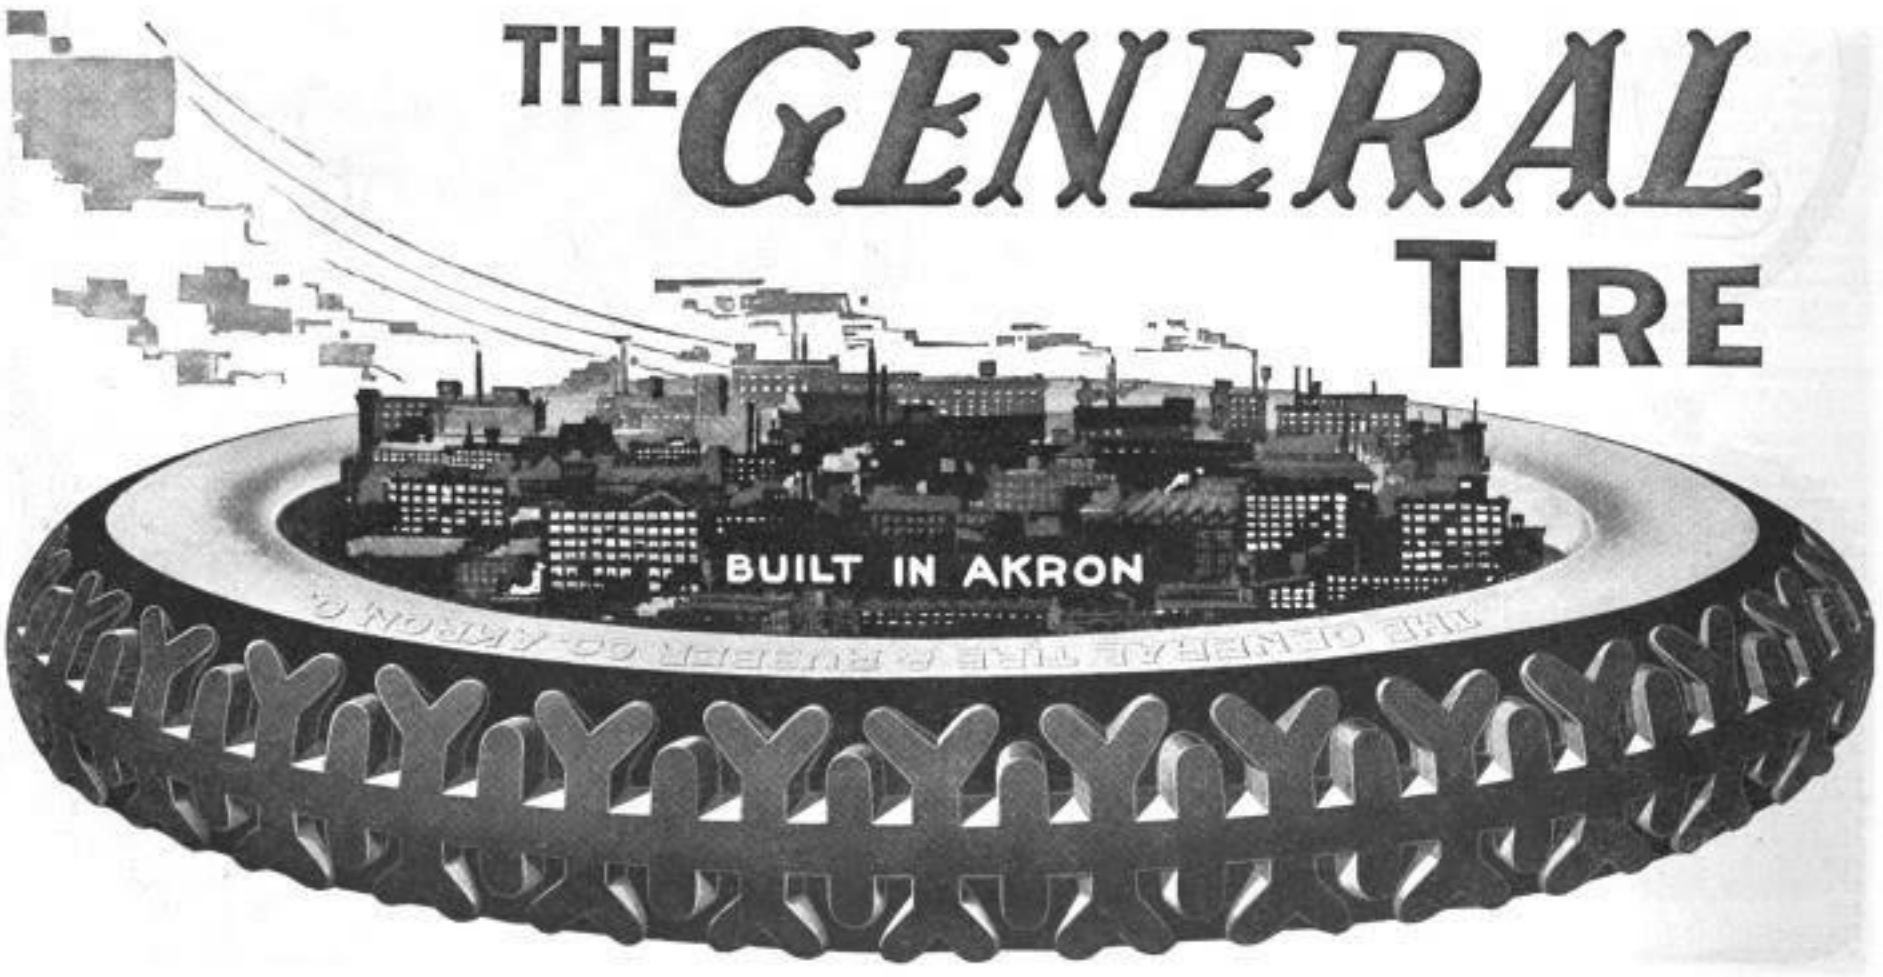
When we started, we knew what tire users wanted and needed—we knew how to make that kind of tire and we had the *will* to make it.

We had no old methods of our own to cling to through sentiment, stubbornness or economy. We had no old machinery or equipment that we had to get along with.

We had no past of our own to handicap us and we did have the pasts and presents of others to warn us of pitfalls in tire making.

In Akron we built a factory equipped with the very last word in tire making and perfecting machinery.

As you know, Akron is the center of the tire brains of the world. We located the best of the tire brains of Akron and the world and put them to work in carrying out our ideals.



When you put to work the knowledge of a need—the know-how to fulfill that need—the machinery, equipment and materials to produce the results demanded by the know-how—the brains to see that results are produced, and the *will* to make a good tire, you can't make anything but a good tire.

There's the whole reason for the success of The General Tire—unvarying quality produced by building into it the best of Akron and the best of ourselves.

Now—after reading this, you are expecting the General to be a high-priced tire. Just ask the dealer and be surprised at how moderate the price is. And as to cost in service—the General costs less per guaranteed mile.

Write "General Tires" in your auto note book.

THE ECHO

(Continued from Page 11)

on together. If you're going to swap steeds in midstream there's no use trading a mule for a jackass. Understand? The only excuse for matrimony is that it adds something desirable to the life of each party. That's the idea, isn't it?"

Emmett had quizzed him shrewdly with his keen eyes.

"I think you've stated the case rather well," the unconventional suitor had admitted.

"All right, then. Here's the bargain I'm willing to make with you: Weymouth, I'm sending Sophie to a good, respectable private hotel to stay exactly two months. Won't see her husband a minute during that period. She'll have a chaperon to look out for her, but you can see her, take her round all you please. That's all. And here's the only string I tie to the arrangement: If at the end of those two months you—young people—can come round to see me and say you're still in love, all right. Leave it to me! I'll say 'Bless you, my children,' see that she's divorced properly and you're married. No questions asked."

Weymouth had given Sophie's obliging husband a look of blank amazement.

"D'you call that square?" Emmett inquired, biting off his words more sharply than ever.

"Square? Yes—it's too square. It's a very peculiar arrangement."

"I'm a peculiar man," replied Emmett shortly, with his rough, rather ingratiating smile. "Is the arrangement agreeable to you?"

"Absolutely," his dazed visitor had admitted.

"Good! I can't give you any more time this morning—got to get out. Two months from to-day will be Wednesday, the fourth of January. At nine o'clock in the evening. Good day, sir."

Harlan Weymouth, lumbering along in the wake of the yellow taxicab this evening of the fourth of January, looked at his watch. It now lacked twenty-five minutes of the hour of nine. His cab came to a stop in a narrow street leading into Park Avenue, and peering out he could see that they were pocketed in a tangle of drays and excavations. Sophie's car was blocked a few yards ahead of him. There was a wait of two minutes, during which teamsters swore in the darkness, lanterns flashed back and forth, confusion reigned in the sloppy street. Dimly in the rear window of the yellow car he thought he could see her white face turned appealingly toward him. He opened the door of his vehicle and was about to plunge out and go to her, but a saving caution restrained him. If they came together now they would probably quarrel again. It was too late for further words. The case must be laid before Elijah Emmett.

A fog-horn voice out of the night brayed "Go ahead!" He could see the ruby light of the yellow taxicab plunge forward through the débris. The driver of his own ramshackle chariot pulled the gears with a frightful rasp, his car responded with its habitual kangaroo movement and stopped so suddenly that its passenger was half thrown from his seat.

Weymouth uttered an unclever oath and resumed his cushions. Another truck had wheeled across his path, the horses dozing philosophically.

"Go round!" roared Weymouth to his driver, and the latter began backing away in a smudge of oily smoke.

In their subsequent detour Weymouth clutched the seat and ground his teeth like a thwarted pirate. She had beaten him to the goal after all. Upon cooler thought he knew that it couldn't make any great difference if she saw her husband first. It was just the feminine character of the act that irritated him. Elijah had distinctly stated the rules by which the game was to be played. And she had lightly defied these rules at the last moment.

As soon as his vehicle had come to a violent halt in front of the Emmetts' gray-stone façade, he had a stinging realization that the yellow taxicab had come, left its fare and departed. By now Sophie had met her husband and rendered her verdict. The small hostility of her act annoyed him, as he took the steps three at a time and jammed an irritable thumb against the button of the bell. After a dignified space a footman appeared, to motion him stiffly into the formal reception room.

"Mr. Emmett is still at dinner, sir," he announced upon his return. "He says won't you please come in."

It was a nightmare walk for Weymouth down the hall toward the wide, tapestried doorway of the Emmett dining room. And it was a splendid setting for a comedy of Italian duplicity that he beheld in the great space beyond, with its carved wainscoting and ornate Florentine ceiling. He had associated this big room with rapturous dinners enjoyed in an atmosphere of intellectual adoration during the Golden Age of Sophie. Yet here in the doorway he paused, a stranger, blinking into the flood of light that surrounded the well-set table, flashing reflections of crystal and silver. And this was what he saw: The massive Elijah Emmett, like a great gray bear, in a badly fitting business suit, sat by the table, utterly absorbed in a shuddering silken bundle that he held tightly and clumsily in his arms. A surge of destructive jealousy quite overcame the onlooker at first. Then he wanted to laugh. The light of four many-branched candlesticks, geometrically arranged on the damask cloth, imparted a sparkle to the elaborate table display and illumined the bald spot at the apex of Elijah Emmett's lowered head. For the silken bundle in his arms was Sophie Emmett.

"Hem!" suggested Weymouth as soon as he had gazed his fill.

"Ah, Weymouth!" responded Elijah, looking up at last.

Whereat the white and slender arms which clung so hysterically round the massive neck were tightened and a high voice quavered:

"Oh, Elijah! Send him away! He doesn't"—a sob—"he doesn't understand me!"

"There, there," soothed her gigantic master, patting her gently with a heavy paw, "don't worry about him. I understand you."

As Harlan Weymouth approached the dramatic table he had some delicacy at first in looking upon this intimate family scene. But when he did look he turned quickly away. Still snuggled against her Elijah's untidy waistcoat, she had got out her little golden box and sat serenely powdering her nose!

"Come here and sit down, Weymouth," invited Emmett genially, as he sipped his cooling coffee, making no pretense at rising. "On time, I see."

Weymouth seated himself a space away from the table, as far removed from Sophie as convenience would allow. There ensued a terrific pause, the more oppressive because of Emmett's mountainous good humor. The arbiter of the situation, he chose his time to finish his coffee.

"Well," said Elijah at last, nesting his wife's dark head the more closely against his shoulder, "what's the verdict?"

Sophie Emmett sat suddenly up on her husband's knee, and considering her perch she presented a front of surprising dignity.

"I don't want to hear another word about it, if you please," she commanded, a queen in the lap of her god.

At that moment Weymouth almost rendered her his unbiased judgment. Anger had brought animation into her pretty face—or was it merely the stupid pique of a cat striking out with her claws?

"That's quite positive, is it?" smiled Elijah Emmett. "And, of course, that's enough to dissolve the partnership. Too bad. Started out with every promise of going nicely."

Emmett began striking fire upon Weymouth's imagination.

"You're splendid!" he admitted abruptly.

"I'm sensible," replied the big man, with his staccato accent. "And that has a certain splendor in this generation. The splendor of loneliness." He put his wife down in a chair as though she had been a doll. "You look tired, my dear," he said gently. "Better go to your room and put on something less elaborate. You couldn't afford that gown in the first place, and you'll spoil it sitting round in it."

She never looked at Weymouth as she went out of the room and out of his life as docile as a chidden child. So this was a glimpse of the rough country at the farther end of romance! He sighed.

"Sigh away!" Elijah Emmett bade him, his rugged features breaking into a smile. "I guess you're about as glad as she is."

TWIN SONG HITS

"YOU CAN'T GO WRONG WITH ANY 'FEIST' SONG"

What Do You Want To Make Those Eyes At Me For?

"It's a whale!" "It's one big smash!" "It's a hum-dinger of a song!" This is what Broadway thinks of the lively song sensation now being sung by Henry Lewis in Anna Held's new musical show, "Follow Me." It's the snappiest "Eye-Song" ever written. Get a copy today and start something in your town. Words and music by McCarthy, Johnson and Monaco.

I Met You, Dear, In Dreamland

Once in a blue moon (maybe) you run across a little peach of a song that hits you between the eyes and warms the cockles of your heart. Here's the song! It's a real love ballad with just the right sentiment and melody that charms. Its dreamy waltz-time is irresistible. Words and music by Lew Berk.

ON SALE TODAY at all Music and Department Stores, or at any Woolworth, Kresge or McCrory Store.

Other Popular "FEIST" Songs:

"Honolulu, America Loves You"	"You may Hold a Million Girlies in Your Arms"	"Silver Bay"—Percy Wenrich's Latest
"Not so very far from Zanzibar"	"Ireland Must be Heaven for My Mother Came from There"	"I Know I Got More than my Share"
"Way out Yonder in the Golden West"	"It's not your Nationality, It's Simply You"	"He May Be Old, but He's Got Young Ideas"
"Civilization"—Peace Song	"There's Just a Little Bit of Monkey Still Left in You and Me"	"Keep Your Eye on the Girlie You Love"
"The Sweetest Melody of All"		
"There's a little bit of Bad in every Good Little Girl"		

These songs are printed in the new "Feist" easy-to-read style. Complete song at a glance—no leaves to turn

SPECIAL NOTE: You should get all these songs from your dealer. Please do so. If you can't, send us eight 2c stamps for one, or a dollar bill for any seven pieces. Orchestra or Band—25c each. Male Quartette—10c each. These pieces may also be procured for your Talking Machine or your Player Piano. Be sure to get them. Orchestra Leaders will gladly play them on request.

Time and Motion Study of Mechanical Bookkeeping Requirements—Result: The BAKER-VAWTER Steel Posting Tray

TRADE BEST VALUE MARK

Baker-Vawter ORIGINALITY *scores another big hit!* Two years of successful use by many concerns precede this announcement. Practicability thus *guaranteed.*

Credit men can keep in touch with daily balances of *all* customers, handle special matters and save much of stenographer's time—*all with less effort. Bookkeepers* can work faster—and with less fatigue—with the

BAKER-VAWTER
STEEL LEDGER AND STATEMENT TRAY
for use with Bookkeeping Machines

It facilitates the Baker-Vawter plan of offsetting accounts before posting. Ledger leaves and statements are efficiently held when interleaved. Elastic capacity. Leaves held at any desired angle by positive automatic follower block and steel non-skid bottom.

WRITE—
For Baker-Vawter Salesman to call and explain.
NOT SOLD BY DEALERS.

After compressing leaves tightly inside, a steel hood locks over tray. Safety! Press a foot lever and rollers drop to floor. Tray then rolls into vault on stand, or lifts off for carrying.

New Orleans, U. S. A.

"I should like to ask what the devil you've been trying to do?" asked Weymouth, facing his tormentor.

"That's a fair question," replied Elijah slowly. "I'm a queer fish, Weymouth. Probably you've noticed that. We're both of us investigators along our own lines. You write for an exclusive public; I write for a one-man audience—myself. Well, this has been in the way of an experiment in—matrimonial psychology."

Weymouth slightly raised his brows.

"You don't understand me? To put it plainer: I'm writing a book about women. It's called Limitations. I don't know any women but Sophie—don't care to know any others—but I think I know her pretty well."

Elijah Emmett paused and pressed a button under the table. When the butler had appeared he commanded shortly:

"Bring in another bottle! Then you may go!"

And when the man had shown a cobwebby label to his master, and left the bottle uncorked between two glasses, Emmett explained:

"This is old tawny port—eighteen-seventeen. It's out of fashion and so am I. We'll split the bottle between us."

He filled the glasses brimming full, and held the topaz liquid to the light.

"To our escape!" he pledged. Weymouth was ashamed of himself, yet he tossed the toast off with alacrity.

"Weymouth, there's nothing that lives or breathes that can look dignified in a false position. It's like a Church of England clergyman trying to ride a motor cycle ——"

"What's that?" asked his guest, sitting up as though a cold hand had touched him. "Would you mind saying that again?"

"Like a Church of England clergyman trying to ride a motor cycle."

"By George, that's queer!" cried Weymouth; and again: "By George! Unless I'm mistaken I've heard ——"

"Heard Sophie say it several times?"

Weymouth faintly nodded.

"Quite possibly. And that's the point I'm getting at—my experiment in matrimonial psychology. Weymouth, we've got to talk quite candidly, as men must when they're similarly interested. Now tell me this: Just when did you begin to lose interest in my wife?"

"That would be rather an ungentlemanly thing to discuss, wouldn't it?" inquired Sophie's quondam lover.

"Probably. Don't let that stand in your way. I've met very few gentlemen in my lifetime—and none of them have had anything to say worth repeating. What I want is facts."

"Well, if it comes down to a bald confession, I'll admit," replied Weymouth, "that she began to bore me slightly about two weeks after we began our probation together."

"Humph!" Emmett's grunt was filled with satisfaction. "That's about the time, I should say. In what way did she bore you?"

"I was slightly disappointed—not so much at first. But it began to dawn upon me that I was either losing my taste for wit or Sophie was losing her point of view. You see, I was inordinately interested in her from the first because she had positively her own way of looking at things and expressing what she saw. I hate dull women. That was what drew me to her—she was a shining difference. But after you began your—your experiment with us—and I could see her as often as I liked away from you, it seemed to me her mind was—what shall I call it?—thinning out. Where once there were ten thoughts to the minute, there was less than one to the hour. Then she began visibly struggling to make good. She began to repeat herself."

"No clever woman ever repeats herself—to the same man," grinned Emmett. "Let me fill your glass again."

"Finally it got to be positively distressing. We would spend hours together groping desperately for something to say. It got so I dreaded to hear her speak, for fear she would come out with something so threadbare that ——"

"Ha!" Emmett uttered a one-syllable laugh. "She was now delving down to the subbromidic stratum. Was that toward the end?"

"Two or three weeks ago. I avoided going to see her as much as I could. I was still in love with her and hoped against hope. No use. The brilliance of her imagination had evaporated. You will pardon my saying so, but she was dull as ditch water."

"And you weren't much better?" snapped Emmett suddenly.

"I—I never looked at it in that way," he confessed. "I must have had a pretty hard time with nothing to work on."

"Now I'm going to show you something," pursued the elder man in the same cross-examining tone. "I am going to show you something and ask one or two more questions."

He leaned bulkily down and fished from under the table a small portfolio, such as lawyers employ for the carrying of documents. Rapidly he unbuckled the straps and brought out a thick, typewritten manuscript, in size and character very much like the one he had been blue-penciling upon their first interview up in the library.

"This is my book, Limitations, so far as it has gone. Let's look at page one-thirty-one." He pulled the sheet from its place and laid it on the table before them.

"Now, Weymouth," he said, "I want you to read the ninth line from the top—here." He indicated the place with his broad thumb.

"'Woman has always occupied a position of priesthood,'" he read aloud, "'standing before an inner shrine and guarding a sanctity that is essential to civilization. To many of them, in their modern aspects, freedom is merely a delightful joy ride. She rides astride upon her rights, and the aspect, I am compelled to say, is like that of a Church of England clergyman mounted upon a motor cycle.'"

Weymouth looked up blankly at Emmett's face, stonily amused.

"There's a lot more," insisted Emmett, "and I'd have no trouble showing you Sophie's pet epigrams and philosophies if I wanted to bore you with my work. There's the one about married couples not liking each other—eight chances to one—or the statement that too many people want socialism the way they see Chinatown—by being taken round at a dollar a head by a man with a megaphone, or ——"

"Has she stooped to that?" Weymouth half whispered. "Stolen thunder!"

"Oh, we shouldn't mind that. Every echo steals thunder and imitates it faintly. And, of course, you must realize by now that Sophie is ——"

"An echo?" inquired Weymouth.

"An echo!" echoed Emmett. "She has one of those minds which can only give back the sounds they receive."

"I see," grunted Weymouth. "She's changed so in her absence from you, because ——"

"She's been shut off from the base of supplies. Her mind went dry. It's been a shame to take my words out of her pretty mouth. She has always echoed so delightfully! Really, Weymouth, with her beauty and the way she has with her it has been more than worth the trouble."

"It would be a crime against art to stop her now," suggested Weymouth, "like taking the lines away from a great actress."

"Oh, bless her!" laughed Emmett heartily. "I wouldn't have the brutality to do that! In a week she'll be bristling with ideas again—my ideas. And I'll give her all the philosophy and bright paragraphs she can use, just as I'd give her money until I went bankrupt. I don't think you realize how much I love her, Weymouth."

The young critic was amazed at the intense earnestness with which this peculiar man made the last statement.

"I'll have a little more of that excellent port, if you don't mind," suggested Weymouth in a voice that was dry as dust. Emmett's hand shook slightly as he poured out the liquor.

"She used to take me round a good deal in society when we were first married," went on Emmett. "She acted as my convoy because she had the social position and I had the money. I never cared much for that sort of thing, because I never could talk to advantage to more than one person at a time—and I've only found one in ten worth talking to. But I stood this dinner business for a while. The thing that really attracted me on these occasions was Sophie. It gave me a sort of rare, epicurean delight to sit a few places away from her and hear her strewing epigrams—my epigrams—right and left like handfuls of jewels. People are often careless with other people's valuables, and Sophie was a spendthrift. I never really appreciated how good my lines were until I heard Sophie delivering them in that wonderful voice of hers. I used to go to dinners that mummified me where I sat, just for the exquisite joy of hearing

(Concluded on Page 61)

Hudson Super-Six is Not A Brother of the Six

The Feature Which Won Its Supremacy Is Controlled By Hudson Patents

A Six now rules in Motordom—where the trend, not long ago, was toward added cylinders. A Six holds all the worth-while records. A Six outsells any other front-rank car. But it is the Super-Six, remember—with the Hudson invention which added 80 per cent to six-cylinder efficiency.

The Light-Six type, some years ago, attained the heights of popularity. It so excelled the previous types that it was, for some years, the reigning type.

But engineers knew that in the Six at its best much of the power was being lost in vibration. They knew that friction and wear, within the motor, limited its endurance.

Leading engineers, including the Hudson, started out to end these faults. For a time the best way apparent seemed the V-type motor. So in 1915—before the Super-Six was presented—the trend was to Eights and Twelves.

There can be no doubt that those types soon would have superseded Sixes. Maker after maker adopted them. The Super-Six turned the tide back to the Six.

An Almost Twice-Better Six

What changed the condition was the Super-Six invention, made by Hudson engineers.

They discovered the fault in the Six. Then they worked out the remedy. The result was to add 80 per cent to efficiency, with no added size or cylinders.

That vast step forward made the Super-Six supreme. Never had a motor shown such power for its size, never such flexibility, never such endurance. That fact is still true. And the evidence is, it is bound to long remain true.

But that is the Super-Six motor, invented and patented by Hudson.

It Won All the Laurels

All the worth-while records have been won by the Super-Six. That is, speed records for stock cars. Records for quick acceleration. The hill-climbing records, including Pike's Peak.

Endurance records—most important of all—have been broken by enormous margins. The 24-hour record was broken by 52 per cent. The transcontinental record was twice broken in one continuous 7,000-mile round trip.

So the Super-Six excels, beyond possible question, in every quality you prize.

For men who want a great car, no car in the field today approaches the Hudson Super-Six.

Now 25,000 Owners

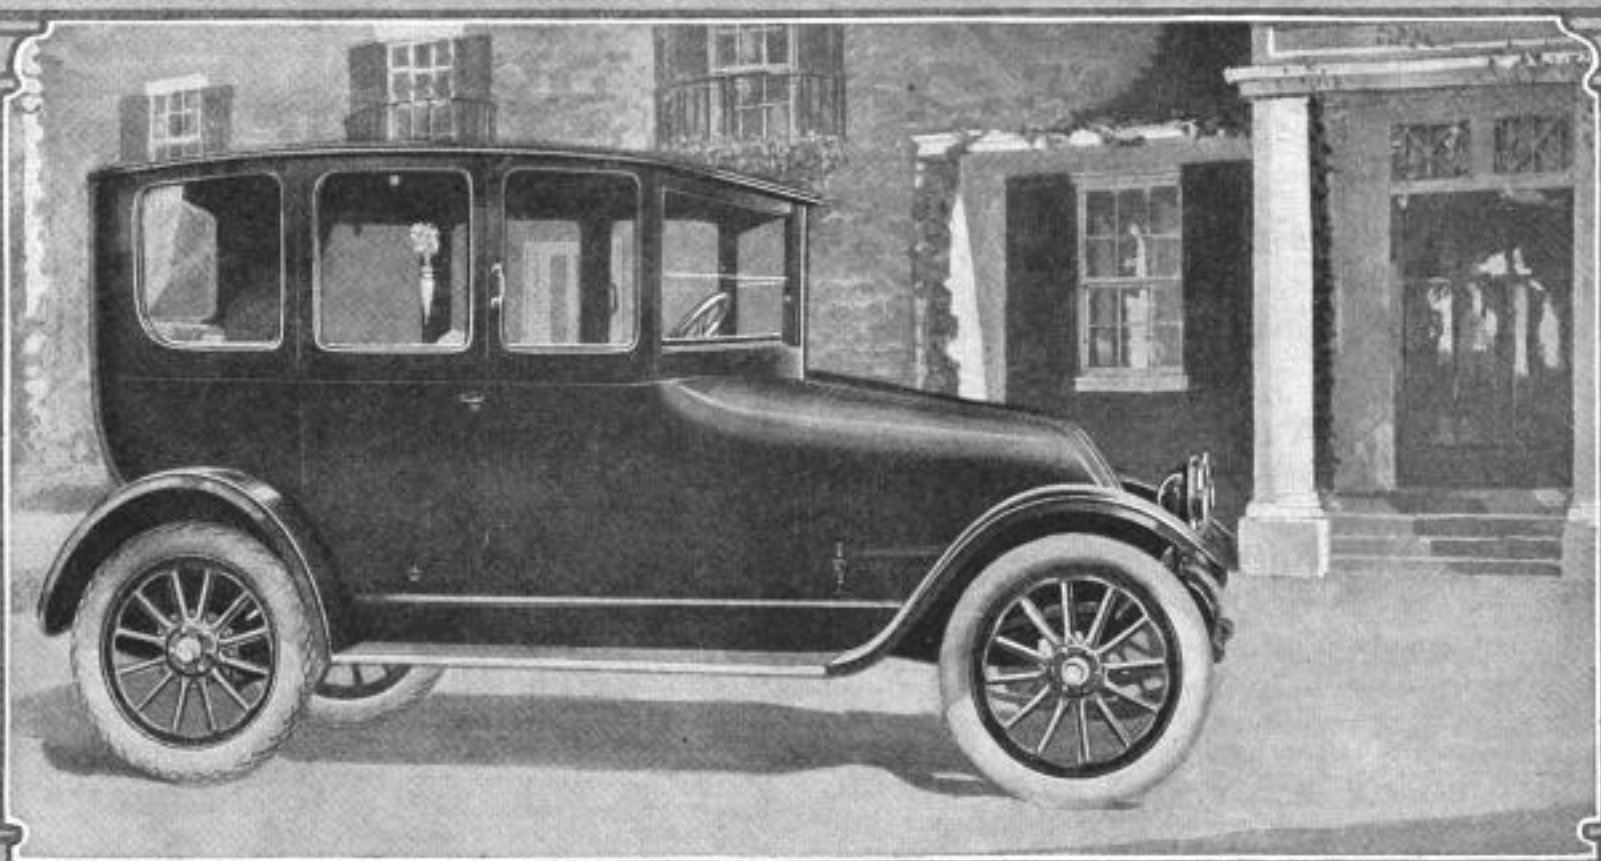
Now 25,000 fine-car owners are driving the Super-Six. Could we have supplied them, there would have been thousands more.

The Super-Six, in one year, has come to outsell every rival. That is, every car above $1,200.

In that year, too, we have made Hudson bodies studies in beauty, luxury and comfort. So the Super-Six looks its supremacy.

The car is now equipped with a gasoline saver, also a development of Hudson.

If you want these advantages, and a type which can't be supplanted, your choice must be the Hudson Super-Six.



Let your Hudson dealer show you Super-Six performance.

THE FRANKLIN CAR

FIND a man who has experienced the luxury of a Franklin Enclosed Car for *summer use*.

Ask him what he thinks of the Enclosed Car idea for summer.

He will tell you that he has made a *discovery* in motoring: that he will never use any other type of car: that all the objections you can think of are not true or do not apply to the Franklin.

He will tell you that the lightness and resilience of the Franklin make it practical for *any kind of driving*, on any sort of road, any time, anywhere.

That he gets all the *free-blowing air* there is—as much or as little as he wants.

That he can *regulate* the amount of ventilation. That he can instantly adjust the windows for any sort of weather—shut out dust or rain; drive for fifty miles on a hot summer afternoon and step out of the car *clean* and *cool*.

Then he will tell you what it means to his wife and family. The comfort of wearing what they please *en tour;* the freedom from grimy, parched skins and enveloping veils; the joy of stepping onto a hotel veranda without looking like the rescued survivors of a wrecked Cook's Tour.

Then he will come back to the specific features of Franklin construction—its *flexibility*, the *lightness* of its unsprung weight. He will tell you of *easy riding* over rough roads, its *liveliness* on the hills, its *maximum speed* from place to place, its economy in gasoline, its remarkable tire mileage.

Features that apply *equally* to Enclosed or Open models—the features that make the Franklin so definitely an *all-around efficient car*.

myself quoted—quoted without quotation marks—by the most charming little actress I ever met.

"But I was punished for it at last. It got round that society merely endured poor, stupid Emmett for the sake of getting his brilliant wife. Then I decided to let Sophie do it all. I've stayed home ever since."

They sat a while regarding the tablecloth. The topaz liquid in the bottle was fast reaching its nadir.

"Mr. Emmett, if you don't mind telling me," asked the younger man, "how a clever man like you—for I'm beginning to think you're a stupendous person—ever came to ——"

"To be fooled the way you were?" grinned his host.

"Well, that's one way of putting it. I wonder how you came to marry her. Whom was she echoing when you first met her?"

"Her father," Emmett replied. "He was a remarkable individual and gave her enough ideas to keep her going until she could tap my mine."

Weymouth pushed back his chair. He had heard the truth and must take it for what it was worth.

"I thank you," he volunteered rather heavily. "There aren't many men who would speak out like this. Of course it's been rather crushing for me. I thought I understood women ——"

"You did? You poor, lost lamb!" Emmett let his friendly hand rest a moment on his victim's shoulder. "I don't think you understand much of anything. You clever fellows—professionally clever fellows—are usually pretty stupid when it comes down to the facts of life. I don't suppose, now it's all over, that you have an inkling as to why I've done all this to make you and Sophie tired of each other?"

"I really believe you're fond of her!" gasped the dupe of fate.

"Fond of her! My dear boy, if she'd stayed away two days longer—well, your case would have been simplified to courting a pretty widow. I don't think you'll comprehend what I'm going to say, but I'll tell you as plainly as I know how. I adore Sophie for exactly what she is—simple and unreasonable and feminine—utterly lacking in that abominable thing called cleverness. On the days when we're alone together we drop all pretense and chatter like children. She takes me out of my maddening theories. She rests me and makes me feel young again. I don't care how she cavorts in public, like a charming little animated phonograph. She doesn't waste any of that foolishness on me. She saves it for people who aren't discerning enough to know glass from diamonds. But when she's home, she's Sophie—just entirely Sophie. We frolic and talk nonsense together. And when the servants are out we commandeer the kitchen, and cook our own little dinners. She's quite a wonderful cook."

Emmett paused, arrested by an idea. His eyes were twinkling with enthusiasm.

"Weymouth, you've never really tasted a curried squab until you've tried Sophie's!"

Her reformed lover smothered a groan. He had lost a comet and found a curry cook!

"Why don't you come round Wednesday night and have a family dinner with us?" Elijah's voice rasped on his reflections.

"I—I should like to. But don't you think it would be better if ——"

"You and I ate alone? Nonsense! I want you to come when Sophie's here. It would hurt her feelings if you didn't."

HELENKA

(Continued from Page 8)

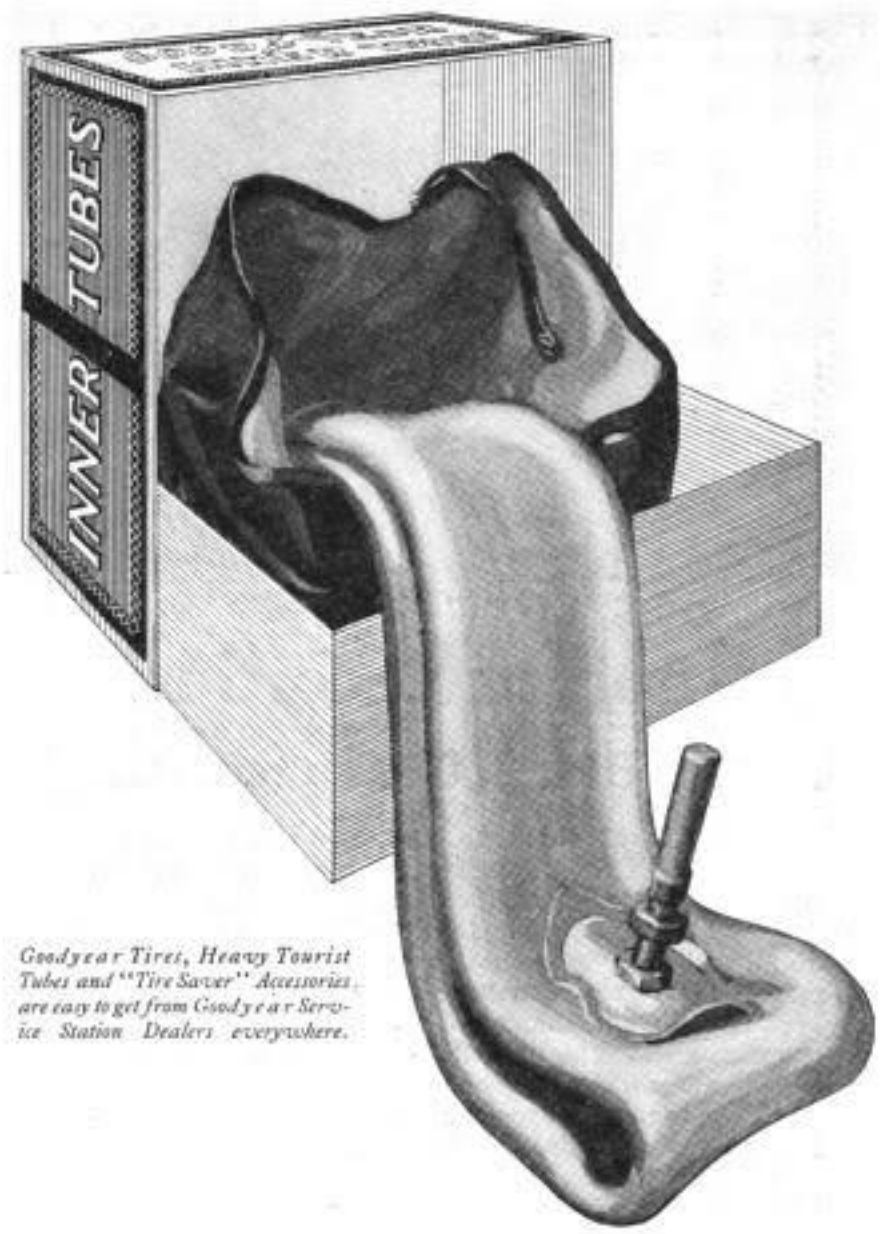
Eight o'clock came, and five minutes after, and then ten! At last she heard the roar of the motor, and her heart beat wildly. Then the great car with its closed hood pulled up to the curb; the chauffeur leaped down and began to unbuckle the flap, and she hurried forth across the pavement in her wonderful gold shoes. She did not wait for Paul to get out, but stepped through the door and found herself in his arms, squeezed against the orders pinned across his uniform.

"I thought you would never come!" she cried. "I'm so frightened—to go to that great hotel—poor little, timid me!"

He bent over and kissed her on cheek and lips again and again.

"I came near not getting here at all, little sweetheart!" he answered with grumbling tenderness. "Took some chances, in fact! But you're worth it! You know that, you mischief! There isn't a man in the Russian Army but would die for you—if he knew you existed."

"Then I'm not frightened any more!" said Helenka, giving him back his last kiss.



It was nearly a quarter to nine o'clock when the motor which bore Paul Zamarkroff and Helenka rolled up to the door of the Potocki. During the thirty-odd minutes which the ride had consumed the girl had already divined that something was preying upon her companion's mind, which in turn communicated itself to her own. It was not that Paul was less loverlike than customarily—not at all—but she detected a slight absent-mindedness on his part that puzzled her. She also noticed that he had been drinking—more than usual she thought, but why not! But when the *concierge* opened the door of the motor, saluting Paul rigidly, she forgot all these things in a fresh palpitation of excitement. Oh, could she ever put her foot to the ground and enter those great doors through which came the subdued strains of mysterious music? Could she face those hundreds of strange people—those great folk? She hesitated longer than was at all necessary and Paul spoke rather impatiently to her. She must not annoy him! Trembling she descended and, gathering up her abbreviated skirts, not daring to look at the *concierge*, followed Paul into the Hotel Potocki.

The air in the foyer was heavy with the scent of roses and of hot food. A couple of lackeys sprang forward to relieve Paul of his military greatcoat, and a maid in black and white hurried toward her while Helenka, petrified with embarrassment, stood with her eyes on the floor. She could hear the clank of swords, which came from the glass doors of the restaurant, and realized that some officers had entered just after them. There were ladies. She must not block up the way. The officers were greeting Paul jovially in Russian.

Helenka, turning away from the maid who had taken her wrap, saw Paul in full-dress uniform for the first time. Always, as she was convinced, the personification of her ideal—the young hero of her dreams—he now seemed to her like some glorious pagan god—Mercury perhaps, "new-lighted on a heaven-kissing hill." Well over six feet, his inlaid sword swaying against his glossy black boots, his chest cordoned with gold and decorated with a row of service orders, her lover indeed looked every inch an officer and—had she known it—every inch a prince. The head waiter was hastening forward obsequiously. Evidently Major Zamarkroff was a familiar as well as a distinguished patron. Paul selected a huge bunch of blossoms from the rosary by the door, tossed the flower girl a gold coin and, bowing ceremoniously, offered them to Helenka, then slipped her hand through his arm and led her across the threshold. Faint with excitement and embarrassment, she blindly followed, but her head swam and the scene blurred before her dizzied eyes. She could see the black swallowtail coat of the head waiter bobbing ahead of them, and swaying masses of gay color at the crowded tables, but the myriad lights ran together and the orchestra was almost drowned in the clatter of china and the roar of talk and laughter. Paul patted the hand that lay upon his arm.

"Courage, little sweetheart," he whispered.

But Helenka, who had never bared her shoulders in public before, felt as if she were half naked to the gaze of thousands, and a crimson flush stole swiftly across her neck and bosom. She was convinced that no other woman had ever so exposed herself. There was something wrong with the cut of the dress. There must be! Or why was everybody looking at her? She hung her head and held the roses to her breast, trying to conceal her shame. But every candle seemed an eye of flame leering at her. Half supported by Paul, she pursued the head waiter's retreating coattails down the aisle between the tables until he paused and with a grand flourish pulled out two chairs. At last she could sit down and sink out of sight! Alas, no! With an access of agony she perceived that Paul was berating the functionary for giving them such poor seats. He spoke sharply to the man, and his voice had an imperious ring that she had never

Goodyear Tires, Heavy Tourist Tubes and "Tire Saver" Accessories are easy to get from Goodyear Service Station Dealers everywhere.

THE TUBE THAT MAKES THE CASING LAST

The inner tube, obscured, unnoticed, seemingly unimportant, nevertheless bears heavy responsibility.

It is ofttimes the life or the undoing of the casing.

For underinflation is the keenest foe to long tire-service, and from the slow tube-leak, the slightest seepage even, to underinflation is but a step.

Goodyear Tubes are the sort that makes a casing last—yield up its final mile of usefulness—by supporting it in its work with constant and adequate pressure, by *holding* air.

They do not leak, seep or creep.

They are built up from many paper-thin layers of rubber, laid sheet upon sheet and vulcanized together into a perfect air-retaining unit.

Even the valve-patch is vulcanized in, not stuck on, eliminating one of the commonest causes of tube trouble.

For the sake of your satisfaction, for the good of your casings, Goodyear Tubes should be inside your tires.

We particularly recommend the Heavy Tourist type for sustained and severe service. It is especially thick and vigorous, containing more material and more miles; it is a little higher-priced—and *better*.

Clean, Durable Concrete on Milford Turnpike, near Orange, Conn.

Another Record in Concrete Road Building

DURING the first ten months of the past year, 22,583,577 square yards of concrete paving were contracted for throughout the United States. This equals about 2200 miles of road 18 feet wide. The contracts let during the first ten months of 1916 alone surpass the record of any previous year. Every year a new record has been made in the amount of concrete paving laid. Such records indicate the unqualified confidence of the people in concrete roads and pavements.

Concrete makes a road that is a pleasure to ride upon. It is **dustless, mudless** and **free from ruts and holes.**

Concrete makes the safest and most serviceable road. Its gritty surface **prevents slipperiness;** in wet weather automobiles **will not skid** on it; the color makes it **easy to follow at night.**

Concrete roads are nearest to being **100 per cent efficient** 365 days in the year.

Concrete roads are the **most economical** of all types of permanent pavements—the first cost is moderate—the upkeep is negligible.

Concrete Road Construction is Easily Understood

No patented materials—no secret processes—no mystery

Materials used for the construction of concrete roads are familiar to everybody. They consist of clean sand, pebbles or broken stone and Portland cement. These are mixed with water, and form a material having a hard, durable, rigid, unyielding surface which is not destroyed by swiftly moving automobiles, heavy motor trucks or horse-drawn wagons. The sun does not soften it. Cold does not cause it to crack, crumble or get brittle.

Many communities in practically all states have gone into extensive building of concrete roads. Vermilion County, Illinois, of which Danville is the county seat, is building a system of 144 miles of concrete roads, under the supervision of P. C. McArdle, Superintending Engineer.

Your community can enjoy all the advantages of concrete roads without saddling a heavy burden on the taxpayer. Let us send you a free copy of "Concrete Facts About Concrete Roads." After having read this booklet, write or talk to your road or street officials and request them to investigate the merits of concrete roads before spending any more of your money.

CONCRETE FOR PERMANENCE

heard in it before. The fellow was cowed and apologetically led them back between the tables toward the main door of the dining room, but there were no vacant places and, after an agonizing delay, a table was dragged out for them into the very center of the restaurant.

"Well, at last!" said Paul. "And to think I gave that rascal twenty rubles only day before yesterday!"

The head waiter was back now, officiously ordering the other servants about and solicitous in his attentions. Paul called for champagne and leaned back in his chair, nodding right and left to various occupants of neighboring tables. Once she was no longer standing up in the midst of everything Helenka began to recover from her confusion and presently mustered enough courage to glance timidly about her. She still clutched her bouquet tightly to her breast, but she soon realized that her own costume was modesty itself compared with some of those which were within her range of vision. The women all seemed very beautiful to her and their dresses marvels of creamy tulle and lace—what there was of them—and the officers who crowded about the tables all looked marvelously big and brave and handsome—only not nearly so wonderful as Paul, whom most of them seemed to know.

Many of the women apparently knew him also and one, sitting at a table close by, thrust out her hand across the intervening space and Paul gravely bent over, took it in his and kissed it. Helenka experienced her first knife thrust of jealousy. Who was this woman? Paul saw the look in her eyes and laughed.

"Only the Countess Czvorska, my dear. An old friend—forty years old!"

Above the din—for it was little short of an uproar, punctuated every now and then by screams of laughter, the clink of glass against glass and the popping of bottles like near-by rifle shots—the double orchestra on the balcony was struggling to make audible a piece described upon the program as "La Turkee Trot Americaine." It seemed curious to Helenka to see an orchestra playing and nobody listening to it.

Gradually her curiosity got the better of her embarrassment and she began to observe the scene about her in detail, while Paul busied himself with the menu. There were certainly five hundred people in the room—or more—and at least one-third of them were Russian officers, many in field uniform. There were one or two women to each officer, while here and there a civilian in evening dress contrasted oddly with the military appearance of the others and sounded a note singularly prosaic and bourgeois. One was nothing if not a soldier in Warsaw! And the number of bottles was astounding. Bottles large and bottles small, on the tables and beside them, in wonderful silver pails piled high with ice. And just then the head waiter returned with just such a pail and took out a great dripping black bottle, rather dirty, and showed it to Paul, who nodded and pushed forward Helenka's glass. Another waiter pulled the cork and returned the bottle to the first, who deftly filled the glasses with yellow bubbling wine.

"*A toi, ma chérie!*" said Paul, lifting his glass.

Helenka raised hers and placed it to her lips. She had never tasted champagne and was surprised to find it so bitter, but she drank it all without putting down the goblet, and began presently to feel a new sense of confidence. After all, she had as much right there as anybody—now. She was Paul's affianced wife. It was proper that she should take her place at once in his gay world. And yet, what had she, an unknown Polish girl from New Praga, to offer him? What an extraordinary thing was love! What miracles it brought about! She sought Paul's hand beneath the table and he pressed it tenderly. She wished she could meet his parents and see his home, the home in the country which he had described to her, with the peasants and the cattle and the fields of grain. But she must wait until after the war. It would be wrong for them to marry now. What if he should be shot? Looking at his mobile face with its warm color and brilliant smile it seemed inconceivable that he could ever die. Yet thousands like him had been killed. She felt that she would die herself if anything happened to him.

A tall officer of the Preobrajensky Guards arose from where he was sitting and came over to their table, slapping Paul familiarly upon the shoulder.

"Well, old fellow, I thought you were stuck for good at Lowicz!" he remarked. "You were lucky to get away!" His eyes fastened themselves on Helenka's face. "But then you are always lucky!" he added significantly. "Introduce me, won't you?"

But Paul's expression showed no cordiality of response.

"Why, certainly, if you wish," he replied stiffly. "This is Colonel Petroff—Mademoiselle Lavorska."

"Charmed to make your acquaintance!" exclaimed Colonel Petroff, reaching for her hand and raising it to his lips. "The major here has a great eye for beauty. Permit me to offer my homage also!"

Paul's face had taken on a look of annoyance. The interruption was evidently not at all to his liking. But having laid his wreath, as he supposed, on the altar of Aphrodite, the good colonel, feeling himself *de trop*, returned to his place. His remarks had been quite unintelligible to Helenka, who only realized that he thought she was pretty; but she was troubled by the fact that Paul had omitted to introduce her as his future wife. This evidently was also in his own mind, for a moment after Petroff's departure he turned to her and said:

"That fellow is the greatest busybody in the army. If I had explained to him who you were, he would have spread the news all over the room. Probably he'd have told the orchestra to strike up the wedding march!"

Helenka, feeling that Paul's instinct in the matter must of course be correct, was satisfied, but she somehow regretted that her fiancé had not seized the very first opportunity to make her position absolutely plain. Unless she had been engaged to him she was quite sure it would not have been right for her to come there.

Paul filled her glass again and hastily began to point out some of the celebrities who were present.

The stout man in the dress suit, dining at the table with the general covered with decorations, was the Civil Governor of Warsaw. At the next table to the left was Count Orlenoff with one of the general staff. Over there was a group of officers of the Lithuanian Legion. At another table was Prince Ivanokoff with his wife. Helenka was thrilled. Then the waiter brought little shiny things in shells—oysters, she guessed from what she had read—and she was lost in confusion as to how to eat them, until she saw Paul take up a little three-pronged fork from beside his plate. But she no longer felt abashed at her ignorance, only rather amused. After her second glass of champagne she hardly minded anything. Amid the confusion she did not notice that her ears were singing a little, or that she found difficulty in focusing her eyes except on near-by objects. The lights were so dazzling!

She saw Colonel Petroff raise his glass and smile at her from where he sat, and she did not know just how to acknowledge the salute. He was certainly very polite. She was very happy. She was going to have a wonderful life with Paul if her introduction was any index of the future. The noise was increasing every moment. They had come so late that already some of the corner tables had been cleared away and people had begun to dance—a funny seesaw kind of American dance. Others stood up and applauded. From the other end of the room came a crash, as if a table had been upset. She had never been where people were having such a good time before—so carefree, natural and happy! And then, just as Helenka had managed to capture one of the oysters, the lady at the next table—the Countess Czvorska—leaned across, halfway between, and in a silver satiric voice said to Paul:

"And how is my *cher prince* this evening?"

"*Cher prince!*" That meant "dear prince"—the ordinary form of salutation for a person of that rank, as Helenka well knew. The hand holding the oyster fork stopped midway in its journey to her mouth. The lights seemed to grow dim. The blood rushed to her throat. *Prince!* The countess had used the word quite naturally.

But of course it was a joke—why, Paul was a prince—a prince among men! That was it! With a little gasp of relief Helenka turned to Paul. He would introduce her now. The countess was an old friend. Helenka would, if necessary, force the issue. But why was he scowling?

Oakland Sensible Six

"Sturdy as the Oak"

Get the *real* thrill of the open road in an *Oakland Sensible Six.* The valve-in-head motor develops full 41 h. p. at 2500 r.p.m.—one h. p. to every 53 pounds of car weight.

And every mile is an easy mile. The big, oversize tires, 32 x 4, the long, semi-elliptic springs, 51″ in rear, 112″ wheelbase, all make the *Sensible Six* one of the most comfortable and easy riding cars of its size ever built.

It has the power, comfort, good looks, reliability you want in an automobile—yet it is sensibly priced—$875, and built to operate at moderate cost.

Oakland Eight—$1585—is a big luxurious 73 h. p., 7-passenger touring car for those who demand the utmost in power, speed and luxury.

(Continued from Page 62)

"I want to present Captain Lagaroff!" the countess was saying.

"Oh, I beg you—not now!" stammered Paul, scowling and turning white round the lips.

"How absurd!" she returned. "Be a good boy! Can't you leave your little comrade for two seconds? Lagaroff!" she called over her shoulder. "I want to introduce you to Prince Zamarkroff!"

And Paul, turning in his chair, bowed stiffly to Captain Lagaroff and raised his glass.

Then it was so! He was a prince! Why did he not look at her? Why did the fingers of his left hand twitch that way? Oh, why had she met him? No Russian noble would ever marry the daughter of a Polish musician. She knew that!

He was a prince—a member, perhaps, of that dissolute—if aristocratic—circle notorious throughout Poland for its profligacy and dissipations. Why, she had never been anything to him at all except a possible victim that the fortunes of war had thrown in his path. One of many—doubtless—at Lowiez, perchance, or even in Warsaw! Every word he had ever spoken to her had been false—an infamous, calculating, sordid lie. And he had taught her to lie like himself! She should have known that true love would not countenance anything but the unsullied truth. But he had made her lie to her father and mother. Her dear father! Her dear mother! Oh, where were they? Where was Ignacio? She must fly to them at once! But how could she get away? She was a prisoner in a horrible trap—a trap where the cats gave the mice food and wine and played music for them to dance to!

The trinkets he had bought for her, the letters he had written to her, were all a part of a hideous lure; his kisses—ugh! Involuntarily she lifted her napkin to her mouth. Why, the very dress she had on was part of the price he was willing to pay for her! She felt suddenly ill—with an actual, overpowering nausea! She wanted to tear the dress from her body, to cast it away from her, to burn it! How was she to escape? Could she escape? These heartless Russian officers and these brazen women were his accomplices. They were all engaged in the same sort of conspiracy. It was all part of their own lives—this sort of thing—an everyday affair—a joke no doubt. The very servants here in this gilded place were in his pay! He could snap his fingers and they would drag her away, screaming, to anywhere he might direct. Every story she had ever heard of the cruel bestiality of the Russians crowded seething into her aching brain.

What an incarnate devil he must be! "Major Zamarkroff!" The hard-working farmer-officer, the only support of his elderly agricultural parents. What a fine story it would make to tell to his brother officers round the mess table! Oh, Ignacio! Why had she ever looked down at his faithful, unswerving loyalty? If he were only there to take her away from this wretch who had brought her into this terrible place! They would fight their way out together. She clenched her teeth, stiff with fear. The wretch was turning to her now with a forced smile on his red lips. How could he dare to speak to her? But she was fighting for her life. She must keep her head. He must not suspect that she knew. She must meet guile with guile, fight fire with fire. How she loathed him! There surged through her all the hatred engendered of love betrayed, of confidence violated, of truth outraged. Yet she bit her lips and smiled.

"We must learn that dance," she heard him saying. "La Turkee Trot!"

"Yes," she answered, "but not now! Give me some more champagne!"

"What a thirsty little sparrow it is!" he laughed.

They clinked glasses, but Helenka only touched her lips to hers, while Paul drained his to the bottom.

The noise was now deafening, the air suffocating. More tables had been removed and many couples were dancing, or trying to do so. The efforts of the musicians could not compete with the increased laughter, the almost continuous crash of china, and the popping of corks on every side.

What would he do next? What was the next step in this kind of tragedy? She looked frantically round her—at the supercilious waiters, at the flushed, bleary-eyed officers, at the powdered, heartless-looking women. Her eyes sought wildly for doors and windows, but there were none that offered any means of inconspicuous exit. Oh that Ignacio might come like a Sir Galahad to save her! But she knew that he would not come. No one would come! She would have to stay there alone with Zamarkroff!

"O God!" she prayed—Zamarkroff's words hovering somehow in her mind—"Dear God, who knowest the sparrow's fall, watch over Thy little Helenka—Thy little sparrow, Helenka! Have mercy upon her and save her; send Thy ministering angels to guard her; for the sake of the Blessed Virgin send Thine angels—Thine angels!"

With the effect of a thunderclap the noise in the room suddenly ceased. In place of it there fell an utter and ghastly silence, as if a lid had been clapped suddenly over a music box. The waiters stopped in their tracks—dishes raised in hand—the musicians ceased playing, as if turned to stone. Not a sound of any kind broke the stillness. And then everybody—officers, civilians and women alike—rose with white faces and turned toward the door. For on the threshold stood—the Grand Duke!

Alone he stood there in mud-bespattered field uniform, a silent colossal figure, six feet eight inches in height, with folded arms, his eyes fixed sternly upon the scene before him. Every officer in the room was rigid—at the salute. Every woman was erect beside her chair. There was no movement save the slow upward curling of the smoke from five hundred discarded cigarettes. It was like the palace of the Sleeping Beauty—with everybody in it turned to stone in an instant.

Slowly the Grand Duke's eyes traveled from table to table, taking in and identifying every officer present. A minute passed, two minutes, three. Helenka saw that Zamarkroff's lower lip was quivering. Then the Grand Duke crossed the threshold and walked slowly to the first table at his right, and as he did so two Cossacks appeared in the doorway and stood there, facing each other, at present arms. The table to which he gave his first attention was that occupied by the heavily decorated general and the stout man in evening dress.

The Grand Duke, his arms still folded, approached within two feet of the general and gazed down upon him from his great height, as Wodan might have looked down at Alberich. The man in civilian dress he ignored.

"What are you doing here?" he demanded in a deep voice that could be heard through the room.

"Your Royal Highness," gasped the general, "I—Your Royal Highness—I am dining with the Civil Governor!"

"The Civil Governor should dine in his own house!" said the Grand Duke shortly and turned to the next table.

"What are you doing here?"

The officer addressed—the member of the general staff—turned livid.

"Your Royal Highness, I beg to explain. I had dispatches for Your Royal Highness from Petrograd, and—supposing you were at the front—I—I—paused in Warsaw to dine. I have the dispatches here!"

"Give them to me!"

The officer fumbled in his breast and produced a sealed packet.

The Grand Duke snatched them from his hand.

"I should have had these three hours ago!"

Still in silence, the Grand Duke passed on. At the next table was a handsome young officer in full dress, a row of decorations on his breast, and beside him two girls, fashionably attired.

"What are you doing here?"

The officer clutched the back of his chair with one hand while keeping the other at salute, and hung his head.

"Your—Your Royal Highness," he choked out, "I—I—am—dining with friends."

His voice sank to a whisper.

"Have you leave?"

"No, Your Royal Highness."

The face of the Grand Duke grew hard. With one sweep of his right arm he tore the decorations from the young officer's breast and threw them upon the floor, as with his left he pointed to the door. The officer, without another word or a look at his companions, walked to the threshold, the two Cossacks closed in behind him, and he passed out. Two others appeared and took the vacant places of the sentinels.

TRIAL COUPON
Please send me a complimentary can of Barrington Hall Coffee

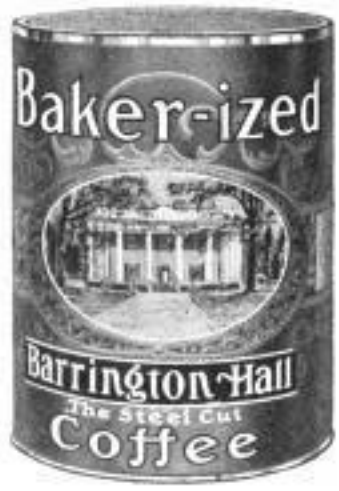
Clip the coupon and find out why cheap coffee costs more than

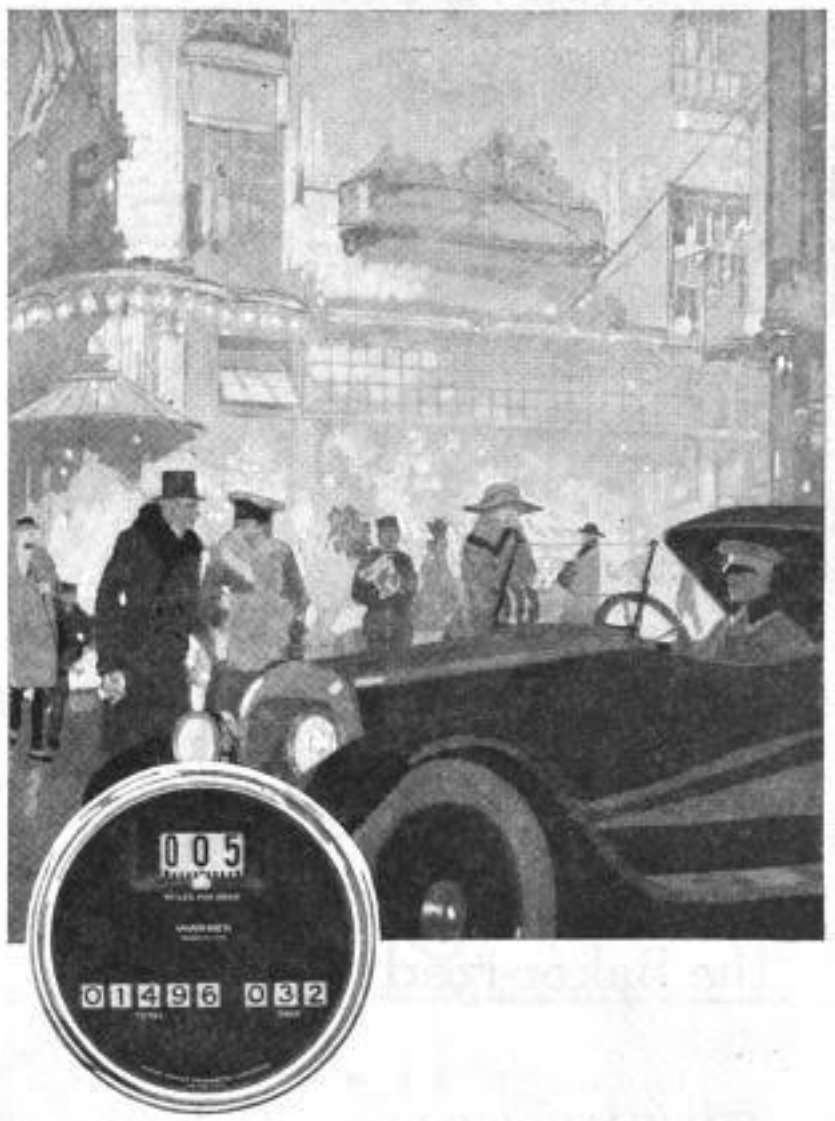
Barrington Hall
The Baker-ized Coffee



PERHAPS you have put "cheaper coffee" on your list of economies to reduce the high cost of living.

The above figures show that Baker-izing makes the cost per cup of choice coffee actually lower than that of coffee costing 10c less per pound.

BAKER IMPORTING COMPANY



116 Hudson Street, NEW YORK, N. Y.
246 N. Second Street, MINNEAPOLIS, MINN.

This process of preparation eliminates the chaff and dust which impair the purity of the flavor. It preserves the full strength of each coffee bean and by cutting the coffee into tiny granules of uniform size makes correct brewing possible. The result is real "domestic economy" without sacrifice.

Barrington Hall is sold in sealed tins by over 50,000 grocers at 40c a pound (45c in extreme west), but you can test its economy entirely at our expense. Simply mail the coupon or copy on a postcard. A trial can (enough for six large cups of this delicious coffee) will be forwarded at once with a booklet explaining the Baker-ized Process in detail.

The Unanimous Choice Of Fine Car Builders

FINE motor cars are fine throughout.

Their builders set the standards for automobiles.

They use the utmost care in selecting each part and each item of equipment, however small.

They pay a premium, if necessary, to have the best.

They base their choice on out-and-out efficiency. No other basis would do.

And no other basis than that of efficiency could have won the Warner Auto-Meter its place on virtually all fine cars.

The Warner is by far the highest priced speed indicator made. Price plays no part in its construction. Cost is not limited.

But fine car manufacturers are more than willing to pay the extra cost to have it on their cars.

When you pay the price for a quality car look for quality equipment. Look for the Warner Auto-Meter on the dash. See that it is there.

It is the final distinguishing mark of a de luxe automobile.

Warner Auto-Meter

$50 to $200

Stewart-Warner Speedometer, Corp.
Chicago, Ill., U. S. A.

Down the aisle walked the Grand Duke, pausing at each table and interrogating every officer. Soon four had been degraded and sent out of the room. Zamarkroff had gone quite gray, and his knees were shaking as the royal personage stepped beside him. Poor Helenka, almost too terrified to breathe, was only conscious of a huge, overpowering presence, a greenish gray immensity, a vast expanse of beard, a giant arm and a hairy giant hand.

"What are you doing here?"

The voice roared in her ears like the thunder of surf. The presence of the Grand Duke seemed to be suffocating her. But Zamarkroff did not reply. His head fell upon his chest and he made a deprecating gesture with his left hand. Helenka saw the hairy hand of the Grand Duke close over the decorations on Paul's coat and heard the ripping sound as he tore them off and dropped them on the floor. And then she was alone—all alone—by herself beside the Grand Duke—and Paul was walking slowly to the door. The two Cossacks turned and followed him out. Two others appeared from nowhere.

The Grand Duke moved on. And still there was no sound throughout the restaurant save his ever repeated inquiries of "What are you doing here?" the stammering replies, and the footsteps of those who went forth in obedience to that terrible pointed finger. From table to table he went, until there was no officer left who had not given an account of his presence. Eleven in all were ordered forth. And then, as suddenly and as silently as he had appeared, the Grand Duke turned on his heel and strode out of the room.

Still no one moved. It was as if those standing so motionlessly beside the tables were waiting for the next scene in the drama, for the *dénouement* that must follow. Then without warning a woman whimpered and collapsed upon the floor. The Civil Governor and his decorated companion hastily left their places and hurried out. Like a flock of sheep, when they had at last decided to move, the orchestra fled with their instruments down the balcony. And one by one, or by twos and threes, the waiters and the guests slipped away, leaving the dishes as they were upon the tables.

Helenka was dazed. How long she stood there she did not know. It must have been some time, for when she came to herself she was in a cold sweat and the great room was empty. She could hear herself sobbing, but there was no other sound. She felt weak and sick and her legs could hardly support her as she stumbled toward the door. She must get home! Home! Would she ever manage to get there? The lobby was empty. There was no one to be seen anywhere—not even the *concierge* or a servant of any sort. The big glass doors leading out into the avenue were wide open and, gathering her skirts into her hands, she ran forth into the snowy night, still sobbing as she ran. She felt neither the cold upon her uncovered neck and back nor the icy slush as it poured over the edges of her golden slippers. Her skirt fell from her hand and dragged along the pavement, and once she slipped and fell to her knees. But breathlessly she kept on—her only thought to get home, to her father and her mother and Ignacio.

It was curious how she kept thinking of Ignacio. Along the Ujazdowska she ran, and on through the Nowy Swiat, past the Bernardine Convent, the Carmelite Church and the Radziwill Palace, past the very spot where she had first met Zamarkroff on that eventful afternoon, through Sigismund Square and out across the Alexandrovsk Bridge. The night was quiet, and her footsteps seemed to make a loud clatter as she ran. And suddenly, as she neared the center of the bridge, from out of the night in the direction of the citadel came the muffled crash of distant musketry. What did it portend?

Somehow it terrified her more than anything that had happened. Again that irregular discharge—and presently again! Eleven times in all!

She paused, feeling unexpectedly faint, and clutched at the iron handrail of the bridge for support. Down below she could see great pieces of ice whirling and twisting in the black current. If she could ——! But she had not the strength to climb over the rail—not even the strength to stand upright. There was a thundering in her ears—like artillery being driven headlong across the bridge—and footsteps running. Could it be Zamarkroff? A figure loomed behind and stretched out its arms as if to embrace her. She made a futile attempt to climb over the handrail.

"Helenka! It is Ignacio!"

His arms were about her, his hands tearing hers from the rail. Another moment and his coat was buttoned about her shoulders and he was half carrying her along the bridge.

"It is all right, sweetheart!" whispered a new and extraordinarily bold Ignacio. "I followed you to the hotel. I waited outside. I should have killed him. Oh, yes, quite certainly. Only I did not have to. But I walked a little way when they marched him off toward the citadel; and so I missed you! But I've found you now! Oh, I love you, Helenka! Say you love me!"

And Helenka, perhaps from general weakness of character, perhaps from utter exhaustion, perhaps from horror at what she guessed to be the fate of Zamarkroff, or perhaps because it was really true, dropped her head on Ignacio's snow-covered shoulder and told him so.

Twenty minutes later they bade each other good night on the steps outside Sophie Yaska's apartment. Then Helenka turned and feebly climbed up the stairs to the landing. The key of the flat was in her pocket and, as she fumbled with it, she discovered that she was clutching something in her other hand—an oyster fork!

Helenka, accompanied by Ignacio, returned home the next afternoon looking rather pale and—a quite unusual thing for her—with black circles round her eyes. Madam Lavorska was still enshawled and reading Clara Militch in front of the fire. Helenka's father was putting a new string on his practice violin. He looked up inquiringly as they entered.

"Hello!" he remarked. "So you're friends again, eh? Did you hear what happened last night? They're telling the story everywhere in Warsaw—and it must be true. The Grand Duke found eleven officers without leave at the Hotel Potocki last night and had them shot without court-martial within an hour. I hate a Russian! But that's carrying discipline a little too far! Don't you think so, Ignacio?"

Helenka had turned paler than ever. Ignacio shook his head.

"No," he answered, "I am for the Grand Duke."

Madame Lavorska seemed rather annoyed at having her reading interrupted.

"Well, what difference does it make anyway?" she asked.

Packard TWIN-6 MARMON STUTZ HAL McFARLAN SIX

THE STAMP OF APPROVAL

OF TWELVE GREAT AUTOMOBILE ENGINEERS

Warner-Lenz are now standard equipment on twelve famous cars, upon the recommendation of their discerning engineers. This means that twelve leading companies have not merely loaned their prestige and their names to Warner-Lenz—they are paying extra money to give their 1917 cars the best light. And that without extra cost to their purchasers.

This extra feature is added by these manufacturers for one sole reason—Warner-Lenz, to their minds, have solved night-driving problems. Ordinary lenses would and do cost less—but the engineers of these companies insist on the *best*.

Mark well the names of the cars now equipped with Warner-Lenz: Packard, Marmon, Stutz, Hal, Singer, McFarlan, Ohio Electric, Daniels 8, White, Pathfinder, Doble Steam and Peerless.

Others will be added. This widespread approval among the manufacturers, together with the sale of 300,000 pairs to individual owners, means that Warner-Lenz are destined to be used universally. You can be guided by these facts. Remember, makers of automobiles are especially careful in adopting new ideas.

Their engineers have been experimenting for years to solve the night-lighting problem.

If these big companies are spending money to equip ALL their cars with Warner-Lenz, isn't it a final reason for your buying them for YOUR car? Is a greater endorsement necessary?

WARNER-LENZ

HAL TWELVE

Warner-Lenz bring man-made daylight for all who drive at night. Dangerous glares may now be discarded. Also the weak dimmer—which is only meant for parking.

All laws favor Warner-Lenz. Wherever tested, police and traffic officials give their approval.

Pretty soon, no man will dare to blind you with a glaring headlight. And *you*, appreciating the etiquette of the road, will not be content to have your car equipped with the old-style lighting.

Warner-Lenz break up the lights and diffuse it. It is thrown far enough ahead—from 300 to 500 feet. And spread out like a fan. Dangers are disclosed before you reach them. In turning corners the entire way is lighted up completely *while* you are turning.

Warner-Lenz can be put in your lamps in a jiffy. Different sizes are made to fit all makes of cars. Prices, 5 to 9 in., $3.50; 9¼ to 10 in., $4.00; 10¼ to 12 in., $5.00. Add 25c per pair west of Rockies.

If by any chance your dealer has not obtained a supply of Warner-Lenz, merely let us know and we will see that you are supplied at once.

10 Dominant Manufacturers Build Extra Well

Ten big motor truck manufacturers stand out prominently as those whose products find biggest use among the large concerns who buy carefully. The stability of these ten manufacturers is assured—their combined capitalization is $250,000,000; the value of their yearly output runs high into the millions.

Each builds the best truck he can.

Each offers guarantees backed by tremendous resources, tremendous manufacturing facilities; big, strong organizations, established business reputation.

In essential specifications, established practice is closely adhered to.

Eight build trucks in excess of four ton capacity. All build from one to four ton.

Yet with all the tremendous competition, with the tremendous manufacturing efforts to build the best, SERVICE motor trucks stand out among the ten with certain definite marked advantages of big value to purchasers.

Only one of the ten furnishes tires on all types that equal SERVICE in size.

Only one other is built to operate with perfect safety at the same high speed.

SERVICE is the only one of the big ten using the vacuum feed system, assuring maximum fuel economy, steady uniform fuel supply.

Eight use the worm drive; but SERVICE worm drive construction is the strongest that manufacturing ingenuity can devise.

Nine use pressed steel frames, but in the SERVICE motor truck pressed steel frame, greater width of flange, depth of frame, more uniform distribution of load assures maximum resistance to driving stress and strain and clinches SERVICE superiority.

Five use motors of same power as SERVICE, yet SERVICE shows an 11% higher rating than the other four trucks of equal capacity.

In chassis size SERVICE gives greater loading length than any other of ten. This means a larger loading platform—greater carrying capacity—greater even distribution of load. Despite the over-size in construction SERVICE motor trucks, in each model, are notably light in weight. With these points of leadership and with every other feature of construction duplicating even the most expensive of the trucks manufactured by these ten big manufacturers, SERVICE presents a remarkably low initial cost.

67% of Service Motor Trucks Were Re-orders in 1916

60% of Service Motor Trucks Were Re-orders in 1915

Wherever big purchasers, basing their orders on proved mechanical superiority or demonstrated superior service features, are installing motor truck equipment, SERVICE motor trucks are found.

And the big feature that stands out prominently in the history of SERVICE trucks is the fact that in each year's business 60% of the sales are re-sales to satisfied customers. They are in use by the biggest corporations all over the country, in every line of work, achieving economy results and standards of operating service that make the use of the first SERVICE truck the basis for fleet orders.

6 Sizes of Service Trucks Wait to Do Your Work

SERVICE motor trucks are designed to meet the hardest working conditions—to stay in service day in and day out without time lost for repairs, to operate with minimum mechanical attention, with freedom from necessity for replacement. They are an engineering achievement, particularly built for big practical service.

Each model is built for the especial work it has to do—and range is from the 1-ton model for fast, economical moving of light loads up to the big 5-ton truck for the heaviest hauling. All have been tried out through years of usage. Each is as individual in design as though it were the sole product of the factory. This is the only way in which proper construction can be achieved. SERVICE trucks are the product of specialists.

Buy now while these startling prices prevail—before the advance in price takes place:

1-ton truck	$1,375	3½-ton truck	$3,000
1½-ton truck	1,950	3½-ton truck (Special contractor's)	3,250
2-ton truck	2,250	5-ton truck	4,000

13 Point Booklet

Send for our Big Illustrated Thirteen Point Booklet. It is a concise compilation of facts of tremendous importance to you in your selection of Motor Trucks.

ONE EVERY MINUTE

(Continued from Page 21)

feel altogether at home in the broker's office. On the other hand, he was unable to see in himself anything suggestive of the Wall Street lamb. He did not suffer from ticker fever. He had noticed in Woodcock's office men who clustered about the tickers—curious groups that breathlessly read what the wonder-working little machine printed on the tape. As he walked past other brokers' offices in Wall Street or Broad he noticed similar groups. And uptown, in the branch offices, he saw ticker-fiends and tape-worms also reading with their very souls the figures that raised hopes or killed them—inveterate gamblers that gasped and clenched their fists and grimaced nervously, unaware that men who were not inveterate gamblers were watching them.

Not for Wilberforce Shadd such madness! The worst he did was to turn to the financial page the moment he bought a newspaper, which was altogether natural. In fact, it was a conservative business man asking at the bank what his balance was.

On his way home that night, in order to prove that he was not suffering from the acute tickeritis of the others, he did not read the Wall Street page. Also, the street car was so crowded that he could not half open his paper. He did not read the paper immediately on arrival at his home, because his wife and his supper were waiting for him. He ate a newsless meal and then went to the movies.

IX

THE next morning as soon as he awoke he began to think that it would have been wise to put a stop-order on his two hundred shares. If the stock started to go down for keeps it was better to lose a small proportion of the untaken profit than to lose everything, including his original investment of $1832 in cash, the savings of a lifetime.

He wondered how he ever could have doubted the wisdom of not losing all his profit! Doubt so tortured him that by the time he turned to the financial page of his morning paper and looked for the "outside market" he was sure that Undersea Craft, in the language of the Street, had "broken par"—that is, sold below 100; a clean loss to him of $15,000 or more.

He felt ill. His head was hot and his feet cold. He felt a tremor within him.

He certainly had been rash not to sell at 160; and even more certainly a plain fool not to have "let them have it" at 172!

It was about that time that he discovered accidentally that Undersea Craft for the second time had earned the honor of a special news story. There it was in big type:

FORTUNES WON IN UNDERSEA!

It was the sensation of the day. It seemed that the movement really started in the last hour, and the stock had risen by leaps and bounds to 210. The last sale was at 210 and the closing prices were "210 bid; 220 asked." At 200 there had been sales of 3100 shares. The market had absorbed them easily, and the upward movement had proceeded as if there were no top.

"Great Scott! If I'd been in the office I surely would have sold at 200!" he muttered, so awe-strickenly, thinking of his escape, that the reaction left him weak and short of breath.

He had saved untold wealth by leaving Woodcock's office when he did! He did not go so far as to call it brains. He acknowledged humbly that it was great luck, and he was duly grateful.

He was still making money. As long as he held that stock he seemed to get richer and richer. He could not have told how he managed to live until noon. He made mighty efforts to concentrate on his work without succeeding. Lipps, the manager, frightened him by asking:

"How is she?"

Shadd, who did not understand, merely stared fearfully.

Lipps proceeded sympathetically:

"No better?"

Ah, Lipps evidently meant Mrs. Shadd and not Undersea Craft; whereupon Wilberforce said dolefully:

"About the same. I'm going home in the lunch hour." But he could not help looking guilty as he finished: "I'll be back in time, Mr. Lipps."

"Oh, the deuce, man! Stay as long as it's necessary. I understand how you feel about it. I'm a married man myself."

Lipps was a nice man. He also was married. Shadd felt sorry for him.

At 12:01 Wilberforce Shadd, who believed he was immune from tickeritis, was in a Subway express bound Wall Street-ward. His broker's offices were in Exchange Place. As Shadd approached Broad Street he heard a stupendous racket. Looking southward he saw the Curb in a state of active eruption.

Two hundred lunatics were watched by half a thousand awed spectators. The outside market for War Brides was on!

He thought he would see at close range what was going on. This Curb market was where people bought and sold Undersea Craft shares, although at what price he could not tell just then. There was a sort of storm center, about which the human waves eddied and whirled and broke. On closer inspection he perceived that about 90 energumens were past praying for. He shook his head in genuine sorrow.

"That," volunteered a bystander, who seemed proud of feeling no compassion, "is the Undersea crowd."

Shadd stood up straight as a soldier and smiled proudly:

"Yes, I know," he said. "I've got a jag of it that cost me nine. Plain nine!"

The bystander smiled knowingly: "Yes, I heard about you." Shadd looked modest. The man went on, "I myself paid $3 a share for a small lot of 50,000 shares," and laughed loudly.

Shadd, made angry by the rude incredulity of the vulgar beast, was about to say something apposite, when he heard someone yell:

"Thirty-five for 20!"

Wilberforce Shadd nearly fainted. His legs bent under him. From 210 to 35 meant a drop that was more than catastrophic. It was lethal. Then he heard the same voice shout:

"Two-thirty-five for 20!"

Shadd rushed madly toward the office of Francis T. Woodcock to be near his 200 shares which at 235 a share now represented $47,000.

Rich! Rich! Rich! That's what he was!

Woodcock was in the board room when Shadd asked for him. It seemed there was a big day on the Exchange, and the broker was very busy. The customers gave Shadd an ovation such as is vouchsafed to few men under a proven $50,000,000. Henry Rumney was calling him "Willie" and gazing adoringly the while. Henry had bought 60 shares of U. C. at 95, which by the usual Wall Street process had grown, in the telling of it, to 600. He had 140 points profit. It was no trouble for him to be grateful.

"Willie, as I was saying to Ben Meiggs here," said Rumney, "it looks to me as if the movement in U. C. is only beginning to get a fair start. When they see it somewhere round five or six hundred they will begin to realize that somebody is picking up investment bargains. Hey?"

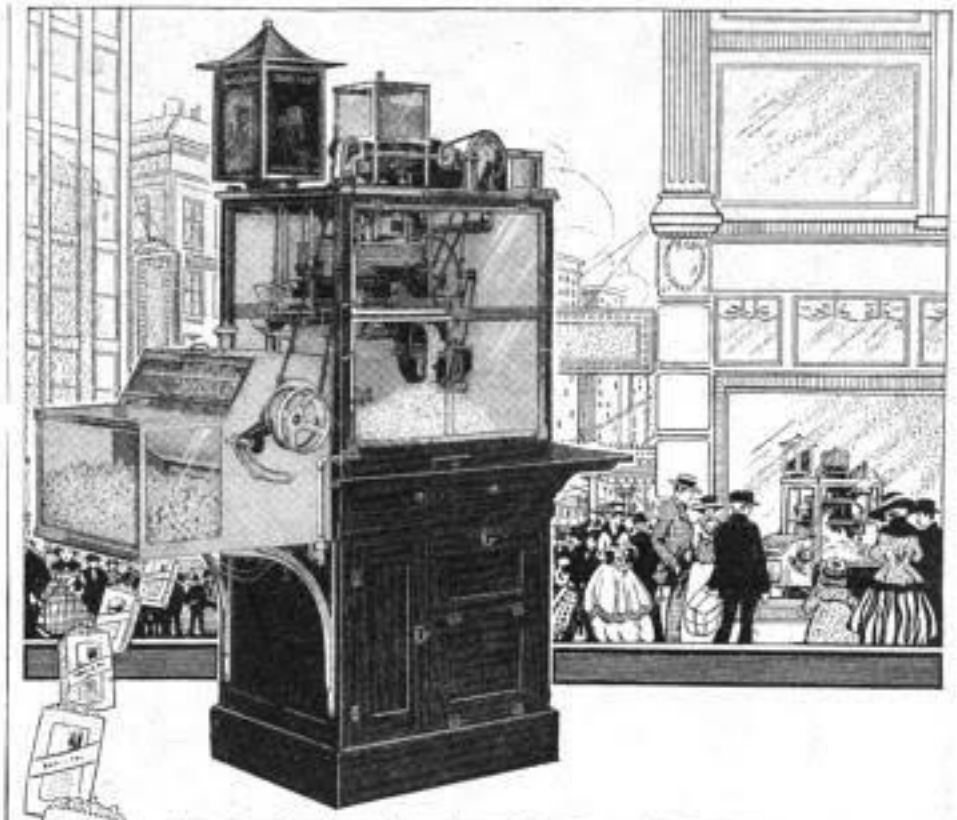
Wilberforce Shadd was thrilled by the thought of U. C. selling at 500 or 600—preferably 600. He smiled gratefully at Henry Rumney and nodded, whereupon Henry exclaimed triumphantly:

"There! What did I tell you fellows? He says I'm right!"

The customers looked as if they believed it. But Ben Meiggs approached and said:

"Mr. Shadd, of course, I—er—we don't want to ask indiscreet questions, but, you know, we've all got some U. C. and we'd like to know if there's any reason why we should sell. Every one of us has got over 100 points profit ——"

"Say, Willie," broke in Rumney, who wished to get an answer to the same question but couldn't wait for Benjamin Meiggs, Esq., to finish his circumlocutions—"say, Willie, are you selling yours?"



"No!" answered Shadd before he could think of any reason why he should not tell the truth.

"Good enough for me! Good enough for me!" chanted Henry Rumney. The office boy whom he had dispatched to get a quotation on U. C. from the firm's Curb man returned and reported in a whisper—Henry paid him for whispering:

"Last sale, 242."

"Good enough for me!" chanted Henry Rumney, accompanying himself with his feet, Indian fashion. "Last sale, 242. Good enough for me! Good enough for me!"

Everybody in the room beamed gratefully on Wilberforce Shadd, as though that

BUTTER-KIST

POP CORN—TOASTY FLAVOR

Buy It at the Butter-Kist Store From This Famous Machine

Only the celebrated Butter-Kist Machine can make BUTTER-KIST Pop Corn—crackling white and toasty-flavored. No man on earth can do its superhuman work. No pop corn like Butter-Kist was ever made until this machine was invented.

Look for the Butter-Kist Pop Corn Machine in your neighborhood—but don't be satisfied with less. No other imparts that toasty flavor that has put Butter-Kist on the national map.

After you've tasted this new-day pop corn, evenly buttered with pure creamery butter, piping hot and toasted to a crackling crisp—you'll be glad to give all your trade to the store you go to for Butter-Kist.

The sale of pop corn has increased by millions and millions of bags and cartons since Butter-Kist came.

"Business is simply great," write the live-wire Butter-Kist business men who know a good thing when they meet it in broad daylight and are always first in service to their customers.

Wins Big Rewards for Merchants

Butter-Kist stores are prospering as never before because this machine earns five times as much profit per square foot of floor space as anything known to trade. It stands anywhere that a merchant has room for a chair. Capacity 70 cents to $4.00 per hour.

Drug Stores, Bakeries, Groceries, Department Stores, Confectioneries, Cigar Stores, News Stands, Hotels, Restaurants, 5 and 10 cent Stores, Theatres—anywhere that there's an enterprising manager there is likely to be a genuine Butter-Kist machine. Look for the name on top—look for the trademark on the bags and cartons.

Hundreds of Storekeepers and Theatre Managers *even in small towns* are making up to $3000 yearly *and more* by popping and selling Butter-Kist.

Dealers! Mail the Coupon

Our valuable book—"The Little Gold Mine"—gives full details and *proof of profits*—is the livest proposition that we have ever seen in print and pictures. Sent free to any man already in business.

Just send us your address today. No obligation—send today and see how Butter-Kist will multiply your trade.

Flour Facts

It is not generally known by the public that many different grades of flour are made in the same mill, at the same time, and from the same wheat.

The quality of each manufacturer's best-finished flour depends very largely upon how skillfully and carefully he separates it from the undesirable lower grades. The greater the proportion of the lower grades he puts in, the less it costs him to manufacture.

The making of the best quality flour can be likened to the skimming of milk; some skimmers are careful to take off only pure cream; others carelessly or purposely include a percentage of milk.

Therefore, grinding the best wheat does not alone insure the highest quality flour because the quality and richness of the flour are determined largely by the care, pride and equipment of the man who makes the separation.

The purity of both flour and cream depends upon how closely they are skimmed, and this is entirely up to the skimmer (the miller).

Pillsbury's Best is absolutely pure. It contains none of the cheaper grades; so we say,

The Flour Question Settled
"Because Pillsbury's Best"

Pillsbury Flour Mills Company, Minneapolis, Minn.

superman had with his own hands put the money, in cash, in each man's pocket.

At 242 Wilberforce Shadd had paper profits of $46,200. This was so close to $50,000 that Wilberforce Shadd thought he might as well call it that.

Something about the sound of $50,000 subtly invited cashing in. Fifty—thousand—dollars!

There was indeed a most remarkable "enoughness" about that sum that made Shadd ponder. Should he or should he not sell? His painful indecision did not end until the spoken admiration from Rumney and Meiggs and a dozen other regular fellows had brought about a change within Shadd. They thought he knew everything. By agreeing with them he changed the courage of desperation into the confidence of knowledge.

He was making money. He would not sell.

"I'll go back to my work," he announced presently. Into his heart of hearts there suddenly popped the hope that he might meet Woodcock on the way. He knew that Woodcock would tell him to sell out at $50,000 and Shadd would obey. But he couldn't sell in front of these worshipers.

"Look at him!" said Henry Rumney, pointing. "If a million dollars stared me in the face you bet your life I'd be sweating blood wondering whether to hold on or realize. Look at him! The coolest man in the room!"

"So long, boys!" said the imperturbable Shadd nonchalantly, and left, still half hoping to meet Woodcock out of sight and hearing of these men. But he didn't. It was a sign Fortune intended to bestow more favors on him.

That night, alas, the stock closed at 240 bid, offered at 245. The last sale was 238. That was 12 points away from his $50,000.

He had never before known how far 12 points could be!

x

HE SLEPT ill. The next morning on rising he felt so nervous, so convinced that he had been guilty of criminal neglect in not selling out, or at least giving a stop-order, that he did not go to the office, but waited until he thought that Lipps, the manager, was in the office. He telephoned, and said:

"Mr. Lipps, would it be convenient if I did not show up at the office until ——"

"That's all right, Shadd. Don't bother to come at all. Stay home all day with her. We'll manage. Don't mention it. Good-by."

Wilberforce Shadd was at Woodcock's office at 10:01 A. M. He would have been there earlier but for the fear of appearing to be afraid of anything. As it was he hoped his fear of one thing wouldn't show in his face. The customers clustered about the ticker, either reading the news or watching the tape. Beside the stock-ticker sat the self-appointed reader of the tape, William Burnett, who called out the prices. An office boy with a many-pocketed apron full of cardboard numbers stuck the fluctuating prices on the quotation board.

The operation did not interest Wilberforce Shadd. He had no sympathy for these men who watched the board breathlessly, as if what they were reading were the clinical chart of a dying son's temperature.

Undersea Craft was a Curb stock and, therefore, not quoted on the Stock Exchange. Such being the case, its quotations were not printed on the tape or posted on the board.

The customers greeted him cordially, but Henry Rumney, disturbed at seeing him in the office at an hour unusual for him, naturally thought of disaster.

"Say, Will, you haven't heard anything, have you?" he asked anxiously. By "anything" he meant official news of a world-wide catastrophe.

"No," said Shadd. Then feeling that he was not very cordial, he added with a smile: "Nothing at all!"

Henry Rumney looked at Shadd suspiciously. He wasn't satisfied. He therefore remarked casually:

"Don't you think, old man, that after all a couple of hundred points is enough profit for any Christian gent? If there's anything I hate it's a hog."

Shadd, looking at Rumney, saw that his friend desired an affirmative answer, so he gave it:

"I guess so."

Henry, trying to appear innocent, went on:

"Then a man who is satisfied with a couple of hundred points profit ought to sell even if he thinks the stock is going still higher, oughtn't he? Of course a man on the inside can't always tell his friends what to do, excepting somebody that he is sure won't pass it on to a million people."

Mr. Henry Rumney immediately proceeded to look as if the grave could not hope to equal him in the matter of speechlessness.

Wilberforce Shadd did not grasp the fact that Henry Rumney was really begging to be told to get out of Undersea Craft common and was solemnly promising not to pass the tip on to anybody else. Not having understood anything at all, and, moreover, himself having but one interest in life, Wilberforce Shadd looked at Henry Rumney quizzically and asked with a smile:

"Suppose, for a change, you tell me what you think about Undersea Craft common."

"I don't know anything save what you've told me, but I'll say this much:

"If I knew what you know about the company, I wouldn't hesitate to tell Henry Rumney about it. Say, Bill, can't you loosen up?"

Henry Rumney turned his best ear in the general direction of Shadd's lips and determinedly closed his own mouth in advance.

"My wi—— People," began Shadd slowly, "thought Hen Wil—my friend—was crazy when he began to talk to me about the business the company was going to do. He figured that with—that if the company sold the 65—what they had already for sale, the first dividend would be $650 per share ——"

This was so obviously inside dope of the insidest character that Henry Rumney muttered: "Great Scott! Such a thing only comes once in a lifetime! I must have been crazy to think of selling now. Say, Shadd, as a favor, if you begin to see me getting cold feet this side of $1000 a share, kindly knock me in the head, will you? For heaven's sake, don't let me be a piker, with the one chance I ever had in my life, will you, please?"

Henry Rumney looked entreatingly at his dear friend. As a matter of fact, the foxy Henry really wished to exact a promise from Shadd in order to learn exactly when to slide out. Shadd smiled, reassured at having learned from other people that this was an unusual stock and an unusual opportunity.

If U. C. had been merely a dividend paying railroad stock he naturally would have regarded the sensational rise with suspicion, not to say distrust. But the Undersea Craft Company held the fate of great nations in the hollow of its hand. It would decide who should be the victor in the world conflict. And what would not said victor gladly pay the company for said victory? And, moreover, hadn't he made money by holding on?

Henry Rumney, who had left him when he saw the whispering office boy appear in the offing, came back and announced:

"The first sale was 100 shares at 235; then 300 shares at 230. Pretty transparent, isn't it?"

Shadd thought it was pretty bad. A drop of 12 points from the previous day's high figure meant a reduction of $2400 in the profit. Nobody can lose $2400 without a qualm, especially Shadd. And yet he couldn't blame anybody. Moreover, Henry Rumney must not know that Wilberforce Shadd was ready to die then and there. So poor Shadd smiled and said huskily:

"That's nothing!"

"That's what I told 'em!" triumphantly shouted Henry Rumney. "They 'washed' it down to pick it up. Anybody could see it with half an eye."

The other customers listened to Henry Rumney, but were looking at Wilberforce Shadd. Shadd said nothing, but smiled. Rumney continued:

"Somebody's picking it up, somebody who knows. By George, I shouldn't be at all surprised if the man who was buying it was right in this office. Say, Shadd, why did you come down before the opening today of all days, hey?"

And as Shadd said nothing, but continued to smile, the other customers looked as if they thought that Henry had hit the bull's-eye plumb in the center.

Henry Rumney exclaimed:

"Oh, you, Shadd! If I only had your nerve! By heck, I'd have the nerve all right, if I had the information."

Wilberforce Shadd could see that Henry Rumney sincerely envied him. He saw the admiration in the eyes of the others. But he began to have his doubts as to the wisdom of keeping U. C. common, seeing on what grounds these others kept theirs.

PAIGE

The Most Beautiful Car in America

For seven consecutive years, we of the Paige-Detroit Motor Car Company have demonstrated our ability to conceive and produce the type of automobiles that appeal *instantaneously* to the American people.

All of our models have been immediate successes. Our announcements and the endorsement of the public have been almost simultaneous. As a consequence, the history of Paige at the automobile shows has been one long, unbroken series of triumphs.

Such being the case, it must indeed be significant when we say the reception accorded to our new models has far surpassed anything of the kind that we have ever experienced.

At the earlier automobile shows it has amounted to a genuine ovation.

The Paige booths have been thronged with visitors from morning until night. Hundreds of disinterested men and women have personally sought out the officials of our company and congratulated them in the most glowing terms.

Seasoned motor car distributors from all sections of the nation have been equally lavish in their praise, and each day our mails are filled with communications expressing the same enthusiastic approval.

So you can see we have reason to feel proud—and *do* feel proud. We know, too, that every Paige owner will share this feeling with us when he first sees and rides in "The Most Beautiful Car in America."

Church Gasoline Feed System

TRADE MARK REGISTERED

$10

F. O. B. CHICAGO

- —Increases gasoline mileage.
- —Eliminates draining of auxiliary tank in fuel supply system.
- —Automatically regulates feed to carburetor—constant gravity pressure.
- —Keeps dirt out of gasoline.
- —Eliminates waste vapor—no disagreeable odor—great economy.
- —Simple—trouble proof—efficient.

Money Back in 30 Days

Try it thirty days. Return it if you are not satisfied; we will refund every penny of your purchase price.

This Wonderful New Gasoline Feed For Your Car

Edmond S. Church, famous inventor of devices increasing efficiency and economy in the gasoline motor, has perfected his greatest achievement. It is the Church Gasoline Feed System, air lift to gravity tank—that has been pronounced by every engineer who has tried it, the most wonderful feed system ever devised.

Saves 7% to 16% Vapor Loss

Engineers' estimates vary, but the consensus of opinion is that the fuel lost in an open system is from 7 to 16 per cent. The Church Feed saves this. It is absolutely closed: there are no vents. The vapor which accumulates in the auxiliary tank is carried to the carburetor and mixed with the fuel.

A Universal Feed System

The Church Gasoline Feed System is universal in its utility. In this it is exceptional. In hilly country it maintains a constant level, constant gravity pressure feed regardless of throttle conditions—regardless of road conditions.

Have you ever been driving up a long, steep hill, throttle wide open, and have the engine go dead? Don't blame it on the carburetor.

In official tests it has been shown that the auxiliary tank of standard gasoline feeds can be drained in three to four miles under these conditions. This is what frequently causes your engine to "spit," "sputter" and go "dead." The trouble is seldom due to the carburetor.

But under no driving conditions—at no speed—on no roads, no matter how muddy, can the Church Gasoline Feed System be drained. Official tests have proved this.

Keeps Out Dust and Dirt

With any open feed, road dust is drawn in by suction; sand is drawn into the reserve tank under the hood. Look at the dirt and dust that banks up on the dash under the hood.

The Church Gasoline Feed System keeps dirt and dust out of the fuel. Road dust or sand cannot be drawn into the reserve tank by suction.

For the Church Gasoline Feed System is the only closed feed system made.

No dirt can possibly get into the Church Gasoline Feed System. Clean, sparking, power developing gasoline is the only thing that reaches the carburetor.

Compensating Vapor Plug $5

Money back in 30 days if not satisfied. 30% more power—30% more speed—40% more mileage. In use by hundreds of thousands of motorists.

A Steady Uniform Feed

With pressure systems the pressure often comes up to three or four pounds—the jarring of the carburetor float over rough roads releases a great quantity of gasoline in the carburetor under this high pressure.

The Church Gasoline Feed System overcomes these difficulties.

The air lift on the main tank is equivalent to a steady pressure of 1-½ to 2 lbs.—never more—never less. And the gasoline is fed to the carburetor by gravity.

You get a steady uniform feed—gasoline saving; efficiency increasing.

Big Official Tests—Sanction of A. A. A.

A stock roadster, equipped with Church Automatic Gasoline Feed in official tests at Speedway Park, Chicago, covered 10 miles in 7 minutes 58-⅗ seconds. Maximum speed 84 miles an hour.

At the end of 10 miles the pressure on the gasoline tank was 1-½ pounds and the Church Automatic Feed Tank was full.

The same car, equipped with a vacuum feed system under same conditions, emptied the tank, stopped at 3-¼ miles in the first trial, 3-¾ miles in the second, and maximum speed was 82 miles an hour.

These results have been certified to by the A. A. A.

In another test a stock Six Cylinder car was used and the Church Gasoline Feed System was carried on a mast 10 feet 9 inches above the bottom of the main gasoline tank.

The Church tank at this extreme height filled in 14-⅘ seconds, and the car driven around the Speedway.

This was equivalent to putting the car on a 65% grade.

F. E. Edwards Joins Automatic Carburetor Company

F. E. Edwards, formerly of the A. A. A., one of the biggest and best-known automobile authorities in the country, is now efficiency engineer for the Automatic Carburetor Company. No more sensational verification of the wonderful value of the Church Gasoline Feed could be obtained than this.

Wonderfully Simple

The Church Gasoline Feed System is amazingly simple in construction. There are no complicated valves, no delicate mechanism to get clogged up—nothing to get out of order. It is a mechanical ornament to any car on which it is used.

GET IT NOW—*Get this wonderful new gasoline feed system for your car today. We will supply you immediately.*

(Continued from Page 70)

"Mr. Shadd," said Ben Meiggs, "there must be a limit to these advances."

"There must be!" said Shadd gloomily.

Not to know when to sell took all the pleasure out of being long of a stock that goes up 200 points in a few weeks.

"Ha! ha!" shrieked Rumney, who himself being on the inside saw the humor of Shadd's reply. The other customers smiled happily, being beneficiaries, and Ben Meiggs, instead of taking offense, remembered that he also had 20 shares. Wherefore he extended his hand toward Shadd and said blithely:

"Mr. Shadd, I'm sorry I cannot let you have my stock at any such bargain price as this. But, speaking seriously, all I can say is that I am very much obliged to you."

Then Meiggs' face took on such a serious look that all the other customers instantly imitated it.

Shadd, thrilled by the obvious gratitude of these fellow beings, said:

"Don't mention it," and smiled—a modest, deprecating smile.

He ceased to smile when it occurred to him these men would not be so grateful if they knew what he knew.

"Nice fellow!" said Ben Meiggs in a stage whisper to his friend Paine. Paine acquiesced gloomily. He didn't have any stock.

"Undersea Craft, 255!" yelled Henry Rumney at the top of his voice.

A hush fell on the room. In the deep silence Wilberforce Shadd distinctly heard a wee small voice say, not so very softly: "$51,000!"

Cæsar crossed the Rubicon and Rome was free no more.

U. C. crossed 250 and Wilberforce Shadd no longer thought that $50,000 was enough.

It was a glorious, dazzling day. The market was in a state of magnificent excitement. A news agency published an analysis of the meaning of the war orders which there was reason for believing the Undersea Craft Company had secured. Presently the bulletins from the front began to arrive. The "I hears" and the "They says" were merely war correspondence. The reports of the actual sales were the official communiqués.

And the official communiqués were enough to satisfy even the general staff quartered in the offices of Francis T. Woodcock & Co., for in a few delirious hours they recorded a string of successful advances—sales of hundreds of shares at 255, 256, 257, 258, 259, then back again, five points between sales, to 247. Then up, up, up, in driblets of ten and twenty shares, until at one o'clock U. C. common sold at 260.

Vocal Generalissimo Henry Rumney shouted the wonderful figures, looked at the clock, and said:

"One o'clock, and all's well! Gents, we've made enough to afford a business man's lunch. Colonel Shadd, at your pleasure, sir!"

And General Rumney stood up, brought his heels together smartly, saluted and without waiting for a formal acceptance said:

"Aye, aye, sir!"

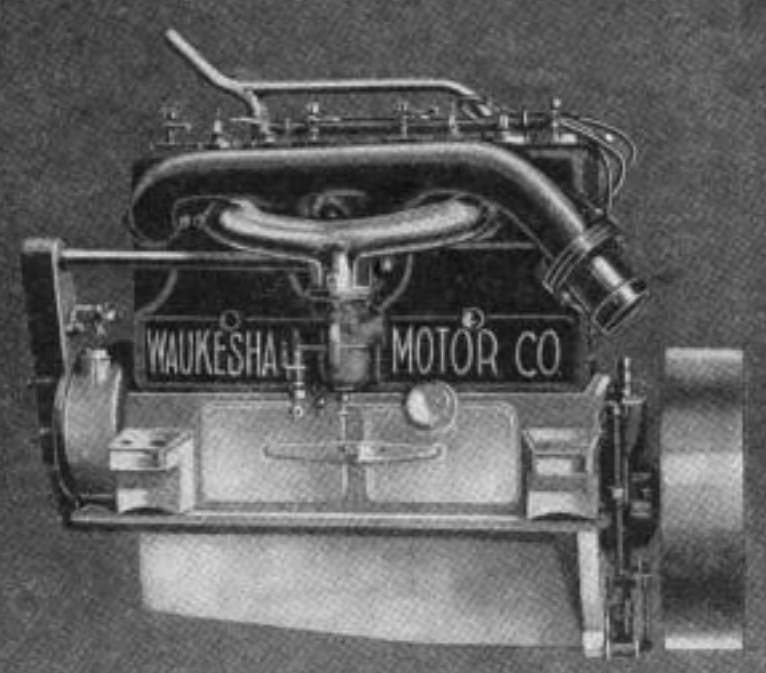
The other customers looked angry at Rumney's robbing them of the privilege of inviting Wilberforce Shadd. Some of them said so to the monopolist. But Henry took Wilberforce by the arms, and said:

"Let's get away from these tip-seekers before they begin to ask d. f. questions," and led Shadd to the best restaurant in the financial district.

XI

WILBERFORCE SHADD did not know that any place existed where such wonderful food could be prepared—or such awful prices extorted. He couldn't help thinking of his wife. Henry Rumney paid the check of $6.75 without appearing to think it was out of the way, and tipped the waiter with a bill. The least the tip could be was $1.00, and that was beyond Shadd's experience.

It took money to be a gentleman, thought Shadd.



Of course at 260 he was worth $52,000. Invested at six per cent he would get $3120 a year. That income would not permit him to eat such lunches every day. A wonderful thing—riches—to have and to hold.

No wonder the poor were failures!

On the way back to the office, after the epochal feast, Rumney suggested that they look in on the Curb. They gazed on the excited throng.

"Bunch of lunatics!" commented Mr. Rumney to Mr. Shadd, and beckoned to a Curb broker he knew:

"What's U. C.?" he asked.

HARMONY
A PIPE BLEND

Of course a Blend tastes better

Each of the several tobaccos in this pipe blend plays its own part in giving Harmony its cool and characterful flavor. One is used for its exquisite aroma—one for its "fruity" richness—one for its delicate pungency—one because of its unusual sweetness—and one for its full mellow "body".

The result is a new, more delicious flavor—a flavor that pipe-smokers call "rich mildness". No one tobacco by itself could ever give you such flavor. It requires a *blend*.

If you think you have been enjoying a pipe-smoke made of only *one* tobacco, just try Harmony—a *blend* of five tobaccos.

"Twosixty-five bid!" answered the broker proudly, as though he had put it there.

"Gosh! Say, Shadd, you're all to the mustard!"

"I certainly am," silently agreed Shadd, thinking hard. The thought was $53,000!

Wilberforce Shadd, after ten years of toil and thrift, had accumulated $1800. Therefore, to him dollars had always been DOLLARS, especially when his wife heard him say he needed neckties or another umbrella. But now, after a few days in Wall Street, he no longer saw DOLLARS but DOLLARS, so that there had to be more of them to be seen at all. The old dollars, sticky with the sweat of years of toil, had a hundred cents. These new, bull-market dollars were only ninety-cent dollars. He could not get the thrill out of ten thousand of the new dollars that he could out of one hundred of the old ones.

With the change in the weight of his dollars came the beginning of a change in his attitude, not only toward men and things, but toward the world that thinks in dollars and fights for dollars and envies dollars and begrudges dollars, and dies because of not enough dollars. Although he had not cashed in and therefore had not really changed his financial condition he already was thinking of what he began to consider his rights. When yesterday's luxuries become to-day's necessities the damage is done.

And then this was another world, in Francis T. Woodcock's office—inhabited by people who did not speak the same language as the men and women with whom he had associated all his life, but a language he was beginning not only to understand but to like. He saw investors and gamblers and tipsters and optimists and plain fools; men who were still honest, not having lost every cent, or still decent, not having won too much. And he did not know what they were because he did not know that he himself was walking toward what they were. He saw wild eyes, but perceived nothing to look wild about. He saw fists that clenched and unclenched, fingers that had a habit of clutching; and he did not know that the owners thereof were trying to hold on to their ticker fortunes or perhaps were seizing drowning hopes by the hair. He was not aware that in the obvious indecision on the face of Meiggs' fat friend, Paine, he was beholding the end of the battle between Paine's greed and Paine's fears.

Because he himself was not long of Stock Exchange securities he did not scrutinize the quotation board as the others did, with an attentiveness that they never gave to the perusal of the Decalogue. And the news-tickers were not feeding man's immemorial craving for knowledge or satisfying the divine curiosity that is the source of wisdom, but making human beings read what might move them to buy or sell stocks and make money—to get something for nothing; not to live in the sweat of the brow, but to cool said brow with an electric fan's breeze, sitting in an easy-chair while the greatest of all philanthropists, the ticker, crammed fortunes into their yawning pockets. And the reason he didn't know any of these things was that he also was much too busy getting something for nothing to pay any attention to unimportant trifles.

But one thing that Wilberforce Shadd clearly saw was that these men, whose judgment was the result of years of experience in Wall Street, thought he was greater than they, having bought a war bride which had risen 250 points. A man who did this was much wiser than a man who invested in a railroad stock that merely doubled. To be mathematically exact, he was thirty times wiser. Therefore, Shadd felt that he ought to help these humble admirers who no longer desired information as to the wisdom of selling but assurances as to further advances.

In one of the news-tickers Shadd read that Rochester Arms stock was so closely held that it was not considered necessary to mark up the price. The nominal quotation was $5000 a share. But, the statement said, it might just as well be $15,000.

So when Ben Meiggs approached him and announced respectfully "It's 268!" Wilberforce Shadd nodded calmly. He was thinking of Rochester Arms. "Pretty good price," ventured the experimental Meiggs.

Wilberforce Shadd almost snorted. His obvious disgust instantly drew to him by a sort of capillary attraction a dozen customers. He waited until the sugar bubbles in the coffee cup had drawn together, then he addressed them:

"Meiggs"—and Wilberforce Shadd spoke so slowly and coldly that they all realized with a thrill that at last the real man was revealed to them—"Meiggs, you call 268 a good price. So it is—when applied to a kitchen chair. But my stock ——"

They almost gasped at this admission that he owned the controlling interest.

"My stock at 268 makes me think of Rochester Arms. The nominal quotation for Rochester is $5000. The real value, when you consider what the profits on its war contracts will be, is $15,000 or more. That's what the war has done for Rochester Arms. Well, the war isn't over, and the Undersea Craft Company—I can't say any more."

And he couldn't. And, what was more, none of his hearers needed any more.

Woodcock had come in as Shadd was delivering his speech. At the conclusion he approached the orator.

"Well, Shadd," he said, "I've got to hand it to you. We are here to execute your orders—without comment."

Wilberforce Shadd smiled; and after a glance out of the corner of his eye at the admiring customers he looked steadily at Mr. Francis T. Woodcock and said firmly:

"Woodcock, the time for selling has not yet come!"

"U. C. 271!" yelled Henry Rumney.

"I guess not!" said Meiggs with conviction.

When Meiggs, who was known to the office as "Careful Mike," said such a thing it was plain that U. C. must be going to $10,000 a share.

Woodcock, who had lived through three bull markets, swept the customers' faces with a keen glance; then he said:

"On form, this ought to be a good time to sell. Everybody's bullish. Nobody sees anything but higher prices. There's no top to them. As a selling tip this has never failed ——"

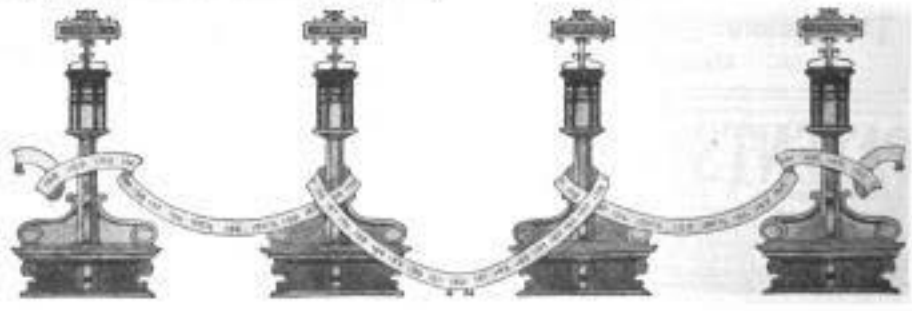
"All signs fail in dry weather," observed Henry Rumney with much positiveness. "The trouble with you, Frank, is that you're asleep. Perhaps you don't happen to know that war has been declared by Germany against France and Russia!"

"That's all right," said Woodcock, keeping his temper because he knew the breed.

"Sure it is. Did you ever before see a stock go up like Undersea Craft, without manipulation? No laundry work in that rise—no phony work, but a legitimate advance due to buying by people who know what orders the company's getting. Did you?"

"No," admitted Woodcock; "but we know that what goes up must come down. It's a law of physics."

"Yes, but before it goes down," Henry Rumney acutely pointed out, "it must first have reached the top."



"That," observed Shadd judicially, "seems to me a reasonable assumption."

"Three o'clock," announced the tape-reader. "They are closing at the top, gentlemen. It is what might be called a satisfactory performance."

"You bet!" said Shadd happily, and accepted Ben Meiggs' invitation to go up to his club. There Shadd, Meiggs and four delightful strangers spent a wonderful afternoon drinking highballs and talking high records.

He was getting richer by holding on!

Phone Call

Date 1-27-17

Mr. Foster

You were called at 1.16

By Mr. B. Turner

of Barber, Bambs & Co.

Phone No. Main 920

His message was Call him above number before 2.30 after that Hotel Jefferson – Room 942

Operator M. E. W.

"Somebody Called You Up While You Were Out"

"Who was it?" "What time?" "Where can I get him?" You want to know these things; but without a standard form for recording the call you are lucky to know the simple fact that your 'phone bell rang.

Let a form like the one above tell you what you want to know about the somebody who called you up. An ordinary slip of paper won't do. You know what happens to a slip of paper. Even if you find it, it says, "Call Main 920."

Now you don't want to call "Main 920." You don't know who it is, whom to ask for there, nor what he (or is it she?) wants.

It's an even break you won't call that number.

But a 'phone call form is different. The operator filling it out automatically extracts the desired information from the party on the wire.

Show this form to your printer and settle once and for all the question of lost, missed and forgotten 'phone calls.

It's a good idea to have it printed on a conspicuously colored paper, so you can distinguish it. Since it is an office form it properly belongs on Hammermill Bond.

Hammermill Bond is the right paper for all your office forms, for a very logical series of reasons. Your printer knows the paper and can supply it in white and twelve colors. It is carried by our agents located in all important centers.

It is an economical, durable paper.

When you decide to use it for *all* your forms you eliminate difficulties about paper; you standardize just as the 'phone call form standardizes the record kept of telephone calls.

Competitive bidding by printers is a generally unsatisfactory way to buy printing. Specifying Hammermill Bond is a safer and better way.

Let us send you a portfolio which will show you how you can use Hammermill Bond. We have prepared portfolios applying directly to nearly every line of business.

This portfolio is free. Ask for it on your letterhead.

Printers may have the full set. Most printers already have full sets of the Hammermill Portfolios.

HAMMERMILL PAPER COMPANY, ERIE, PENNSYLVANIA

Quick Starts on Cold Nights

THE theater crowd is homeward bound—your party is seated in the car, eagerly awaiting the first muffled tones of the engine. Whether the start is promptly made, or whether the battery is too feeble to do the work, depends not only on the kind of battery, but also on the *service behind it.*

A battery that is "supervised by Prest-O-Lite Service" is quite certain to be a lively, healthy source of power.

Cold weather, hot weather, roads, speed, traffic—all these things have one effect or another upon your battery.

But no matter what the conditions, and no matter where you may be, Prest-O-Lite Service is at your disposal to help you keep your battery in good condition and insure your satisfaction.

In addition to the Prest-O-Lite Factory Branches, insuring direct *factory service*, there are special service stations in cities and towns in all parts of the country. The service rendered to all car owners in avoiding battery troubles through expert inspection, is a valuable thing to you, but is rendered without cost.

When you need a new battery, remember there is a Prest-O-Lite Battery of correct size for your car, and it will give you superior service and satisfaction.

THE NEW ARISTOCRACY

(Continued from Page 5)

Long before this war the governing upper class in Germany—most intelligent and most farseeing—at once placated the Socialists and improved their own system by appropriating a great deal of Socialist method. They did eliminate a great deal of waste; they did create an improved social machinery, whose operation was made possible by that unquestioning obedience which they made the root of German education. But the people in general got little of the product of that machine. It worked for the good of that mythical state with a soul, and for the greater wealth and grandeur of the governing class. Nevertheless, they made it work.

Before the war had gone on six months, the Entente Powers had discovered how well it was working; and in the stress of the times they were forced to imitate. More and more, matters that had been regarded as the business of the individual became the business of the state. A British or French merchant or manufacturer cannot import certain commodities any more—the state prevents.

He cannot use his factory for certain kinds of product—the state prevents. He cannot charter his ship to certain ports—the state prevents. He can make only so much profit out of war work—the state appropriates the surplus.

Socialistic Tendencies

England is preparing to take over the railroads. Long ago she assumed such complete control over labor that a worker in a "controlled" munitions establishment cannot leave his job without special government permission. Now France and England talk of "mobilizing" all persons between sixteen and sixty, and—more important, perhaps—all industries. Part of their object is to eliminate the waste of competition—to start a Socialist machine.

Other experiences pointing toward socialism have come out of this war. The Commission for Relief in Belgium is only partly supported by charity. Mostly, it is a charitable convenience by which Belgians who still have money may get bread and other necessities. It sells its bread at cost—that is, though the farmer who raises the wheat, the broker who handles it and the shipmaster who hauls it all get their competitive profit, the competitive profit of the baker who sells it across the counter has been eliminated.

As a result, Belgium—even in her shut-off, desperate condition—is getting the cheapest bread, considering its quality, in Europe. And Belgians are asking themselves whether the distribution of bread, the first necessity to life, should be left in private hands—whether the employing retail bakers had not better be producing while the state exercises their function.

Now, unless every guess I have heard is wrong, this state of socialism or semisocialism will not end with the war. The nations that have danced must pay the piper. A whole generation must toil and live close in order to pay interest and sinking funds on the war debts. The better to meet them, the European nations will begin a period of the sharpest competition among themselves. In this situation private competition within the nations must more or less go by the board. Many of these socialistic laws, rules and methods must continue for a generation at least.

The "social question" and the economic question, then, resolve themselves into a curious situation—a struggle between oligarchy and democracy for the prize of controlling socialism! How those fathers of modern socialism, who conceived their system in the spirit of equality and pure democracy, would have shuddered at the possibility that it might some day become an instrument of the oligarchs! Yet so it may be—an unlikely outcome of the war, I think, but still a possibility.

The economies brought about by eliminating unnecessary competition, reducing unemployment, guiding and regulating output, applying scientific inquiry to the whole business of production and distribution, may be used not for the better feeding, the better education, the general improvement of those who do the work, but for extending the power and glory of an "upper class" and for furnishing armaments and all war machinery to glorify and extend a mythical state "with a soul."

I say again, it is possible, though not likely. It depends upon the issue of the new struggle. But the control of socialist machinery is the citadel for which the army of privilege and the army of equality will struggle in the next decade.

We cannot regard with superior complacence this new struggle in Europe; for the same division is widening among us also. We have not the candor of the French, whose aristocrats call themselves such; who admit a royalist wing to their legislative chamber. Our oligarchs publicly dodge the issue. We have, among our extreme standpat politicians, certain men exactly as distrustful of popular rule and popular right, exactly as certain of the sanctity in the "best people" idea, as any aristocrat of Europe. Do they express this? Not in public! On the platform they ratify the Constitution and affirm the right of the people to rule. Whereas in Europe the cards are usually played above the table, here they are passed under the table.

Yet in private conversation they often admit it; and I find that in the rich old centers of the East, where something like a hereditary upper class has intrenched itself, this oligarchical opinion has been crystallizing since the European war and the temporary success of Germany. I have heard the aristocratic view in its extreme set forth as simply and frankly in New York as in Paris or Rome or London. The trouble with this country, they say, is that we ignore our best people. We have no governing class; therefore we are raw and unformed. We cannot be a great people until we take our place with the nations of the earth and arm—presumably for some kind of conquest.

Our vice, our besetting national vice, is disobedience. At present the "best people," the "representatives of solid interests," must, if they rule at all, rule secretly.

The Call of the Blood

Those people who hold or express these views usually hate Germany and figure as hot sympathizers with the Allies. Nevertheless, by one of the paradoxes of the times, they have adopted the opinions that have made of Germany the danger of the world.

Yet in one thing the American aristocrat has dared be frank, because neither he nor the public in general quite understands what this item of his creed really means. He has gone mad over war—war for war's sake. In my glimpses of my own country since Armageddon began I have been amused to see how inevitably the men of "blood and breeding," or the members of the financial oligarchy, in my acquaintance have grown fascinated by the ides of arming the nation! It is but the call of the blood howling for the old favorite sport of a jaded aristocracy.

After nearly a year abroad I have been skimming the magazines published since I went away. I find in them—and always from members or admirers of our "upper class"—exactly such expressions as those of Bernhardi and Roberts: "Life is a struggle; war is the highest expression of life." "Pacifists are cringing cowards"—notwithstanding that incurable pacifists are wearing, by the bushel, medals won for valor on European battlefields. "War is a biological necessity"—a phrase which betrays a half-baked knowledge of the laws of breeding. "Nations grow soft with peace"—notwithstanding that the European peoples, grown soft with forty-four years of peace, are showing such hardihood as the world never knew before. "China has become a dead nation because she is unmilitary"—notwithstanding that China, in the Tai-ping Rebellion of 1850–64, killed more people than ever perished in a single war before Armageddon.

"Behold Broadway—we are reveling in flaunting extravagance"—notwithstanding that Broadway is the playground of only a small element in our population, the newly arrived of their class, scattering newly made riches; that flaunting luxury does not trouble the ninety-five per cent of our population which would bear most of the burden and suffering in war.

They have not yet begun to talk about the state with a soul, because we Americans are an unphilosophical people and do not run to abstractions; yet their thought is

2200 Housewives Told Us This:

WE wanted some facts about uses of peanut butter. We sent a special investigator into 2,200 homes. He found out that *only one in four* of these homes *used* or *knew* peanut butter. What is the reason?

We sincerely believe it is because the other homes *do not know the food value and the fine flavor of*

Beech-Nut Peanut Butter

If they did, most of them would be placing Beech-Nut Peanut Butter on the table for every meal; would be giving it to children in place of too much candy or sweets.

For a Beech-Nut Peanut Butter sandwich contains the same amount of *Strength*, *Heat* and *Energy* that a glass of full cream milk does. And, besides—it contains all the *flavor* that comes from carefully selecting the choicest peanuts grown.

Because these peanuts are *blended*, as coffees are blended, to an exact degree of flavor. Because they are roasted *under even North light* to the precise color that determines *perfect* roasting. Because they pass through processes that carefully remove all skins, the bitter little hearts, grit and defective kernels. Beech-Nut Peanut Butter contains *absolutely no grit*.

Because they are crushed in an ingenious machine which mixes salt with the peanuts to an exact degree of uniformity. And sends the butter into glass jars to be quickly vacuum-sealed until ready to eat, insuring peanut butter that is always sweet—*never rancid*.

We want every hostess to know how good Beech-Nut Peanut Butter tastes in sandwiches—for luncheons, teas, any meals. How *different* it is from any other peanut butter.

We want every mother to know how fond the children are of it—in the school lunch-box, spread on crackers between meals, etc.

Therefore, we say: Order a jar of Beech-Nut Peanut Butter today. Have it on the table at your next meal.

Ask Your Grocer About the Superior Quality of Beech-Nut Peanut Butter

Let us prove to your entire satisfaction, at our expense, that the Hamilton College of Law is the only recognized resident law school in U. S. Conferring Degree of Bachelor of Laws—LL. B.—by correspondence. Only law school in U. S. conducting standard resident school and giving same instruction by mail. Over 500 classroom lectures. Faculty of over 30 prominent lawyers. Guarantee to prepare graduates to pass bar examination. Only law school giving Complete Course in Oratory and Public Speaking. School highly endorsed and recommended by Gov. Officials, Business Men, Noted Lawyers and Students. Send today for Large, Handsomely Illustrated Prospectus and Special 30-Day Free Trial.

HAMILTON COLLEGE OF LAW, 1204 Advertising Bldg., Chicago

Let us Send You a Conn Cornet

THE New Wonder Conn Cornet has been chosen by practically every famous cornetist in America. For ease in blowing and quickness of valve action it has no equal. Fitted with Conn mercurotor tuning device. We'll send it to you on 10 days' trial.

Write for Catalog Tells how you may have any instrument sent to you on 10 days' trial and arrange for easy, convenient payments. Write today.

C. G. Conn, Ltd.

Dept. 2381, Elkhart, Ind.

We want your spare time—Will you sell it? All about you are subscribers for The Saturday Evening Post, The Ladies' Home Journal and The Country Gentleman. You can earn $20.00 a week looking after new and renewal orders.

Agency Division, The Curtis Publishing Company, 225 Independence Square, Philadelphia

The Chinese Woolflower

introduced by us three years ago is now acknowledged to be the greatest new garden annual. It is a success everywhere, plants growing 2 to 3 feet, a pyramid of color, its many branches bearing great balls of woolike substance and most intense crimson scarlet.

Flowers develop in June and some fade before frost, ever brilliant and showy beyond belief. Seed per pkt. 10 cts. 3 for 25 cts.

New Mastodon Pansies. For immense size, wonderful colors and vigor they are marvels. Seed 10 cts. per pkt. 3 for 25 cts.

Everblooming Sweet William, a startling novelty, blooming in 60 days from seed, continuing all the season and every season being hardy. Flowers large, colors exquisite—pkt. 10 cts.

These 3 great Novelties, with two more (5) for only 20 cts. See Catalog for colored plates, culture, etc.

Our Big Catalog of Flower and Veg. Seeds, Bulbs, Plants and rare new fruits free. We are the largest growers in the world of Gladioli, Cannas, Dahlias, Lilies, Irises, etc.

JOHN LEWIS CHILDS, Inc., Floral Park, N. Y.

BANKING BY MAIL AT 4% INTEREST

NO MATTER how far you live from Cleveland you can open a Savings Account at 4% compound interest with this bank—the Oldest Trust Company in Ohio. Send today for our booklet "M" explaining our system of receiving deposits by mail.

THE CITIZENS SAVINGS & TRUST CO.

CLEVELAND, OHIO. ASSETS OVER 60 MILLION DOLLARS. CAPITAL & SURPLUS $7,000,000.00

based on this philosophy, just as all old-fashioned patriotism was based upon it before Kant formulated the principle.

Among our American militarists, as among the Europeans, self-interest, expressed or unexpressed, plays its part. When they talk of inculcating obedience they mean obedience to their class. They express it now and then with astonishing frankness. "When we have a real conscript army," said one of them, "we shan't be troubled with strikes." Again, an aristocrat of high place and position was discussing the Swiss system, under which every man keeps his gun at home and brings it to drill. "We can't do that here," he said; "we can't give a rifle to every man in a country which has such a large discontented class."

With perhaps unconscious insincerity, certain gentlemen, distrustful in their bones of popular rule, are saying that universal conscription is democratic. As a matter of fact, conscription normally works toward the oligarchic spirit. During two or three impressionable young years the conscript lives under a system that inculcates blind obedience to superiors. Those superiors, in the nature of things, are drawn characteristically from the upper classes; for war is the true interest of an aristocracy, and the profession of arms is to them the only strictly honorable form of real work.

In all the great nations of Europe, which had this system before the war—save France alone—conscription made for oligarchical government. In Germany and Austria it constituted the dike against the rising tides of democracy. France saw this with the clarity of thought that distinguishes the French; and she made her army democratic not because of conscription, but in spite of it. The Dreyfus upheaval was by no means the hardest battle in her hidden war against oligarchical influence through the army.

The Issue in America

Now this is not an essay against preparedness. In the New World, which was born on August 1, 1914, we represent the democratic principle; we may have to fight externally, not only for national existence but also for the principle of popular rule, as France and England are fighting now.

One who has watched the European game cannot overlook some pretty sinister signs of trouble ahead for us. One who has followed the new warfare knows what tissue paper our present defenses are—yes, and even our present plans for defense. But we may so defend ourselves that, while preparing to fight the battle of democracy with powers outside our borders, we shall lose the fight within our borders.

We may accept complacently from our American Bernhardis the medieval notion that war in itself is good, a cleanser of nations; that we owe to the glory of the state—or to the "old flag," as we put it in our concrete American way—a duty higher than the welfare of every person in the state. We may seek our own "place in the sun," and use our army as an instrument not of defense but of conquest, so doing our part in maintaining the "glorious" old institution of war.

We may strengthen thereby the grip of our aristocracy and come finally to a state of society wherein the "best people" assume the right of judging what is best for the mass. Or, keeping up the traditions of this new state, whose success has given such encouragement to all the liberal elements of Europe, we may remember that war is an evil in itself; that it is the destroyer, not the renewer, of nations; that it is excusable to-day only as a defense against a system whose end is the perpetuation of war; and that the true ideal of a state is not glory or mythical honor, but merely the highest average happiness of its individuals.

We may, by such constant vigilance as the French have exercised, keep our army of defense democratic, prevent it from becoming an instrument to inculcate that obedience which is merely machinelike docility.

In short, we may prepare as free men; for if we do not we may have to prepare as serfs. The issue between oligarchy and democracy is joined here as in Europe; and the choice is ours.

Mr and Mrs Top Notch Rubber request the pleasure of your company—in the rain.

Stylish, fine-fitting, beautifully finished rubbers and arctics—lightness combined with long service—that's what you get in the Top Notch line—leader of the rubber "400."

Top Notch rubbers are distinctive. They are in a class by themselves for wear and looks. They fit the very latest styles in shoes and are made in a wide variety of shapes and sizes, for all members of the family.

TOP NOTCH

BEACON FALLS

RUBBER FOOTWEAR

Most rubbers wear through at the heel all too soon and become useless. But Top Notch rubbers and arctics are made with the famous patented Clincher Cushion heel construction—the heels last as long as the soles. That's why they are *balanced* rubbers.

These money-saving rubbers and arctics are sold at thousands of the best shoe stores. Write for the booklet "M" and the name of the Top Notch dealer in your town.

BEACON FALLS RUBBER SHOE CO.

Beacon Falls, Conn.

Kansas City Minneapolis San Francisco

Men's Apollo

A dressy, fine-fitting men's rubber. Fits the latest English lasts.

What 15c WILL BRING You FROM THE Nation's Capital

The little matter of 15c in stamps or coin will bring you the Pathfinder for 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation: a paper that prints all the news of the world and tells the truth and only the truth; now in its 23d year. This paper fills the bill without emptying the purse: it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is at last. Send only 15c to show that you might like such a paper, and we will send it on probation 13 weeks. The 15c does not repay us, but we are glad to invest in New Friends. Address

The Pathfinder, Box 94, Washington, D. C.

"I *Can* Succeed!"

What other men have accomplished through I. C. S. help, I can. If the I. C. S. have raised the salaries of other men, they can raise mine. To me, I. C. S. means 'I CAN SUCCEED.'"

Get the "I Can Succeed" spirit, for the International Correspondence Schools can raise your salary—whether you're a dollar-a-day man or a dollar-an-hour man. No matter where you live, what you now do, or how little time or money you may have, the I. C. S. have a Course of Training to fit your needs. Hundreds of thousands of ambitious men have achieved success through I. C. S. help in the past 25 years—over 130,000 are now studying, getting ready for the big jobs ahead. Join them and make your life something to be proud of—you *can* do it. Just mark and mail the coupon TODAY and find out *how*; it won't obligate you in the least.

The Great American Substitute

Like most things, a substitute may have a bad or a good meaning. It may stand for something poorer, cheaper and shoddier; or something better, less harmful, of more worth.

The secret of all improvement is in finding good substitutes.

The best way to quit a bad habit is to substitute a good one. To escape the evil effects of impure drinking water, substitute pure water. To heal a bad passion, substitute a wholesome one.

No man would swear if he had a good word handy that was just as expressive. A good vocabulary is the best substitute for profanity.

Chewing gum is one of the best substitutes in the world.

IT HAS DONE AN INCALCULABLE AMOUNT OF GOOD BECAUSE OF THE BAD HABITS IT HAS CROWDED OUT.

For the man who feels that he has smoked too much there is no better substitute than chewing gum.

Let him have a box of the pure chewing gum, made by THE HOUSE OF ADAMS, dainty, appealingly flavored and clean—to the last word in purity—let him have a box of gum on his office desk, and go to it.

There are many ways to limit tobacco using. The chewing gum way is THE EASIEST WAY.

Most people eat too much. They keep on eating after they are done. They eat to satiety. Hence they overload the stomach with unneeded substance.

And "the superfluous is never without danger."

Many diseases are directly caused by habitually taking food that we cannot assimilate. By and by that means indigestion, dyspepsia, liver trouble, diabetes, and other derangements.

Finish the meal with a piece of gum, and you not only get the pleasure of continued eating, but also an increased flow of saliva and the stimulation of the gastric juice.

Besides you are not overburdening the digestive apparatus.

Children eat candy because it tastes good, but in doing so they often take in unnecessary and harmful substance. Candy eating has its dangers.

But children chew gum as gladly as they eat sweets, and incur no harm. On the contrary, gum chewing is healthful.

Take a piece of gum instead of a piece of French pastry for dessert. You get the same pleasure, and none of the evil of too rich food.

Dr. Chalmers, the celebrated preacher, once delivered a sermon on "The Expulsive Power of a New Affection."

Chew gum, and cure hurtful tastes by "the expulsive power of a new affection."

Look for the name—Adams. It means pure chewing gum made with Chicle.

The New Hupmobile

The Year-Ahead Beauty-Car

Bright finish, long grain, French seam upholstery.

Luxuriously improved seat cushions and backs.

Moulding finish conceals all upholstery fastenings.

Neverleek fast-color top, black outside, tan inside.

Tonneau quarter curtains, cut integral with the top.

Front and rear edges of top finished with moulding.

Bow spreaders to carry top when folded.

New "Lift-the-Dot" fasteners for side curtains.

Door-curtain carriers fold with curtains, and drop into place instantly.

Tonneau carpet fastened with snap fasteners. Tonneau sills carpeted. Entire tonneau finish improved.

Satin-finish instrument plate. Ammeter supplied to show rate of battery charge and discharge.

Hand grip-pads on doors. Improved door handles.

Larger door pockets, with weighted flaps.

Bodies, Hupmobile blue; hood and fenders black. More paint and varnish, handsomer finish.

New type demountable rims. New type rim carrier.

Adjustable foot pedals. Clutch action very light.

New carburetor air control. One switch for ignition and lighting.

New dimming device graduates brilliance of head lights.

Tail lamp operates independently of other lamps.

Look for no car equaling this new Hupmobile, even in externals, for twelve months to come. Its intensified refinement is a year ahead. It was the world's finest Four before. Now it is the year-ahead beauty-car as well.

More than $750,000 spent for factory improvements in 1916 paved the way.

It took a year to get ready to give you this added goodness.

Hupmobiles, back to the beginning, have been one long line of successes. But this beauty-car goes far beyond Hupmobile best.

Why You Get a Car A Year Ahead

It goes further, because we are equipped to give more. In truth, we cannot afford to give less.

Hupmobiles, so other makers say, have always been too good. Our shop standards, they think, are too high; our materials too fine.

It was true that we needed larger production to spread the cost of excess goodness. And new factories to get the production. Now we have them both. And you get the beauty-car a year ahead.

Engine Fit For A $3000 Car

We have held fast to Hupmobile standards and pulled down the overhead. Critics (among them a leading car builder) called the Hupmobile motor "a power plant fit for a $3,000 car." And so it is.

They said we could cheapen the rear axle, that we could use a clutch less costly, and so on.

But we refused to take the obvious course. Nearly a million dollars spent in factory-saving and efficiency looked better to us than lowering Hupmobile ideals.

So we sought and won this extra margin, and have put it all back into added beauty.

A Wonder-Car In Performance

The Hupmobile has always been a wonder-car in point of performance. Its supremacy has not stopped short with supremacy over all other Fours.

It wins every day against Sixes, Eights and Twelves—as any Hupmobile dealer will gladly show you.

Now it wears a sheath worthy of its steel. The high-duty-car has also become the rare-beauty-car.

In sand, and on the hills, it will continue to outdo the multi-cylinder. On dress-parade, it will shine by comparison.

The Glory of Good Looks

The Hupmobile will always be sold on performance. From New York to San Francisco, and back, dealers will continue to court competitive tests. Owners will continue to boast of the superiority of "their" car.

But a new glory is added—the glory of extraordinary good looks and social distinction.

Looking a year ahead, nothing equal is in sight. You cannot buy wisely unless you see The New Hupmobile.

Five-Pass. Touring Car,	$1185	Roadster, ...	$1185
Year 'Round Touring Car,	$1385	Year 'Round Coupé	$1370

A TOWN COMPANY

By WILL PAYNE

RECENTLY eleven towns in Northern Illinois formed a corporation for the purpose of introducing coöperation in municipal government, and thereby launched an idea that seems likely to spread—in which case it may affect the well-being of more than half the inhabitants of the United States and get better results in the expenditure of somewhere from one and a half to two billion dollars a year.

One of these towns is Highland Park. Like the other ten, it is a suburban community on the shore of Lake Michigan, north of Chicago. Its population is about seven thousand, and it used to have the same sort of government which every other "good" town of that sort and size had.

Many of the inhabitants are commuters, who make a livelihood in Chicago and go out to Highland Park to enjoy it. There are no slums, no saloons, no particularly disorderly elements or especially difficult civic problems; so there were no scandals of a dramatic nature in the municipal government—such as Highland Park's big neighbor to the south is always enjoying. There was just the everstanding humdrum scandal of considerable waste and inefficiency.

This good town had divided itself into four wards, each of which elected two aldermen, while the community at large elected a mayor. Naturally the job of half representing a ward in Highland Park was not an important or attractive one. In a general sort of way a man who put a high valuation on his time wouldn't care to devote much of it to so unimportant an office. Generally speaking, aldermen were more interested in their particular wards than in the town as a whole.

So a year and a half ago Highland Park adopted the commission form of government. Samuel M. Hastings, a manufacturer, and president of the Illinois Manufacturers' Association, was drafted in as mayor, despite that ingrained reluctance to "mix up in politics" which characterizes most successful business men.

The commissioners, also, were men of extensive business experience, and they proposed simply to apply to the town's affairs sound business intelligence, looking at those affairs very much as though they were the affairs of a commercial corporation of which they were directors.

Business Methods Applied

They found that the city's books were not kept in a way which any of them would accept in his own business—not that there was graft, but there was ineptness, inexactness, confusion. Now good bookkeeping is the first step in the application of business intelligence to any affair. The first consideration is to know all the time exactly where you stand. So they called in a competent accountant and got the town's books in the same condition as those of any well-managed bank or factory—that is, so as to show clearly and accurately at a glance how the concern's finances stand.

There were haphazard, wasteful ways of buying municipal supplies and various other unthrifty conditions that the members of the new government would not have accepted in their own businesses. They saw no reason to accept them in the town's business.

But this notion of applying good business intelligence to the town's affairs presently took a new angle. Looking at Highland Park much as they would have looked at a private business they were directing, the mayor and commissioners found that its affairs were always running into those of Highwood and Lake Forest, to the north, and of Glencoe and Winnetka, to the south. It occurred to Mr. Hastings that, beginning with Deerfield just north of Evanston, and ending with Waukegan, near the Wisconsin line, there were eleven concerns in a row, touching one another, all with the same general interests and problems, but each one struggling with those problems quite independently of the others.

It struck him, as a business man, that this was an unthrifty situation. These suburban towns didn't want to be incorporated in Chicago—because, for one very obvious reason, Chicago's government was notoriously much worse than that of any of them. They didn't want to consolidate in a single municipality. Each one of them had its proper local pride. It is true that to the uninstructed stranger who rides through them in an automobile, without knowing when he passes the boundary which separates one town from the next, they look pretty much alike. Yet the duly initiated and habituated resident of Glencoe, for example, will tell you rather confidentially of many advantages that town enjoys over Winnetka, while the true Winnetkan, admitting that Glencoe is a rather nice place, will point out many reasons why it is better to live a couple of miles farther south.

Aside from this local pride there were various objections to an outright consolidation. The string of towns measures some thirty miles from tip to tip; so a consolidated government would entail a good many little inconveniences. It would entail, also, a rather formidable legal process, with a lot of voting to consolidate, voting to elect a new government—in which, no doubt, jealousies and rivalries between the towns would develop—and there would be a large expense bill.

Sanitation Problems

Formal consolidation was not advisable; yet it was clear enough that all the towns, working unitedly, could deal with the problems which were common to all of them more efficiently than each town acting alone.

As one illustration of a common problem, there was the water supply. In Lake Michigan all these towns had an unlimited supply of fresh water. Of course they had resorted to that supply, simply pumping the lake water into the town mains. Unfortunately there was also, from the beginning, the problem of sewage disposal. The cheapest, most obvious method was to turn it into the lake. That presently threatened to contaminate the water supply; so the waterworks' intake was moved farther out.

But, as the towns grew, the volume of sewage increased and reached farther out too; so the waterworks' intake must be moved still farther.

All round the southern end of Lake Michigan, with rapidly growing population, that sort of race between sewage and water supply has been going on for years. Nearly a generation ago Chicago reached the point in population where the race had to be given up definitely and a great scheme of inland sewage disposal, with water intakes far out in the lake, resorted to. It cost many million dollars.

Now the North Shore towns have reached a point where it is plainly advisable for them, also, to abandon temporizing, and take up a comprehensive, lasting solution of the water problem. Their water intakes now are fourteen or fifteen hundred feet out in the lake—not far enough to be absolutely secure against contamination in the not distant future, experts say. They ought to dispose of their sewage inland, as Chicago does, and then go five or six miles out in the lake for their drinking water.

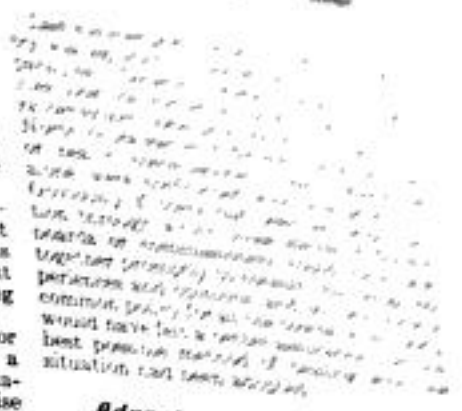
The largest of these towns, Waukegan, has about eighteen thousand inhabitants; the smallest has one thousand. For any of them alone the cost of such a permanent solution of the water problem as that mentioned above would be staggering; but all of them together could do it easily. And one big pumping station, with an intake five miles out, could be operated more cheaply than eleven little stations with intakes fourteen hundred feet out.

All the towns in common have a public-utility-franchise problem. Their local transportation, gas and electric current are supplied by corporations with which they make bargains covering cost and quality of service. All over the United States these public-utility corporations have been getting together through various forms of merger and consolidation. It is the usual thing now for a dozen or a score of towns to get their street-car service, gas and electric light from the same company, and that company is often but one of many subsidiary concerns in a great combination which is controlled from a single office. A dozen or so such head offices control a great part of the public-utility business of the country outside the larger cities.

The advantages of this consolidation—from the corporation's point of view at least—are evident from the great profits that have resulted from the process. But though the corporations have been getting together the towns have not.

Each of these North Shore towns, for example, has its separate contract with a public-utility corporation for transportation and light. Each contract or franchise expires on a different date. Say Winnetka's street-car franchise is about to expire. It covers part of a continuous service along the North Shore. If Winnetka should not renew the franchise, service to all the other towns would be interrupted. Say, Highland Park's gas franchise is about to expire. It stands alone, and on its own hook must make the best terms it can with the company.

When a consolidated company is bargaining with an individual town it has something of the same advantage that a big employer of labor enjoys when he bargains with his workmen individually instead of collectively. If these towns would make their franchises expire on the same date, and then deal collectively with the company, they would get a better bargain. Probably the company could afford to give a better bargain if it dealt with somebody who was authorized to speak for all the towns together, and so settle the whole matter at a stroke. When dealing with the towns individually the company naturally suspects that if it gives North Chicago an inch, Lake Forest will hear of it and demand an ell. So a more satisfactory settlement for both towns and company may result from a collective bargain.



Opportunities for Closer Buying

Each of these towns is continually buying certain supplies. One of them, for instance, will use five hundred water meters next year; another, seven hundred; another, three hundred. One of them, acting alone, might get a better meter than the next, or as good a meter at a less price. But no one of them acting alone could expect so good a bargain as a single purchaser of six thousand or seven thousand meters would get.

If each town sent to a single purchasing committee a memorandum of the number of meters required in the coming year, the single committee, going into the market with one order for several thousand meters, could save money for all of them. So with fire hose and all other supplies. The towns are buying water mains, fire apparatus, snowplows and street sweepers. Considerable expert investigation is necessary to know which of the many sorts of these articles are most suitable and most economical. One town, acting alone, could not canvass the field as thoroughly and be as sure that it was getting the best returns for its money as a single agency, acting for all the towns, could.

Any resident of any town who looks about him a bit will at once see various problems that are common to all the towns round him, so that all the towns, acting together, could solve them better than a single town, acting alone, could. These North Shore towns have their common automobile problem and they try to solve it in different ways. Some of them establish the lowest speed limit the state law permits; a limit which, in fact, hardly one driver out of twenty observes.

They don't really expect a driver to observe the speed limit, but they can arrest him for violating it at any time they feel like it. The next town takes a more liberal view; its ordinance permits a higher speed. One minute a driver is within the law. The next minute, without having changed his speed and with nothing to warn him that he has passed under a different jurisdiction, he is violating the law. Obviously a uniform code would be preferable.

Advantages of Coöperation

The best towns [illegible] liable to experiences of [illegible] smallpox develop in [illegible] is an outbreak of yellow [illegible] typhus in the state or of [illegible] seaport; half a dozen persons [illegible] typhoid over in the next [illegible] community shivers a bit, grows [illegible] looks at its youngsters with new [illegible] sion.

In all such cases the fact of a [illegible] organization, in which the health [illegible] ities and the best medical talent of a dozen towns were coöperating to take whatever steps their collective judgment deemed advisable for safeguarding health, would have a most reassuring effect, because, as a matter of course, such an organization is better fitted to cope with the situation than the organization of any single town would be.

There are other obvious advantages of coöperation. They will occur to anyone who has had any experience in the government of a town—or of a city, either. But these towns wanted to keep their corporate identity. They didn't want to merge. So Mr. Hastings simply took a leaf out of his business experience—one so suitable to the needs of the case that it is a wonder no one had resorted to it before.

He proposed that the eleven towns join in forming a corporation—not for profit—under the laws of Illinois, such a corporation as the laws of every state, I believe, already provide for.

The cost is trifling. Half a dozen or so men fill out an application to the secretary of state, setting forth that they wish to form a corporation under such and such an act of the state legislature, giving the name of the corporation, the general objects for which it is formed, a list of the persons who have been chosen for the first board of directors, and the address of its main office. To this application a notary public appends a certificate that the signers appeared before him and acknowledged their signatures. The secretary of state files the application in its proper pigeonhole and issues a charter. Substantially that is all there is to it, the total cost being a few dollars.

The name of this particular corporation is the Association of North Shore Municipalities. The object for which it is formed, says the application for charter, is "to secure the coöperation of North Shore municipalities, to acquire and disseminate commercial, scientific and economic information pertaining to the business of municipalities, and to secure uniform action, economy and efficiency in the administration of municipal affairs."

The board of directors consists of the eleven mayors or presidents of the eleven cities or villages in the association. These directors, having been named in the charter take office automatically as soon as the corporation is formed. Thenceforth the management of the corporation is in their hands. It is provided, however, that when any of them ceases to be mayor or president of one of the municipalities his successor as mayor or president shall also succeed him as a director of the corporation. Thus, the board of directors will always consist of the heads of the eleven municipal governments.

By this scheme, it will be observed, no voting by the inhabitants of the towns or by anyone else is required. No formal action of any sort by the town governments is required. Nothing is required except that the governments of the towns agree to coöperate.

Digitized by Google

Thus, the corporation has no legal power whatever over the governments of the towns. Those governments remain exactly as they were before, with the same powers in every respect. The individuality of the town is not diminished in the least, but something is added to it. As an illustration of how the corporation works, take the matter of local tax valuations for Waukegan, which, being farthest north, is the first town on the list.

It is considerably larger than any of the others, with about eighteen thousand inhabitants and quite a manufacturing interest. The present government of Waukegan has given a great deal of attention to the difficult matter of equitable tax valuations and naturally has acquired a good deal of valuable experience and information on that subject. So the corporation appointed a committee on tax valuation and made the mayor of Waukegan chairman of that committee. The idea is, of course, that Waukegan's special information and experience in the matter of tax valuations shall immediately be made available for all the other towns.

The corporation appointed a purchasing committee, and for chairman of it elected the purchasing agent of a big railroad system—a resident, of course, of the North Shore. The different towns will make up memoranda of the supplies required in a given period and turn the memoranda over to this committee, which will then go marketing for the total quantity of supplies required. Thus the towns will get the advantage not only of buying in bulk but of having their buying done by the best talent in that line to be found among them. The idea throughout is not only to get the advantage of a bigger unit, but to make available to all the towns whatever talent and experience any town has.

If one town has been particularly successful with its shrubbery and tree planting the persons who achieved that success will be called upon, through the corporation, to advise all the towns. Eleven standing committees have been appointed, and the head of each town government has the chairmanship of that committee when he seems likely to be most serviceable to the towns as a whole.

The committees—and, in fact, the corporation itself—act only in an advisory capacity. Any town government is free to ignore the advice if it so elects. But, having agreed to coöperation and having taken a due share in the deliberations, it is not at all likely that any town will so elect.

Cheapness and Simplicity

In fact, this idea of municipal coöperation has been received with quite unanimous approval and enthusiasm in the North Shore towns. Anybody with any experience in municipal government, or with a business experience in the light of which he could appreciate municipal problems, quickly saw its advantages. It gives the benefit of unity, without cumbrous and expensive legal formalities. Each town joining in the association pays a membership fee of twenty-five dollars, which has, so far, covered all expenses of the association.

No new offices are created, for all the officers of the association are already town officers; its official committee members are already members of the town governments. In time there will be a library of municipal reports and like useful information; there will be some bills for stationery, printing, and a clerk or secretary. It is thought likely that the towns will have to pay in something like a hundred dollars a year each to cover such outlays. But, with that small exception, the association creates no additional cost.

When this idea of coöperation was taking shape the gas franchises of several towns were near expiration. All of them get gas from the same public-service corporation. Under the old plan each town would have taken up negotiations with the gas company separately. If it couldn't agree with the company—as often happens—it would have had to go into court or before the State Public-Utilities Commission. It would have had to compile arguments and evidence in support of its stand, which would probably have involved hiring some experts, and in any event would have involved a good deal of trouble and expense. First and last, there might have been half a dozen separate hearings before the Utilities Commission or in court, each, from beginning to end, extending over several months.

Mr. Hastings, however, got the heads of the town governments together. They canvassed the situation and agreed on united action; then called the gas company representatives into conference. In a series of such informal meetings round an office table the matter was threshed out, with the result that both sides recently agreed upon a schedule of rates and conditions of service which are mutually acceptable and which are to apply to all the towns. In that simple, inexpensive, businesslike way the gas problem of eleven municipalities was satisfactorily disposed of. No doubt the fact that all the towns were acting as a unit had its effect upon the gas company.

I mentioned that Highland Park had adopted a good system of municipal bookkeeping, such as a competent business man would approve for his own office. It engaged a good expert accountant for that purpose, because working out the details of any accounting system so as to get maximum results at minimum cost is a job for an expert. This system of accounting is, of course, applicable to any town operating under substantially the same conditions. By coöperating all the towns will get the benefit of it.

Uniform Accounting Systems

This brings up another advantage of coöperation. All the towns having a uniform system of accounts, it will always be possible to check one town against another. If Winnetka is paying more for snow removal than Wilmette the fact will appear in a comparison of town reports, and there should be no difficulty in tracing down the reason for it. This applies to every branch of town work. If one town is doing a given piece of work more economically than another the other towns will know it and know how the lower cost is attained. By this constant interchange of experience every town's expense items should get down to any town's minimum.

Each of these towns does something in the park and boulevard way. Each of them has made its own plans in that respect, practically without regard to another town's plans; yet the towns form a virtually continuous community. Obviously, by working together in this business of adorning themselves they could get many advantages. As a unit they could get better landscape-gardening talent, better road-making talent, better horticultural talent. Letting contracts on a large scale, they could get better prices. Greater harmony and a finer effect could be expected from one plan than from eleven independent plans. There are opportunities in the way of parks that no one town alone could undertake to develop, but which all together might well carry through.

So they are talking now of a union park system. To carry that out, having formulated the plans, they would go to the legislature and ask for an act creating a park district. This would not affect the individuality of the towns in the least, but simply put them into a partnership for the purpose of making a park, issuing bonds and levying taxes in that connection. The legislature has passed various acts of that nature, including the one which created the Chicago Drainage District, and would no doubt pass this act if asked to do so by all the towns.

In the same way an act of legislature could be asked for a union waterworks, with an intake far out in the lake and beyond danger of future contamination. Having once established a coöperative organization through the advisory corporation above mentioned, any special powers the municipalities require for extending the idea can be easily obtained.

Already, and irrespective of any future park system or pumping station, the corporation has taken up the matter of municipal bonds. As in nearly all other municipal affairs, each town has followed its own plan; and some plans were better than others. It is proposed now to adopt a uniform plan of issuing bonds, making them all serial. The common practice among American municipalities used to be as follows: The city issued, say, a hundred thousand dollars of bonds for street improvements. They were due in thirty years, but the city couldn't prudently wait until the end of thirty years before making provision to pay them. So each year it levied sufficient taxes to pay that year's interest and one-thirtieth of the principal—or such a sum as, being invested at compound interest, would produce one-thirtieth of the principal. This sum was put into a sinking fund. Theoretically, at the end of thirty years the sinking fund would contain enough to pay off the bonds. But in practice the theory doesn't work well. The city gets hard up and "borrows" its own sinking fund; the accounts become confused; the sinking fund doesn't produce the interest expected. In short, the sinking fund doesn't pay off the bonds.

But under the better serial plan one-thirtieth of the bonds fall due each year. The tax levy of that year pays them off and that is an end of them. There is no chance for borrowings and confusion of the accounts. So bond houses, in buying municipal issues, will usually give the serial bond a shade the better price. This is a small detail, of course; but it illustrates that, wherever it is possible to get a shade the better bargain, this municipal coöperation proposes to get it.

The association has eleven standing committees, composed of members of the several town governments. It has also an advisory committee, which is not to be overlooked. This consists of three unofficial citizens of each town—or thirty-three in all—its members being selected with a view to their probable usefulness as advisers upon the many phases of municipal affairs. This committee will be called into consultation when any especially important affair comes up. The corporation wants its advice. It also wants its sense of responsibility for the government of its towns.

No municipal government can be so good that good citizens will not, from time to time, discover defects in it. In a general way it is the intention of the North Shore coöperation that good citizens shall not only trot out their discoveries of that sort but personally lend a hand to see what can be done about them.

An excellent citizen of Highland Park complained to the mayor that railroad locomotives were making too much smoke. He thought it was the duty of the city government to do something about it. The mayor asked just what he thought the government ought to do. The good citizen was decidedly vague as to the precise measure that should be adopted, but he was sure the government ought to do something.

Next day he received notification that he had been appointed chairman of a citizens' committee to investigate the smoke and recommend remedial measures.

After a period of sheer astonishment, and after learning that the city government really expected him to do what its notice implied, he accepted the appointment in good faith.

Substantially the same plan has been applied in various like instances. Without having made personal complaints, other citizens have been drafted into the public service by being appointed on committees to investigate or deliberate. In the course of a year the city government has levied upon the services of some sixty private citizens for that sort of public work. It has been pleased to find that when it pressed the matter home nobody has refused to serve. Of course a busy man would rather not have a public office and rather not bother with public affairs; but he can be induced to do it. And when one does it the next one comes all the easier.

The Line of Natural Expansion

The aim is to get all citizens into thinking that town business is their business—not thinking of it as a remote abstraction, but as an immediate, practical fact. Of course, wherever that can be accomplished the form of the government—whether it is the government of a village or of a nation—is comparatively unimportant. Highland Park adopted the commission form of government; but this coöperation involves no change in form. Being wholly voluntary and advisory, it could be carried out even without the formal organization of a corporation under state law. If the governments simply agreed to act together, that would answer; but the agreement would have to be put in some sort of form, and a state charter is as simple, easy and cheap as any other.

Not long ago a number of widely experienced men of affairs met at a dinner. One man at the table knew about this municipal coöperation and explained it to the others. The way they reacted to it was highly flattering to the author of the idea. They soon had the whole United States involved; first, with local associations, each comprising a dozen or so towns in the same neighborhood and having the same general conditions—say, the towns in an agricultural county in Illinois or Iowa; then there would be a regional association, to act as a clearing house for the local associations, so that if one local association was especially successful in dealing with a certain problem the others would know about it and benefit by its experience—just as all the towns in a local association benefited by the experience of the other towns; finally, a national association.

They talked of associations of cities in the same class—say, those having from one hundred thousand to five hundred thousand inhabitants, and from five hundred thousand to a million; then New York, Chicago and Philadelphia. By this sort of coöperation, they argued, the best methods of managing municipal government would be discovered and applied.

That is an object of considerable importance nowadays. Formerly it was not so important. At the first census less than one per cent of the population lived in cities of thirty thousand or more inhabitants. Now thirty-one per cent of the population lives in such cities. At the last census fifty-five per cent of the total population lived in cities, towns and villages—more than half; and the proportion is steadily growing. And the expenditures of cities, towns and villages are growing even faster than their population.

The net government cost of operating cities having thirty thousand or more inhabitants in 1910, according to the census, was thirty dollars and thirty-three cents for each inhabitant, or a little over eight hundred million dollars, all told. Say we assume arbitrarily that government cost in cities, towns and villages having less than thirty thousand inhabitants—which are not included in the census report—was only two-thirds as great a head as in the larger cities. That assumption would put the total cost of municipal government in 1910 at one billion three hundred million dollars, in round figures.

An Idea That Should Spread

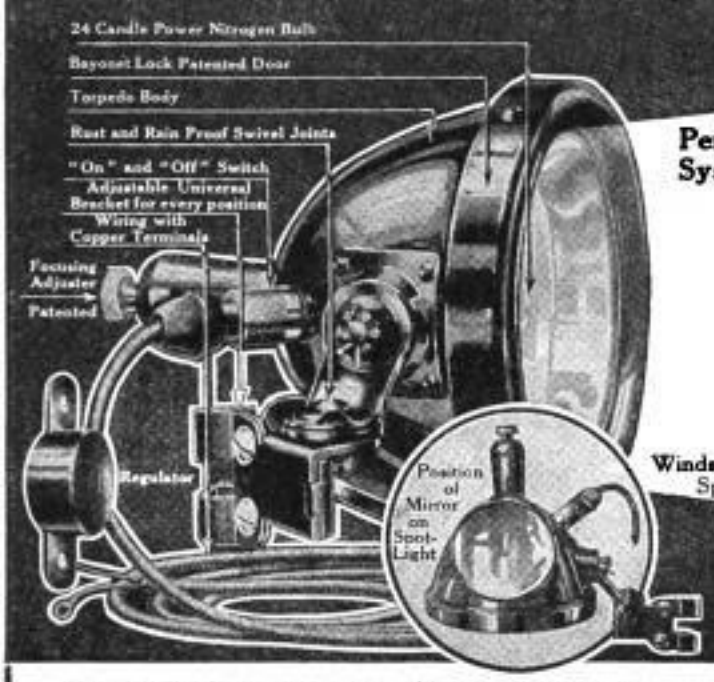
But by 1915 the net government cost in cities having thirty thousand or more inhabitants had risen to one billion fifty-seven million-and-odd dollars, or a little over thirty-four and a half dollars for each person. So we seem pretty safe in assuming that municipal government this year costs at least one and a half billions. For cities of thirty thousand and upward it was under twenty-five dollars a head in 1903, while in 1915 it was over thirty-four and a half dollars.

In short, not only are municipalities increasing rapidly in population but government cost is increasing even faster than population, which obviously makes the subject of municipal costs one of considerable importance.

There is another item that must not be overlooked: Out of two hundred and four cities having thirty thousand or more inhabitants the census had complete and comparable fiscal data for one hundred and forty-six. From 1903 to 1915 the net indebtedness of these cities increased from under one billion dollars to nearly two and a quarter billions, or from less than forty-five dollars a head to more than seventy-seven.

It isn't only the money, by any means. To any man who isn't holding a state or Federal job, local government is far more important than state or Federal government. His police protection and his fire protection; his means of getting about; what he shall pay for such household necessities as water, gas, electric light, and what kind of service he shall get, depend upon the local government.

But, though municipal government has been growing more important—not only because it includes more people but because it touches their pocketbooks and their interests in more ways—there has never been any teamwork in it. Every municipality has struggled or muddled with its own affairs on its own hook. One might say without great exaggeration that no two cities have handled the same problem in the same way.



In any line of business an improvement introduced at any given point will spread, competition forcing others in that line to adopt it; but there is no competition in government. Coöperation among municipalities would have the effect of introducing it.

This North Shore Association gives a simple, inexpensive and practical method of coöperating. The idea ought to spread.

ELECTRIFY YOUR FORD

FROM HEAD LAMPS TO TAIL LAMP IN TWO HOURS

Perfect Electric Lighting System for Ford Cars

Battery

Generator

Tail Lamp

Side Lamps

Windshield Spotlight

Head Lamp Bulbs — Dimmer Switch — Head Lamp Control

Ford Owners! Attention!

No more Headlight worry—no more glare—no more uncontrollable run-away light—no more oil side lamps—no more oil tail lamp—no more fumbling in the dark, the wind and the rain with matches. But now—all annoyance and inconvenience swept away by the push of the button. Convenient headlight control from the switch mounted on the steering post. Headlights brightened or dimmed at will for pleasure and safety.

Also two beautiful electric side lamps and a high grade electric tail lamp to switch on and off instantly. No cost but the low first cost. No machine work. No need of an expert mechanic. This necessary Electric Lighting System can be installed upon your great little car complete in two hours.

Here's the Good News!

And there's beauty, good looks for you. Safety, pleasure and night-driving comfort as long as your car exists.

The improved Genolite is an achievement for Ford Owner satisfaction, comparable only to the service and the quality performance of the car Ford Owners are proud to own.

Genolite Type "C" $29.85

An improved and complete Electric Lighting System that gives you a brilliant light from a storage battery in both side and tail lamps irrespective whether motor is running or idle.

Genolite also furnishes you with two powerful Nitrogen headlight bulbs (to replace your present ones), lighted through our patented regulating device which governs the flow of electric current from the magneto, resulting in a more constant light, which is sufficient for touring even at low speeds and a most satisfactory light at all speeds.

And this can be instantly accomplished at the will of the driver from a control switch conveniently located on the steering post.

Genolite [Type C] also includes a generator, and a storage battery which it charges without cost. With the beautiful electric side lamps and tail lamp, also bulbs, wiring and all attachments complete as described and ready for application (no extras needed) Genolite is an efficient and complete Lighting System for five electric lamps for Ford Cars.

Genolite Type "D" $31.85

In the unique Genolite [Type D] equipment Ford Owners are given an exclusive combination Electric Lighting System that includes a powerful windshield Spotlight with many patented features.

This spotlight that throws a brilliant ray of light ten feet or a thousand ahead, behind, at left or right, which can be diffused or concentrated at the will of the driver, offers together with the Genolite Electric Side Lamps and Tail Lamp, generator, storage battery, bulbs, wiring and all necessary attachments, a complete Electric Lighting System that any Ford Owner may well be proud of.

Sum up the unusual advantages obtained in Genolite Type D.

A brilliant and continuous light in side lamps and tail lamp without regard to the motor whether running or idle.

One operation of the switch conveniently located in the spotlight throws on a brilliant light and thereby automatically dims the two headlights.

This spotlight is the first and only practical windshield light ever designed exclusively for Ford cars.

This beautiful and powerful spotlight is complete with mirrorscope for day driving convenience.

It includes a patented hand focusing device to meet State lighting laws. It has a universal bracket that will not rust in the joints and fits all Ford cars ever made. It possesses many other exclusive and patented features.

It gives almost full candle power at very low car speeds and maximum candle power at nine miles or more—maintaining this maximum lighting capacity at any speed.

This is accomplished by a patented regulator which automatically delivers current at the proper voltage to the spotlight at all speeds.

Genolite Type C at $29.85, or Type D at $31.85, comprise respectively perfect systems of Automatic Electric Lighting for Ford Cars. Their only cost is the low first cost. Their installation is simple and their service and convenience lasting. After you have equipped your car with Genolite you will wonder how you ever did without it.

Genolite will be a revelation to you of Economy and Service. To every Ford Owner, whether living in city, town or country, Genolite Type C or Type D will light the way for pleasure, pride and safety.

To insure prompt delivery send your order now.

Fill out the coupon. If your dealer should be unable to immediately supply you, send his name with your remittance and we will send you Genolite either Type C or Type D as ordered with full instructions to save you delay and to provide you at once the pleasure, convenience and enjoyment this perfect Electric Lighting System will give you.

Announcing the New Seven-Passenger OLDSMOBILE

$1367

f.o.b. Lansing

THIS light weight, eight-cylinder car combines power, acceleration, speed, economy, comfort, beauty, and luxury in a measure hitherto undreamed of in a light car. The eight-cylinder motor, developing 58-horse power at 2,600 r. p. m., with the light weight of the car—3,000 pounds—presents a proportion of power to total car weight of approximately one horse power to every 51 pounds—an unusually favorable ratio.

This relation of weight to power, together with the high frequency of the power impulses—one to every five inches of car travel—is the reason for the wonderful hill climbing ability of the car—for its dependability on all sorts of roads—and for control so responsive that gear changing is seldom necessary.

Careful refinement of mechanism insures almost absolute quiet, while the counterbalanced crankshaft, light weight, balanced, connecting rods, and aluminum alloy pistons reduce internal resistance, bearing pressures and vibration to a minimum.

The comfort of the car is beyond description. Long, flat, flexible springs and perfect balance of chassis insure easy riding under any kind of going. The seats, upholstered with fine, long grain French leather, stuffed with pliant springs encased in linen sacks, increase comfort to the point of luxury.

Economy results from light weight and motor efficiency—economy both of fuel and tires. The new Oldsmobile is now on display by Distributors throughout the United States. Illustrated catalog on request.

Details of the Car

Wheel Base—120 inches.
Weight—3,000 pounds.
Motor—Eight-cylinder, V-type, high speed motor, with counterweighted crankshaft, developing 58-horse power at 2,600 r. p. m.
Cooling—By centrifugal pump.
Radiator—Honeycomb, with solid German silver jacket.
Lubrication—Force feed.
Electric System—Delco—In three units, starter, generator, and distributer, each unit independent.
Spark Control—Automatic, with hand lever for extreme ranges.
Carburetor—Automatic compensating type.
Gasoline System—Vacuum feed, with gas tank in rear.
Transmission—Unit with motor.
Gear Ratio—4 11-12 to 1.
Clutch—Cone type, leather faced.
Drive—Hotchkiss type.
Frame—Cold pressed steel, deep channel.
Front Axle—I-beam, with Timken tapered roller bearings.
Rear Axle—Full floating, spiral bevel type. Timken bearings.
Brakes—Foot, external contracting, emergency, internal expanding.
Wheels—Selected hickory, natural wood finish.
Springs—Front, semi-elliptic; rear, three-quarter elliptic, long and flat.
Steering—Left hand, semi-irreversible, worm and half-nut type.
Fenders—Crowned type.
Doors—Twenty-three inches wide.
Upholstery—Finest French leather, stuffed with springs encased in linen sacks.
Dash—Circassian walnut, with silver finished instruments.
Finish—Paint and varnish, applied by hand.
Equipment—In addition to regular items, includes double bulb headlights, dash light, tonneau light, double tire carrier, and side curtains, opening with doors.

This *Important* Fruit

- a *Need* in Every Lunch Box

Dr. L. Emmett Holt, the famous authority, writes as follows in his book, "The Care and Feeding of Children":

> "Some fruit should be given to most healthy children every day . . . Oranges, baked apples and stewed prunes are most to be depended upon . . . The best fruit juice is that of the Orange, which should be fresh and sweet."

Thus an eminent man, who is quoted on child feeding by practically every physician, tells mothers what is best.

Remember these facts; for no other subject today is more important than proper food. Don't let *anyone in your family* who carries a lunch from home go without a fruit that authorities deem so needful.

Nature has made Oranges doubly attractive in flavor, perhaps to win people to their benefits.

For these reasons, adults as well as little folks need Oranges every day.

The principal nutritive value of Oranges lies in their fruit-sugar. And Oranges contain organic salts and acids that aid in the digestion of other foods.

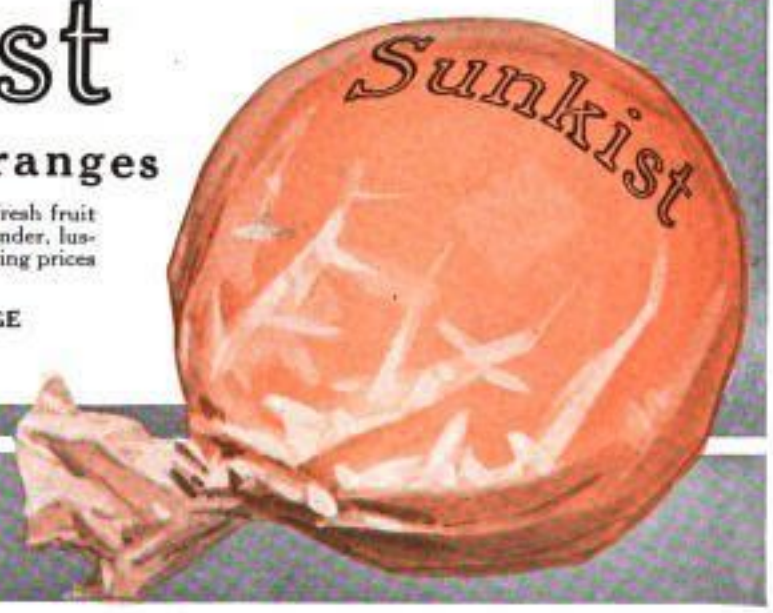
These facts are stated by Dr. Harvey W. Wiley, well known for his campaign for "pure foods."

Decide for yourself, from the standpoints of flavor, healthfulness and *economy*, if another fruit so well merits a daily and conspicuous place in your home.

Boston Cooking School Recipes

A valuable illustrated book containing 200 tested Orange and Lemon recipes by the authors of the famous Boston Cook Book, will be sent *without charge* to housewives who answer this advertisement, giving their dealer's name and address. Send for your copy now.

Sunkist



Uniformly Good Oranges

Sunkist are *uniformly good* oranges—a year 'round fresh fruit for everybody's table. They are practically seedless, tender, luscious, juicy, sweet—and are sold in varying sizes at varying prices so every family can afford them.

NOT the least of the pleasures of a hard game is the bath that follows it. For it is just after the final whistle, when you realize for the first time how warm you are and how your skin is chafing, that the cooling, soothing, refreshing qualities of Ivory Soap are most appreciated.

The mild, smooth, copious Ivory lather feels grateful to the sweating skin and tired muscles. Just a few moments' stand under the rushing water removes every particle of soap and dirt. A brisk rub-down leaves the body aglow with health, and muscles and nerves in perfect trim.

It is this ability to cleanse thoroughly without irritation to the skin that makes Ivory Soap so popular with all athletes. In it quality and purity combine to produce cleanliness pleasantly and perfectly under every conceivable condition.

BUBBLE DAYS OF FINANCE

By Albert W. Atwood

NEVER before in this country has there been such an avalanche of questionable promoting schemes as now. The get-rich-quick brokers and promoters have sprung up like mushrooms overnight. Fakers, schemers and swindlers swarm over the land. Financial sharks swim joyously in schools and shoals.

For this is the heyday of undreamed-of prosperity; and every boom in trade and in stocks brings to the surface a multitude from the underworld of finance, glad to seize upon the possibly brief wave of fortune and take advantage of a feverish mania for speculation while it lasts. Thus, the tremendous revival in frauds and semifrauds by mail and by advertising, along with its marvelously sudden fungous growth of upstart brokers and promoters, only serves to emphasize the prodigal, almost recklessly abrupt increase in national wealth.

There is a spirit of double-or-quits in the land. Quick and prodigal riches have made men reckless. Luxury, extravagance and waste are at their height. So is the heedless "investment" of money.

"It's nobody's business. I am going to do what I d——d well please with my own money!"

The present boom in questionable and probably worthless stocks is not unique. They have come in waves or periods or cycles for several hundred years. As insane as any was the Tulip Craze in Holland. John Law, in France, and a long series of foolish bubbles in England separated the credulous from their money long years ago. Ever since the modern world existed men have been afflicted by this strange disease, whether the promise of untold wealth dangled before their eyes was located in South African mines, the broad pampas of South America or the islands of the South Seas.

But the get-rich-quick delirium of to-day differs from and exceeds previous speculative excitements—in this country at least—by the more ample means of those who are seized by it. The greatest previous period of American speculation was that which began in 1899 and came to an end in 1907. People woke up to the fact that there had been too much lost motion. So they started trusts and combinations. The crossroads blacksmith, with his thousand-dollar business, capitalized it for a hundred-thousand-dollar stock company. Inflation was rampant; and what went up ultimately came down.

All this was very instructive and interesting; but the speculator of that period operated largely on borrowed money. To-day conditions are very different. Money has been distributed and filtered out over the country everywhere. Farmers have had huge prices for their crops. A man with a few acres of potatoes has thereby become almost rich. Mechanics have had wages and bonuses beyond anything previously known. And investors have received larger dividends than the most optimistic had dared hope for. These conditions are, in the first place, the result of enormous profits, which the nations at war have been obliged to pay us. War business has always been hazardous, and therefore has commanded large profits. Secondly, the result of our having repaid to Europeans on our own terms practically all the debts that were entered into on their terms.

So the speculator of to-day, whether he operates in recognized and established securities or in the fly-by-night, get-rich-quick variety, claims a measure of independence he has never felt when using borrowed funds. A man thinks twice before he takes a rash flyer with borrowed money. Hundreds of new millionaires have sprung up all over the land, and half a dozen cities are bulging with new riches. Clerks, waiters and messenger boys have laid by thousands. At such times it is most difficult to combat the reckless dare-devil "investment" of surplus funds in the stocks of companies whose only product is tons of alluring and flamboyant literature.

But the world has not changed overnight. Thousands who think they have found Aladdin's Lamp or the Philosophers' Stone are building on false premises. They will find that the rules of business conduct which held true a few years ago still have an application. The forms of the get-rich-quick game change, but the principles never. Yesterday it was the bucket shop; to-day it is stock in new oil, mining and manufacturing companies; to-morrow it will be something we cannot foresee. But the results are always the same. The denizen of the underworld of finance never changes his ethics, though he is a broad-minded opportunist as to the nature of the proposition he handles. He holds himself in readiness to take advantage of whatever comes along; and he is both mentally and physically about the nimblest creature on earth.

For the first time in a great stock-market boom the old-fashioned bucket shop was absent. That was the place, as almost everybody knows, where one could bet on the prices of stocks made on the New York Stock Exchange, or the prices of wheat, corn and oats made on the Chicago Board of Trade. Ten years ago there were perhaps five thousand of these places in the United States. To-day there are practically none. There is a great difference of opinion regarding stock speculation; but there is no difference of opinion concerning its parasite, the bucket shop.

The bucket shop was a place where proprietor or customer must lose. It was mechanically and physically impossible for both to win. Whatever the morals, or lack of them, in stock speculation, it is at least possible for both the regular broker and the customer to win. But the bucket-shop keeper makes his living out of his customers' losses. He ran a gambling joint, mechanically, legally and technically, as well as morally.

Ever since telegraphic quotations for stock and produce prices had first been known the bucket shop had flourished. It commanded the most talented practitioners of low finance, and its leaders became millionaires. Always the bucket shop pretended to have a connection with the New York Stock Exchange or the Chicago Board of Trade. Or if "pretend" be too strong a word for every case, there was always the seeming, simulated—or at least implied—connection.

Twenty years ago John Hill, then a director of the Board of Trade and member of a committee to investigate and prosecute frauds, examined more than fifteen hundred such schemes, and said: "Though the schemes are limited in variety only by the number of subjects upon which it is possible to found a swindle, the vast majority of them are based on an active speculative or investment market, such as the Chicago Board of Trade or New York Stock Exchange.

"The reason is apparent. Most persons are aware of the fluctuations and opportunities in these two great markets and very frequently read of large sums of money being made by

Digitized by Google

shrewd speculators. . . . Hence unscrupulous knaves, bent on preying upon the unwary and inexperienced, paint for them a rosy word picture of the great fortunes which can be made in grain and stocks by an easy and safe—absolutely safe—method of speculating, according to 'their system,' which is the 'result of years of experience and study' on the part of these rogues who, having perfected their system, are anxious to take in the dear public in any sum from ten dollars up."

The bucket shop has gone, for many reasons. It became too notorious and laws were passed against it. The slow-moving processes of law are sure to reach any particular form of financial swindle, provided it remains in the open long enough. The big exchanges in New York and Chicago fought it bitterly. Most important of all, the telegraph and telephone companies began, within very recent years, to stop giving wire service to the bucket shops.

Deprived of wire service, there are to-day few if any concerns of a patently fraudulent nature conducting business on the basis of Stock Exchange or Board of Trade quotations. Nor is this the day of the "discretionary pool," or even of the professional stock-market tipster, who flourished so generally about ten years ago, and whose claims were so absurd that it is difficult to see how even the merest babe could have been deceived by them. Nor do we appear to be in a period of cotton swindles. Absent, too, is the flood of fake fruit-grove, banana-plantation, nut-orchard and other land schemes. Gullible mankind will always bite at new inventions and "secret processes"; but these are not especially numerous now. Irrigation projects had their day a few years ago, and fake insurance and publishing schemes are pretty well in the discard.

The Swarm of Doubtful Stocks

THE characteristics of the recent boom are numerous and intensely instructive. Of course some of the swarm of fake motor stocks are brand-new, with the varnish still on. Not so with the oil and mining shares. Beginning with '49, we have had them at regular intervals ever since. But the present crops of promoters have shown unusual cleverness in taking advantage of that human desire to get something for nothing, to expect that riches are concealed under the ground. Even the most uninformed know that in other industries there are definite limits and margins of profit; but they feel that no one can tell what may be hidden in the bowels of the earth. As for the fake motor stocks, the promoters have merely taken advantage of the enormous profits made by legitimate properties, to sell shares in certain new companies that exist almost solely on paper.

One of the most interesting discoveries of the fly-by-nighters is the existence of the open market on the New York Curb. It has always been there; but the discovery of the advantages of doing business in connection with it is relatively new—a matter of ten years at the very most. And this revelation, which first dawned upon them only a few years ago, has recently come to have the cumulative effect of a great and blazing truth.

Just as the vaguely implied connection with the Stock Exchange that came from having some form of ticker—or even a blackboard—used to be of service to the bucket shop, so their lineal descendants find an advantage in doing business on the Curb. Respectable brokers on the Curb have no more to do with these mushroom promoters than the honest Stock Exchange firm had to do with the bucket shop; but a definite impression of connection with a great public market is conveyed to the unwary, and the name of the Curb is being taken in vain to further a most gigantic and nefarious game.

There are really two ends to the present flotation of new mining and industrial stocks of dubious worth: There are the brokerage and the promotion. So many wildcatters have rushed into the business that even the detective agencies and the secret investigators of great financial institutions cannot name or even count them all. I asked the head of one of the leading reporting detective bureaus, which attempts to follow the crooked trail of every financial swindler, what he thought of a certain firm that had been advertising extensively.

Ordinarily this prince of financial sleuths is one of the coolest and most self-confident specimens of mankind. He gave me a look that was half angry and half bewildered. He seemed on the edge of a nervous breakdown.

"You are the fiftieth man who has asked me that question this morning!" he said. "If these people don't stop their advertising campaign I'll be driven out of business from having too much work to do."

But all these gentry—ranging from the lone adventurer with desk room in another man's office, and one stenographer, up to the great houses with their two to three hundred employees, private wire systems and salesmen on the road—work along the same general principles. The main idea is to get people in, keep them in, and keep their money. The exact machinery for doing this is what most interests us.

There is one concern that always buys stock for its customers, but immediately sells them out again. It runs perhaps a hundred dummy accounts, and the moment a customer buys stock the same amount is sold for one of the dummy accounts.

Some of these brokers never buy at all, except in a few cases where they are compelled to make delivery. When they get an order, though no actual purchase has been made, they report back to the customer that the stock has been bought "at the market"; which means at the prevailing price. Usually the report is delayed as long as possible so as to get the customer on their books at the highest price of the day. The reason for this will appear shortly.

Now, though speculators are richer than ever before, a large part of the buying of these stocks is still being done on margin. But the significant fact is that even if these brokers wanted to buy new stocks of questionable merit for their customers on margin they probably could not do so, because it is practically impossible to borrow money on such collateral.

The whole theory of margin trading rests on the existence of lenders. Brokers must borrow the bulk of the cost price of a stock—usually about eighty per cent—from a bank. The New York Stock Exchange would dwindle to a tiny rivulet of trade if it were not for this system of bank loans upon stocks. Only a few of the very richest millionaire brokers have resources enough of their own to buy stocks for all their customers. It is the banks that really make the whole business of stock speculation possible.

But the banks do not loan upon wildcat stocks. Here and there a few institutions conduct such a business; but they make the brokers "pay through the nose," as the saying goes. There are a few money-lenders in Wall Street of the pawnbroker type who will lend to brokers on the thousands of newly floated shares; but they charge at least one per cent a month when the ordinary bank is charging two or three per cent a year for loans on legitimate securities. Thus it is very difficult for the mushroom stockbrokers to buy stocks for their customers, even if they want to do so. They couldn't afford to do it and stay in business.

Heads I Win, Tails You Lose

THE central idea is to induce customers to invest, as they think, in stocks on a rising market, and to encourage them to increase and pyramid their commitments so that the margin of safety gets narrower and narrower. Then, when the proper time arrives, either directly or through representatives, the broker goes into the market and pounds down the price of the stock to a point where he can wipe out his customers. Thus, he keeps the money where it has always been—in his own pocket; for he has never bought the stock at all. Naturally the higher the price at which the stock was "bought," the sooner is the customer wiped off the books.

A curious side light upon this now extensive business is the fact that most of these brokers will never take an order to sell stock short. The reason is obvious to anyone at all familiar with the technic of the stock markets. A short sale requires immediate delivery—that is, within twenty-four hours; because the broker on the other side of the deal, who has bought the stock, insists upon having it. Consequently brokers who make a regular business of selling short must constantly have large quantities of stock in their possession which they can deliver to the buyers, or else have the resources and credit to borrow stocks. Thus it has always been that bucket shops, and every other form of imitation or parasite stockbroker, have gone broke on declining markets, because their customers began to sell stocks instead of buy them. As soon as the prices of stocks throughout the country generally begin to drop the swarm of fake brokers will again disappear overnight.

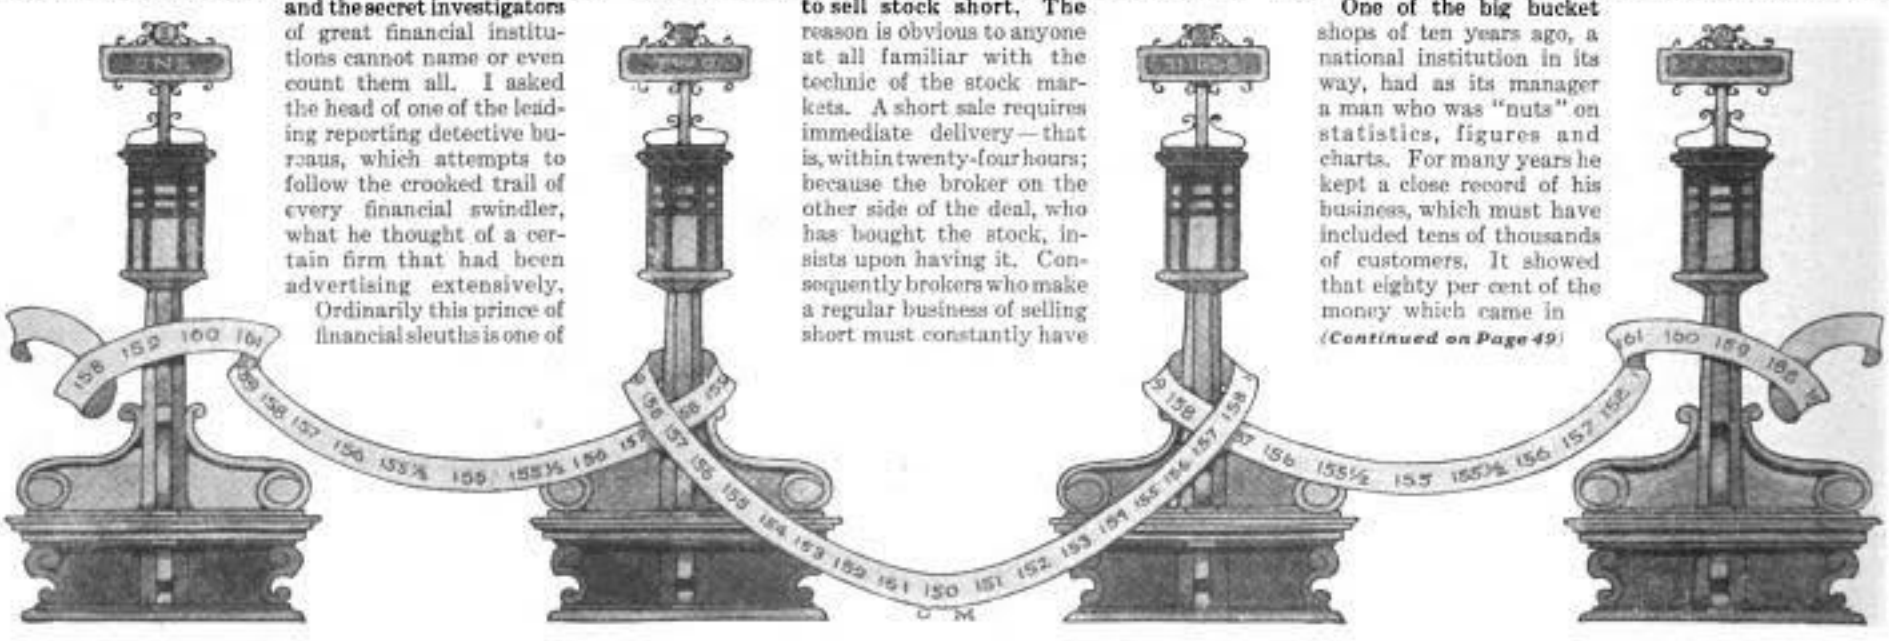
Already there are signs of retribution. Even since this article was started some brokers with small resources, but of tremendous profit to certain newspapers during their brief heyday of advertising prosperity, have been arrested. But for the larger firms the harvest of gold is still bounteous. It is true that several of the big concerns had a narrow escape not long ago. They at least suffered a premonitory chill of the fatal disease that always attacks this too-easy game sooner or later.

A mining stock, to which we shall give the purely imaginary name of Little Mary Consolidated, was boosted from the humble price of a few cents a share to several dollars. Its value was unknown; and its promoter and his associates had at all times actual control of the company.

As the stock continued to rise month after month the outside public, fairly maddened by the fortunes made in Bethlehem Steel and other war brides, rushed into Little Mary. Seeing their chance, the mushroom brokers "touted" the stock for a further rise and, with suspicious uniformity, filled their market letters and "house organs" with puffs of the stock. Some brokers did not execute the orders to buy the stock for their customers on margins, expecting that the promotion would collapse and they could with safety pocket the money.

The Skyrocket Career of Little Mary

BUT Little Mary kept on soaring and the brokers found themselves in a bad situation, with customers clamoring for stock that had not been bought. Then came anonymous broadside attacks upon the stock; reports from alleged mining inspectors to the effect that the mine was of no value were circulated. Still the stock did not fall; and as a last resort a powerful combination of brokers sold it short on an enormous scale. But they had no stock to deliver and, as the saying goes, sold into a bag. They were badly "whipsawed" and suffered big losses.



A quiet investigation at the time of this incident showed an extraordinary degree of coöperation upon the part of leaders in the underworld of finance. They not only constitute a gang—they form a perfect web. It is a dark, mysterious underground system, which is only brought to light now and then by the failure of one of its members or the occasional interruption of its activities at a single point by the police or post-office authorities.

The real principals in many firms are notorious characters in the back yards of finance. The nominal heads are often men of real or supposed respectability—even, in a few cases, persons who have held minor public offices, or at least have been candidates for such offices. The real backers or leaders are almost always ex-bucket-shop men or relatives of bucket-shop keepers who made millions in their time. Scores—perhaps a hundred concerns nominally independent and with no conceivable resemblance—are interwoven in this sinister web. Most commonly, however, it is found that the real head or backer of some concern with a high-sounding name, conducting a vast advertising and circular campaign, was formerly a manager for a now defunct bucket shop.

It is said that many of the now prosperous fly-by-nighters started with a stolen sucker list. Of course when a bucket shop or other fake brokerage office is raided by the police the wise employee, thoughtful of his family's future comfort, steals the customers' list as a last service to his fleeing employer.

One of the big bucket shops of ten years ago, a national institution in its way, had as its manager a man who was "nuts" on statistics, figures and charts. For many years he kept a close record of his business, which must have included tens of thousands of customers. It showed that eighty per cent of the money which came in

SALT OF THE EARTH

By Peter B. Kyne

ILLUSTRATED BY HARVEY DUNN

ALL this happened a long time ago, when Sinful John, Snowshoe Sam and their joint property, a yellow dog named Toby, roamed the desert country of the Far Western States and found life sweet and wholesome, though a trifle uncertain. All three partners have long since reached the end of the rainbow and will come no more to Kelcey's Wells in the fall of the year for "a time"; nevertheless, their memory is still fresh and green among the survivors of the old boom camps. And it was from such a one I had this tale of a crime accomplished in the name of charity, fraternity and elemental justice—a crime the record of which surely must have been erased from the Book of Life when the Recording Angel dropped a mirthful tear upon the entry and neutralized the ink.

Sinful John and Snowshoe Sam, as has been explained elsewhere in the chronicles of their wanderings, were prospectors who had followed the lure too long, with the result that, though they did not know it, the gold they sought became a secondary consideration. What they really wanted—what they had to have—was the silence of the desert; sunrise and sunset; saw-toothed mountain and lava scarp; the scent of the sage at dawn; and wood smoke and the odor of frying bacon in their eager nostrils at eventide.

"You Old, White-Whiskered, Toothless, Chatterin' Child o' Misfortune, Where'd You Git That There Nightgown?"

With no false convention to respect; with defeat behind them, and victory ever in front beckoning them on; possessed of immunity from the competition of life and calm in their knowledge that Mother Earth would yield from her treasures sufficient for their modest needs—Sinful John and Snowshoe Sam journeyed blithely on to the finish; for theirs was a simple code, embraced in three commandments, partly orthodox and partly natural, to wit: Thou shalt not kill—unnecessarily. Thou shalt not steal. Thou shalt not be small of heart and mean of soul. Thus fortified spiritually, they found in their primitive life an elemental peace that can be understood by those only who have walked through the purple haze into the silence.

In the beginning, of course, Sinful and Snow had regular names, like other folk, but lost them early in life; and, finding them of no particular value, never insisted on replacing them. As Snowshoe once remarked, his name was only useful when attached to a location notice; and, inasmuch as he and Sinful were in the habit of posting such notices in singularly out-of-the-way places, the opportunities for advertising their identity were negligible, to say the least—a condition which Mr. Brandon P. Hyde, of Wall Street, New York City, found furiously disconcerting when, following the expenditure of nearly ten thousand dollars in an effort to discover and apprehend the scoundrels who had sold him the Sweepstake Mine, the national detective agency he employed reported the trail irrevocably lost.

However, if Mr. Hyde will go to Weeping Water, on the trail to the old forgotten camp of Paradise, he will find one of the culprits. Sinful John and Toby sleep in the sage there under the same blanket, and a wooden cross marks their last dry camp. To the cross is nailed the end of a cracker box, and carved thereon with a jackknife is the legend:

HERE LIE SINFUL JOHN AND HIS
CUR DOG TOBY
THEIR BARK WAS WORSE THAN THEIR BITE

Here the record of Sinful John ends. As for Snowshoe Sam, he died in the Prospectors' Home down Inyo way, and lies in the local cemetery, disgraced for aye by a neat tombstone bearing the devilish announcement that here lie the mortal remains of Elmer Sampson Postelwaithe. It is to be feared that Snowshoe was forced to reveal his disgrace, when he bought his living in the Home, in order that the demands of red tape might be complied with.

Nobody ever knew why Snowshoe Sam was so called, unless it be that the nickname was meant to convey a tribute to his extremely large feet. No such mystery attached to Sinful John, however. He was called Sinful because he was sinful—that is, if one judged him by his language, which for picturesque profanity was beyond comparison. Snowshoe was in the habit of explaining to horrified strangers that Sinful, in his impressionable youth, had been a bullwhacker and later a mule skinner; and hence had come by the awful habit legitimately, as it were. Sustained by this comforting information and an intimate acquaintance with Sinful John, one presently forgot the latter's deficiency in the matter of verbal convention, and loved him for a clean-minded, simple-hearted, whimsical, gallant old soldier of fortune, or misfortune, depending on how the pay dirt ran.

For more than two years prior to the beginning of our story Sinful John, Snowshoe Sam and Toby had been attending strictly to business, dry-washing gold in some surface placer claims in that choice bit of second-class Purgatory known as Big Smoky Valley. During that period they had not been once to civilization together, Sinful John having abruptly sickened of the shams and foibles of society and declared his weariness of Snowshoe's habit of helling round and getting nowhere. Sinful was all for saving the firm's capital until a sufficient stake had been gathered, whereupon they would "take in" the Paris Exposition. He had heard tales of the delightful wickedness of gay Paree, but was desirous of ocular evidence before believing.

Nevertheless, such a picture of joy unconfined did he paint that Snowshoe's alert imagination was roused, and they had set forth with Toby and the jacks, and plenty of grub and powder, to seek a healthy road stake wherever fortune might be lurking in the mineralized sections of North America. In Big Smoky they located the dry diggings; with a dry-washing apparatus of their own invention and construction, plus the high hopes that had always sustained them, they had spent two years dry-washing the gravel down to the bedrock, and at the time our story opens the partners were possessed of eighteen thousand dollars in coarse gold dust and a tremendous yearning for the fleshpots.

Came a day when Snowshoe Sam straightened up from his task of shoveling the gravel into the dry-washer. Ostensibly he was about to spit on his hands. Instead, he tilted back his hat, ran the toil-worn fingers of his right hand through his thick gray foretop, and sighed. Sinful John heard the sigh, caught the yearning look in Snowshoe's eyes—and understood perfectly. In the desert men do not speak unless they have to, for speech shatters the silence, which is like a benediction.

Moreover, after one has adjusted oneself to the silence, speech is not vitally necessary; and this was so with Sinful John and Snowshoe Sam. After twenty years of partnership, mental telepathy had taken the place of the spoken word; so now Sinful looked sternly at Snowshoe and shook his head negatively. Resignedly Snowshoe replaced his hat, spat on his hands, took a fresh firm grasp of the shovel handle, thrust the lip of the implement into the face of the gravel, changed his mind, and faced round on Sinful, who swore dreadfully at him.

"How many times have I got to tell you, Snowshoe, that I ain't a-goin' to leave these diggin's until the scales tells us we've got twenty thousand in the poke? I'm tellin' you, you"—here Sinful essayed a flight of the language peculiarly his own, returning, after thirty seconds, to the original subject—"that a trip to the Paree Exposition is danged expensive, an' I don't aim to go there an' miss a lot o' fun just because I didn't come properly heeled. Now you quit this vain repinin' an' git to shovelin' gravel, or the first thing we know the Exposition'll be over before we've dry-washed our limit."

"Oh, to hell with the Paree Exposition!" Snowshoe shrilled in sudden, unreasonable rage. "I'm sick an' tired talkin' about it; an' I'm layin' you five to one Paree ain't what she's cracked up to be, nohow. Me—I can have a pretty good time over to Kelcey's Wells."

"That's becuz you're just plumb low an' ordinary by nature," Sinful growled. "Snowshoe, you ain't got a speck o' art in that rabbit soul o' yourn. You ain't got no more culture than a sage hen. Don't you never figger there's somethin' else in life besides goin' to town to git drunk?"

"Don't you never figger there's somethin' else in life besides meltin' away in the middle o' Big Smoky, dry-washing this hell-fired gravel?" Snowshoe retorted.

"We got a good thing, you parasite!"

"A feller can git tired o' too much of a good thing."

There was profound philosophy in this latter statement, and Sinful knew it. He was silent, pondering; whereat Snowshoe pursued his advantage:

"We're about out of matches an' plumb out of airtights, an' it does seem as if Toby'd ought to have a can o' flea powder."

Sinful John banged his fist on the dry-washer.

"Dang you, Snowshoe," he protested, "you are a-gittin' town-hungry."

Snowshoe admitted it.

Digitized by Google

"'All work an' no play makes a dull boy o' Jack,' they say," he quoted.

"It's my turn to go out," Sinful John reminded him with considerable asperity and profanity.

"I thought mebbe me an' Toby might fix up to go 'long with you," Snowshoe suggested mildly.

This was rank heresy, for Snowshoe knew their weakness quite as well as did Sinful. According to their code, neither could "go on a bender" without the company of the other. That would have been unspeakable. Consequently, following the principle of "safety first," for the past two years they had taken turns at going out for supplies; and, as a result of this precaution, the gilded palaces of sin in Kelcey's Wells had not fattened on the toil of the partners.

Sinful John, figuratively speaking, went up in the air. When he came down again he knew that Snowshoe was unimpressed. He could tell that from the dogged manner in which Snowshoe looked at him. So Sinful surrendered.

"All right!" he announced. "I ain't aimin' to make a dull boy o' you, Snowshoe, because I ain't anxious to tackle the impossible. Nature give you a head like a porcelain doorknob long before I met up with you. Now listen, you ornery, quittin', no-good son of a horse thief: I've took a vow not to tread the primrose path, as the feller says, until me an' you've got twenty thousand dollars to tread it with. I ain't longin' none for sassiety—not even your'n. From now until the day me an' you lights in Paree an' starts hikin' up the Rue de la Pakes or the Champs Ulysses—take it from me, Snowshoe—I'm pure. I know you're ——"

"I been a he-angel for two year'!" Snowshoe complained bitterly.

"Seein' which, it sorter looks as if you might stick it out three months longer," Sinful reminded him.

"But we got to have grub."

"Well, you go out to-morrow mornin' an' git it. I'll give you dust enough to buy everything we need—an' you see that you buy it. Tend to all your business first—an' then take a week off an' do your hell-raisin'. Five hundred ought to give you all the joy a man o' your age can stand."

"There ain't no fun if I go alone," the prodigal protested.

"You go alone an' you have your little spash an' git it over with," Sinful thundered. "I'm excusin' you this time. I won't be jealous, nohow. All your life, Snowshoe, you've been a weak vessel; so I reckon the time has come when you've just got to let off steam or bust. I'm plumb weary listenin' to your protests an' whinin'; an' if I got to look forward to three months more o' bellyachin' I might as well set on a stick o' dynamite, light the fuse an' go to glory. At least I'll have peace then—an' peace is my long suit. To-morrow mornin' ——"

"But Sinful ——"

"Don't interrupt me. I'm talkin'. You'll leave here light, takin' two jacks an' ridin' t'other. I'll give you four days to git to Kelcey's Wells; one day to rest up; one day to tend to business; six days to raise hell; one to take a brace on yourself; an' five days to git back to camp. That's eighteen days."

"I'll bring you back a coupler quarts o' liquor?" Snowshoe suggested.

"Wa-al, I suppose we ought to have some round—in case o' snake bite," Sinful admitted grudgingly. "Not that I'm a-hankerin' for the danged stuff."

Snowshoe nodded his comprehension and once more the gravel commenced to drop into the dry-washer. Early the following morning he took the jacks, bade Sinful a perfunctory "So long!" and headed out across Big Smoky. Sinful watched him until he disappeared in the sea of sage; then he sat down, while Toby came and laid his cool muzzle in his master's hand. "Toby," quoth Sinful John presently, "this here dog-goned Snowshoe would sure have been a fizzle as a Christian martyr, wouldn't he?"

Toby made a queer yawning little noise in his throat, wagged his stubby tail, licked Sinful's hand, looked understandingly at him, and thence out into the sage that had swallowed Snowshoe Sam. Sinful John nodded.

"I reckon you'd better go along too, Toby, an' sorter look after him," he suggested.

Toby trotted away on Snowshoe's trail.

II

LATE in the afternoon of the sixth day following Snowshoe Sam's departure for Kelcey's Wells, Sinful John, gazing out across Big Smoky, was aware of a tiny cloud of alkali dust coming rapidly toward him. While he was still wondering whether the dust was stirred up by a jack rabbit or a coyote, Toby burst from the sage and trotted, panting, to his other master. His tongue was hot and dry, and hung sideways out of his open mouth, round the fringes of which the slaver had long since dried. As he caught sight of Sinful he tried to bark his joy at the meeting, but made a dismal failure of it; he could only lean up against Sinful's shins and make queer rattling noises in his throat. He quivered with weakness.

"Well, Toby-boy, you just did make it, didn't you?" Sinful John greeted the dog. "The desert a'mos' got you this time, didn't it? Toby, where's Snowshoe?"

He carried Toby into the tent and poured some water for him. In about five minutes he gave the parched dog some more, after which he bathed him and plastered Toby's sore pads with a healing unguent that was always kept in the kyacks in case the packsaddles should gall the jacks. Utterly exhausted, Toby fell asleep, while Sinful prepared a meal for him. After Toby had eaten he fell asleep again. At midnight Sinful John woke him up.

"Come, Toby-boy," he said, "we've got to get out an' shake a leg; an' it's up to you to lead me to Snowshoe. You've had your rest, Toby. If you hadn't been plumb beat out when you got here I'd 'a' started then. I've got two canteens an' some grub, Toby. Let's hit the trail an' hit it fast."

As they passed out into the moonlight Sinful John was weeping, for he knew Snowshoe was in trouble. The jacks had stampeded, doubtless; the water had given out; and even now Snowshoe was dying—perhaps dead—on the trail. Toby would not have deserted him except as a last resort. It was terrible!

"Oh, partner!" murmured Sinful John—and this time he did not swear.

Toby trotted on ahead, paused, and looked back expectantly; whereat, to test him, Sinful John turned and pretended to go back to camp. Toby barked protestingly, ran after him, circled round him, and once, in desperation, pretended to bite Sinful's ankle. "I guess I can trust you, Toby," Sinful addressed the dog affectionately. "Lead on, pup!"

And Toby led on. Thus, in time they came to Kelcey's Wells, and at the very first saloon on the fringe of the camp Sinful John paused; a procedure Toby took small stock in apparently, for he trotted on, paused, looked back, barked once briefly and sharply, saw that he was making no impression on Sinful John, and forthwith sat down on his hunkers to scratch fleas and think it over. He did not know that Sinful, being wise in his day and generation, would have bet anybody a twenty-dollar sombrero to a chew of tobacco that in this first saloon he would glean news of the missing Snowshoe. And he was not disappointed.

"Snowshoe?" the barkeeper repeated. "Why, yes; I reckon I can tell you about him, Sinful. What's your pleasure?" And he set out a bottle and a glass.

"Then tell me about him; an' be quick about it," Sinful answered with deadly calm, and shoved the temptation away from him. "Where's my pardner?"

"Why, Snowshoe's in the Railroad Hospital."

"Who put him there?"

Unconsciously Sinful John's hand strayed to the old blue forty-five at his hip. Snowshoe's quarrels were his quarrels too; the enemy of one must needs kill both if he would survive.

"Old Man Pneumony, Sinful. Snowshoe just did make the camp, I guess. One o' the boys found him wanderin' up Main Street, drier'n a covered bridge an' talkin' to himself; somebody called Doc Bleeker, an' the doc took his pulse an' temperature, an' had him sent down to the Railroad Hospital. Word come up that Snowshoe had pneumony o' the lungs, an' Doc Bleeker says he ain't got a chance."

"Why ain't he got a chance?" Sinful demanded fiercely.

"Well, principally on account o' all the liquor he's drunk in his day—so Doc Bleeker says."

"He'll pull through," Sinful declared with conviction. "I know Snowshoe from soul to guts. Besides, he ain't had a drink o' liquor in two years."

"That there dog followed him to the hospital," the barkeeper continued. "But they wouldn't let him in; so he hung round all o' one day an' night, an' then lit out."

"He come for me." The door banged and Sinful John was gone.

The instant Sinful John emerged from the saloon Toby rose and trotted confidently ahead; nor did he pause once until he came to the Railroad Hospital, which the T. & G. maintained at this terminus of its line. It was a small frame shack, presided over by a superannuated doctor and two trained nurses. Arrived before the half-screen door, Toby promptly reared himself on his hind legs and looked in; then he scratched the screen vigorously with his forepaws and uttered a propitiatory bark; which peremptory summons had the effect of bringing to the door the nurse on duty. She was a sweet-faced girl of twenty-two or twenty-three, and to weary, alkali-laden old Sinful John she appeared, in her freshly starched uniform, as sweet as a royal flush.

"Oh, I'm glad you've come!" she declared. "You're Sinful, aren't you?"

Sinful removed his hat, held it to his breast and looked at her. There was fright in the fine old eyes. He bowed low.

"I be," he said huskily.

"I Guess I Can Trust You, Toby," Sinful Addressed the Dog Affectionately. "Lead On, Pup!"

Digitized by Google

"Sinful, I'm Tellin' You That if It Wasn't for That There Nurse You'd Be Goin' to Paree Alone"

"Snowshoe said you'd come. He said Toby would go back alone, and then you'd know something had happened and come looking for him."

"Is he—dead, young lady?"

"No; he isn't even going to die. The crisis is past now. He'll be himself in a couple of weeks."

Sinful John's chin ceased to quiver; his mouth set in hard lines.

"Might I see the wuthless cuss?" he queried.

The nurse nodded smilingly and led Sinful John into the tiny ward where Snowshoe, with a clean white nightgown on him, lay with his eyes closed. At the sound of the door opening his eyes opened also; he gazed severely at Sinful John.

"Well," he piped thinly, "what in blue blazes did you come here for, Sinful?"

"To be handed the disapp'intment o' my life when I find you're alive," Sinful roared angrily. "You old, white-whiskered, toothless, chatterin' child o' misfortune, where'd you git that there nightgown?"

"It tickles me," Snowshoe complained.

Doubtless it did; for Snowshoe had been sleeping in his shirt, or fully dressed, the greater portion of his life.

"I hope it kills you, you—you ——"

"Ladies present," cried Snowshoe warningly.

The door was pressed gently open again and a fuzzy nose was poked into the room; a bright eye appraised the vision in the bed and a short bark from Toby greeted the lost partner e'er the proprietor of that bark dashed madly into the room, leaped up on the bed and licked Snowshoe's face. The nurse, being a discreet young woman, knew Sinful John had things to say to Snowshoe; so she withdrew, leaving the partners together.

At eight o'clock that night, when she came in to announce to Sinful John that he must terminate his visit in accordance with the rules of the hospital, she found the light turned out. So she lit it again, and beheld at the foot of Snowshoe's bed a pair of miner's boots, and hanging to Snowshoe's bedpost a cartridge belt and a long gun in a holster. On the floor, beside the bed, Sinful John lay stretched, sound asleep; on the bed with Snowshoe, filling it with fleas, Toby lay, with his muzzle in Snowshoe's hand. The nurse, who had been on the desert long enough to know its children, covered Sinful John with a spare blanket and left the partners alone together.

III

"SINFUL," Snowshoe Sam declared solemnly, the day the former called to take him away from the hospital, "I've had a durned narrer squeak. I'm tellin' you that if it wasn't for that there nurse you'd be goin' to Paree alone."

"So?" said Sinful John.

Fell a silence, broken presently by Snowshoe.

"No," he declared emphatically; "she ain't that kind. She's a lady. We can't give her no new dress or bunnit, same as we would a Washoe squaw."

"How d'ye know she wouldn't like a new dress or a bunnit? Besides, I was thinkin' of a silk dress."

"Sinful, there's times when you don't show good sense. If she wears a silk dress in a camp like this, right off folks'll think she's a dance-hall gal."

"Wa-al, then, seein' as how you're so danged up on etiquette, suppose you suggest somethin'."

"What do you suggest, Sinful?"

"I don't suggest nothin'. I'm askin' you to suggest it; an' I don't give a durn what it is—provided it's right. We've just nacherly got to show our appreciation, an' there ain't a thing I hate worse than bein' a short sport when it comes to showin' appreciation. Of course we pay the railroad people for your hospital expenses an' they pay that gal what they think she's worth; but then—hell's bells!—the railroad company never gits sick with pneumony o' the lungs, so how can they know what that gal's really entitled to draw down?"

"Them's my sentiments, Sinful. I'm tellin' you that young woman ain't content with doin' what the doctor tells her to do; she goes further. Sinful, I'm tellin' you! I can't grunt at night without she's up an' awake, an' wantin' to know how about me. I can't even think I'm thirsty but she knows it before I do. Just about the time them bedsheets an' the nightgown has me driven to distraction, she's givin' me an alcohol rub to cool me off. She puts ice on my head; she curries my hair an' whiskers; she feeds Toby; she frisks me an' finds my poke an' puts it away in the safe; she goes uptown an' gets a feller to care for the jacks until you come. Sinful, every which way you figger her, that girl is allers up an' doin'. She reads to me. When I'm out o' my head an' cussin' somethin' scandalous, she ain't scandalized none. An', on top of it all, she makes me up a lot of fancy grub an' cooks it herself. An' if that ain't a hand hard to beat I'm a Chinaman!"

"Them's the things money can't pay for," Sinful John declared with conviction. "Whatever makes her take such an interest in you, Snowshoe?"

"That's what I says to her myself, Sinful. Which she 'lows as how her daddy was a prospector; in consequence of which she takes a special interest in the breed. Her name's Kincaid—Marjorie Kincaid. We both knowed her old man thirty year ago—Pyrites Kincaid. He was a big, dark-complected man; an' me an' him had an argyment once in Ballarat."

"Which it's just the mercy o' hell you don't kill Pyrites that time," Sinful declared. "He pulls first an' cuts down on you—an' his gun's emptier'n a banker's heart! I ain't never forgot the look that come in his eyes then; an' I ain't never forgot how you takes off your hat an' bows to him. 'Pyrites,' you says to him, 'I'm a-goin' to make you my debtor the longest day you live. Permit me to present you with your wuthless life.' An' then you shoves back your gun an' invites all hands to step up an' liquidate."

"We was young an' generous in them days," sighed Snowshoe.

"Which it's well we was, pardner. An', seein' as how Pyrites lived to father this here nuss, I'm a-layin' you ten to one he's paid his debt."

Snowshoe nodded and Sinful went on:

"Whatever become o' Pyrites Kincaid? Did the gal tell you, Snowshoe?"

"Why, yes. He hits the pay in Panamint, drops his roll, an' finds it again in Cinnabar. Then a swindling, sneakin' son of a hoss thief, by the name o' Brandon P. Hyde, relieves him of his million in a placer proposition down in Mexico; an' after that Pyrites don't seem quite able to come back. He loses his sperrit after he discovers there ain't no more pay in that ground than there be in Toby's whiskers."

"Salt?" queried Sinful John.

"Salt a-plenty."

"I don't rightly see how this man Hyde managed to salt the property on an old-timer like Pyrites. He ought to have guarded agin saltin'."

"Which he did; but Hyde was too slick for him. Him an' Pyrites went down to the property together; an', of course, Pyrites being worth a million dollars, it stands to reason he don't do the pannin' himself. An' he's too confident of his own judgment to hire an engineer. So Hyde has a passel o' Mexicans doin' the pannin'; an' all the time they're doin' it they're smokin' cigarettes, which the same cigarettes contain mebbe a dollar's worth of gold dust, run in with the tobacco. Nacherly when the ashes falls off the end o' the cigarette they falls into the pan, an' Pyrites finds

The Big-Game Hunt on Kenai

By HELEN VAN CAMPEN

ILLUSTRATED BY FRANK E. SCHOONOVER

I WAS in our barn soaking old Dandy's puffed forefoot in a bucket of leg wash—we are the Northern Transfer, Freighting by Horse, Dog and Launch—when Ike Bell hollered from the office that my Uncle Dan had come at last to take that hunt. And Pa and Mac—they are partners and brought me up, and Mac had to make my little dresses when we were way up at the head of the Kobuk, while Pa tended the trap line—had gone Inside to bring out a shipment of Iditarod gold over the first snow.

I streaked into the dog-harness room and switched from work overalls into my good, red tailored suit I had hung there, and fuzzed up my hair, which is black and curlyish like Pa's, though my high cheekbones are from mamma, who was Russian. Next minute I rushed out and kissed a man who was as big as Pa but not so handsome; and he had a mustache—I wouldn't allow either Mac or Pa to have one; they are germy. And he said:

"Well, well, Betsy—you have not the Kelly look, my love! And here's a gift from Aunt Nora—a dress, I think; a little—uh—quieter than that one possibly."

I said I knew it would be bully—his wife is the one who marks things "Hold for the opening of navigation," though forty times I wrote we have no ice on the Seward Run, and ships come all winter, and the gowns never have the least zip to them, and I give them to natives.

There was a Mr. Devlin with Uncle Dan, a golfy-faced, short, fattish man, in a thick green suit and a cloth hat with a green feather, though otherwise he seemed sensible. He stared up at our moose heads, telling Ike Bell he would give an ear to shoot one of that size.

All He Wanted Was to Rough It

"NOW, Uncle, Pa said if you ever came while he was away to take you on a fine hunt; and I've the first guide's license for Kenai Peninsula ever issued to a female—a nonresident, under Alaska law, must have a licensed guide at ten dollars a day down there; so we will take Ike, here, too."

"Ten a day! What rapacity!" said Uncle Dan, looking grave.

Pa had told me he was rich and careful; so I hustled to explain he needn't pay anything, nor his friend; and Ike said, why sure, this hunt was on us, and we would just get some swell heads!

"But has that little Ike chap stamina?" Uncle Dan whispered. "We'd want to travel fast and high, my love."

Why, Ike can keep up with Pa! So Uncle said then that was settled, and everybody could cook some of the time; and was it always this warm the twentieth of September? He is from Bangor, Maine.

I was going to hire a couple of packers, but they wanted to pack their own stuff, as that would be more fun; so I hurried and made a grub list, and Ike and I took them up Broadway and introduced them to everybody. They went to the butcher's with me, and Mayor Myers shook hands and cut off lamb chops and said he only wished he was going. And Uncle Dan said:

"Well, I am pretty quick of eye; and this summer Dev and I practiced, and I fired more than thirty-seven hundred rounds from my .280 caliber, high-velocity Bass rifle, at all ranges from a few feet to half a mile—the close shots offhand, others from standing, kneeling and prone positions, always using the military sling."

"I guess you're sure fit. Your brother is some shot, himself," said the mayor.

"As boys I could beat him," said Uncle Dan. "You got a fine town here."

"You like the Bass for a big gun, eh?" said Ike, and my Uncle nodded gravely; his had been specially made and cost eighty bucks.

"I took it this way, my love," he explained: "Dibbs' Hardware people knew I was coming, and I tried to get 'em to put up the gun free for the advertising my Alaska trip would give it; but they are very close people, though if I take it back unnicked and well kept Dibbs is to let me turn it in for seventy-two."

"Oh, you will meet somebody here you'll want to give it to," I said, and he looked amazed, and Ike snickered.

Mr. Devlin had begun to breathe way into himself, and then let out, saying he meant to keep it up, and asking me if I took exercises daily, as his daughter bent down a hundred times every morning, and it had made a new girl out of her.

"This is a beautiful country, Miss Betsy," he said. "Ah, I dote on mountains; and those white peaks across that bay, cleaving the blue sky—delightful; delightful!"

He would say "not necessarily" or "comparatively speaking" about everything, and had brought some specially prepared rations, and said not to put in anything extra in the food line for him; but, just the same, I did, for whether the Germans marched on it as he claimed, or not, that truck is foolish. Uncle Dan had a sack of special pellets that he told me to guard, as they were valuable.

"But, child, you won't be able to keep pace with hardy men like us," he said uneasily. "Dev walks miles golfing, and in thirty years I have not missed going on my own feet to business, no matter if I have been up; and your aunt would feel very badly if I returned without trophies. Yet I won't be able to leave you alone in a wild country—I can't do any loitering."

"He does not necessarily mean that you are not welcome, Miss Betsy," said Mr. Devlin between breathings. "But I know what my own daughter could endure."

"The kid'll be right along—put a bet on that," said Ike, and finally we all laughed; and Uncle Dan said on with the dance then; all he wanted was to rough it and be sure of moose and sheep.

By noon next day we were in Pa's big high-nosed river boat, a sled cover over the outfit, which was piled everywhere except on seats for two who must row in bad places, and room for me in the stern to run the overboard engine, and were halfway down Kenai Lake. Uncle and Ike were to row, and Mr. Devlin sprawled on top of the cargo, smoking and breathing noisily, and taking pictures.

"By my soul—delicious!" he said, beaming at the hills bright with yellowing poplar and reddened blueberry scrub. "I'll bring the wife next year."

Uncle was already looking, with Pa's best glasses, for game above the timber line of the peaks; and he told Ike:

"Oh, that Bass is a wonderful weapon! Starting at the five-hundred-yard station I would run ahead, stopping to fire from all stations to improve my wind for quick shots in the field. Now be frank with me: Is there a chance of not seeing moose?"

"Why, they'll run over you if you don't side-step!" said Ike; and Mr. Devlin cried:

"Glorious! By George, I am ready for them! I have a Bass too."

The lake was like satin, and even with a ton in the boat we made fair time; and they ate a cold lunch I had made; and when we rounded an island and a chill wind hit us Uncle exulted because he had on double-kneed Mackinaw pants, made special, like the gun, though Ike had warned him to ditch them for some light drills that would not rustle in the brush. Mr. Devlin was all bundled up in heavy wool clothes and a coat that was leather on one side and corduroy on the other, though I told him he would roast in it, and to get a stag shirt, like Ike and I wore; but you can never advise a chechako—they get talking to a clerk who once went after ducks, and it is all over.

Mr. Devlin's Busy Day

SOON the lake narrowed, and I yelled to Ike would we take the river without stopping at the Landing to say hello to the boys? And he said might as well; then we would be able to camp before it was very dark. Uncle Dan smiled when Ike stripped to his undershirt, which, with drill pants, is all he wears in the hills unless it is snow weather; and Mr. Devlin made a burrow in the grub sacks, so as to lie on his back and smoke.

"If you are nervous, maybe you ought to scrooch down more," I said, and Mr. Devlin waved a lazy hand at me. "It takes two hours through the river, and we don't stop."

"Not unless we git stopped unexpected," said Ike. "'Member last fall, Betsy, when the Murphy party spilled on Schooner Bend?—a-course they didn't savvy the channel. The water's two foot higher than it ought to be this year 'cause of the hot summer."

"Why did they spill?" asked Uncle Dan; I had stopped the engine to look it over, and a current was taking us into a narrowing stream.

"Rocks," I said. "Of course, being high, it's better for us to-day."

Then I cranked and couldn't hear anyone; but when we shot the first rapids, and Mr. Devlin abruptly got to his knees and looked ahead, Ike motioned for him to get down so I could see to steer. The Kenai River was in flood, water covering places that are usually bare, and the twelve-mile current making whirly places everywhere. I saw Mr. Devlin clutch the sled cover—he was a very pale green, matching his suit—as we rushed at a barricade of white foam.

"Row!" yelled Ike, and Uncle Dan's face set like wolves were after him, as they jerked the boat round a rock.

Then we hit—a grind and a whang-bang, which was the hinged shaft of the engine; but Mr. Devlin didn't know and he sat up and shouted:

"We're sinking! Sinking!"

"Set down, you rummy!" Ike roared, and he slammed him with an oar; and I stood for a second to be certain of the course. "Channel's changed again, Betsy; keep her dead ahead, or we—row!"

Digitized by Google

They rowed desperately, and we slewed about, rose again, grated, and came down, shipping water, into the racing flood. There was a nasty box cañon coming, where the white water frothed and sprayed high. The engine halted under the impact of a cross wave, but it went on, though the water alone could take us fast enough, and I steered for the middle, where it was deepest, and they all yelled, Mr. Devlin lying flat on his stomach and rolling his eyes and panting—the ninny! We slid off another rock getting out of the cañon, and the river widened, Ike yelling:

"Devlin, jump down under our feet and bail; we're standin' in a foot of it!"

Mr. Devlin fell into their space, and every time he would throw out a bucketful I had to laugh at his greeny face. "'S all right—don't be scared!" said Ike; and he winked at me and bailed, too, for a little.

It was certainly a lovely day, and a person with time to look back could see the white spires of mountains closing in on us; and the sun made a glistening silvery streak of the river until the next box cañon shut out everything but high dark walls of rock. Ike got his oar ready, bobbing up to look over the big bow.

"Sta'bo'd, kid—no chance; we can't make it—row!" he hollered.

Mr. Devlin Makes Himself Useful

THE shaft went bumpty-bump on a bowlder that the high water hid, and the boat tipped until water was nearly to the top of my shoepacs. I saw Ike give his oar to Uncle Dan, who had his mouth open and some of his mustache in it, and was glaring and sweating, and quite pale. Ike and Mr. Devlin both bailed, and I sent her between two pointed rocks I remembered from other trips, and just scraped one. Golly, it was fun! Uncle Dan did pretty well rowing alone, though it is a very wide boat; but he has a long reach, and when Ike would roar Uncle rowed, and I jumped her round them, until suddenly we were through the last cañon and the river split into two streams, and beyond was Skilak Lake. I ran the bow up to a gravel bar and got a can from the tool shelf and bailed; but Mr. Devlin scrambled to land and sat right down in a mudhole, sinking his face into his hands.

"You done swell, kid," Ike said, bailing fast so as to keep the bedrolls and grub from much of a wetting.

Uncle Dan was wheezing and stripping off his Mackinaw coat; and he said between heaves:

"Well, Elizabeth, my brother Al can thank his stars that I was along to-day to save your life!"

"To what?" I was plumb amazed!

Mr. Devlin looked up and tragically nodded.

"Why—lovely dove!—Uncle Dan," I said, "Pa and Sandy Cotter once came down the Kenai on two logs lashed together, and they had me and a sack of flour with' em!"

"Ain't no danger when you got a good boat," said Ike, laughing. "Had you goin', did it?"

"Not at all," said Uncle Dan stiffly.

Mr. Devlin was busy being sick.

"Why, Uncle, you looked ready to have a fit!" I said, and he just looked without replying.

Ike would glance at Mr. Devlin and wink at me, while Uncle Dan tried to find out if the bumping had loosened any seams in the boat; but it hadn't. Pa and Mac run right into anything if they are busy arguing, and we just throw her on the shore, springs, and calk with half a bedquilt.

"Look, Mr. Devlin—speaking of scenery," I said kindly. "See the long glacier to the left? That's an awful thing to get over. We walked up one year and Pa himself got tired! These are nice high mountains too—why don't you take a picture?"

He gave a dull look down the lake, muttering, and he shivered as his eye caught the river; and I got his camera and opened it, and he held it any which way and pressed the bulb—I know it wasn't a regular picture.

Pretty soon Ike said she was all skookum now, and we better be on our way as it was a head wind. Mr. Devlin got down in the bottom, pretending soon that he was asleep; but he would open his eyes and look anxiously forth every minute or so. Skilak is a long narrow lake, and the peaks on each side give the wind quite a sweep, and it would catch our bow; and, meeting the waves, we would slap, and Mr. Devlin's green hat would rise up and sink down—he ought to be in her in such a sea when she is empty!

There was no need to row now, and Uncle Dan just sat quiet, seeming to be reflecting, and not bothering to look with the glass for game. Ike smoked and grinned at me; and I would nod and think over what to get him for Christmas. Out from the lee of some little rocky islands we pounded harder, and Mr. Devlin weakly got up, and he and Uncle Dan seemed to be excited; so I stopped the engine, which slowed us, though the wind turned her right round in a minute, and I heard:

"It's not us; it's taking that young girl into peril!"

"Right, Dev—better to get ashore anywhere here," said Uncle Dan. "I am responsible to my brother for her safety, and ——"

"Uncle Dan, you are just plain scared—of nothing!" I said indignantly. "Safety, indeed! You stick with Ike and me, and we will take care of you. Now sit down!"

After a little, as we plowed along, I could hear bits of talk, Ike saying how he shot a bear on that hill once, and that would have been a bully shot for the Bass, and trying to make Uncle Dan shoot at a tree; but the latter only smiled wanly and would not. It got gray and cold as the sun slipped back of a peak, and no one said anything until when it was nearly dark I stopped the engine and called:

"Row!"

"Oh, heaven, what has happened?" said Mr. Devlin from the gloom; but Ike had grabbed his oar, and Uncle with that same glary look took his—I had merely shut off the gas so they could quarter us in to shore slowly.

And in five minutes we were all on the beach and dragging the outfit through ragged spruces to a camp site in the thicker forest. Ike started up a fire first thing, and I got water for tea and dumped cold cooked beans into a pail, cut up bread and set out a can of butter, milk, and fried a big pan of ham and made milk gravy. From under a bedroll he was carrying Mr. Devlin exclaimed:

"Dan'l, I wouldn't make that journey again for a million! It may be a long way round over the glacier, but a man's hide is worth something to him."

"Cheer up, Dev!" said Ike from where he was getting up a tent. "Or you could mush nine miles to the foot of the lake, and go down river to Kenai Town, on Cook Inlet—river runs out of this lake, y'see. But you'll lose that feelin'. Now, goin' back like we come, we got to line the boat up the rapids—two hours to ride 'em, comin', and three hard days, with the hull mob pullin' on the towline, to git up."

Ike Was Saying How He Shot a Bear on That Hill Once

"Holy Moses!" said Uncle Dan, letting his end of the tent fall.

"A man could foot it to this Kenai place, then?" asked Mr. Devlin, bringing a duffel bag, and a stick of driftwood for the fire, though I told him it was no good, and he could take the ax and find a dry standing dead tree.

"Well, if he took a shaller-draft boat down he couldn't go to sea in it from there, an' no vessels come in so he could ship it by freight round to Seward; an', again, he'd want the boat on these lakes for next year an' then wouldn't have it," said Ike, eating a flake of dried beef. "If he mushed he'd be leavin' his trophies behind. Now then, Kelly, raise your end again an' hold it!"

After we had sat round the fire and chowed, though it was windy, Uncle Dan and Mr. Devlin felt better, though once Uncle said, in a sniffy way, it was lucky he had brains enough to keep on his thick trousers in spite of advice, or where would he have been? Mr. Devlin drank a lot of tea, and remembered to breathe long some more, and after his second go of beans and ham and gravy he was telling jokes.

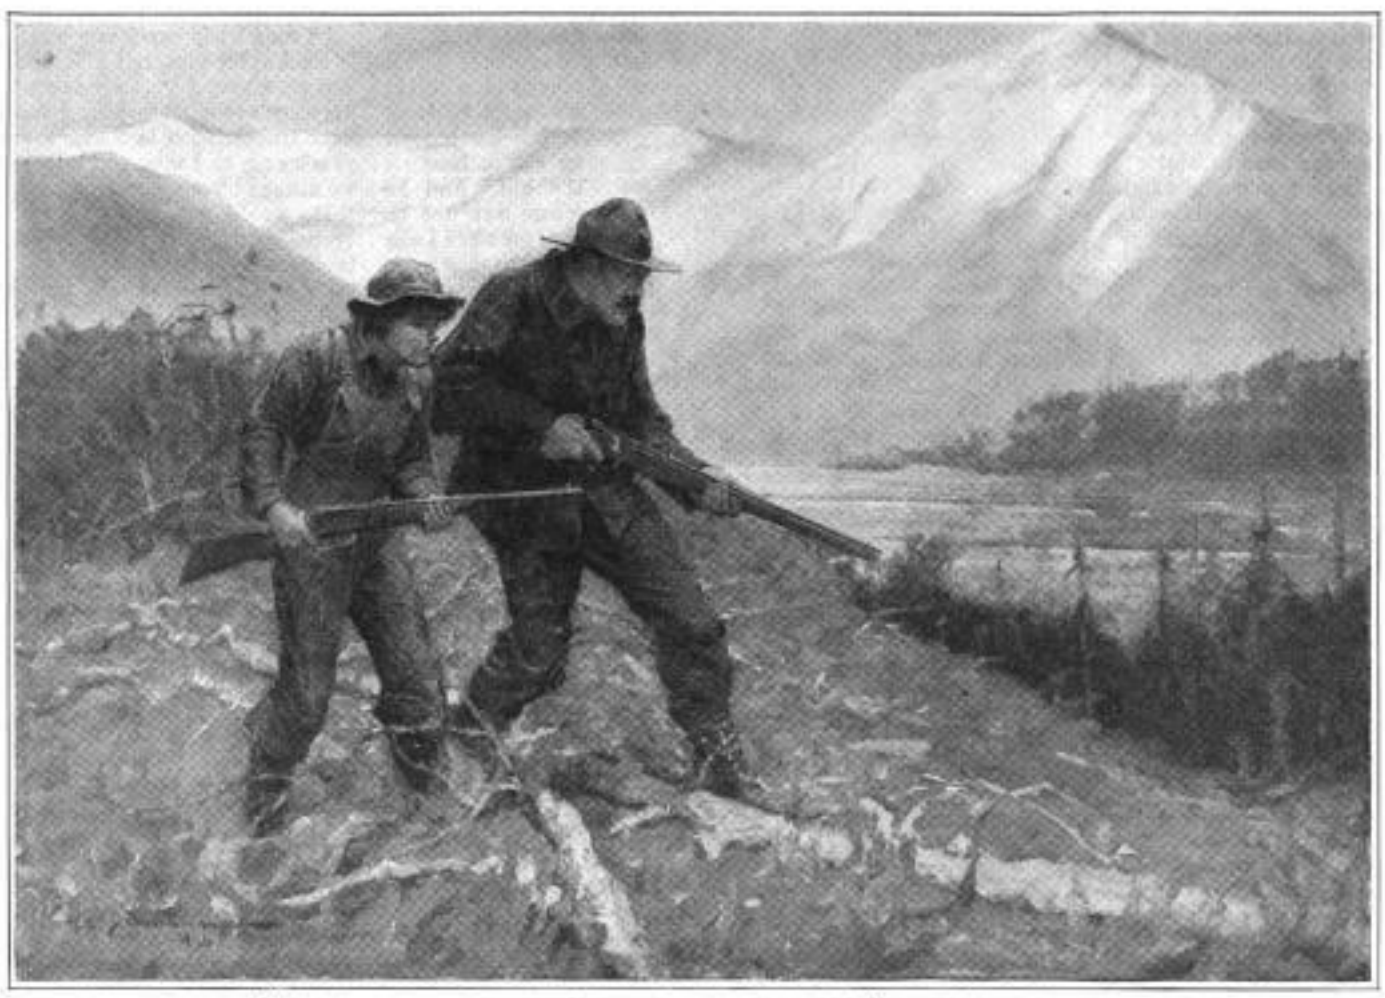
Uncle Dan Wants Statistics

SUDDENLY Ike touched his arm, and we all listened, for a moose cow was mooing in the swamp back of camp. I could have got her right up to us if I had spotted a birch while it was lighter, so as to make a horn. Uncle grabbed his rifle, and Mr. Devlin took his, and Ike had to tell them they couldn't hit anything in the dark—and you mustn't shoot cows, anyway; but they kept listening, and the mooing grew fainter as the cow moved away from her drinking spot at the lake. Uncle Dan told again about his running shots, and said:

"There must be a record kept of all shots on the trip, Dev, with distances accurately measured, and notations of the effects of shots on animals; for we shall want it to write up that piece for Trapper and Trader's Friend. The editor of it is a great pal of mine, Betsy. Who's got a pencil? I forgot mine."

"I never seen the paper," said Ike, who is a great reader; and Uncle asked me to make a note to send Ike a copy of their article on Alaskan game conditions.

By the fire we got the outfit fixed up, though some was wet, and my wolf robe just soaked; and Uncle's bag of pellets was damp too. Ike ate a handful, and Mr. Devlin said:



"Careful, man! Each is a full meal in itself!"

Shucks! I ate a bunch too. They are not bad for a relish, though Uncle Dan said:

"Betsy, do you know they cost me fifty cents apiece?"

"They ain't worth it," said Ike, and he put some in his stag-shirt pocket.

Ike and I each had a little duffel sack and our beds and stag shirts, and everyone was to pack his personal stuff and either grub, tents, stove and guns. When Ike had spread a week's grub on the sled cover, and explained how the

"The Sheep are in Those High Peaks, Uak," I Whispered. "Scrooch Down—Quick!"

Digitized by Google

Yukon stove, with the cooking stuff, except fry pans and nested buckets, and the big tent, was a one-man pack, so someone must take that man's bed, Uncle Dan and Mr. Devlin sat on the edge of things a while, and then rooted out their duffel, and said first they must have enough towels. And I said one towel each was enough—Aunt Nora had put in a dozen and Mrs. Devlin ten—and one handkerchief, and just the boots they had on, and moccasins for round camp. Uncle Dan had a rubber poncho and a big tarp, and a medicine case weighing ten pounds and full of fancy-topped bottles—why, we take only some iodine and bandages, and bichloride tablets, which are the thing for a soak for blood poisoning, and some fly-dope.

"No; I got to have the case, my love," said Uncle Dan. "Now these two whetstones and five hunting knives go—gifts, Ike, from my friend, that editor, and others who knew I was coming North—and the fishing rod; we shall want fish; also, the shotgun for birds—lay that over there. Ever use these little folding axes, Ike?"

"Naw; I never use 'em," said Ike. "We got a real double-bitted one along. See that burlap is tied round it good, Betsy."

"This compass is a need," said Mr. Devlin; and he also put out a folding saw and a toilet set in a silk case, and lots of heavy shirts, some hats, and a folding chair he meant to use in camp. "I can carry them."

Ike was to take the tent and stove and bacon, and Uncle was bound to carry grub, his own bed and duffel, and Ike's robe. The two were then to return for another load, while Mr. Devlin and I set a camp on Cottonwood Creek, which is in the middle of the moose country.

"Clever stunt, Ike," said Uncle Dan. "I'll take Betsy's things as well."

Mr. Devlin suggested taking just his prepared rations, which were done up one for a meal, as that would reduce grub weight, the very reason for bringing them; so he brought a big box up and used the folding ax, to show it was handy. The contents seemed soggy, and it was full of paper candy boxes; and he read from a label:

"Two thin slices bacon; four prunes; tablespoon ground nut meat; one disk sweet chocolate; five macaroons; one hard-tack; square Swiss cheese; spoonful seedless raisins; five caramels—eliminating all cooking."

"You tore into them beans lively for a starter," said Ike. "Why not a ration?"

"They are for the march, my dear fellow," said Mr. Devlin. "There you have the sweet to give you fuel—comparatively speaking, a man wants no more than is listed."

"We got it out of Trapper and Trader's Friend," said Uncle Dan. "There's no bunk about it; the fats, sugars and acids are all there. Let's all use 'em."

Uncle Dan Has a Square Meal

HE GOT mad when I wouldn't agree. Ike woke everyone at five so we could get away, and Mr. Devlin cut some green wood. And, as Uncle Dan was bound to breakfast on a ration, he said never mind him; but then he smelled the coffee and ham and mush, and said it might be easier this time to have that and save untying a box; so he did, and called Mr. Devlin, who was standing round and shivering, and crying what must it be like down here in winter? And wasn't I freezing in those thin overalls and light flannel shirt? Of course a person is some cold, hunting in the fall; but you keep going, and if thin clothes are wet they will dry quick.

Pretty soon he made his pack and had some left over, and went into the brush and put that on, and a lot of shells in his pockets, and a cartridge belt too. Uncle Dan wore a big .45 and had shells cached all over himself, and Pa's glasses, and offered to take my rifle; but I hid it, and Ike told him to forget trying to lug my bed, he had too much right then. But he is like Pa and stubborn, and he said he guessed he knew himself; that it would be merely pleasure, and he was a trifle too stout as it was.

I saw, when he started, his pack-straps were too wide and cutting his shoulders in two. Mr. Devlin was going to use a tumpline. When he got set, with the band over his forehead, the pack sagging far down, and his gun and a camera in one hand and the buckets in the other, though Ike wanted to tie them to his own packboard, with the stove, he saw there was lots of dew, and began all over, first putting on some slicker pants.

I slid under my pack sack, got it high on my back, and made my little silk hat loose on my head, and went up the trail after Ike. Pretty soon Mr. Devlin hollered—and he was sogged in a water hole and could not get up; so I pulled at him, and after another half mile he excused himself and swore. And I snickered and said that would be some picture, and he gritted at me, his face purple, and staggered on until he swore again and fell flat, crying could I find his knife and cut off the slicker pants? I got a bully picture of him, first.

"Lord, I am baking alive!" he said, and could breathe hard without remembering.

After another quarter mile he said to please go on and he would catch up; and later he burst out through some alders and said:

"That is twelve-dollar underwear, but it can go, for all of me—I took off my two extra suits. Also, maybe in Ontario they lug a hundred pounds from a tumpline that's cutting into their brains; but I believe it is a lie! Are you hot?"

I took his rifle, then, and a few odds that would go on my packboard; and we overtook Uncle Dan and Ike resting under a big spruce.

"Why, where's your big coat, Uncle?" I called, because he was in his undershirt like Ike.

He said very briefly he had put it on a branch and would pick it up with the second load; and when I asked was he enjoying the outing, he sighed and rose—but Mr. Devlin got snagged again, not having learned to hunt a stump or bank to rest his pack on, and then walk under it when starting.

"Well, sir, you sayin' yesterday about how you carried a hundred an' fifty pounds in the lumber country got me," Ike said, giving me his gun while he made a cigarette. "Put eighty on me, an' I got a load; but then big guys like you an' your brother Al kin make it—what you're packin' to-day feels like a feather, don't it?"

"How—how much I got now?" Uncle said in grunts, shifting his packboard, and Ike figured a second and I said:

"Only seventy, Uncle. I weighed it all on the scales last night, so I could tell Pa if you are stronger than he is. He carries a hundred and twenty-five, and has his gun, too, you know; but he said not to overload you if you ever came while he was away."

"I wouldn't know I had anything on me," Uncle Dan said, and he walked very fast; and when he saw I was right along with him he looked back and said I was a great girl, and wasn't I tired yet?

Then I wanted him to race; and he agreed and ran a little way, but stopped suddenly with a long grunt and said where was that glass?—he thought he saw a bear on the hill. And he made out not to hear me when I was ready to race some more.

Ike was delayed, pulling Mr. Devlin out of a creek, as he had tripped on a root and gone backward through some bushes into the water. Ike picked up fifty of Uncle's shells, the compass and folding ax, thinking they had been lost; but Uncle scowled and was not very polite when he took them back. I asked where was his .45?

"Betsy, I have it; it is mine anyway, is it not?" he said quite coldly.

Just the same we never saw it again during the trip! He was all scratched from willows flying back into his face. Mr. Devlin kept worrying about poisonous growths and being far from medical aid; and he was scratched too. I told him twice there is no poisonous vegetation in Alaska, and he would sigh and eat full-meal pellets, and look hungry.

"There's camp in them big cottonwoods!" said Ike after three hours, and I wanted Uncle to race; but he shook his head, though smiling a very little. Not much like Pa, who larks along the trail and hides, coming in ahead of you, and doing birdcalls until he has to laugh and gets found!

Well, I built a small hot smudge while the rest straightened up and drank from the creek; and Mr. Devlin lay flat, feebly pawing at his pack to get out a candy-box ration. I nearly spilled the coffee bucket when he gave a throaty, queer cry and found the boxes had got full of Skilak Lake; and as there had been some gasoline and lubricating oil with the water in the boat it made the melted chocolate, nuts, cheese and caramels stick round the bacon; and it smelled awful! With another moan he scrabbled them all together and staggered with them to the creek.

"Never mind, pal; we got plenty grub along," said Ike, smoking.

"Never mind? Ninety cents each! And I suffered under them eight miles!" said Mr. Devlin bitterly. "Thirty pounds—about a hundred in all, upon me!"

"Oh my, no, Mr. Devlin; we only let you take fifty-six—it was every smidge weighed," I said. A chechako always thinks he is packing more than he is.

Mr. Devlin Got Set, With the Band Over His Forehead, the Pack Sagging Far Down

The Size of a Kadiak Bear

PRETTY soon I gave him a plate of rice and raisins, and a can of cocoa and a bacon sandwich, and he came to life. Uncle just ate and was silent, except once he asked Ike who said it was only eight miles back to the lake? Ike said if he would rather omit the extra trip, forget it, and I mentioned how Pa and Mac last year made three round trips in a day; and after a sigh Uncle said:

"Not at all; not at all, Ike. I am feeling grand!"

"He can pack fifty pounds of sugar and fifty of flour," I suggested. "That makes just a nice load, and not knobby, like canned stuff."

When they were gone Mr. Devlin kept going to sleep by the last of the fire; but I shook him and made him do the heavy work, getting up the big tent. He had busted the feather half off his hat, lying flat so much. I said wasn't this a pretty place? And he answered oh, glorious indeed!—but he seemed rather absent.

We were in the only big trees in the narrow little valley, as beyond there were only a few small spruces on the steep hillsides, the rest all alders and fireweed and Hudson Bay tea scrub, and willows which were broken and chewed by moose. Ahead there showed one snowy peak. You go toward it to reach the sheep country. About every minute a rabbit would dart through camp and Mr. Devlin would grab at his gun, thinking it was a bear.

"My child, you must be mistaken as to the size of the Kadiak species of brown bear that inhabits this locality—ten-feet hides! Do you realize what that would be?"

"I didn't say every one was. Eight is a big bear if he is coming for you, but nine and ten are down here if we find them; and Pa once saw a twelve-footer, though the fur wasn't over an inch long and no good. And a mamma bear travels with last year's cubs, sometimes, and this year's also, and they will help her, of course; that is why we always have a gun along down here—you have to."

He would not move a step, then, without his Bass. Well, it is true. And they will go for a man; they do it all the time. Why, Bill Kaiser had to stay on the roof of his cabin three days once. A brownie can't climb, though it will reach for you if you don't keep going. When we had the small cooktent up—the one I would sleep in—and were setting the Yukon stove on some rocks, Mr. Devlin suddenly got pale and peered out, with his rifle ready; but it was only a wolverine and it flashed away in a hurry. There is an animal that hardly ever lets itself be seen.

"I wonder if they will be much longer?" Mr. Devlin kept saying when it was dusk; so I said I would chase down the trail a couple of miles, and he could watch the big bannock I had in the oven, and stoke the stove with some more of that green wood he had cut, and square the top of a log for us to sit on at meals.

We had brought in some boughs for the beds. He seemed to want me to stay there, and sighed. It was about dark when Ike's voice came, offering to spell Uncle with the big pack, and crying that it wasn't but another half mile.

"Hello, Unk, how are you making it?" I hollered, and he said gruffly:

"I am all right."

"Lemme spell you with it, Kel; you been slowin' for the last mile," Ike said.

"I tell you I am all right!" said my uncle hoarsely; he had cut some off the ends of his heavy pants and was in his undershirt, with no hat, and heaved like fury.

Mr. Devlin acted half hysterical when we got there, and he had burned a hand turning the bannock over, and made some terrible muck for coffee. He said a person

HALF A MAN

By GEORGE PATTULLO

ILLUSTRATED BY HARVEY DUNN

CARLITOS sat on the back steps of the manager's house, brooding darkly on the ways of women. Though he munched steadily on molasses candy, there was a frown on his brow. He and Rosie had quarreled.

"No, I won't!" he called over his shoulder. "Get as mad as you like. It ain't a man's work."

Her retort was swift. The contents of the wash-pan caught him squarely in the middle of the back, and with a wail of dismay and anguish he ducked beyond reach of more.

"You did that on purpose!" he yelled.

Rosie came to the door and surveyed the dripping boy with soft contrition.

"Oh, I'm so sorry! But how could I know you'd be there? Are you mad at me, honey?"

Carlitos said he was; he was perfectly honest about it.

"Well, why wouldn't you help me wash up, then?" she demanded.

That insult again! Carlitos took a long breath and started in afresh to tell her precisely what sort of devil she was. What he said would have scorched a sensitive nature to a crisp; but Rosie was not sensitive and she smiled kindly as she wiped her hands.

Now a smile may propitiate or it may be one to madden. The girl's stung Carlitos to frenzy. He gulped down the tears and advanced to chastise her. Yes; he would show Rosie a woman's place in the scheme of things; he would beat her up.

Forgetting that she was twice his size and could wallop the everlasting daylights out of him in a fair field, Carlitos grabbed her by the wrist and tried to apply the boot. Rosie cuffed his ears vigorously and backed him against the wall, her intent being to pin his arms above his head and then torment him at leisure, but the boy bit her on the forearm and she screamed. The noise of their struggle drew the manager's wife to the kitchen.

"For heaven's sake, what's the matter now?" she exclaimed. "Rosie, turn that boy loose! The idea of a big girl like you picking on a little fellow like Carlitos!"

The dishwasher let go by flinging Carlitos to a safe distance, and cried in her own defense:

"Pick on him? Why, he jumped on me, Miz Witherspoon! The brat's got a knife out too. Look! Oh, you mean li'l' devil!"

Mrs. Witherspoon cast one glance at Carlitos and perceived that it was so.

"Scat!" she snapped, with a stamp of her foot. "Scat, you!" And Carlitos fled.

He headed toward the corrals for sanctuary. There were three of them, with high, thick adobe walls. The feed barns formed one side of the largest; next to them stood the stables, where the thoroughbred stallions and the jack were kept. As he passed the latter's stall the beast came raving to the foot of the door. He had torn a hole in it close to the ground with his teeth, and through this aperture he now stuck his nose, snapping his jaws hopefully. The boy paused to watch the performance. A pitchfork lay on the ground. Carlitos picked it up and shoved the handle into the opening. Instantly the jack's teeth crunched on it and the boy lunged viciously.

"Cut that out!" ordered a voice, and he whirled to face the manager. "Where you been?" continued Witherspoon. "Just lazin' round as usual? Now you come alive and get busy. Take the stallions out and water 'em."

The boy proceeded to do as bidden. The brown pacer he led down to the tank because of an antipathy the animal harbored against anything astride his bare back, but the black Percheron, which weighed two thousand and fifty pounds, was a special chum. Carlitos clucked at the monster and stroked his glossy shoulder, then scrambled up by the aid of a wagon wheel and rode him to water.

He looked like a monkey atop an elephant. General Prosperity's back was about three feet across and the boy's short legs stuck straight out, but the stallion moved with an easy gait, his glistening neck arched, and Carlitos swelled like a toy balloon with pride. It was a source of annoyance to him, however, that Rosie could not witness this triumph of horsemanship.

I have recited this chapter of a morning for the sole purpose of showing from what humble beginnings a great soldier may spring. Who would ever have suspected that Carlitos would become a hero and have his deeds lauded in camp-fire song? Who, watching him suck candy on the back steps, or playing the mouth organ in the shade, while others toiled afield—who the Sam Hill would have guessed that he'd lay it all over every rival of his years in martial doings?

But he did. It's the tarnation truth.

Haven't you often noticed how that sort of thing works out? Did you never have occasion to observe that the very fellows at school whose excuse for existence seemed hardest to find got monuments erected to them in the town square?

Well, that was the way with Carlitos. All unknowing of the splendid future, he dwelt in the house of his mother at the Tumbling K Ranch, and took the stallions to water, and stole sugar from the commissary, and worried Rosie by loafing in the kitchen.

Not that the girl disliked him. No woman on earth could look at Carlitos without a warming of the heart. But there were flaws in his character—it seemed probable that Carlitos would make a poor provider. He was fond of idling in the heat of the day, and in the cool he preferred rolling dice to any form of labor. Besides all that, Rosie was seventeen and Carlitos only ten, which is really a too great disparity of age for anything serious.

Sometimes she would grab Carlitos and kiss him in the presence of the entire outfit. It made the boy see red and plan murder in his heart. He would have appreciated a little loving in the gloom of the kitchen at the going-down of the sun, when nobody was about, but with a crowd of ribald cowboys to witness the spectacle it made his flesh creep. The strange part was that Rosie swiftly slapped him when he attempted a private rehearsal on his own account. Perhaps her caresses of Carlitos were directed at Joe Rinehart, anyway. If not, what made Joe so wild, and why did he sneer so bitterly?

"You Have Heard Me Say That the First Duty of a Soldier Was Loyalty and Obedience? Yet You Have Been a Traitor"

As I have said, Carlitos dwelt in the house of his mother at Number 15, Perfume Alley. At least, it would have been Number 15 if the dwellings at the Tumbling K had been numbered. There were seventeen of the adobe huts for the native employees and they straggled along one side of a broad, grassy highway that divided them from the barns and corrals. The boys called the thoroughfare Perfume Alley because the natives lived there.

Though his name was Carlos Aviles—Carlitos is merely a diminutive of endearment—his mother's name was Elias. She had married again, so she said, and her husband was horse wrangler for the outfit. As for the father of Carlitos, his identity was always a matter of vague and disquieting speculation.

One day the boy lay on his back in the Willows, a league below headquarters, his hat over his eyes to protect them from a shaft of sunlight that pierced the low-hanging boughs—it was too much trouble to move to a spot where no light penetrated. He was musing on Rosie and her treatment of him. That very morning she had flouted him. With Joe Rinehart and another there to see, she had looped a soggy dishrag round his neck while the uncouth pair applauded.

Carlitos gritted his teeth as he recalled the scene. Did you ever love a girl so hard that you hated her? Well, he was in that case exactly.

But she would pay for it all some day! An hour of reckoning would come, and then she should see with what manner of man she had trifled. Carlitos pictured the whole thing and gloated.

Chief of a daring band whose only law was their leader's word, he would swoop down from his mountain aerie upon the helpless Tumbling K and bear the maiden off, carrying her lightly in front of him at a gallop. Arrived by tireless riding at the cave, he would put her down. Oh, the ecstasy of that moment! He could see the proud beauty nosing the dirt as she pleaded for life, the while he stood sternly over her and smiled—aye, smiled!—with disdain. Perhaps she would realize then what she had missed by spurning him; and he would lift her up and, turning to his hardy outlaws ——

Clack! It was a hoof against stone, and Carlitos came rudely out of his dreams to peer through the trees.

Three Mexicans were watering their ponies in the stream about a hundred yards off. While he watched, others joined them. They came flitting like phantoms through the grove, in couples, apparently careless of concealment. Carlitos counted twelve and got no further, for the reason that he couldn't count above that number—but he was positive there were half a million.

They were weather-beaten, ragged, covered with dust; and all carried rifles slung at the saddle. The scrawny horses seemed exhausted. They buried their hot muzzles in the creek and drank eagerly, and each moment the cavalcade on the bank was swelled by new arrivals.

Soldiers! He thrilled at the spectacle. But suddenly he asked himself what such a force was doing in the Willows—and then he thought of those at the ranch. Instantly he turned and fled out of the grove, moving soundlessly in his bare feet.

They were just sitting down to dinner at the manager's house when Carlitos burst in with the news. The boss sent his chair flying in a wild jump for the door.

"Fanny," he shouted back as he sped toward the corrals, "take the baby and Rosie, and hide. Joe, you and Lon run off the horses. Drop out a few of the condemned ones. If they don't find something it's like they'll burn the place. Carlitos, help me with the thoroughbreds."

At last he was getting his due—the boss was treating him like a man.

Carlitos sprang eagerly toward the stables.

In the main corral were sixty horses, brought there at noon in order that the few men remaining at headquarters might catch fresh mounts. Rinehart locked up a dozen of the oldest and poorest, threw wide the gate and drove the others forth. They went streaming down a draw leading eastward, the two cowboys urging them with cracking ropes, and the draw hid them from sight of anyone approaching from the Willows.

Carlitos, perched on the mighty back of General Prosperity, cantered clumsily in their wake. The boss was in front, on the brown stallion.

Digitized by Google

Prosperity was not built for speed, and he began to pant before half a mile had been covered. Witherspoon groaned as he beheld his labored efforts.

"It's no use," he said. "Take him back, Carlitos. He'll die if he goes another mile. Perhaps they won't want him, account of his size."

Glad of the order, the boy turned back. He had just reached the stables when he heard the distant crack of rifles and perceived Witherspoon returning.

"They saw me and cut across the mesa," he explained ruefully. "Gee, we're up against it hard, boy! Mind you keep your mouth shut and don't breathe a word. Understand? If you tell 'em a thing I'll flay you alive!"

He led the stallion to his stall and slammed the door, then hurried back to the house, with a view to concealing whatever valuables Mrs. Witherspoon might have overlooked in her flight. The boy kept at his heels.

The place was deserted; the dinner stood, half eaten, on the table. Mrs. Witherspoon and Rosie were safely hidden in the underground room the boss had built, after the style of a cyclone cellar, just for this purpose, and with them were two native women and the baby.

"Clear away the extra places, Carlitos," said the boss, "and me and you'll be eatin' our food peaceful when they find us."

It was done in two winks. Presently they heard a bugle, then a jangle of bits, and the patter of hoofs on hard ground.

"It's Murga and his crowd," announced Witherspoon, peeping through the window. "And he's got close to a hundred men, it looks like."

In a minute, eight or ten Mexicans approached the open back door, with rifles held at the waist, and one of them cried sharply to Witherspoon to surrender. The boss smiled genially and shoved back his chair.

"Come in, *amigos!*" he replied with hospitable warmth. "Had your dinner, yet? We was just finishing."

They looked hungrily at the food, but made no move to enter.

"Where's the general?" asked Witherspoon. "I want to pay my respects."

For answer they drew up in two lines from the door to present arms, and Black Murga strode in. He was a thickset man, with negroid lips and somber, suspicious eyes. His official killer was at his elbow, and half a dozen lesser chiefs trailed behind.

"Are you the *administrador?*" he inquired.

"Yes, sir."

"Where is everybody? What have you done with your people?"

"Ain't they outside?" asked the boss. "I left two of the boys in the corral, general. All the others are out on the round-up, forty miles southeast. The farm hands are here, though."

"But the Americans in your employ—the señora—your family—your servants—where are they?"

"My wife is visiting her kinfolks in Nogales, General," was the answer. "And the only help I keep round the house is Carlitos, here. Bow to the general, Carlitos."

Carlitos did so and the chief gave another grunt, stroking the knob of his nose.

"That's a lie," he said calmly, "but never mind. They're in the storm cellar." The boss started a feeble denial, but Murga flew into a rage.

"Don't lie to me," he cried furiously, "else I'll give you a pill of my making. Why did you hide her from us? Hey? Why do you show distrust? Do you think we are common bandits? Answer me, I say!"

"No, general. But ——"

"But you treat us as such," he fumed.

He glared at the boss. Just behind him the killer waited alertly. "Well, it doesn't matter," he continued, mastering himself by an effort that left him pale. "We will show better manners than you. All Americans are alike. What can you expect from a pig but a grunt?"

He waved to his escort to withdraw, and added as they filed out:

"I want to talk to you. And while we talk I will eat—with your kind permission. Boy, bring me a plate."

The interview lasted the better part of an hour and ended in an agreement on the following terms:

Witherspoon was to make a war loan of three thousand pesos to the cause, on behalf of the Cattle Company, for which General Murga consented to accept his check on a Douglas bank. In addition he was to provide twenty head of cattle, the saddle horses left in the corral, fifty sacks of flour, five hundred pounds of salt, thirty sacks of sugar, whatever bacon he had in the commissary, and three days' grain for the force Murga had with him.

In return, the chief pledged his word that all other property and the lives of the ranch employees should be respected, and the Tumbling K Company should be favored with his friendship.

He also consented to accept the bay stallion, worth a thousand in gold, as a personal gift, but sold the huge Percheron to the boss for a trifle of a hundred pesos, cash in hand.

Long before this happy arrangement had been arrived at, Carlitos had stolen out. Somehow he didn't like the General's restless glance, and he was not interested a bit in the ownership of the stock or flour on the place. Therefore, it happened that when Black Murga and the boss emerged—the former completely restored to good humor and slapping the glum Witherspoon on the back—they found Carlitos mingling with the soldiers.

"Colonel Moreno," said Murga to an officer, "ring the bell and summon the people."

In a moment the tiny belfry above the mess house was rocking to the clangor, and every native on the place trooped toward the sound. The majority of them had consorted freely with the raiders from their entry; the more cautious, who had something to lose, perhaps, and therefore kept indoors, now sallied out as though obeying a command, and all congregated in front of the manager's house.

Like the astute stage director he was, Black Murga kept them waiting until a trooper had brought his horse. Then he mounted and moved into their midst.

"Hear me!" he said in a deep, vibrant voice. "I come from the mountains. You are listening to the words of one who dwells in everlasting touch with the clouds. My bed is where the eagle builds his nest; my eyes rest where the eagle soars.

"Here is Erasmo Murga, the avenger of the helpless. Here is the man, my children, who has been chosen by Justice to hold its sword against oppressors. Let Justice guide us."

Frantic "Vivas!" and hysterical feminine cries greeted the speech. There was a compelling magnetism about Murga that set heartstrings throbbing. They surged forward, those humble peons, to kiss his hand and pat his horse, tears streaming down the faces of the old and the women. Seven men enlisted on the spot.

First of all to offer his services was Carlitos.

"No, no, *muchachito,*" said the chief, not unkindly. "Stay here and be the comfort of your good mother."

Abashed and crestfallen, the boy slunk away. An hour later Black Murga and his band departed from the Tumbling K, after looting the commissary to the last tin of sardines. He might be a man of the mountains, but Erasmo certainly possessed excellent business acumen, for he dispatched a trusted officer to Douglas to cash the check before Witherspoon could stop payment on it.

"They Come So Quick We Didn't Have Time to Run," Wailed Mrs. Witherspoon

Carlitos could not sleep that night. His stepfather returned home shortly after sundown, and he was in an ill humor. He gave Carlitos a beating because the boy seemed sulky, and when his mother protested he beat her too. Elias was always impartial in this respect.

Stiff and sore, Carlitos crawled under his blanket on the earth floor and pretended to sleep, but he remained wide awake, burning as with fever. Why had they not taken him? He was old enough and he could ride like a *vaquero.* Often he had heard of boys no older than himself who were fighting in the ranks. Why, that very day he had conversed with a patronizing trooper named Tomas, who was certainly not a day over fourteen years of age!

Hour after hour he tossed and turned, debating the question. He was on fire to join the rebels. The bravado of their bearing had stirred his envy; their arms and military discipline seemed magnificent to Carlitos. And Black Murga —— Was ever such a leader? The boy would have followed him cheerfully to the death.

Abruptly he came to a decision. His stepfather's rasping snore and the shriller nasal note of his mother apprised him that they were dead to the world, and he tiptoed out of the hut, carrying the blanket with him. There had been no need to dress; Carlitos usually slept in his clothes.

He went straight to Prosperity's stall. It had flashed into his mind that if he could present the Percheron to the chief as a peace offering, he would be made welcome to the army.

The gentle stallion permitted him to climb up. He clucked at him, and they ambled out of the ranch.

Drawn by huzzas and laughter, Black Murga forsook his breakfast and came out to the steps of the house wherein he made his headquarters in Sauceda. A motley procession was moving up the main street of the village, composed of citizens and troopers and camp followers and children; but the core of it was a tiny figure on a great black horse. On it came, Carlitos sitting dejectedly on Prosperity's rump, yet keeping serious and intent on his mission, while the crowd surged and eddied and jostled round him, crying greetings and jests.

"Wow, what a bigness!"

"Hi, *muchacho!* The flea and the elephant!"

"Dios, what a beast! He must eat the stuff that makes the bread swell up—hey, *compañeros?*"

The boy was wan and half famished, and the Percheron appeared to be in even worse plight. He had lost his noble rotundity, his proud head drooped, a thick layer of

Digitized by Google

congealed dirt hid his silky coat, and he scarcely bothered to lift his feet.

"What's this?" demanded Murga sternly.

Carlitos halted, raising a tired arm in salute.

"I have come to serve you, general. As for the horse, he is yours."

More laughter, in which the chief joined. Yet he looked at Carlitos with favor; it is precisely from such blind loyalty that leaders build their power.

"Welcome, *niñito!*" he answered gayly. "You have taken terrible risks; but the greater shall be your reward. Colonel Moreno, see that he gets a suitable outfit and attach him to your company. It may be he will make a fine bugler—he has the mouth and wind for one."

When the anticipated applause that greeted this sally had subsided, he went on:

"As for this mountain of flesh, my child, he would prove an encumbrance to us. Therefore, we shall eat him."

"Eat him?"

"To be sure. We are short of beef and my boys will enjoy so fine a feast."

The boy let out a wail; but there was no help for it. Black Murga had spoken, and they led him and Prosperity away.

In such fashion did he become a soldier. And to such ignominious end came the Percheron. The boy wept over his demise; but there were so many things to distract him that his grief was assuaged before nightfall, and he partook with gusto of a portion of steak from his favorite's fore quarter.

They gave Carlitos a pair of whole shoes, a new shirt and felt hat; also a rifle, and a belt with fifty-five cartridges in it. After that he got his pick of one of the commandeered horses from the ranch and became the owner of a saddle that almost held together when mended with wire.

"Now," said the sergeant to whose care he had been assigned, "take this bugle and let's hear you blow."

Carlitos put the mouthpiece to his lips and blew until his eyes popped. Not a sound could he get out of it except a hoarse gurgle.

"That is not the way. The lips should be thus. Watch me."

After that Carlitos tooted for hours at a stretch and before he went to bed had learned to extract a single long, plaintive note.

There were six hundred and thirty men in Murga's force and more than half that many women. Children swarmed all over the place. When a Mexican goes to war he takes his family along, lest he should have none on his return, and also for the reason that the wife may take care of him. He is willing to attend to the battles and parades personally, but permits the light of his life to do the camp drudgery and carry the load on the march.

About the first person Carlitos met at Sauceda was his ranch acquaintance, Tomas. There was no mistaking Tomas, once you had seen him; for he was stunted and had a cast in the left eye. Upon learning that Carlitos was now one of them, he volunteered to initiate him into their life, and as a first step thereto conducted him to his comrade, Juan, aged twelve, who figured on the roster as Trooper Juarequi. The introduction passed off very well until Carlitos, the ignorant country boy, began to stare at a six-shooter Juan wore in his belt. Now, Juan was sensitive concerning this weapon, purloined from Witherspoon's desk, and an exchange of repartee led to a fight.

Fortunately the six-shooter contained no cartridge. Still, it made a useful ally when grasped by the barrel, and Carlitos was obliged to have recourse to a stone, placed to his hand by Providence.

"You've killed him!" said Tomas, awed as much by the catlike ferocity with which Carlitos fought as by the limp form of his friend.

"That couldn't kill a flea," asserted Carlitos. "I only hit him once—like that."

He ran to the stream that flowed through the outskirts of the camp, filled his hat with water, and dashed it into Juan's face. The shock brought a shiver of horror from Trooper Juarequi; he gasped and sat up. And, of course, from that moment they were firm friends.

To our eyes the village of Sauceda and the army of General Murga, and the camp followers of that army, would have looked hopelessly unkempt, ill-equipped and ragged. There was no apparent system in anything. The whole camp seemed to be in utter disorder. Refuse, odds and ends, lay in the open street, and dogs prowled the place the livelong day. Yet there was rough method in it all.

And that was injected by the women. They prepared the meals over the little fires in the open, and quarreled fiercely about such matters as the ownership of an old lard bucket or a handful of beans. And in the long afternoons they cleaned clothes by pummeling and rolling them on the flat rocks in the creek.

"Wow!" cried one at first sight of Carlitos in all his grandeur. "Look at the pretty boy! Are we taking them from the cradle now?"

Carlitos, who was naturally quick, told the lady to go to hades and himself went on about his business, which was to accompany Colonel Moreno's command on a foray for fodder.

Ah, it was a fine, carefree, noble career! Carlitos took to it like a duck to water. He would join a group at a camp fire and revel in the tales of fights and deeds of valor, and the prodigies of Black Murga. His mouth open and his body twitching with eagerness, he missed no word. This was life! Now he was a man and a soldier.

They had cockfights every day, too, and horse races, not only among themselves but against the *saqueros* from a neighboring ranch. And sometimes Carlitos and Trooper Juarequi held wrestling matches, which proved a popular feature.

Once, when entertaining a visiting chief, the general sent for the boy to stand behind his chair and wait on him. The attention pleased the guest—he felt a lot safer with Carlitos behind him in place of one of Murga's cutthroats. And Carlitos acquitted himself so deftly that the general often had him in after that.

He was thus engaged one noon when the chief's meal was disturbed by the entrance of an aide with a report.

"Drunk, hey?" said Murga, with his mouth full. "Shoot him! It'll teach the others discipline. They need it."

And he went calmly on with his meal. From time to time he glanced at Carlitos, perhaps to see what effect the sentence produced.

"Listen, *muchachito*," he began: "You heard the order I gave. Reflect on it and profit thereby. Always keep in mind that a soldier's first duty is obedience."

"Yes, general," stammered Carlitos.

Well satisfied, the general rose from the table and Carlitos hurried off to see the execution.

The prisoner's name was Hernandez and he enjoyed a reputation among the bandits for dauntless courage; but he had got drunk while on outpost duty and was caught sound asleep under a tree by the patrol. He appeared very unconcerned as he marched in the midst of the squad to the place of execution, smoking a cigarette and joking with the captain who was to deliver the death stroke.

Carlitos stuck close to the procession. What manner of man was this that could march to his doom without flinching? He watched intently for a sign of fear, but could not detect a flicker. And on a sudden impulse he sidled near enough to thrust a fresh cigarette into the prisoner's hand. Hernandez darted a glance of surprise at him and smiled.

"Ah! Thanks, *compañero!*" he said cordially, patting him on the shoulder. Carlitos gulped and moved away.

Everybody in camp who could leave duty followed to witness the spectacle. Soldiers, women and children trooped behind the escort, which presently stopped at the wall of a ruined house. The officer in command stepped to the front and, having called for silence, made a speech.

"His Excellency desires that this should be a warning to you," he ended sonorously.

There was absolute silence during this harangue—absolute silence when he had finished. The prisoner continued to smoke the cigarette Carlitos had given him.

"Ready?" demanded the captain.

"Yes."

They stood him up against the wall and the officer advanced to blindfold him, but Hernandez repulsed the bandage.

"Let me see it done," he cried gayly. "And do me a favor, captain—permit me to give the word."

"Certainly."

The prisoner drew a couple of deep puffs while the squad took positions a few paces in front. Then his glance roved over the crowd and he smiled bitterly. Among them were scores and scores of women.

"So you come to see me die?" he said, and laid a curse on them.

Carlitos shivered as he listened. Some of the women began to whimper; a few sneaked off; the majority just stared, seemingly unmoved.

"All right!" the prisoner announced, briskly flipping the cigarette into the air. "There's just one thing more I ask—don't spoil my face, *compañeros*. Tell Lolita my last thoughts were of her—and my soul to the Unknown. Shoot, boys!"

Five rifles blazed and he dropped.

Carlitos, who had watched to the end—watched with bated breath and taut muscles—turned swiftly and ran. Stumbling and falling, he ran and ran until far beyond the camp of Sauceda. Then he cast himself down behind a bush and burst into tears.

"So she is a beauty?" inquired Murga smilingly as he puffed on an after-dinner cigar.

The boy, pausing in his task of clearing the table, launched into a eulogy of Rosie's charms. Encouraged by the stimulating applause and laughter of the staff, he talked as no little boy ought to talk. They poked fun at Carlitos, egged him on, chaffed him. The more they bantered, the more eloquent he grew. Black Murga was amused for a while and then became thoughtful.

"She is, then, such a wonder?" he asked.

They Followed Him Soundlessly Down the Slopes

THE STUDY OF FOOTPRINTS

The Bare Foot—By Melville Davisson Post

IN THE effort of the detective writers to create an infallible sleuth Mark Twain took the wind out of everybody's sails. Neither Dupin, Holmes, Lecoq, nor any of the celebrities of Nicholas Carter, could approach Archy Stillman.

He was a modest, unassuming person. He made no pretensions and, what is incredible in a sleuth, he offered no explanations. But his method was unequaled. If he were shown a footprint that had been left behind by a criminal in his exit he would examine it very closely, like a person with exaggerated myopia. He would get down over the footprint, with his face nearly touching it. He would stare at it motionless for a few moments. Then he would get up and follow the trail of that unfortunate criminal through wood and field, over hill and dale, street and alley, cellar and housetop, where there was no sign, mark, or any visible physical evidence of a track; until finally he cornered him and turned him over to the amazed minions of the law. And he could do it in the dark!

The marvelous skill of Archy Stillman was an amazing mystery until the inimitable humorist gave his charming explanation:

The detective had been marked by a prenatal influence. His mother had been pursued by bloodhounds. Her son, though giving no physical evidence of a wonderful gift, had inherited the keen sense of smell that belonged to the bloodhounds which had put his mother in terror. It was by means of this naïve device that Mark Twain ridiculed what he believed to be the exaggerated deductions of Dupin, Lecoq and Holmes.

One wonders what he would have thought of the deductions of the modern scientific criminologists.

Even the gift of the bloodhound's nose hardly puts Mark Twain's sleuth in advance of these experts. If young Mr. Stillman were shown a footprint, he could trail down the assassin who had made it; but he could tell you nothing about him. But the modern scientific criminologist can tell you all about the assassin from his footprint, so that the police have only to go out and find him.

A Real Holmes and His Watsons

WHEN the Baron von R—— was murdered in a city of Southeastern Europe, the police found on the floor beside the dead man a single track in a splash of blood. The body of the Baron, after his murder, had been placed in a chair, perhaps with the intention of creating the impression of suicide. But in going about his work the assassin had made the single footprint. The police at once sent to the university for the celebrated professor of criminology.

He came, with a group of his students, to examine the footprint.

He was a little, obese, bald man, with a military bearing, for he had been an officer in the Bohemian wars. He had a fine, acute face, with heavy, straight eyebrows—like lines of ebony set into the craggy brow—a large bony nose, and a grizzled mustache that bristled in the military fashion.

He sat down on the floor beside the single footprint, with a small metal tape and a magnifying glass, not unlike the big reading glasses to be seen in this country.

"This," he said, "is an imprint of a right bare foot, and therefore could not be that of the Baron, whose shoes have not been removed. It has a very high arch, and was made three hours ago. The man who made it was not standing still. He was walking when this imprint was made—probably leaving the room."

Then he paused, measured the print very carefully with his tape, took out a pencil and made a calculation on a blank page of a notebook, and continued:

"He is a thin man—very slender—six feet and one inch in height. He is a soldier and has been injured in the knee."

Then he looked up at the police officials.

"You can write down that description," he said, "and go out and find this assassin while I finish here, with this illustration, my lecture on scientific criminal investigation."

The police went out, with what the French call a *portrait parlé* of the assassin—a slender soldier, six feet and one inch in height, with an injury to his right knee—while the professor of criminology, assembling his students, began his lecture on how he had arrived at these precise conclusions from the single footprint before him.

SKETCHES BY W. D. I. ARNOLD

Figures A and B

He explained, first, that, where one was able to examine an imprint of any sort in blood before that medium had entirely dried, one ought to be able, by an accurate knowledge of the process of coagulation, to say with some degree of precision what time had elapsed since the formation of the imprint. In the case before him he was able to say that this imprint had been made three hours before his arrival.

Anyone could see that it was the print of a right foot. He knew the foot had a high arch—that is to say, it was unusually cambered—because the interior line of the print made a deep curve, cutting out a great segment of the print.

He explained that a flat foot would leave the whole print of the foot, but as the foot was arched the print would lessen.

Thus, in a foot with an excessive arch—highly cambered—not more than half of the surface of the foot would appear in the print. This was the case with the print before him. Consequently it was evident that the person who had made the print possessed a foot with an exceedingly high arch. See Figures A and B.

He knew that the assassin was walking at the time he made this track on the floor, because the print of the great toe was lengthened and ended in a sort of point. That was because one pressed the toe down in walking. If the track had been made by the assassin when standing still the print of the great toe would be round, because only the ball of the toe, in that case, would rest on the floor. See Figures C and D.

He went on to point out that it was always possible by the examination of a print to tell whether the person who had made it was, at the time, walking or standing still, since the track lengthened when one was in motion. Moreover, the print of the foot of one who is standing still is shorter and wider than the print of the same foot in motion. Thus, in following a track one is able to say where the person making it stopped and where he went on. This was sometimes exceedingly useful and could always be determined.

He knew that the man who had made this print had been a private in the German Army, because in walking he used the conventional goose step, which caused the foot to strike the earth in a certain manner and gave a peculiar indentation to the heel.

He knew this soldier had been injured in the knee, because in lifting the foot he had given the ball a twist to the right. This twist could only be caused by a knee injury; a certain weakening of the knee joint that one so injured invariably endeavors to assist by twisting the foot. Such an injury would perhaps not cause a decided limp; but the twist of the foot in walking would be easily perceptible.

He went on to explain that a novice in the study of footprints might be easily mistaken with respect to this feature of a print, because everybody twists the sole of the foot somewhat when he walks.

Gross, at the University of Graz, had first determined this by a series of experiments in which he caused a barefoot man to walk up a stepladder of which the steps were glass. By photographing the foot from below as it rested on the glass step he was able to determine the extent and peculiarities of this invariable twist. The experiments of Gross had been greatly advanced and improved by causing the barefoot person to walk on a flat roof laid in glass plates. This method gave more natural results, because the foot in this case was not under the unusual necessity of lifting the body up from one step to another as in the Gross experiments.

Bertillon's Laws of Proportions

THE students wished to know how the professor arrived at the conclusion that the assassin was of the exact height of six feet and one inch, and thin.

He replied that M. Alphonse Bertillon, chief of the Service de l'Identité Judiciaire, of Paris, after a vast number of experiments, had laid down a table of rules by which, if one knew the exact measurement of a certain portion of the body of an individual, he could work out precisely the dimensions of other portions of his body.

This exact table was known to everybody. One had only to measure the foot and multiply that length by its proper coefficient in this table in order to arrive at the height of the individual making the print. Relatively speaking, the height of a man was from six to seven times the length of his foot. Feet short in proportion to width took a larger multiple than those relatively long in proportion to width. But the table was approximately correct and one had now only to measure the print and apply it. Thus, if an imprint were 225 millimeters, the coefficient of reconstruction would be 6.840; and consequently the subject would be 1539 m. in height.

He was, therefore, able to say that the individual in this case was approximately six feet and one inch in height. He knew also that he was slender, because, with that height, any other than an unusually thin person would have made a wider track. Even the weight of an ordinary person of that height would have forced the foot to expand more than it was expanded in this print. He therefore felt justified in the belief that the assassin was unusually slender.

So full, precise and accurate was the description given by the professor of criminology, that he had scarcely concluded his lecture before the police were able to lay their hands on the assassin. He was a slender German, over six feet in height; his right knee had been injured by a tubercular infection, which caused him to twist his foot as he walked. And it

Figure A

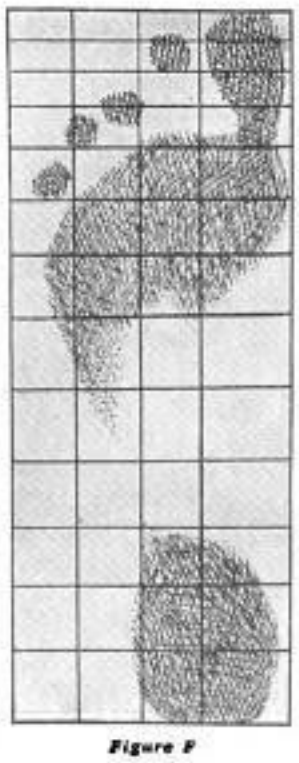

Figure F

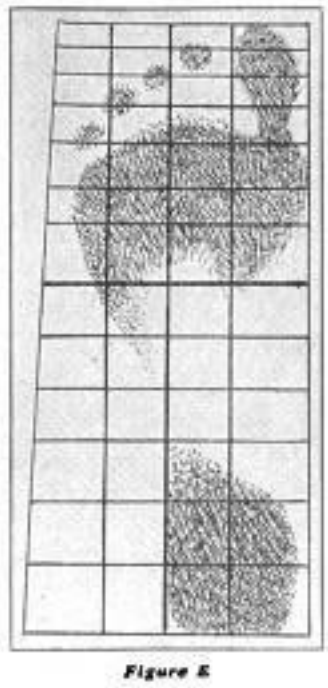

Figure E

Digitized by Google

was afterward shown that he was a deserter from a division of the German Army in Munich.

One may believe that the incidents of several experiments are assembled in the foregoing case, but one cannot believe the facts included in these details to be exaggerated or in doubt. A communicated case, especially at this time, is apt to reach us with contractions and elaborations, to gain or to lose by transmission when it is not a matter of legal or official record. But there is no observation or deduction in it that does not rest upon unquestioned scientific authority. They are established by an abundance of painstaking experiments.

The layman might believe the reading of this print to be an exaggerated deduction. But learned criminologists, like Niceforo, at Naples; Gross, at Graz; Reiss, at Lausanne; Ottolenghi or Lacassagne, know that such deductions are only the evident conclusions of the scientific examination of a footprint.

Figure D

One should remember with what skill scientists are able to reproduce a prehistoric animal by the mere study of its footprint preserved in some geological formation. The pictures and casts of strange beasts, which one regards with wonder in the museums, are often built up from the slightest data—one or two bones or imprints. By assembling all available facts, and with a comprehensive knowledge of anatomical structure, it finally happens that the savant is able to get a pretty accurate idea of the size, structure and habits of a prehistoric animal from no other data than a footprint.

Bertillon, in Paris, devoted a lifetime to working out his system of anthropometrics. Finally, as the professor said in the foregoing case, he was able to formulate a table by which, if one were given the size of any organ of the human body, he could reconstruct the individual precisely as the scientists are able to reconstruct the prehistoric animal. His table for obtaining the height of an individual from the length of his foot has been accepted after verification by the leading criminologists:

BERTILLON'S TABLE

LENGTH OF FOOT BY GROUPS OF TEN TO TEN MILLIMETERS	COEFFICIENT OF RECONSTRUCTION FOR HEIGHT
2 to 219	7.170
220 to 229	6.840
230 to 239	6.610
240 to 249	6.505
250 to 259	6.407
260 to 269	6.328
270 to 279	6.254
280 to 289	6.120
290 to w	6.080

Mascard, in 1848, read a bulletin on this subject before the Academy of Medicine, in Belgium. And in 1889, De Parville, in the Revue Scientifique, published a formula showing the relation between the length of the foot and the height of the individual: $\text{Foot} = \frac{8.6}{30} \frac{(\text{Height} + 0.05)}{2}$

This formula De Parville verified upon hundreds of individuals of all ages and proved it to be correct within the maximum of two centimeters.

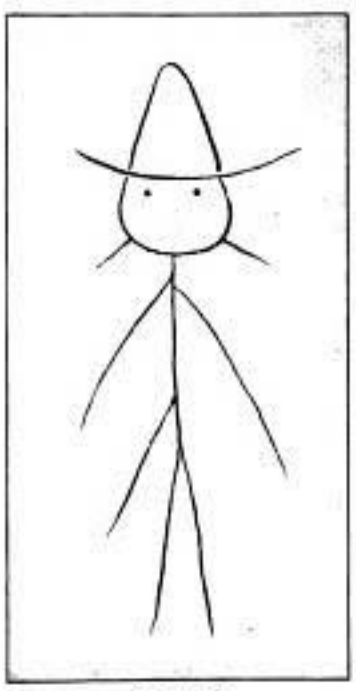

Figure 9

But a criminal investigator cannot remain content with the mere reading of a print. He must be able to preserve that print so that its peculiarities may be visible to a trial court or an examining magistrate. Moreover, it does not by any means always happen that a print exhibits the distinguishing characteristics set out in the foregoing case.

It is always possible for anybody with but slight skill in such matters to preserve the distinguishing characteristics of a print. The commonest method is to place a few pieces of pasteboard on the floor round the print and then lay a pane of glass over it—the pasteboard is merely to keep the glass from touching the print. Then one takes a sheet of paper, made transparent with oil, grease or turpentine, places this on the pane of glass and traces the print with a pencil or in ink. If no paper is available the print may be traced on the glass in ink.

A better method, suggested by Professor Florence, is to dip a bit of cotton in white lead and frost the glass. This frosting does not render the glass opaque. One may trace the footprint very easily on this frosted glass. Then, if one places a piece of black paper under the glass he obtains a very clear black print; or if he puts the glass in a solution of a certain potassium salt the lead frosting will turn black, and the result will be a first-class stereotype of the print, which one is able to take off on paper by the usual method. Niceforo, in discussing this

Figure C

method, advises one to varnish the glass in order to preserve the print.

The pantograph is also used. But one must be careful not to injure the print by this method. An optical device by which pictures or objects are reflected on paper is also sometimes used. But nowadays all criminal investigators agree that the best method of preserving an imprint is to photograph it.

Bertillon, Londe, Burais, Paul, Popp, Reiss, and others, have elevated scientific photography, in the subject of criminal investigation, to an elaborate art. However, the photograph of an imprint is no very difficult undertaking. It is only necessary to be absolutely sure that the photographic plate is precisely parallel to the plane of the print.

When Photographs Lie

FIGURES E and F show a false and a correct photograph. Niceforo, in discussing these figures, taken from Coutagne and Florence, points out that an inaccurate photograph is the most dangerous, misleading thing in the world; and that all photographs of prints are worthless unless, as has been said, the photographic plate is precisely parallel to the plane of the print when the picture is taken.

It should be remembered that a footprint does not always require a conspicuous medium in order to make it intelligible. Sweat or the natural moisture of the foot will often make a print hardly distinguishable to the eye, but capable of being developed. Mercury or chalk is used if the footprint is on a surface of a dark nature, and graphite or lampblack if the imprint is on a white surface.

A fine distinguishing footprint might be of no value whatever if one were not able to preserve it by some of these methods.

In the notorious assassination at Carmaux, on the night of the eighth of August, Causse found on a balcony the print of a naked foot. It was outside and would presently have been effaced by the rain if he had not immediately preserved it. As the case turned out, the whole solution of the mystery hung on this print. Eight persons were suspected of the crime. Causse was able to demonstrate that not one of these persons had anything to do with the affair. And it was afterward shown that one wholly unsuspected by the police was the author of the crime. It thus happened that by the preservation of the imprint eight innocent persons were cleared of the charge of murder.

A similar method was followed in the Courvoisier case, in England, and the MacPherson case, in Glasgow. In the latter the authorities found on a plank three imprints of a naked foot. They observed that it was a right foot, small, and with an exaggerated arch. This gave them a precise clew. They were able to discover all the persons who had been about the house or in the neighborhood. And it was finally shown that MacPherson was the only person whose foot could have possibly made the imprint, since it was small and with an unusual arch.

Figure 10

Some remarkable cases have resulted from the scientific observation of imprints.

The Gazette des Tribunaux gives the case of the Arab, Seliman ben Barbi, who had broken into a closed country house. The police in the morning found in the wet earth the print of a naked foot. This print indicated that the foot making it lacked several toes. The print was traced and careful reproductions were made by the police according to the scientific methods already explained in this paper. These reproductions were also accompanied by an exact, accurate description of the print.

This evidence was preserved, but it did not lead to the arrest of Seliman ben Barbi.

Other evidences connected with the affair, however, indicated that this Arab was the criminal and he was finally taken into custody. His foot showed no peculiarities and the police were not able to advance in the matter until the *juge d'instruction* forced the Arab to walk barefoot on a plank covered with mud. The tracks made by the man in this medium demonstrated conclusively that he was the person who had made the track in the garden. It proved that the peculiar position of the toes in walking caused the track of the Arab to give the impression of a foot curiously deformed by the loss of its toes.

This case conspicuously illustrates the great cardinal rule in the scientific study of footprints—namely, that a foot must never be compared with an imprint.

An inspector once came to the leading criminologist at a Germanic university and told him that he had discovered the person who had left behind a footprint.

"How do you know that?" said the criminologist.

"I know it," replied the inspector, "because the man's foot fits into the track."

The criminologist laughed in the inspector's face.

"You have fitted a foot into a track? *Mein Gott!*"

Every authority on the subject points out that one must never compare the foot with a print or undertake to fit a foot into a print. One must compare the imprint found at the scene of the crime with a like imprint of the foot of the accused taken in a similar medium, and never with the foot itself.

In many American cases, courts and examining inspectors have ignorantly gone forward with the comparison of the foot of the accused with the imprint found at the place of the crime—a thing that no competent foreign inspector would ever think of doing. The foot at rest is always shorter and wider than the foot when walking. And the most distinguishing peculiarities of a footprint are given by the way in which the subject puts his foot down and removes it when he walks. There is always a twist to a print, which the foot in repose does not show. The proper method is to take the imprints of the accused's foot under conditions as nearly resembling those of the imprint in question as possible. Thus, if the imprint is that of a man walking, the imprint of the accused must be taken walking.

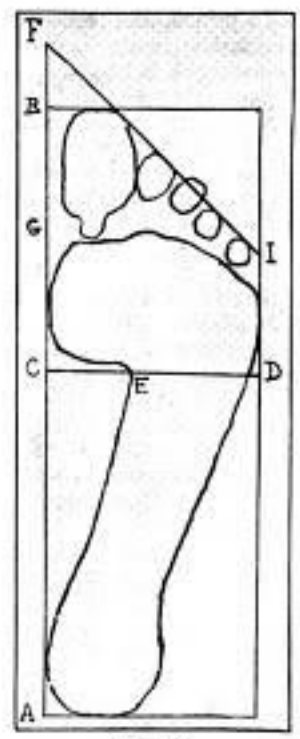

Figure 7

Niceforo, Florence and Frecon suggest a number of methods by which the imprint of the accused may be

EPHEIMER

By JOSEPH HERGESHEIMER

ILLUSTRATED BY M. LEONE BRACKER

THE glass doors of the great hall of the Conifer Arms were open to the soft purple night. A bland Southern air, spiced by the undulating miles of pines, stirred, insidious and relaxing. The Northern papers spoke of driving snow and ever-dropping mercury; but here such conditions seemed mythical—to belong to another world. The women, coming from dinner, wore sheer, simple gowns; the men, in smoking jackets, gathered over their cigarettes in the open doorways.

The latter, sun-bronzed in winter—that sign of comfortable leisure—discussed exclusively one topic—golf. They were very much of a kind—smooth-faced, youngish-looking men, given to confident pronouncements, an imperturbable arrogance of self-assurance. Though they said little about their actual scores over the near-by golf course, they radiated a certain satisfaction with their game.

One, a tall, ungainly Scotchman with unruly red hair, pale blue eyes and thick features, was briefly describing a well-timed putt.

"I lost two hundred on that green this morning," a listener added.

He was a small, thin man with a prominent nose and a level gray gaze. There were no comments on this statement; when a man, notable principally because of his fine pearls, studied the last speaker. Finally he said:

"Carter, how many will you start me up in thirty-six holes?"

Carter answered immediately:

"Three, for what you like a hole."

"Not a chance!" Arnold Sears replied. "You're handicapped at five, and I haven't even a national rating."

"You're a clever fellow, Sears," Kettel, the Scotchman, told him. "You have no rating, and yet you play one of the most useful games I know. I'll bet you are farther to the good than any other here. I'll bet, too, if you'd show an honest card it would read close to eighty-five."

"Nonsense!" Sears declared irritably. "I'm erratic, and consistency's the only other name for golf. I might bring in a good score to-day; but to-morrow —— The train must be in; there's the bus."

The conversation was dropped while the group swung about in their chairs to study what new arrivals might appear. There was an appreciable delay and then Arnold Sears ejaculated a surprised phrase. A small, exactly rotund man, with pronounced Semitic features and a cheerfully mild and inviting gaze, confidently led a companion figure, and evidently their two wives, to the registry desk.

Sears' interest faded, and he turned away. Kettel, his long legs stretched out, lamented the local necessity of hunting the privacy of a room for a drink. But Carter, lounging to the desk for mail, took a brief glance at the signatures. He returned, dropped into his chair and reported:

"Epheimer, the Mrs., and the Solly Benjamins."

II

SHORTLY after the newcomers had mounted from the hall, the uniformed house boys literally staggered into sight under mounds of opulently black-and-gold-stamped hand bags, rolls and wraps; and one dragged, in addition, a large, heavy bag of golf clubs. At this last object the expression on Arnold Sears' face changed; a carefully masked interest drew his gaze after the long, leather strapped and hooded white bag. He thought: "One look at the clubs and I can get the fellow's game to a hole. . . . To-morrow!"

Sears was midway through an excellent cigar; Carter was explaining a recondite and useful point at auction bridge—in other words, Sears was thoroughly comfortable—when a small woman in beautiful lace and with the manner of a naval commander at sea stopped at the edge of the group.

"Arnold!" she pronounced. The content instantly left the man's face; a momentary annoyance was apparent, which he hastily concealed.

"He said: 'Epheimer, keep your head down and do like I say'"

"Coming right away!" he exclaimed, crushing his cigar into the glass tray at his elbow. He rose, nodding to the others. "See you at the clubhouse to-morrow," he announced.

When Sears left, Kettel winked heavily at the men who remained.

"Good husband, and all that!" he ejaculated. "Doesn't waste the lady's money. What have you had out of him, Carter?"

"Nothing much—a trifle at bridge; a little less at golf. He's an accomplished match-maker and can putt with any."

"He's got over four hundred of mine at the Ancient and Honorable," Kettel declared; "and I don't just see where. I have thirty yards on him."

"He is careful," Carter insisted, "and he can concentrate. Sears doesn't take a chance with ten dollars on the roll. He sinks it; you have got to hand it to him. His bridge is good too—years of the best French clubs; and his poker is well above par. I don't believe he handles any sums over his winnings; the old girl keeps him flat; and that is why he is so keen and so efficient."

"I'll get it back from him," Kettel declared, rising. "I can no let a sum like that rest away from me. The old family burying ground would look like a plowed field from the twistings and cursings of earlier Kettels. If it rains in the night I'll catch him on a heavy turf."

As he moved away Carter followed him with a slightly narrowed gaze; eyebrows were raised, but nothing more said in that connection.

It did rain liberally until morning, when a steaming sunlight gleamed on the bronze boles of the pines and the sparse gray-green grass of the golf course. Kettel, in baggy rough knickerbockers and gaiters, overtook Sears as the latter was going out on the bricked veranda of the inn.

"How are you for a match this morning?" the Scotchman demanded. "You've got me so badly that I will have to double the stakes or move out entirely."

"Not this morning," Sears promptly replied. "The course will be soaked; besides, I want to look over some mail."

As he spoke, Epheimer, followed by "the Mrs. and the Solly Benjamins," stepped out into the morning. Epheimer's cheerful benevolence included every object and condition visible; he smiled at the universe, at the pines, at Arnold Sears and Kettel. "We must have our game, Solly," he told his companion. "I'll give you a stroke a hole, and then take all your credit away from you."

"I wish, Isadore, you could get a game with one of these regular players," the other returned. "It doesn't make you anything to go round with me. You have the club gold cup twice already now ——"

The conveyance from hotel to golf course drew up and Kettel climbed to a seat.

"Perhaps you'll play this afternoon?" he called back to Arnold Sears.

"I'd like to," that individual loudly replied; "but my game's so rotten now—hardly better than a hundred. You can make a match with the professional."

Epheimer turned and surveyed Sears with a personal and inviting cordiality. "But, Solly"—he turned again to his friend—"I couldn't think of giving you a stroke a hole."

The exclusive Mr. Sears drew nearer, exposing an open and friendly interest in the discussion.

III

"I HAVEN'T seen him since breakfast," Carter replied to a query, comfortably settled in a leathern chair after dinner.

"He stayed in to look over some mail this morning," Kettel continued. "I went out in a cheap foursome, got in late, hardly made my caddie fee, and he was still out of sight. There he is now."

The familiar group turned and saw Sears leisurely making his way across the hall. The latter nodded, clipped the end from a cigar and continued on his way.

"That's extraordinary," the Scotchman complained; "it's the first evening he hasn't stopped with us. I wonder what's up? Sears surely wouldn't drop out because he's ahead!"

"Oh, no," Carter replied defensively. "Sears looks closely at a bet; but he is a good fellow underneath. And, after all, he doesn't pinch a gold piece so tight as you do, you careful Scot."

"It hurts me to see a shilling misdirected," Kettel admitted. "It's an honest Highland trait. Could we have some bridge this night, do you think?"

Their eyes followed the sally of Isadore Epheimer and his companions from the dining room. Isadore, oblivious of the public's gaze, clasped his wife's hand in a frankly affectionate and sentimental manner, and the second couple followed with intertwined arms.

"Very pastoral," Kettel commented in his harsh voice. "Look; there's Epheimer speaking to Arnold Sears, and introducing him to his women."

The former was radiating sociability and satisfaction.

"My wife, Mr. Sears," he pronounced with a palpable pleasure at that conjunction; "and my good friends, Mr. and Mrs. Solly Benjamin. Mr. Sears," he continued, "is the gentleman I was telling you about who ——"

His voice was lost to the interested group across the hall. The group passed amiably down the long vista and disappeared in the direction of the evening dancing. Kettel wondered fretfully what it was all about.

The morning following he left a solid breakfast only in time to see Sears departing for the golf club in the first hack. That evening, too, the latter was absent from his customary seat, and missing to his familiars the next day. They saw him only for a hasty word, an evaded query or invitation, when he would vanish with the gait and finality of a man bent on exclusive and important affairs. It was Carter who broke the leisurely flow of the evening discourse with the first authentic news of Arnold Sears.

"I've got it now," he announced, flinging himself into a comfortable chair. "Sears had to open up to me this afternoon. . . . He's been playing golf with Epheimer." He paused, gazing at his surprised audience. "Sears let me know, because he wanted to arrange a little foursome—or, rather, because Epheimer insisted on it. Sears would have kept quiet until the end of time. It seems," said Carter impressively, "that Epheimer is worth something between two and three hundred dollars a day to Arnold."

Kettel whistled long and enviously.

"The miser!" he exclaimed—"to keep all that to himself! He should have split it up with his friends; let some of the rest of us in on it."

As Kettel contemplated the sums involved, a parsimonious greed was clear on his weather-beaten face. "How much would you have split up, Kettel?" someone gibed.

"Arnold wanted to play with me against Epheimer and the club professional," Carter proceeded. "Willie Bangs

Digitized by Google

has been teaching so much that his game has gone way off; and Sears says Epheimer, who thinks he is Braid and Vardon rolled into one, can be beaten by any fair woman. Epheimer, it seems, playing with the professional, will back his side for any amount. . . . Arnold and myself really have a very pretty chance."

"When is this holocaust to come off?"

"To-morrow—thirty-six holes; and we don't want any ribald gallery."

A marked discontent settled over Kettel; he muttered, more Scotch than usual, and consumed an inordinate number of villainous black cigars.

"Well," he shot out at Carter at the end of the next day, "did you bring it away in sacks?"

"It's never really safe to gamble against a professional," Carter replied evasively. "Willie hit some very pretty shots."

And that was all the group could get from him about the day's proceedings. Later, in spite of Sears' obvious efforts to steer Epheimer safely past the danger of his old associates, Epheimer insisted on stopping and being introduced. He was received with enthusiasm, an effusive welcome, in the warmth of which his eager cheerfulness of being glowed. This, Arnold Sears attended with a growing frown.

"My game is pretty good now," Epheimer declared confidently; "easier swing."

Kettel applauded.

"I would like to take you on, Mr. Epheimer; but, from what you just said, you would have to give me something."

"I've got a series yet with my friend here, Sears. Then I would be delighted. I might be able to give you a little if it goes as well as it did to-day. But," he added, "it seems we're wasting time right now. Couldn't a little game be arranged?"

"Can't be done," Arnold Sears put in—"that is, I can't. Promised my wife to be back in an hour." He glanced at the gold dial on his wrist.

"Well," Epheimer agreed immediately, "another time. But an hour—that's something. We could have a couple of rounds of red dog. Of course all you gentlemen know red dog."

"Never heard of it on the other side," Kettel pronounced without interest.

"Haven't played it in a club," Sears added.

"It is very simple," Epheimer told them. "We might go into that side room ——"

Kettel and Sears rose indifferently, and accompanied by Carter and two others they moved to a more secluded spot.

"The dealer doesn't play," Epheimer explained, presiding benevolently over a pack of cards. "Everyone else is dealt five, in two and three, and the pack is put, face down, on the table. But, first, we must have a bank, something to play for—five or perhaps ten cents each to start."

"Wouldn't have left my chair for five cents," Arnold Sears declared.

"And only for an hour," Kettel continued; "make it twenty-five."

Epheimer made an eloquent gesture.

"Just as you say," he agreed cheerfully. "But red dog is a treacherous game, gentlemen. I learned it from a party of Pennsylvania State Senators. Well, the pack is placed face down; then each man bets or not, as he wishes, that he has a higher card in his hand, of the same suit, than the one the dealer turns up on the top of the deck. That's all; very simple. And you can bet the whole pot or any fraction of it, taking out what you chance if you win, or losing if you fail."

A thoughtful expression crossed Carter's face. He muttered:

"Mathematical progression."

Sears said tersely:

"Shoot!"

Epheimer dealt the cards in a manner radiating eager friendliness and good will. His round face flushed with pleasure; his mild gaze seemed, beside the cool calculation of Carter, Sears' arrogant self-possession, Kettel's frowning concentration, that of an awkward youth before a trial board of vindictive seniors. Three men bet, failed to hold a winning card, and the pot contained ten dollars.

The following hand Epheimer won a deprecating risk; Carter won; but, in spite of that, Kettel plunged, lost, and the sum on the table was doubled. In a surprisingly short time the pot held ninety dollars. Kettel's expression had intensified. Sears had discarded his aloofness; he won, and then lost twice. Others won; but the pot slowly and steadily mounted, doubled and redoubled.

"Why," Carter finally exclaimed, "at a quarter we might easily have ten thousand dollars on the table in an hour!" Epheimer, studying his hand, reiterated:

"It's a treacherous game."

The bank now held two hundred and sixty dollars. A long, lean individual in shell glasses had dealt. Carter and an unremarkable example of the "tired business man" had dropped out. Kettel, after long hesitation, decided to hazard ten dollars. Sears said equably:

"I'll go the pot; now it's five hundred and forty dollars."

Epheimer added, in a rush of good fellowship:

"I tell you"—he beamed—"it's my game. I'll give you all a chance; here's the pot again. Now it is ten hundred and eighty dollars."

Kettel exposed his hand before the top card was faced, and the others followed his example. The Scotchman had four suits, but with exceptionally low diamonds and hearts. Arnold Sears had three aces—hearts, clubs and spades—and a second club and heart. Epheimer's hand was unremarkable; all suits were represented—a queen his highest card; an eight the lowest. The dealer leisurely turned the top card of the deck. It was the five of diamonds. Kettel had only the three; Sears' aces lay impotently before him; Epheimer reached out an apologetic hand. He had the eight of diamonds.

"Why," Sears burst out, after a swift calculation, "I've lost nearly seven hundred dollars at this confounded nursery pastime!"

He glared at Epheimer.

"It's treacherous," said Epheimer; "but if we start another pot perhaps you'll get it back."

"I'm off," Sears declared, rising; "hour's nearly up. I'll see you, Epheimer, at the club to-morrow."

"Not till Thursday," the other replied; "I've got to go away two days on business."

IV

ON THURSDAY morning Arnold Sears was the first player to call a caddie from the nondescript collection of colored boys, betting their two bits over a contracted course of one hole. He waited impatiently for nearly an hour, when, almost with an exclamation of relief, he saw Epheimer descend from the club motor.

"Business successful?" he asked in a decent impulse.

"I don't know yet," Epheimer replied; "maybe it will be something or perhaps it's no good. What shall we play for to-day? The last was twenty dollars a hole."

"You got well into me at red dog," Sears reminded him. "What do you think about doubling it?"

Epheimer whistled his admiration.

"You are a genuine platinum sport! But I'm no stopper; play it for forty."

Epheimer had not been constructed for the physical niceties of golf; the "follow through" was abruptly arrested by his short rotund bulk; the "top of his swing" was only achieved by a straining, a facial contortion, that made ease and accuracy difficult if not impossible. Nevertheless, he addressed each shot with the shining confidence that lures the most impotent golfers constantly forward in a rosy and immaterial hope. He teed his ball and swung with a swift, snapping jerk.

"I can never drive the first hole," he complained; "I'm all stiff yet."

Sears played his shot in irreproachable form. It was a short drive but true, and came to rest on the most advantageous part of the fairway. Epheimer had to play out of the rough; he swung a heavy mashie; an avalanche of sand rose and the ball rolled a few inches, into a more difficult position. Again a cloud of débris floated out; but the ball appeared in the course. There Epheimer, swinging himself from his feet, managed, nevertheless, to land fairly on the ball, and it flew a most amazing distance, and beyond the green. Arnold Sears holed out in five and Epheimer required eight.

But at the next hole Sears got into difficulty; his ball fell into a hoofprint and he wasted two shots. Epheimer won and grew instantly jubilant.

"It's only the first hole that gets me," he declared; "after that I am as good as anybody. The match is all square."

"With sixteen holes to go," Sears reminded him irritably.

The fellow's confounded optimism got on his nerves. Sears played with minute care, putted with precision, and won. But he again had bad luck—a longer shot than he usually played dropped his ball into water. Epheimer, who had had a lengthy but erratic second shot, addressed his next effort with elaborate caution. As he teetered over his ball, the two caddies, away at the edge of the fairgreen and at least ten yards distant from Epheimer, moved. He straightened up in a flash of indignation.

"Don't you know anything about it?" he cried. "Can you move like that when I am playing important forty-dollar shots?"

His indignation fed itself and he swore. When he was at last comparatively composed he played and hit the ball on the top. It rolled swiftly toward the green and ditch into which Sears had blundered, but at the edge of the water struck a mound and jumped safely to the green.

"How's that?" Epheimer demanded, delighted. "Rolled it right up to the flag! A four on a par five hole!"

"You were shot in the eye with luck," Sears told him brutally.

Sears was seriously annoyed; already mishaps had cost him eighty dollars. He put the past holes out of his mind and settled solidly to the winning of what remained. As Carter said, Sears' game was not strong but accurate; he rarely needed seven for a hole, though he seldom got a three. Epheimer, contrarily, often took seven—even eight; but on a short hole he required only two. He occasionally drove a long ball, putted sometimes in luck, but went to pieces completely when approaching the green.

They were now on the fifteenth green and Arnold Sears was six up—two hundred and forty dollars ahead. Epheimer studied his bag. *(Continued on Page 65)*

How Much and Who Gets It

By WILL PAYNE

CARTOONS BY HERBERT JOHNSON

THE other day my friend Penfield was reading the annual-review section of his daily newspaper. It was like rereading the story of Aladdin and His Wonderful Lamp. It said the foreign trade of the United States had nearly doubled in two years and a half, rising to eight billion dollars, which is much more foreign trade than any other nation ever had. It said bank deposits had climbed well over the twenty-billion-dollar line, which is miles above high-water mark for any other country. It said our factories, mines and railroads were doing much more business than ever before, and far more than any other country ever did. It said labor was more fully employed than ever, and at decidedly the highest wages ever known. It gave a long table of wage increases during the last two years that footed up into the hundreds of millions; and it pointed out that farmers, whether they raised wheat in Minnesota, cotton in Texas, potatoes in Maine or beans in Michigan, were getting the highest gold prices on record for their products.

That review was a regular orgy of wealth. It looked like the jewel scene in a musical spectacle, where everything is gold except what is diamonds, pearls and rubies.

An Old-Fashioned Family to Support

Having read it Penfield went downtown in an amazed and admiring frame of mind. On the first corner a person without an overcoat touched his arm with a blue hand and asked him whether he would give a hungry man a dime. Down a cross street he saw a large sign, affixed to the Elevated Railroad structure. It said that, though Christmas was over, poverty was not; cold weather brought much suffering to the poor, and the United Charities would gratefully receive his contribution. In his evening newspaper he read that forty thousand men and women had gone on strike, alleging that they couldn't live decently on their wages.

All of which set him to thinking. Penfield is fifty years old. His salary is considered quite handsome by those who get less and quite magnificent by those who pay it—though any one of the latter would be appalled by the prospect of having to live on it himself. Penfield and family consider it rather pindling; but, with good management, it suffices and leaves a bit over for the stocking every year.

Those Untouched by Boom or Panic

HE REMEMBERS, as a boy, having received vague impressions of terrible doings down-east, with machine guns on top of freight cars and some strikers shot. Later on he connected those vague impressions with the panic of 1873 and the hard times ensuing. He remembers distinctly long queues of somewhat shabby persons at the doors of savings banks—reaching down the street a full block and vigilantly kept in line by policemen—during the panic year 1893, and in the next three years other queues of still shabbier persons at the doors of free soup kitchens; also, in those years, the phenomenon of Coxey's Army of the Unemployed, from which the newspapers derived much amusement.

He remembers a panic in 1907, with much unemployment and industrial depression for some time thereafter; and he remembers various boom periods, like 1900, 1906, 1912 and 1916. Penfield himself has never been either panic-stricken or boomed. So far as he can see, it has never made five cents' difference to him whether the country was floundering in the deepest trough of depression or riding the topmost wave of prosperity. His business requires him to travel a great deal, and he has the usual assortment of acquaintances.

Among those he knows well enough to have any definite idea of their material circumstances he cannot recall one who was ever personally hit by panic and depression. He knows a few who, through lucky investments or speculations, or a swift expansion in business, have got a piece of boom; but much the greater number of his personal acquaintances, like himself, have gone on just about the same in good times and bad times. If here and there one has got moderately rich it has been through a continuous stable process—the steady growth of the enterprise he was connected with or a steady application of ability and judgment—and not because of a boom. If here and there one has got very poor it was plainly because he was foolish or dissipated, and not because of hard times.

If he had to rely upon his own personal touch with the world he would say that good times and bad times are mostly mere figures of speech. But he feels bound to admit that his immediate personal experience isn't adequate, for he belongs to that class which those less fortunate call well-to-do, and much the greater part of his personal acquaintances belong to that class. He knows that to the shabby persons at the free soup kitchens hard times are no mere figure of speech. As he is out in the country more or less every year, he knows that boom is a very solid reality to the farmer who gets twenty cents a pound for his cotton instead of ten, or a dollar and ninety cents a bushel for his wheat instead of ninety.

Admitting that boom and panic are not mere figures of speech, then, and reading that for two years this country had experienced such a boom as never before fell to the lot of any country, he was possessed by a curiosity to find out as nearly as possible what a great boom really came to; how much wealth it tangibly meant to anybody; and who got it.

Like most men with sufficient curiosity to read at all outside the realm of fiction, he had read some of the popular writings on economics—that is, John Stuart Mill, Karl Marx—at second hand—and Henry George. From reading them he had formed an opinion that wealth is not only distributed with monstrous inequality but that its inequality is progressive, the rich ever becoming richer and the poor poorer.

When he took up the subject again, on a somewhat more extensive scale, he was shocked to learn that in the judgment of those who profess to speak with authority the deductions of Mill, Marx and George as to the distribution of wealth are no more scientific than is Thomas Hood's celebrated poem, The Song of the Shirt. Mill, these authorities said, had no adequate data for a scientific study of the subject; Marx was not much better off; and to Henry George it was all so obviously a question of land monopoly that it hardly needed argument in detail.

They saw a monstrous inequality—a few men, relatively speaking, who were very rich and obviously getting richer, along with an increasing number of men who were very poor; so their writings tended to inspire an easy, impressionistic deduction that as the rich got richer the poor got poorer; that a few hogged nearly all the wealth; and that it was precisely the very rich who kept the very poor in their calamitous state.

But it occurred to Penfield that this deduction, drawn from the two extremes, took no account of a large social territory in between; and so could by no means be regarded as an adequate study of the distribution of wealth. He was not rich or poor; nobody whom he personally knew was very rich or very poor. In the course of a year he saw a great lot of people who were neither rolling in affluence nor pinched by poverty.

Turning to the census reports, he found that the wealth of the United States in 1910 was about a hundred and sixty billion dollars, and by far the biggest item in it which could be definitely allotted with regard to ownership was farm wealth, consisting of farm lands, buildings, tools, machinery and livestock. This came to over forty billion dollars, or, roughly, one-quarter of the total.

There were over six million farms. Nearly four million of them were worked by their owners. He knew from his own observation that ownership of the remaining farms, which were worked by tenants, was widely distributed. He concluded there must be five million farm-owning families in the United States; and, as the census said there were twenty million families altogether, that would be one-quarter of the total. One-quarter of the families owning one-quarter of the wealth were, therefore, in just the ideal position.

The Wealth in the Hands of the Few

MOREOVER, census reports showed that this farm wealth had increased as rapidly as total wealth. The census said that over nine million families out of the twenty millions owned the homes in which they lived. Nearly one-third of these homes were mortgaged, and no value was stated; but even a humble home with a mortgage on it is that much rescued from plutocracy.

In the economics department of the Public Library Penfield found a dozen or more volumes dealing at large with this subject of the distribution of wealth. He also invariably found that if the volume was written in a sober spirit, and by a person well qualified to deal with the subject, it began by explaining that data were not in existence from which anybody could compile a really satisfactory statement; all the most competent and best intentioned investigator could do was to make a more or less shrewd guess, based on inconclusive information. He discovered further that, though the best qualified writers approached the subject in that modest and apologetic spirit, some writers who were not very well qualified handed out cocksure conclusions.

A somewhat elaborate study of the subject ten years ago resulted in the guess that one per cent of the population owned over half the wealth—more wealth, that is, than the other ninety-nine per cent of the population owned. By a few graceful transformations this presently flowered into a bald declaration that one per cent of the population owned ninety-nine per cent of the wealth. Penfield remembered having encountered that declaration more than once.

But he cared less about wealth than about income. It was income that his family lived on—and every other family. Give him a guaranty of a satisfactory salary for the remainder of his life, and he would care little about owning anything. He knew quite a lot of men who occupied rented houses and owned nothing worth mentioning, yet who lived decidedly better on their salaries than most property-owning farmers did.

So far as he could see, there would be only a sentimental objection to letting Mr. Rockefeller own all the wealth in

Digitized by Google

the country provided the people could manage it to suit themselves and enjoy the income from it. If there were poor people, what they needed was not wealth, but income. Clearly distribution of income was much more important than distribution of wealth.

With that idea in mind he turned to the income-tax returns. The surtax, he found, begins with an income of twenty thousand dollars a year, which at five per cent would be the yield on a fortune of four hundred thousand dollars—or, at four per cent, on five hundred thousand. Certainly nowadays nobody who hasn't a fortune of half a million or an income of twenty thousand can hope to be considered very rich. Even a man with a million dollars is not considered very rich now. In popular writing those who are untowardly and obnoxiously rich—and so presumed to be hogging most of the goods—are always referred to as multi-millionaires. Surely, then, any income of less than twenty thousand dollars might be regarded as in a state of innocence.

In 1915 surtax was paid on a little less than one billion dollars of income, from twenty thousand a year upward. But the professional economists whose writings Penfield consulted warned him that he mustn't lean very heavily on income-tax returns. They pointed out that the manner in which the tax is levied made the returns valuable as indications, but hard-and-fast conclusions could not be drawn from them—though there was a reasonable presumption that big incomes were more fully reported than comparatively small incomes, because a big income is almost always conspicuous.

What Foreign Income Taxes Show

HE FOUND that recently Prof. W. I. King, of the University of Wisconsin, published the most comprehensive study of the distribution of income which has yet been made, the investigation including an examination of all previous publications on the subject. From all information available Professor King constructed a table—admittedly made up in large part of more or less arbitrary estimates—from which it appeared that in 1910 incomes in excess of twenty thousand dollars a year came, all told, to a little less than three billion dollars. As the total income of all the people of the United States came to thirty billion dollars, this would be somewhat under ten per cent of the total.

For more than seventy years—not counting the first experiment a century ago—England has had an income tax. It is far more inclusive than ours, because it begins with incomes of eight hundred dollars a year. There is an elaborate system for catching incomes at their source. Long experience and careful study have made the British Government very expert in unearthing incomes.

Thus, while the total income of all the people is estimated at twelve billion dollars a year, more than five billions, or forty per cent of the total, is covered by the income-tax returns. Those returns, therefore, are far more valuable for studying the distribution of income than any figures applicable to the United States are. And England is an industrial country, organized about like the United States and with income distributed in about the same way. The British income-tax returns show that incomes in excess of twenty-five thousand dollars a year amount to about six per cent of the total.

Germany also has a pretty fine-webbed income tax, which it enforces with the ruthless thoroughness for which that country is famous. Its returns show that incomes in excess of twenty-five thousand dollars a year amount to about six per cent of the total; and Germany is an industrial country, organized much like the United States. Available information from all three countries would put the income of the "rich" at not over ten per cent.

That involves, of course, a gross inequality in distribution of income, for the persons who enjoy this ten per cent of the total income amount to only a small fraction of the population.

Suppose—Penfield thought—some delectable scheme of social reformation succeeded in taking away the income of the rich and distributing it pro rata among those who were not rich. The income of the latter obviously would be increased somewhat less than ten per cent—and their problem of paying the rent, the grocer and the doctor would be substantially just what it had been before. An increase of ten per cent in his income, he knew, wouldn't change his problems in any material way. But he was already considered comfortably off.

Suppose people in his class got no share in the distribution. Say the income of those who got twenty thousand dollars a year and upward was distributed pro rata among the families that got less than two thousand dollars a year. The income of the latter, comprising by far the greater part of the population, would be increased less than fourteen per cent and their economic problems would remain pretty much what they had been before.

As, by these calculations, ninety per cent of the income was distributed among those who were not rich, it struck Penfield that there had been too much bothering about the rich, and for practical purposes they might almost as well be left out of the account altogether. Evidently the rich were very far from hogging most of the goods—however much they might like to.

Suppose all the income was divided equally among all the people. The census said there were twenty million-and-odd families averaging four and a half persons each. That didn't exactly satisfy Penfield, because he knew that, for income purposes, a lot of unmarried self-supporting men and women belong to no family group. He found a calculation that divided the population into nearly twenty-eight million income-receiving units. A total income of thirty billions divided equally among twenty million families would, of course, give fifteen hundred dollars a year to each. Divided among nearly twenty-eight million income-receiving units, it would give each of them about eleven hundred dollars a year.

That reminded him of his nephew, Ben, a young man employed in a clerical capacity in a big bank, at a salary of a hundred and twenty-five dollars a month—or just the fifteen hundred dollars a year an exact division among the census families would give. Ben's family consists of himself, a wife and a year-old baby. They occupy a four-room apartment far out in the northwest section of the city. Ben's wife takes care of the baby and does the housework herself, except when a woman comes in once a week to wash, and another woman comes in every Thursday afternoon to catch up with some arrears of heavier housework and to mind the baby. That is the only time Ben's wife has to run downtown or call on a friend. The young pair can very seldom go out evenings, for there is the baby.

Penfield, with very well-settled notions about thrift, couldn't see that they were extravagant in any respect; yet every month it was nip and tuck between the pay check and the living expenses.

True, they paid thirty-three dollars a month rent. But when Penfield looked over some of the habitations they could get for less—which were stove-heated, or in dingy buildings in dingy neighborhoods, or very inconvenient with regard to transportation—he couldn't blame them. Their clothing cost more than was necessary to protect them from the weather; but, remembering that he felt uncomfortable in conspicuously shabby clothes, he couldn't blame them for that. They ate very simple food, prepared in simple fashion. Their expenditures for amusements, including car fare for social calls, were not over five dollars a month. There was only one child, requiring nothing, as yet, for education.

When Penfield expanded Ben's family to the average four and a half, with a couple of well-grown children going to school and wearing out shoes at an appalling rate, then wanting to go to college—and looked over his own family budget, with a daughter in high school and a son at college—he concluded that fifteen hundred a year for a city family nowadays was just thinly veneered poverty.

Not Enough Wealth to Go Round

OF COURSE he found a good many careful calculations as to what a family of four and a half could live on; they mostly agreed that, on a basis of prices somewhat lower than now prevails, such a family in a big city could live decently on somewhere from eight to nine hundred dollars a year. But when he looked over the items of this "decent" living he saw it meant mere subsistence. For that a family could get a tight roof over its head, enough clothing and fuel to keep it warm, enough food to nourish it—and so be as well off as a cave man; except that the cave man had a lot of exciting sport and much leisure to contemplate life.

Penfield knew well enough, without asking them, how absolutely indecent and utterly impossible his own wife and children, to say nothing of himself, would regard such living.

The trouble, he concluded, was not at all that relatively few rich men hogged nearly all the goods; but that there were too few goods. With all the income equally divided the country would still be poor, and no one could live in a way that he or anybody he knew would regard as adequate. What was needed, he opined, was greater production of wealth—greater income.

He went at it, then, from a different angle. There was the census report on manufactures, showing a little more than seven million wage-earners employed—that being the average number during the year—and total wages somewhat above four billion dollars. That would give an average wage of five hundred and eighty dollars a year, or less than fifty dollars a month, and evidently too low. But, taking the total gross income of manufactures—that is, the value of all the products turned out during the year—and boiling that down to a single dollar, he found that fifty-nine cents of it went for raw materials consumed in the factories; nine cents went for miscellaneous expenses, including taxes; five cents plus went for salaries—divided among nearly a million salaried employees—and about seventeen cents for wages. Taking the fractions into account, practically ten cents remained. Out of that should come a charge for depreciation of plant. The remainder should be regarded as going to capital—for rent, interest, dividends and surplus.

On any reasonable calculation for depreciation, then, if the total share that went to capital in

(Concluded on Page 61)

Nobody Loves a Rich Man

WITH CANADA AT THE SOMME

By WILL IRWIN

SOME of the Canadian divisions were resting in the peace trenches when we saw them in November, and some were still in the fiery muck of the Somme. "Resting," as they use the word, is only a comparative term. In November last there were two great areas of blazing action along the great line—the Somme and Verdun. Elsewhere proceeded the same old winter trench warfare. The very intensity of the Somme and Verdun actions had drawn much of the vim from this fighting; it proceeded perfunctorily, especially in the sectors defended by the Saxons, whose motto is "Live and let live." A Canadian captain, just back from his turn in these front trenches, came one night into a headquarters where we were visiting. He had been through the mill with Canada since the first—the gas attack of Second Ypres, the long five months of passive endurance under concentrated fire on the Ypres Salient, and finally the indescribable battling at the Somme. "Well, thank God for peace!" he exclaimed as he threw off his pack.

And one afternoon, when a glimpse of sun gave a chance for observation, we climbed to a ridge from which we could view the bloodiest sector of the old line—Notre Dame de Lorette Ridge, all one great graveyard, where skeletons lie unburied in the shell holes; the curve—like a light surf on the beaches—of Loos, where Britain got at cost her education in trench warfare; the battered, deserted mining villages that fringe Lens.

While we watched the British were bombarding desultorily; and presently seven great, wide-spreading British aëroplanes, back from a raid, came coursing out of the clouds and crossed the line. The Germans, of course, fired on them—fired high-explosive shell, which bursts sharply, trails black smoke instead of white, and seems more sinister than the puffy shrapnel burst. They sent exactly five shots at this squadrilla. You could imagine the gunners remarking as they loaded and let go: "Well, it has to be done." The casualty clearing stations reported as many cases of ordinary small accidents as injuries by enemy fire. Which would have been pleasant and comfortable, as war goes, but for the mud. I have heard of tropical rains. If they can pour any more violently than those of Northern France, take me to the Arctic. When we crossed the Channel the rain was coming down in sheets that seemed to beat flat even the Channel chop.

A Land of Mud and Muddy Men

THE road from the coast base is one of those perfect highways first laid by the Romans and improved by centuries of intelligent care. It seemed the only dry thing in the landscape; but even then our wheels were always stirring up dirty spray. The brooks were rivers; the hollows in the pastures, ponds.

Up by the front, engineer companies were mucking and growing profane in sharp, crackling North American speech over communication trenches which slid now and then like the Culebra Cut. The men waded to position in hip-high gum boots. And an apocryphal legend grew up and passed on from brigade to brigade, so that we heard it at every headquarters where we stopped for dinner or tea or a bed. When—so the tale goes—the Canadians took over a certain section of trench they found an English lieutenant stuck in the mud. And the English commissary sergeant, an imperturbable soldier of the old army, turned him over to the Canadians in the list of "trench stores." The men relieved from the trenches staggered back to the rest stations with gunny-sack coverings over the locks of their muskets; and as they marched the caking crust over their uniforms crackled like thorns in a fire.

The very mules, sometimes, looked as though they had been painted for protective coloration.

"We'll have to get a bath," panted a chatty sergeant from Saskatchewan as he got his breath against a pile of sandbags, "before we can tell whether a Fritz has mixed hisself among us!"

There were three days of these wanderings among a comparatively resting army before we began to see that field of action which has made all the other battles of the world appear insignificant, and they were interesting days enough. Whisked from brigade to brigade, we heard more tales of old action, consorted with more interesting characters, than the human memory can carry. Even the places which serve as division, brigade and corps headquarters have become confused in my mind, picturesque though they be in their present condition.

One morning we drove up to a very pretentious structure grown ripe with age. The entrance ran through a conservatory built on to a kind of morning room where the family had their noon breakfasts, I judge. The palms and tropic orchids, though drooping from lack of care, stood as the family left them. Up against their fronds was a soiled burlap screen pinned and repinned with military maps. The floor was tracked deep with mud left by soldiers too much in a hurry to clean their feet. Tables knocked together from plain boards filled all the floor space; they were littered with the papers and paraphernalia of an army at work. The family had taken away the paintings, and the wall space so cleared was covered with reports, notices, blank forms pinned by thumbtacks into the wall paper; but above the wainscot ran a very good collection of old Dutch china, which the owner had doubtless preferred to leave with the soldiers rather than trust to the transport of these days.

Again, keeping our car to a route which hid us from enemy observation, we dropped into a brigade headquarters one afternoon to find a rather over-prettified modern French château, furnished with much heavy carved wood. The family had taken away the lighter objects, but the great dressers, sideboards and wardrobes stood in place, storerooms for military papers. The owner had evidently been a huntsman. His trophies, such as wild-boars' heads, stuffed foxes and stag horns, rimmed all the walls. He had left behind, too, a big stereoscopic apparatus, with many pictures, and as we entered a Canadian Highlander officer, his kilts all mudcaked, sat looking at pictures with the delight of a boy. Finally, there was a beautiful building with a still more beautiful park. This the owner still uses, along with his military guests. A fine set of family paintings, dating back into the Middle Ages, and a collection of Renaissance Art of great merit, still hold the walls, though all the elegant furnishings have given place to objects of military use. These are the remote headquarters. Near the line, where the guns are ever shaking the window glasses and rattling the thatch, headquarters are more primitive—only things of military necessity.

Also, we have met forceful and engaging characters too numerous for mention or memory. Officers of all nations are likable fellows, and yet, after reconciling one's native ways to Frenchmen, to Italians and to Little Englanders, it is like homecoming to fall among men who speak your native tongue with all its dialectic peculiarities, who joke as you do, who know Broadway. The professional officers among them might have been our own West Pointers, the others might have been trained from our militia. The major general, for example, is all of the Western Continent. He it was who commanded the Canadians at the immortal affair of Second Ypres, where, when the line broke before the new peril of poisoned gas, these men of the West plugged the gap and saved Calais. He commanded, too, during those trying months on the Ypres Salient, a dreary memory to Canada. He is tall, with a stalwart figure growing a little portly. He has a fine forehead, a face all intelligence and determination, and a direct eye. He talks entertainingly, without undue amount either of optimism or of pessimism, concerning the present condition and future prospects of the operations up there—a mind which keeps its balance and observes, whatever the personal interests in the game.

Some Fine Canadian Types

MAJOR GENERAL TURNER is as different physically as may be. Little, dark, quiet, spectacled, he looks somewhat like the modern type of American college professor. He talked little, while we were about, and listened much. Possessed of nerve in the absolute—he is with his men at the fighting front almost every day—he gives in time the impression of vast reserve power. A grave man, he has the kind of solid popularity in all ranks which goes with merit. Major General Dave Watson, who came to war from a newspaper desk, represents a type different from either of these others. They might have been born on either side of the Great Lakes, so purely do they represent the universal English-speaking breed of North America; but Watson is from Quebec. In a keen face, deeply lined, he has a steady gray-blue eye; and he, too, possesses nerve in the absolute.

We had a long smoke talk one evening with Brigadier General Elmsley. Quite common among the Canadians, both officers and men, is that type of Colonial who has kept his roots in the Motherland. Elmsley speaks with an English accent; it is impossible to tell him—save by the maple-leaf insignia on his collar—from the regular English officer of the Imperial Force; quiet, cool, pleasant-spoken, always performing more than the easy, smooth exterior promises. These are some of the higher commanders. Among the officers of the line recur again and again types so much like the men I have known in the States all my life that I grew homesick with old memories. A certain major walked down a road with us, through a twilight heightened by gun lightnings. "I'm one of those stock-exchange privates," he said, laughing, as he passed some comments on the financial situation. And indeed, he might, except for the clothes, have stepped off Wall Street, though he had been "through it" for fifteen weary, perilous months, and had been wounded.

One night, too, we waded kneedeep through mud to an advanced headquarters in a board shack where a young

ONE EVERY MINUTE

XII

By Edwin Lefèvre

ILLUSTRATED BY F. R. GRUGER

THE one thought uppermost in Wilberforce Shadd's mind as he went home that night was that, even if Undersea Craft sold at a thousand dollars a share, he wouldn't make enough to enable him to afford the pleasure of having multimillionaires for boon companions. The fact that at the close the price was 276 gave him a feeling of intense irritation. Why did this measly stock advance so coyly when it knew it had to go a good deal higher, and that he proposed to hold on? It was enough to make a saint swear!

It was after supper that the damage was done. Mrs. Shadd announced that she would not go to the movies owing to an aching corn. Wilberforce, who felt nervous and excited, wished to escape from the monotony, and urged her to be a sport and put on her oldest shoes.

"If you had a corn one-tenth as sore as mine you'd be moaning and groaning, and wanting to be operated on or massaged or something!"

"And you are not saying a word!" said the bold bad Shadd.

As he realized what he said, he looked frightened. Fortunately she was in too great pain.

"I'm staying home so I can soak my feet in hot water. Where's the papers?"

"Here they are," said Shadd, and handed a bundle to her.

There were five; for he wished to read all the versions of the sensation of the day in the outside market—the rise in Undersea Craft common.

"Wha'd'd you buy all the papers for?" she queried complainingly.

Wilberforce Shadd could not tell her the truth; so he told her a lie in order to mollify her:

"I picked them up in the car where they had been left. They didn't cost me anything."

She groaned. The pain made her forget to encourage thrift in her husband. She said:

"I should think you'd have more pride than to go round picking up old newspapers after people."

Shaking her head hopelessly she sat on four of the papers and read the fifth. Wilberforce, who had not read anything but the Curb Market report, several times observed—gently, mindful of her corn:

"Would you mind letting me see one of them, dear?"

She rose, picked up the four upon which she had been sitting, read all the headlines on each front page, and then, after a little hesitation, gave her husband the Evening Sun.

"Save it," she admonished. "I want to see the pictures."

In order not to have to squeeze pennies, but to live like a gentleman, such as those he had met in Wall Street, he must make money. To do that he must not hold for five hundred dollars a share, which would give him just one hundred thousand dollars, but, say, for eight hundred. With one hundred and sixty thousand dollars invested at six per cent, he could get ninety-six hundred dollars a year, or eight hundred a month; in fact, it ought to be an even two hundred dollars a week. To yield that interest the principal must be one hundred and seventy-four thousand dollars. To make one hundred and seventy-four thousand dollars the stock must sell at eight hundred and seventy dollars a share.

These calculations absorbed him. Next to putting money into the bank, there is nothing like figuring your profits in advance, with a lead pencil, on the margin of the newspaper in which you have read the closing prices.

Of course from 276 to 870 was nearly six hundred points. This was what the newspapers would delight in calling an "unprecedented rise." But then, so was the war unprecedented. On the other hand, a man with two hundred dollars a week could do anything, because then he would not be afraid of losing his job; in fact, there was no need to keep any job.

"It wouldn't be our luck!" Mrs. Shadd exclaimed bitterly.

"Did you cut yourself?" he answered, without looking up from his golden statistics.

They had been married ten years. He naturally assumed she was working on her corn.

"No; I didn't. I'm sorry to disappoint you."

He laid down his paper and said mildly:

"You didn't disappoint me." He wondered at her peevishness.

"I was reading about a waiter who bought some stock in Wall Street when it was a few cents, and now it is selling for hundreds of dollars. He is a rich man, and only the other day he was taking five-cent tips in the restaurant of a family hotel uptown. I wonder what hotel it was?"

"I don't know," answered Shadd, putting on the infuriating smile of a man who knows something else and won't tell.

She picked up the newspaper, read another paragraph, and said:

"This waiter bought one hundred shares of U. C. common at 14, when nobody knew it was valuable. Oh, Wilberforce, if we'd had the gumption to look for a chance like this and ——"

Shadd couldn't stand it any longer.

"Look for a chance?" he echoed. "Why, I looked for one for years—day in and day out. Kept my eyes open."

He paused so that she might ask him: "With what success?" Instead, she said soothingly:

"Yes, dear. I'm not blaming you. I was only saying that this ignorant foreigner, who bought one hundred shares at fourteen dollars a share ——"

"And I," shouted Shadd, "bought two hundred shares at 9!"

For corroboration he waved the newspaper at her, on the margin of which he had figured at what price he should sell out the same two hundred shares in order to have an income of two hundred dollars a week. She stared at him in doubt, which gradually turned into terror. She voiced it by telling herself aloud:

"He's crazy!"

"I am not crazy," Shadd denied, knowing both whom she meant and to whom she was speaking.

She stared dazedly at him. She could see it was a different Shadd who spoke, but she did not know it was a Shadd who had tasted success and inhaled the incense of flattery. At all events her husband was not her husband. She couldn't keep the tears back, but she managed to steady her voice.

"That's all right, dearie," she said softly.

"No; it isn't," he contradicted loudly, meaning she need not assume that he was still insane. "I just bought two hundred U. C. common."

"What is that?"

"Undersea Craft common stock."

And Shadd, Wall Street veteran expert, smiled. He went on, modest as all great men are: "I paid 9 for 200 shares."

"Nine what?"

"Dollars."

"For the two hundred shares?" She gazed on him admiringly.

"No," he confessed; "for each share—eighteen hundred dollars for the lot."

"Oh-h-h! Then you took it from the bank! From—the—bank!"

"Yep!" replied Shadd, trying to look brave. He went on hastily: "So I bought the stock and held on like grim death when everybody was advising me to ——"

"From the bank!" repeated Mrs. Shadd.

"Of course" affirmed Shadd, feigning playfulness; even then he was marveling at his own courage.

"And that was the reason you didn't bring the bank book home!"

She shuddered violently at the thought of her weeks of ignorance. Her tragedy showed so plainly on her face that he hastened to inform her:

"Well, just because I had the pluck to take the money I've made fifty thousand dollars."

"Where is it?" she almost shrieked; then she shook her head, denying it to herself.

"In the office of F. T. Woodcock & ——"

"Who?" she asked, and without waiting for the answer walked toward a table where she had left her hat.

"My broker," replied Wilberforce Shadd in the voice in which the Kaiser says "My troops." He went on kindly: "You can't go there now."

She, nevertheless, put on her hat. Then she sat down on the edge of a chair and said:

"Tell me all about it."

"Well," he said, trying to decide on the jump which details to skip and which to play up, "it began with Hen Wilkins' spiel about submarine boats ——"

"Oh, I knew it wasn't your idea," she interjected forgivingly.

"Three Thousand a Year is Good Enough for Any White Person"

Digitized by Google

For ten years he had been an honest man. She still believed in him.

"Well, I knew Hen's yarn was crazy in some things; but I also saw where he was right. So I thought about it until I was sure I had sized up the situation correctly."

"And where is the money you say you've made?"

"I told you. In my broker's office."

"But why don't you bring it home—if you've got it?"

"The fifty-thousand-dollar profit is still on paper! There is no cash yet."

"Then you didn't make fifty thousand dollars?"

"Oh, yes; I have—on paper. It closed at 276 ——"

"What are you talking about?" she interrupted. She shook her head twice.

He knew what she was denying to herself, and smiled. He explained:

"The last sale was at 276; which means that if I had sold out just before three o'clock my two hundred shares would have brought me fifty-five thousand two hundred dollars in cash. But I didn't ——"

"Why didn't you?" she asked, recognizing the finality of the tragedy.

"Because," he said very deliberately, in order to drive the dagger in up to the hilt, "because I thought that I would wait to make one hundred thousand dollars, or possibly even two hundred thousand, instead of fifty-five thousand two hundred dollars at closing prices."

But he was mistaken. When she heard him talk of one hundred thousand dollars and of two hundred thousand she knew she was hearing fairy tales—lovely to read about, but mighty slim diet for everyday use. So she said:

"And you can get fifty-five thousand two hundred dollars now?"

"I could have gotten it to-day."

"'A bird in the hand is worth two in the bush.' The first thing you do to-morrow ——"

"To-morrow," he interrupted, "I may get more—or I may get less."

"I just knew it would have to be less!" she asserted. "There was Raymond Porter, with those Long Island lots he could have sold for eighteen thousand dollars and didn't; and when he did sell he lost three hundred dollars instead of making anything."

"But this isn't Long Island lots."

"Well, I was reading the other day how the people who always lose the most money are the men who want to grab everything in sight; and ——"

"But I tell you Undersea Craft will surely go higher."

"What will happen"—and she looked her husband straight in the eye—"what will happen if, instead of going higher, it goes lower? Answer me that!"

He thought of his own abdication, of the descent from the Napoleonship of Woodcock's office, and almost shuddered. Then he said judicially:

"Well, we'd still be ahead of the game ——"

"Would we still be ahead of the game fifty-five thousand two hundred dollars?"

"No. But, even if we were only thirty or forty thousand to the good ——"

"Thirty or forty! The way you sling tens of thousands round! Your luck has gone to your head."

"Oh, no."

"Oh, yes. And you took the money out of the bank ——"

"But I have made ——"

"Yes; and now you want to lose it! Fifty-five thousand dollars is a fortune!"

Wilberforce Shadd had not thought it a fortune in Wall Street. Hearing his wife say it uptown made him think it was.

"It's fair pickings," he admitted grudgingly.

"What I can't understand is why, after having fifty-five thousand two hundred dollars in your grasp, you run the risk of losing it all ——"

"Not all!"

"Well, didn't you take it all out of the bank?"

"Yes; but ——"

"Oh, Wilberforce, how could you? It was all we had for a rainy day. Suppose you had—suppose you—suppose ——"

But she didn't dare suppose such a thing, though she closed her eyes.

"But I didn't lose it. I made more than I could have saved up in three hundred years."

"And you want to lose it!"

"No."

"Then bring the cash home, Wilberforce darling. Bring it to-morrow. That's enough."

"But we can double it ——"

"I don't want to double it. It's more than we ever thought we'd have."

"Not more than I thought I'd have if I was let alone."

He looked at her accusingly, remembering how her fears had bred cowardice in him.

"I'll let you alone if you bring home the fifty-five thousand two hundred dollars to-morrow. Honest, I will, Wilberforce! When I think of what that money will mean ——"

She began to weep softly, with a drip as of a small fountain.

"Don't, my dear!" he said uncomfortably. "Don't! The idea of crying because I've made money!"

"I'll never ask you again to save money."

"You won't?" he said, knowing what the promise must have cost her.

"No—provided you bring the fifty-five thousand two hundred dollars home to-morrow. When I think of my poor mother ——"

"I promise! I promise!" said Shadd. "I'll sell out. But when you see that stock selling where we could have got out at a hundred thousand dollars profit, don't talk to me."

She looked frightened and hesitated. Then she thought it might never happen. And if it did—if it did, which it wouldn't—he could talk as he pleased.

"Very well; blame me!" she told him.

"Went Down! Down!" Muttered a Man Named Shively. "Down! Down! Down!"

That night, before he fell asleep, he did not blame his wife—only Fate. He thought:

"I ought to have held out for a hundred thousand dollars," as though he already had sold out for fifty-five thousand two hundred dollars. "Confound it!"

Then it occurred to him that he was still a failure. To stop thinking of that he thought of the fifty-five thousand two hundred dollars and fell asleep, smiling.

The next morning after breakfast, just as he was putting on his hat to leave the house, she said abruptly:

"Wilberforce!"

"Yes?"

"Do you think you—you can ge-get that much to-day?"

She looked at him so anxiously that he forgot his grievances and his remonstrances—everything but the profit. Had he not, after all, made a mistake in not selling out at fifty-five thousand two hundred dollars the day before, after he had convinced himself that fifty thousand dollars was enough for any Christian?

Six per cent on fifty-five thousand two hundred dollars meant $3312. That was much more than he was getting from the office for working.

"I hope so, darling," he said, so tenderly that she began to cry.

He did not comfort her. He could think only that he wished to sell that stock at once. Anything lower than 276 would be tragedy. After you have opened your mouth to insert therein a spoonful of raspberry jam with your own hand, you resent Fate's thrusting in a chunk of boiled cabbage.

"Damn!" he said.

"Oh, Wi-Wil-ber-berforce!" she moaned.

"Don't worry—yet!" he said. Then: "You will have to telephone to Mr. Lipps that I cannot be down to-day."

"He might not like it," she ventured. "Will it take all day?"

"Nobody can tell just how long it will take," he said importantly. "It may take one minute or it may take two hours. All I can say is that I will be back here as soon as I can."

"I'll telephone to Mr. Lipps that you are not well," she said cheerfully.

"No. Say I'm doing something for you."

"I don't like to," she protested.

"It's the truth," he said sternly. "I don't want to sell."

"I'll tell him," she promised hastily.

XIII

WILBERFORCE SHADD arrived at Woodcock's office before the opening. The general staff welcomed him with effusive cordiality.

Naturally they talked about the stock; and, to show him how completely they believed in him, thereby inflicting great pleasure upon themselves, they no longer asked him to tell them what further beneficences U. C. common was going to work. Instead, they told him what the future held in store for them all.

At nine-fifty-seven A. M., Henry Rumney, who was looking at the news ticker, shouted:

"Hey! Here's a whole lot about U. C.!"

And he began to read, snapping his fingers impatiently because the news ticker didn't print faster.

Trying to guess what words are going to be printed about a stock you're long of is bad for the nerves.

"Read it aloud!" cried Ben Meiggs.

They all listened while Henry read an official statement from the president of the company announcing the booking of contracts aggregating several million dollars. This was followed by an unofficial statement from an unnamed "insider," who declared that the book value of the stock at that moment, based not on prospective business, which was expected to be huge, but on what contracts were actually signed and the money deposited with New York bankers, was "several" times what the stock was then selling for.

Henry read this, one word at a time. When he finished all eyes turned toward Wilberforce Shadd, who, thinking of his wife's injunctions, looked acutely uncomfortable.

"That means at least two thousand dollars a share," said Henry Rumney positively to everybody.

Ben Meiggs, alias "Careful Mike," looked directly at Wilberforce Shadd and asked respectfully:

"Do you think so, sir?"

Since he himself could not hold for two thousand dollars, Shadd did not wish the stock ever to sell at two thousand. He, therefore, replied angrily:

"No; I don't!"

Consternation appeared on the faces of the customers, promptly to be succeeded by a puzzled look. If it didn't sell at two thousand dollars, at what price would it sell?

"Mr. Wilberforce Shadd," said Henry Rumney sternly, "you know damned well that stock is going higher."

"I do, do I?" said Shadd bitterly, thinking of his own abject promise to the woman who kept him from becoming a rich man.

"Yes, you do!" asserted Rumney; then, as one who adduces proof, he said: "Let's see what the opening is."

Willie, the subsidized office boy, had not yet appeared. Henry Rumney sought Dave Caldwell, the office manager, and said:

"Get a quotation on U. C. common as soon as possible, will you?"

Digitized by Google

"I Should Think You'd Have More Pride Than to Go Round Picking Up Old Newspapers After People"

"Sure thing!" The polite manager was so accustomed to nervous customers that he overlooked the peremptory tone. The entire office tensely awaited the bulletin from the Curb. Three, four, five, six, seven, eight minutes went by—minutes that ran at least three hundred seconds each. Then Willie came in, breathless.

"Well?" snarled Henry Rumney.

Willie looked dubiously at him. He was paid for whispering, but he could not whisper at such long range. Henry Rumney couldn't stand the suspense and cried sharply:

"Spit it out!"

"They can't tell what it's selling for. They've gone crazy. I heard Wright & Bonner's man say that the opening sales were all the way from 280 to 300."

"Two-eighty to three hundred?" asked Wilberforce Shadd.

That was more than 276. He'd better hurry up—if he wanted any peace at home.

"I say 2000 within sixty days," said Henry Rumney, looking at Shadd challengingly. "Don't you?"

"Two thousand what?" asked Francis T. Woodcock, approaching the group.

"Being a conservative man," said Rumney to the broker, "I was just remarking that U. C. common was on its way to 2000. Watch it!"

Woodcock smiled the smile of a father at his baby's Commencement.

"How about it, Shadd?"

"I am going to sell," answered Shadd miserably.

"What?" shrieked Henry Rumney.

"Honest?" asked Careful Mike Meiggs, looking incredulous.

"Not all?" from Woodcock.

Wilberforce Shadd forced himself to nod. His lips were tightly compressed. This was in order that his groans might not escape. The broker looked at Shadd, and somehow felt that his luckiest customer was not in his usual luck. He said:

"You know how I've felt about that stock of yours, Shadd; but I've come to the conclusion that this is the wildest boom in history. Nothing like it was ever seen. There isn't any top to them! I used to think the bull movement couldn't keep up and that an awful day of reckoning was coming; but, with accounts margined from fifty to two hundred points, what's the use of talking about healthy reactions, hey? I don't want to butt in; but it seems to me I'd take a chance and keep at least half. Of course a profit's profit; but if you sell all your stock ——"

"Yes, all!" cried Wilberforce Shadd, bent on committing suicide. "Every damned share I've got in this office!" He saw his wife—all in red!

F. T. Woodcock pushed a pad and a lead pencil toward Wilberforce Shadd.

"Write your order—and sign it," said Woodcock.

Every man in the room, including Wilberforce Shadd, heard the words and realized that what Woodcock really was saying was "Put it down in black and white, so you can't blame me—afterward." And all the customers who were long of the stock further translated the broker's unspoken "afterward" into "When it sells at two thousand dollars a share!"

Wilberforce Shadd wrote the order savagely and signed it desperately—watched by thirty-two lynx eyes.

Henry Rumney, having gazed long and bitterly at Wilberforce Shadd, suddenly ceased to frown and beckoned to Ben Meiggs.

"It didn't work, did it, Ben?" And Henry Rumney smiled.

"What didn't?"

"If he really was selling all his stock would he be doing it at the top of his voice, in front of everybody?"

"No," answered Meiggs; "but ——"

"But nothing! If he had told me or you, on the q. t., I might possibly have believed it. That stock is going to one thousand dollars a share, I tell you. And that's certain."

"I don't know about selling at 1000," said Meiggs; "but I do know that these insiders get left as badly as any sucker; in their own stock too. There's Patent Process Steel, for instance. I heard that Paterson, the treasurer, went short ten thousand shares at 90, and had to cover at 125. Lost all he'd made on the rise from 46."

Henry Rumney smiled broadly.

"Right-o, old top! We didn't bite that time—what?"

"No!"

Meantime Wilberforce Shadd was staring gloomily through the window at the passers-by, a picture of utter dejection—and foiled villainy!

"Not a bite! Look at him!" said Henry Rumney to Ben Meiggs. The sure-thing Mr. Meiggs nodded. For once he agreed with his reckless friend.

Wilberforce Shadd merely looked as he felt. All he could see in the sky was a stupendous bulletin board, on which he read: U. C. 5000. Then he began to figure. At 300 all he could get was sixty thousand dollars. At 1000, not waiting for 2000 or 5000, he would have taken out of Wall Street two hundred thousand dollars!—twelve thousand a year—one thousand a month—something a man could do something with!

"Look at him! Mad as blazes because no suckers bit in this office!" whispered Henry Rumney to Meiggs.

The others, seeing Henry whispering, instantly desired to know what he had said that was important enough to whisper. Henry cheerfully repeated his remarks, whereupon they nodded.

Really it was too transparent.

"I don't mind that skunk trying to get more stock," said Henry; "but why should he want our few shares when he could go outside ——"

"Oh, those people want it all! They'd swipe a blind man's pennies as eagerly as they'd steal a million out of a bank." Their glances were venomous. But Wilberforce Shadd was calling himself an ass. Doomed not only to be married and a coward all his life, but to die poor!

Woodcock came up to Shadd and whispered:

"We sold a hundred at 300 and a hundred at 301."

Sixty thousand dollars—that is to say, nothing!

"All right!" said Shadd huskily to the broker, and walked out of the office.

After the door closed on him the comments of the customers became audible to the clerks in the farthest offices.

"Three-two for U. C.!" triumphantly shouted Henry Rumney.

Ben Meiggs, who had twenty shares that showed him more than two hundred points profit, began to clap his hands. The others imitated him. Henry Rumney, as though the applause was intended for him, bowed to right and left, murmuring "I thank you! I thank you!" He was so happy with his two hundred and fifteen points profit that he wasn't sorry he didn't have a hundred shares. Then he thought of the man who advised him to buy the stock that had made him fourteen thousand dollars richer in a few weeks.

"The skunk!" said Henry Rumney.

When Wilberforce Shadd left the office he did not know whither to go; and so, as a man always will when he walks aimlessly, he walked toward the south. Presently he found himself in Battery Park. On the park benches he beheld not hobos, or clerks out of work, or homesick immigrants, or stenographers getting a breath of fresh air, but specters who grimaced mockingly at him. He didn't hear them, but he knew they were saying: "Only three hundred a share! Oh, you boob!"

He came upon the Aquarium; and, unable to bear his own thoughts, walked in for the first time in his life. Forty seconds later the bitterness went out of his mind and he forgot his troubles while looking at the fish.

Two hours later, tired and hungry, he was surprised to find that he craved to sit down in a comfortable chair before a good luncheon. He had sixty thousand dollars. No—he had more; he had sixty thousand and seventy-one dollars. He would take the seventy-one dollars and buy lunch.

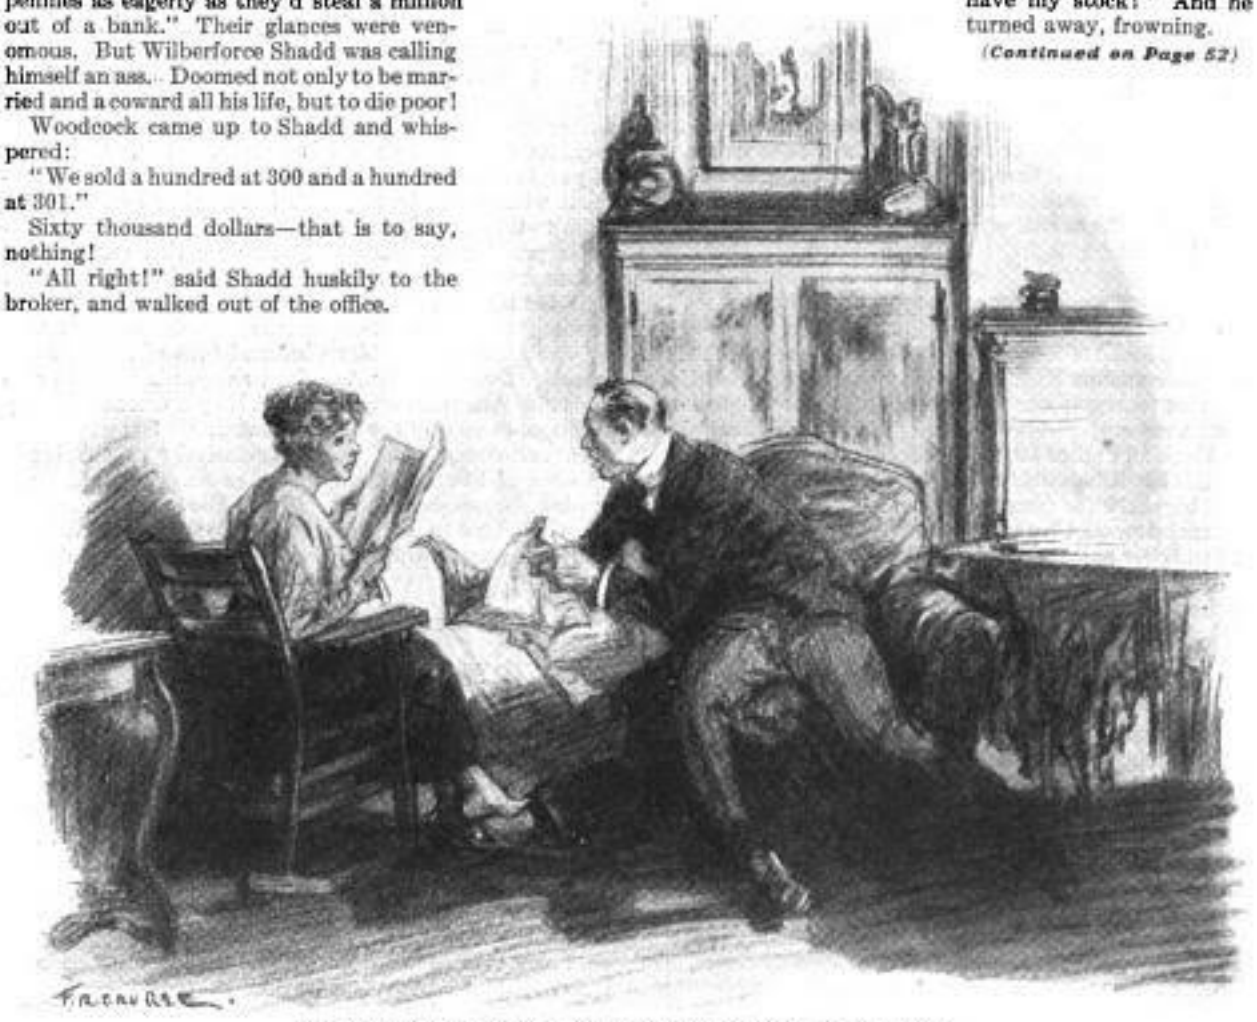
He had forgotten to bring with him more than his usual fifty cents—the fifty cents that he had taken to the office every day for fifteen years. He smiled. He, Wilberforce Shadd, with only fifty cents in his pocket! It really was so funny that it put him in good humor, and he decided to go back to Woodcock's office and get some money.

He entered the customers' room and was shocked by what he saw. Gloom brooded over the office. There was a threat of ruin in the air. Pale-faced, anxious-eyed men, no longer debonair admirers of the great Wilberforce Shadd, clustered about the ticker, frankly despondent, visibly unnerved. And the voice of the tape reader by the ticker was the voice of a judge pronouncing death sentences, one after another—one for each man in the room.

Henry Rumney saw Shadd.

"Why couldn't you tell us?" he inquired hotly.

"Tell you what?" asked Shadd.



"You know damned well!"

Shadd didn't know; so he asked:

"What's U. C.?"

"Two seventy-one, and going down fast," said Henry Rumney, more loudly than was necessary. "But you can't have my stock!" And he turned away, frowning.

(Continued on Page 52)

"And I," Shouted Shadd, "Bought Two Hundred Shares at 9!"

Give the Packers a Rest

ONE Chicago packing company did a business last year of five hundred and seventy-five million dollars. Six of them must have done a business of two billions.

This means that a handful of private corporations bought a great part of all the meat animals sold in the United States, and sold a great part of the meat and by-products the population consumed.

Many good people view that fact with suspicion and disfavor. But no business in the United States has been more copiously investigated than this packing business; no business is more closely watched. The books have been searched repeatedly. The men who conduct the business know their books are sure to be scrutinized in the future.

The methods of buying, manufacturing and selling have been overhauled and exposed. Whenever there is pronounced discontent on the side either of sellers of animals or of buyers of meat, a public investigation is pretty sure to follow. Investigation has shown there is no waste. Whatever else may be said, the packers certainly do their business with high efficiency and at a very small margin of profit for each pound of product turned out.

This Big Business has been thoroughly studied. Meantime an endless multiplicity of small businesses, each contributing in one way or another to the cost of living, get comparatively little broad investigation and study. Broad investigation and constructive study of small business, we believe, is quite as well worth while as destructive study of Big Business.

That British Shell Bid

NATURALLY American steel men were shocked to learn that an English concern had underbid them for a contract to supply our navy with big shells. English concerns were supposed to have their hands full making shells for England and to be handicapped by war-bonus wages; yet this English concern offered to make seventy-five hundred big shells for our navy at a price more than a million dollars below the best American bid, and to deliver the shells in little over half the time required by American bidders.

Naturally, also, this bid was heralded as conclusive proof of our need of "an impregnable tariff wall round the United States to prevent the flooding of our markets with cheap foreign goods and the impoverishment of our labor"—as one contemporary emphatically put it. For if England could so signally underbid us, both as to price and time, when at war, what could she not do when at peace?

But perhaps there is an alternative to that impregnable tariff wall. The English concern explained that it was able to make a low bid because at the time it had no work on hand in that particular line for the British Government; because its plant had been brought to a state of extreme efficiency; and because it had perfected an improved process for making shells of that sort. Now plants exposed to competition are more likely to be brought to a state of extreme efficiency and to discover improved processes than plants sheltered behind impregnable tariff walls.

We now have a Tariff Board to investigate just such phenomena as this shell bid in a disinterested, scientific spirit and to find out whether they mean that we need more protection or only closer figuring. The country is not going to become excited about any developments in that line until it hears from the board.

Opportunity in Prison

ABOUT two years ago the Mutual Welfare League was organized in Sing Sing Prison. It is composed exclusively of prisoners and every inmate is a member. Its first object was to inspire the saving sense of self-respect and social responsibility. The league soon addressed itself to education, starting a school, virtually managed by inmates, which any inmate might attend after completing the day's labor required of him by the state. Identification cards were issued to pupils by use of which they could leave their cells and go to the classroom where the elements of public-school education were taught.

Vocational training presently developed. Appeals by letter brought tools and books; telegraph instruments; wireless apparatus; automobile parts and appliances, so that a complete car could be taken apart and reassembled, and all its mechanism studied. Now everyone who is committed to the prison receives a statement from the league, explaining its purposes, offering its advantages, urging hearty coöperation with it. The league is permitted, of course, by the state; but its educational work is carried on without state aid.

The chairman of the Educational Department of the league writes: "Most of the inmates of prisons are there because they could not compete successfully with others. They did not know how to meet the conditions of free life. While in prison they should be made better able to maintain themselves in freedom. Our Educational Department is striving to do that. Generous friends outside have given books and equipment; but we are still much short of what we should have to give a fair opportunity for self-betterment to all who would take it.

"At present, for example, we are trying to start classes in carpentry, bricklaying and plumbing, but have too few tools. Secondhand tools would be very acceptable; in fact, any equipment that we can use in vocational training. If the need were more widely known, and the great good such helps to self-help can do in a place like this generally appreciated, good people would respond."

The Shipping Board

CERTAIN appointees to the new Shipping Board, it seems at this writing, are objects of senatorial suspicion and must be carefully investigated. They have been engaged in shipping in a rather large way, and successfully. Hence, naturally, the suspicions. A man who has conspicuously failed in his own undertakings will be readily acceptable to the Senate as a director of the business of the United States; but if he has been decidedly successful on his own account he will not be readily acceptable. We could cite various illustrations, but forbear out of consideration for personal feelings.

The new Shipping Board has a job both very difficult and very important. Already a vigorous exercise of its theoretically broad but practically dubious powers to regulate rates, and so on, is urged upon it. A number of people apparently view it chiefly as a tempting instrument with which to play hob in shipping affairs. They seem to think its highest usefulness will consist in disrupting, repressing, retaliating. The notion of a constructive instrument of the Government is not very familiar to them.

In the last calendar year of unprecedented freight rates and huge ship earnings, our merchant marine was increased by two hundred and fifty thousand tons of metal steam vessels, turned out by American shipyards on both seacoasts for American owners. That is by no means a heavy addition, in view of the circumstances.

In addressing itself pretty exclusively to the broad problem of how best to upbuild the American merchant marine the new board will find abundant occupation. It can well afford to let its other functions wait until it has a thorough grasp of the situation.

American Barbarism

THERE is now a more powerful reaction against lynching—that abominable disgrace to the United States—than ever before. It is more generally realized that lynchers, whatever positions they may hold in society, are essentially stupid barbarians, whose anarchism brings into question all social security and order. It is plain enough that no man's life can really be safe in a community given to lynching. There will probably be, at first, the extreme provocation of an assault upon a woman. The record shows that, having yielded to that provocation, yielding to lesser ones becomes increasingly easy; and finally a mob will as readily slake its bloodthirst by murdering a white man as a colored one. There is no real security for anybody.

Because lynching has been more common in the South, the South is especially interested in discouraging it. The intelligent Southern opinion, which must finally prevail, is insisting upon the only remedy—conviction and punishment of mob murderers. When dominant opinion recognizes lynching for what it is—a detestable crime against society far more dangerous socially than any individual murder—lynching will disappear. Only the criminal sanction or tolerance of misguided opinion keeps it alive. Mobs never lynch except when they think it perfectly safe. As soon as they have to expect not sanction or tolerance, but genuine prosecution, they will leave the repression of crime to orderly processes of law.

It is altogether a question of public opinion. To strengthen the right opinion is a plain duty for everyone who wants that opinion to prevail.

A National Pastime

WALL STREET has as irresistible a fascination for Congress as the insides of a clock have for a normal infant. No exigency of public business could ever make it forgo the childish delight of poking round in the works of the Street on any pretext.

This is a short session. There is much urgent business to be done. Somebody—presumably an office boy—starts a rumor. Somebody else—probably a wag—writes a letter to an innocent and excitable congressman. Without the least tangible evidence to go upon, Congress begins investigating. Men who doubtless could devote their time to some useful ends if permitted to do so are summoned from far and near to testify about something that there is no reason to suppose they have any knowledge of.

When engaged in serious business Congress is mostly ignored. The newspapers dismiss its sober proceedings with scant paragraphs or say nothing at all about them. But if Congress wants to put on a cabaret show entitled Wall Street the newspapers will give it whole pages. The silliest incidents and the emptiest chatter are reported in column after column. Utterly irresponsible and pointless vaporings on this subject will get more front-page space than the greatest debate on the weightiest affair of state.

After the War

IN AFTER-THE-WAR speculation one factor, which may be the most important of all, is overlooked. Europe is doing wonders now—keeping millions of men under arms, supplying them with prodigious quantities of munitions, raising billions of capital, and at the same time subsisting its civil population and carrying forward many lines of industry at a high pitch. Speculation runs as to the effect upon this country when all that highly organized, coördinated, intensively applied energy is turned to peaceful competition.

But Europe is working now under a tremendous stimulant. The mass of its people feel that what they hold dearest is at stake. The war fever is in their veins.

Peace will bring a reaction. The end of any prolonged intense effort always does. There will be a pretty dismal taking of stock everywhere. The dead will be counted with disillusioned eyes; there will be the dull burden of taxes. Millions will be asking themselves: "Why should it have happened?"

The business situation is always in good part a state of mind. The greatest fact in Europe's business situation after the war may not be any of the material things, such as the supply of capital and the rate of wages, with which speculation now concerns itself, but exactly Europe's state of mind. If it is a heavy, bitter, discouraged state of mind, that may well mean more in terms of industrial output than the supply of capital or the rate of wages.

Buying Stocks

A CORRESPONDENT, whose letterhead shows that he is a physician, says he is often invited by circular or newspaper advertisement to buy stock in some revolutionary invention. Usually the invitations point out that early investors in inventions, such as electric light, telephony, adding machines, typesetting machines, automobiles, moving pictures, made great profits.

"Isn't it true," he asks, "that if the invention proves successful, some way will be found, through reorganization, and so on, to freeze out the small investor?"

That is not the danger which confronts recipients of such invitations.

There is no reason why a competent physician should not advertise himself through bright-colored circulars and newspaper spreads—except that the highest class of good, responsible physicians do not advertise themselves in that manner.

Selling stock in new enterprises by means of flamboyant newspaper advertisements and circulars, promising big returns on the investment, is distinctly the method of the quack. One is warranted in judging the stock, like the physician, by the manner in which it presents itself. If it comes in like a quack, promising cures in all cases—or big profits and no losses—prudent people will have nothing to do with it.

Very Temporary Captain McLean

By PHILIP E. HUBBARD

ILLUSTRATED BY H. J. SOULEN

MR. GAVIN McLEAN, expert cracksman, mechanic, motor driver and past master in the art of disguising everything about his engaging personality except his Scots tongue, was confronted with what he himself would have described as a "serious deeficu'ty."

Business with Mr. McLean had been extremely brisk during the early summer of 1914; and the trade he had recently developed in stolen automobiles—which he contrived to convey to his workshop, where by the many arts known to him he converted their appearance through a process of exchange of bodies, repainting, renumbering, combined with a trifle of judicious alteration of water-piping, type of magneto, carburetor, or any other part that could readily be altered—had brought him to the high-water mark of illicit prosperity.

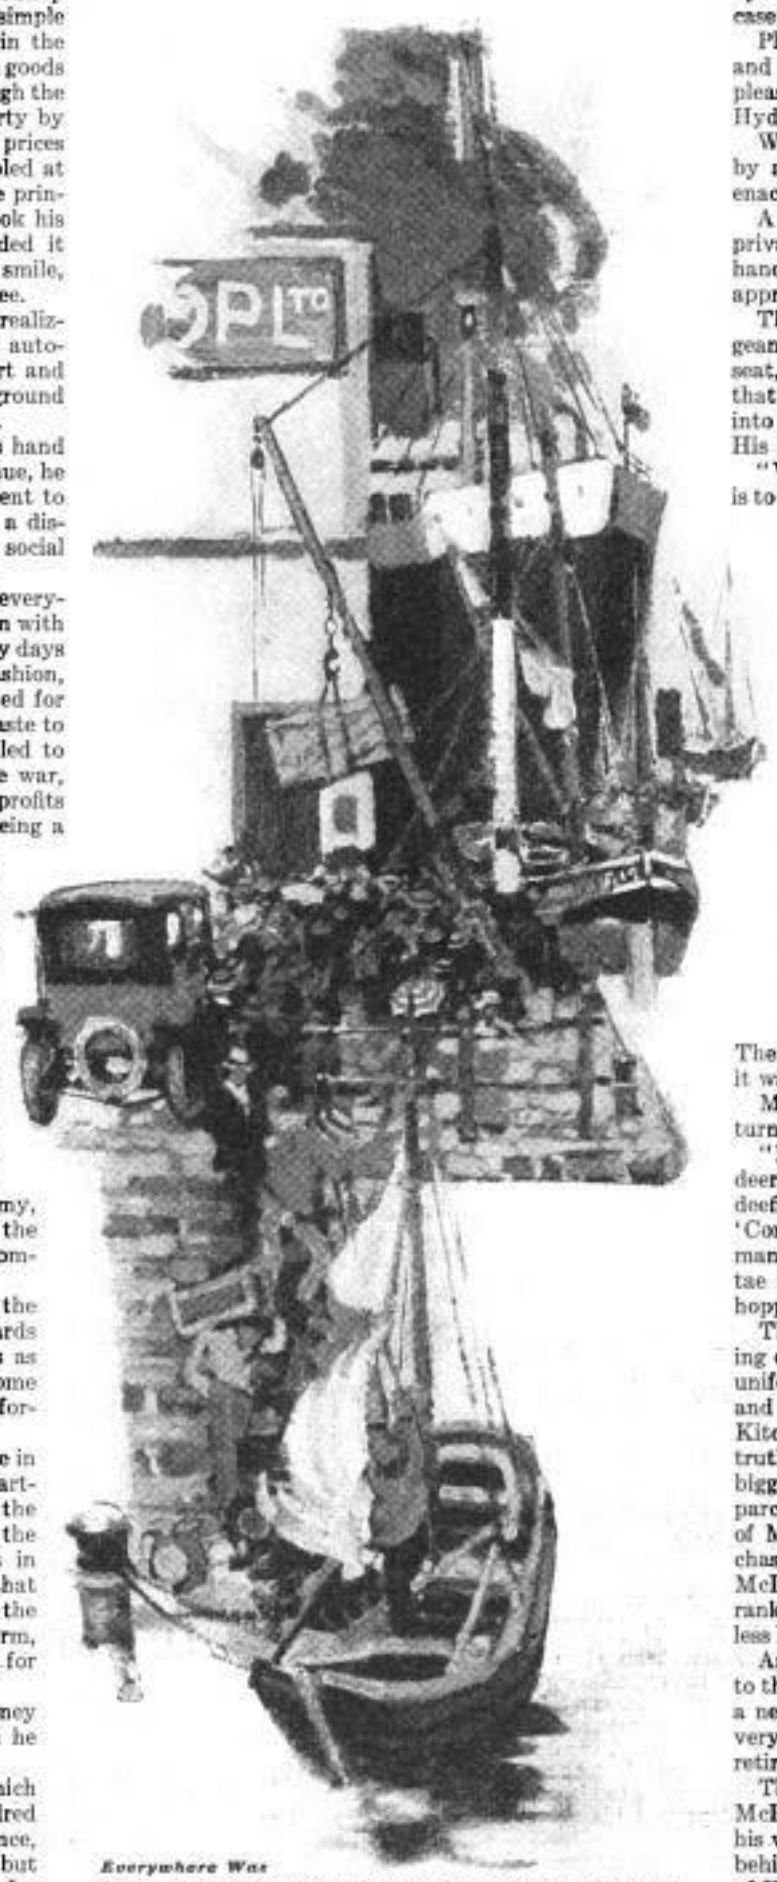
Once the stolen automobile had passed through his shop and his expert handling, disposal of the prize was a simple matter; for certain secondhand auto emporiums in the region of Euston Road are never particular as to the goods included in their auction-sale catalogues. And, though the genuine owners of cars who dispose of their property by this means find much cause for discontent at the low prices realized, Mr. Gavin McLean not only never grumbled at the prices fetched by his entries, but, acting on the principle of never looking a gift car in the radiator, took his check for the amount—less commission—and added it to his growing bank account with a self-satisfied smile, whether the figures on the check ran into two or three.

And then, in the early days of August, his hopes of realizing a fortune and starting a comparatively honest automobile business, on which he might live in comfort and security for the rest of his life, were dashed to the ground by the coming of war and all its consequent horrors.

Mr. McLean was no patriot. To begin with, his hand was against that of all law and order; and, to continue, he was a comparatively young man. And it is apparent to the meanest intelligence that fervent patriotism is a distinctive mark of those whose age, infirmities or social position render them ineligible for military service.

It will be remembered—even in these days, when everything, from a pledge to a deed of heroism, is forgotten with the issue of a fresh morning paper—that in those early days of the war, when "voluntary compulsion" was the fashion, there were some people in this country who agitated for national service. Some of them even had the bad taste to suggest that rich manufacturers should be compelled to nationalize their businesses for the duration of the war, and thus be saved the humiliation of making sordid profits out of their country's disaster, and Mr. McLean, being a Scot, was keen enough to appreciate the fact that the safest and least noticeable costume for the humble citizen at that time was that known as khaki.

To enlist as a private soldier was entirely distasteful to Mr. McLean; and, as he unfortunately had no military experience and no friends either at court or in the War Office, he did not see his way to applying for a commission. However, there are more ways of winning a game of poker than by keeping a king up one's sleeve; and, after some consideration and a careful scrutiny of the various types of "temporary gentlemen and ossifers" who were then to be seen swarming in the streets of the metropolis, Mr. McLean came to the conclusion that the easiest and safest method of joining the army, without bringing himself into too close touch with the authorities, would be to grant himself an unofficial commission in the Army Service Corps.



He selected that corps because at that time the Gazette, though naturally of large proportions as regards the fighting units, was enormous beyond all others as regards the A. S. C.; and, also, because he had become aware that a large proportion of these were for the formation of Mechanical Transport Units.

After earnest study of the columns of the Gazette in the Morning Advertiser, and of the advertisements artfully displayed alongside the Gazette, informing the newly fledged officers that Messrs. Moses & Aaron, the celebrated tailors, could supply field service kits in twenty-four hours, Mr. McLean betook himself to that eminent firm's showrooms. Announcing to one of the shopmen that he wished to be fitted with a uniform, he was taken to the basement and there measured for an outfit.

He had already provided himself with sufficient money to cover the cost of the modest outfit with which he proposed to provide himself.

Being unwilling to advertise his own address, which was over the workshop by the riverside, not a hundred miles from Kew Bridge, he paid for his outfit in advance, gave his address as the Grand Central Hotel, but arranged to have his uniform retained until called for on the afternoon of the following day. Mr. McLean thereupon betook himself to the lounge of a certain large hotel in Piccadilly, where he contrived to get into conversation with a newly fledged second lieutenant of the corps to which Mr. McLean was planning to attach himself in a purely honorary capacity.

His native charm of manner and his enthusiastic praise of the patriotism of his new-found acquaintance quite captivated the heart of that guileless individual; and, after a few minutes' conversation and the absorption of sundry drinks, he allowed Mr. McLean to pump him dry of the information of which that craftsman was in search.

Everywhere Was
Bustle and Orderly Disorder, Loading the Great Steamer

Now Mr. McLean was extremely quick-witted, and it did not take him long to find out from this fledgling the salient points of the duties of an officer of the Army Service Corps as regards deportment and dress, school of instruction and probable destination, which were the sole points of interest to Mr. McLean at that period.

From his informant he gathered that, in the general muddle which followed upon the entry of Britain into the war, a young officer, provided he was careful to salute staff officers and all others who bore the rank of field officer—he was careful to extract the necessary information as to badges of rank—and provided he did not obtrude himself upon his superiors, was unlikely to attract any special attention. And it became obvious to Mr. McLean that, if this was the case with an officer regularly commissioned by his king, it was still more likely to be the result in the case of an entirely unofficial appointment.

Pleading an engagement, he escaped from his informant and returned to his workshop; and, as the afternoon was a pleasant one, he elected to walk along Piccadilly as far as Hyde Park Corner before taking a bus for Kew Bridge.

When he came to Green Park his attention was attracted by a little scene which was at that time in process of enaction in many of the busier thoroughfares of London.

A sergeant of the A. S. C., accompanied by a couple of private soldiers, stepped into the road and held up his hand to the driver of a smart touring car, which was approaching from Hyde Park Corner.

The driver of the car stopped his vehicle; and the sergeant, with a smart salute to the occupants of the back seat, produced a written order from his pocket and requested that the occupants of the car would be good enough to step into the road and hand the car over to him for the use of His Majesty's forces. The owner expostulated.

"Very sorry, madam!" replied the sergeant. "My orders is to commandeer every car of this type and hand it over to the War Office. I'll give you a receipt for the car now, and if you take that to Whitehall to-morrow, to the office of the Inspector of Mechanical Transport, you can make a claim for the price of the car; and you'll get your money at once. We've got to have every car that's suitable."

"But," explained the owner, "I only bought the car last week. I cannot part with it like this."

"Very sorry, lady—'fraid you ain't got no choice. This country's at war and we've got to 'ave cars."

"I call it disgraceful! I quite understand that we are at war—I think the Kaiser has behaved abominably—but I really cannot spare my car."

The sergeant motioned to his two men, one of whom ordered the chauffeur to get down from the driving seat—whereupon his place was taken by one of the men—and again addressed himself to the owner of the car, who, with very bad grace, at last got out and, taking the official receipt as though it had been a noisome reptile offered to her, surrendered the car and angrily ordered her driver to find her a taxi.

The sergeant, with the second man, got into the car; and it was driven rapidly away toward Piccadilly Circus.

Mr. Gavin McLean watched it out of sight and then turned westward with a scheme forming in his brain.

"If a sergeant and yon two swaddy-men can commandeer a car in yon fashion, Ah'm verra sure there'll be nae deeficu'ty for an officer tae hae a smack at the same notion. 'Commandeered' Ah heear-red yon sergeant say—an' commandeered some mair car-rs wull be before yon war's come tae a finish," said Mr. Gavin McLean to himself as he hopped on a bus bound for Kew Bridge.

The next day Mr. McLean, in a taxi, called at the tailoring establishment of Messrs. Moses & Aaron, tried on his uniform, which fitted quite respectably in several places, and was assured by the cutter that it was fit for Lord Kitchener—a statement that had a certain amount of truth in it, since it was obviously intended for a much bigger man than Mr. Gavin McLean. Depositing the parcels in his taxi, he drove to the opposition establishment of Messrs. Levi & Harris, in the Strand, and there purchased some braid and two pairs of additional stars. Mr. McLean had determined on an early promotion to the rank of captain, as he wisely inferred that, as such, he was less liable to interference than as a second lieutenant.

Arrived at his den, he set about the necessary alterations to the cuffs of his service jacket; and, being as handy with a needle and thread as he was with most other tools, he very soon completed the alteration to his satisfaction and retired to bed.

The next morning Very Temporary Captain Gavin McLean, A. S. C., stepped into the quiet street in which his workshop was situated and, locking the door carefully behind him, strode off, with an easy swing, in the direction of Kew Bridge.

Digitized by Google

In his pocket was an official-looking blue paper, bearing unreadable hieroglyphics, and alongside it were a number of neatly cut yellow slips of paper, as much like the receipt form he had seen the sergeant give to the car owner as the local stationery shop in Back Lane could supply.

The policeman on point duty near the bridge drew his heels together smartly as Mr. McLean approached and, to the latter's extreme pleasure, saluted.

Carelessly acknowledging the salute, Mr. McLean passed his natural enemy with an air of conscious superiority and strode away across Kew Bridge. Selecting a quiet spot on Richmond Road, some little distance from the entrance to Kew Gardens, he waited for what he knew must sooner or later come to him.

Two motor busses passed him, and then in the distance he saw a smart car, with an open touring body, approaching from the direction of Richmond. The driver was the only person in the car, and he drew up, with a grinding of brakes, as Mr. McLean, in the glory of his new uniform, stepped into the road and held up his hand.

"Ah must tr-rouble ye tae hand o'er yon car-r," said Mr. McLean.

"What the 'ell—" began the chauffeur.

"Ye can say a' that tae your maister-r—yon car-r's required by His Majesty for the use o' the for-rces. Get ye down fra' yon seat."

The driver paused, bewildered.

"Hump yeself, ma mannie! An' if ye'll tak' ma advice ye'll gang awa' tae the near-rest recr-ruitin' office an' enlist—a gr-reat gowk that ye are! Ye are jist the mon we hae need o' the noo."

The driver, who happened to have witnessed the requisitioning of a car on the previous day, got slowly down from his seat.

"There'll be 'ell to pay over this!" he remarked. "D'you know 'oo's car this is?"

"Ah dae no'; but if Ah deed, an' if it was the king's own car-r, 'twould be a' the same tae mae," said Mr. McLean as he scribbled a receipt with the number of the car.

"But this 'ere's Sir 'Enry Lupton's car," said the chauffeur feebly.

"Mon," said Mr. McLean, mounting to the driver's seat, "Ah'm no' carin' if it were Sir-r Thomas Lipton's car-r—'tis needed for-r the airmy. Tak' yon receipt to Whitehall tae-morrow mor-rnin'—tae the office o' the Inspector-r o' Mechanical Transport—an', nae doot, he'll gie ye a fair-r pr-rice for yon car-r. Guid mor-rnin'!"

With which piece of advice, Mr. McLean slid the gears into engagement, let in the clutch, and drove away toward Kew Bridge, leaving the bewildered driver standing in the road.

Driving with great care, but at a fair speed, Mr. McLean crossed the bridge, continued his way into Chiswick Highroad, and after going half a mile turned sharply to his right. He dodged about for a short distance among the side turnings and finally reached Back Lane without seeing a policeman, or, indeed, anybody with whom he had even a nodding acquaintance.

Halting the car at the door of his workshop, he got down from the seat, unlocked the gate, and drove the car inside. As soon as he had safely bestowed it, Mr. McLean washed his hands and face, straightened up his belt, cocked his service cap a trifle more over his right eye, and went forth by devious ways in search of a second victim.

This time he got on to a street car going toward Hounslow and traveled on it until he had passed the unsavory suburbs of Brentford. At the corner where the car lines divide he alighted and, taking the turning leading to Twickenham, walked briskly in the direction of that place. Before he had gone a hundred yards he heard a car behind him; and, facing about, he held up his hand for the driver to stop.

It was a closed car, with a landaulet body; and, to Mr. McLean's horror, the window was slammed down and a white-mustached, red-faced old gentleman in khaki, with the scarlet band of the Staff round his hat, looked out.

Mr. McLean drew his heels together and saluted.

"What the devil d'you mean by stopping my driver?" questioned the old gentleman in angry tones.

Driving With Great Care, But at a Fair Speed, Mr. McLean Continued His Way Into Chiswick Highroad

"Ah'm verra sorry, sir-r," apologized Mr. McLean. "Ah'd no idea that this would be your car-r."

"Well, supposing it wasn't—what did you stop me for?"

"Ah was aboot tae ask ye tae gie me a luft."

"I'll give you a court-martial, sir, if you're not very careful! I suppose you're one of these ragtag and bobtail of the Army Service Corps from Hounslow?"

"Yes, sir-r," replied Mr. McLean untruthfully.

"Well, consider yourself under arrest. Go back to Hounslow and report yourself to your commanding officer. What's your name?"

"Angus McTavish," replied Mr. McLean.

"Very well, Captain Angus McTavish, you'll hear more of this, I can assure you," said the angry general; and, calling to his driver to go on, he received Mr. McLean's salute without acknowledgment, and his car sped away into the distance.

"Ah'm thinkin' per-rhaps ye're mebbe mistaken aboot ma heer-rin' mair o't," said Mr. McLean to the back of the retreating car. "However, Ah'll hae tae be mair carefu' i' the future."

At that moment an open touring car appeared from the opposite direction. Seeing that the occupant was a lady, Mr. McLean repeated his maneuver and, leaving the indignant owner and her driver to continue their journey on foot or return by the street car, drove away to his workshop and successfully deposited his newly acquired touring car alongside the other.

Doffing his uniform he assumed the greasy overalls he affected when at work and, with the aid of a most ingenious overhead traveling crane, which he had some time since fitted up, he changed over the bodies of the two cars, and during the course of the next two days so altered them in appearance that there was small chance of their respective owners recognizing them.

Intending to transfer the two cars for sale to Quiswell's Auction Rooms the next day, in order to make room for further "commandeerings," Mr. McLean, weary, paint-stained and disheveled, stood within the precincts of his shop regarding his handiwork and plunder.

"It's an ill wind that daes no' blaw guid tae somebody," he reflected. "Ah'm no' in love wi' war as war, sae tae speak; but gin Ah can gae on requeeseetioning twa guid car'rs a week, Ah'm no' sayin' Ah'll be fashed if yon war bides wi' us for ten year-rs."

Now undoubtedly the presentation of any of the bogus receipts would have made the authorities aware of the fact that some unauthorized person was commandeering cars which were not finding their way to the official destination; but the muddle of those early days of war was so intense that the authorities resolutely refused to see anybody on any business connected with paying out cash in any form until they had had time to consider how the necessary cash was to be raised.

Counting upon this, Mr. McLean continued his work until his garage was full to the bursting point. And, having effected certain exchanges of body work and made various minor alterations in detail, he proceeded to effect a salvage sale by the simple process of delivering the cars to sundry motor-auction salesrooms that are to be found in the neighborhood of Euston Road.

He was in some doubt, at first, as to whether to deliver the cars himself, and, if so, whether to array himself in his newly acquired uniform or not; but finally, concluding that to trust anybody else with the delivery would be to court disaster, he decided to undertake the job himself.

He also decided that, in view of the possibility of a car being officially commandeered en route to the salesroom, his presence on the driver's seat in uniform was a necessity.

Selecting the sacred dinner hour of England as being that in which he was least likely to be interfered with, he successfully delivered three of the cars to three separate salesrooms, representing them in each case to be his own property, and in two cases out of the three asking for and receiving an immediate settlement at a specially low price, on account of being under orders for the Front and having no use for a car.

The third car, which was a nearly new and very expensive one, was not so easily disposed of, because its value was such that any great reduction might have roused suspicion. However, he left it in the care of the salesroom and received an advance of two hundred pounds on it, pending its sale by auction or private treaty. The two other cars he had disposed of outright for one hundred and fifty pounds and one hundred and twenty pounds respectively.

Therefore, when Mr. McLean returned to his workshop, intending to drive the fourth car to a fourth salesroom, he had in his pocketbook in notes, mostly of the larger denominations, the respectable sum of four hundred and seventy pounds.

He was of two minds whether to cache this board or not before starting out on his last trip, but eventually decided to keep the notes in his pocket—a decision for which he had good cause to be devoutly thankful later on.

Mr. McLean, neatly attired as a captain of A. S. C., drove the auto into the road, got down from the driver's seat, locked the shed, pocketed the key and, remounting the seat, drove away.

He had avoided the crowded main thoroughfares as far as possible in delivering the three other autos; and this time, to be certain that he should attract no attention, he avoided the Middlesex side of the river altogether and, crossing Kew Bridge, made his way to town via Richmond and Upper Richmond Road.

He made his way in through Wandsworth and Batterses, and continued his drive over Albert Bridge and turned east along the Embankment, intending to run down to Westminster and from thence to retrace his road through the West End to Euston.

As he approached Grosvenor Road Railroad Bridge he became conscious of a small crowd of civilians surrounding the wreck of a touring car and a taxi, which had obviously been in recent collision with disastrous results.

Mopping blood from a gash on his cheek with a khaki handkerchief, and swearing in most strident tones, was an officer in the uniform and badges of the Staff, the crossed sword and baton on his shoulder straps proclaiming him to be of the rank of a general officer.

Seeing Very Temporary Captain McLean approaching with his recently acquired touring car, the general stepped deliberately into the track of the approaching auto and held up his hand.

Mr. McLean applied both foot and hand brakes and halted the car not a foot from the general.

"Where are you bound for?" inquired that officer.

With ready untruthfulness, Mr. McLean answered:

"Tae the War Office, sir-r."

"On any special duty?"

"No, sir-r—only tae hand over this car-r."

"Who does it belong to?"

"Yon's a government car-r, sir-r—jist ta'en ower fra' a civeelian owner-r."

"Commandeered?"

"Aye, sir-r."

"Then—damme!" exclaimed the general—"I'll commandeer it myself."

"An' wheer wad ye be needin' tae gae, sir-r?" *(Continued on Page 29)*

Let ALEXANDER feed the power to your plant

ALEXANDER of Beltdom is, today, Alexander The Great in the World of Power Transmission.

His mighty tendons are driving the tireless machines that are manned by millions of men in America's master-mills. To these strong men who worship power, Alexander's invincible tenacity is an inspiration.

In plants without number this belt is forcing on the side of Success that narrow margin of gain that outweighs mediocrity or loss. Alexander is turning wastes into winnings.

Let Alexander Tight-Line Belting rim-grip every pulley in your plant; feed every red ounce of power to your big and little machines; give you utmost mileage by metered tests; *give you lowest net cost in Power Transmission.*

For a long pull and a strong pull; for a flying start on Monday morning and a fresh second-wind for the night-shift—for light drives, for heavy duty, for dry, for wet, for hot or cold—Alexander Tight-Line Belts.

Alexander Brothers
Philadelphia

Makers of Leather Belting, Sole Leather and Leather Specialties. Branches, New York, Atlanta and Chicago. Alexander Distributors in All Parts of the World.

The High Mark on Leather

Goes in the basement; supplies *automatically* every hot water faucet in the house.

The Comfort of Instant Hot Water Is Yours

A Ruud in your basement takes hot water out of the luxury class—puts it at your fingers' touch—every hour of the day or night—with nothing in the world to do but turn any hot water faucet in the house.

There is no bother or delay in Ruud Instant Hot Water Service—just turn on the faucet. That's the only signal the Ruud needs. Instantly hot water gushes forth and continues to gush forth until you turn the faucet off.

RUUD
AUTOMATIC GAS WATER HEATER

"Hot Water All Over the House"

The Ruud needs no attention. You never go near it. It is in the cellar out of sight and joins your gas and water pipes there. When you open the hot water faucet—in the bathroom, laundry, kitchen—the flow of water automatically turns on the gas, which ignites from a tiny pilot light in the heater.

The water heats instantly as it passes through a copper heating coil, and comes to you—fresh, sparkling, steaming hot—ready for your bath or shave, for the dishes, for the family washing. When you shut off the water, the gas is turned off—and the Ruud rests inactive until you want hot water again.

If you kept a fire going night and day throughout the year, you couldn't surpass the Ruud for service. And think of the difference in expense. The Ruud Water Heater burns gas—except for a trifling amount in the pilot—*only* when you are drawing water. And then it burns *only enough* gas to heat the exact amount of water you use. There can be no waste, for a temperature regulator in the heater *automatically* keeps the gas supply down to just what is needed.

The Ruud is a thoroughly proved and tested device. Over 100,000 are in use. Many of these have been in service 20 years. *Long service and the highest heating efficiency* are the vital points to be considered in the selection of an automatic water heater. You may be able to buy a heater for a few dollars less than you will pay for a Ruud, but sturdy, durable Ruud construction and the patented Ruud temperature regulator mean *long life* and a *saving of gas* that will soon make up for this small difference in initial cost. It is worth while to make sure that the heater you get bears the name *Ruud*.

Ruud Heaters are made in sizes to fit every home. They operate on artificial or natural gas.

Any gas company, plumber or gas appliance store can give you information regarding a Ruud Heater for your home. If you are near one of our branch offices listed below, come in and see the Ruud for yourself.

The Ruud booklet and descriptive matter, telling all about the Ruud Heater and Instant Hot Water Service, mailed free on request. Address home office or branch nearest you.

Welding one of 26 boiler sections of 16-gauge steel tubing to stand a pressure of 3,000 lbs. to the square inch for the light-weight, high-power engine of the new Doble Steam Car.

Welding made this new steam boiler possible

In constructing the boiler of this new steam automobile, the manufacturer's design called for neatness, light weight, strength and the ability to withstand high pressure. Oxy-acetylene welding solved the problem, just as it is making stronger, neater and better metal products possible in every line of manufacture. If you use bolts, rivets or threaded joints in your product, it will pay you to know the possibilities and savings of oxy-acetylene welding.

Prest-O-Lite PROCESS

Oxy-acetylene welding *fuses* two or more pieces of metal at intense heat, giving a strong, neat, permanent joint.

The Prest-O-Lite process is inexpensive—simple to operate. We furnish a high-grade welding apparatus for $60 (Canada, $75), acetylene service and special metal-cutting blow-pipe provided at extra cost.

The great, universal system of Prest-O-Lite Service furnishes ready-to-use dissolved acetylene in convenient, portable cylinders in sizes to suit every need—insures prompt exchange of empty cylinders for full ones—everywhere. Prest-O-Lite Dissolved Acetylene gives better welds, quicker work, lower operating costs. Makes the outfit portable for use inside or outside the shop. Avoids the initial outlay and depreciation of making crude acetylene in carbide generators.

For Quick, Permanent Repairs

Millions of dollars' worth of valuable castings, machine parts and tools are being reclaimed from the junk pile through this process. The entire cost of the outfit may be saved by just one repair, and the saving will include the time and delay caused by a shut-down as well as the cost of a new part.

Write for details on any manufacturing or repair operation. Our literature describes hundreds of savings by oxy-acetylene welding.

WORLD'S LARGEST MAKERS OF DISSOLVED ACETYLENE

(Continued from Page 26)

"Southampton," snapped the general sharply. "I'm General Ferguson, commanding the —nth Division. What's your name?"

"Ma name? Ma name's Captain Angus McTavish," replied Mr. McLean, with more readiness than truth.

"Are you a regular?" demanded General Ferguson.

Mr. McLean was nonplused for the moment; however, he compromised.

"Aye," he replied; "Ah'm a' that an' mair—though Ah winna say Ah haven't been a trifle irregular sometimes."

General Ferguson glared at Mr. McLean for a moment.

"Special Reserve of Officers?" he queried.

"Aye; ye micht ca' me that."

"I see," said the general, jumping to wrong conclusions. "Just joined up again for the war?"

"Aye," replied Mr. McLean guardedly.

"Well, anyhow," snapped the general, "I've got to get to Southampton to catch my boat. That fool of a taxi came swinging round the corner, knocked my car into matchwood, knocked the driver and young Webster, my A. D. C., out of time, and played hell generally. I've got to get on. You'll have to take me. It will be quite all right—I can give you a note to your chief that will put you all square. There's no desperate hurry for this car of yours to go anywhere in particular, I suppose?"

"Nae," said Mr. McLean; "there's nae mor-rtal haste for her. Jump in, sir-r; Ah'll tak' ye tae Southampton an' chance it."

"Good!" snapped the general, opening the side door and stepping into the car.

A corporal of the R. E. detached himself from the crowd round the wreck of the two cars, stepped smartly up to the general and saluted.

"They've taken Mr. Webster and your driver to Millbank Hospital, sir," he said.

"Right!" said General Ferguson.

"Am I to stay here till the wrecking gang arrives, sir?"

"You'll stay here till the war's over," said the general with a smile, "if you wait for that. You'd better get back to Whitehall and report the accident. Stop! I'll give you a note to take—that will explain the whole thing."

The general scribbled a few lines in his notebook, tore out the leaf and handed it to the corporal, who received it, saluted and stood strictly to attention.

"Now, Captain—Captain—what's your name again?" said the general.

"McWhirter," volunteered Mr. McLean with more readiness than accuracy.

"McWhirter?" said the general. "McWhirter!—I'm sure that's not what you said just now."

Mr. McLean pulled himself together. "Nae, sir-r," he replied; "Ah but gied ye the half o' it—it's a double name. Ah'm the McTavish-McWhirter—but yon's too much for maist folk tae remember; sae Ah sometimes ca' meself the one and sometimes the ither."

"I see," said the general. "Well now, Captain McWhirter, we'll get on, please."

Mr. McLean, wondering in his mind how he could contrive to rid himself of his distinguished passenger, engaged the gears, let in the clutch, and turned the car westward.

Away they sped through Chelsea to Putney, and out over Barnes Common to Richmond, and so through Kingston and Hampton Court to The South-Western Road, the general ever urging Mr. McLean to keep the car at speed. Through Staines and Bagshot they dashed, keeping a steady average of thirty miles an hour; and the car purred over the smooth road like a live thing.

At Camberley they halted to pick up more petrol, and while the tank was being refilled the general took Mr. McLean into the hotel and bought him a drink.

"That's a fine little car you've got there," he remarked.

"Ah've driven worse," admitted Mr. McLean.

"Yes," said the general; "and it seems to me I might easily get a worse one allotted to me on the other side. I've a dashed good mind to take her over with me. Would you like to come?"

Mr. McLean hesitated, his natural caution struggling with the love of adventure that is in every Scot.

"Aye, sir-r," he said; "Ah'd just like it verra weel."

"Then—damme!—you shall. We'll get the car stowed on the boat and you shall drive me."

"Wull I no get into trouble at the War Office?" asked Mr. McLean.

"The War Office be damned!" replied General Ferguson. "If a divisional commander can't choose his own car and his own driver, what's the use of going to war? I'll put that all straight. Between you and me, the War Office is in such a state of mess and muddle at the moment that they'll take no notice of anything. It'll take them months to settle down to any kind of routine. You've done me a good turn, my boy—I'm going to stick to you. Come along!"

Mr. McLean absorbed the remainder of his whisky and the pair returned to the car. Away they sped through Frimley and Basingstoke, and in the gathering dusk purred up hill and down until it grew too dark to go on without the lights.

"Better stop and light up," suggested the general.

"Nae need, sir-r!" shouted Mr. McLean. "Jist click down yon switch, if ye plesse," he added, pointing to the little switchboard that faced him on the dash.

The general complied, and the dazzling beams of the electric headlights pierced the shadows and turned night into day.

"Electric headlights, by Gad!" said the general, delighted. "This is a jewel of a car! I'll see I don't part with her if I can help it."

Away they sped through the New Forest and out to the south, until the lights of Southampton twinkled before them. And under the general's direction Mr. McLean sought and found the South-Western Hotel.

"We've taken it over as headquarters for the Naval Transport people," explained the general. "Wait here for me—I must go in and find out how we get across. My division crossed last night, but I had to wait for special orders."

The general disappeared into the hotel and Mr. McLean considered his position. A trifle of thinking brought him to the conclusion that flight at this stage of the proceedings would be attended by grave danger of detection; so he concluded to stay with his general and see it through. His deliberations were cut short by the return of General Ferguson, attended by a lieutenant commander of the Naval Transport Staff.

The latter officer mounted the front seat beside Mr. McLean, while General Ferguson entered the back of the car; and, under pilotage of the naval officer, Mr. McLean drove the car through the dock gates and down the road leading to the loading sheds on the quay.

"Here you are!" said the naval man as a long shed loomed up ahead of them. "Keep round to the water side—just under the crane there."

Mr. McLean halted the car between the wall of the shed and the crane, and looked about him. Everywhere was bustle and orderly disorder; hurrying men and anxious officers were bustling round and seeing to the loading of the great tramp steamer that lay alongside the quay.

Mr. McLean had gathered during the journey that the reason General Ferguson had not crossed with his division was that he—the general—had been appointed to the command at less than twelve hours' notice, owing to a sudden change in one of the higher commands. It appeared, also, that General Ferguson was a "dugout," having been living in comparative obscurity for some years.

General Ferguson was a man of about Mr. McLean's height and build, though some twenty years older; but, except for the fact that he was clean-shaved—an unusual state of the lip for a general—he was not in any way remarkable-looking.

After seeing the general installed in his quarters, Mr. McLean saluted and withdrew to his own cabin. After a delay of an hour the warps were cast off and the big steamer made her way slowly down Southampton Water to pick up her escort, and Mr. McLean, stretched on a very hard bunk, tried to get to sleep.

General Ferguson's cabin was next to his own, and cut off only by a thin partition, and he could hear the general snoring above the rumblings of the propeller shafting below in the bowels of the ship.

Just as Mr. McLean was beginning to feel sleepy he heard a startled cry from the other side of the partition, and sat up in his bunk to listen. The general's snores had ceased and he could hear no sound from the next cabin.

Very quietly Mr. McLean got out of his bunk and, opening the cabin door softly,

FINISH the day on Wingfoots—take a night-cap walk beneath the stars before you turn into bed.

again listened. He could distinguish no sound from the general's quarters. Softly Mr. McLean turned the handle of the door and looked inside.

The electric light was full on, and the general, who had divested himself of his service jacket, was lying at full length in his bunk.

"Is there anything wrong, sir-r?" inquired Mr. McLean. No answer.

Mr. McLean stepped closer to the bunk. The general lay white and still, and to Mr. McLean's eye appeared to be too still. Mr. McLean bent over and touched the general's arm. Still, the general gave no sign of life, and Mr. McLean, taking him boldly by the shoulder, shook him.

The general remained entirely inert, and further examination convinced Mr. McLean that General Ferguson was dead.

"Puir fellow!" he mused. "Hair-rt disease, Ah mak' nae doot. Ablins there's a doctor-r aboar-rd. Ah'd better see."

Just as he was about to leave the cabin in search of assistance, an idea struck him. With General Ferguson dead, how was he to explain his presence on the boat and his unofficial appointment? Mr. McLean hesitated, and it became obvious to him that he was in a position where he stood in considerable danger of making the acquaintance of a wall and a firing party at no far distant date. Then came inspiration—and Mr. McLean picked up the dead man's service jacket and slipped it on.

Mr. McLean tiptoed from the cabin and looked out of the doorway at the end of the alleyway. The deck outside was deserted, the night black, and the rail at the ship's side not five feet from the door.

Quickly Mr. McLean returned to his own cabin, picked up his service jacket and, with it in his hand, made his way to the dead general's side. He did not try to dress up the corpse, but, merely wrapping the khaki jacket round it, lifted the body and, staggering under the weight, made for the deck. Cautiously he looked back and forth; and then, when he was certain that there were no prying eyes to see his action, he crossed the deck to the rail and committed the body of the late General Ferguson to the deep.

There was a sounding splash, and the officer on the bridge heard a cry from the deck below.

"Man owerboar-rd!" cried the voice in a strong Scotch accent.

The watch, attracted by the cry, came running, and found an officer, in the uniform of a British general, leaning over the rail and gesticulating wildly.

"What's up, sir?" inquired a boatswain's mate.

"Naething!" replied the general. "Naething's up—it's ma young friend, Captain McWhirter—he's down—he's owerboar-rd! Canna ye no' save him?"

"Better come up on the bridge, sir," said the sailor.

And to the bridge they went, where General McLean-Ferguson reported to the astonished naval officer that Captain McWhirter, who had driven him from London and was to have accompanied him to join the Division, had fallen overboard.

"Can't help it, sir," said the naval officer. "I daren't stop. There may be submarines about, and we can't risk a shipful of men for one captain of the A. S. C. I hope somebody'll pick the poor chap up; but I doubt it."

"Aye; I doot too," replied General McLean-Ferguson; "but we'll hope for-r the best. Verra sad—a nice young fellow! Verra sad!"

With which obituary notice Mr. McLean, in the garb of a general in command of a division, returned to his cabin to investigate the contents of the dispatch case, in which he hoped to find information that would enable him to take over his command without exciting suspicion.

To his delight, he found what he required; and after a few minutes' perusal of the papers in the case he composed himself to sleep on the bunk in which General Ferguson had lain half an hour before.

"Eh, weel!" said Mr. McLean to himself as he lay down. "I dinna doot he was a verra guid general—but Ah'm nae sae sure that Ah'll no' mak' a better. It's no' as though Ah'd tae run the campaign. If Ah keep ma mouth shut, an' dinna gie ower mony or-rder-rs, Ah can get maist o' the worr-k done by adoptin' the navy's word o' command. All they'll get fra' me'll be just two wor-rds—'Carry on!'"

And the new British general fell sound asleep.

TWO SECONDS *BEFORE IT HAPPENS!*

THE new car is working like a charm. You have learned to master it completely.

Down the street you come, proud of yourself and your smooth, swift progress.

Then something happens.

From the sidewalk, in the middle of a block, darts a man, or a girl, or a little boy.

There he is—almost in front. He doesn't see you.

You reach for the button that sounds your horn. Down—down also with the foot brake!

But it's the horn that you depend on. If that horn makes good, if it does its duty in those two nerve racking seconds—the accident DOESN'T HAPPEN.

You never thought much about the horn. When you bought the car you asked about the starter and the motor, the axles and transmission, the rims and cushions and leg-room and a dozen other things.

But the horn. Well, a horn's a horn. The car had one. Yes, an "electric" horn. You pressed the button. It sounded all right—IN THE SHOW ROOM. You were satisfied.

And you probably CONTINUED to be satisfied till you really NEEDED that horn.

When you DID need it then you realized that you needed a GOOD one, one you could DEPEND ON—that would ALWAYS WORK—that would WARN—that would CARRY—that would always and unfailingly GET HEARD.

You need a KLAXON.

Klaxon Company, Newark, N. J.

If it is a genuine Klaxon it has the name **KLAXON** *on the nameplate: Look for it.*

KLAXON

KLAXON-3 $3
It pushes from BEHIND—the handy, *easy* way to work a hand signal.
(In Canada $4)

KLAXON-6 $6
An electric *motor*-driven Klaxon for medium and small sized cars.
(In Canada $7.50)

KLAXON-12L $12
Big and powerful—designed especially for installation under the hood; but may also be installed outside.
(In Canada $15)

KLAXON-20L $20
This is the big Klaxon—the one you see on all high-priced cars.
(In Canada $25)

Shake!!

You live business men who sell Cornell-Wood-Board do you know what you have done?

You have helped build the most wonderful wallboard business in the world in *less than three years time!*

You have helped make Cornell-Wood-Board famous as an interior finishing material wherever folks are interested in better building and better homes.

You have demonstrated to your customers that Cornell-Wood-Board really modernizes homes in a way that no other material can accomplish.

You have shown the public that Cornell-Wood-Board makes walls and ceilings unequalled for beauty and utility.

You have proved to builders that Cornell-Wood-Board is ideal for stores, offices, churches, theatres, farm buildings and the like, as well as for homes.

You have pointed out that Cornell-Wood-Board makes rooms warmer in winter, cooler in summer—that it keeps out the moisture.

You have demonstrated by fact and figure that Cornell-Wood-Board is economical above other materials of similar purpose.

You have spread our guarantee of absolute satisfaction far and wide.

You and your customers undoubtedly have profited by your honest enthusiasm in the sale of Cornell-Wood-Board.

You have, by your co-operation, made the Cornell Wood Products Company a dominant factor in the wood-fibre wallboard industry.

We appreciate all this. And it is our earnest desire to co-operate with you to a greater degree this year than ever before. We will try to give you *even greater* assistance in selling Cornell-Wood-Board.

Cornell-Wood-Board Dealers, we thank you.

SHAKE!!

Sincerely yours,

President

American Supremacy In Machinery

This supremacy has been gained and held by quantity production, enabling American manufacturers to dominate the world-market in spite of paying the highest wages. It is the toolmaker that has made this quantity production possible.

In the constant search for better tools, a most noteworthy advance is made in the design of the Gun Tap shown below. Here is a tap in which *breakage is almost entirely eliminated*. Think of that for a minute, remembering that the breakage of ordinary taps runs about 90%.

The Gun Tap cuts with a shearing action, the only true cutting, and a new feature in taps. This makes it the easiest cutting tap on the market. It shoots the chips ahead—whence the name "Gun" Tap—instead of jamming them into the flutes. Thus the flutes can be shallow, and this, with the easy cutting, makes it almost unbreakable.

For further information as to these details, its unequalled accuracy, and the possibilities of increasing production, send for Bulletin entitled "The 'Gun' Tap."

LE PAGE'S GLUE 10¢
STRONGER THAN NAILS

HALF A MAN

(Continued from Page 13)

The boy vowed that there was not another such among womankind. The General nodded and stroked the knob of his nose.

Carlitos thought no more of the incident after the first flush of elation subsided. He thought no more of it for two whole days; and then, on the evening of the second, as he was engaged in rolling dice against Juan Juarequi and Tomas down by the stream, he looked up to see a cavalcade enter camp. In their midst, on led horses, were Mrs. Witherspoon and Rosie.

He paused in the middle of play to gape. They passed without seeing him and dismounted at one of a group of empty huts near Staff Headquarters.

"What's the matter, Carlitos? You are pale."

"Nothing!" he replied shortly. But in a short while he abandoned his comrades and strolled up to the house. It was guarded by a sentry. Carlitos knew the fellow, and they exchanged some remarks concerning the prisoners.

"Let me see them."

"My orders spoke only of men, not of children," observed the sentry with a guffaw; "so you may go in."

Mrs. Witherspoon looked up quickly when he entered, and Carlitos quailed.

"So it was you, after all?" she said. "I thought so."

"I didn't know anything about it, ma'am," he protested in a whine. "Honest, I didn't! How could I know that they'd play such a trick? All I did was to say something about how pretty she was—and so she is pretty."

"I'd like to scratch your eyes out!" snapped the girl. Her plump, tanned face was streaked with tears and she was sadly disheveled.

"How did they catch you, ma'am?"

"They come so quick we didn't have time to run; and Jim was away," wailed Mrs. Witherspoon. "There was only ol' Miguel on the place, and he never so much as lifted a hand. Oh, my baby, my baby—he'll die—I know he will! And it'll be your fault."

"Where is he?"

"They done left him with your ma; but you know as well as I do he can't get on without me. And they mean to kill us! I can tell that."

"Oh, no. It ain't as bad as that, Miz Witherspoon."

"Perhaps not," she cried fiercely. "It's like it'll be worse!"

The boy did not comprehend that at all; but he realized that they held him to blame, and he was abjectly miserable. So the next time the sentry went by the door he used him as a pretext to escape.

"Go and tell 'em some more!" Mrs. Witherspoon flung after him.

Carlitos pretended not to hear, and inquired of the soldier where General Murga was.

"He went out this morning to meet Colonel Servin and will not be back until late."

The boy reëntered the hut to impart this information.

"That's good," said Mrs. Witherspoon, who was lying on the floor. "I hope something happens so he never gets back! What're you going to do about it, Carlitos? You got us into this fix—can't you get us out?"

When he did not answer she added scathingly:

"After all I've done for you too! Here, we fed you and gave you clothes ——"

"Yes; and I've stuffed him with candy till he popped!" exclaimed Rosie.

"And now you go and do us like this! Can't you fix it so we could get away, Carlitos?" Mrs. Witherspoon's manner became eager. "Just give me a gun," she went on in an unsteady whisper, "and me and Rosie'll manage the rest. Please, Carlitos! Think of all we've done for you—oh, don't stand there like ——"

"S-sh!" the boy warned as the sentry reappeared; then he said aloud, in brusque tones: "Well, you women'd better quit crying and make yourselves pretty."

The soldier heard him and chuckled. Shortly afterward Carlitos left them.

They expected that he would return soon, but he did not. He went down to the creek and squatted on the bank, chucking stones into the water while he thought out the problem.

The fate of Mrs. Witherspoon did not occasion him the concern it ought, and he even dwelt on the baby's predicament with a measure of composure. Their case merely roused in Carlitos a certain irritation that he should be vexed with their troubles.

But Rosie was an entirely different proposition. The longer he pondered over what might happen to her, the bluer he felt. He fidgeted and fumed. At one moment he savagely denounced his own garrulity, which he knew intuitively had brought her to this plight; the next, he wanted to murder the general, hero though he was. He stood up and flung stone after stone into the stream with all his might.

About five o'clock he answered roll call, but returned immediately to the creek. And there he stayed, though the bugle sounded for supper, wrestling with his problem. He was still wrestling with it when darkness fell; but he was quieter now.

Something was crying his duty in ears that strove to be deaf. The white half of him was working strongly.

At last he seemed to reach a decision, and made his way by a circuitous route to the horse lines. An hour later he sauntered back to the village past the hut where the women were held. The sentry was talking to a young girl at a fire about ten yards off. It seemed to Carlitos that he was having too good a time to be watchful, and after a few minutes he stole to the back window and tossed a pebble inside.

Why Mrs. Witherspoon and Rosie did not scream when it rattled on the floor they could never afterward decide, nor why they permitted in silence a figure to climb through into the room. Perhaps the size of the intruder was reassuring, for even in the dim light, and under the strain of fear, he looked very small to them.

"Don't move!" breathed Carlitos in the girl's ear, and she clutched his thin little arm convulsively. "There's a couple of horses tied below the bend. Come on!"

They tucked up their skirts and followed him soundlessly out of the window and down the slopes.

"Here they are," whispered the boy. "Be mighty careful how you get on; and go slow. I've wrapped sacks round their feet."

"Ain't you coming, too, Carlitos?" asked Rosie in surprise.

"No-o-o. I got to stay."

"But they might find out; and then you'd get it!"

"I'll be all right. You go along. I—I just got to stay."

With a prospect of escape at hand, Mrs. Witherspoon was seized with a fever of energy.

"Hurry, Rosie. I'll help you up first. If we can make it to the ranch before they catch up, Jim'll take us to the Border; and then ——"

But Rosie was of softer stuff. She did not realize any more than the older woman the sacrifice the boy was making. She never suspected for an instant that he was doing it in the full expectation of paying with his life; but, all the same, it was a fine, manly thing for Carlitos to do, and she was touched to the heart. She reached out in the dark and took him in her arms and kissed him. Carlitos clung to her; and suddenly he began to cry.

"So," Black Murga rasped, with the culprit erect on the mat before him, "you helped them—and admit it?"

"Yes, general."

"Why? You knew what to expect, didn't you?"

Carlitos answered humbly that he did.

"Then"—the general bent his heavy brows on him—"what made you go and do it?"

"They'd—they'd been good to me!" was his only defense.

Murga considered him a while, his features set and stern.

"You have heard me say that the first duty of a soldier was loyalty and obedience? Yet you have been a traitor."

When he paused, Carlitos deemed it incumbent upon him to say something.

"Yes, general."

"What I don't understand," continued the chief irritably, "is why you didn't go with them. You come back here and sneak into bed, and next morning have the nerve to own up that you helped them get away!"

(Concluded on Page 35)

United States Tires

Leaders

Just as New York is among the leaders of the great cities of the world, so United States Tires are among the leaders of tiredom.

They have become the recognized standard of tire value and low mileage cost.

We honestly believe that there is as much value, as much tire mileage at the lowest cost per mile, in United States Tires, as it is possible to put into a tire.

Behind this statement is the word not only of the United States Tire Company but of the largest rubber manufacturer in the world.

If you want further evidence, just ask your friends who are using United States Tires.

Then you will probably prove it for yourself by joining the great multitude of satisfied users of United States Tires.

Sketch the NATIONAL OATS Girl

for $1000.00

THE WINNERS!

In the Open-to-Everybody Contest:

1st	Fred A. Deckhar, 3930 Magazine St., New Orleans, La.	$200
2nd	Mrs. Annie L. Tuttle, 1603 Grape St., Jacksonville, Fla.	50
3rd	E. F. Rebbolz, 3211 Pennsylvania Av., St. Louis, Mo.	20
4th	Mrs. Lena Hillington, 38th Av. & Buchanan St., Nashville, Tenn.	15
5th	Frank S. Nicoll, 3617 Park Heights Av., Baltimore, Md.	10
6th	F. C. H. Stevens, 2222 Nebraska Av., St. Louis, Mo.	5

In the School Children's Contest:

1st	Evaline Sillers, Box 116, R. F. D. No. 4, Ft. Worth, Tex.	$100
2nd	Helen E. Richards, 845 Lincoln Av., Toledo, Ohio	50
3rd	Chester Blain, Spring St., Amherst, Ohio	20
4th	Doris Brethouwer, 536 S. 1st St., Montrose, Colo.	15
5th	Ebba Hendrickson, 707 Van Buren Place, St. Paul, Minn.	10
6th	Sylva Berg, 711 Downey St., Indianapolis, Ind.	5

Checks for the first six prizes, each classification listed above; also checks for the 100 prizes of $2 each in the Open-to-Everybody Contest, and the 300 prizes of $1 each in the School Children's Contest, will be mailed to the winners on Febeuary 11th. We shall also mail to each one who sent in a sketch conforming to the rules, in the Open-to-Everybody Contest an order, good at any grocer's for a regular, full-size package of National Oats, *free;* and a souvenir to each child, under sixteen years, who failed to win a cash prize.

And now we say to everybody—contestants and others alike—

EAT

NATIONAL OATS

—you can taste the difference

Made from choice, plump white oats, rolled. Packed in bright, clean packages. Crisp and flaky. Cooks up quicker and whiter. Tastes just like you know oats ought to taste. Any grocer can supply you with National Oats.

NATIONAL OATS CO., ST. LOUIS

"YANKEE" TOOLS

Make Better Mechanics

Works where no other breast drill can

Five adjustments made with Shifter between the small gears: (1) Plain drill; (2) Left-hand ratchet; (3) Right-hand ratchet; (4) Double ratchet; (5) Gears locked.

In DOUBLE ratchet, any movement of the crank, to or fro, and no matter how slight, causes the drill to feed continuously. Multiplies man's power.

"YANKEE" Ratchet Breast Drill

Price, $6.25. Your dealer can supply you. *Fourteen styles and sizes of "Yankee" Breast and Hand Drills. Write for "Yankee" Tool Book."*

E. W. Stillwell & Co., Architects, 506 Henne Bldg., Los Angeles

(Concluded from Page 33)

It was plain that the performance struck him as sheer effrontery.

"I—I had to come back. I'm a soldier! Besides, you'd have found out it was me and got me, anyhow."

The rebel chief scrutinized him fixedly. Carlitos was pale round the lips and ears, and the pupils of his eyes flinched slightly, but he stood up straight and did not tremble.

"I see," said the general with ominous calm. "You figured that I might let you off because you're so young. Well, you were wrong." He paused, made a sign to Colonel Moreno, and added: "I'm going to have you shot. Take him away, colonel. And finish the job at once. You understand me."

It was only what Carlitos had expected, but from the group about the chief broke exclamations of horror and amazement. There was a simultaneous movement forward of all but Moreno, and a young aide cried:

"*Por Dios*, my general! Think—he is only a child!"

"Be quiet, you!" roared Murga, his face twitching with rage. "Just one word more and it will be twenty blows with a saber. Do you hear? Take him away, Moreno! There's a pill of my making."

They fell back, and the colonel conducted the boy outside. Before going, Carlitos saluted punctiliously, and as they passed out into the sunshine he could hear Black Murga scolding his staff.

A priest confessed Carlitos and a squad of five marched him to the adobe wall against which Hernandez had perished. On the way the boy kept that hero in mind and strove to walk as nonchalantly. The result was a pathetic swagger; and when he tried to smoke, it got into his lungs and set him coughing. Yet he contrived a joke to the sergeant of the squad, and the big Yaqui grinned.

The whole camp trailed behind. Carlitos did not resent their curiosity. Instead, he accepted it as a tribute and was glad that so many people should see how fearlessly he could conduct himself.

How was it Hernandez had done? Ah, yes—he had smoked a cigarette; he had flung it from him and made a speech; and he had thrust aside the bandage. Well, he would do the same; he, Carlitos, would show the entire army the stuff that was in him. A sort of ecstasy submerged the inner voices that prompted him to beg for mercy—to run for it—to fall down and refuse to go farther.

Consequently, when they placed him against the wall Carlitos selected a spot with nice care, as though the choice were a matter of moment. Murmurs of pity reached him from the crowd, but he did not interpret them. An officer attempted to bind his arms, but Carlitos pleaded that it was unnecessary, for he would not run or dodge, or fight back.

Next he pushed aside the handkerchief that Colonel Moreno would have tied over his eyes, squared his shoulders, gazed straight at the firing squad, and announced in a childish treble:

"I'm ready!"

The colonel stepped to one side. His sword was lifted.

"Wait a minute!" exclaimed Carlitos.

They waited. The boy took another pull on his cigarette—he had nearly forgotten that. Blowing a smoke ring above his head, he tossed the stub away.

"Tell Rosie," he cried, "that my last thoughts were of her—and my soul to the Unknown! *Preparen armas!*"

Up came the rifles.

"*Sobre el reo apunten!*"

They leveled them at his breast.

"*Fuego!*" he shrilled.

The rifles barked. The dust spurted from the adobe wall. Yet Carlitos stood upright. He was quivering, but he did not fall.

"You'll have to shoot again," he quavered. "I'm not dead yet. I think you missed me."

And, dadgum, if they hadn't! What do you think of that? The whole army gave a yell and surged toward the prisoner. The colonel advanced to look; and Black Murga appeared abruptly from the crowd to make sure for himself. It was surely a miracle.

"*Ah qué pelado;* it is the truth!" exclaimed the general, turning the boy round and round, and feeling him all over. "Not a hole in him—not so much as a scratch! What sort of shooting is this? I've half a mind to stand all five of you up in his place."

"Shall we shoot him again, general?" inquired Moreno gravely.

"I should say not! If five of my best shots can't hit him the first time, you don't get another chance. How about it, *muchachito?* Had enough? Then be off before somebody of surer aim tries it."

The advice seemed good to Carlitos. Jubilant, but feeling far from secure as yet, he darted into the press of spectators and was carried triumphantly back to camp. They felt so relieved and happy that they not only yelled for Carlitos but even cheered Black Murga. And Carlitos made eleven speeches.

He was well started on the twelfth, the center of a throng of troopers; he was relating it all over again—how five full-grown men had fired pointblank at him from a distance of five yards without so much as inflicting a mark, because of God's grace as a reward for devotion and courage—he was telling it for the twelfth time when a messenger arrived to summon him to headquarters. Carlitos did not notice him at first. He was in fine fettle. As he warmed up, he colored the tale, dividing the credit between Divine intervention and his own astuteness in making certain muscular contortions by which he had evaded the whizzing bullets.

The messenger thrust forward.

"Yes, Carlitos," he said; "you ought to be thankful for your small stature. That alone saved you. But hurry up and come with me. The general wishes to speak to you."

"What's the matter now?" demanded the boy in some apprehension.

"I don't know."

Very uneasy, Carlitos accompanied him to the chief's house. Nor were his fears allayed when he glimpsed Murga's expression, which was black and lowering. Half a dozen officers were in the room, and they gazed at Carlitos without a sign of friendliness.

He began to fear the worst.

The general waited until Carlitos had brought his heels together and saluted. A secretary sat beside him, with pen and paper.

"What is your name?" he began with much formality.

"Carlos Aviles, excellency."

"Your age?"

"Ten years—going on eleven." The secretary jotted it down.

"Have you any children?" Murga continued.

"No, general—not yet."

"Ah! Then you are not married?"

"No, general."

"So much the better. You can serve me with undivided mind. Carlos Aviles, you are promoted in the orders of the day to a captaincy; and you will be attached to my personal staff. . . . And now," he cried, rising from his chair, "come and embrace me, *hombrecito!* Give me ten thousand like you, and I would laugh at my enemies."

Later that day Black Murga was disturbed in his siesta by wrangling voices and sounds of strife, punctuated by yelps of pain. He sent his military secretary to learn the trouble. That officer returned in short order.

"It is one of your aides, excellency."

"What? That row? Who? Which one?"

"Captain Aviles, general."

"Ah, indeed! And what is the captain doing now, Dario?"

"He is trying to beat up two of your soldiers."

"Good for him! Why?"

"It seems, general, that he ordered Troopers Juan Juarequi and Tomas Fraustro to salute him each time he went by."

"Well?"

"They told him to go to hell!"

This X Will Prove Your Ambition

THIS little "X" has marked the way to success for thousands of ambitious men. It marked the day when they stopped *dreaming* and began *doing*. Merely dreaming about the job ahead won't help you get it. But marking "X" in the coupon proves your ambition—and shows that you are ready to put your dreams into action to earn success.

The job you dream about *can* be yours. Not through favor or pull or some lucky chance—but through *training*. Thousands are proving it every day.

And it is easy for you to get that training. It isn't necessary to make a drudge of yourself. The first step is to mark your "X" before the job you want, and we will show you the way to success.

Make Your Mark Now

Mark an "X" before the job you want, and mail the coupon to us now. We'll show you your way to success—more simple and easy than you have dreamed. You'll be under no obligation and for the sake of your ambition you should act today. Make your mark now. Send the coupon.

REPUBLIC TRUCKS
INTERNAL GEAR DRIVE

Five Republic Sizes

Republic Dispatch Model 9, maximum capacity 1500 lbs. Furnished complete with express body, canopy top, side curtains, glass front, electric lights with generator and storage battery and electric horn, $750; or with beautiful solid panel body, ***$775.***

Republic Model 10, one ton; stake or express body, seat and bow top included, ***$1095.***

Republic Model 11, one-and-one-half ton chassis, ***$1275.***

Republic Model "A," two-ton chassis, ***$1675.***

Republic Model "T," three-and-one-half-ton Dreadnaught chassis, ***$2550.***

Maximum Hauling Service —Minimum Investment

FIRMS in practically every line are standardizing both their hauling and delivery service with this wide range of Republic sizes. There are many Republic fleets embracing all the five models. There are many large fleets *exclusively* Republic.

This remarkable expansion of Republic service in three years is due to the demonstration in the hardest kinds of work of the Republic's idea of Quality—the hauling of your goods all the time, at the least cost.

Our business increases with the demand for better service. And this demand calls for an output of more than 23,000 Republics in the coming year. The largest motor factory in the world exclusively devoted to motor truck manufacture has ample facilities to cope with this market. Write for catalog of model in which you are interested. SALT OF THE EARTH

(Continued from Page 7)

dirt that runs from four bits to a dollar a pan. So he buys the property for a million dollars, puts in his machinery an' ditches, washes for a month, an' shuts down to make his first clean-up. Sinful, that gal tells me he don't git gold enough to fill a tooth!

"Hyde is in Yurrup by this time; so Pyrites can't git close enough to the skunk to kill him. Also, Pyrites don't squeal none—part from pride an' part because he's a dead-game sport. He just packs his jacks an' heads up into the Harqua Halas, lookin' for another stake, which he never finds; an' finally somethin' goes wrong with his innards an' he sets back from the game. His widder runs a miners' boardin' house an' manages to give this here gal Marjorie her schoolin' an' make a trained nuss out o' her; after which maw cashes in too—an' the gal's an orphan."

Sinful John was silent a long time, pondering this tragic tale. Finally he asked:

"An' this feller Hyde? Is he still in Yurrup? Because if he is we'll just nacherly look that varmint up an' argy the case with him when we go to the Paree Exposition."

"No," replied Snowshoe, "he ain't. He's a-livin' in New York, an' he's what you-all call a banker and broker. That million he took from Pyrites Kincaid give him his start; an' Marjorie tells me as how she read all about him in the papers. I reckon mebbe that skunk's worth twenty million dollars by now."

Again Sinful John lapsed into silence. After a long time Snowshoe Sam queried:

"I'm agreeable, Sinful. . . . How d'ye propose takin' that million away from him?"

Not a word had been spoken; yet Snowshoe read his partner's thoughts as accurately as if Sinful had shouted them.

"To-morrer mornin'," Sinful declared calmly, "I'm a-goin' to take two o' the jacks an' go back to the dry diggin's, dig up that eighteen thousand dollars in dust we got buried there, an' light out for Battle Mountain, to connect with the overland train. When I git there I'll cash in enough dust to keep us both goin' for the next three months, an' the rest o' the poke I'll put in the safe-deposit vault in the bank there, in both our names. Then I'm a-goin' to dust for New York; an' as soon as you're able to stagger round, Snowshoe, you light out for Mono County. D'ye remember that big cement-gravel deposit we looked over twenty years ago—about nine hundred acres of it, up near Benton?"

Snowshoe nodded.

"You're goin' to sell him that conglomerate, eh?" he queried.

"I'm a-goin' to try, Snowshoe."

"Salt?"

"You bet!"

"How?"

"Nothin' so coarse as Mexicans with gold-filled cigarettes. No, siree! It'll require art to sell this swindler nine hundred acres o' gravel without a streak of color in it! So we'll be artists, Snowshoe. We'll just tell him where the claims lie, lead him out to 'em, then walk away an' let him or his engineer sample every dog-goned acre of it, if they want to. They'll get an assay that'll drive 'em crazy, no matter where they take the sample."

"Sinful," Snowshoe Sam reminded his partner gently, "we ain't got dust enough to salt nine hundred acres o' that wuthless gravel deposit. An' though I don't never aim to be a short sport, an'll go as far as any man, still, as your pardner, I've got to remind you that this proposition's goin' to knock spots out o' our trip to Paree. An' you been settin' a heap o' stock by that journey."

"To hell with Paree!" roared Sinful John with splendid nonchalance. "I been readin' up on Paree lately, an', come to think of it, I'm afraid I've been overestimatin' that camp. In the first place, the john-damns, which is what they call the city marshals, won't let you wear a gun; an' if you hit a Frenchman a swipe in the snoot for insultin' of you, you git six months in the county jail. The only thing that's left for a feller to do, then, is to cuss the short-horn. An', Snowshoe, them Frenchmen don't know what cussin' is like! Snowshoe, they wouldn't understand us. If I was to call one of 'em the name that was sudden death in Ballarat an' Eureka an' Virginia City when we was young fellers, he'd think I was complimentin' him."

"Well, I'll be shot!"

"Yes, sir; it's a fact. Snowshoe, whenever you want to cuss a Frenchman just call him a camel; if you want to git him goin' for fair, call him a camel with two humps; an' if you want to see him tie knots in himself, 'low as how he appears to you to be a kind of cabbage, badly cooked! That'll always stampede him."

Snowshoe expressed proper amazement.

"Wa-al," he concluded finally. "Let's hope we'll save enough out o' the wreck for a trip to Frisco. We ain't been there since sixty-eight; an' they do say folks in Frisco has quit burnin' kerosene in lamps an' uses 'lectricity. I sure would like to see one o' them bottles with a light in it an' no wick. Speakin' personal, Sinful, I ain't never been very strong for Paree myself."

"Then you wouldn't enjoy the trip, Snowshoe. However, to git back to business: As soon as you're able to toddle round you cross over into Mono County, California, an' stake every acre of that gravel deposit. You can use the names of all our friends here in Kelcey's Wells; then, after filing the location notices, come back here, give each of the fellers whose names you've used one silver dollar an' git a quit-claim deed from them for the claims. Then git a lawyer an' incorporate 'em all in a company, an' put a couple o' fellers to doin' the assessment work, until I come back from New York with this Hyde person or his engineer."

"What'll we call the mine, Sinful?"

"Call it the Sweepstakes Minin' Company; an' don't use your own name in connection with the deal at any time. Have the locators deed direct to the company, an' put all the capital stock in my name, with two dummies, holdin' a share each, to make up the board of directors. I'll be president an' treasurer."

"High fi-nance, eh?" piped Snowshoe.

"You bet!" said Sinful John. "Minin'—how to do it an' how not to do it—is one game you an' me savvy all the way. High fi-nance! I should tell a man!"

IV

THE cool young man on guard in the general office of Mr. Brandon P. Hyde, banker and broker, of Wall Street, New York City, looked up as the door opened cautiously halfway. An individual, alien to New York, stood in the aperture. Mr. Hyde's young man gazed upon Sinful John—for the visitor was none other—but said nothing, though his gaze plainly indicated that he wished to be shown—something; no matter what. On his part, Sinful John hesitated, awaiting a cheerful summons to enter and make himself at home. Thus, ten painful seconds passed.

"Well?" queried the cool young man.

"Son," Sinful asked mildly, "be the boss in?"

"Have you an appointment with him?"

"No."

"Then he isn't in—to you, I'm afraid."

"Suppose you tell him I'm out here an' ask him if he can spare me ten minutes o' his attention."

"Whom shall I say wishes to call? Have you a card?"

"Quit joshin' me, young feller! Have I a card? Of course I ain't. Just tell the boss John R. Harkness, of Kelcey's Wells, Nevada, has called to sell him a mine."

"It would be as much as my job is worth. Mr. Hyde has mining propositions put up to him every day of his life, and just at present he isn't considering any further investments."

"He'll consider my proposition. He can't afford not to."

"Mr. Hyde's time is very valuable ——"

"How valuable?"

"Well, I've known days when it was worth a hundred dollars a minute."

Sinful John stepped into the room, reached into his breast pocket, and brought forth a roll of greenbacks held together by a rubber band. Quite coolly he counted out a thousand dollars and shoved it across the counter toward Brandon P. Hyde's astounded outpost.

"I'm no piker when it comes to gittin' what I want," he informed the latter. "You tote that wad in to the boss an' tell him I'm not asking him to give me a second of his time. I'm prepared to buy it an' pay his price for it."

Mr. Hyde was a very human sort of bandit; consequently when his private

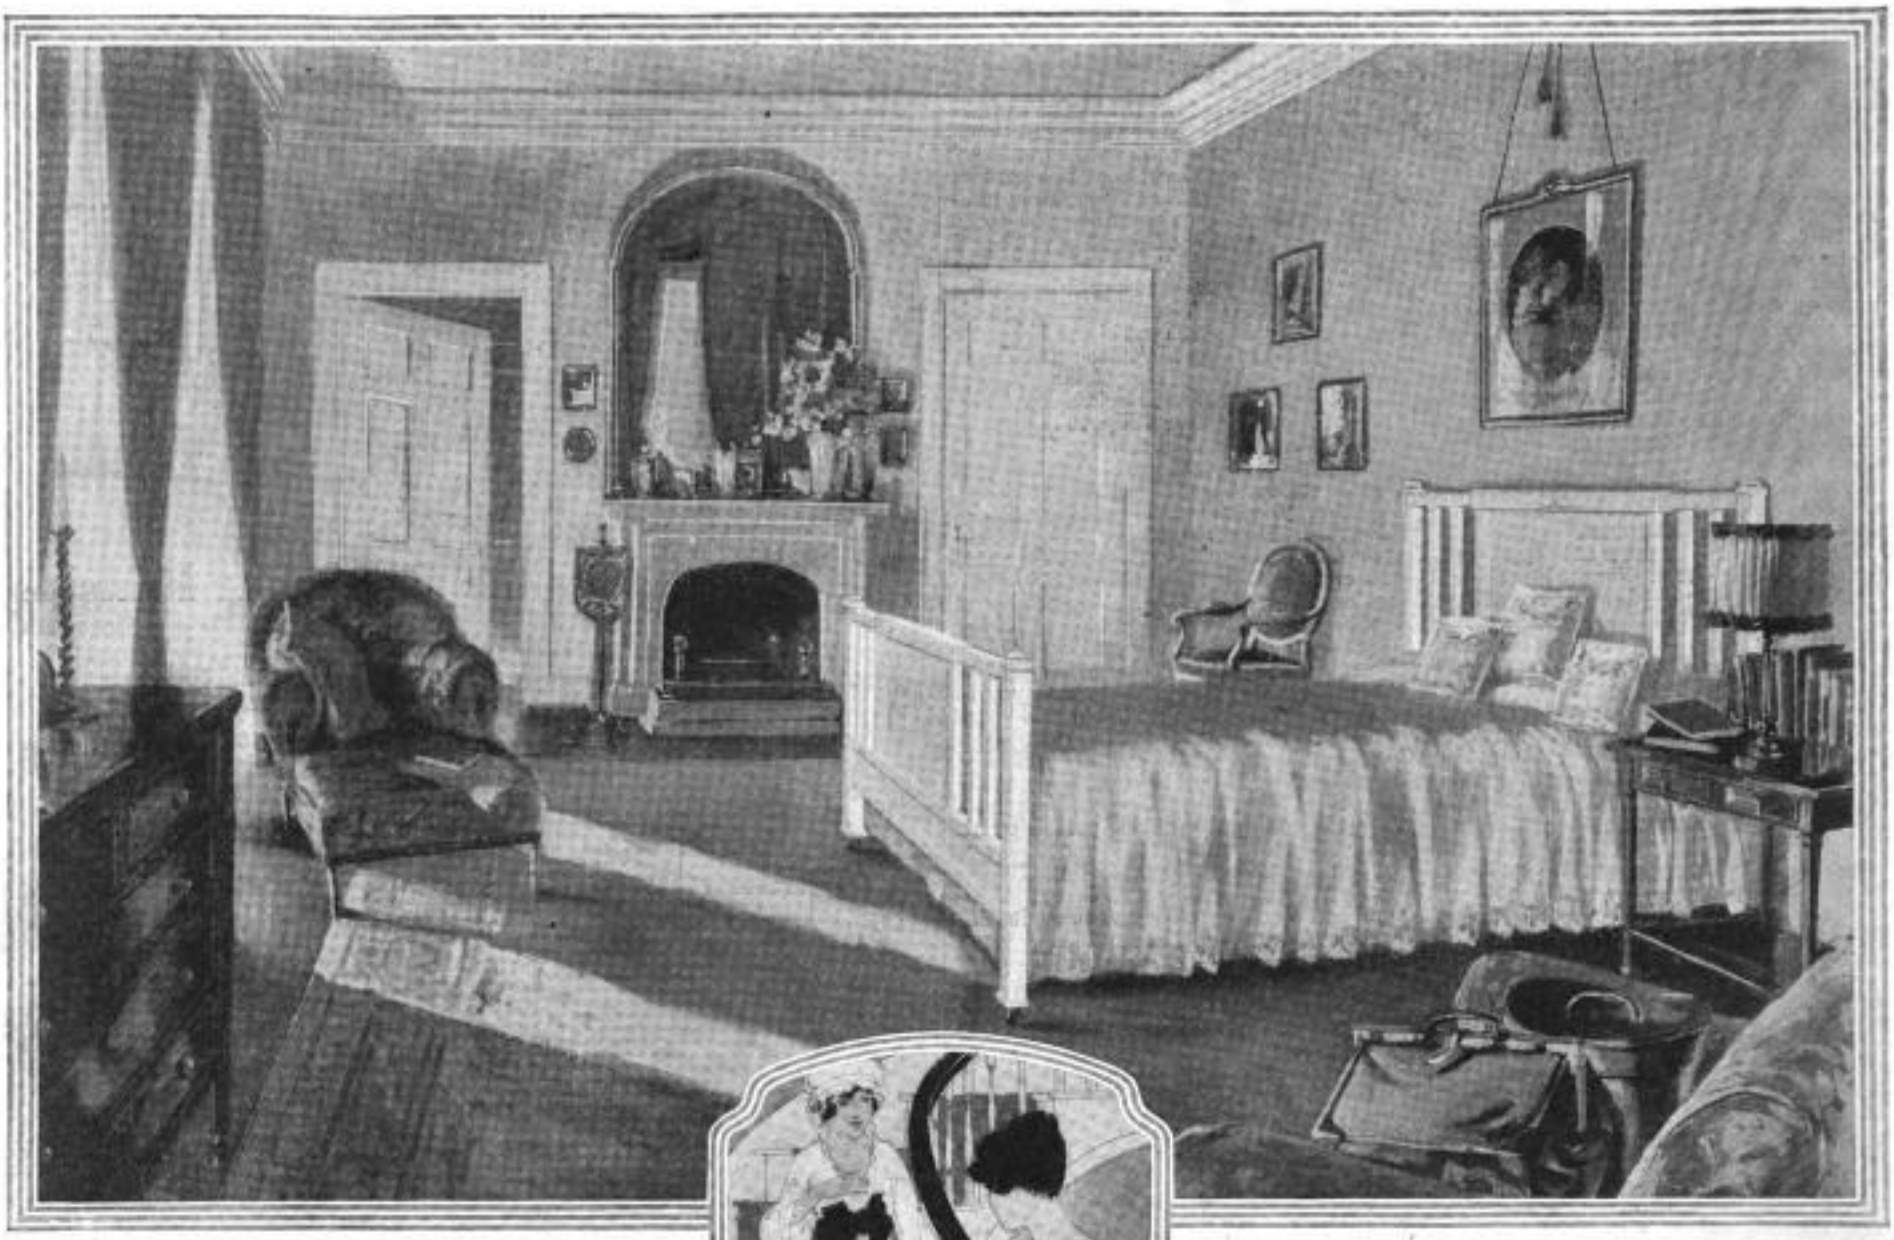
GOODYEAR
AKRON

The Primer's Part in a Shot-Shell's Speed

With the birds crossing at eighty feet per second, one-twentieth of a second's sluggishness in your shell makes the difference between a hit and a miss.

You need the shell with the strongest primer. Empty a Black Shell of its load and see how high the primer alone will shoot a quarter-dollar. Make the same test with the primer of any other shell, and then you will know why the harder-hitting, speedier Black Shells are the shells for you to use. Try this primer test.

US THE BLACK SHELLS



Smokeless and Black Powders

Ask your dealer for The Black Shells. If he hasn't them, mail one dollar to nearest selling agent to pay for a box of twenty-five and they will ship prepaid. Be sure to specify gauge and details of load. This is a trial offer and holds good only in towns where The Black Shells are not now sold.

General Selling Agents: National Lead Company, Boston, Buffalo, Cleveland, Chicago, St. Louis, Cincinnati; John T. Lewis & Bros. Co., Philadelphia, Baltimore; National Lead & Oil Co., Pittsburgh; United Lead Co., New York; Selby Smelting & Lead Co., San Francisco.

See your dealer's exhibit *of Simmons Beds*

"DID YOU SLEEP WELL?"

That morning question to your guest really means—"Did you feel at home in my guest room?"

What kind of guest room is homelike? Not one patched up with odds and ends. Not one elaborate and stiff. But just a quiet, comfortable place where everything fits exactly right.

A Simmons bed fits in.

We believe that a bed should be the keynote of the room. Therefore we make two hundred and fifty styles of Simmons metal beds. Among these you can find one that will strike just the right keynote for the kind of bedroom you can afford.

The Simmons policy is:

To treat our customers as you treat a guest in your home—

To take the same cordial interest in their welfare—

Every time they come to us, to have them go away with a strengthened friendship, a greater confidence and a desire to come again.

Upon this policy is based Simmons leadership.

(Continued from Page 37)

secretary carried him Sinful John's message, together with the latter's cash, name and address, the financier forgot his customary taciturnity long enough to laugh.

"Money talks, Dawson," he declared. "Show him in."

Sinful John entered—a picturesque sight. A Battle Mountain tailor had built him a Prince Albert suit of a cut that, in those days, was strictly vogue. The horseshoe-cut vest showed a "b'iled" shirt, with three small red studs therein. They looked like rubies, but were not. A low turndown collar, with a black string tie, a wide black felt hat, and a pair of twenty-five-dollar boots, the beauty of which even Sinful's trousers, drawn over the boot tops, could not conceal, completed his attire. His thick white hair hung in wavy masses to his coat collar, but his cheeks were clean-shaved and his tobacco-stained beard and mustache had received the careful attention of a barber that very morning. He looked dignified, patriarchal; the compelling glance of his keen, fearless blue eyes won the respect of his victim before a word had been spoken.

"Sit down, Mr. Harkness," said Hyde cordially. "My secretary tells me you want ten minutes of my time. I am very busy, but I can grant you ten minutes. Meantime there will be no charge." And he shoved the thousand dollars toward Sinful John, who pocketed it with a smile.

"Pretty able chap—the young feller," he declared with a nod toward the general office; "I just nacherly had to outgame him." He sat down. "Yes, sir, I wanted to see you," he continued; "but not for ten minutes. I can tell you my business in five minutes. I own all the stock in the Sweepstakes Minin' Company, of California. The Sweepstakes consists of nine hundred acres, more or less, of a cement-gravel deposit, an' I guarantee to deliver it with a clear title an' the assessment work all done.

"I'm offerin' it to you for a million dollars, cash money—an' you're a-goin' to buy it, because that deposit is from ten to twenty feet deep; an' I defy you to put a round o' shots anywhere in the face an' break down stuff that won't assay as low as three dollars a ton an' as high, in spots, as ten. I'm tellin' you, Mr. Hyde.

"Remember, however, I ain't wastin' your time. I'm an old man, an' I ain't got the million dollars necessary to put in machinery an' build ten mile o' flume to lead the water to this ground for sluicin'; so I'm sellin' out, an' I've picked on you to buy me out. The young feller outside told me you have minin' propositions put up to you every day of your life. I don't doubt it; but—you'll never have another proposition like mine put up to you! An' this is how I'm goin' to put it up to you: I'm a-goin' to leave five thousand dollars with you here an' now to pay the expenses of sendin' your engineers out to the Sweepstakes Mine to make an examination. If them engineers reports that the ground ain't as I represent, then the deal is off—an' it ain't cost you a cent to find it out.

"It's a hydraulic proposition, Mr. Hyde. I guarantee the water, provided you build ditches to bring it to the property; an' I'm tellin' you that when them engineers o' your'n reports back to you you'll see a hundred million in sight, an' you'll just about bust a leg runnin' to me with a certified check for a million dollars. Of course, if you buy the property you reimburse me for the expense money I've put up. That's fair, ain't it?"

Brandon P. Hyde chuckled pleasurably.

"You're right, Mr. Harkness," he declared. "I'll never have another proposition like this put up to me, for men of your caliber are too scarce. You are really willing now to put up the cash to guarantee me against loss if I'll take a chance and merely investigate your property?"

"That's the bet! She goes as she lies. My name is John R. Harkness; an' when you git the contract ready, an' signed, send the young feller over to the Astor House for my signature an' the cash. Much obliged for your time, sir. Good afternoon." And Sinful John picked his hat from the floor beside his chair and started for the door.

"Here; wait a few minutes!" Hyde called. "We'll fix this thing up here and now. If you have such a gravel deposit as you describe and it will assay one dollar a ton all through—and if, as you say, a million dollars expended on machinery and waterways will put the mine in operation—I'll buy it."

"You've bought the Sweepstakes Minin' Company," said Sinful John; and he sat down again, while Hyde sent for his attorney to come over and draw up a memorandum of agreement between him and his strange visitor.

When it was signed Sinful John paid over five thousand dollars, took a receipt for the same, and departed, after having made an agreement to meet Brandon P. Hyde's engineer ten days hence at Hornbrook, Siskiyou County, California, guide him into the gravel deposit, and leave him there to sample the mine according to his nature and inclinations.

"Which there won't be nobody but your men on the ground," Sinful declared. "I'm tellin' you that cement-gravel assays so high, anywhere you put in a shot round a couple o' miles o' face to git your sample, that if me or my representative was standin' round you'd be inclined to think we'd salted the ground on you."

"Salting nine hundred acres of ground would be prohibitive as to price," Hyde suggested, out of the depths of his early experience in salting placer ground on the late Pyrites Kincaid.

"Well, I ain't takin' chances on rousin' suspicion," Sinful declared. "I can't afford to queer a million-dollar deal—not at my p'int in life. I'll lead your men in an' leave them there to investigate as they durned please."

V

WHEN he left Hyde's office Sinful went to his hotel and sent the following telegram:

NEW YORK, June 27, 18—.

E. S. POSTELWAITHE,
Hornbrook, Siskiyou County, Calif.

Sold. Engineer due Hornbrook morning July seventh. SINFUL.

Immediately upon receipt of this telegram Snowshoe Sam went over to the general store in Hornbrook and bought two cases of seven-eighths-inch forty-per-cent gelatine dynamite, packed them on a burro, and disappeared into the hills. When he was satisfied he was far from prying eyes he carefully pried off the lids of the cases and removed the dynamite; then, from his kyacks, he produced a polished-steel rod about ten inches long and a quarter of an inch in diameter; also, a bag of gold dust and a tiny funnel.

His nefarious preparations now being completed, Snowshoe Sam took up a stick of dynamite, drew back the folds of the heavy, greasy, brown-paper cylinder at one end and drove his steel rod down through the center of the stick for one-third of the distance, wiggled it round gingerly, and then withdrew it, leaving a well-defined hole. Into this hole he placed his tiny funnel and from the buckskin poke poured about ten dollars' worth of gold dust into the funnel. Then he stamped the gold down into the heart of the dynamite, covered over the tiny hole, folded the paper back over the end of the stick, reversed it and performed a similar operation in the other end. When the task was finished that stick of dynamite contained between eighteen and twenty dollars' worth of gold dust, and there was no sign to indicate that the stick had been tampered with.

Wise in the ways of the miner handling powder, Snowshoe knew that an engineer, when breaking down rock for ore samples, is never foolish enough to use a full stick of dynamite. He cuts it in half. Hence Snowshoe craftily salted his dynamite from both ends, planting each deposit at about the center of a half stick. Hence, when a full stick was cut in twain the point of separation would be approximately at the center of the stick and the knife would cut through dynamite only, thus rendering discovery of the gold practically impossible. Snowshoe loaded all the dynamite, repacked it in the boxes and nailed down the lids again, after which he dug a hole and buried the deadly stuff to keep his inquisitive jacks from investigating it to the detriment of all concerned.

Then he went fishing over on the Klamath River; and when fishing palled on him he took his old double-barreled, muzzle-loading shotgun and went hunting rabbits for Toby. Thus did he disport himself until the fifth day of July. On that day he journeyed back to Hornbrook, arriving late at night; and on the morning of the sixth he again visited the general store and bought the last two cases of dynamite in Hornbrook. The excess supply usually kept on hand had been used up by patriotic citizens

1917 ATLAS WITH NEW WAR MAPS GIVEN

To the readers of *The Saturday Evening Post* who *take advantage of this offer* now made in connection with

Webster's New International

THE ONLY GRAND PRIZE (Highest Award) given to dictionaries at the Panama-Pacific International Exposition was granted to Webster's New International and the Merriam Series for superiority of educational merit.

This New Creation, The *MERRIAM* WEBSTER—

A Complete Reference Library in Dictionary Form—with nearly 3,000 pages, and type matter equivalent to a **15-Volume Encyclopedia**, all in a **single volume**, in Rich, Full Red Leather Binding, can now be secured on the following remarkably easy terms:

The entire work in full leather (with 1917 Atlas)

DELIVERED *for* $1.00

and easy payments thereafter of only a few cents a week (In United States and Canada) **ON SUPERIOR INDIA PAPER**

REDUCED ONE HALF
(In Thickness and Weight)

India-Paper Edition

Printed on *thin, opaque, strong,* superior India paper. This edition is *one half* the thickness and less than one half the weight of the regular edition. Size 12¾ in. x 9¾ in. x 2¾ in. **Weight** 7½ lbs.

Regular-Paper Edition

Printed on strong book paper of the highest quality. Size 12¾ in. x 9¾ in. x 3¼ in. Weight 16 lbs. **Both Editions are printed from the same plates and indexed.**

Over 400,000 Vocabulary Terms, and, in addition, **12,000 Biographical Names,** nearly **30,000 Geographical Subjects,** besides thousands of other References. Nearly **3,000 Pages, Over 6,000 Illustrations.**

The only dictionary with the *New Divided Page,* characterizedas "A Stroke of Genius."

"To have this work in the home is like sending the whole family to college"

TO THOSE WHO RESPOND AT ONCE we will send a copy of "Dictionary Wrinkles," containing an amusing "Test in Pronunciation" (with key) entitled the "Americanization of Carver," and also a "Red Facsimile Booklet" of interesting questions with references to their answers.

The ATLAS

is the 1917 "New Reference Atlas of the World," containing nearly 300 pages, with 128 pages of maps beautifully printed in colors with complete reference indexes, late Census Figures, Parcel-Post Guide, New War Maps, etc., all handsomely bound in red cloth, size 10¾ x 13¾. Mail the coupon at once to

G. & C. MERRIAM CO., Springfield, Mass.
Publishers of GENUINE Webster Dictionaries for over 70 Years

Home Office (Coupon)

G. & C. MERRIAM CO., Springfield, Mass.:

Please send me, *free* of all obligation or expense, a copy of "Test in Pronunciation," also "Red Facsimile Booklet," with specimen pages of India and Regular paper, and terms of your *Saturday Evening Post* free Atlas offer on "Webster's NEW International Dictionary."

Over

TRADE MARK REG.

Stab

YOUR car is inseparable from the institution that built it.

The service it gives you is just what its producers build into it and *keep alive* in it.

In motor cars, stability of product is inseparable from the stability of the producers.

Overland ranks first among producers of cars above the $400 class—second in the entire industry.

There are 400,000 Overlands in use.

Overland dealers have contracted for one hundred and eighty million dollars' worth of Overlands for 1917—an increase of seventy-five million dollars compared with last year.

Overland sales this year therefore will be approximately as great as the entire annual gross revenues of the New York Central Railroad.

Overland net assets have grown from *fifty-eight thousand* dollars eight years ago, to *sixty-eight million* dollars today.

In our great Toledo plant a our allied plants, we e ploy nearly thirty-eig thousand men.

They directly support mo than two hundred thousa people.

Permanent, well-appointed fa tory branches and par depots representing an i vestment of millions ha been established in impo tant metropolitan cente that cover the country.

land ility

These branches serve the five thousand Willys-Overland dealers who complete our great international service system.

These tangible evidences of the stability of the Overland Industry are your best assurance of stability of quality and service in Overland Automobiles.

The Willys-Overland line is now *complete.*

And it is the only complete line of cars built and sold—

—under one executive management,

—with one engineering staff,

—with one purchasing power,

—by one production management,

—through one sales force and

—one group of dealers.

Resulting economies amounting to millions of dollars, reduce the cost of every car—enable Overland to establish and maintain higher quality standards at lower prices.

So in your Overland you get maximum quality at minimum price—plus stability, to assure permanence of value in your investment.

You can select a car in the light four group, the big four group, or the light six group.

You can select one of the cars in the luxurious Willys-Knight group.

In either case it is dominant value in its class, for it has shared in the economies of Overland bigness and stability.

See the Overland dealer now and make your selection.

(Concluded from Page 39)

during the Fourth-of-July celebration two days previously, and a new consignment would not be delivered for several days.

Snowshoe packed his two cases on his jack and trudged back to his camp in the hills, where he worked until far into the night, salting both cases liberally.

Thus it came to pass that when Sinful John, accompanied by Hyde's engineer and two husky assistants the latter could trust, dropped off the train at Hornbrook on the morning of the seventh, and the engineer went over to the general store to purchase dynamite at the source of supply closest to Sinful John's deposit of cement-gravel, or conglomerate, he was courteously informed by the proprietor that he had no dynamite in stock, having sold the last two cases the previous night.

Sinful John, having gone to take over the pack outfit and saddle horses he had ordered by wire, appeared at the general store a few minutes later, and to him the engineer explained the embarrassment resulting from the scarcity of dynamite. They would have to mark time in Hornbrook until the storekeeper should receive the lot just ordered.

To this unwelcome news the storekeeper further added, volubly, that he was plumb sorry; that he wished he had known sooner, because he'd sold the last two cases only the day before.

"Who'd you sell it to?" Sinful demanded.

"To a prospector name o' Postelwaithe. He's peggin' away at a claim back yonder in the hills."

"Oh, I know Postelwaithe!" Sinful declared, vastly relieved. "You say he bought two boxes?" The storekeeper nodded. "Then," quoth Sinful John, "he'll give us one of them if we agree to send him out a case from this here lot you've got comin' next week. One case each will keep us both going until more dynamite gets into this country. Come, boys! Climb aboard your horses an' let's crack along. We pass the claim o' this person Postelwaithe on our road out to the Sweepstakes. He's an obligin', neighborly sort o' cuss; in fact, you'll find that folks in this country is generally willin' to give a feller in need about half o' whatever they've got."

So Sinful John led his victims out to the camp of Elmer Sampson Postelwaithe, who sympathized deeply with them in their predicament and cursed the mining game up hill and down dale. It appeared Mr. Postelwaithe had just come to the conclusion that quartz mining was a delusion and a snare, and was about ready to go back to his old love—placering. Consequently he would be glad to sell them three cases of dynamite, if they wanted it, and take back any part they found themselves unable to use.

Brandon P. Hyde's engineer was delighted with Snowshoe's liberality and neighborly spirit, and hastened to take advantage of it. Snowshoe pointed disgustedly to three cases of dynamite.

"Help yourself. All I ask is that you don't let it drop," he declared; he was not at all concerned, for all three cases were salted.

"Much obliged," Sinful John told him. "Have a cigar, Mr. Postelwaithe?"

"Don't mind if I do, Mr. Harkness," said Snowshoe Sam.

VI

BRANDON P. HYDE'S engineer in the course of time rendered his formal report on the property of the Sweepstakes Mining Company. He had put in shots and taken samples all over the property, which, when washed and rockered out, showed an average assay of $4.61 a ton, with so many million tons of gravel in sight that Brandon P. Hyde actually blinked at the enormity of the paper profits. Everything was as the whimsical Mr. John R. Harkness had represented and the engineer recommended the immediate purchase of the mine.

So Brandon P. Hyde promptly transferred a million dollars by telegraph to a San Francisco bank, and wired John R. Harkness to call upon his attorney there and close up the deal; which, being done to the entire satisfaction of the attorney, a certified check for a million and five thousand dollars was handed Sinful John, who, to the great amazement of the paying teller, insisted on receiving the entire amount in bills of large denomination.

With the million in a satchel, he then went to Los Angeles, where he purchased ten cashier's checks from ten banks, each check drawn for one hundred thousand dollars in favor of Marjorie Kincaid. These checks he inclosed in an envelope, together with a scrap of paper, upon which was written:

"I can't die a thief! I stole this from your father before you was born. Please forgive me."

Then he returned to San Francisco. At the What Cheer House he met Snowshoe Sam, who reported Toby in the basement of the hotel and everything lovely in his department; whereupon they sent that million dollars by registered mail to Marjorie Kincaid, at Kelcey's Wells, Nevada. When the return registry receipt gave ocular proof that Pyrites Kincaid's daughter had at last come into her father's fortune, Sinful John and Snowshoe Sam went blithely forth to the enjoyment of those worldly things they had set their hearts upon. It was a wonderful vacation; certainly Gay Paree was not a deprivation.

And when the poke was down to five hundred dollars Sinful John and Snowshoe Sam and Toby went back to Kelcey's Wells, bought a new pack outfit and drifted away through the purple haze into the silence, to sunrise and sunset, to the scent of the sage at dawn, and wood smoke and the odor of frying bacon in their eager nostrils at eventide.

When at last they came to their abandoned dry diggings, in the hot, cruel heart of Big Smoky, with the shimmering heat waves stretching away to the distant blue Toquina Range and the desolation of death round them, Snowshoe Sam heaved a sigh of relief.

"Thank God, Sinful," he murmured, "we're home again!"

As for Brandon P. Hyde, he spent another million installing machinery and building a dam up in the hills, and miles of ditches to lead the water to his vast cement-gravel deposit. The Sweepstakes Mine ran a month and then shut down for the first clean-up, which netted nothing—neither more nor less.

Simultaneously with the receipt by Hyde of this horrible report, however, the latter's mail brought him a communication that, though disconcerting otherwise, at least brought to Brandon P. Hyde the meager comfort of an explanation. It was undated and unsigned, and read as follows:

"Do not blame your engineer that made the examination. I slipped him a couple of cases of salted dynamite. The Sweepstakes Mine wasn't a mine at all—just a big deposit of conglomerate, which is a formation that often contains a lot of gold. The only gold the Sweepstakes contained was the gold that was put into the sticks of dynamite. After your men had drilled holes in the face of the deposit they tamped the salted dynamite into the holes; when the dynamite exploded it blew the salt into the deposit, an' when your engineer rockered his samples he found stuff that ran $4.61 to the ton.

"Now you know how Pyrites Kincaid felt when you salted that Mexican ground on him fifteen years ago. Pyrites is dead; but his heir will enjoy your million. The other million you spent on the ground is for exemplary damages.

"It's a long lane that hasn't got a saloon at the end of it!"

And when Brandon P. Hyde's detective came to Kelcey's Wells seeking information anent one Elmer S. Postelwaithe and one John R. Harkness, nobody could give him any information. If he had only asked for Sinful John and Snowshoe Sam!

And yet some people ask: "What's in a name?"

WITH CANADA AT THE SOMME

(Continued from Page 20)

major waited to receive us. Of the college-athlete type, he was just a big, cordial boy, glad and lucky to be alive. Tale after tale he spun of brushes with the Germans in the hot days when Canada took Courcelette up the Somme; and he ended with these remarks: "So you are with THE SATURDAY EVENING POST! Your paper has hurt me deeply. I was up in a dug-out on the Somme. As I'm too tall for the regular funk hole where I used to sleep, my head and legs were always hanging out. I hadn't had a bath for ten days. My batman, poor kid, had been hit; and my trench coat went with him. My clothes had been soaked and dried on to my skin. Then someone brought up the mail and I drew a POST. I opened it to a collar ad—you get me? A collar ad! I looked at that neat son-of-a-gun, slapped him and said: 'Take that, Willie! Take that!'"

There was, too, a paymaster officer, with one of those crinkled faces which in the North American type go with shrewdness. He might have been a small city judge or banker of the Middle West; and he was wise, very wise. The Canadian-Irishman who escorted us past the stinking shell holes of an old battle to a set of reserve trenches and an observation post, might have been in high affairs in Boston, that Puritan city grown Hibernian.

Dinner Before the Attack

He whom they call the "Papoose" is of the Western Continent, too, but with a difference. He gets his nickname from a play on his real name; but as much, too, for his wide-eyed, childish interest in this world and his boyish spirits. For the Papoose is of the French element, and shows it in his sprightliness. Yet he has seen enough to sadden a man for life—a proof that characters are not changed by war. Twice he has come back from action the only unwounded officer of the company. On the last night before our all-American party moved on to the Somme, there was a dinner at a certain headquarters. A crack military band, come to cheer up the men at the rest stations, serenaded us outside. After God Save the King they played The Star-Spangled Banner, which I considered right handsome of them. That called for speeches. The Papoose rose and delivered himself of real eloquence—another proof that he is French. That was a singular dinner, there behind the guns, a pleasant affair, with much joshing about the board. Yet these men were only a few weeks from the slaughter pen of the Somme; and one and all they had been through hell. It broke queerly into the conversation now and then. In the midst of some quaint or funny story about Smith or Brown or Jones the narrator would pull himself up and say: "Poor fellow, he's gone!" or "Killed at Courcelette!" and then, after a momentary shift of expression, go on with the conversation.

With the rank and file we had communed less than I might have wished. The Canadian is not marked off from the "Imperial" forces, like his brethren of Australia and New Zealand, by a distinctive hat. He wears the trench cap; his designation is merely the bronze maple leaf at the collar and the brass tag "CANADA" on the shoulder-strap. Yet as the columns crawled down the muddy roads you could usually pick the Canadians by their stalwart frames and the freedom of their stride; and when they came near enough, the hard stress of their American accents would pierce the babble of softer English speech. Now and then a stop at a crossroads would afford a chance for a talk or an exchange of cigarettes, and the soldier so accosted, upon finding that we were not officers, as our khaki seemed to prove, but only correspondents from the States, would open up with the friendliness of our Continent and tell about themselves. We talked so with a wheat farmer of the Saskatchewan, a mechanic from Ottawa, a clerk from Toronto, a miner—he was using his skill now in driving military galleries—from the far North.

I found, too, that the excellent Canadian morale, of which the British correspondents write in these days, was no myth. Why soldiers prefer dangerous activities to less dangerous passivity, I do not know; but the fact remains; and these Canadians proved it to me. They vastly preferred the Somme, with its terrible hardships and losses, to the pounding at the Ypres Salient. This rest in the peace trenches hardly resembled warfare as they had known it in their heroic fifteen months of battle for the Empire; and it came most gratefully after the Somme.

Now we had shifted through Amiens, toward the scene of action where a part of the Canadians, wedged among their Imperial comrades, were blasting their way toward Germany. A bad set of tires and a damaged rear wheel held us back that day, and we came to the devastation of the Somme and to an advanced headquarters in a twilight sprinkled with the firefly spots of bursting shrapnel, lit by the sudden, vicious bursts of guns. Headquarters was a dug-out to which a plank walk led across a muddy ridge. The general was having tea, and an Imperial colonel—"Imperial" among the Canadians means about the same thing as "English"—had dropped in for a visit, a noble specimen of a cream-colored English bulldog following at his heels. While we drank our tea the animal slept under the table, snoring even more wheezily than is the habit of his kind.

"He's been through it with me from the first," remarked the colonel. "He was gassed at Ypres, and I was afraid I was going to lose him, poor old chap—his voice has never recovered!"

Soldiers at the front, I find, do not care greatly to discuss the war. Visitors bring a breath of outer air, a relief from a topic so all-absorbing that it amounts to torture. So we spoke of many things, such as the presidential election and the reason for the American accent. Only when we rose to go did the staff remark quite casually that there was going to be an attack during the night. A certain strong and famous German trench had been half taken a week before. The mud had been drying during the day, and Canada was going after the remainder. They spoke of this quite casually as part of the day's work; but when we left the general was hurrying back to his map room. We had scarcely started our car down the road, when the guns, which had been booming all the afternoon, broke into a tattoo, as a snare drummer, out of the "Tum, Tum, Tum-Tum-Tum" of his marching beat, will break into a long roll.

We flashed, on our way back, through the ruined city of Albert. Who does not know of the Albert Virgin? The fame of that curious statue has spread over the world; yet to get the impression it gives, bizarre, sinister, pathetic and all-impressive, one must see it not in photographs, but in the setting of battle. The Albert Cathedral was one of the most pretentious modern churches of France, though a little loud in effect, what with much mosaic and gingerbread work. Now at its highest steeple stood a gigantic gilded Virgin, holding up before her the Child with His arms outstretched. This figure, seen in the distance, was the cross of the church.

The Colonel's Dog Fritz

No church tower I have seen in the war is so badly battered, while still standing. Shells have bitten great chunks from this side and that, until in profile it looks like a corkscrew. The copula supporting the figure was burned, and the iron girders bent so that the statue dipped over horizontally. There it rests; it seems a mother keeping her child from falling; and the outstretched arms of the infant give him an appearance of terror. We saw it in flashes of the guns, in star sparkles of the shrapnel; the crazy structure and the figures which topped it were shaking with the reverberations of the guns. I could even imagine an expression of horror on the sculptured face of the Child.

We were quartered in a city perhaps twenty miles behind the line. There the colonel was to meet us. Since he is a character in the events of that night, I pause to describe him. He is a Briton of the old army; among the prismatic row of service ribbons on his left breast is the Victoria Cross, which he won at Spion Kop. The colonel is tall and rangy, calm and witty, opinionated and kindly. Wherever he goes behind the front he takes along Fritz, his little dog. When the Canadians stormed a certain bastion at Courcelette they found only one living thing—this tiny mongrel fox-terrier with an undershot jaw, who stood on the body of his dead master barking furiously. The officer who captured Fritz is dead; the colonel got him by inheritance. And now the little traitor is as fond of the colonel and his mess as though he had been barking for England all his days.

REMY

STARTING LIGHTING IGNITION SYSTEMS

LEADERSHIP

IF you are the owner of a car which is Remy equipped, we have every reason to believe that the name is associated in your mind with satisfactory service.

And it is human nature, when a man approves of any product, to derive satisfaction from the fact that its merit is generally recognized by others.

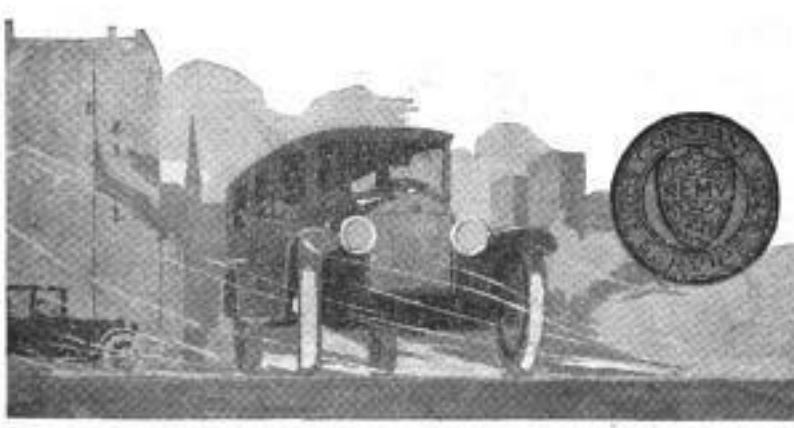
We want to intensify your good opinion of Remy products—and therefore we want you to know how high they stand in general esteem.

In Ignition, Remy is firmly entrenched in first place.

It is preferred and specified in a larger and more substantial percentage by those motor car manufacturers who build a thousand cars or more per year.

Remy Starting and Lighting came later in Remy history than Remy Ignition, but they are destined to the same absolute degree of leadership.

The fact that a car is Remy equipped does not, of course, represent a sufficient reason, in and of itself, for buying that car.



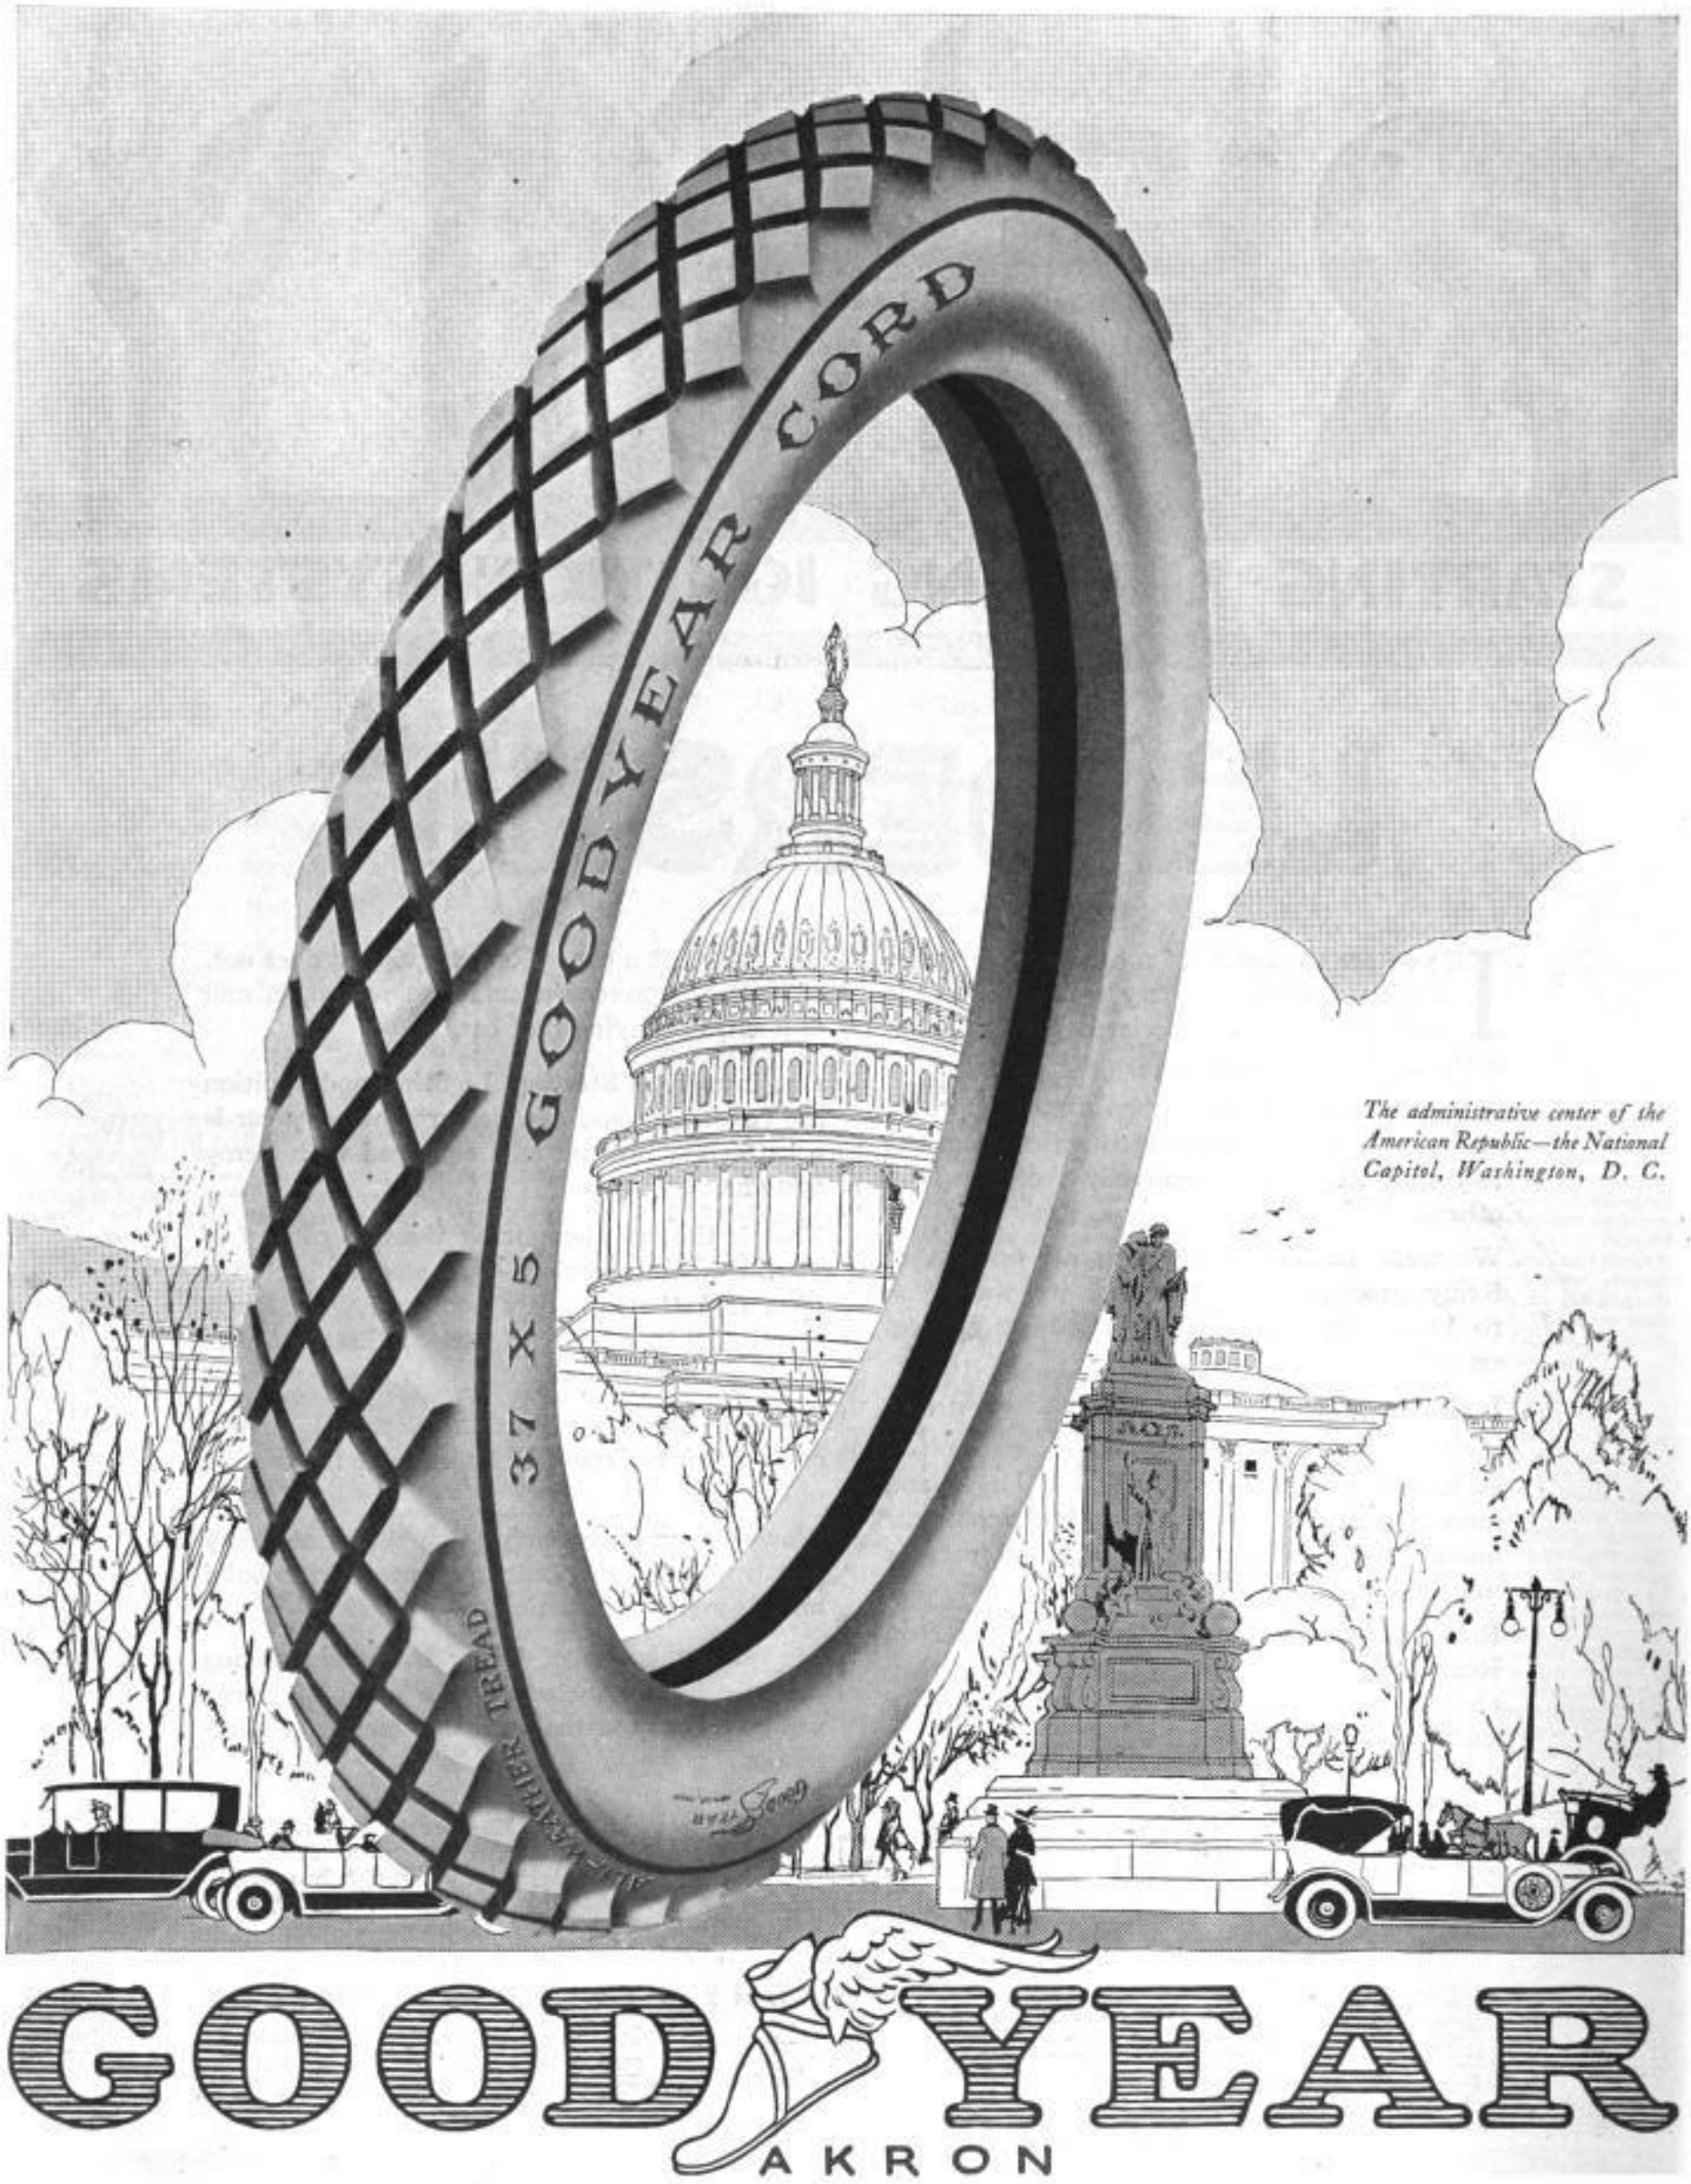
But insofar as Starting, Lighting and Ignition are concerned, you can be sure that any car is a better car because it is equipped with Remy systems.

That is the one thought we want to convey to you in this advertising—that you can accept it as a fact that, on cars equipped with Remy Starting, Lighting, or Ignition, these features are beyond betterment.

For the user's satisfaction, electrical devices on a motor car must be dependable for the life of the car.

We want you to remember that the name Remy stands for constant, deliberate intention to build for the user's satisfaction.

We do not speak of Remy leadership among motor car manufacturers in a spirit of boasting. We give you the facts as a matter of information.



The new patented Thermostat Control of Remy generators provides more current to the battery just when it is most needed, in both winter and summer, with slow, average and fast driving.

Goodyear Tires, Heavy Tourist Tubes and "Tire Saver" Accessories are easy to get from Goodyear Service Station Dealers everywhere.

THE GUARANTEE BEHIND GOODYEAR CORDS

The guarantee behind Goodyear Cord Tires is not a scrap of paper.

It bears no signatures, no seals, none of the meaningless appurtenances of official habit.

It is written rather in performance than in phrases.

It is simply the clear and steadfast purpose of this Company never to send into the world a product unworthy of the Goodyear name.

A strange guarantee, perhaps, in these days of definite mileage warranties.

Yet is it strange?

Why should you trust a tire-maker's signature if you cannot trust his product?

And why, if you can trust his product, should you ask his signature to a mileage guarantee?

No man can *write* miles into a tire —he must *build* them there.

And to build them there in Goodyear measure he must be stirred by such a purpose as the Goodyear purpose.

He must ally this purpose with the highest manufacturing proficiency to make it consistently effective.

High aim and high ability must work hand in hand—and such an alliance is the real guarantee behind Goodyear Cord Tires.

This, and the fact that you—the tire-buyer—*must* be satisfied.

Their capacity for long and satisfactory service is not on paper, remember—it is *in the tires*.

Their longer mileage is insured not by a phrase or a figure—but by the best materials put together in the best possible way.

Their positive economy rests not upon a promise, but upon definite structural Goodyear features.

Their greater comfort, their lasting strength, their surer security, their uniform quality, their downright *goodness*—these are guaranteed by Goodyear integrity of manufacture, by the character of the product itself.

In the ordinary sense, the guarantee behind Goodyear Cord Tires is not a guarantee at all.

But to those who have dealt with Goodyear it is a warranty beyond all formal compact.

They know the Goodyear declaration of principles is to be found in the Goodyear product, and they require further assurance no more than they require a trusted friend to swear his loyalty before a notary.

They know the miles they pay for in a Goodyear Cord Tire will be paid back to them upon the road.

And that there is more satisfaction in collecting them there, than over the adjustment counter.

You will find it so, when you buy Goodyear Cord Tires.

Their quality makes them higher-priced—and *better*.

They come in No-Hook and Q. D. Clincher types, in both All-Weather and Ribbed treads, for gasoline and electric cars.

The Goodyear Tire & Rubber Company, Akron, Ohio

CORD TIRES

Digitized by Google

(Concluded from Page 42)

The weather had broken into a beautiful night with a full November moon. The British hold the air above the Somme; it is the best thing they do. Yet on a night like this it is very hard to prevent air raids. Extinguish lights as you may, the target lies stretched below the enemy, while the aëroplane rises invisible against the silvery-slate background. We were not surprised, therefore, to have the lights of the hotel suddenly fade out. The hotel help, making a brave effort to be calm, lighted candles. Just as we were washing for dinner the sharp crack of anti-aircraft guns opened outside. We ran out. White puffs of shrapnel sprinkled the silver-slate sky like clouds in a Japanese print. They burst faster and faster, the flock moving always toward the zenith; there came a loud "bang" not far away, showing that the bomb-dropping had begun. With all that shrapnel falling it was imprudent to stay outside. We withdrew indoors and finished our toilet. There were more crashes; then the guns died out.

Scarcely had we begun dinner when the firing recommenced—the raiders, evidently, were on their way back. Madame the cashier, counting change at the desk, smiled gravely; but she stopped every now and then on the bang of a bomb, a five-franc note raised in a hand which shook only a little. Our slim, pretty little waitress paused once, laid her hands on a door and her head on her hands; then she continued serving. Two other waitresses, more frankly frightened, stood together in a corner; I saw their shoulders jerk with each of the big explosions. Our officers calmly ate their *hors-d'œuvre*, making now a comment on the raid, throwing now a word of joking reassurance at the waitress. Then silence again.

After dinner I visited friends at a château a few streets away. Conversation was going merrily when it came again. We went into the backyard to witness the show. The shrapnel clouds were climbing to the zenith and we were planning a retirement when the backyard of a house two doors away went up like a blast in a quarry; we had a vision of a black cloud shot with angry red sparks. When, toward midnight, I grew sleepy, one of my hosts offered to show me my way home. Just as we neared the hotel the firing, the bomb explosions, recommenced; it seemed no time until the clouds of aërial warfare were breaking exactly overhead. We ran to the big night door of the hotel. It was closed. We rang the porter's bell. Evidently he was in the cellar. I had a picture as I rang of a group of French soldiers—convalescents from a hospital, it turned out—passing up the street.

A Very Close Shave

I had given up ringing for the porter, had turned back into the street, when two bombs struck almost together, one the hotel next door, one a shop four doors away. The first I did not notice at all; it was the other which produced the spectacular effect. A cloud of dust and débris burst fanshaped across the street, broken glass rattled, the French soldiers with proper prudence scurried toward cover. I had leisure to wonder, as I crammed myself into one corner of the doorway, why I saw no dead out there in the street, why I myself had escaped, and why I had felt no wind from the explosion. In reality the bomb had exploded inside the shop, and what I saw was only glass and débris blown out through the window.

The French scurried to cover, and then, plainly in the moonlight, I saw a tall British officer striding with easy dignity toward a refuge in the doorway of the adjoining hotel. Though I learned it only the next morning, this was the colonel; and he had a close shave. He had been calling on a friend at the hotel next door. On the way out he entered into conversation with the porter. On some impulse they walked as they talked out onto the street. Five seconds after they passed the door the lobby in which they had been standing went up in splinters. No one was hurt in this building, but people were killed in the town that night—as usual, civilians. These bomb raids on open towns strike the observer as fairly senseless. Five minutes after this episode a German raider was brought down in flames, a spectacle which we missed. That stopped the performance for the night.

Yet twice I was wakened by firing, and realized only when I struggled out of sleep that it was not a raid but the noise of the great, eternal battle twenty miles away. I realized also that while I lay warm between linen sheets, Canada, heroic Canada, was staggering through mud and cold and pain and death for the prize of a ditch. I had heard Verdun going full blast, but never such intense fire as this. The burst of curtain fire would last ten minutes or so, a roar which rose to a tremendous crescendo, die down to a roar, rise again. Once I looked out; a faint light like dawn rimmed the patch of horizon above the city roofs.

When we burst into the map room of advanced headquarters next morning the adjutant announced quietly: "We got the trench; our casualties are small; fifty prisoners or so." Yet the action evidently was not quite over as yet; these modern battles do not end until the enemy has made his last counterattack. The adjutant, as he spoke, wore a telephone head-receiver; suddenly he began talking in cryptic letters and numerals. A staff captain stood at the map, taking measures with a divider. The general, busy over some papers, found leisure for a moment to explain the action. They had not slept since we bade them good night at teatime. Their faces were drawn, lined, dark with fatigue toxins. I noticed, after a time, that we were all talking under our breaths, as men do in times of stress. And all this, I take it, is a fairly typical picture of a headquarters during a modern battle. The gold lace has gone, all gone, from war.

The Great Spectacle of the War

The strain relaxed a little. Probably something among those cryptic messages over the wire had convinced the staff that counterattacks were finished. The general strolled out into a sickly sunlight over a sick land, and laid out our route with due regard to prudence and possible curtain fire. So we started forward. There were Simms and I, correspondents; a pleasant Irish captain, who had come with us all the way; a Canadian major, whose name is written large in American letters; and a staff captain. The last is worth mention. He was in high school when he enlisted for the Empire; he has been through the hottest of it all; and he serves on the staff by virtue of ability.

The hinterland of the world's greatest battle lay some way behind us. At the beginning of the war I saw a whole German army march through Louvain, and I have said often that it was to me the great spectacle of the war. I revised that opinion on the spot. Nothing that I may see again in life can impress me like this. Imagine a rolling country, falling here and there into wide, shallow hill bowls. Imagine a terrain, on which grows neither tree nor shrub, but only at best stumps. Imagine that grass, hedges, roads, houses, are all gone, blotted out; a land underfoot of sticky mud which seems to exhale poisonous odors. Imagine next a new city, greater in extent than Manhattan, sprung up suddenly on this strange ground—a city without women, without real houses, without rapid transportation lines, without the slightest ordinary grace or convenience of life. As far as the eye swept in any direction were the tents or bivouacs of men, interspersed with military dunnage of every size and kind. I can compare it to only one thing I ever saw before—one of the old Western boom camps, only on a gigantic scale. Here was a battalion in bivouac, circling in lines while the men were issued rations or clothing. Here was a great corral of artillery horses. Down all the roads—old ones rebuilt after the smashing of battle, new ones thrust across the mud—crawled a procession which ran forever, as though on an endless chain: artillery with bright, burnished muzzles, polished harness and curried horses, going up; artillery with muzzles covered by khaki-brown caked mud, rope-patched harness, incredibly bedraggled harness, coming out; camp kitchens with smoking stacks; motor omnibuses moving troops; motor caravans carrying shells and supplies; motorcyclists curving expertly through the traffic; empty ambulances hurrying forward for the wreckage of the attack; loaded ambulances coming slowly back; mule trains; the touring cars of officers. And, adding somehow to this impression of a city, were the graveyards, with little white crosses rising thick as wheat stalks.

The guns were increasing their fire as we went forward—the regular morning hate. Never was there a pause in the regular "boom-boom-boom" which sounded now near, now far. Also there were screaming shells, and occasionally the lighter sound of their bursting punctuated the noise of our guns. The Germans, their "eye put out" by the British supremacy in the air, were shelling blindly by the map, aiming generally at some feature of the landscape, like a crossroads, which they had known in their time of occupation.

We pushed on past towns whose hitherto obscure names were flashed to the four corners of the world by the communiques last summer—La Boiselle, Pozières, Martinpuich. Towns! They are geographical locations only. The foundation of one heavy stone house stands with a sliver of wall; there is nothing more, not even a visible site. They say that when the army first came one could trace in the débris the course of streets; but even that has passed, what with the use of a working army. On the edge of one of these towns a crater, like the true crater of a volcano, gapes open to the sky; here the British exploded a giant mine. "Want to see a German dug-out?" asked the staff captain. "Those fellows dig in their sleep."

We splashed and floundered, weaving through a maze of military work and supplies to a hole like a cellar door. An officer, walking ahead with a lantern, led the way down precipitous stairs of cement; the same material incased the walls. We turned; we were traveling downward between boards, deep into the earth.

"There are still German grenades lying about," cautioned the officer; "don't kick any of them!" He stopped by a section of the plank wall. "Graveyard," he said briefly. "We boarded up the German dead in there!" Again there was a door. "Used to be an officer's funk hole, but we've nailed it up because of what's inside." We were glad to climb up into open air.

Near by was a barbed-wire entanglement, forming a small corral, where a group of men, so soaked in the universal brownish-yellow mud that their uniforms had lost distinctive color, stood huddled together, their hands in their pockets, their backs turned against the cutting November wind.

"Our Fritzes, the ones we caught last night," laughed the staff captain. Someone among them had cracked a joke, it seemed, for as we came up they were all laughing. I say, as a neutral who tries to be fair-minded, that they seemed to be relieved and to enjoy captivity. We looked them over carefully, as they smoked cigarettes and exchanged cheerful conversation, to see where the German quality was deteriorating; and we drew no conclusions. Four or five looked like pretty poor specimens physically; but four or five others were stout little men and young. Down the road came an artillery caisson on which rode a Canadian officer with a German officer-captive beside him, their uniforms of the same color by virtue of caked mud. As they passed, everyone ran out from dug-outs, cook-shacks and barricade to have a look. The German saluted; the Canadian grinned a broad North American grin.

The Irish Sergeant's Tale

On the advanced edge of this new-sprung city was a field dressing station, just a hut of sandbags. As we approached a group of walking cases came in from the other direction, showing utter exhaustion in every stiff movement. The wreckage of the night's work was beginning to arrive. Two stretcher cases were lying at the door, tucked up in gray army blankets, awaiting their turn. The nearest lay with his eyes closed, his face the color of soiled putty; I could not tell if he was alive or dead. Beside him a fine, stalwart blond boy was chewing his lip to control himself until the needle should bring surcease. A third man, not so heavily wounded, had called for a drink, and a German prisoner, his head bound up in a field dressing station, was lifting him by the shoulders, while a British Red-Cross man tilted a water bottle to his lips.

We walked on; we were in the belt behind the actual fighting front, where there were no motor vehicles, no field supplies. The men we passed were equipped for business only, and bent on business; neither officers nor rankers troubled about salutes. We had reached, too, the place of unmitigated devastation. Farther back there had been a few touches of green. Fields which the traffic spared had put out a little grass in the shell holes. Here nothing lived. The trees were ragged stumps. The shell-torn trees beyond Verdun, when I saw them in July, showed a little ragged verdure. These showed nothing; and it was not the effect of November. You saw that they were dead, drying and rotting. We reached a plateau. As the mists limited vision, you saw nothing but broken, battered, muddy ground. Near by shell hole blended with shell hole. In the distance it all resembled a muddy road which has been trampled by cattle. A tank rose somewhere in the distance. Two wrecked aëroplanes lay like dead birds in the other direction. Then, as the eye grew accustomed to the black muck, I began to pick details. What had been a German gun rose, a twisted piece of scrap iron, from the muck. "Dead," said the officer briefly, and pointed. With eye and glasses I began to make out the new-buried, newly unearthed by shell fire.

We pressed on toward the probable line of curtain fire, beyond which it was not prudent to go. And up the road came slowly but sturdily a little man, unarmed, with a new sheepskin coat over his uniform. Behind him walked another, slighter and darker, with the Red-Cross brassard on his arm. We stopped the little man; he wore a sergeant's chevrons. Without preliminary salute he addressed us in a ripe Irish accent:

"Well," he said, "I got mine!" He pointed to his battle hat. A bullet had struck it, had turned the steel back in little curling splinters. "Put me out for a few minutes," he said: "then I got it in the shoulder. It's the lucky one, I am—see what happened that last time I went over." He fumbled under the sheepskin. Out came a package of chewing gum, an old knife, and finally the broken remains of a gold watch. "They can't get me," he added, smiling on us with a pair of merry blue eyes. "I'm Irish!"

Touches of Nature

Over there in the ground mist lay what was Courcelette, a name which will be blazoned forever on Canadian banners, graven forever on Canadian memorials. Here the French Canadians and the men of the East—Nova Scotia and New Brunswick—won one of the hardest and most brilliant tactical actions of the war on the Western Front. But it was nothing to see—only something to imagine. That hump which marked the site was quite indistinguishable from other military works in the mud, and resembled anything but a town. A ridge, black below, crested by gray mist above, ended the line of vision. Somewhere in there lay the Canadians, victorious but last night, and now digging feverishly against another possible counterattack. The German fire, indicated by the scream of shells ending with a fire-cracker burst, had somewhat changed its direction. There was a chance, I learned, that another shift might cut us off for the time being from retreat. The Irish captain asked pleasantly how I liked to be under fire. Another officer remarked that the principle of scouting was not only to get the information, but to get back with it; he presumed the same principle applied to journalism. So we retired, clumping along corduroy roads, wallowing in mud.

The wounded were coming in faster as we approached the dressing station. And somewhere along the route we caught up with our friend the sergeant strolling back, a little feebly now, but with the air of a man who has all the time in the world.

He walked with us, talking of the Regina Trench and Vancouver politics, until we reached the automobile, where the major invited him to come aboard. We had a full load already; so the sergeant rode in the front seat, while the staff captain—lately promoted from the high-school cadets—stood up on the dashboard.

That would not happen in every army!

Those touches of home in a foreign land! Poignant at any time, they are doubly poignant in war. I intended to sail home to New York as soon as ever I could finish with the Somme and get these lines through the censor.

Now we made a stop, on our way back, in a town which is shelled every day. The window-panes of the nearest house were gone, blown out by the back kick of a shell. Someone had covered the gap with a newspaper. It was a sporting page, a real one. In a corner of a seven-column head was the standing photograph of Our Great Expert. Below beamed the benevolent countenance of Grover Alexander, premier pitcher of the National League. Hal Chase, who led the League in batting, stared at us from mid-page; in the lower corner George Stallings, the world's great hunch player, glowered from beneath his roached hair cut.

Did a sporting page, I wonder, ever bring tears to human eyes before?

The Maxwell Service plant at Newcastle, Ind. This is the parent of the Maxwell branch service stations shown below. The greatest stock of automobile parts in the industry is housed in this building.

A record of every part is kept

Maxwell Service is built on system

SERVICE

IN preceding advertisements, we have explained various measures adopted in manufacturing processes to insure a surpassing serviceability from Maxwell Cars.

But there is still to be considered the after-service—the speedy replacement of parts worn out or accidentally damaged.

To dispose of this problem, we have a highly systematized and nation-wide Service Department which operates sixteen big Service Branches, advantageously located from coast to coast.

These branches serve our distributors, dealers and our own retail stores and replenish the supply of parts that all such distributors, dealers and retail stores are compelled to carry.

We have defined carefully each territory and require each Service Branch to maintain an adequate stock of all parts of every Maxwell Car ever built. Thus can we guarantee delivery of any Maxwell part in from one to twelve hours, irrespective of where the car owner may be located.

From a desire to perfect Maxwell Service still further, we constantly keep a crew of expert traveling mechanics who conduct a campaign of education among Maxwell dealers and their service men.

We believe Maxwell Service is superior to that of any other motor car builder. And we are keeping it on this high plane because *continuous owner satisfaction* is our biggest asset and is responsible for the great, the unprecedented success of The Maxwell Institution.

Roadster, $620; Touring Car, $635; Cabriolet, $865; Town Car, $915; Sedan, $985. All prices f. o. b. Detroit. All cars completely equipped, including electric starter and lights. Canadian prices: Roadster, $870; Touring Car, $890, f. o. b. Windsor, Ontario.

Williams' Shaving soaps

stick
powder
cream
liquid

See that smile? It starts the minute the Big Stick is brought into action and broadens as the shave proceeds.

The smile and the shave were strangers once, but now they're inseparable—all because of the soothing, softening influence of the lather of Williams' Shaving Soaps.

Get a Williams' Holder Top and smile with the majority. The metal finger-grip is a convenience from the start and a necessity at the finish.

Williams' Shaving Soap comes in several convenient forms:

Stick, Powder, Cream, Liquid

and in round cakes

Send 12c in stamps for a trial size of the four forms shown here. Then decide which you prefer, or send 4c in stamps for any one.

The J. B. Williams Co.

Dept. A, Glastonbury, Conn.

Add the finishing touch to your shave with Williams' luxurious Talc Powder

BUBBLE DAYS OF FINANCE

(Continued from Page 4)

stayed there; that customers were wrong four times out of five, and that rarely did one sell stock short.

The same theories, principles and spirit are manifest in this latest revival or reincarnation of the game. It is figured that the present customer lasts about four months, on the average; and, as the broker pretty well makes his own prices and is thus able the sooner to close the customer out, the game will be as profitable while it lasts as was the old bucket-shop business.

But it is difficult to estimate the size of these reëmbodiments of bucket shops, for much of the present business is conducted by mail, whereas nearly all the trading in the older type of gambling joint was carried on in the offices themselves.

One man now engaged in this business has a genius for organization. Except a very few close lieutenants, none of his employees knows the whole business.

This concern sends out thousands of letters a week. Its office and general expenses are enormous. The chief rival of this concern, besides all these expenses, had at one time a large corps of salesmen on the road. Both concerns have a great number of expensive branch offices. But there is nothing new about all this. John Hill, writing fifteen years ago, said:

"Of the vast sum wrung from the thrifty by false pretenses, about twenty million dollars is spent for newspaper advertising, about an equal amount for postage stamps, and vast sums for attorneys' fees, circulars, booklets, stenographers, clerks, telegraphing, and for furnishing suites of offices. The swindler is usually a reckless spender and squanders his ill-gotten gains."

Impudent Selling Methods

One curious feature is that with each new wave of doubtful promotions many of the notorious gentry more or less voluntarily announce that they have reformed, turned over a new leaf, and will thenceforth "be good." They visit the offices of detective agencies, reporting bureaus, lawyers employed by big financial institutions, the post-office authorities, the district attorney—sometimes the police.

"I've been in jail three times," one swindler told one investigator not long ago, "and I'm not going again."

He was serious about it too. Perhaps he really intended to play on the square for a change; but one fundamental principle upon which all the detectives and investigators in the world of low finance operate is to take it for granted that unless proved to the contrary the fly-by-nighter has something in his blood that will not disappear but, even when he intends to reform, sooner or later will force him to put over another raw deal. They are like habitual drunkards.

One of the most baffling of the newer features that the various enemies of get-rich-quickdom have had to combat in the last two years has been the use of assumed names. Of course an alias is nothing new, but its employment is now far more common and skillful than formerly. Well-known criminals have come into Wall Street and organized fictitious firms, with dignified-sounding names not unlike those of members of the Stock Exchange. When things get hot for the slick imitator he quickly forms a new firm with a different name.

One method employed on a more extensive scale than ever before to dispose of stocks has been the use of telegrams. This has really become such an abuse that the telegraph companies ought to find some way of restricting their use to properly urgent matters. The use of telegrams instead of letters is to get the attention of the person addressed. Busy and experienced men won't read stock-jobbing circulars. As yet, they will still read a telegram; but even these will soon lose their novelty.

Recently a concern sent out night letters offering stock in a new industrial company. Estimates as to the number of telegrams sent range from five thousand to one hundred and twenty thousand. Many persons received them who had never heard of the firm.

A new practice is the use to which several get-rich-quick artists have put the ordinary broker's confirmation slip. These are the slips brokers send their customers upon receiving an order. At the head of the slip appear the broker's name and address and the date, and at the bottom a long printed notice to the effect that all securities bought or sold or "carried" for customers are subject to the rules and regulations of the Stock Exchange, and several other provisos commonly employed in regular brokerage transactions. In the middle of the sheet appear the words "We have this day —— for your account and risk ——." The blank spaces are left, of course, for the word "bought" or "sold," as the case may be, and for the name, quantity and price of the stock involved.

Though not members of any stock exchange, the fly-by-nighters have had printed precisely similar slips; but in place of the word "bought" or "sold" they insert "reserved," and send the slips to total strangers, who have never even heard the name of the firm. Still other gullible persons feel they are under some obligation and send on the money to pay for the stock.

A favorite means of advertising is by means of the "house organ," or alleged magazine. Of course reputable brokers do the same thing; but those in the dark alleyways of finance are far more imaginative and ingenious.

One such "magazine" is published by John Skinem & Company, of Number 00 Broad Street. It is known as the Wall Street Synopsis, Limited—at least that is what we shall call it. One department is called Personal Talks With Traders, by Special Arrangement With the Financial Abstract, of Number 000 New Street. But, as everybody knows, there are many buildings in the Wall Street district with ells that extend either from one street through to the next, or from one street round to another street running at a right angle. Number 000 New Street is the same building as Number 00 Broad Street, and the effort to make people think that the Financial Abstract is a different crowd or outfit and is in a different building from the Wall Street Synopsis and John Skinem & Company is a cheap, childish trick.

A suspicious fact about all such literature is that it always advises one to buy but never to sell. Another common characteristic is the clever way in which attention is always called, first, to undisputed facts and legitimate securities, and then shaded off to doubtful facts and still more doubtful stocks. The advice begins with references to legitimate securities, but well down in the middle of the list of cats and dogs the firm's advertising manager pauses long enough to insert the name of at least one more well-known concern, to bolster up the general impression.

Another favorite device is the employment of slogans or catchwords. Twenty years ago this was a common practice and the thimbleriggers of those days used such phrases as the following: "We can prove all our statements." "One hundred dollars invested now will make you wealthy." "Fortune knocks at every man's door but once in a lifetime. This is your summons!"

Fake Photographs

The present type of slogan is briefer. One of the first of the present crop of impostors to decamp overnight had a really splendid motto. But all he left behind him to pay debts of $61,281.74 was twenty pearl-handled revolvers.

The paltriest, shabbiest trick of all is the fake photograph. Now it should be observed that though every large city has its crop of irresponsible brokers and promoters most of them have settled down upon New York like a pest, owing to its large Curb Market. But though their headquarters are in New York the bulk of their newspaper advertising and mail-order campaign reaches other parts of the country. Especially do they seek out cities where workmen have made big wages; and also the smaller towns. Even in New York City there are naturally plenty of people—the vast majority, indeed—who do not know the appearance of every building. To fool out-of-town folks in this petty manner is simplicity itself.

One firm, which has since gone to the wall, occupied a few rooms in one of the upper floors of a large building owned by a very well-known restaurant company. The restaurant occupied the ground floor and the second floor. A huge sign stretching from top to bottom of the building announced the restaurant's name to all the world. But the broker sent out a circular to his customers containing a picture of the building, with the sign of the owners entirely erased from the negative and his own name, in huge letters, covering the whole front of the building.

In a similar way another petty share peddler covered a photograph of the two lower floors of a famous office building with his name, though he never occupied more than a single room.

Of course the purpose of these double-negative photograph tricks is to convey an impression of vastness and magnificence that never existed. Frequently the main entrance to an office building is surrounded with the polished name plates of many tenants. One concern sent broadcast a photograph of one such entrance with all the name plates erased but its own. The effect was indeed superb, because the building has a truly famous location; but if the reliability of the firm's brokerage service does not exceed the truthfulness of its photography its customers have a slim reed on which to lean.

The last stages in this gigantic game of imposture cannot be far off. It will be remembered that the bubbles of several hundred years ago usually came to an end when the stockjobbers reached the brazen effrontery of inviting people into "An undertaking; but no one to know what it is"; or "For a purpose not to be disclosed." There have been times when people would buy stock in anything—in schemes to take gold from the sun's rays or from sea water, and to pick diamonds off the cactus plants of Mexico. We have about reached that stage again.

The Activities of Mr. Jackson

People are invited to enter "Syndicates for undisclosed purposes." With the wording and names changed, but exactly reproducing in substance and spirit the real thing, here is one such invitation:

Dear Mr. A.: We have decided to organize a company having as wide a field and scope as the electrical industry. Indeed, it has ten million possible customers in the United States, Canada and Mexico alone. If the company sells only two per cent of the possible demand on this continent it will net seven hundred and fifty thousand dollars a year, or two hundred and fifty per cent.

It is our intention to invite a few of our friends to become subscribers on a pre-organization basis—which offers opportunities of enormous profits in the near future. We invite you to become one of the original subscribers.

And nowhere does the circular mention the nature of the business to be engaged in!

Quite the most lurid episode of the last two years has been the return to the scenes of lamb-shearing of a promoter celebrated from the Pacific Coast to London and Paris. So numerous have been his occupations and so many his names since he was compelled to sell his seat on the Stock Exchange, about fifteen years ago, that he could not even remember them all at his trial, last June, when he was sentenced to a year and a half in the penitentiary.

This much is known: At least three or four times Professor Jackson—which is not his name—piled up "profit" ranging as high as three hundred thousand dollars. He had a professional education in this country and supplemented it with a postgraduate course in Germany. Striking in appearance and skillful in impressing the fair sex he has always had the faculty of making people feel sorry for him.

Once, against the almost tearful warnings of the district attorney, he induced a group of citizens in a Western city to raise twenty thousand dollars in bail, and promptly jumped it. Arrested some years ago for selling stock in a South American scheme, he escaped from his captors in a San Francisco street, but slipped and fell as he approached the ferry, and broke his ankle. While confined in a hospital he managed to escape to a waiting automobile loaded with rifles and revolvers, and made for the mountains. But he was recaptured in Oregon and served a jail term of a couple of years.

Shortly after the war boom in stocks started, a new firm was formed on the Boston Curb, which asked to have a certain mining stock listed. The authorities grew suspicious, and it was found that Professor Jackson was behind the innocent-sounding name of the new firm, and had left for parts unknown with his customers' money. But so well had he concealed his identity that he had fooled one of the great stock exchanges into allowing him the use of a ticker.

A few months later people began to wonder at the great business and prosperity of a previously unknown Wall Street firm of "bankers." It bore a dignified name—one that would not rouse the least suspicion. One of the great mercantile agencies made a report upon the firm, which, though admitting that the statements could not be confirmed and no estimate of means was obtainable, spoke of the silent partner, whose connection with the firm had been widely advertised, as the nephew of one of the largest stockholders of the Standard Oil Company, a man worth perhaps sixty million dollars.

A Sudden Trip to Florida

The new brokerage house was specializing heavily in Standard Oil stocks—one especially, which it said would go to a thousand dollars a share, and which was, of course, an enormously rich concern. So attractive was the literature and so obvious to the most ignorant were the merits of the stock that large sums, amounting to several hundred thousand dollars, were sent in to buy the stock on the "easy-payment plan." Much was made of the broker's relationship with the great family of Standard Oil magnates.

The firm had its offices directly opposite the quarters of a leading Wall Street detective agency. The head of the firm lived in the same hotel as an official of the Department of Justice. Yet no one suspected him and there seemed no limit to the taking in of easy money. The lawyers for the Standard Oil family heard of the firm's literature. They knew that the pretended connection with a nephew of their client was not only false but a pure fiction. Their client had no such nephew. A post-office inspector thought the broker might be Professor Jackson and took his picture from the Rogues' Gallery to show it to the clerks in the broker's office.

But the professor had always shown intense speed in flitting from one part of the country to another to avoid capture; and he had been sufficiently forewarned by demand from the Standard Oil attorneys to stop using their client's name to make his getaway to Florida. His capture speedily followed, and also his trial, conviction and prison sentence.

The case of Professor Jackson is only one of the more glaring chapters in the history of the separation of credulous people from their money. It requires from three to a dozen letters before the victim begins to give up his wealth. But having once succumbed to the blandishments of the accomplished faker it is appalling to note the confidence and sense of security he displays in absolute strangers while the deal is on, and the surprise he manifests when he finally and inevitably wakens to the realization that he has been duped. About ninety per cent of the victims are ashamed to acknowledge their greenness, and very few care to go to the trouble and vexation of prosecuting.

I sat in the outside office of a Wall Street detective agency the other day and noticed a meek, pale-looking little man talking to one of the assistants. He had come all the way from another state, nearly a thousand miles away, to see whether a certain broker to whom he had sent money was reliable. Presently the overworked head of the agency rushed out impatiently from his private office and asked what was wanted. The assistant, trying hard to suppress a smile, said that Mr. Smith, from Four Corners, wanted to know about Stingem & Company.

"Shut up shop yesterday!" snapped the chief. "Everybody in New York has a judgment against them. They are not good for anything. You can't get a cent out of them; but you can put your claim in the hands of a lawyer if you so desire. I can't do anything for you."

"Thank you," said the little man dejectedly as he took up his hat and walked out of

Hundreds of Extras

Due to John W. Bate's Efficiency Methods

"How can the Mitchell give so many extras?"

That is a question asked of Mitchell dealers, perhaps a thousand times a day.

There is only one way—by saving in factory cost. By building the whole car in a model plant, under Bate efficiency methods.

Our duty now is to wake men up to the value of this new factor. We owe it to you as we owe it to ourselves. If we can actually give you 20 per cent extra value, you'll want the car that does it.

What the Extras Are

The Mitchell extras—in the latest models—comprise the following, all of which distinguish the Mitchell car.

31 extra features—nearly all of which all other cars omit.

24 per cent added luxury—new beauties added this year out of savings made in our new body plant.

100 per cent over-strength in every vital part. That's double even the former Mitchell standard.

These three classes of extras comprise hundreds of additions, which every man wants in his car.

How We Afford Them

John W. Bate, the great efficiency engineer, has cut our factory costs in two. He has built and equipped here a model plant, adapted to this single car.

Here we build, under Bate efficiency methods, 98 per cent of this car. We build even our finest bodies. And we build at a price which, in this class, no one else can match.

The savings go into these extras. They pay for unique attractions which every fine car needs. That seems the best way to show you clearly the value of efficiency methods.

Mark the Over-Strength

You will see the extra features—see the extra beauty. But the chief Mitchell extras lie in the chassis. And we want to impress their importance.

The Mitchell standard, up to lately, has been 50 per cent over-strength. That seemed an extreme standard. It gave the Mitchell its reputation for endurance.

TWO SIZES

Mitchell —a roomy, 7-passenger Six, with 127-inch wheelbase. A high-speed, economical, 48-horsepower motor. Disappearing extra seats and 31 extra features included.

Price $1460, f. o. b. Racine

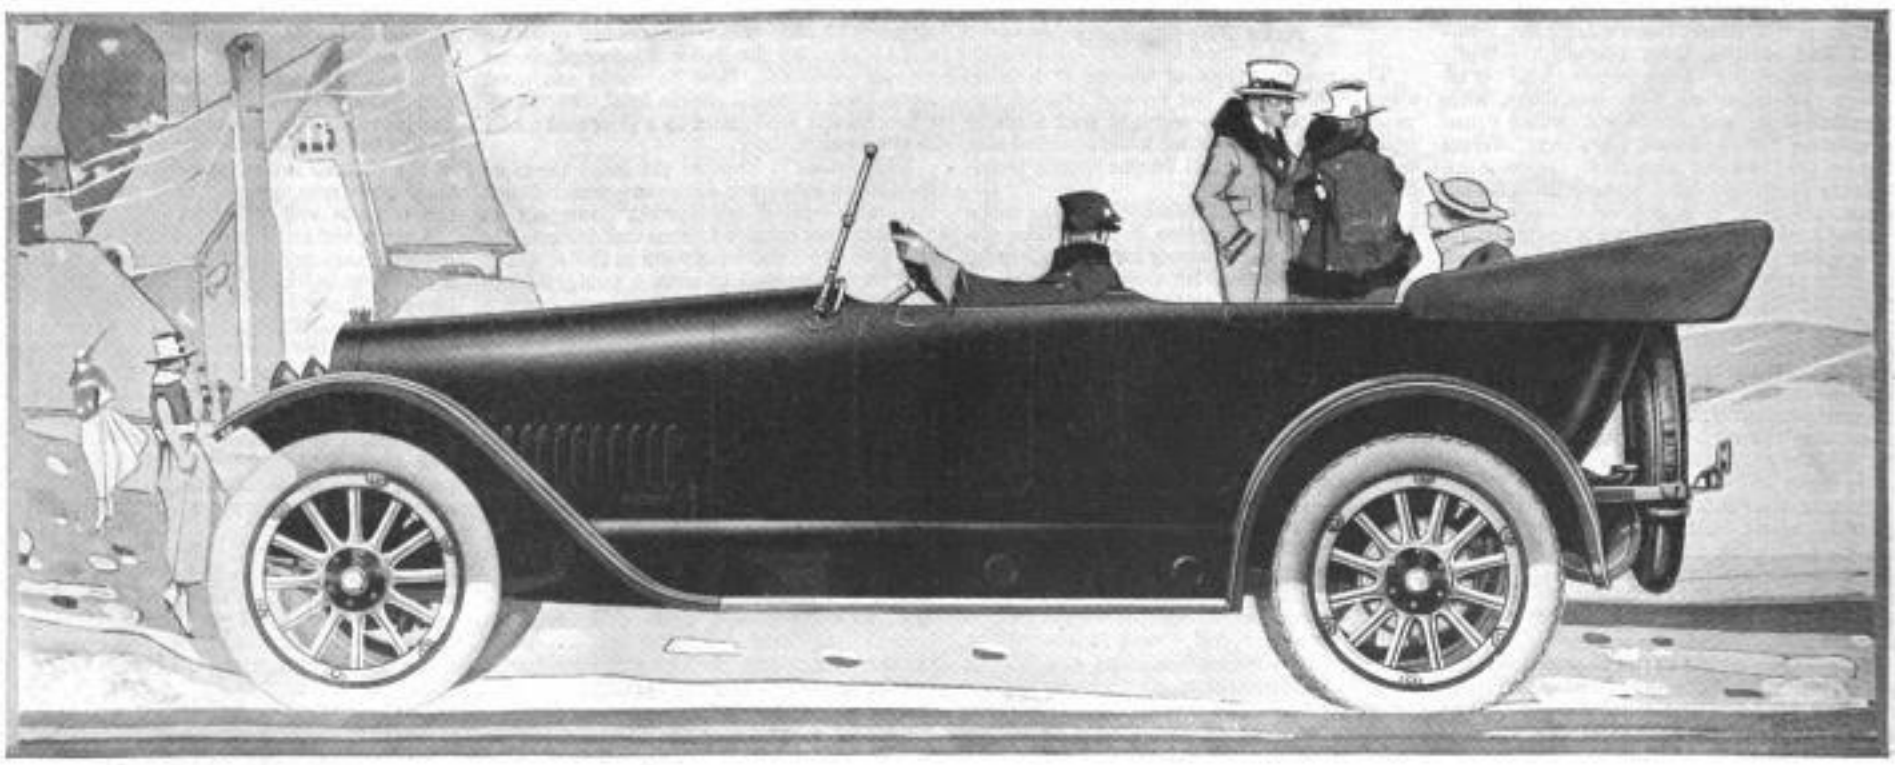
Mitchell Junior —a 5-passenger Six on similar lines, with 120-inch wheelbase. A 40-horsepower motor—¼-inch smaller bore than larger Mitchell.

Price $1150, f. o. b. Racine

Also all styles of enclosed and convertible bodies. Also demountable tops.

Seven Mitchell cars that we know of, built under that standard, have averaged 175,000 miles apiece—over 30 years of ordinary service. Two have already been run over 200,000 miles apiece.

But three years ago—after one year in Europe—John W. Bate returned here to double the Mitchell standard. Since then, part by part, he has given Mitchell vital parts twice the needed strength. And this year, for the first time, we announce this radical standard.



Safety Margins Doubled

This means a doubled margin of safety. It means a lifetime car, in Mr. Bate's opinion. It means less trouble, less repairs, less upkeep.

Over 440 parts in the Mitchell cars are now built of toughened steel. Parts which get the major strains are built of Chrome-Vanadium. We pay for steel in Mitchells up to 15 cents per pound.

Parts on which safety depends—like steering parts and axles—are also built over-size. Every gear is tested. And our standard for gear teeth is now 50,000 pounds per tooth.

Let us mention one part which, in most cars, so often gives out under shock. The Bate cantilever springs in Mitchells have now been used two years. In all that time, used in thousands of cars, not a single leaf has broken. That's what this extra standard means throughout the Mitchell chassis.

Built by John W. Bate
in the
Model Efficiency Plant

Mitchell SIXES

Two Sizes
$1150-$1460
F. o. b. Racine

Now Also An $1150 Model

Mitchell Junior—120-in. Wheelbase

Another new step which Mr. Bate has taken is to build a smaller Mitchell. And that is also for efficiency.

A man who wants a 7-passenger car must have the power to drive it under any hard condition. He ought to have the larger Mitchell with its 48-horsepower motor.

But a man who wants a 5-passenger car can use a 40-horsepower motor. He has ample room with a 120-inch wheelbase. We build for him the Mitchell Junior, so he doesn't pay for room or power not needed. But he gets a Six.

This is not a new-type model. It is simply a smaller edition of the much demanded 7-passenger Mitchell. To prove it out, before making this announcement, we put out last year thousands of these cars. It is just as perfect as the larger Mitchell.

So this year we offer two sizes and prices, plus eight new styles of bodies.

Greater Luxury

This year we shall save, through our new body plant, hundreds of thousands of dollars. Here we now build all Mitchell bodies, open and enclosed. And under Bate efficiency methods.

This saving all goes into added luxury. We have added 24 per cent to the cost of finish, upholstery and trimming.

This means heat-fixed finish coats on the entire body. It means a rare-grade leather, a wider rear seat, better cushion springs. It pays for a hundred final touches which mean so much to women.

As a result, the latest Mitchell stands out as the handsomest car in its class.

Now 31 Costly Extras

Last year the Mitchell offered 26 distinct extra features. This year it offers 31.

By these extras we mean things like a power tire pump, reversible headlights, a new-type control, a ball-bearing steering gear, an extra-cost carburetor. Things like a light in the tonneau, a locked compartment for valuables, an engine primer at the driver's hand. Things which usually cost an extra price.

On this year's output it costs about $4,000,000 to include all these 31 extras. They would be impossible at the Mitchell price without our factory savings.

New Considerations

These are new factors to consider in buying a high-grade car. It isn't price that counts so much as the value you get for the money.

Here is where the Mitchell has tremendous advantage, due to years of preparation under a master of efficiency.

Every factory waste shows up in a car. It means stinted value somewhere. The Mitchell factory economies show up just as clearly in hundreds of added values.

See them and judge them for yourself. They show in beauty, luxury and comfort. They show in road performance. As the years go by they will show in the wondrous durability.

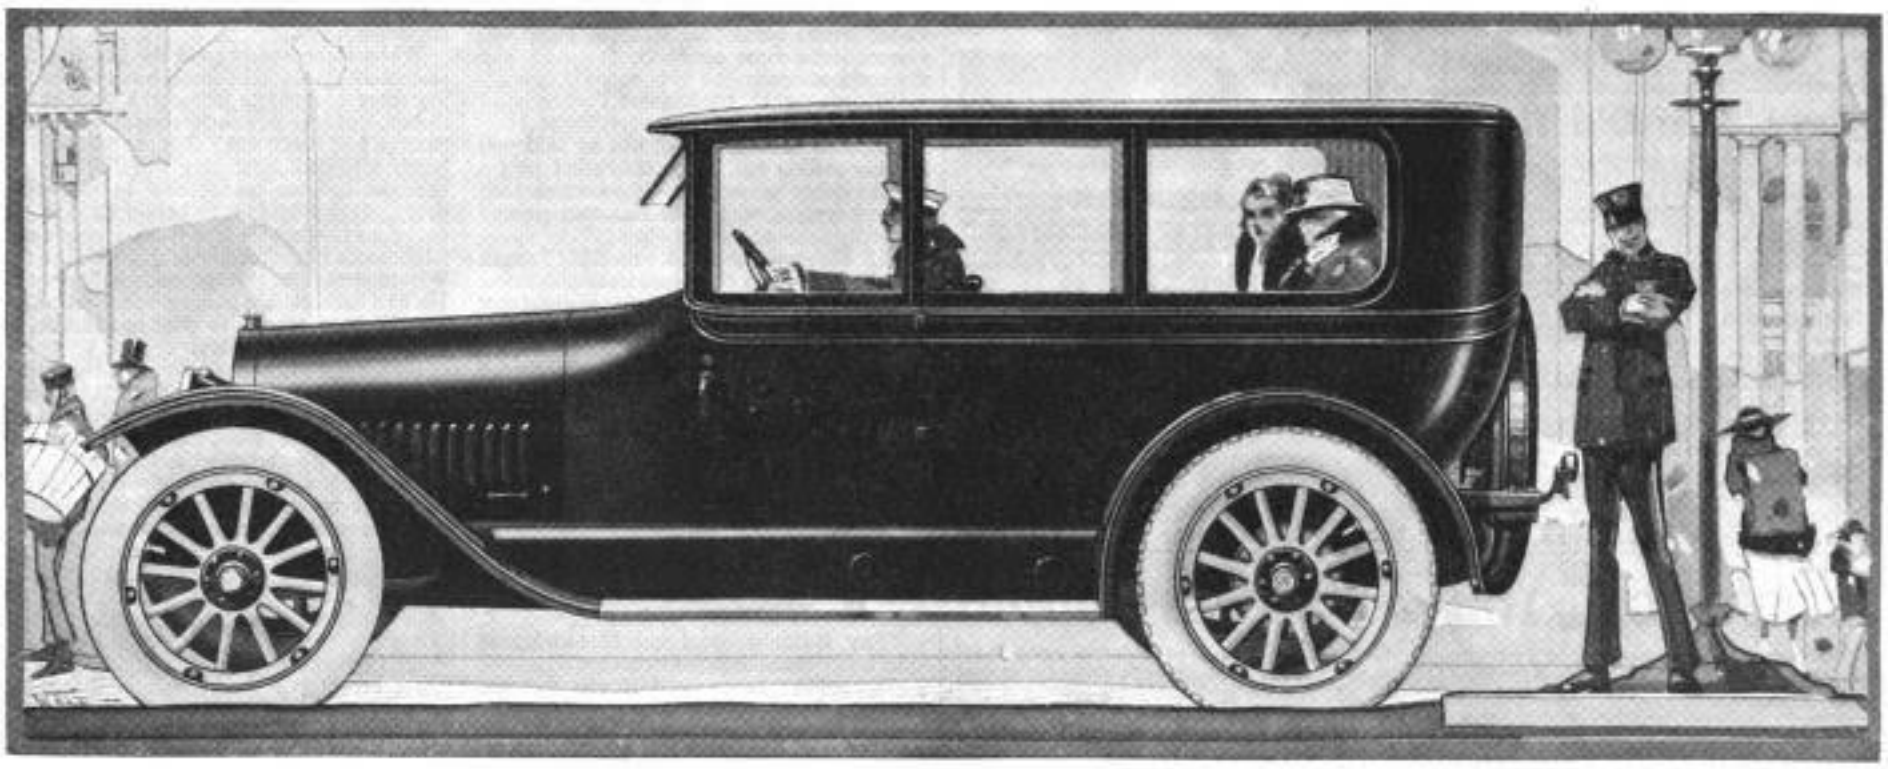
The buyers of Mitchells, in large part, have been men schooled in mechanics. Or men advised by competent engineers. We publish a list of famous engineers who selected this car for themselves.

Our purpose now is to impress on laymen the superlative Mitchell qualities. This year we more than double our output, so more men can be supplied. And we want more men to learn why Mitchells have lately won such multiplied prestige.

They offer you what no one else can offer. One hour's time will prove that. The result will change your whole conception of what a fine car ought to give.

There are Mitchell dealers everywhere.

MITCHELL MOTORS COMPANY, Inc.
Racine, Wis., U. S. A.



Mitchell Models

The Mitchell is built with eight styles of bodies—

Touring Car	4-Pass. Cabriolet
Roadster	Convertible Sedan
Coupé	Demountable Top
Limousine	Club Roadster

***Mitchell Junior* is built with Touring Car and Roadster bodies only.**

Quoted prices, of course, apply only to open models.

What 15c Will Bring You from the Nation's Capital
The little matter of 15c in stamps or coin will bring you the Pathfinder 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's Center, for the Nation; a paper that prints all the news of the world and that tells the truth and only the truth; now in its 23d year. This paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your house which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. Send 15c to show that you might like such a paper, and we will send the Pathfinder on probation 13 weeks. The 15c does not repay us, but we are glad to invest in new Friends. The Pathfinder, Box 95, Washington, D. C.

(Concluded from Page 49)

the office, the chances being a thousand to one that this was now a closed incident in his life, except for the bitter experience he had gained.

Why will men and women blindly intrust their money with brokers they do not know? The same folk are very careful from whom they buy a twenty-dollar suit of clothes. They are mighty careful not to go to a shyster peddler of hats or shoes or suits. They are even careful of the grocery stores they patronize. They prefer to deal with retail houses of established reputation. But the fact that financial swindlers phrase their advertising with such extreme cunning as to make it attractive seems to upset all the ordinary common sense and precautions of human nature.

"But how am I to know a reliable broker from the other kind?" is the natural question.

The answer is simple: Ask your bank to write to its correspondent bank in the city where the broker has his headquarters, whether that be New York, Chicago, Boston or any other city. Inquiries made where branch offices are located will be of no avail. If this precaution is taken the chances are more than a hundred to one that the investor will not fall into the hands of a swindler.

Of course reliable brokers often get their customers into unfortunate investments. But a great deal more than half the battle is fought if the broker is honest to start with. Never before were there so many attractive stocks with reasonable assurances of becoming good investments. There are more than enough to go round. There is no excuse for buying holes in the ground that have never been dug or shares in motor companies that have never built a motor. The merits of an investment are not determined by its typographic allurements.

There is no royal road to selecting safe investments. Even John D. Rockefeller has picked lemons. But the literature describing the stock will, nine times out of ten, on its face, stamp the wildcat with its proper brand, as it will also mark the legitimate type of security. Be wary of the extravagant use of adjectives, and of the liberal use of such words as "belief," "expectation," "opportunity," "possibility," and any extended reference to the success of other companies. As the writer has said elsewhere:

The swindler always promises too much; his literature is too plausible. Usually he is overvehement. His letters are personal. He wants to let you in on the "ground floor." He is holding the stock just a little longer for you. He is absolutely certain the stock is going up. He bubbles over with enthusiasm. He conveys an air of optimism, buoyancy and good nature. It is all fake! That is the way he works; and you must look out for it.

ONE EVERY MINUTE

(Continued from Page 23)

A smile began to form itself on Wilberforce Shadd's face, and suddenly petrified itself when Meiggs, in an awed voice, shouted from the news ticker:

"It's officially confirmed! The Cunard office admits it. The loss of life is not known, but the worst is feared. The ship, after the second torpedo, quickly went down."

"Went down! Down!" muttered a man named Shively, who stood near Shadd. "Down! Down! Down!"

And he began to point toward the floor with a rigid forefinger. He had been one of the first bulls, buying stocks on the first day that the Exchange resumed business. He had pyramided until he was carrying stocks on which his paper profits had been over two hundred and fifty thousand dollars at ten o'clock that morning. Now, at twelve-thirty, the profits had been more than cut in half. And he kept on muttering: "Down! Down!"

Still he would not sell, but hoped for a miracle.

Henry Rumney approached Shadd and asked threateningly:

"Why didn't you tell me?"

Dave Caldwell, the usually suave and always keen-eyed office manager, cut in:

"He did! He certainly did! And all you fellows did was to call him names!"

The other customers might or might not be wiped out and cease to be customers; but Shadd had cashed in and, therefore, would have money to make good his orders. From orders come commissions, and from commissions come comforts.

Shadd nodded:

"That's right! I told them."

"But you didn't tell us why."

"No," said Caldwell; "but he told you he was selling his, and you called him a skunk—after he put you into a stock that showed you a couple of hundred points' profit."

"U. C. common, last sale 265!" read Ben Meiggs from the news ticker.

"I told you fellows," said Wilberforce Shadd loudly; "but you were talking two thousand dollars a share."

"You certainly got there with both feet," said Caldwell admiringly.

"I want fifty dollars," said Shadd diffidently. "Do you suppose I could ——"

"You bet your life!" And Caldwell rushed to the cashier and rushed back with a yellowback, and a receipt for Shadd to sign.

Shadd put the fifty dollars in his vest pocket with the same gesture that he might have used on five cents the day before. Then he said to Henry and Meiggs:

"Say, Rumney—and you, Mr. Meiggs—won't you come to lunch with me?"

"I couldn't eat now if it was the last chance I had," said Rumney indignantly.

Ben Meiggs shook his head and compressed his lips.

"I'm sorry," said Shadd, and walked from the office.

Meiggs approached Henry Rumney and said, after a moment's hesitation:

"It wasn't Shadd who was the fool."

"No," admitted Henry Rumney. "But he's a skunk, just the same."

XIV

WILBERFORCE SHADD went to the restaurant whither Henry Rumney, while still grateful, had taken him on an unforgetable day. On this occasion, as on the previous, Wilberforce did not feel quite at home there. In the appraising eyes of the waiters he saw the contempt that comes from the practice of sizing up ungiven tips. On the faces of those patrons who took the trouble to look at him he fancied he saw an amusement that irritated him to the scalding point; but he assured himself that he was outwardly calm as he found an empty table, without help from the captain, and sat down. He deliberately tried to look as if his mind were so intent on important business that all he could do was to stare frowningly at a spot on the tablecloth before him.

A patron's frown is the waiter's strongest magnet. An omnibus, on whose face was a resigned look that came from knowing there would be no vacancy on the waiting staff in his lifetime, placed before the absorbed Shadd one glass of water, one butter plate, one bread plate and one menu. Then the waiter rushed from another table, said "Yes, sir?" looking the while at the other customer's card.

Wilberforce Shadd read the list of dishes and their prices. He could not help thinking more about the prices than about the dishes, until he defiantly reminded himself that he had made sixty thousand dollars by being wise enough to buy when everybody thought he was crazy, and to sell when everybody called him an ass for not holding on. And if what he had done was so easy, why didn't more people do it, including the Wisenheimers in Woodcock's office, hey? He had fifty dollars in his pocket. And, no matter how expensive the lunch was, it wouldn't be fifty dollars.

He turned to the waiter and ordered with a recklessness that went to his head, champagne-wise, and made him feel very happy and very generous. He wished to give of his abundance to all the world.

He ate the most expensive meal of his life with relish. By dessert time he was ready to emerge from his chrysalis. The real and definite change came when he tipped the waiter one dollar and fifteen cents and received the enthusiastic thanks of the poor man, whose financial gratitude was so obviously sincere. The change showed in Wilberforce Shadd's face, in the poise of his head, in his gait, as he walked out of the king-making restaurant.

He was now a man with money; a man better than other men. He had lost the fear

WORLD WIDE SUPREMACY OF THE BISSELL'S CARPET SWEEPER

Bissell's Carpet Sweepers predominate in all the markets of the world, abroad as well as at home. This is in the face of competitive manufacturers resident in those countries where national loyalty is keenest.

In every *Bissell* you buy the experience of 40 years in making nothing but carpet cleaning devices—either carpet sweepers or vacuum machines.

Bissell's Vacuum Sweeper is easy-running, most convenient to empty and excellently well made—above comparison with the crudely made apparatus with which the market is flooded.

"Put your sweeping reliance in any Bissell's appliance" and you will not be disappointed. Sold by the better dealers everywhere. Booklet on request.

Vacuum Sweepers, $7.50 and $9.00. "Cyco" Ball-Bearing Carpet Sweepers, $3.00 to $5.50. A trifle more in the West, South and Canada.

BISSELL CARPET SWEEPER CO.
Largest and Oldest Exclusive Manufacturers of Carpet Sweeping Devices in the World

of dismissal, the apprehension of years over the regularity of his income. And it had been so easy, too, to make money that he could never again feel the old respect for the legendary money-makers—that is, the members of the firm of Morris & Cunningham, for whom he had worked for years—for practically nothing!

It was the superbly fed and fearless Shadd who walked into the customers' room of Francis T. Woodcock & Co., and gazed calmly, almost superciliously, upon the still excited men who had not been clever enough to sell out three hours before the news of the sinking of the Lusitania reached the Street.

The nonsellers, however, had become less bitterly resentful and were again ready to worship at the shrine of Success, provided the god, in return for the incense burned, vouchsafed them a tip or two.

Henry Rumney made the first move. He was carrying many other stocks besides his Undersea Craft and it therefore behooved him to rise superior to petty prejudices and unmanly grudges. So he said:

"Well, Shadd, I've got to hand it to you." Henry spoke without enthusiasm, because he was in a hurry to rush through the usual flattering preamble and get down to his own troubles. "You certainly did cash in at the psychological moment. And—er—— What do you think of 'em now? They've had quite a setback."

Not knowing what reply to make, the new Shadd shook his head as the old Shadd never would have dared to shake it—that is, he managed to express not only negation and dissent but formal displeasure.

"Why not?" persisted Henry Rumney, who was a bull because he held stocks instead of holding stocks because he was a bull.

Shadd again shook his head.

"I don't see any panic," went on Henry doggedly. "Many who are selling now will be buying 'em back at higher prices."

All he had lost so far was a fraction of his paper profits, but he begrudged it as if it were a fraction of his viscera. He frowned and mutely dared Shadd to answer.

"Nope!" said Shadd, disdaining to give reasons.

"You don't think we are going to have war with Germany, do you?" asked Henry Rumney, and hastened to make a reply unnecessary by volunteering "I don't!"

Shadd smiled quizzically at Henry Rumney—and remained silent!

"Even if there should be war with Germany," ventured Careful Mike Meiggs, who also had not sold and, therefore also, could think only of bull, or favorable, factors, "I should think the war stocks would go higher than ever. The companies will simply have more business to do, with Uncle Sam in the market as well as all Europe. I guess the United States will pay as high prices for war material as anyone else."

"I doubt it!" said Wilberforce Shadd calmly.

Henry Rumney, who had been thinking hard, trying to find some way of goading the saturnine Shadd into telling the facts, now smiled Machiavellically and asserted with exasperating assurance:

"Oh, there will be no war!"

"No?" And Shadd just looked at Rumney.

Ben Meiggs thereupon began to look worried.

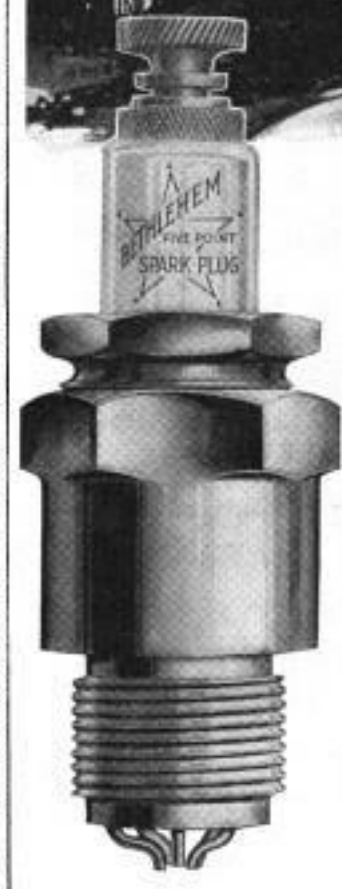
"I think," put in Bill Edson, in whom the wish was father, grandfather and stepfather to the thought, "I think they've gone as low as they are going to, this trip."

He meant stocks. Tipsters, when they speak of "they," always mean the Malefactors of Great Wealth who conduct the wholesale shearing. But to everybody else "they" means stocks.

Wilberforce Shadd felt the discomforting scrutiny of a dozen pairs of corkscrewing eyes full upon him. He began to think quickly. His problem was to be not only the fount of all wisdom but also infallible. The solution lay in finding words that would do the trick, no matter how the market went. They came to him.

"If I felt the way you do, Mr. Edson," he smiled, "I certainly would buy stocks."

But Bill was modest. He was not sure his thinking had any relation to wisdom. He came back:



"Do you think the way I do, Mr. Shadd?"

Shadd, foiled in his well-meant effort, became angry enough to resolve to take a sporting chance. Not holding any stock, he naturally wished all stocks to go down.

Make Your Own Movies!

Startles the Whole World!

A Miracle in a Metal Box For everybody! Power to make anything that lives and moves **LIVE AND MOVE AGAIN.** Because **YOU will it, YOU wish it.** Power to say,—**LOOK!** Do you see that man, that woman, that child, that crowd, that event, that action, that living, moving scene? **I CAN MAKE THEM LIVE ALL OVER AGAIN.** And everybody can do it, because the **MYSTERY** has been taken out of the Movies forever. No more wondering **HOW IT'S DONE.** No more longing to **DO IT YOURSELF. DO IT.** It's yours—the mystery of it, the joy of it, the entertainment of it, the usefulness of it—the living picture that does everything but talk. **YOURS!** A scientific-wonder machine, so simple that a child can operate it in a minute. So marvelously efficient that if you paid a thousand dollars for a professional camera you **COULDN'T TAKE A BETTER PICTURE.**

THINK what this Invention means to you! You know what the Movies have done to educate and entertain. **NOW YOU CAN MAKE YOUR OWN MOVIES IN YOUR OWN HOME.** You take pictorially anything that lives or moves right into your home—**TAKE IT—OWN IT.** You give the lifeless picture—**LIFE.** No more memory fadeaways, but living pictures. Would you see in years to come the mother or father who have left you? **LOOK!** They live on the screen before your eyes. You've conquered time, age, yes, perhaps the silence of the grave, with your Movette and its projector. Would you see again the dear kiddies who have grown up? **THERE THEY ARE!** Laughing, playing, care-free angels, bless them. Would you go back over the days, school days, vacation days, big days, momentous days? The Movette will give them back to you **ALIVE,** with happenings and meanings. Would you keep a history of your life, your loved ones' lives, your city's life? The marvelous Movette will keep it for you—give it back to you and yours in living moving pictures, and do all this for **less than the cost of ordinary photography.** This is the miracle of the Movette.

Movette uses are Universal For boys and girls at school, at play, in study, education, entertainment, helpfulness, the Movette will **enrich their lives.** To the individual in any work, profession or environment the Movette will give **a myriad uses.** Everyone can use it everywhere. Clerk, mechanic, artisan, teacher, professor, lawyer, doctor, minister, lecturer, salesman, factory superintendents and manufacturers in a thousand lines of business, merchants, city police and fire departments, builders, inspectors, commissioners, soldiers, sailors. For every home, every trade, Y. M. C. A. workers, lodges, churches, Sunday schools, grammar and high schools, colleges, universities, all sports and athletics, hunting, fishing, tennis, football, rowing and sailing, swimming, automobiling, running and field sports. For fairs, vacations, entertainments, games. Events in town, city and country—the living world **AROUND** you and a live imagination **INSIDE** of you, the Movette Moving Picture Machine will serve for pleasure or profit.

Movette will get you! There's a novelty, a quiet excitement, an enchantment about this masterpiece-invention **THAT WILL GET YOU.** It will bring your eyes closer to the beauty and wonder of life around you. It will stir the imagination. It will give knowledge to every owner. To go **"MOVETTE-ING" WILL BECOME A NATIONAL HABIT.** It will mean bringing home pictures that tell living stories. This miracle-working machine will strengthen family ties. It will make **home a treasure house of entertainment.** It will bring the great out of doors to the fireside. It will take the cost out of joyful living because a Movette will open the door to more simple and intense pleasures than can be imagined. The variety of **"what the owner can do with it"** is inexhaustible. It is at once a gift of science and invention unequalled since the talking machine—a possession **worth its weight in gold.**

Movette Will Get You

Every Dealer Sells it

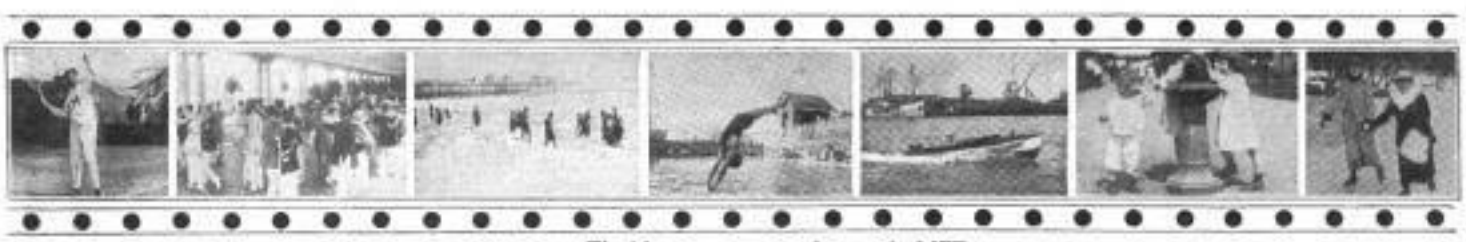
Guarantee to Purchasers

We absolutely guarantee that the Movette Camera will make perfect moving pictures. We will refund your money direct to you without question or equivocation if it does not do so.

MOVETTE CAMERA CORPORATION · ROCHESTER, N.Y.

You Can Buy It Everywhere

Startling low cost and lasting economy go with the Movette Camera and each 50 feet of film. A thousand uses in every machine. Every picture a permanent entertainment for its first cost, and every picture paying a free, lasting dividend of joy as long as you care to keep and show the film. Soon **a library of living pictures**—your very own. Talk of Moving Picture and Camera economy! **32 PERFECT SNAPSHOTS TO A FOOT FOR THREE CENTS. 1600 SNAPSHOTS FOR $1.50.** Camera **$29.75** and a lifetime service in it. Was there ever **ANYTHING** like this! It **IS** a miracle. A machine that can do **EVERYTHING BUT TALK.**



Movette Snap-a-graphs are perfect pictures every time—all the time. No focussing—it's all done for you. No dark room necessary. Daylight loading and unloading. Films replaced in camera in a few seconds. You only have to turn the crank, and the Movette will get everything—get you with its wonderment, its uses, its pleasures—get you with its unlimited possibilities. This isn't a thousandth part of what the Movette Moving Picture Camera **WILL MEAN TO YOU.**

(Continued from Page 53)

"No," he told Edson very gravely; "I do not think as you do. This is a time to play safe!"

Thrilled by the visible signs of the sensation created by his words, he nodded toward the subdued customers and approached Dave Caldwell, the office manager.

"I say, Caldwell," began Shadd, not quite so courageously—"about the check ——"

"What check?" asked Caldwell, already trying to look as if it wasn't his fault.

"For my U. C. common."

"What about it, Mr. Shadd?"

"When can I have it?"

"You are not going to close your account with us, are you? I think there will be a lot of bargains on any further break ——"

The new Shadd thought of additional fortune winning, but the old Wilberforce thought of Mrs. Shadd and her fears and his peace of mind. The new Shadd, therefore, shook his head and said pleasantly to the office manager:

"Not yet a while, Caldwell."

So rare a bird is a stockbroker's customer who knows what to do without prodding that Caldwell nodded respectfully and paid Shadd the stupendous compliment of not urging him to trade. An office manager's object in life is to get orders out of customers. This man Shadd, however, dealt exclusively with cold facts, including the future course of the stock market. Still, he was a customer, from whom commissions should come.

As the manager's face reflected his indecision it occurred to Shadd that, though Francis T. Woodcock & Co. had sold his stock, Wilberforce Shadd might never see the cash. He could not see how Woodcock could steal his sixty thousand dollars and he did not actually expect it; but he feared it.

"When," he asked nonchalantly, "will you get the money for it?"

"Oh, we'll probably get the check to-day, sometime," replied Caldwell. "The buyer has until to-morrow at two-fifteen to pay up—just the same as with Stock Exchange transactions.

"But, say, Mr. Shadd, I think that if a man bought standard railroad stocks at this minute ——" He looked expectantly toward Mr. Shadd and instinctively reached for an order pad.

"That's all right, my boy," said Shadd.

He had decided that, before making any more money in Wall Street, he had better look at the color of what he had not yet received.

Also, he did not wish to hurt any feelings in this office, where everybody treated him so nicely; so he said paternally:

"You are a nice chap, Caldwell; but you are not—don't get huffy before you know what I'm going to say—you're not so old as you'll be at my age. Don't ask me to buy anything to-day!"

And Wilberforce Shadd walked out of the office moved by a sudden fear that David Caldwell and everybody else there might discover that he was bluffing, by means of words, looks and gestures—bluffing all the way through.

A spasm of honesty is liable to come to anyone. However, by the time he was halfway home his mind had reverted to thoughts of his wisdom and of the wealth that had come from his wisdom. He had bought at nine dollars and had sold at the top. He was worth sixty thousand dollars; and stocks were still going down, thereby increasing both the wisdom and the pleasure. He was completely successful! And yet, upon crossing the threshold of his own home, Wilberforce Shadd became uneasy.

XV

MRS. SHADD was mending his socks. She had on spectacles—big imitation tortoise-shell goggles which gave her an owl-like aspect.

She saw him—empty-handed! She took off her goggles, as if she preferred not to see too clearly, and asked tremulously:

"Have you got the money?"

"No; I have not."

"Why not?"

"Because I couldn't get it."

She rose to her feet, her face pale, her eyes full of fear. He hastily explained:

"The buyer hasn't paid up yet."

"And you let the stocks go? Oh, Wilberforce!" she wailed like a child who is hurt.

"They have twenty-four hours in which to send a check." And he patted her back reassuringly, which naturally made her fear the worst.

"Yes; but the stock ——"

"When I get the check," said the adamantine Wilberforce, "they get the stock."

"Yes; but if they back out and don't send you a check, then you've lost the chance to sell it to somebody else, and ——"

"My dear, all business in Wall Street is done that way—with a nod of the head. A man says 'I'll take it,' and it's as good as a certified check."

"Are you sure about this particular man?" She looked at him eagerly, clutching at that blessed straw.

"Positive!" he replied with such assurance that even she could not disbelieve.

No longer doubting her husband or the buyer, but having to doubt her luck after all her dark years, she did not ask—she asserted: "Of course you didn't get the fifty-five thousand two hundred dollars." There was a pause. She looked away and asked faintly: "Did you?"

"No," he answered slowly; "I did not."

She seemed instantly to deflate, with a pathetic nonblaming sort of sigh. He went on quickly:

"I got more than fifty-five thousand two hundred dollars."

"Wilberforce!" She jumped to her feet.

"I got," he told her proudly, "sixty thousand dollars!"

"Oh, Wilberforce!" she repeated.

"That means three hundred dollars a month as long as we live, without having to work or sweat or stew. We're rich, old lady!"

"Oh, Wilberforce!" she said, and threw herself into his arms.

Once there, she began to sob softly. After all, he was a man and this was the woman he had sworn to protect. He understood, first, why he had married her, and then why he had humored her all these married years. It had made him a coward to love her; but he wasn't a coward now, though he loved her.

"My dear," he said playfully, in order not to say it tearfully, "are you sorry we didn't lose the money?"

"N-no," she sobbed, concerned only with her own emotions.

"Well, there's no sense in crying over our being rich. Cheer up. The worst is yet to come!"

"How do you mean?" she gasped. She knew it!

"Well, we've got to invest the money."

"That's easy," she retorted, relieved. "Put it where it will be entirely safe and bring you in as much as possible. That way, before you know it, you'll have a lot saved up and getting interest on that."

"It's as easy as all that, isn't it?" smiled Wilberforce Shadd, veteran investor.

"Are you sarcastic?" asked Mrs. Shadd, not wishing to ask "Am I an idiot?" The tone of voice was the same.

"Oh, I merely wondered whether we were going to have war with Germany over the sinking of the Lusitania; and, if we did, what would happen to stocks and bonds."

"We don't have to buy any."

"Oh, yes, we have," contradicted Shadd in a voice that already was convictionless.

"I was talking to Mr. Marshall about this money ——"

"But you didn't know whether I'd be able to sell or not," objected Shadd.

"I knew you'd sell," she said, "because we needed the money. So I told Mr. Marshall that a friend of mine was asking me what she ought to invest some money in, and he said he'd advise her to buy New Jersey house-lots. He said they were bound to go up in price." She looked at him with an air of business.

"How can he guarantee that?" sneered Shadd.

"The idea," she explained very earnestly, "is this: You buy ——"

"I buy nothing!"

"You buy the lot," pursued Mrs. Shadd, who had inflicted stone-deafness upon herself, wife-fashion, "for one thousand dollars. Then you hold it ——"

"You bet you do!" hastily agreed Wilberforce.

"—— until it's worth three thousand dollars. Then you sell it; and you don't get any cash ——"

"You bet you don't!" again agreed Mr. Shadd.

"—— but you leave it on mortgages, because that way the buyer will put up a five-thousand-dollar house on your lot and you get a mortgage for your three thousand dollars at six per cent, which is as much as you are allowed to get. And your security is the lot and a five-thousand-dollar house on top of it; so you get a hundred and eighty dollars a year for every thousand dollars you invest now. So that if you buy sixty lots for sixty thousand dollars you get —— How much do you get?"

"You get left!" said Shadd, desperately humorous.

"Figure it out for me, dear," said Mrs. Shadd very seriously and still deaf.

"Don't you know how to multiply one hundred and eighty by sixty?"

"You have the lead pencil, dear." She pointed to Mr. Shadd's waistcoat pocket.

Mr. Shadd took a lead pencil out of that same pocket and held it toward his wife, who rose, got a sheet of paper from the desk, and gave it to him.

"I won't do it!" he said determinedly. He multiplied one hundred and eighty by sixty. Then, as he read over his figures, he said, much less angrily: "It's ten thousand eight hundred."

"What?"

"Dollars."

"For how long?"

"A year."

"Oh, Wilberforce! What will we do with ten thousand eight hundred dollars a year? We'll be sure to have bad luck in something else! Of course if we did not spend it all for luxuries, but saved ——"

"Before you spend any of it at all, find out whether you are going to have it to spend. Did you figure on the loss of interest in all the years the lots are going to be unsold? And then, how much will you have to pay for taxes and improvements, sewers, and streets, and ——"

"Oh, no! All improvements and titles are guaranteed, and ——"

"Who told you all this?"

"Mr. Marshall, the real-estate man who married Esther Lillie. He said ——"

"I know what I'd have said ——" began Wilberforce.

"And so I told him I'd bring the money ——"

"What money?" angrily cut in Wilberforce.

She looked at him in surprise.

"Why, our money, that we got from selling the stock you bought. I told him I'd bring it in to-morrow."

"Well then, you just untell him!" Shadd snarled. His upper lip was drawn back until his teeth showed. He looked like a mother-wolf fighting for her cubs. "We'll invest that money—that I made—in good safe bonds and gilt-edged dividend-paying stocks. If we can't get six per cent on all our securities we'll get five per cent. Three thousand a year is good enough for any white person. No bother; no waiting for your interest; no tales of woe to listen to if the mortgagor can't pay; no foreclosure proceedings and loss of time; and no lawyer's fees to eat up in one week your entire profits of six years! Bonds and stocks!"

There was much in what he said, but all she heard was his tone of voice. Her eyes, therefore, filled with tears.

"I—I—kn-knew it would bring bad luck. You are di-different already. Just because I said Mr. Marshall said lots were the safest! I saw a picture of them. It was a photograph; so it was not a fake picture, to fool buyers with. And I know, if we put the money in the lots ——"

"My money in your lots?" sneered Shadd.

Mrs. Shadd drew in a deep breath. This was what people meant by the curse of money. It had made a miser of Shadd. But she explained forgivingly:

"Our money in our lots."

"Oh, indeed!" The politeness in Mr. Shadd's voice was inexcusable.

"You took our savings," she reminded him. "You know how I kept at you ——"

"Yes; until I was a complete ——" He stopped. It would kill her to know the truth.

"And I wasn't satisfied with Mr. Marshall's advice," she went on accusingly; "so I telephoned to Mr. Warren that you and I would be in to see him in a day or two. He said he didn't take divorce cases, but that he'd listen to what we had to say. So I said it was not a case of divorce or separation, and that we'd be at his office at four o'clock to-day or to-morrow."

"I'm going to be very busy," said Shadd.

"And Wilberforce, dear, I'd like to go to the movies to-night—please! They've got a new play at the Universal by that man who writes the Wall Street stories I don't understand. I'd like you to explain it to me. I want you to have a nice time; so you can begin to enjoy your sixty thousand dollars ——"

"H'm!" muttered Shadd, realizing that a great fortune can turn to ashes in the mouth of the married possessor.

"I don't wish you to do anything you don't feel like doing," she pursued meekly.

"Oh, I'll take you; I'll take you," he said.

But no Jersey lots for him!

REX MIXER For PERMANENCE in CONCRETE

A Size for Every Job

How a Chain Maker Affected the Cement Industry

C. W. Levalley's life, like that of all great achievers, is the story of an ideal. At the age when most men are ready to retire from business, Mr. Levalley made his first chain. He put into it all his knowledge of the needs of the chain industry—and he knew its needs, for he had spent his life with manufacturers of chain-driven machinery. It was his determination to make a better chain than was yet known.

Mr. Levalley, twenty-five years later, sees a business that has developed far beyond the art of chain making.

Products on which Mr. Levalley's chain was used must be on a par with the chain, was his belief. To be certain of their quality Mr. Levalley began their manufacture. Chains for elevators and conveyors, concrete mixers and travelling water screens, illustrate the fields into which chain making led his company—Chain Belt Company. This great family of products is bound together by one chain and one name—REX.

The Rex Concrete Mixer illustrates Mr. Levalley's foresight. Years ago he saw the coming importance of concrete construction. He believed that the success of concrete would depend largely upon the way it was mixed, and that the mixing process must be made as reliable and standard as the recording of time by good watches. His experience proved that a chain-driven mixer would best give that reliability so essential. He was right—success has come.

The sureness, the economy, the efficient mixing of the chain-driven Rex Mixer have brought it national prestige. "Rex" on a concrete mixer means that every part is made with the same care as the chain which built this great industry. Practically every part of the Rex Concrete Mixer is made by the Chain Belt Company, Milwaukee.

The Rex Mixer is made in a number of sizes from 4 cubic feet capacity up, to meet the needs of any contractor. It has a steel frame, steel truck, and cast semi-steel drum. Friction clutch, chilled semi-steel rollers, steel housing over the gasoline engine, are more items that show how thoroughly the Rex Mixer is equipped with "best" materials. Every gasoline-driven Rex Mixer is equipped with a Novo Engine.

Rex Mixers meet the needs of all contractors, regardless of their requirements. Often one Rex Mixer is the entire concrete equipment of a contractor in a small town. The biggest contractors in America are today using many Rex Mixers. On big jobs it is not unusual to find ten or a dozen Rex Mixers scattered about mixing the concrete where it is needed.

You cannot buy a better mixer than the Rex. They have demonstrated their ability to mix concrete properly and at a maximum speed. You can count on Rex Mixers giving you their rated amount of work day after day. In regard to the construction, economy of operation and initial price, they have every advantage that you naturally look for in choosing your mixer equipment.

Attention of the public—Concrete must be machine-mixed to insure strength, permanence, economy. Your contractor must employ the proper methods in mixing concrete, for its durability depends largely on how it is mixed.

One of the Rex Mixers owned by Nash Bros., Chicago, at work on Chicago's $60,000,000 sanitary improvements.

Write Today for the Rex Catalog, It's Free

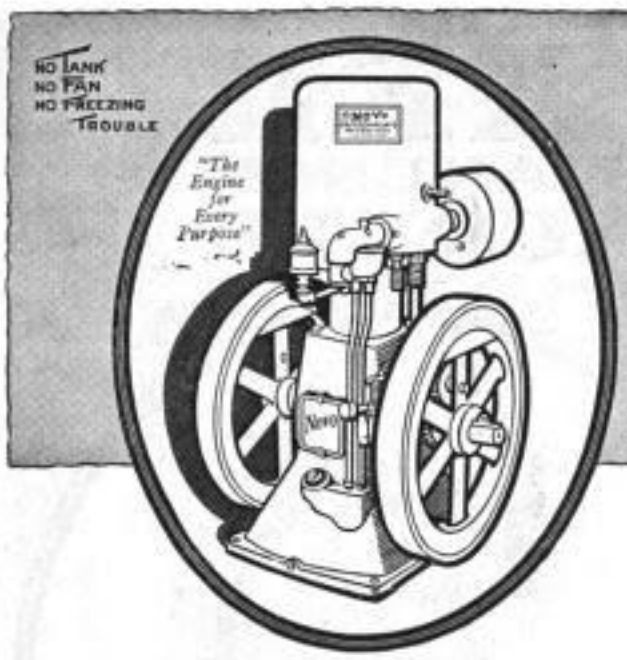
You need a Rex Mixer whether you want to mix a few hundred or many thousand yards of concrete. Remember, the Rex is made in different sizes. There is a Rex for the smallest job and a Rex for the largest. There is a Rex for every kind of concrete work. Send today, then, for the complete, fully illustrated Rex Mixer Catalog E which will show you every model. It is free.

CHAIN BELT COMPANY

749 Park Street **Milwaukee, Wis.**

Here are a few of our products. Look for the name "REX" on them.

Chains for elevating, conveying and transmission
Sprocket Wheels—Gears
Shaft Couplings and Collars
Malleable Elevator Buckets
Concrete Mixers
Paving Mixers
Travelling Water Screens



Write for interesting booklet on any of these

Be sure to look for this trade-mark— REX —when you buy any equipment listed above

Dealers' Attention—In towns and cities where we are not already represented, there is a big opportunity for reliable agents to sell Rex Mixers. We offer you a permanent and profitable business. Address us on your letterhead.

If You Pay for Power— Know the Truth About It

A contractor who didn't know material and labor costs would soon go broke. And the same thing is getting to be true about power costs.

You can't go on using just any power for concrete mixing, hoisting, pumping and compressing. You've got to use the most economical, as well as the most reliable power.

The mixer manufacturers had to solve the power problem. On their own responsibility they had to install some kind of power as regular equipment. If the power failed, their whole outfits might be condemned. After subjecting all forms of power to the most brutal, racking tests known, eight out of every ten manufacturers have adopted Novo Engines as their Standard Power.

When you multiply the advantages of the Novo Engines on your mixers by the number you can use on all other equipment, you will have introduced the biggest economy possible in your business—Standardized Power. You won't be troubled by city regulations on boilers. You won't have heavy coal bills, big moving expenses, nor a long pay-roll of licensed help. You won't have to buy different motors to meet varying conditions.

No other form of power is more reliable than the Novo. The Novo Engine is simple, compact, self-contained, with practically no working parts exposed. It is of the vertical type, with fuel in the base and water in the cooling hopper. Positively guaranteed against freezing damage. Runs anything, anywhere, that requires less than 20 H. P. Furnished to operate on gasoline, kerosene, alcohol or distillate.

You will standardize your power the day you see the light. It pays the biggest contractors in America. It will pay you. There are 75 Novo Outfits—Hoists, Pumps, Air Compressors, Saw Rigs, etc.

Our book, ***"Standardized Power,"*** tells the whole story. Get a copy from one of the firms mentioned here, or write us. Feel free to write to our Engineering Department any time for real expert help on your most difficult power problems.

POWER

These Manufacturers Know Power—

They know the advantages of standardized power. They know the necessity of dependable power. They know that the power is a vital part of their machine—that the best piece of power machinery is worthless when the power fails. They eliminate as far as possible the chance of power failure by equipping their machines with the Reliable Novo Engine.

How Hudson Super-Six Saved the Six

A Review of the Crisis in Motordom

Only engineers knew it, but a year ago a crisis impended in Motordom. The light-weight Six—long the favorite type—seemed waning in popularity. The trend was toward Eights and Twelves. It appeared for a time that certain limitations might force the Six out of the field. Note how the Super-Six reversed that condition.

For years the Light Six was the leading type. Hudson was its foremost exponent.

It was so much smoother than former types that enthusiasts called it finality.

But it never fulfilled expectations. It nowhere near ended vibration. It won hardly a record. About every performance record that counted—save a few won by V-types—was still held by Fours.

Multi-Cylinders Came

At that juncture Hudson engineers—and numerous others—began to build V-type motors. That is, two Fours or two Sixes so set at angles as combat the Six limitations.

The trouble, remember, with all the types then known, lay in excessive vibration. That caused friction and wear. It lessened power and endurance. The object of the new types—the Eights and Twelves—was to minimize that waste.

Numerous upper-grade cars adopted them. The Hudson shop had its V-types perfected. For a time it seemed that the fate of the Six was sealed.

Then Came the Super-Six

But early in 1915 Hudson engineers discovered the cause of motor vibration. And they set out to remedy it in a new, mathematical way.

In June they applied for a patent. In December the patent was granted. It gave Hudson control of a basic invention which solved the problems better than anyone had dreamed.

It added 80 per cent to the efficiency of the best Six ever built. That is, to its power and endurance. It gave the new Six—the Super-Six—a supremacy too great to be questioned.

The First Year's Result

The Hudson Super-Six has been on the market a year now. It has won all worth-while records—that is, records made with a stock motor. In speed, power and endurance, in hill-climbing and quick acceleration, it has out-performed all other types. It won the chief record—the 24-hour record—by a margin of 52 per cent.

It twice broke all endurance records in a round trip from San Francisco to New York. It ran 7000 miles at over 80 miles an hour without showing any wear on the bearings.

It has gained the supreme place in Motordom. It has come to outsell any other front-rank car. It is now out-performing all rival cars for 25,000 owners.

Today every man who seeks the best in a fine car must choose the Hudson Super-Six.

Not Like Other Sixes

But don't confuse the Super-Six with Sixes of the old type. The Super-Six is a unique type—a basic invention, controlled by Hudson patents. It differs from other Sixes more than Eights or Twelves do.

Some makers abandoned the V-types because of the Super-Six. The added cylinders seemed useless additions when the Super-Six so excelled.

But no other Six is like the Super-Six. Our patents prevent approach.

A New Gasoline Saver

This year we add to the Super-Six another exclusive advantage. It is a gasoline saver, remarkably effective. At a nominal cost it can be added to any Hudson Super-Six.

And our latest bodies, in every style, are masterpiece productions. They are built to match the Super-Six supremacy.

HOW MUCH AND WHO GETS IT

(Concluded from Page 19)

the form of rent, interest and dividends was turned over to labor the wage-earners' share would be increased only about one-half, which would bring the average wage to little over seventy dollars a month—still very decidedly too low for any scheme of living Penfield would be willing to accept.

Turning to the Interstate Commerce Commission's reports on railroads, Penfield found substantially the same situation. If capital got nothing at all, its total share being handed over to labor, the pay roll would be increased little over one-half. In other words, as with manufactures, about two dollars went to labor for one that went to capital. Excluding general officers and other officers—that is, the higher-salaried class—and beginning with clerks, there were, in round numbers, a million seven hundred thousand employees who received wages amounting to one and a third billion dollars. As railroads employ few women and child laborers, while a considerable part of this labor is highly skilled, well organized and relatively well paid, the average wage here is about eight hundred dollars a year. Interest on funded debt and dividends on capital stock amounted to seven hundred and fifty million dollars, or fifty-six per cent of the pay roll after excluding the higher-salaried employees.

Manufactures and railroads employed, in round numbers, at the date of the latest reports, ten million people. Assume that all the capital invested in them was owned by the rich, and suppose the total share of the rich was distributed to labor, leaving nothing whatever for capital; then labor's share might be increased about one-half. But even the Socialists, Penfield found, were not agreed upon outright confiscation of capital.

Moreover, a large and rapid increase in wages would, no doubt, involve a rise in prices; so labor's living would cost more. He didn't see how any scheme of distribution would increase labor's real share more than a quarter or a third; which brought him round again to the former conclusion that too little income was an even deeper trouble than faulty distribution of such income as there was; in short, that the country, though relatively rich—being much richer than any other—was positively poor.

Of course he ran across the famous doctrine of Malthus, that population tends to increase faster than the means of subsistence, and in a well-settled country the only way to heighten the well-being of the common man decisively is to have fewer of him. He learned that this doctrine was accepted as Gospel truth for a generation or so; then, for a long time, was assaulted and derided on all sides, while its exact opposite—namely, that mankind's chief duty consisted in breeding, regardless of consequences—was proclaimed by nearly all those who assumed social leadership. But latterly, he found—with human life so cheap and superfluous that Europe could devote her best energies for two and a half years to destroying it—the Malthusian doctrine was receiving more respectful consideration. Not only were some sober economists urging it anew but some irrepressible women were preaching on forbidden texts at the risk of going to jail.

The Measure of New Wealth

But to Penfield's mind well-being was something more than income. Whenever he and his acquaintances, discussing a given man, said he was "getting ahead," they almost always meant he was saving something, accumulating something. He knew that increases in wages, salary or profits might be canceled by increased cost of living. When he figured up at the end of a year the only thing he counted as a solid gain was the excess of income over outgo—what he had saved.

The economists told him that was highly important for the nation too—which simply means all the individual citizens taken together. Under any possible scheme, Socialist or other, if the country wanted to increase its production of wealth and its true well-being, it must save some of its income to build better plants, more railroads, more ships, and so on; also, to get better houses, parks, roads, libraries, and the like.

He found that Sir George Paish estimated the income of the people of the United States at thirty-five billion dollars—which, allowing for the difference in dates, would be about in line with Professor King's estimate of thirty billions—and their total savings at seven billions against about two billions for England before the war. But that evidently included increase in land values, which struck Penfield as a very dubious item.

Every normal year, for example, the market value of city land is marked up by some hundreds of millions of dollars—not because there is any more of it, or that it is really more useful, but because there is a greater demand for it. In actual experience it means that far the greater part of the city population pays more rent, while a small part, consisting of the landlords, gets more income. Obviously there is no true gain in total wealth by that operation.

America's Increased Savings

Wealth of the country, as reported by the census, begins with real estate—land and the improvements thereon. In the eight years ending with 1912 it increased in value at the rate of a little more than six billion dollars a year. But a great part of this increase evidently consisted in marking up the value of the same land, with the same improvements; and though a few people were better off by that process, many people who rented land or tenements were worse off.

On the other hand, when a new building goes up there is a gain in real wealth; somebody has saved up something for a useful, wealth-producing structure. In cities one must get a permit before putting up a building. The permits issued in leading cities in 1914 implied an expenditure on buildings of more than eight hundred million dollars. The value of farm buildings increased during the last census period at the rate of two hundred and seventy-five millions a year. Those two items come to more than a billion dollars a year.

Of course a great deal of building and improvement of buildings is not included in them—that in cities other than the leading ones, in towns and villages. When a farmer drains a piece of swamp land he adds to the country's wealth; but there is no satisfactory means of estimating that apart from enhanced land value. So, with the certainty that considerably more than a billion dollars a year is invested in buildings, the real-estate item may be dismissed.

Other items in the census estimate are: livestock; farm implements; manufacturing machinery; railroads and equipment; street railways; telephone, telegraph and lighting systems; farm products; manufactured products; imported merchandise; products of mines; clothing; and furniture. Clearly all these things are real wealth. If the stock of them increases it is because the nation's total production exceeds its total consumption; it is saving that much of its income.

The increased value of these things in eight years came to thirty-two billion dollars, or four billions a year. Add at least a billion for real-estate improvements, and there is a total of five billions. The country's savings before the war, it seems, could not have been less than that.

How much had two boom years increased this saving? To answer that, a new Federal census would be necessary. Meantime, however, Penfield found some significant items. Before the war a very important item in England's wealth consisted of investments in foreign countries. A calculation dated December 31, 1913, put the total at eighteen billion dollars, of which nearly nine billions had gone to India and the British colonies, nearly four billions to the United States, and the remainder largely to South America. This foreign investment was increasing at the rate of eight hundred million dollars a year, through British purchases of foreign stocks, bonds, and so on. France's foreign investment was put at nine billion dollars; Germany's at five billions.

No such item appeared in our balance sheet, for we had no such investments. Whatever we saved was invested at home. But a statement by the Federal Reserve Board put the amount of foreign obligations held in this country in October, 1916, just a little short of two billion dollars. Foreign loans floated here between then and the end of the year would bring the total above two billions.

At the same time a thorough canvass of the railroad offices showed that between January 31, 1915, and July 31, 1916, we bought back from foreign holders one billion three hundred million dollars of American railroad securities. In about the same period foreign holdings of stock of the United States Steel Corporation decreased by about a hundred million dollars, taking the market value of September, 1916. Many other American securities that cannot be exactly enumerated were sold back to us by Europe in 1915 and 1916.

Foreign loans, the purchases of foreign-held American securities, came to over three and a half billion dollars, or at the rate of one and three-quarter billion dollars a year. At least that much, then, must be added to other savings.

And other savings have clearly been at an unusually high rate. Turning back to that census estimate of wealth, Penfield found that manufacturing machinery, tools, and so on—what we commonly call plant equipment—railroads and their equipment, street railroads, telephone and telegraph systems, privately owned lighting and irrigating systems, manufacturing products and mine products came to forty-eight billion dollars, and had been increasing at the rate of more than two and a half billion dollars a year.

Such things, he knew, were almost all owned by corporations. Generally, when additions and permanent improvements were to be made to them, some corporation or other issued bonds or stock, and somebody who had saved up some money subscribed to the bond issue or stock issue. Corporation financing, therefore, is the means by which a very important part of the country's savings get invested in industry.

In 1916 corporations of such size and importance as to get noticed, issued well over two billion dollars of stocks, bonds and notes against less than a billion and a half in 1914 and 1915. The figures, of course, are suggestive rather than conclusive. Some stock may be issued for alleged goodwill and other intangible considerations; bonds or notes may be issued merely to pay off a former issue, in which case they do not represent any new saving. But corporation financing shows that saving for home investment was at a high rate last year.

There is the building record. Permits issued in leading cities indicated an investment in buildings for 1916 about twenty-five per cent above the average of the two preceding years—or about the same ratio in which corporation financing exceeds the average of the two preceding years.

For another indication there is the incorporation of new companies in six Eastern states, where an important part of the country's incorporating and financing takes place. Total authorized capitalization of the companies formed in those states in 1916 came to about two and three-quarter billion dollars against about a billion and a half in 1915 and less than a billion in 1914. Of course this is only an indication, for all the capital may not be subscribed or may not represent tangible values. But, along with the other indications, it shows home investment on an unusually large scale.

By the end of June, 1915, savings deposits in the United States had risen above eight and three-quarter billion dollars—far ahead of comparable deposits in any other country. This consisted of six billion three hundred million dollars of "savings" deposits, as bankers classify them, and nearly two and a half billion dollars of "time" deposits. But time deposits, in fact, are mostly savings deposits—money put by for investment. From October, 1914—roughly corresponding to the beginning of the war—to September, 1916, time deposits in national banks increased one billion dollars. It will be several months before figures are available to show the total increase in savings deposits—including time deposits—during the war boom. But the showing for national banks alone suggests a very large increase.

If we saved five billion dollars a year before the war, we cannot, Penfield thought, be saving less than seven and a half billions a year now. That means more machinery, tools, railroad cars, and so on—in short, more production; consequently more income. We are in that much better position to solve the first problem of producing more goods to divide. As to the second problem, of how to divide them, it seemed clear the old impressionistic assumption, that nothing was necessary but to take from the rich and give to the poor, was untenable.

The real trouble ran far deeper than the millionaire line. It struck Penfield the chances of correcting that trouble would be much increased if everybody would just forget the "rich," the "plutocracy" and "Wall Street" for a spell, and devote their energies in more promising directions.

Sense and Nonsense

A Rush Message

GEORGE C. CARROTHERS has a young son who accompanied him on Villa's special train about two years ago. The boy was very fond of animals and carried a ground squirrel, attached to his coat by a fine chain, wherever he went. He called his pet Flossie.

"Wentworth," said his father as they sat with Pancho in his private car, "have you written to your mother yet? No? And you've been away a week! Sit down now and do it."

"Yes, indeed, *muchachito*," cried Pancho; "you must do that at once! Here, write her a telegram and I will give it precedence over all official business."

They brought him a blank and Wentworth sat down to give his mother the news. He thought for a long while and then wrote as follows:

"*Dear Mother:* Flossie is a mail!"

The Dark Horse

IN A CERTAIN Kentucky town is a grocer who does very little reading, but who is strong in the Democratic faith. One day last June a customer dropped in on him and remarked:

"Well, the last of the nominations are made."

"I didn't git time to look at the paper this mornin'," said the storekeeper. "Who've they nominated this time?"

"Wilson and Marshall are the nominees," said the other.

"Well," said the grocer, "I'll bet you Wilson beats him to a frazzle!"

"Beats who?"

"Beats this here Marshall!"

Birds and Birds

A YOUNG woman entered a book store in Chicago and asked the aid of the clerk in selecting suitable reading. She especially desired some native American fiction, she said.

"Why not try Allen's Kentucky Cardinal?" said the salesman, taking a copy of the book off the shelf. "That's a very popular book."

"No; I don't think I care for those theological stories," said the lady.

"But this cardinal was a bird!"

"I am not interested in the scandals of his private life," replied the young woman; and out she walked.

Just Right

MANDY, who was a housemaid and colored, arrived late to begin her duties one morning and her mistress inquired as to the cause of delay.

"I's sorry, Miss Clara; indeed I is!" stated Mandy. "But I jest natchelly couldn't got here no sooner'n whut I is got here. I been at the party give by the Sistern of the Mysterious Ten at the Cullid Odd Fellers' Hall, right up the street. They started in dancin' and carryin' on last night, and they's still in full swing. You never seen so many folks packed in one little hall in all yore bawn days; and right now, ef you'll poke yore haid outen yore side winder you kin hear them folks whoopin' and laughin', and hear the orchestra playin'."

"Wasn't it rather tumultuous, Mandy?" asked the lady of the house.

"Oh, nome!" said Mandy. "Hit wuzn't a bit too mulchous—jest about mulchous enough!"

The Chain Campaign To Insure

The Motorist who does not stop to put on Weed Tire Chains before driving over wet-slippery-skiddy streets gambles with his life and the lives of others

Some men would gamble with anything, from a counterfeit coin to life and property and all that they or others hold dear,

But at least they gamble for some stake which to them—if to no one else—seems worth the gamble. They do not risk their whole fortunes with only a few dollars to gain.

Why then, if time be precious, would they risk *all the time* allotted them here on earth, for the sake of a *few moments* of it now?

Yet, strange to say, this is just what some motorists do when *they fail to stop to put on Tire Chains before driving over wet-slippery-skiddy streets.* They gamble their automobiles, their

"What! My Car?"

"Yes! skidded—and it's up to you. You failed to provide the chauffeur with Tire Chains. Only good luck saved your wife from paying the supreme penalty for your negligence. She's on the way to the hospital painfully injured, but the doctor thinks she'll pull through. You'd better hurry to the hospital and then report to Headquarters"

How strange it is that disaster must come to some men before they realize that all makes and types of tires will skid on wet pavements and muddy roads when not equipped with Chains.

These men do not appreciate, until too late, that by failing to provide Weed Anti-Skid Chains they expose their families to injury and death.

The time to provide against accidents is before they happen. Don't wait until after the first skid. Put Weed Chains on all four tires at the first indication of slippery going and you will have quadruple protection against injury, death, car damage and law suits.

The Real Test of Advertising

Millions of people have read the advertisements reproduced on these pages.

They have prevented thousands of accidents.

They have saved thousands of lives.

These advertisements were planned to sell tire chains by creating and directing a public opinion that will compel drivers of cars to take every precaution to make motoring safe.

The advertising is profitable to the manufacturers—otherwise they could not continue it—but it has been profitable only because it has performed ***a great public service.***

You can't measure human life or human suffering in dollars and cents.

The real test of the value of any advertising is not what it does ***to*** the public but what it does ***for*** the public.

This campaign benefits ***all*** the millions who come in contact with automobiles, whether they are car owners or not.

Its results are of immediate, personal concern to every man who wants to protect himself, his wife, his children—from the driver, always ready to take the gambler's chance.

Automobile accidents are so familiar that our senses have been dulled by the repetition of the news accounts. We forget we may be the victims next time.

We are prisoners of the greatest of conquerors—Old General Apathy.

The Chain campaign has been successful because it makes us realize an ***actual danger*** and presents a ***specific remedy.***

The chief cause of Automobile accidents is skidding, and chains are the only mechanical device yet invented that is absolutely dependable to make slippery roads safe.

Motoring Safety For Everyone

WHEN you feel your car skid—that feeling of utter helplessness with its attendant fear of disastrous consequences—it will be too late to do anything, except pray. No amount of human skill will then avert a crash against the curb, a nearby vehicle, or, worse yet, the innocent bystander.

But you don't have to suffer that terrible "*feeling of utter helplessness*." Appreciate now that the only thing to do is to use *the* dependable preventative—***Anti-Skid Chains on all four tires.***

Weed Anti-Skid Chains

"Criminal Negligence"

Skidded, fatally injuring a child, because he neglected to use Tire Chains

The conscience-stricken motorist knows only too well that he is directly responsible for the loss of the child's life. Failure to put on Tire Chains before driving over wet and greasy pavements was the actual and immediate cause of the accident and as such constituted "criminal negligence" on his part.

The Fight Against General Apathy

The problem is ***not to sell*** Weed Chains, but to make drivers of cars ***use*** the chains they already have.

Practically every car in operation has chains—in the locker. Even the novice knows there are times when he can't move without them.

The trouble comes in making drivers put them on the wheels ***before*** the accident.

Chains are only one of the essentials to make motoring safe. They are merely a mechanical device.

No mechanical device can supply a man with intelligence.

Those who are only thoughtless are awakened. These advertisements which ***vividly picture truths*** bring home a realization of the consequences of taking chances—of personal responsibility.

Only two things can reach the driver who habitually gambles with the lives of others as the stake—fear of the law, and the mightier power of public opinion.

These advertisements arouse and concentrate a public opinion that will compel drivers of cars to use intelligence and judgment that will safeguard the public against all preventable accidents.

Are ***you*** entirely free from blame?

Do ***you*** take chances?

Some of the ideas for these advertisements were suggested by men who don't own cars; others came from car owners who have the best interests of motoring at heart.

We want more of these ideas.

We want ***your*** ideas.

Don't think about selling Weed Chains; they are incidental. Think how an idea or illustration can make people ACT to safeguard all of us against that criminal thoughtlessness and carelessness of the driver who is the greatest enemy of motoring.

RICORO

The "Self-Made" Cigar

Imported from Porto Rico

CIGAR VALUE AND SERVICE

If you are not among the millions who have tested and proved United Cigar Store *values* and *proven* United Cigar *service*, we urge you to make the acquaintance of *both* through

RICORO—THE "SELF-MADE CIGAR"

RICORO is the greatest cigar value we have ever offered—an *imported* cigar selling at from six cents each to two for a quarter (according to size)—a value which is only *half-expressed* by these prices.

RICORO would sell at *twice* these prices if it were imported from anywhere except Porto Rico. Porto Rican cigars pay no duty—other imported cigars do.

Forget the question of low price. Try RICORO on its merit as a quality cigar only. You will be amazed at its tropic bouquet, its soothing mildness, its satisfying richness.

Four popular sizes of RICORO are shown here—you will find many other sizes and shapes in every UNITED CIGAR STORE and in United Agencies.

Try RICORO and you will understand why this business is the largest of its kind in the world—*why* every fourth man who buys cigars in a United Cigar Store asks for RICORO—*why* RICORO sells over 400 a minute, 24 hours a day.

THANK YOU.

EPHEIMER

(Continued from Page 17)

"I guess," he said slowly, "it's time for some business. Three holes more, Mr. Sears, and I'll play you them for a hundred apiece."

Arnold Sears was surprised.

"Of course," he answered, "since it is your suggestion. Personally I think you're foolish."

He had no desire to slay a goose so prolific of golden eggs. He drove with—if possible—even greater care, safely over the first bunker in the middle of the course.

Epheimer, with a whacking swing, sent out a long, sliced ball, curving far into the trees that lined the fairway. Somewhere in the distant tangle of limbs it must have struck solidly, for it bounded high in air, directly back into the open.

"That's some screecher!" Epheimer declared complacently.

The green lay at the top of a high, abrupt bank; and, playing safe with an iron, Sears brought his ball to rest beneath the earthen wall, from where he would have an easy shot to the green. Epheimer summoned his caddie with impressive ceremony and drew from the bag a comparatively new, unused club. It was wooden, and from his position Sears identified it as a "spoon." Epheimer bent over his ball and played promptly. There was a high, flashing white arc of flight. . . . There wasn't any doubt about it—Epheimer must have comfortably reached the green.

"What the devil!" Arnold Sears exploded. "Who explained that club to you?"

Epheimer was a fountain of joy.

"That was the 'business'!" he cried. "I have a friend at Pineridge—Eidlemann—and he's been champion of Belgium twice already; and in two days he showed it to me—a spoon. He said: 'Epheimer, keep your head down and do like I say, and you will surprise any Methodist or Catholic gentleman whatever.'"

Sears said shortly, "Episcopalian," and tramped toward the steps that led to the green, where he found Epheimer's ball. Even there the latter exuberantly overran the hole, and the best he could get was a half. The next hole, after a feeble drive and a second shot into the rough, Epheimer took the spoon and laid his ball near enough to the hole narrowly to miss a putt. In spite of this failure he won, and Arnold Sears was only a hundred and forty dollars ahead. But one hole remained, the course leading back to the vicinity of the clubhouse. As usual, a number of men who had just finished were congregated there, adding scores and idly watching those still out come in.

Arnold Sears drove with an unaccustomed abandon; but, holding his form, the ball swung out in an impressive carry. Epheimer, under the pressure of the waiting audience, hit with such force that he swung completely round, facing the direction from which they had come. A section of the sod-stand flew even farther than the ball. After a second failure, a third rousing wallop, with better success, carried him up the course, when he again drew forth the "Scourge of the Gentiles." In some peculiar manner, under the influence of the twice champion of the Belgians, and though his other shots had been almost farcical, he played the spoon in excellent form and carried his ball to the plateau that held the final flag.

As they approached, Kettel detached himself from the little waiting throng.

"Man, but that was a fair shot!" he told Epheimer. "It ought to save you a bit."

Sears, with an accurate iron, had placed his ball below the green, where, in two, he lay as advantageously as did Epheimer above, in four. Yet Arnold Sears cherished a hidden arrogance; he could get but two hundred and forty dollars out of his opponent, when he should have had that again, and more still. He bent over with his mashie, playing it deep, when an unexpected resistance below the sand stopped his shot, and the ball trickled into the narrow bunker that guarded the edge of the green. He ejaculated one tense syllable and, with a niblick, unavoidably sent his ball to the farther end of the green. There it chanced to roll snugly into a small depression, which fitted it, Carter said, as accurately as if it had been cut by the most expensive sporting tailor.

Sears had now taken four, and lay alike with Epheimer. The latter rolled a simple shot to three feet of the hole. Sears chopped in the only manner possible at his ball, and the sphere promptly traveled back to the bunker from which it had just risen. Once more it returned to the upper slope. Arnold Sears was visibly shaken by wrath; he banged directly at the hole, over which, faultlessly directed, his ball squarely went, and back, back into the bunker.

There was a suppressed but audible amusement.

"Show him where the hole is!" an unidentified voice urged Epheimer. And Epheimer, flushed with success, and out of order, magnificently holed his putt. Sears had picked up.

V

THAT evening Epheimer, at bridge with his wife and the Solly Benjamins, showed a beaming countenance. Even from where Sears sat, once more in the group of his familiars, it could be told that Epheimer was bidding recklessly.

"I'll double four spades," Mr. Solly Benjamin declared stoutly.

"Again," Epheimer sweepingly came back.

"Your property is enjoying a little well-earned relaxation," Carter observed to Sears.

The latter replied enigmatically:

"They must play mighty good golf in Belgium!"

"I saw Epheimer drive a number of times this morning," Kettel commented; "and his ball sailed like a broken monoplane. I never thought, Sears, you would be so close with a good thing like that. It's better than stock in a powder concern right to-day. Are you thinking of taking any time off for pleasure? And if you do, what will you sell the temporary right to Epheimer for?"

Sears regarded him morosely.

"If you think the thing's a mint you are mistaken."

Sears commenced the tale of the spoon; then suddenly he stopped. His own game, he well knew, was worth a moderate amount. With the old Epheimer he could count on a very comfortable lead at the end of a day's play, but with the new he was at a loss to place his chances. Epheimer, he told himself, was certainly shot with luck—witness the drive that had rebounded from the trees; and now, with this spoon shot that apparently would not go wrong, Sears actually stood to lose money.

"What Sears ought to do," stated the lean individual in shell glasses, "since he has had such a good thing for ten days, is to offer Epheimer for sale. Give Kettel a chance at him, if Kettel will do the right thing; give us all a chance at him."

A young bondbroker grew immediately enthusiastic.

"That's it," he declared; "have a sale—Epheimer with all rights and privileges and goodwill! Sears can always withdraw him if he is not satisfied with the offers."

"If you are only trying to be funny," Sears announced, "stop where you are. I might take you all on."

"There's nothing humorous in the idea," Kettel announced. "I'd make a modest bid myself. Let's move over into the card room and consider the proposition."

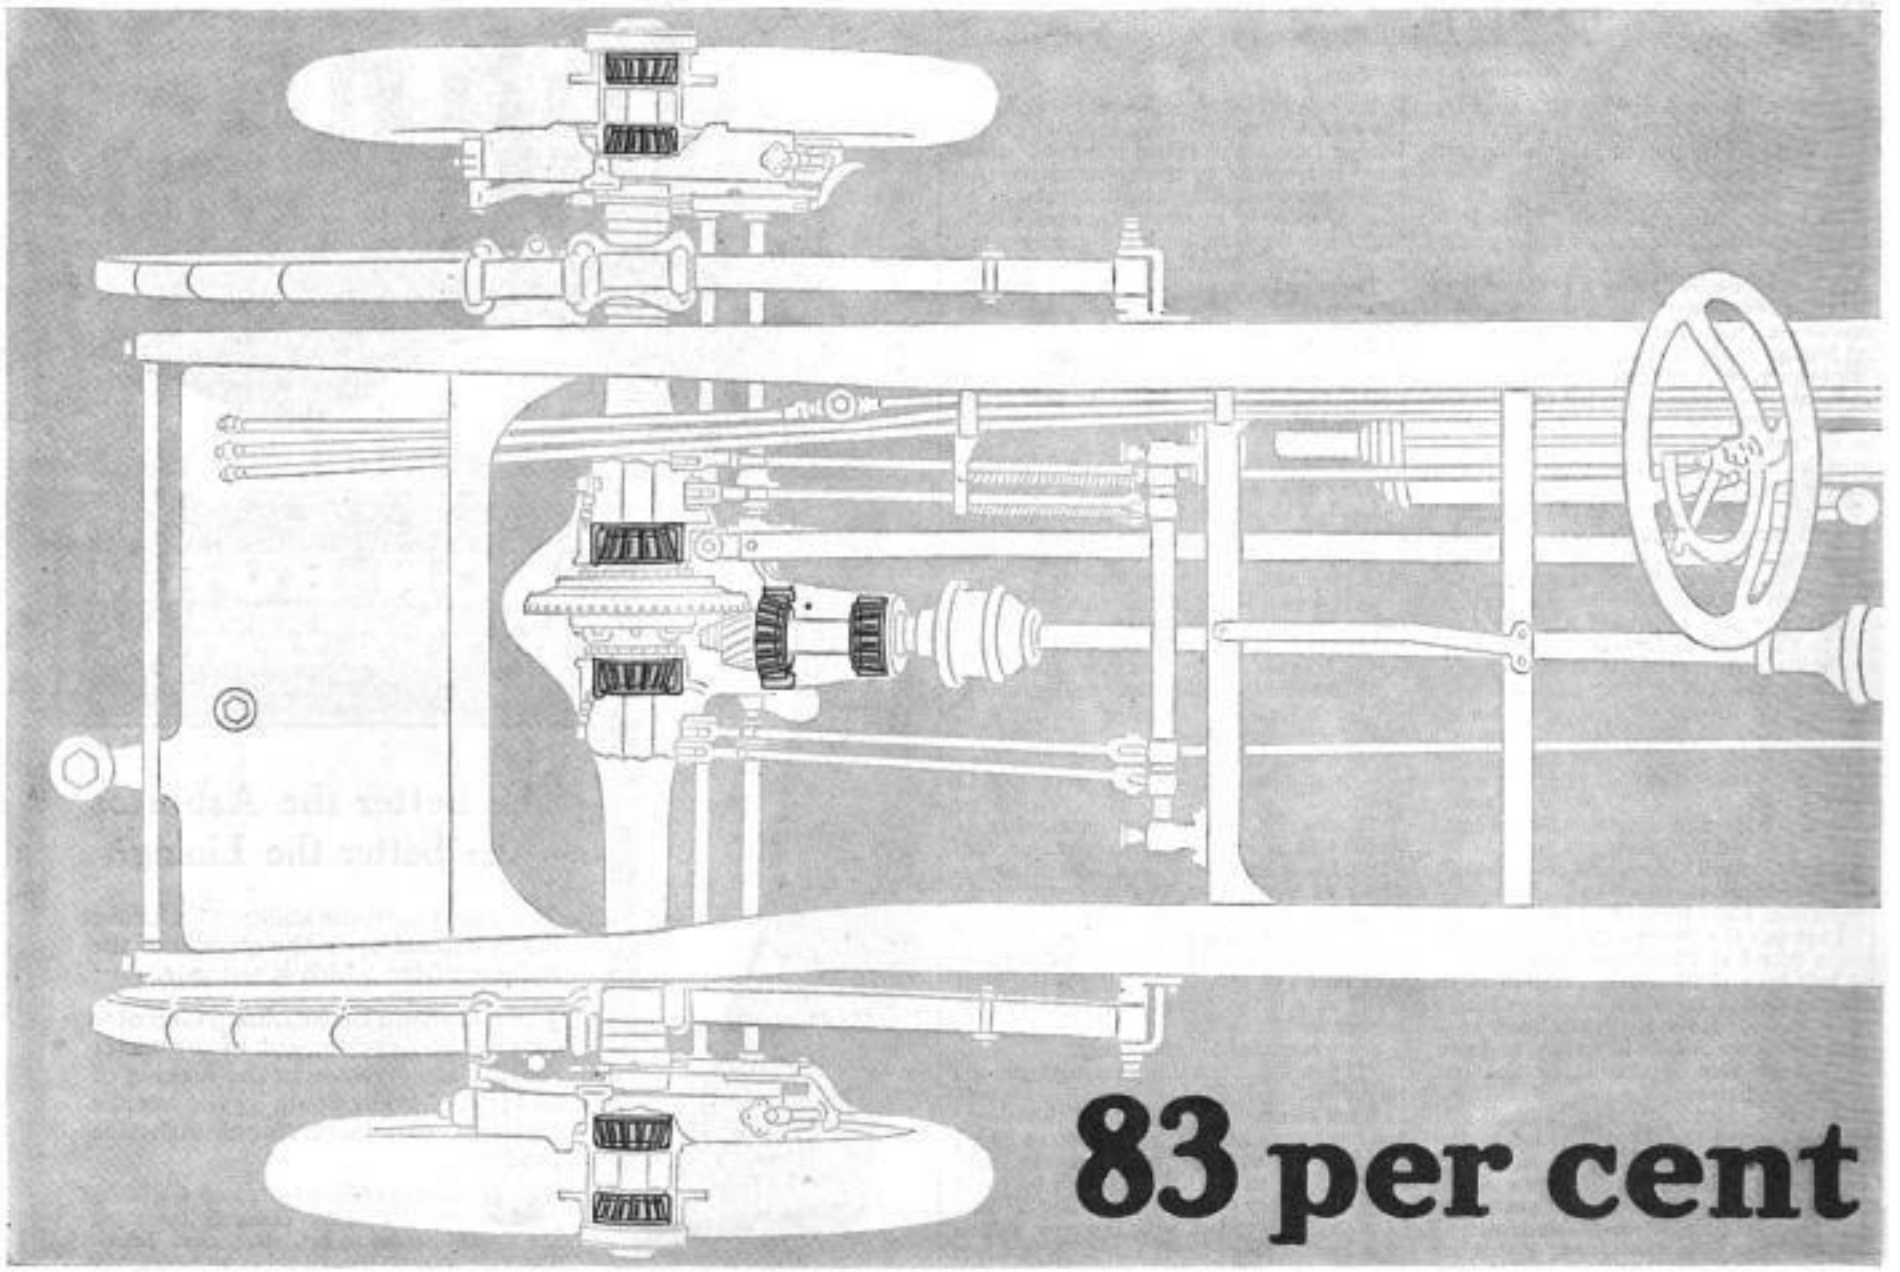
Eight men gathered promptly in the privacy set apart for games of chance; the bondbroker added a friend, and a golfing individual of doubtful waistcoat and amateur standing completed the number.

"I shall ask," Carter commenced, "for two important pieces of information; though Epheimer is undoubtedly a good thing: I'd like to have some account of the actual receipts he affords; and I must be convinced of Sears' ability to transfer this property in the event of a sale."

"Fair enough," Sears agreed. "The first week I played with Epheimer I was the winner of about a thousand dollars ——"

"Minus a mere seven hundred at red dog," an irrelevant voice put in.

"About a thousand," Sears repeated with dignity. "And Epheimer shows a constant tendency to double the bet. This morning he suggested and was playing a hundred dollars a hole. As for my ability to transfer Epheimer—well, I can guarantee this, that the purchaser has two or three days of golf with him. The rest is a question of personal judgment."



"What if Epheimer leaves?"

"He engaged his rooms for a month and more than two weeks remain. I suppose

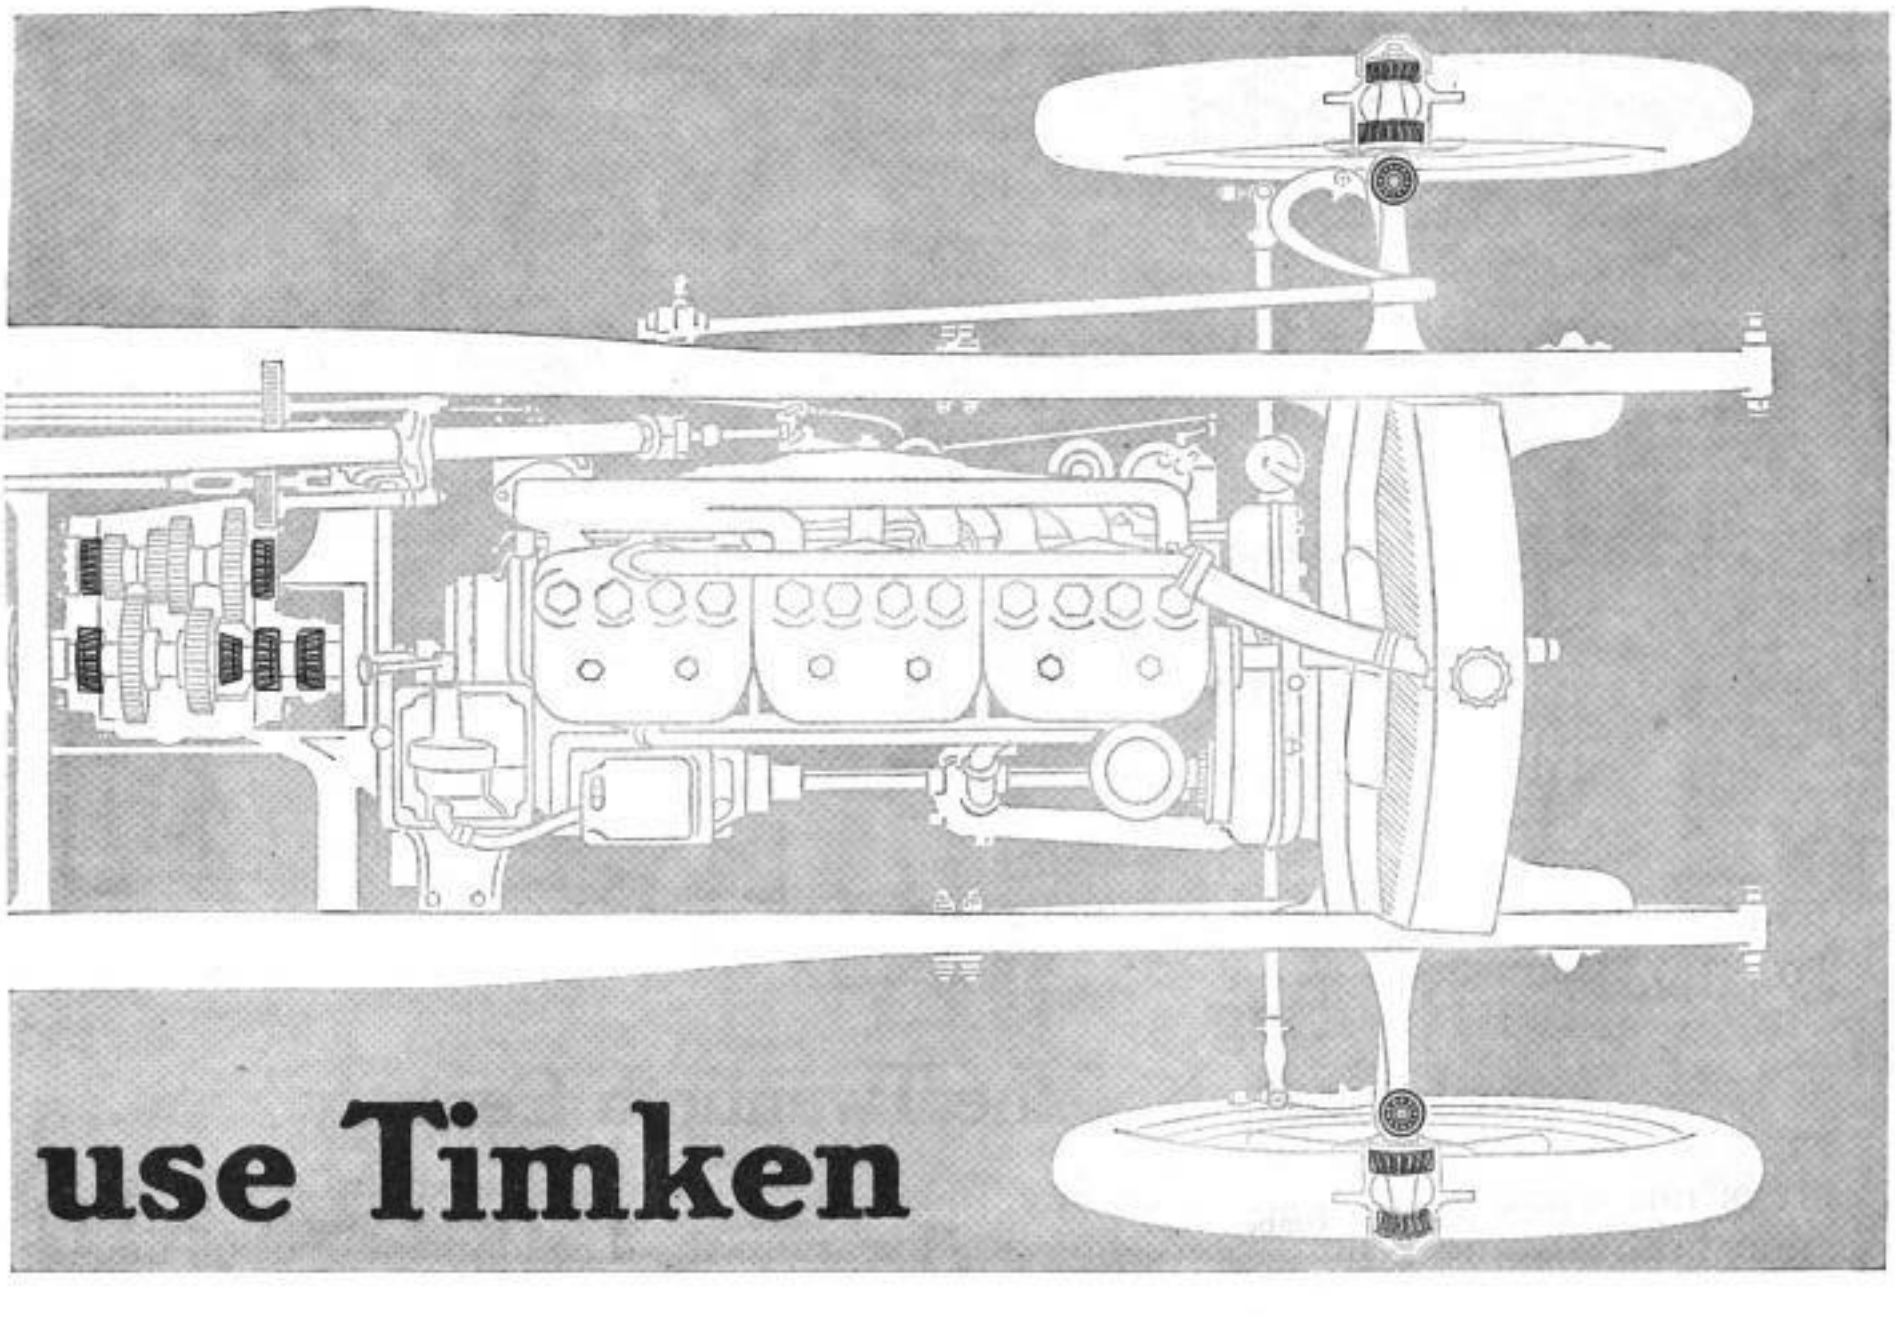
83 per cent

The above chassis shows where to look for Timken Bearings in high grade cars.

83 per cent of the 654,653 higher priced motor cars built in 1916 have Timken Bearings at one or more of the points of severest service — wheels, differential, pinion shaft, and transmission.

These are cars priced above $700, built in factories having a yearly output of one thousand or more. The 83 per cent that are Timken-equipped represent a total of 535,235 cars whose builders considered quality of greatest importance, even though the cost was more.



The superior quality of Timken Bearings has been proved and is accepted by automobile engineers and motor vehicle builders.

This is the standard of quality, safety and economy that *your* car should possess.

"The Roofing Development of the Twentieth Century"

It is not alone beauty, nor economy, nor fire-resistance, nor wear, but a combination of all of these qualities that has given NEPONSET Twin Shingles their reputation.

Over 120 years in business, and 30 years in the development of a full line of NEPONSET Roofings for every type of building, has made possible this success.

Looks The colors, size, shape and slate-surface of Neponset Twin Shingles make as handsome a roof as it is possible to find. They have the look of slate, laid in substantial looking large slabs. Their soft green and red harmonize with any surroundings or architectural plan. You can be sure of eye-satisfaction.

Wear Tough felt, saturated with the best waterproofing material known (everlasting asphalt), then coated and recoated with crushed rock and asphalt, pressed and jammed into one solid, thick sheet, guarantees extra wear. Similar materials in our famous Paroid Roofing are still giving good service on roofs laid 18 years ago when Paroid was new. A roof of these shingles, when laid, being several times as thick, should last as long as the house.

NEPONSET TWIN SHINGLES

(Patent applied for).

Fire-Resistance On a Neponset Twin Shingle roof sparks and flying embers burn out harmless. Most conflagrations spread from roof to roof. NEPONSET shingles are a very great protection. They are approved by the National Board of Fire Underwriters.

Cost Notwithstanding their great beauty and durability, Neponset Twin Shingles belong in the class of economical roofings. Their uniform shape and double width halve the cost of laying, because two shingles are really laid at a time; and also lessen cracks and nail-holes.

Five layers, six processes build up Neponset Twin Shingles into one thick, solid, inseparable mass, impervious to rain, sun, frost—undecaying and not affected by sparks or embers. Always remember "five layers, six processes."

There are three types of Neponset Shingles, meeting every requirement and pocket-book.

For factories, warehouses, barns, etc., similar material is furnished in rolls. It is **NEPONSET PAROID ROOFING**—a roofing that for service has been unchallenged for 18 years. There are three types of NEPONSET Roll Roofing, meeting every requirement and pocket-book.

See the NEPONSET Dealer in your town. He can supply you with just the product you need—made and guaranteed by us.

(Continued from Page 65)

you will want me to insure him against injury or sudden death," Sears proceeded sarcastically. "I didn't organize this sale, you know. I'm not especially anxious to dispose of Epheimer. Call it off if you like."

"The terms of this sale," the young bondbroker announced, rising, "owing to its unusual conditions, are these: Payment must be made after satisfactory delivery of the property; and a fair construction of that, I should say, would be a check for the amount after the first day's play. Now, bids, please! Who'll say five thousand dollars for the privilege of playing golf with Epheimer?"

Kettel demanded:

"Is it a life interest you're disposing of?"

"Five? Five? Well, four? . . . Three?"

"Bid a hundred!" said the individual of the doubtful waistcoat.

"The gentleman has misunderstood the scope of the sale," the auctioneer declared. "We are not disposing of the privilege of putting with Mr. Epheimer on the home green. We are selling his entire range of golfing activities—driving and approaching, and language, from dawn till dark. This proceeding must not be interrupted by factitious bids."

"Two hundred!" Kettel added.

"And fifty!" Carter continued.

"No bids of fifty considered," the bondbroker announced. "I can only imagine what Mr. Sears' feelings must be at this depreciation of his unusual offer. Do I hear a thousand for the opportunity of teeing off every morning, for two momentous weeks, with Epheimer?"

"Three hundred!" Kettel appended.

"Three hundred . . . pounds. Good! Mr. Kettel is a Scotchman and has forgotten that we are dealing in dollars. A round fifteen hundred ——"

"Shillings!" Kettel put in.

"About three hundred and seventy-five dollars," the other instantly replied. "Make it four hundred!"

"Four hundred!" said Anderson, the taciturn, unexpectedly.

"Five! Five! Going! Going! Five—did I hear? And six! Six! Six! And fifty—all right! I'll waive this ruling. Six hundred and fifty dollars bid for the inexhaustible Epheimer, the golfer's golden goal; the ne plus ultra of the links; the man with the peerless slice!"

The bidding grew slower. Seven hundred was offered—seven hundred and twenty-five—and accepted. Then, after some auctioneering eloquence, seven hundred and fifty.

The door that had been closed upon the hall opened a space, and Epheimer's mild gaze swept the room.

"What's this?" he demanded, edging in. "Business or pleasure? I'll be in on either."

"This," said the bondbroker suavely, "is a private sale of the Screecher Mine—gold; seven to nine shafts, all swinging; profits constantly doubling and rolling up ——"

"Not a nickel!" Epheimer vociferated, backing toward the exit. "I thought it was cards, or some game of chance." He disappeared.

"Was it eight hundred?"

"I said seven hundred and fifty dollars," Kettel morosely declared.

Finally the bidding rose to nine hundred, where it obstinately hung, defying the auctioneer's best efforts.

"Mr. Sears," he said, "I sympathize with you. Do you wish to withdraw the opportunity for the present? Perhaps some real sports could be got together later in the week."

"Let it go," Sears decided. "I'm tired of it, anyhow."

"Going! Going! Gone! Mr. Kettel has become the owner of all the rights and privileges of Epheimer's golf, to operate or dispose of as he sees fit. According to terms of sale, full payment will be made at end of first day's play."

Laughter and comments rose, and Kettel was variously congratulated and baited. The latter solemnly contemplated the sum he had pledged and said:

"I've been awful bad through the green."

Sears said:

"You might play a spoon."

VI

THE following morning Sears, not in playing garb, met the impatient Epheimer in the Assembly Hall.

"Sorry," he said; "I'm following the Drag Hunt with Mrs. Sears. She doesn't play golf, you see, and time has been dragging for her. But Kettel will be looking for a partner—the Scotchman. It's a real pleasure to golf with the Scotch; after all, it's their game; they give it an inimitable atmosphere—all the little appropriate terms, and really wonderful cursing."

"It's their game, right enough," Epheimer agreed discontentedly; "they're at it from the day they can walk. What chance would I have with a player like that?"

"Excellent!" Sears declared. "A few days back I couldn't have honestly said that; and, Epheimer, I wouldn't. But with that new spoon shot—excellent! Personally I'd like to see you trim Kettel; so would some others of us. He's—well, he's so crabbed about the rules, and all that. Watch yourself or he'll count the slightest infraction against you. Here he is.

"Kettel, I'm turning Epheimer over to you for a day's sport. You two ought to make a good match; you're nearly on a par. Perhaps you should give him a little, because you are Scotch; but you can fix that up between you. . . . Sorry! There's Mrs. Sears."

The Drag Hunt went far into the pines and the Searses were late for dinner. When Arnold Sears had finished, and was lighting the first evening cigar, he made his way to the familiar gathering place; but the group was scattered. Anderson was talking to a newly arrived young woman; the Epheimers and Benjamins were again deep in bridge. Sears studied Epheimer's countenance, but it expressed neither elation nor dejection; he was bidding thoughtfully. A click of balls came from the billiard room, and there Sears found Kettel playing Kelly pool. When the latter saw Arnold Sears he drew him into a corner.

"Here's the sum." He reluctantly deposited a folded check in Sears' hand.

"Well," Sears asked, "what occurred? Naturally I'm a bit curious."

"Man," Kettel said fretfully, "if ever I played golf like a finnan haddie, it was today! Not one shot did I get off fair from the tee, and my irons could have been duplicated by any fat boy. I ought to have been seven to the good—at twenty-five dollars—and I was but a scant two. Epheimer nearly killed a woman three courses away and wanted to strangle a caddie for sneezing. He has the boomerang drive to perfection."

"Did he use a spoon?" Sears asked negligently.

"I think he did—once, toward the last; and made a fluke too—landed bang-up on the rim of the cup."

"It's getting colder," Sears observed. "I think I'll take a cue in this."

It was undoubtedly getting colder. When Arnold Sears went to bed he searched through a closet for supplementary blankets. He woke in the night, found his windows rattling like castanets, and reluctantly rose to plug them. He gazed out into the dark, and a sudden smile wreathed his swollen features—a rising wind was whipping through the moaning pines, and minute white particles, like goose feathers, were whirling in an eddy back of the inn.

"It's a good job," he muttered, "that no one put in a clause about weather rebates!"

In the morning a veritable blizzard was raging; huge flakes of snow were flung in white banks against the face of the Conifer Arms; white mantles hung heavily on the clipped shrubbery and coated the melancholy black pines. The snow gathered in heaps in breaks and angles, melting almost immediately and being immediately replaced.

Sears, with Mrs. Sears, had breakfast in his rooms. He did not appear until past eleven, when he found a thoroughly disgusted group of sportsmen gazing through the long glass doors at the inclement weather. Kettel refused even to reply to Sears' cheerful morning greeting. Carter, at the latter's shoulder, whispered:

"I hear Kettel was down at five o'clock; and what he has said about the elements since I turned up would blast a sand green!"

Epheimer, it seemed, had disappeared to change his golfing clothes. He came back shortly, in crisply ironed stripes, and joined Kettel.

"It's bad, ain't it?" he observed. "And we had such a nice game fixed! But they told me at the desk these storms always blow out by noon."

The snow did vanish by lunch, its place being taken by a forthright downpour of rain. The drumming on the roof continued until the loss of consciousness in sleep, and

Rubber Footwear *Holds up Colds*

RUBBER footwear is the "Stop! Look! Listen!" preventive to the possible cold. It insulates the foot, keeping out cold and moisture, both of which are frequent causes of "snuffles." Many a cold in the head has traveled all the way up from "cold feet!"

But rubber footwear may be good, bad or indifferent—and only an expert can tell, by observation alone, which is which. So the leading makers put their brands on all their products to protect *you*. Almost from the very beginning of the rubber industry, these trade-marks have pointed the way to rubber footwear of supreme quality, style, fit and workmanship.

Seventy-four years of successful manufacturing and the experience of forty-seven great factories are back of every pair of rubber shoes, overshoes, arctics, boots, etc., produced by the United States Rubber Company, the largest rubber manufacturer in the world.

Rubbers that fit wear twice as long as rubbers that do not fit.

Could anyone fool you on a rose
— with your eyes blindfolded ?
Of course NOT !

"Your Nose Knows"

By its *fragrance* alone does the rose make its universal appeal. Nor can anyone fool you on tobacco, either, if you rely on your unerring, personal sense of *pure fragrance*. Tobacco without a definite fragrance is like a rose without perfume—"Your Nose Knows."

Tuxedo
The Perfect Tobacco

is the *rose of tobaccos*. Its rich, ripe Burley leaves, grown in the Blue Grass region of Old Kentucky are so carefully aged and blended that its *pure fragrance* is as individual, as appealing as the rose. There is no fragrance like it—"Your Nose Knows."

Try This Test:—Rub a little Tuxedo briskly in the palm of your hand to bring out its full aroma. Then smell it deep — its delicious, *pure fragrance* will convince you. Try this test with any other tobacco and we will let Tuxedo stand or fall on your judgment—

"Your Nose Knows"

Guaranteed by
The American Tobacco Co.

unabated it greeted the ear on the following morning. The third day it slackened to a mere drizzle, and at evening a serene bar of yellow showed in the west. Kettel, Sears thought, was quite purple with suppressed wrath.

"I'll play that Epheimer," he asseverated, "for any dizzy sum he'll agree to!"

VII

AFTER dinner Epheimer, followed by Mr. Solly Benjamin, stopped at the group huddled on their shoulders in lounging chairs and biting viciously on cigarette holders and cigars.

"I propose," said Epheimer, "a little sociable game—to forget our monotony; and Solly, here, can fill a hand with the best."

Six men were finally collected about the circular table in the card room. At Carter's suggestion the customary limit of twenty-five cents was raised to a half dollar; and a fresh pack was opened, chips counted and distributed. From the first deal the hands were very low. Sears won a modest pot on two little pairs; Mr. Solly Benjamin managed to collect three treys and two dollars-odd. The game threatened to drag lamentably.

"Make it a dollar?" Epheimer inquired, and the others agreed.

Sears, studying as much of Epheimer's game as the latter was forced to expose, found that the other skillfully mingled careful betting with the most admirably conducted bluffs. Benjamin's game was, if possible, even of a higher order; it rose to the plane of psychologic poker. Kettel never risked unless he held a strong combination of cards; Carter was more than adequate.

The deal went on and on; ten dollars was won, lost; no one was a gainer. Anderson counted his chips and withdrew, presumably in the direction of the dance music faintly audible through the closed door. Sears negligently picked up his hand and swiftly surveyed it; two nines were the best that showed, and he retained them, discarding the others. Solly Benjamin's face was as imperturbable as that of a Chinese; Kettel was frowning at his collection; Epheimer was regarding the ceiling.

"Three," Sears said listlessly.

"And three," echoed Benjamin, and flung away the resulting combination.

"I think," Kettel pronounced slowly—"yes, I'll take one."

He got it, and his face was as dour as one of his highland granite knobs.

"One here," Epheimer added, and shuffled his filled hand about, finally depositing it in a neat stack before him.

Arnold Sears' mouth contracted slightly—he had held a pair of nines, and had drawn two queens and another nine. Not only was it an exceptional hand, but he was certain that the number of cards he had demanded would put the others at sea.

"Dollar's bet," he said.

"And a dollar," Kettel added.

"Those two dollars and another," Epheimer came along.

Arnold Sears saw the raise, and continued it to the limit; and the others repeated this, again and again.

"Raise the limit?" Kettel asked. "This might go on till to-morrow."

"Five dollars!" Sears suggested tersely.

There came a knock at the door and Sears turned apprehensively. A house boy entered.

"Telegram for Mr. Epheimer!" He deposited the envelope at his hand. Epheimer gazed at it curiously.

"Not for nothing!" he announced—"not for nothing would I look at it betting a hand! Such bad luck! Raise the limit?"

The limit accordingly became ten dollars, and a round of seeing and betting followed. Epheimer fingered his telegram.

"Not for nothing!" he repeated.

Arnold Sears studied his hand thoughtfully; it was good, but not unbeatable. Both Kettel and Epheimer had drawn but one card; the former would never plunge to this extent, he decided, on a flush. Kettel—yes, Kettel had fours.

"I'm dropping," Sears decided regretfully.

A very material hole had been made in Kettel's check.

"And again," Epheimer said. "Solly, what do you think's in that wire?"

"Shall I look?" the other queried.

Epheimer shook his head.

"Anything's bad luck now, Solly."

"Back at you," went Kettel.

Beads of perspiration were ranged in rows on the Scotchman's forehead and he champed at the sad wreck of a ten-cent cigar. Carter counted the pot.

"About eight hundred dollars," he reported.

It rose steadily—almost doubled. Kettel was talking to himself. Epheimer was divided between the envelope before him and in betting in a loud voice.

"Kettel's pulse must be going up a beat a dollar!" Carter whispered to Arnold Sears; the other made a bet in a reverent whisper.

Suddenly Epheimer pounded with his fist on the table.

"I'm a donkey!" he declared. "But that telegram's got me beat. I've got to see it! Nobody who is anything ever calls at poker; it's raise or drop. I'll call."

Kettel exposed his hand with a stirring sigh of relief, and Sears congratulated himself on his acumen—Kettel had four new bright kings. Epheimer ran a finger through the envelope of his telegram, leaving Benjamin to face his cards. Kettel almost shouted:

"A straight!"

Sears corrected him:

"A flush!"

But Mr. Solly Benjamin spoke in the manner of one rebuking a sacrilege.

"Gentlemen," he said—"gentlemen, Epheimer has a straight flush in diamonds!"

But a sudden deep concern had stirred Epheimer's round, sympathetic countenance. He cried in a voice of apprehensive feeling:

"Solly, it's from home! And what do you think? Rosie, our little Rosie, has married that shine salesman traveling in shoes! You get the girls right away at the trunks. I've got to be immediately in New York!"

Kettel unsteadily mopped his brow.

"I'll need my check book!" he said in a solemn whisper.

His somber gaze sought Sears, and the latter hurriedly rose.

"I thought I heard my wife!" Arnold Sears declared.

It had occurred to him that his bill at the Conifer Arms had been permitted to lapse for three weeks, and he had that in his pocket on which it might be well to realize at once!

And Some to Spare

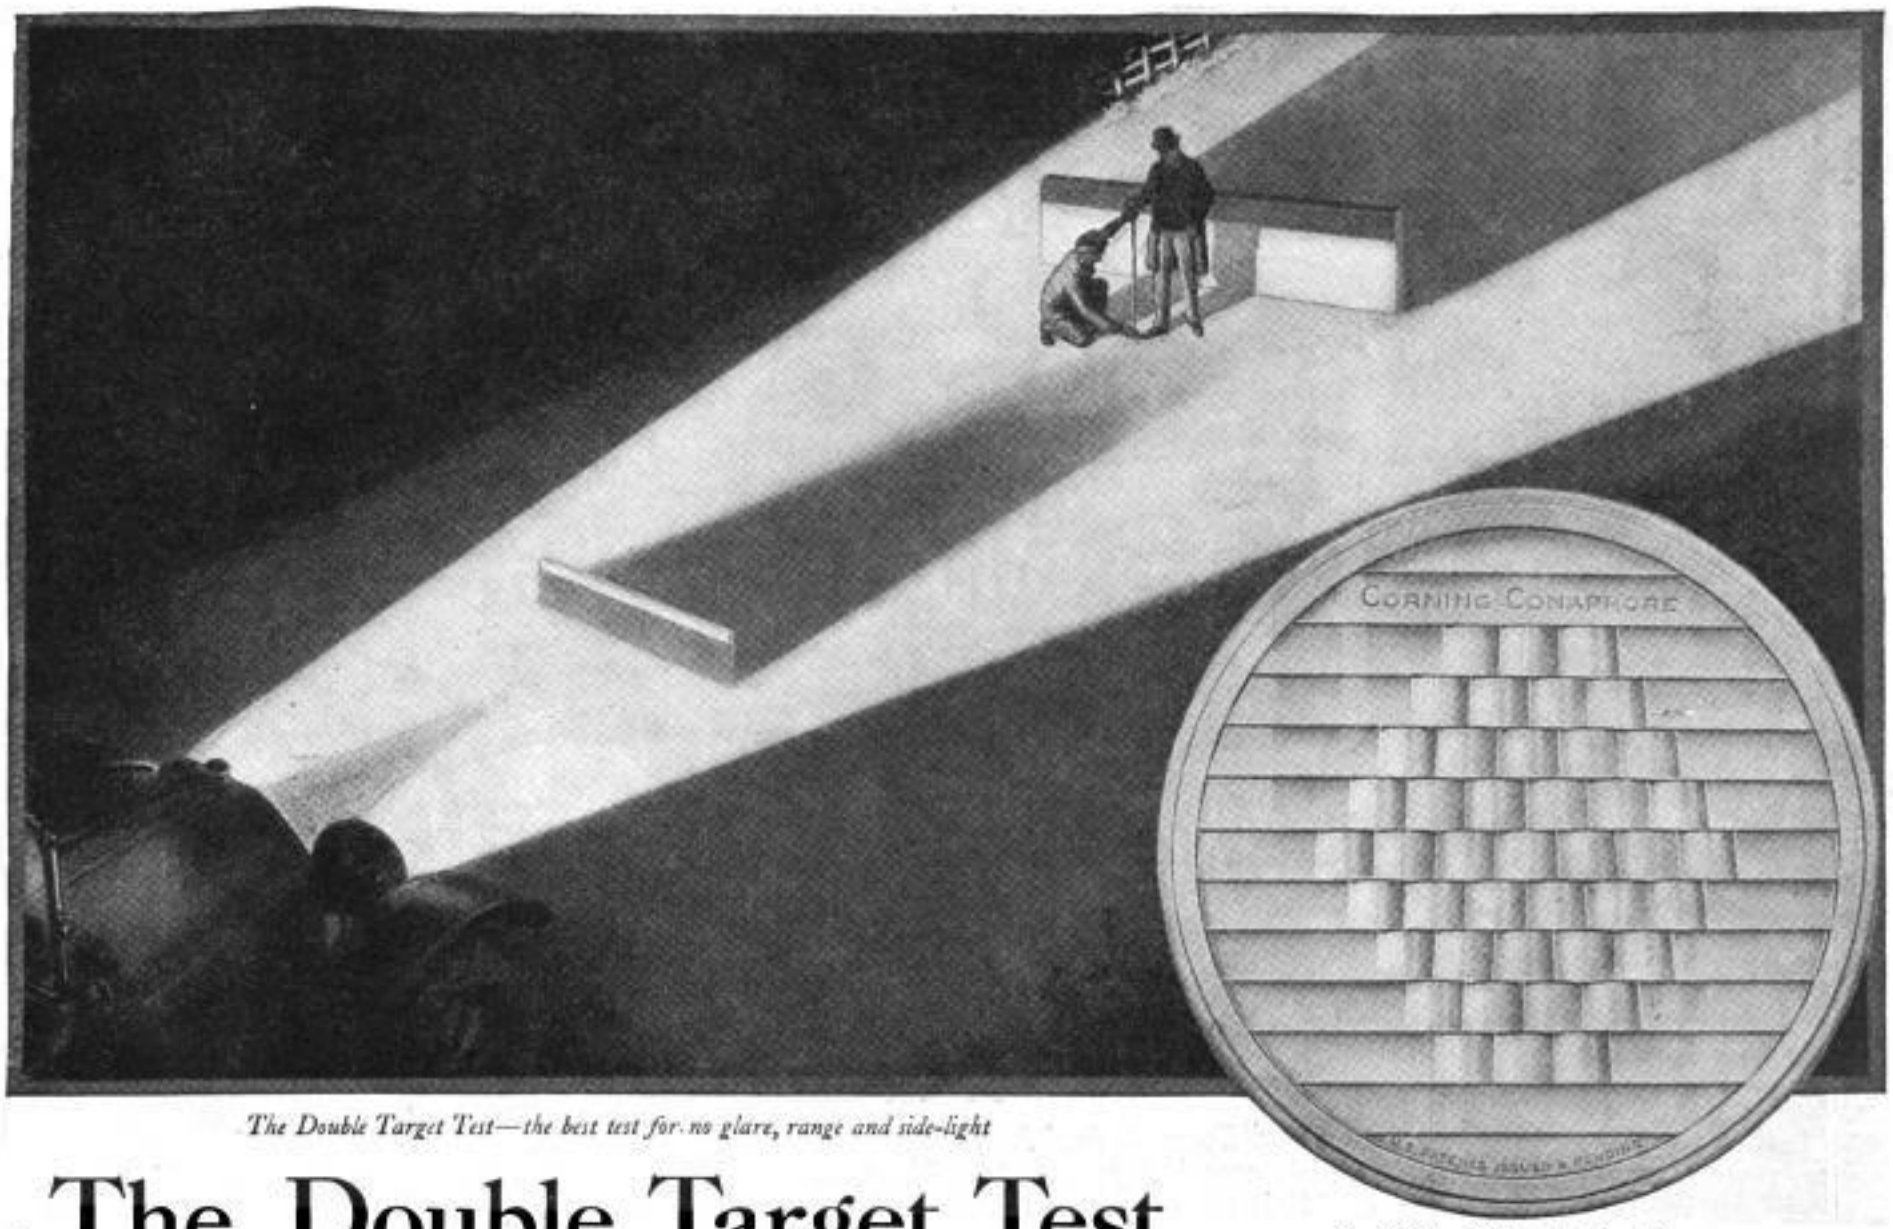
A MAN who makes a specialty of collecting anecdotes of the stage and the people of the stage says a young actress of his acquaintance rented a new apartment and hired a new maid. Immediately all the tradesmen in the vicinity began calling. When she was tired of these attentions the mistress called in the maid, whose name was Nancy and whose color was black.

"Nancy," she said, "I don't want to be bothered again by persons trying to sell us something. Tell all of them we have all of everything that we need. Now remember!"

A few minutes later a strange gentleman appeared at the hall door and asked permission to demonstrate an exterminator of his own designing.

"An exter-which?" inquired Nancy.

"An exterminator."



"Whut's it fur?"

"It's for cockroaches," said the man.

"Nothin' doin'," stated Nancy; "we got all the cockroaches we wants!"

The Double Target Test—the best test for no glare, range and side-light

Front View of Corning Conaphore

The Double Target Test

The Only Headlight Glass That Passes It

The Double Target Test is the most important test of headlight efficiency. It is the best test for no glare, range and side-light.

Only one headlight glass passes this test—the Corning Conaphore, a new invention manufactured by the Corning Glass Works.

How the Test is Made

Two targets are placed on the road in front of a car. The first target is 22 inches high and 10 feet from the car. The second is placed beyond the first one, 30 feet from the car. It is 4½ feet high and a horizontal line is drawn across it 42 inches from the road.

The intense beam from the Corning Conaphore shoots over the first target and completely illuminates the second target below the 42 inch line.

Other headlight glasses designed to prevent glare, dump the light right in front of the car, completely illuminating the first target, but throwing only a faint light on the second target.

Tilting headlights down may decrease glare, but it also decreases range. Tilting wastes your light.

The Corning Conaphore *does not dump* the reflected light in front of the car where it is not needed, but shoots it out in a low, wide, strong beam. It gives a 500-foot range, and ample side-light, with no glare.

A New Headlight Glass Perfected by Scientists

The Corning Conaphore has a smooth outer surface and a series of patented horizontal corrugations and cylinders on the inner face. It bends down the light rays and shoots them out in a long, intense beam, never more than 42 inches above the road, which has wonderful range and ample side-light, but no glare. The Conaphore gives 500-foot range, and ample side-light, with no glare.

In response to a general demand for an efficient headlight glass, scientists in the laboratories of the Corning Glass Works perfected the Corning Conaphore. The Corning Glass Works is the largest manufacturer of technical glass in the world. It makes most of the signal glass used on American railroads. The facilities, experience and reputation of this company are behind every pair of Corning Conaphores.

Noviol Glass Causes Light to Pierce Fog

Corning Conaphores are made of a new patented glass—Noviol Glass. This is a golden-tint glass which gives the Corning Conaphore a distinctive appearance.

Noviol Glass causes the beam of light to pierce fog or dust, and eliminates back-glare. It makes the green along the roadside stand out. No ordinary headlight glass has these features. Noviol Glass is controlled by the Corning Glass Works.

Five Major Advantages of Corning Conaphores *(First Four Exclusive)*

1. **Gives headlight range of 500 feet when a standard bulb of 21 candle power or more is properly focused.**
2. **Cuts out all the glare yet uses all the light, thus complying with all city and state no-glare laws.**
3. **Penetrates fog, dust or smoke, so you can easily drive 25 miles an hour under adverse weather conditions.**
4. **Has strong side-light which illuminates the roadside; the Noviol Beam makes the green stand out so you can distinguish bushes and ditches.**
5. **Never clogs with dust or mud in summer, or with ice or snow in winter, and is easily put on any car.**

Made in Two Kinds of Glass

Corning Conaphores are made of clear glass as well as Noviol Glass. Clear Glass Conaphores are equally efficient in giving long range and eliminating glare, but lack the added advantages possessed by the Noviol Glass of eliminating back-glare and penetrating fog and dust. We strongly recommend the Noviol.

Easy to Install

You will find the Corning Conaphore easy to install. Simply take out the glass now in your headlight and put the Conaphore in its place. Sizes are made to fit all cars. In ordering, give name, model and year of your car, and diameter of your present headlight glass. All progressive dealers now sell Corning Conaphores. Put a pair on your car today.

Price List

Noviol Glass	Per Pair	Clear Glass	Per Pair
3 to 4⅜ inches inclusive	$1.30	3 to 4⅜ inches inclusive	$0.80
5 to 6⅜ inches inclusive	2.40	5 to 6⅜ inches inclusive	1.60
7 to 8½ inches inclusive	3.50	7 to 8½ inches inclusive	2.05
8⅝ to 10 inches inclusive	4.50	8⅝ to 10 inches inclusive	3.00
10⅛ to 11½ inches inclusive	6.00	10⅛ to 11½ inches inclusive	4.00

Prices 25 cents more per pair West of Rocky Mts.
Sizes vary by steps of ⅛ inch.

Stewart

PRODUCTS

The Stewart Speedometer is the only accessory on which practically all automobile manufacturers agree.

It is the only item of automobile equipment that absolutely dominates its field.

Take tires, carburetors, magnetos, bearings, axles—any other part or piece of equipment for motor cars.

No one make seems to stand out above and beyond all others. The opinion of car manufacturers is divided. Some choose this make—others that make.

With speedometers it's different. Here opinion unites. 95% of the car manufacturers agree on the Stewart Speedometer and furnish it as a standard equipment.

And each Stewart Product occupies a commanding position in its field.

The Stewart Vacuum System is already adopted by 70% of all car manufacturers. In nearly every instance it has replaced pressure and gravity feed systems. Less than 30% still use these old-fashioned, troublesome systems.

The Stewart Tire Pump is also provided with many of the better cars. It saves your time, money and back. Lets your motor do the laborious pumping—keeps tires properly inflated—makes them last longer.

There are also the popular Stewart Warning Signals—motor driven or hand operated—and the Stewart V-Ray Spark Plug—with its four sparking points and oil-proof, soot-proof, fracture-proof core.

If you own a Ford don't fail to have the Stewart Ford Speedometer—$10—or mounted in a handsomely enameled special steel cowl board—$11.25. It continually checks the efficiency and economy of your car.

All Stewart Products are backed by Stewart nation-wide service. Do not fail to have them on the car you buy.

Stewart-Warner Speedometer Corp.

Chicago, Illinois U. S. A.

THE STUDY OF FOOTPRINTS

(Concluded from Page 15)

taken for comparison with the original: One may cause the accused to walk on sheets of white paper covered with lampblack. This method gives excellent prints. Florence suggests that one of the best methods is to make a mixture of water, glycerin and red aniline, soak a thick cloth in this solution, cause the accused to tread heavily on this cloth, and then walk on sheets of white paper. This method gives detailed imprints of the foot. This is perhaps the best method to obtain distinguishing footprints for comparison with the original.

But, as Niceforo points out, one must be very careful to see that the accused does not trick him. An acute criminal will give the foot an unnatural twist, or will press too heavily on a certain portion of it, or will exaggerate the toe or heel pressure, and in a variety of ways undertake to make the print misleading.

Niceforo says that one must not be content with a few prints. He must take hundreds of them, and then he can come to a conclusion about the peculiarities of the imprints only when he has several that show the same distinguishing characteristics.

Some distinguishing characteristic is always to be found by a skilled investigator. A typical case is reported by Doctor Frecon:

The police were puzzled by a mysterious incendiary. Fires broke out in a most extraordinary fashion and they were unable to obtain any clew whatever that would help them to arrive at the identity of the criminal. Finally, one morning, they found the track of a bare foot in the mud behind one of the buildings. This print was carefully molded by an expert. An exact reproduction was presented to the chief of the Criminal Investigation Department. He pointed out that the mold showed an indentation on the sole of the foot. Such an indentation meant, he said, that the person making it had a wart or protruding callus at that point on the sole of his foot. With this distinguishing clew, the police were finally able to run down the incendiary; and he was tried and condemned.

A learned criminologist at the University of Brussels points out that by the comprehensive examination of an imprint one ought to be able to disclose the sex, age, height, peculiarity in walking, and the profession or trade of the person who made it.

When the imprint of the accused has been obtained, as nearly as possible under conditions similar to those relating to the original imprint, the greatest difficulty in this branch of criminal investigation begins. The prints must be compared and one must be able to say what distinguishing characteristics are common to both, and finally to conclude whether they were both made by the same foot.

The Comparison of Prints

This is an exceedingly important branch of criminal investigation.

Niceforo points out that the first thing to do is to compare the prints for dimensions and form. See Figure 7.

The prints to be compared are inclosed in a rectangle touching the outlines of the print. This rectangle is bisected by a line running through the print at the point showing the deepest outline of the arch, and cut by a line showing the angle of the toes. This manner of treating the print is clearly shown from the figure: AB is the length of the foot; CD is the width; CE the depth of the arch. By placing the two prints in a geometrical figure of this character the gross dimensions and form are at once determined, and the resemblances of the two prints in outlines and dimensions are ascertained.

But when one has gone thus far the work is but half finished. It is necessary to locate precisely the resemblances in the prints, distinguishing characteristics, peculiarities, and so on. In order to do this with accuracy Causse suggests ruling the prints with an equal number of parallel lines and comparing the field of these lines, as is shown in Figure 8. By this means the investigator is able to see whether any peculiarity, like a callus, scar, or the like, is precisely in the same relative position on the two prints.

But by far the best method is a comparison of transparent photographs. By superimposing one above the other, anybody—judges, juries, examining magistrates, and so on—is able to see with what degree of exactness the two prints coincide.

It must also be remembered that the papillary lines of the *planta*, or the sole of the foot, and the balls of the toes, are as individual and permanent as those of the thumb and fingers, and may be used with an equal degree of certainty in establishing the identity of an individual. But it must be remembered that these lines differ in their whorls and structure from the papillary lines of the hands and fingers.

A knowledge of this fact was of conspicuous value in a noted case.

The Countess Z was assassinated in her villa on the Riviera, and her chambers looted. The servants, including her maid, had gone by permission to attend a carnival at Mentone. The police found three distinguishing clews in the villa and nothing more. First, the door of the countess' chamber was fastened by a rod laid transversely across the door on the side opposite to the direction in which the door opened, and lashed firmly to the knob. The second clew included three imprints of a bare foot in blood. And the third was a little drawing of a human face, wearing a peaked hat, above five lines branching out below it. See Figure 9.

Some Misleading Clews

The prefect of police sent for an expert. It seemed evident to him that the crime was the work of some of the Italian criminal orders, and that the mark on the wall was the graphic sign of the individual.

The expert came and went carefully over these three distinguishing clews in the villa.

Finally he declared that not one of the clews was indicatory of the assassin, and that all of them had been deliberately made for the purpose of misleading the police.

The expert pointed out that the drawing on the wall was, as the prefect of police concluded, a sign of the Italian Camorrists. But, instead of this figure's being a sign of an individual criminal, it was, in fact, the conventional sign used to indicate the prefect of police. It had been placed there by the criminal, he thought, either in ignorance of its precise meaning or in derision.

It was certain that the crime had been committed by some skillful criminal, for each of the three distinguishing clews had been manufactured for the purpose of misleading the police.

The manner in which the door was tied up indicated that the crime had been committed by a Transylvanian gypsy; the figure on the wall indicated a Neapolitan Camorrist; while the broad flat footprints indicated an Algerian of marked Negroid structure. But, he added, in going to the trouble of making these false evidences of the assassin the criminal had left excellent finger prints, by which his identity could be established.

The prefect of police asked him where the finger prints were.

He pointed out that the prints on the floor were not footprints, but had been made with the hand—the palm being used for the heel and the *planta* of the foot, and the fingers for the toes. This gave a broad, flat print, Negroid in aspect and apt to mislead the casual observer. See Figure 10. But they could not mislead anybody who understood the difference between the structure of the whorls and the papillary network of the hand and fingers as distinguished from those of the foot and toes.

However, here were excellent finger prints. These were taken off in the usual manner and sent out to be compared with the finger prints in the police archives of neighboring cities. It was presently established that the assassin was a well-known leader of one of the gangs of Marseilles Nervi.

A predominating percentage of our criminal class is from Southeastern Europe. It is therefore evident that, to deal with it intelligently, we must find out the methods used by the leading European criminologists.

The most distinguishing clew to these foreign criminals is the footprint. It is an old and persistent trick of Southeastern Europe to go barefoot behind a man to kill him. This habit of the foreign criminal is apt to leave the police with a distinguishing clew in almost every crime committed with violence or entry.

Author's Note—See Niceforo: citations from Florence, Frecon, Causse, Coutagne, and others; La Police et l'Enquête Judiciaire Scientifique, for data and figures.

This is the master package. In it are packed 12 rings—each ring in its own sealed container (see point 1).

The Genuine — packed this way for your protection

This Package Covers Five Points of Protection

1 It is your protection against substitution when you buy LEAK-PROOF Piston Rings. The genuine—the McQuay-Norris manufacture—are packed, individually, in these plainly labeled, sealed parchment containers.

2 It protects the garage and repair man from having palmed off on him inefficient, imitation rings which are substituted when LEAK-PROOF is asked for, with the purpose of deceiving him into thinking he is getting the genuine—substitute rings which, should he sell them to you, would hurt his reputation for fair dealing and mechanical knowledge and skill.

3 The package protects the rings themselves from rust and the effects of rough handling while in stock. Delivers them to you just as they left the factory—perfect in fit and finish, accurate to 1/1000 of an inch. This micro-metric care in manufacture is the McQuay-Norris method of ensuring 100% efficiency: its preservation is your protection.

4 This package covers the one piston ring that protects motor efficiency. Protects motor life because its light, equal tension minimizes wear of cylinder walls. Protects power because it prevents power leakage and ensures minimum carbonization.

5 Protects you in the matter of price. Every McQuay-Norris LEAK-PROOF Piston Ring is sold at a definite price. Imitations get the price of the genuine, or more if possible—otherwise they'll take less. Their prices are no more standard than their quality. Whatever you pay for them you pay too much.

Take Full Advantage of this Protection

As an assurance of getting the genuine, have your garage or repair man send you the empty containers—one container for each ring—with his bill.

The still small voice that warns the smoker.

Sometimes, in every smoker's life, a small voice warns: "Don't smoke-fuddle yourself, my friend,—you need your working edge. Stick to the mild cigars!"

Yet I doubted mild cigars for a taste like mine—keyed up to heavier tobacco.

This was before I smoked ROBERT BURNS.

Now, when I sit and blow the smoke wreaths out, I have to smile. For I feel not alone the keen joys of a really gratifying smoke—*I feel better, too.*

* * * * *

Are you one of those who doubt the smoke-satisfying qualities of milder cigars?

Try ROBERT BURNS!

The blend and the curing tell the story. Its Havana filler gives its fine flavor. Our own special curing gives that Havana rare mildness. The neutral Sumatra wrapper *helps* that mildness.

So ROBERT BURNS, though so ripe and satisfying, is yet a far, far healthier smoke.

And moving forward with the times, it is today a better cigar than ever!

Have you tried me lately?

Remember that Little Bobbie is a pocket edition of ROBERT BURNS himself. Price 5c.

THE BIG-GAME HUNT ON KENAI

(Continued from Page 10)

would soon expire trying to reach that stove, and I said I thought bending was such fine exercise, but he had only meant comparatively speaking; so I stirred up some corn-beef mulligan, saying:

"Fresh meat to-morrow—eh, Uncle Dan? We always use the tongue the first day; it is fine boiled."

"Yes; Kel said he wants to git up by four, kid; so, bein' as I'm tired an'll sleep heavy, you got to wake the bunch," said Ike. "Or are you too spent, Kelly?"

"No. Not at all; not at all," said Uncle shortly.

I washed the dishes in a cup, as the three buckets were full of water and cooking, and asked Uncle to tell about my Maine cousins; but he kept yawning, and Ike said there was one guy ready for the feathers. Mr. Devlin put his gun and knife in his bed; so I put the mush to soak and turned in.

There was a moon for a while, glowing through the tent, while rabbits thumped about outside; and I snugged in my robe, hoping Joe Torrance—we are almost engaged—would stay away from the dance Seward was giving to the men of the government railroad's commission. I was on the reception and floor committee, and had an angelic pale yellow dress all ready; but a girl has her duty, and mine was to give Uncle a happy time. I felt very kind toward him; so I would wake and look at my watch that was in my pants, which I used for a pillow; and at three it had begun to rain some, and was dark. Moose stay in timber if it rains hard, but at nearly four it was just misting; so I said into their tent:

"Get up! Four o'clock! Ike! Come on, Unk! Four o'clock!"

Ike mumbled; but Uncle said plainly he did not care what it was, and to get away! So I took the water bucket and hit it hard with a big spoon, and hollered again; and finally I went in and threw water at Uncle, as I do with Pa when he plays being a perfect dope, to make me mad. Uncle Dan cussed to Mr. Devlin, who was moaning; and I said:

"You come on, Unk! Me stay awake half a night to rout you out! Get up!"

So he did, stumbling after Ike, who was laughing, to the creek. I made two sacks of lunch and Ike hurried in to fry hot cakes. Uncle and Mr. Devlin were consulting secretly under the tree where Ike had put a couple of inches of mirror, in case somebody wished to shave. They walked quite stiffly, and I asked Uncle if his back hurt, but he said no, it did not, he was all right; so I knew we could make a nice long day.

I headed him up the hill back of camp. Ike was guiding Mr. Devlin. Uncle puffed loudly, and when I told him to quit he would keep in; but it just made more noise when he let go again. The brush was wet; and after about four miles, when we were in the next valley, he said a curse on him who had made those trousers; now they were soaked and weighed a ton. Climbing up a steep hill, I showed him a moose lick down on the flat, all muddy and cut up with tracks. In one direction the flat stretched off toward Cook Inlet, the browning tundra spotted with ponds. The other way there were mountains, white with new snow on top, dark and bare on the lower slopes.

"The sheep are in those high peaks, Unk," I whispered. "Scrooch down—quick! See him—that big bull just walking from the alders? No, not there—look where I point. Want him?"

"He's a pippin! I'll have him mounted giving the call!" he hissed, and we crept down toward the lick; and suddenly Uncle fired and missed.

Then he fired again, and some more, and fumbled wildly in a pocket for shells, but had put his tobacco can in that one.

"Lovely dove! Pa would have downed him the first crack—near as he was," I said.

"Your father is certainly a wonder," he said coldly; and I said:

"Pa is the best man alive, Mr. Kelly!"

After we had both felt mean for a little, he said well, well, no gun was infallible, and the trouble was that the rear sight on the Bass was dim and hard to see at two hundred yards. I could see it—I tried at once, and said to take my thirty rimless if he wished; and he did, and went on, saying the pans on that moose were not regular, anyway, and we would nail one with a wider spread of horn.

Soon we heard another bull beating his horns against a tree; so I knew he had to be in a clump of spruces, and motioned Unk to go after him alone. Will you believe he missed that one? And he took seven shots—enough to scare all the game for ten miles! So then he said the stock on my gun was too short for him, and I said, pity's sake! take the Bass, or else run the next down!

"Pa would have him skinned by now," I said. "Try not shutting one eye."

"Elizabeth, I am high man in our Bangor gun club," he said. "But after yesterday's strain, likely I am not steady enough."

"Why, Ike said he gave you only eighty the second trip, and you said you'd carried a hundred and fifty in the lumber woods!" I said; and he merely snorted.

It was two o'clock when we returned to the lick, and there were Ike and Mr. Devlin, crouched back of a bush; and Ike said get down by them, there was a moose apiece coming into range.

"Noble animals!" said Mr. Devlin with emotion, but Ike said shut up; so he did.

Uncle's eyes were gleaming, and he was all shaky with excitement, and Mr. Devlin squinted through his sights, saying he would give his to the museum.

"Listen now; take your time. It was hurryin' made you miss all them others," counseled Ike; and he looked at me, shaking his head sadly and moving to the rear.

I got back of him, because I had an idea, and I was carrying it out as Uncle and Mr. Devlin fired.

"Got him, pal!" said Ike, grinning; and Uncle Dan jumped up and down, yelling to me how was that for a fancy shot, for his moose had gone to its knees and then sogged into the mud of the lick.

We had to tell them to beware of getting a final kick, and Mr. Devlin shook hands all round, and Uncle Dan laughed and told again about the shots he had made at home, and how he had aimed for the heart. I saw Ike looking at Uncle's moose and shaking his head sort of privately. It was not often you could get two fine heads traveling together, but Uncle's measured sixty-five spread and Mr. Devlin's was a smidge over sixty-two.

"Glorious! Glorious!" said Mr. Devlin; and as the rain had been stopped a long time and the sun was bright I took their pictures by the two moose, and Ike cut out the tongues and sharpened his knife to cut the thick hide below the shoulders.

The moose lay only a hundred feet apart; so we could all holler at each other. The flies had been pretty bad, but now with us not moving they bit like sixty, and we were all grease from fly salve and gore from moose, and standing to our knees in a water hole. I skinned at the cape while Uncle turned him, and lifting that great head was all he could handle; so he got down to his undershirt again, and the white-stocking flies would burrow under it.

"Yes; I have saw a feller's entire arm swole from them bites," Ike was telling Mr. Devlin, who had to sit right in a water hole to work on their moose. "Bites got to-day you'll feel for a couple weeks."

"By George, let's leave these till to-morrow! We have done enough!" called Uncle; but I explained you can't do that, the hide would be spoiled unless it is winter, and the brownies would come for the meat in the night and tear the heads.

Uncle unbent himself and stretched then, and wearily did some more turning; and to liven him I described the big bears, and promised surely, if we didn't get him one round there, we would run into some up in the sheep ranges, and then we would have sport.

"That is poppycock about their charging man, I think," he said. "They would be the scared ones."

"No, sir; they will so attack people!" I said. "Didn't one catch Pa with just one shell left, and Mac saved him only by a gamble shot from a hill? That is the hide you saw in our sitting room when you came to supper. Pa wants you to get one."

"No, no; them ain't the tenderloins," Ike was saying; and Mr. Devlin said:

"Darn him! Are these it, then? I have cut until my wrist aches!"

"Elizabeth, even your talented parent could not alone turn over a whole moose," said Uncle Dan after he heaved and pushed, and could not budge it.

I had to begin on the other side of the head, and Ike brought the ax and chopped

Peerless Eight

Peerless

"All that the name implies"

A Car of Unbelievable Contrasts

Its two separate power ranges gives the Peerless Eight a "dual personality,"—it is capable of a range and variety of performance heretofore possible only in totally different types of cars

A "Loafing" Range

for economical operation

Think of an Eighty Horsepower Eight consuming fuel so sparingly as to put to shame many a lesser powered six—even many a four.

In its "loafing" range the Peerless Eight operates on half fuel rations. Think what that means in economy of operation.

And for all ordinary driving it is ideally soft and smooth, performing with the utmost ease all that you would expect of an eight cylinder car of the utmost class and distinction.

A "Sporting" Range

for extravagant performance

But when you need or want power and speed of which few cars are capable, you have it in this same Eighty Horsepower Peerless Eight.

You have only to open the throttle wider to use its "sporting" range and change the whole character of your car.

You automatically open her double poppets, give her full fuel rations and transform her into a brute of a car ready to vie with any contender no matter what its class.

The Peerless Eight among cars of real class and distinction yields to none in a comparison of beauty of design and finish, of quality materials and of master workmanship throughout. It is dominant among such cars in economy of operation and extravagance of performance.
See the Peerless dealer and drive the Peerless Eight.

Prices

On orders accepted by the Factory for shipment, until February 28th, 1917, Roadster, $1890; Touring, $1890; Sporting Roadster, $2250; Coupé, $2700; Sedan, $2750; Limousine, $3260
On orders accepted by the Factory for shipment, after February 28th, 1917, Roadster, $1980; Touring, $1980; Sporting Roadster, $2250; Coupé, $2700; Sedan, $2840; Limousine, $3350
All prices f. o. b. Cleveland are subject to change without notice

Don't tell me the world ain't growin' better. Most things improve with age—just like tobacco. Velvet Joe.

You Cannot Think of Mellowness Without Thinking of Age

MELLOWNESS is that mildness, smoothness and full flavor we all want in our pipe tobacco, and there is no better way of mellowing tobacco than letting it age *naturally*.

Every tin of Velvet contains selected tobacco age-mellowed two years in the original wooden hogshead—Nature's own patient method—and the best method known to man.

Say to the storekeeper: "Give me a tin of Velvet, please," and know for yourself the tobacco cured in Nature's way.

off a hind quarter to make it lighter; but he went right back, winking at me, and Uncle was all in when he got the job done. Mr. Devlin was doing their skinning, and he had a million cuts in the cape; but he had studied how to do it in Trapper and Trader's Friend, and insisted on his way. It takes a long time to get a nose properly skinned, and Uncle was eager to do that; so I let him, and sat up on a nub of moss, with my feet in the mud, and told him how—and thought about Joe, and whether Pa and Mac were lonesome for me. It was nearly dark when Ike said:

"Kel an' me and Dev got our packboards; so we kin git a hind quarter an' both capes an' one set o' horns to camp tonight, Betsy bringin' someone's gun, an' the tenderloins in the lunch sack. Now them capes'll weigh forty each, an' horns seventy-five; but in the dark they're hard packin'. Let Kel pack the meat."

"At least, will you take this rifle?" said Uncle, while he put on his glary look and got the hind quarter hoisted on himself; but I wouldn't, because a gun would overbalance Ike, who was carrying horns.

"I have a dog-gone sight meaner pack right here," said Uncle, trying to untrack his feet and get on the gravel of the hill. "What are those horns? He has a cinch!"

We would struggle up a rise and down into a swamp, me ahead finding a trail for them in the gloom, and Ike crashing along in the rear. Then Mr. Devlin abruptly shouted that he couldn't get the two capes any farther for anyone; but, just the same, he did, after I took his gun, which made three I had; so, for fun, I said then:

"Look out! Brown bear!"

"Run, boys, for your lives!" yelled Mr. Devlin, and he tripped and lit on his head. "They are twelve feet long!"

Before he could get up I grabbed his foot and growled deeply, but Ike killed it by saying come on, and not let that kid make a sucker of him; so Mr. Devlin rose, panting, and I heard him tell Uncle it was lucky for me I did not belong to him; and Uncle said yes, you bet, but it seemed up here they ran wild. Just for that, at camp, I said I supposed Uncle would wish to make supper, as he had suggested each should cook in turn, and mine was yesterday.

"Very well," he replied in a lifeless tone, and he dumped the meat and leaned his back on it, heaving.

I washed and stayed outside, reflecting, while he was blowing into the stove and claiming it would not draw, which is untrue. I was cutting some gun rags and wondering where I had put the powder solvent, and whether to order one of those blue serge gowns with the colored wool embroidery; but anything that's such a rage goes out so fast, and every ad. in Outside papers has them—there is my rose taffeta, with the side puffs—good as new; yet puffs are plumb dead in the East!

"I mix a can of corn in with the flour and so need only one dish," Uncle was saying above a loud frying.

There was a reek of burnt lard when he called to hurry, as they were only good eaten hot. It was a Trapper and Trader's Friend recipe; a big burnt doughy-hearted cake each, and some fierce coffee. I took only an edge to seem courteous, as I slept in the cooktent, where the grub was; the rest ate two apiece, though I kept motioning Ike, but it was too smoky with the frying to see.

"Well, leave us flash them capes an' git it over," said Ike, building a log fire in a hollow to make light. "Git every shred of meat off, fellers. After that we do the saltin'."

It was cold now and the capes were icy to work on, and Mr. Devlin's had meat all over it. I was not going to be a slave, so I told Uncle to get busy with his knife; and he would hold his back and sort of hiss, and scrape languidly, knocking the climate because it did not stay one way; and he was in his undershirt and damp pants and had left his big coat back at the lick, and his shirt too. It seemed he had not brought his extra flannel shirts, and said I told him not to.

"I never!" I said indignantly. "Just towels and handkerchiefs and truck."

"I guess you have much of the Hjorts in you, Betsy," he said later. "The Kellys don't fly up at every word."

"Are you cracking at the Russian part of me, Uncle Dan?" I demanded. "Because, though I want you to have a lovely happy hunt, if Grandma Hjort or Aunt Anna Gagoff heard it, they would chase you clear to Maine!"

"That is going far enough, Elizabeth," he said angrily. "Use a little respect!"

"Respect nothing! You began it," I said; but Ike coughed, so I gulped, and then said excuse me, but I wanted him to enjoy the hunt, and was he?

Next morning Mr. Devlin had a severe cramp and demanded the medicine chest; and Uncle Dan flushed, remarking now how did that get left back at the lake? But after beautiful brown hot cakes, ham, and coffee that Ike made, Mr. Devlin got well, though he kept saying you surely did miss chairs.

This day Uncle was just to fetch his horns, and the rest cut wood and bake, and monkey round camp; so, looking wistful, Uncle started, but got lost and had to come back to start over. And Ike said fire his gun if he missed it again; but couldn't he see the big trees? I made a chocolate pudding in a last year's lard bucket I picked up, and picked enough low-bush cranberries—they grow on vines and are little and good—for a cranberry duff for supper.

Next we heard a shot; so Ike shot, but after a long wait and more exchange of shots we all climbed the hill, and Uncle was sitting there, with a packstrap busted, and trying to get the wide horns between trees he was worn out, but said just take his gun and he would make it.

We fixed him better, and were right at camp when Ike said there was only eight miles to the lake with the horns; and Uncle had forgotten that part, I think, for he stopped suddenly and looked wildly up at the sky.

"I wanted to bring packers," I said, but he was silent until in camp he saw Mr. Devlin crawling round a moose cape, salting it wearily; then he asked was Devlin insane—it was already salted!

"The first was to git out the moisture," said Ike. "You got to shake yours out an' give it another go to-day, Kel; then, when we git 'em to the lake, one more saltin'll put 'em so they kin ride to Maine an' last ten years without tannin'."

After lunch and my pudding Uncle sighed and got his cape; and he had it nearly done when I said I bet Aunt Nora would be tickled with that head, and satisfied at it costing a hundred and fifty dollars to take out—Pa says she sure hates to give up!

"What do you mean?" he asked, holding a handful of salt poised, and shooing the little flies.

"Can't no moose heads be took from the Territory without payin' a license of a hundred and fifty dollars each," said Ike—"an' then only by the guy who shot it for his own use or a museum. That's the law."

"I already got a license, stopping off at Juneau."

But that was only to hunt on, and Mr. Devlin spiritedly called us a predacious Territory—why, Alaskans pay, too, if a head goes Outside!

"A man pack those horns and do that skinning!" said Uncle. "Robbers! Highwaymen!"

"The darn capes weigh even more now with the salt," said Mr. Devlin. "It is something to pack eternally, it seems, Dan'l."

To be agreeable I showed him the cranberries, all cooked; and in the top of a flour sack I thinned out a sweet dough to hold them, explaining that would help, as it was his turn to cook supper. But he began about his cramp and having brought prepared rations, and packed them, too—he wasn't responsible for gasoline getting into them. Uncle said he had been the mark last night; and he and Mr. Devlin got very snippy toward each other, and Uncle walked off on the flat alone. Mr. Devlin burnt the rice and swore because the heat fevered his fly bites; and Ike cut moose steaks and was silent. I washed my other socks and whistled.

"I figger you been overdoin' your strength, Kel," Ike said later. "I kin pack them horns to the lake to-morrow, and Betsy a cape; an' say next day we move toward the sheep range."

"Why, I won't do it!" I exclaimed. "We are both smaller than he is, and Unk would be 'shamed to lazy round camp and us working—wouldn't you?"

"Oh, assuredly—I am all right, Ike," Uncle said then, and straightened more; though Mr. Devlin just sat humped over and scratching his bites.

So Ike asked was he sure and would we move? And Mr. Devlin moodily scraped

SILAS SHEETZ OF NORTH CAROLINA

From $5.00 to $1500.00

Two years ago Silas Sheetz worked in a railroad office.

He happened to want an extra $5.00 one day, and an advertisement like this caught his eye.

He answered it. When he got our reply he decided to try the plan we offered him. In a few months his profits grew so large that he threw up his railroad job and devoted all his time to getting subscriptions for *The Saturday Evening Post*, *The Ladies' Home Journal* and *The Country Gentleman*.

Mr. Sheetz' profits already exceed $1500.00 a year, and his business has only begun to grow. Many Curtis agents make from $3000.00 to $5000.00 a year.

Could you use $5.00 or $10.00 extra this month? Would you like to start a business of your own, worth $1500.00 a year, without a cent of expense to yourself?

Now, above all others, is the time to begin. During 1917 more than a million and a half new and renewal subscriptions will be secured.

You can share in the profits. Every hour of your spare time can be turned into a dollar in cash. For details of our liberal offer, clip, fill in and mail this coupon:

THE CURTIS PUBLISHING COMPANY
235 Independence Square, Philadelphia

Gentlemen:

Without obligating me in any way, tell me all about your spare-time money-making plan.

the rice bucket, because it had to hold breakfast mush, and said again:

"Oh, for a chair!"

It was pretty cold in the night, and when I got out of my robe a bit before daylight I could see more snow on the one peak in sight; and by the time we had the packs on us it was coming down thickly where we were, and Ike had to tell Mr. Devlin twice that sometimes it will be the middle of October before there is any lower than the peaks—only this year it was early.

When we had gone a mile up the valley a hard wind hit us, and wet up Mr. Devlin's glasses, driving snow in his face, and he kept stopping, crying that he felt the cramp some more; but when we all went on he followed.

"Now you savvy about the stove. There will be a couple of feet where we camp if she keeps on," Ike hollered. "Shoot that owl asleep on the top of the dead tree, kid."

I offered to let Uncle do it—owls eat the baby grouse and ptarmigan; but what did he care what they ate? Pa and Mac would bet on who could hit it in the eye with my .22 pistol! I think he is as mean as sin round home! Once he looked back as if about to ask something, but acted melancholy, and went on until he got bogged in some mucky going—the snow hid sinky places in the tundra; and I was getting my pack even again after an abrupt sit-down when he said:

"Elizabeth, I have been thinking that, on your account, this is wrong—are we not by this journey keeping you from the school you should be in?"

"School? Golly! I am all done with that, Unk," I laughed. "So just enjoy the outing and forget that old office down in Bangor; there is only four days of our month gone, so far."

"Month!"

We had to hold to alders to get into a little pass, and Ike had put a hand to Mr. Devlin's back to keep headway on him. I hollered that we must count three days for towing the boat up the river, and another for the lake if it was blowing; and we were on top of the hill, holding to bushes and resting a minute, when he said towing a boat against rapids would be very jolly if you did not freeze stiff.

"Look! Look! Bull an' two cows! See 'em?" said Ike, but Mr. Devlin hardly glanced where they were, as he was peeved over water in his boots; and he said:

"Very nice! Very nice! Darn the wind; there goes my hat!"

"Well, squ'sh it on tighter; mine sticks on," said Uncle; and Mr. Devlin said if he wished advice he would let people know.

He had the stove, and he argued with Ike, saying anyway we could leave that in the sheep camp, but Ike showed him we couldn't, needing it going up the river, with people wet from slipping and falling in; and Uncle said:

"She is surely a sweet country! Lucky I don't listen to every nut telling me to throw away serviceable warm trousers for thin drills!"

"But it may be hot to-morrow," I said, and he made a savage sound.

We could look down from the pass at the Kelly River, flowing between spruce woods. Beyond was a great tundra flat, rolling toward the mountains, which were hidden by the snow, and there was six or seven miles of mushing from the Kelly to a sheltered cañon, though we would not really be anywhere then. For sheep we had to make a higher camp, and then climb as high as they did.

"Yes; an' we want corks in our boots—in shoepacs a guy'd break his neck edgin' round them rocks," said Ike.

"Betsy got a swell ram last year. Sheep's the best eatin' in the hills, boys."

"It is only five dollars to get a sheep head out," I said; but Uncle would not feel cheerful, and he said:

"As I view it, what we eat is no less weight, for heads will more than make it up, and we lug back even more than is brought! That is correct, is it not?"

But Mr. Devlin was clamoring for Ike to look at his arm, asking was the man who suffered so swollen worse than that from bites? He insisted that circulation being retarded from packstraps made him throb, and his cramp had returned.

"We best camp," said Uncle. "He is a sick man."

"He is just plain dogging it," I said hotly. "I saw him rub hard to make them bulge! Anyhow, it is all tundra here; do you care to sleep in a water hole?"

At the river Ike and I found our boat, that Pa and Andy Simonds built out of canvas over a frame. Only two can go in it; so we were some time crossing, with Mr. Devlin looking greeny when it tipped—I was rowing him—and holding to the gunwale, as if that would aid, when we swirled a trifle in midstream.

Jumping ashore, I saw Ike talking to a man, and it was Windy Wagner, coming from his cabin on Kasilov Lake, and of course he was tickled to get a ride across; so Ike took him, because we must have the boat on our side, and Uncle and Mr. Devlin, who had only grunted a little to Windy's kind greeting, whispered under a tree.

"She's blowin' fierce on the flat. I seen a brownie an' a couple cubs two hours back!" Windy hollered above the water's noise.

Ike was asking where. Windy said:

"Runnin', last I seen; but I guess I beat her out. It was me takin' a shot at one cub; then them two others looms up an' I tore along the trail."

Mr. Devlin suddenly rose and stared affrightedly into the timber ahead.

When Ike had joined us he said it was sensible to throw a shell into the chamber, as brownies never give a person much time; and Uncle began to look like he did coming down the rapids, and kept his gun ready. Ike yelled to me that Windy was going to Seldovia.

"That's on Cook Inlet," said Uncle. "Gosh! Now my neuralgia is starting!"

"He goes to Kenai Town and takes a launch over," I said.

After a second he asked did Windy know the way, and I said well, he ought to by now, going twice a year.

"He could go down the Tustumena from his place; but he has to pick up Red Stanniford, and they ——"

"Well, sir, I've dropped my gold match box; and our Congressman gave it to me! Oh, Dev—hey! Come help me look for my match box! Go on, my love, you and Ike; we shall not be long."

Mr. Devlin slumped sullenly after him, saying the cramp was terrible; and Ike said:

"Guess they mean to sneak a shot in the arm, kid. I know Kel has a bottle cached on him; but he ain't said join us to me yet."

I decided if I found it I would bust it, because I am for Prohibition, and there shall be no hooch appearing on trips with me! After quite a while I stopped, declaring I would just go meet him and tell him so; so, snickering, Ike followed, until, near the water, he clutched me and cried:

"What's become of the skiff?"

"My land!" I said, staring. "It's gone! We pulled it up; can they have—Uncle Dan! Too-oo-hoo! Uncle!"

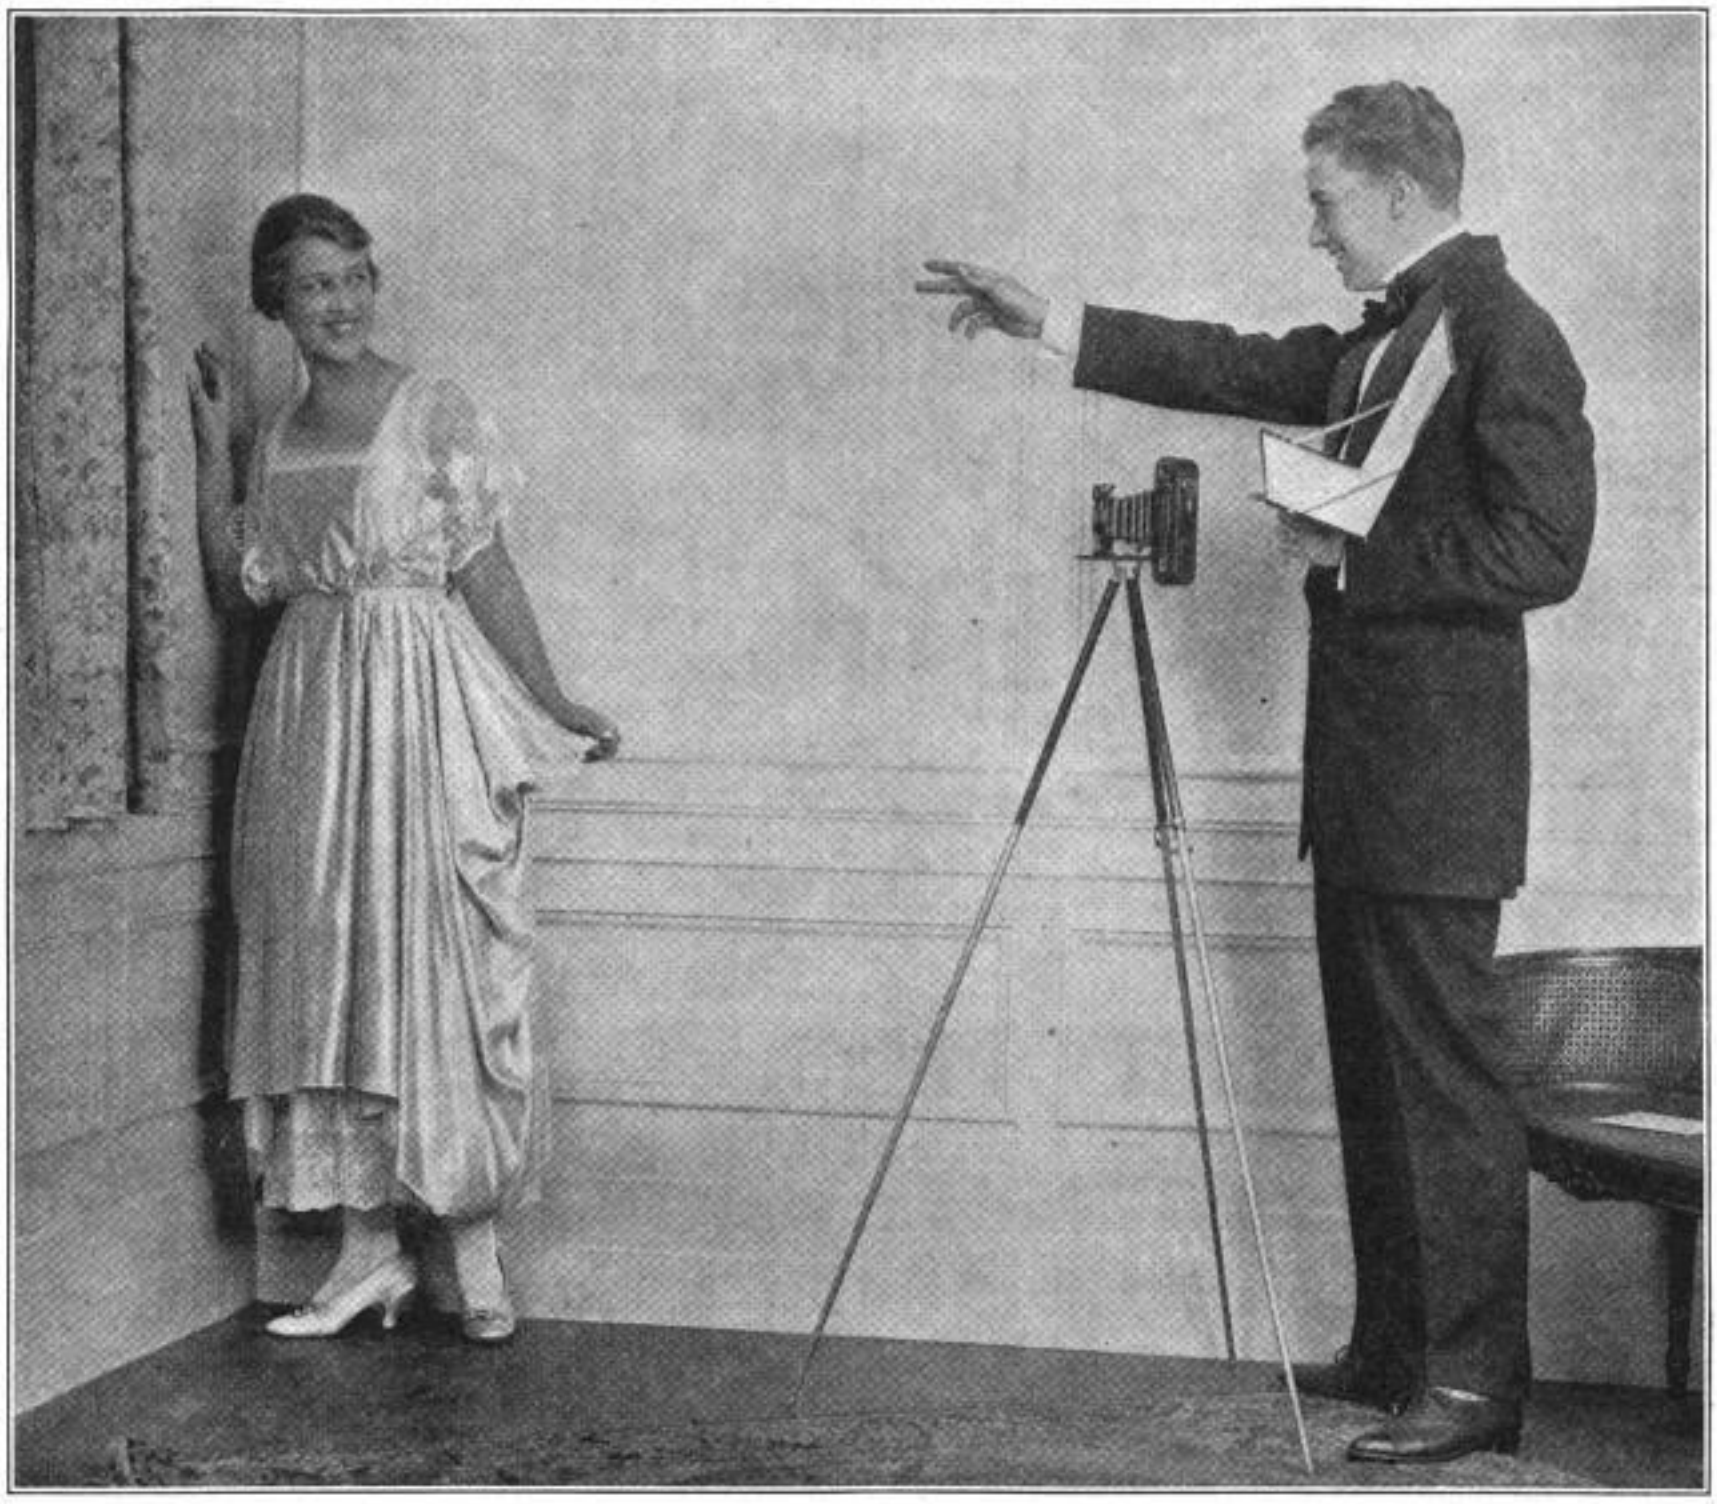
Nobody answered.

"Mighty mysterious doin's!" said Ike. "Lookit! She was shoved into the water here—kin they been swep' down? Kel is awful ignorant in a boat."

"Ike," I said, "I see the boat on the other side, drawn up by that drift tree. Now, Ike dear, you are a snide swimmer and I am a good one—oblige me by going into the brush and not looking until I get back and holler."

Golly! That old Kelly was cold! But I was hot enough inside to make me speedy, and I took a swift glance and rowed back, hustled into my clothes and told Ike to come on. I was too mad to talk, and we put up the boat and left our packs, Ike looking very serious until we reached two packs tossed to one side of the trail.

Then he grinned, for the foot tracks got farther apart from there, and they had taken water holes in jumps instead of going round. I laughed bitterly at a print in the snow of Mr. Devlin, falling flat as usual; and when Ike picked up and offered to me the last of his green hat feather I spurned the unmanly thing! Half a mile more and they had caught Windy Wagner, and their tracks showed a slowing.



"So they're goin' out by Kenai Village," said Ike, halting. "Betsy, up to now I been a gentleman an' not tattled from the huntin' field—I shot Devlin's moose; he couldn't hit it if you tied it!"

"And I shot Uncle Dan's," I said. "And now—now ——"

"Leave them two sissies go; they gimme a pain from the jump!" Ike said; and we sat down in the snowstorm and rested, Ike stroking my shoulder, because he knew how I felt.

It was pretty tough to think that the whole of Alaska would soon know that my own Pa's brother was just a fireside series!

The Power Behind the Thought

HE selects the keys. At his deft touch the silent power of the Robbins & Myers Motor sets in motion the intricate mechanism that records the figures his brain directs.

His mind is untrammeled by operating detail. He knows that the Robbins & Myers Motor is there to give dependable power to the thought he centers on the work in hand.

Nearby is a boy addressing mail by means of the same sure power delivered by another Robbins & Myers Motor. A young woman operates a motor-driven typewriter. In the shop massive punch presses and other machines, big and little, are Robbins & Myers operated.

For assurance of this same silent, dependable operating efficiency, manufacturers of the better electrically-driven devices equip their product with Robbins & Myers Motors.

Their high quality standard demands the best. They realize the value of twenty-one years' experience in quality motor building.

They know that the name Robbins & Myers stands for dependability in motors—from 1/40 to 25 horsepower—for operation on all commercial direct and alternating current circuits.

Buyers of motor-driven equipment will do well to look for this mark of quality and guaranteed performance.

To manufacturers of motor-driven equipment we will submit sample motors without charge or obligation.

If you are a user of motor power, a manufacturer of electrical devices, or a dealer, more facts await you regarding Robbins & Myers service.

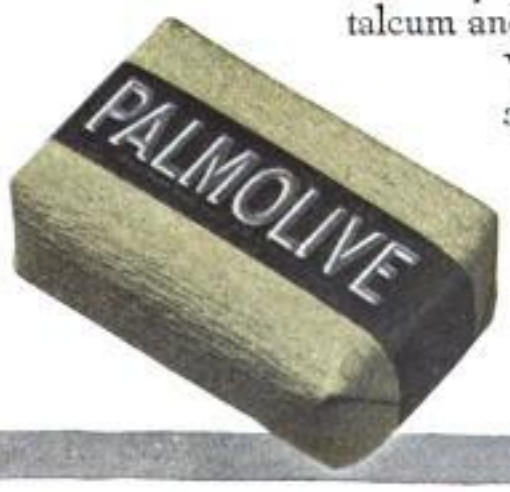
Where the First Olives Grew

THE story of Palmolive begins with the history of civilization. It dates back to ancient Syria, where the first olives grew. Here merchants came for the oil, rare and costly, which the aristocrats of old-world times considered the greatest of all toilet luxuries.

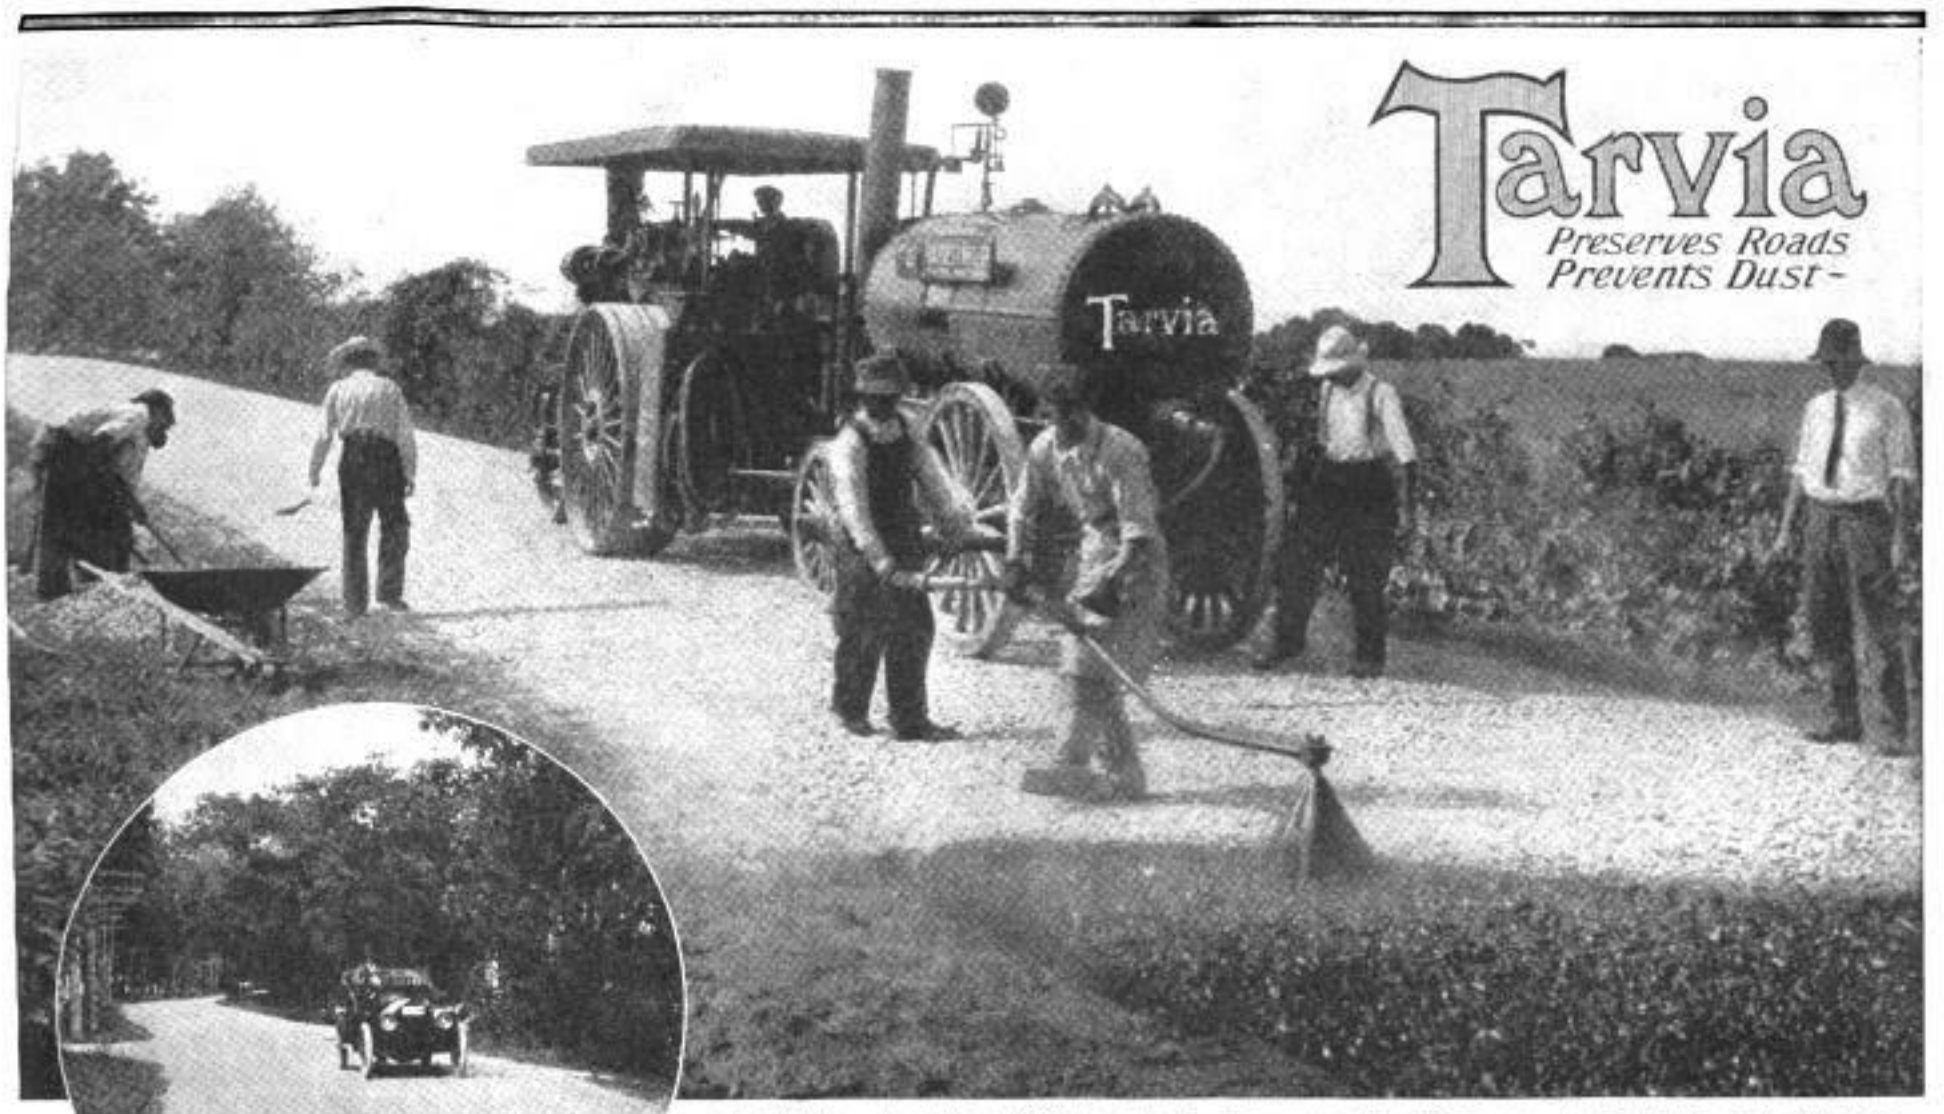
For the value of Palm and Olive oils as natural cleansing agents was discovered in the early days of Egyptian splendor. They were used by Cleopatra—prized by the luxury-loving Greeks and Romans.



It is these same oils—mild, soothing and beneficial—which are the principal ingredients of PALMOLIVE. You enjoy the modern perfection of an age-old luxury in every wholesome, fragrant cake of

PALMOLIVE SOAP

Made in an up-to-date factory where every manufacturing process is scientific, four cakes of Palmolive are produced every second and shipped to all parts of the world.



It is the great world leader of the Palmolive line of toilet specialties—shampoo, powder, cold cream, vanishing cream, rouge, lip stick, talcum and shaving stick. All for sale everywhere.

Week-End Package, containing seven Palmolive specialties, mailed for 25 cents in stamps. Address

B. J. JOHNSON SOAP COMPANY, Inc.

The illustration shows "Tarvia-X" being applied under pressure on the wearing course—at this step the road is about half constructed. The view in the circle is the finished road. Note that the speeding auto leaves no trail of dust.

Finished Roadway at Green Lake, Wis. Constructed with "Tarvia-X," penetration method, in 1913. Note smooth, dustless surface.

Has *Your* Community a Good Roads Program?

MOST municipal engineers in the large centers have what they call a "Road Program"; that is, the plan for all the streets and roadways within their jurisdiction covering from three to five years or more in the future.

In the smaller cities and towns such a paving program is occasionally prepared by outside consulting experts.

They come in and make scientific studies of the traffic on various streets—the grades, the kind of materials that are available, etc.

Then they lay out a complete scheme calculated to keep the road department working for many years ahead towards a well-defined objective of a perfectly-paved town.

More frequently, however, no program is followed and roads are built and maintained by rather loose and costly methods.

Every town, no matter how small, ought to have a definite road program.

Every county ought also to have one.

Roads should not be built in a patch-work, haphazard fashion, for the only result of such a policy is stretches of good roads interspersed with stretches of bad roads.

As a chain is no stronger than its weakest link, so a road is only as passable as its poorest parts.

Therefore, alternating *good* and *bad* roads are a costly abomination to all who travel over them and all who pay taxes for their construction and maintenance.

Our Service Department has persuaded many towns to work out a systematic road policy; because we have been able to demonstrate that great sums of money can be saved by so doing.

A system of tarviated macadam—that is to say, macadam that has been bonded with Tarvia to preserve the surface and make it automobile-proof—is an almost indispensable part of every Good-Roads Program today.

Tarvia roads are not only low in their first cost, but exceedingly low in maintenance cost.

Once a town or city adopts the policy of building Tarvia roads it rarely goes backward, but the mileage is increased from year to year.

The result of such a policy is a town where the roads are dustless and clean, the property values advancing, the road tax low and the taxpayers enthusiastic believers in and boosters of Tarvia.

There are several grades of Tarvia and a dozen methods of using the product.

If you are at all interested we should be glad to mail you an illustrated booklet showing Tarvia roads all over the country that are giving the maximum of service and satisfaction at a minimum cost.

Special Service Department

In order to bring the facts before taxpayers as well as road authorities, The Barrett Company has organized a Special Service Department, which keeps up to the minute on all road problems. If you will write to the nearest office regarding road conditions or problems in your vicinity the matter will have the prompt attention of experienced engineers. This service is free for the asking.

If you want *better roads* and *lower taxes*, this Department can greatly assist you.

GMC Trucks Give Year 'Round Dependable Service

Neither winter storms nor summer heat can stop the haulage of business houses equipped with GMC Trucks.

Every day in the year they afford a better, more efficient, more economical means of moving goods.

More tonnage is carried—more ground covered—customers are better satisfied—and your business is *advertised,* not criticised because of your delivery methods.

GMC Trucks are being selected by many experienced truck buyers in preference to all other trucks, because of their practical, common-sense construction, their utter simplicity and their easy accessibility.

They are chosen because truck buyers in all lines of business have come to realize that GMC Trucks are unexcelled in pulling power, and in their ability to give continued, dependable service at reasonable operating and maintenance costs.

There are thousands of GMC Trucks in service in more than 200 lines of business. Their performance stands as visible evidence of what *you* may expect from GMC Trucks.

GMC Trucks can put your business on a better, more reliable, more profitable basis. See the GMC dealer in your locality, or write TRUCK HEADQUARTERS for complete information regarding the GMC line.

"Let your next truck be a GMC."

We have just issued an illustrated booklet telling of the recent transcontinental trip made by a GMC Truck. Write today for a copy.

THE HOUSE OF CRAIGENSIDE

By Richard Matthews Hallet

ILLUSTRATED BY HENRY RALEIGH

Behind the Rusty Pendulum Was a Little Pug-Nosed Idol of Green Jade

THE house of the Craigensides had loneliness and terror written plain on its pillared front—for it is certain that houses, whether by chance or of design, do convey something of the mysteries of human expression. It was a solid, four-square house, flanked by funereal cedars, and bearing on its roof and within its pediment a quantity of ship's scrollwork. The pediment itself was supported by six marvelous fluted pillars with ornamented capitals; and in front of each of these pillars crouched a teakwood dragon, with mouth wide open and battered wings half raised. These were the spoils of one of Jared Craigenside's last adventures in the East; and they formed a guard very suitable for a house of that tradition.

The ground in front of the house had been graded into terraces, which descended to the river's bank, and were connected by short flights of stone steps, worn monoliths which the action of frosts had cracked and upheaved from mossy beds.

The house sat fairly on the shoulder of a grassy dune, with Hodder's River flowing past on one side and the sea encroaching on the other. Thus the view everywhere was of water and sand, and more water and more sand. The sand appeared to copy the action of the water, as if the same sad devils of unrest had prompted it, and so it took the shape of ribs and ripples where the water teased it into animation, and farther inland reared up in sharp, white, sphinx-like mounds, whose crests and curves reflected with strange faithfulness the lineaments of the winds which fled across them. Made up of material blown about and sorted by the wind, those glittering Æolian drifts were never constant, and so the coast could never establish itself in equilibrium with their activities.

The prevailing winds in Dockport blew, at the time of which I write, parallel to the coast, northwest and southeast; and in consequence the dunes were high and numerous, tossing surge on surge, until they were shattered and cast down by the flanks of the great sea cliffs which extended to the east of Dockport.

The dunes were desolate; but they were not less beautiful than desolate. They were adapted, both in their forms and in the spirit which seemed to animate them, to reciprocate the eternal vicissitudes of the sea. They absorbed color as a sponge takes water, and the least change in atmospheric conditions meant an altering of their visual significance. They most usually exhibited a long, wind-wrought curve bearing from southeast to northwest, and on their northwest side were as steep as sand will lie. Along those curves, with their swordlike edges, the sand devils danced their whirling dances, and invisible wind sculptors produced momentary effects of whimsical genius, effects as strange as fleeting.

I speak thus particularly of the dunes because I can never think of the house of the Craigensides except in its connection with them. If the dunes might be said to reciprocate the prowling spirit of the seas, then the house no less reflected the solitary arbitrament of the dunes, which alone might read the dark riddle of its destiny. As the wilderness, however often driven back, creeps up on the cabin of the pioneer, so the dunes encroached on that house of doubtful omen. They allied themselves with the winds to form sand blasts which poured against the hand-carved seraphim on the roof and rendered the expressions on those wooden faces indecipherable. In tiny grains and invincible atoms the sand sifted in upon those sunken floors. It was hurled through cracks in the splintered paneling of the great front door, and found a resting place in the folds of Oriental stuffs which hung within. It rattled into the maw of the huge fireplace in the sitting room, fled into the wide mouths of two old brass-mounted dueling pistols which lay crossed on the mantelpiece, and was prevented from insinuating itself between the window sashes only by means of huge rolls of red cloth stuffed with sand and laid close to the panes.

"It takes sand to fight sand," Mercy Cobb said gloomily to me one day with a glance out of the window at the menacing dunes. "They are coming to snatch at my old body," she would add in lower tones, "like ravening hounds, but I'll defeat 'em of it yet. Not that it makes a difference to me where men lay my old bones when I am done with them—and the Lord have mercy on my soul that day—but I vow I have sat here so long looking at them that I have an appetite against them, as some people have an appetite against onions."

She sat then, as almost always, in a great rocking chair with a wide horsehair back. She was a stern little old lady with an implacable nose and sallow features. She dressed always in some stiff black material that shimmered, that crackled. She was an old lady cramped into a beetle's case. On her head she wore a flat black ribbon fashioned into a knot exactly square. Like the lady in a hideous old crayon portrait which hung yellowing in the hall, she wore on her withered lip a slight but perfectly defined black mustache.

"They will cover the tomb in time," she said, returning her piercing old eye to the blazing rounds of birch laid across the firedogs. "And Amos would have wished it so."

She had reference to the family vault of the Craigensides, which had been built into a rock ledge at the edge of the dunes. She herself was not a Craigenside, "nor any part of them," she might have said, but her affair with Amos had all but made her so.

Years before, in company with two sisters, she had undertaken the task of keeping house for Amos Craigenside, then a rising shipbuilder and navigator. It was about a year after the death of his first wife that the unscrupulous old seaman had hit upon this dodge of importing three maiden ladies to keep his house in order, and to compete in ministering to his comfort when he was home from foreign voyages. It was a complete success, from the point of view of Craigenside. He did not have to lift a hand. They read his wants before he could so much as utter them, with the mysterious divining power which only such female slaves acquire or possess.

After some years one of the two sisters died; but at once on her decease the other two pitched in, as the expression is, competing with twice their former energy and now with redoubled hope and rivalry. And so the old pirate was hardly less well served than before. By this time it must have been understood between the three of them that the

Digitized by Google

survivor of the two servitors who were working their fingers to the bone in his behalf might in time aspire to privileges beyond those of mere housekeeper and drudge. But when, in the fullness of time, Mercy had a clear field, it availed her nothing. Her employer had treasured up for her no tenderer affection than he was prepared to lavish upon the brazen mermaid which served as a knocker on the front door, and went away very shortly upon another foreign voyage.

II

MERCY COBB had the reputation in the village of a Tartar. "She's a Tartar" were words often on the lips of citizens of Dockport. And strangely enough, though no one thereabouts had ever seen a Tartar, no one was at all in doubt as to what the main characteristics of Tartars were. Mercy was looked upon with that species of awe usually reserved for mild-eyed old seamen who have a name for having been in their day among the most intractable despots of the sea. "She's a bad one to cross," people muttered. "She knows more than she will say" was another utterance dropped with a slanderous intent.

She was certainly a mysterious and awesome old lady. On windy days I used to find her in the kitchen, her legs thrust in at the oven door and her rusty black skirts hanging down like a harpy's wings. Her invariable query then was, "Where's the wind?" with a pious hope thrown in that it had hauled round into a quarter more favorable to her "cold old bones." She was a seagoer herself, and my innocent unconcern as to the prevailing wind evoked in her a slight contempt. She had with her as a constant companion a cane, made out of the vertebræ of a small shark, wired together, and equipped with a handle in the shape of a pair of jaws filched from an enormous albatross.

Why Should Ruel Craigenside Stand With a Slack Jaw and Glazed Eyes at the Mere Flashing of a Lens?

It was not, however, my interest in the Tartar which drew me time and again to the house of the Craigensides, to the neglect of my duties as special officer at Silver Glade. There was a girl in that establishment—Jane, the granddaughter of Amos—who had caught my fancy from the first. I fairly lost my head over Jane. I chose any pretext and any hour to absent myself from the amusement park, where I belonged, and went ostensibly to sit at the old lady's feet and drink her tea, actually to cast sheep's eyes at Mistress Jane. She had very beautiful dark eyes, it is certain. The head was a noble one from which these eyes looked out; the lips full and red, the chin delicately square; but it was a face whose whole implication could be changed in an eyewink, a certain shadow of melancholy then being lost in a blaze of unexpected light, a certain laxness within giving place to an impetuous fire.

Her father was dead, but she had lived her early life on his ships, and she held herself like a sailor. Her movements exhibited a sinuous ease, with more than a hint of that unobtrusive power in the limbs which, from long training, can leap forth in a flash, like a slavish imp, and fall back again, its residence in the very marrow. This power was noticeable in the ease with which her smooth arm swayed over the table, in the deftness with which her long fingers dealt with teapots or laid hold upon the stems of flowers, and, more fancifully, in the reticence which enabled her tongue, when it did give utterance, to do so with discretion and a full balance in the meaning. But a wistful light was often in those dark eyes.

"Look at her there," said Mercy one day. "Every sigh takes a drop of blood from the heart, it is said. I declare I wonder there is any blood left in that girl's body. If it wasn't for her full constitution I wouldn't answer for her."

The girl had not heard us. A little later, when I threw myself at her feet, she yawned and said distractedly: "I feel this moment as if I could sleep away my life."

"Then," I said, "let me be enchanted, too, so that we may wake together."

"What's all this talk of enchantment?" said Mercy sharply. "Have you gone back to fairy tales again?"

"Yes, I think I am enchanted," said the girl with a sudden energy. She snatched back the wide, flowing sleeve from her arm and laid it in the dragon's mouth.

"Bite!" she cried, regarding the beast with slanted eyes and an air of ironical impatience. "I beg of you, good dragon, do something with your great ugly mouth besides yawn, for I assure you it is infectious, and I shall yawn until I fall into it one of these days if you don't stop."

But the dragon, glaring seaward with a consuming ferocity, forbore to bite.

"You see, I am charmed," she said whimsically. Her white arm lay inert and flattened between the weather-beaten jaws.

Her eyes looked into mine.

"How shall I break the spell?" I asked eagerly.

Her countenance waned again, and she murmured: "Ah, Mr. Policeman, that is never in your power."

"You say that with a very special meaning," I returned. "But I see you don't mean that I shall understand you more fully."

"Oh, I wish you might," she cried, "but I do not know my own meaning, I'm afraid. Tell me, how are you affected by this house?"

She looked swiftly at the Tartar, who had fallen asleep, with her aged fingers knotted about the creased pink jaws of the albatross.

"It has a flavor of its own certainly. If it were deserted, and I happened on it at a late hour of the night, I should think it might be haunted. But with you in it ——"

"Bewitched, at the very least," she cried as I hunted for the word. "Nothing short of that will do. Look at those horrible mutilated faces in the eaves—how they stare and spy one out. And then that terrible cast-iron hound, and these rusty balconies and tall windows. I have always been afraid of it, as if a shadow hung over it which had nothing to do with the sun. Look there—the gulls."

We both stared in their direction. They were in truth a gross and greedy flock, frowsy reprobates shrieking over that part of the current which bore in to them its choicest morsels. The wings of some were white and shining, but more were of a dirty gray, as if even self-respect had gone in the exigencies of their perpetual chiding flight, and the wrangling contests given rise to by insatiable hunger. Here they circled high, and there sank low to the water, with necks outstretched, skinny legs hanging and convulsive movements of the body preluding a dive. Now they sat on the tide, like wooden images of birds, or perched statuesque on the tips of black buoys; and again rose triumphant, in their talons shining fish, which they occasionally dropped and caught again in mid-air, swooping down with fantails spread. And at times they wrenched the food out of one another's very mouths, and went away squawking, their fat bodies tipsy in gusts of wind whose approach they had been too nearly concerned with their prey to anticipate.

It was a very feast of sensualists—wrapt, self-absorbed and inconsiderate.

"Did ever you hear it said," she began again softly, "that gulls are the embodiment of the souls of lost seamen?"

I shook my head.

"It is almost a tradition in this house. You know how superstitious sailors are. Look—how aimless. They toss and turn and are whirled like leaves in Tartarus. I suppose it isn't a pleasant thought in the least, and yet I often dwell on it."

"See them try to come nearer on the wind, like so many drunken fools," I said.

"And they never go beyond this house," she added. "They cluster over the roof, but they never pass beyond it. And now, look there, at their very head, do you see the dirty one with a loop hanging from his neck? He has got caught in a weir somehow, I suppose; but Dave Crooker says that that man was hanged by the neck until dead. He went after it with a shotgun, but it bears a charmed life. There! It's directly over us."

The ugly gray bird passed overhead with motionless wings, and a perceptible loop was hanging from its throat. The girl's head had fallen back; her lips were parted.

At that moment the halting noise in old Mercy's throat ceased. She opened her black eyes, renewed her grip on the queer cane and started forward in her chair.

"Where's the wind?" she muttered hoarsely. It was her customary question on awaking; but this time before answer could be made she heard the gulls shrieking overhead.

"There's a pack of ragamuffins if ever there was one," she continued. "Will nothing satisfy them? I have thrown out old fish enough in all conscience to quiet them, but they give me no peace. I declare it hairs me all up to hear them at it. When your uncle comes I shall set him on them with a shotgun, law or no law. They're possessed to take their stand over this house."

She sank back and closed her eyes again.

"She reads an omen into them," whispered the girl, touching her lip uneasily with her long forefinger. "It is harrowing to hear them. But it is nonsense to be wrought up as she is. We are expecting my Uncle Ruel any day now," she added with seeming irrelevance. "You know we left him in the Orient a year ago, to come home in a steamship."

At that moment there came a sinister hiss from the open hallway, followed by four jangling strokes of a bell. It proceeded from an odd-looking clock, perhaps seven feet tall, which stood in one corner swathed in musty draperies.

"Time and Eternity," muttered the old lady, half asleep. "Will I never get it out of my ears, I wonder?"

III

THIS clock had a history which well became the expression written on the pillared front of the house in which it was lodged. The story had its root in the lifetime of Jared Craigenside.

Jared was the first shipbuilder, the first of his race to have ambitions beyond those of a mere navigator. It was he who established the great shipyard in Dockport, whose very bedlogs had now rotted away. It was Jared who built the family tomb and set the dragons on the lawn to guard the house. He became the first aristocrat of Dockport. Many men living in our day could remember seeing the old gentleman stride over the dunes in a green cape with a black felt hat pulled well over his brow and his white beard blowing in the wind. He was the very figure of a shipbuilder—stern, masterful, decisive in thought and act.

Such men are often more liable than others to the tricks destiny plays. He grew old. His faculties deserted him by slow degrees; and having no son he took into partnership with him a nephew, Amos Craigenside. This act was fatal to him. Amos in time found a way to question the acts of his old partner; suspicion was cast on Jared's books; an order issued from a court of equity to compel him to produce these books or go to jail.

When old Jared's eye fell on this order he clapped on his beaver hat and walked into the jail with defiance written in every line of his old body. And there he stayed

Digitized by Google

until his incarceration became so great a scandal that men whose fortunes he had made could no longer stomach it. He was released, only to find that Amos, by crafty management, by sales of partnership land and by secret sales of ships reported lost, had swindled him of all he had.

Old Jared was forced to take a tiny cottage on the edge of Dockport; and there he made a living by compounding drugs and nostrums. One day Amos looked through the window of his shop, and saw him mingling his ingredients.

"What have you there?" asked the younger man abruptly.

"This is an acid," said the old man. "This is the sort of acid that will remove the dark stains from a man's conscience. Will you buy?"

"You are an old wizard then," said Amos. "In another age you would have been burned at the stake for strewing curses."

"Curses?" cried the old man in a fury. "Where is the curse in all the world bitter enough to call down on your head? You are the viper I nourished in my bosom. I took you from nothing, I can bring men aplenty to testify if I like—I brought you to my house, I taught you a trade, I made a man and a builder of you. And now you think I will come on my knees to you in my old age. Gall and wormwood, may you know the taste of hell at last."

The younger Craigenside was staggered to find so deep an enmity lurking against him there; but he went off laughing.

Before long Jared hauled to his premises a load of teakwood boards; and when his nephew came by again he had a coffin built and laid across two saw horses in front of his house.

"So! You drive the nails in your coffin," said Amos.

"You have done your part already," returned his uncle.

In a week he had a second coffin laid beside the first. When next they met the nephew said:

"You are very kind to be looking out for my comfort in another world."

"Comfort," muttered the old builder. "A curse on you all, and may you be driven out to squawk like those gulls yonder is the best wish I have for you. I give you that box with my earnest prayer that it will close over the last of the Craigensides, and extinguish the house—root and branch."

Amos took the coffin in an uproarious mood. For a long time it was up-ended in a storeroom; but some time after Jared's death he had a notion, as he said. He stood the great box on its end in the hallway, and set the head of a grandfather's clock on its top, with a hole bored for the pendulum rod.

"There we are," he said. "Time and Eternity together, and they make a fine race of it."

It stood there for many years—until the time of which I write, indeed. Sometimes, when he was home from foreign voyages, he would stop his pacing in the hall, clasp his hands behind him, and grin tolerantly at Jared's gift.

The cracked yellow dial affixed like a death's-head to the mournful brow of that upright receptacle seemed to grin back at him, as if at a joke which had a meaning between them alone. Over the dial hovered a full-rigged ship, cut out of tin and set on the head of the pendulum rod. With every tick of the clock the ship plunged in a painted sea, and came no nearer than ever to the painted headland in the offing. So Time and Eternity were symbolized.

"Why do you tie one hand behind you by clinging so fondly to that contraption?" Mercy Cobb asked him more than once. "Your father went through life with a stuffed peacock in the corner that dogged every venture he made with bad luck, and that was bad enough. But here is something a thousand times worse, and yet you handicap yourself with it."

"I thrive on it," said Craigenside. "I grow fat on it, Mercy. 'One man's meat is another man's poison.'"

And yet it was a fact that almost from the very day on which Amos received into his house that fateful teakwood

I Did Not Like the Eyes of Mr. Smith. I Did Not Like Any Part of Him

case his fortunes declined. Shipbuilding fell off. The chips grew gray in his shipyards. Great broad flights of steps rose beside the empty ways, and no man ascended them. Several of his ships were lost.

At length, when there was very little left of his former estate except the bark Asphodel, old Craigenside decided to adventure into the Orient again. It had been the success of his early voyages there which had won him a partnership with Jared.

But the spirit of adventure looks with a bleak face on the desperate casts of old age. The times were not what they had been in the glorious epoch of the clipper ships. Freights were low. Moreover, cables had been laid and opportunities for private dickering with benighted peoples had nearly passed away. It was getting so that the captain of a merchantman was no more highly regarded than a shopkeeper.

Thus nobody in Dockport was greatly surprised when Mercy Cobb brought back the body of this man, in whose service she had slaved away her days, from the last of his voyages. How came he to die? There was no answer to be wrung from the set lips of that grim old Tartar. Some said that old Amos had taken Mercy with him on that last voyage because he had a premonition of his own death, and did not want to be thrown inconsiderately to the fishes. It was true that the old lady had once apprenticed herself to an undertaker, and knew something of the embalming art. At all events, she brought him back pickled in brine, it was averred by old sea-dogs in and round Dockport who had seen service in the Black Ball Line.

There were only the vaguest rumors concerning the cause of his death. In certain quarters it was affirmed that he had died broken-hearted because of the loss of so great a part of his estate; others whispered that the curse had fallen which had hung over him invisible for so long and that he had dropped in the full flush of health without a mark on his body. Still again it was argued that he had sold himself to foreign devils—a frequent practice, it is believed, among skippers of the older tradition. Dave Crooker averred that something like a banshee scream had been heard over that lonely house.

"Must have been the gulls," suggested some of his tormentors.

"What if it was gulls?" said the old fisherman mysteriously. There was more to gulls than met the eye apparently.

Nothing was really known beyond this, that Mercy Cobb had brought old Craigenside home, and with him his orphaned granddaughter Jane.

At the time of my installation as special officer at Silver Glade, old Amos had been dead a year. Indeed, it was almost a year to a day from the brief ceremony which consigned him to his rest beside the dunes to that summer's morning which marked the reappearance in Hodder's River of Ruel Craigenside, his one living son, who now brought the Asphodel to her old anchorage.

IV

OUR source for the greater part of this brief history was little Doctor Starr, the local medical man, who used to come on pleasant mornings to smoke a pipe with us on the water front.

"'Time and Eternity, gentlemen, hand in glove,' was how he put it," said the little doctor crisply.

He favored the bark Asphodel with a long, appraising scrutiny. She had dropped anchor in the river three nights previous to this, and now lay with her yards squared, canvas lashed down tight and decks deserted.

"And, gentlemen," continued the little doctor, "whatever the old man may have thought of it in his secret heart, it's not too pleasant a reflection to Captain Ruel, if you will take my word for it. I believe on my soul he'd throw the cursed thing on the tide, if he dared. Yes, it's come to that. The man doesn't dare. Superstitious as the devil, I suppose."

"You have seen him since his return?"

"Yesterday. They called me in on the old lady's account. He's an odd stick for certain. That clock struck ten as he was going out the door with me, and on the first stroke round he wheeled as if he'd been shot out of a gun. He straightened out quick enough, to be sure, but I had seen his antics. He's plain afraid of the thing, if the truth was known and told. Ah, here comes Dave Crooker. He'll back me up in what I say. Yes, and he'll do more, unless I'm much mistaken. Our old friend tells me he saw the mark of a ghost in the dunes yesterday—the ghost of Amos Craigenside, no less."

Dave Crooker, the fisherman, was approaching in a dory.

His long sculling oar, thrust out over the stern, churned up the water to a swaying motion of his wrist; his body was chronically bent, as if it had been cramped for years about the round of some huge spar. His blue eyes looked out warily over bronze cheeks. As the dory swung in under the bank, its yellow interior was seen to be spotted with shining scales, newly detached and silvery, like money which the sea had minted.

"Dave," said the doctor, "they tell me you have seen a ghost."

The little fisherman looked up with a forbidding air, which seemed to echo Montaigne in saying that it is folly to refer truth or falsehood to our own sufficiency.

"It suits you to laugh," he said, "and I'm glad for you—I'm glad for you. I've always contended that those without brains were the happiest on the whole. But some are never to be learned that things come to pass here below never found in print."

The old physician twinkled.

"Ghosts, for example."

"If I believe in a thing I ain't ashamed to say so."

"It's a serious subject, Dave."

THE SHRINKING DOLLAR BILL

Adventures in Kitchen Finance

By Forrest Crissey

CARTOONS BY HERBERT JOHNSON

WHEN a dollar bill at the grocery will barely buy a dozen strictly fresh eggs and a pound of first-class creamery butter—or falls a little short of covering the transaction—the family food budget achieves the sort of sporting interest that attaches to smashed records and grand championship performances. But interest in the figures of the food bill is far from impersonal to millions of family providers; for to those who are trying to make an unexpanded salary cover a swollen cost of living this subject has a tragic fascination.

Of course almost every official body, from the National Congress down to the food commissioner of Bird Center, is investigating. The search for the African in the food-pile is being conducted with the noise and frenzy of an old-fashioned wolf hunt, with the result that the innocent bystander, the Ultimate Consumer, is often hard put to distinguish between the voice of truth and the sound of the political tom-tom.

While the evidence of the official investigation is being prepared for public consumption it is interesting to attempt taking the family bill of fare apart to see what gives it wings. At the start, let this private investigation concern itself with the cardinal food necessities of the American table and tell what has happened to each one of them in this period of prosperity in the United States.

This adventure in kitchen discontent has touched the Atlantic Seaboard as well as the Middle West, and its information has been secured from what appeared to be the most trustworthy authorities available. Wherever possible the opinion of a recognized authority not financially interested in the sale of foods has been sought. On the other hand, it has not been assumed that the fact of being a food merchant—whether wholesale or retail—necessarily debars a man from telling the truth about his business. That is believed to be largely a question of personal equation; and, to the best of his ability, this point has been carefully considered by the writer in selecting sources of information not to be classed as disinterested.

As bread is the staff of life, suppose the searchlight of inquiry is first directed upon the family flour sack. What has happened to send the price of this foundation food from a former level of about $2.90 a hundred pounds to the present altitude of $5.10? Under ordinary circumstances there is nothing highly exciting to the average citizen about a sack of flour; nor is the housewife commonly inclined to read crop statistics with any alarming amount of eagerness. But with flour at $5.10 a hundredweight and the wheat from which it is made hovering dangerously near the two-dollar mark, both the family provider and the head of the household commissary department are able to stand for a few hard facts, expressed in eloquent figures, in order to understand just what has happened to the staff of life.

Fat Years Followed by Lean

PROBABLY no man in America is better able to answer this question with authority than B. W. Snow, the crop expert, whose forecasts are followed by the whole grain-dealing world. Here is the answer to the present record price of flour as seen by this keen crop analyst.

"When the war broke out in July, 1914," says Mr. Snow, "wheat was selling well below one dollar a bushel, and flour, of course, was upon the same basis. The wheat crop of 1914, which was practically made when the war occurred, amounted to 891,000,000 bushels—and this was a record figure for wheat production up to that time. The pressure of the apparent oversupply forced down the price of cash wheat in Chicago in the early part of July, before there was a sign of a war cloud as big as a man's hand, to 77¾ cents a bushel. This price, which made a correspondingly low price for flour, was based upon the immense surplus of production above our domestic requirements and apparently above any possible export call.

"With the convulsion in Europe, the whole situation as to our supply of breadstuffs and their prices was instantly changed. War is always destructive and wasteful. In addition to this natural condition, the European alignment was such that it instantly shut out from the world's market Russia, the greatest wheat producer in the world. Instead of a big surplus beyond the requirements of the importing countries, the world was instantly confronted with a situation in which, in spite of our large crop, the importing countries were certain to find it difficult to meet their requirements, because the great Russian surplus was wiped out, so far as availability was concerned.

"Prices immediately climbed because of the added foreign demand upon us; and in August, 1914, contract cash wheat sold in Chicago at $1.27 a bushel, or an advance of fifty cents a bushel over the low point in July.

"Fortunately for this country and the world, the year 1915 was marked, both in the United States and in Canada, by the most wonderful wheat yields on record. We produced and harvested in the summer of 1915 a wheat crop of 1,025,000,000 bushels, or 134,000,000 bushels more than the record-breaking crop of the previous year. At the same time our northern neighbor grew 376,000,000 bushels, which was more than two ordinary crops in one.

"Roughly, in 1915 the United States and Canada produced 350,000,000 bushels more wheat than they grew in the remarkably prolific year of 1914. This enormous increase was, of course, offset, so far as the world at large was concerned, by the failure of the countries of Europe to produce their normal supply. With Russia still locked out of the commerce of the world, the importing countries drew upon North America for their total requirements beyond the usual contribution from the Southern Hemisphere. Nature was so generous in 1915 that we were able to meet the food requirements of Europe out of our own prodigal abundance without prices showing extraordinary inflation. Indeed, in August, 1915, when these enormous crops were practically a certainty, the cash price of contract wheat in Chicago was again as low as ninety cents a bushel, and at no time after these crops were available was the price in Chicago above $1.31 during the last six months of the year 1915.

"The high price of bread which has ruled in the last six months of 1916, and has roused the average housewife to a blind resentment of its pinch, is merely the logical, natural and inevitable result of the conditions which obtained in this country and in war-torn Europe."

According to this authority, in 1916 agricultural conditions in North America were the most radically unfavorable that have ever been known since definite crop records have been kept. The drought during the period of sowing in the fall of 1915 gave the plant a very poor start, and it went into winter with less than normal growth and with much less than normal vigor. For six weeks or more during the midwinter a heavy coat of ice lay over the fields of the Middle West, with the result that the crop was entirely destroyed upon 4,236,000 acres, or eleven per cent of the total area planted. In addition, the plants remaining upon the balance of the acreage were weak and unthrifty and not in a position to give a good crop result unless weather conditions after the first of April should be ideal.

To illustrate what this winterkilling meant, it is interesting to note that the states of Ohio, Michigan, Indiana, Illinois and Missouri—which in 1915 grew eighty million bushels more than their domestic needs for food and seed—were thirty million bushels short of providing for their own necessities in 1916. As the season advanced, it became evident that further losses in wheat were to be sustained, as insect life was unusually abundant. Mr. Snow asserts that it is reasonable to believe that the green bug in Oklahoma and the Hessian fly in Kansas destroyed from twenty to thirty million bushels of the crop in those two states.

Conditions did not improve as the season progressed. A liberal increase in the spring-wheat acreage gave promise, as late as July first, of making good in some measure the loss in winter wheat. On the ninth of July, however, Mr. Snow spotted the black rust and made the first announcement of its presence in the spring-wheat territory. This scourge practically destroyed the spring-wheat crop upon millions of acres and reduced a promise of nearly three hundred million bushels on July first to a final harvest of 158,000,000 bushels of thin, lightweight, shriveled grain. The loss of the crop in Minnesota and the Dakotas was without precedent in the history of American agriculture. These three states, which in 1915 produced 283,000,000 bushels, in 1916 produced only 88,000,000.

Decreased Production in Europe

THE same scourge swept over the international line, and in three weeks worked a like destruction upon a promising Canadian crop, leaving Manitoba, Saskatchewan and Alberta only 142,000,000 bushels against 304,000,000 in 1915. The total wheat crop for 1916 in the United States was only 640,000,000 bushels, and the total crop for Canada was only 161,000,000—a total North American crop of 801,000,000 bushels against 1,401,000,000 in 1915. A drop of six hundred million bushels of bread-making material is certainly enough to account for quite a rise in price!

Coincident with this immense loss in North America there is a decrease in the production of foodstuffs in Europe because of military destruction and the withdrawal of men from the cultivation of the land. At the same time Argentina has had a wheat failure that is almost as severe as ours. It practically eliminates South America's granary from any part in supplying the world's requirements during the next twelve months. Though Australia and India have produced more than normal crops, the added amount that can be secured from those two rather small sources of supply is not sufficient in any way to offset the losses sustained in other parts of the world.

"Russia," continues Mr. Snow, "with her accumulated surplus of three years, is still locked out of the world's consumption. Under these conditions it is evident that the world is now upon a short bread ration, and that, in order to eke out until the new crops in the Northern Hemisphere become available, the world will be compelled not only to eat all that was produced in 1916, but to approach perilously close to using up the surplus held over from other years as a margin of safety against actual bread famine.

Digitized by Google

"The price of wheat, and consequently the price of flour, is, therefore, the natural and inevitable result of crop failure in this country and in the Argentine, and of war's direct *destruction*, and of its sapping of Europe's productive energy. The price of breadstuffs during the balance of this crop year will depend upon the necessities of human nourishment. Of course some substitution of other foodstuffs for bread is possible and high prices automatically control consumption; but the relief in this direction must of necessity be small, because, in spite of the present prices, bread is still the cheapest food with which human hunger can be satisfied."

On the score of exports this expert presents some startling facts. He observes at the outset that the dependence of the world upon North America for breadstuffs during the last three years is strikingly shown by the figures of the world's trade in wheat.

During the cereal year ending July 31, 1914—the year immediately preceding the outbreak of the war—there was put afloat from producing countries 666,000,000 bushels of wheat destined for the future requirements of the importing countries of Europe. Of this amount North America furnished 284,000,000 bushels, while Russia contributed 174,000,000 and Argentina 44,000,000. During the first year of the war, or the cereal year ending July 31, 1915, the contribution of exporting countries was 535,000,000 bushels, of which North America supplied 400,000,000 out of her enormous crops, Argentina 91,000,000, and Russia only 6,000,000, which came out by way of the icebound port of Archangel.

Who Can Blame the Exporter?

IN THE second year of the war the exporting countries put afloat 595,000,000 bushels, of which North America furnished 480,000,000, Argentina 64,000,000, and Russia only 5,000,000. The United States contributed 312,000,000 bushels in the cereal year of 1915 and 240,000,000 in 1916. The requirements of the importing countries of the world are this year probably even greater than last. Argentina is unable to send out any substantial amount; Canada will hardly have more than 110,000,000 bushels available for export; while this country, even by using up the accumulated surplus of previous heavy crops, can hardly send more than from 110,000,000 to 120,000,000 bushels without seriously drawing upon the safety reserve, which we must carry as a protection against bread shortage at home resulting from crop failure.

How much flour has been exported it is difficult to say. Certainly the total is immense. One wholesale grocer, who is a leader in all food exports, was asked whether he had anything to say on the subject of shipping flour and other food necessities out of the country. His answer was substantially this:

"Since the war began I've sold at least a million dollars' worth of flour to the fighting nations—and a lot of other stuff on top of that. When I came back from Europe, in 1914, one of my associates met me at the dock and asked how I was. My answer was 'Fairly well.' Instantly he remarked that he had hoped I should be feeling much better than that, because he had some bad news to tell me. His department had lost a lot of money—the other departments could speak for themselves. They did. The total loss was not far from a quarter of a million dollars. I had figured that almost the whole world was going to come to Uncle Sam for its food supplies. But it didn't. That was simply a case of bad business judgment.

"Did we howl? Not any! We just pocketed our loss and indulged in the philosophical reflection that it was one of the fortunes of operating on a large scale and selling with the market. There was no talk then about investigating the food merchants—not a peep! We had plenty of company on the wrong side of the ledger at that time, too—lots of it. But the big wholesale grocers who had made our mistake did as we did—waited for a later chance to offset their bad judgment of 1914 with good. That chance came with the continuation of the war. When I had an opportunity, at least partially, to offset my loss of 1914 by selling a million dollars' worth of flour to the agents for some of the fighters I naturally embraced it. The fact that the flour was to go outside of our own country did not, in my opinion, offer any reason why I was not fully entitled to engage in the transaction."

A New York wholesaler who does no exporting sketches the flour situation in these words:

"In 1915, as everybody knows, we had the largest wheat crop the country has ever produced. If things were normal we should now be enjoying the cheapest flour we have ever had. But the war created a tremendous consumption of American flour. The orders for flour from abroad have been terrific. They have taxed the transportation facilities from the flour centers and the ship facilities across the ocean. For instance, Italy had always obtained her flour supplies for the making of macaroni from Russia. To-day Italy is demanding our hard durum wheat for this use.

"Even in the event of peace it will take some time for prices to settle back to a normal flour level.

"Now about prices and profits: The profit is about the same to the wholesaler and the retailer, whether flour costs five dollars or ten dollars a barrel—not the same percentage, but the same net amount. If we make in our jobbing business, on the best-known brands of flour, thirty or forty cents, we get the maximum, and the retailer, governed by competition, is forced to sell that flour at about the same profit on each bag, whether the price is high or low. So the consumer isn't paying a great profit—hardly any profit at all when you consider the amount of investment involved. The consumer may be disinclined to believe this statement; but it is true, just the same.

"Flour is one of the great staples which custom has decreed must be handled by wholesaler and retailer on a margin of profit so narrow that it is often a vanishing quantity."

Now let us consider the lowly spud, which at the present moment is about the proudest thing that rides in the grocer's delivery wagon. The humility that once distinguished this popular tuber is now a fast-fading memory; and if the price of the potato climbs much beyond its present dizzy altitude of two dollars a bushel or better, at the corner grocery of the country town, it bids fair to burst of its own importance without the aid of the oven to effect that result.

To describe the potato as a hot favorite on the American table is to speak conservatively. Bread might be almost as safely subtracted from the daily menu of Uncle Sam's people as potatoes. The spud is the stable and unfailing foundation of the toiler's meal, while the "fancy baked" potato is among the most tempting delicacies obtainable by the wealthy. Our national taste is unanimous on the merits of this once lowly and bountiful vegetable; and consequently when the potato becomes puffed in price to a point that threatens to make it a "special" instead of a

"steady" on the tables of those who must live most carefully, the result may be mildly described as a household sensation of nation-wide scope. This condition now exists throughout the country.

Of course there is quite a wide variation in price between different localities, mainly due to good or bad luck in the matter of transportation; but the community that can buy potatoes for less than two dollars a bushel is extremely fortunate, and in many places two dollars and a half is the ruling price. The thrifty householder has no difficulty in recalling the days when better potatoes than are generally obtainable to-day were bought at twenty cents a peck, and it is not necessary to hark back into the remote past to find a period when they were cheaper than that.

This jump of more than one hundred per cent from the normal price of potatoes naturally means that there have been very decided and sensational happenings in the world's potato field—of which Uncle Sam works a large share.

Probably the potato crop of this country was never planted in a more unfriendly soil than that which received the seed in the spring of 1916. The spring was cold, wet and late, offering every possible chance for the seed to rot instead of sprout. Then came July and August with skies of brass and a record-breaking drought that seemed bound to reduce the earth to ashes. The third act in this climatic tragedy introduced a killing frost about a fortnight before anything of that nature was normally due.

The Short Potato Crop of 1916

ONE result was a potato crop of only 285,000,000 bushels as against 360,000,000 in the previous year—which was exactly the average for the five years preceding 1916. A shortage of seventy-five million bushels of spuds is not a pleasant thing for the potato-loving American public to contemplate; but that was only the beginning of the calamity that fell upon this favorite tuber in 1916. For one thing, there was great waste in that portion of the crop which did mature. Then war conditions shut the people of the United States off from the relief of importing potatoes, which has invariably been our refuge in seasons of shortage.

One of the shrewdest observers of the world's potato market is Mr. F. G. Urner, of the New York Price Current. Mr. Urner says:

"In former years of potato shortage we have always gone to foreign markets and secured ready relief by bringing millions of bags of potatoes from abroad—from Scotland, England, Germany. We couldn't get them in 1916. In 1908 and 1909 we had a severe shortage and imported into the United States from the United Kingdom 1,029,249 bags of potatoes, 168 pounds to the bag; and from the Continent—mostly from Germany—78,291 bags from October, 1908, to October, 1909.

"In 1908 the price of New York State potatoes was from $2.25 to $2.37 a barrel of 180 pounds, or containing three bushels. European potatoes that year brought from $1.75 to $2 a bag of two bushels and forty-eight pounds. To-day New York State potatoes are selling at from $4.40 to $4.80 for a barrel supposed to contain 180 pounds. But a barrel holds a little less than that—about 160 pounds. If European conditions were favorable we could have kept the price down thirty per cent below that."

It should be remembered that these prices are for large shipments—the smallest unit being a carload. According to a New York wholesaler, Mr. Philip C. Staib, potatoes are now costing retail dealers of the Atlantic Seaboard $5 for 160 pounds—or a little more than three cents a pound. These are sold to consumers at four cents a pound—sometimes for less.

"There is an easy way out from under the potato famine," declares Mr. Staib, "for those who wish to take it.

Digitized by Google

That is the rice route. Reputable scientists tell us that a pound of rice has five times the food value of a pound of potatoes. Personally I believe this to be true. To-day you can hardly find a grocery store that charges more than eight or nine cents a pound for high-grade rice. Compare this with potatoes at four cents!

"Rice is the cheapest important food commodity in the United States to-day. There was a big crop in 1916. Yet this food is being generally ignored by the American people, who commonly consider it as a delicacy instead of a staple vegetable—a material for the making of puddings and desserts and side dishes, instead of a full-fledged competitor of the potato. Comparatively few housewives, especially in the North, know how to cook rice properly. If they would learn right now they could cut the family potato bill in half, at least, and not miss the eliminated portion. In many localities storekeepers retail a good grade of rice for less than eight cents a pound."

The crop expert already quoted on other cereals has this to say of rice:

"Practically the one pleasant exception in the dark food situation of 1916 is the fact that the rice crop was one of the best ever known, yielding about forty-two million bushels against an average of only twenty-four millions for the last five years. Rice prices emphasize the general fact that the high price of foodstuffs this year with us is due to meager production and foreign demand.

"We are exporting rice liberally now. Up to the present time more than double the amount exported in the preceding year has been put afloat by us; but the increase in production has been enough easily to take care of this added strain. During the first ten months of 1916 we sold abroad 111,000,000 pounds of rice against 53,000,000 in the same period of 1915, and 35,000,000 in 1914—the latter being the normal situation prior to the war.

"However, the export of rice cannot be considered as greatly influencing home prices, for the reason that we have been importing upon the same liberal scale which has characterized our foreign policy in this product in other years, before the war. In the first ten months of 1916 we imported 208,000,000 pounds of rice, or 100,000,000 more than we exported."

Why Meat is High

TO THE average consumer of sirloin and "roast beef, medium," it probably seems a very simple matter to get the straight of the meat situation. This naïve view of our fleshly diet is not, however, held by any investigator who has ever made a sincere attempt to take the meat problem apart and tell the carnivorous consumer all about it in words of one syllable. Take it from one who has tried to do just that thing: Commercially speaking, meat is the most mysterious article of human food! Its path from the pasture of its nativity to the table of the consumer is beset by a most bewildering series of economic adventures, which have filled hundreds of fat volumes of court, congressional and other reports of hearings, voluntary and involuntary.

Therefore, any investigator who volunteers information on this complex subject will, if he is experienced, make his offering in a spirit of humility, and with the reservation that his findings are to be accepted as an evidence of his sincerity and industry, rather than as the last word on a subject which is clouded with mists of economic mystery well calculated to confuse and baffle the clearest and sanest students of this great industry.

Meat was never so low on the retail block that a considerable portion of the consuming public did not feel called upon to make some complaint on the score of its cost; but, with price of porterhouse steak hovering round thirty-eight cents and rib roast at thirty, more or less, the retailer has a constant opportunity to develop his explanatory powers.

Naturally he has learned the line of least resistance and follows it. He has found it a lot easier, as a rule, to pass the buck to the packer than to attempt to tell his kicking customer how supply and demand have conspired, by moving in opposite directions, to push up meat prices to levels never before attained. Besides, the man at the butcher's block likes to have his explanations believed.

There are two men at the world's greatest livestock market, in Chicago, who neither buy nor sell meat—save as they purchase for their private consumption—who know a lot about the causes that put wings to pot roasts, steaks, pork chops, and all other familiar members of the meat family. One is A. G. Leonard, president of the Union Stockyard Company, and the other is James Poole, of the Livestock World. There is nothing in keeping a hotel for meat animals or in reporting the prices those animals bring from day to day that should necessarily prejudice the outlook or warp the view as to the causes that have elevated the price of meats to record-smashing altitudes. Therefore, these men have been asked to state the situation as they see it and take it apart for the consumers' benefit.

In other words, following the fashion of this industry, the writer will pass the buck back to these gentlemen, who are considered competent meat experts.

Here is Mr. Leonard's size-up of the situation:

"In 1913 there was a very serious drought. Beef cattle were about all sent to market. Even the she cattle were sacrificed. Of course this resulted in a shortage of calves for the following year and for several years to come. In 1918 this loss will be about made up. Meantime there have been steady inroads upon the supply of young cattle. This and the shortage of breeding cattle have sent meat prices skyward.

"Texas is the great natural breeding ground, and there they have a calf percentage of ninety as against sixty farther north. They breed the cattle in Texas and then the calves move northward from there for feeding.

"The increased cost of raising feed has naturally increased the cost of feeding cattle. A certain Texan, who is a large operator and has been advocating local slaughterhouses, contracted for unborn calves, to be delivered at thirty-five dollars a head. This is an eloquent testimonial to the shortness of the supply. The prices paid for calves in Texas naturally forced up the price of cattle sent to the Corn Belt for feeding. The demand for meats in the East did not justify the high prices the Corn-Belt people were paying the Texans for their calves. Consequently the packer was buying meat at prices that were not profitable to the Corn-Belt feeders, who went up in the air because they were losing money. The packer will not pay the price the Corn-Belt raisers must have for their stock to pay out.

"The price of corn has been away up. We have paid as high as $1.12 a bushel for corn. It takes time for the farmer to learn to feed one-dollar corn to an animal, even though he gets better money out of it. His inclination is to close out and get the dollar. The heavy investment involved scares him. A man who sometimes feeds cattle came in here a little while ago. He was going to take two carloads of cattle home and feed them. He asked one of our men how much feed he would have to put into the cattle, and was told that it would take about four thousand bushels. He said 'Four thousand bushels—that means four thousand dollars. Good night! Nothing doing!' So, instead of feeding good cattle, he sends in a miserable lot, carrying twelve or fourteen hundred pounds. This is the era of light animals in the market. Hogs average about twelve pounds lighter than usual.

"Hogs have been bringing enormous prices. The reason for this is that the Canadian packers are taking our low-grade pork. They take a class of hogs they call 'singeing hogs.' These do not make the bacon we want. They are killed here and shipped across the border in dressed condition. This demand has maintained a higher average price for a lower quality of hogs than has ever before been had here. The quality of hogs is the poorest in market history at this season.

"There is no relief for the condition of the beef market to be found through mutton. Lambs are selling for $13.50, which is a sensational price. The singeing grade of hogs has forced up the price of the lower-quality pork. This same condition follows down along in the line of cattle. Mutton is substituted because it is not quite so high in price as the cattle and hogs; but it is not much of a substitute, because the supply is decidedly insufficient."

Figures That Tell the Story

"IF THE consumer would let one little set of figures soak into his mind he would have the meat situation where he could understand it. Here are the figures: In 1916 we had in this market fully 250,000 fewer cattle than a good average year will normally bring us. Other markets can match this. This situation is typical.

"There has been a tremendous increase in our meat exports since the war started. One reliable authority shows that, from July 1, 1914, to June 30, 1916, we exported 595,251,385 pounds of beef, while in the two years immediately preceding that period we sent out only 73,674,466 pounds. This means that we have multiplied our beef exports by eight. The same shrewd observer of cattle conditions—The Shoe and Leather Reporter—points out that from 1907 to 1915 the population of the United States increased fifteen per cent, while the number of our beef cattle diminished by twenty-eight per cent. Here are enough hard facts to make anybody understand why we have almost unbelievably high meat prices."

Mr. Poole, whose job is to observe and analyze the market each day, sketches the situation in these words:

"Everything has conspired to make meats high and scarce. A record-breaking crop of hogs is the one favorable circumstance. Otherwise we should have had a meat famine. Many years ago this Western country was full of cattle from Texas to Montana. Those were the breeding grounds. Settlers came and contracted this cattle range, changing grazing lands to farm lands. Sheep also helped drive out the cattle. Big cattle outfits found it unprofitable to continue their business. Most of them closed out. This raised the price of thin cattle and forced people out all along the developing and feeding line. Simultaneously came the advance in corn prices. A common price for corn in Iowa was twenty-five cents a bushel. In Nebraska they used to burn it.

"They used to feed cattle out here the whole year round. They almost literally bedded their cattle with corn. Steers used to come in here weighing seventeen hundred pounds. They dressed from sixty to sixty-two per cent. This week they are dressing from fifty-five to fifty-seven per cent. Seven Western markets in 1916 received 9,327,000 cattle as against 7,963,000 in 1915. That shows a decided expansion in beef production; but the deficiency in tonnage was such that they did not get so many pounds of beef as they did the year before. Most of the Southwestern states were filled up with poor Mexican stock. Montana had to get the dogy dairy cattle from Wisconsin and Minnesota. This is poor stuff for beef purposes. Calves, whose mothers were bred to produce milk and not to put on beef, are not worth feeding. Those calves are profitable to be slaughtered at about one hundred and fifty pounds. They were never intended to put on beef and the man who tries that game is going to lose money.

"Now about hogs: Last year in seven Western markets we had 25,500,000 hogs as against 21,000,000 the year before. But in pounds of pork there was a discrepancy of a million hogs. The average weight was only two hundred and ten pounds. The reason for this was that the farmers find it more profitable to market hogs weighing from a hundred and eighty to two hundred pounds than to attempt to put more weight on them—at least while corn is selling at ninety cents or a dollar.

THE MAIN-CHANCE LADY

You Will Perceive That You are Looking Upon a Kind of Symbol of Wealth and of Investments, of Security and of Sound Sleep, a Concrete Expression of Impregnability

By Cameron Mackenzie

ILLUSTRATED BY WILL GREFÉ

WERE it not for the fact that some years ago I moved away and only occasionally go back to Grantsburg, I should like to conduct, on pleasant evenings there, for the benefit of such strangers as you, maybe, a kind of private sightseeing tour of my native town. If I did I should not show you the "magnificent" waterworks or the "handsome" new Chamber of Commerce Building, as the boosting literature persists in describing them; or that brave attempt, Hopewell Park. The hotel clerk—anyone—can direct you to those; but only one born and bred in Grantsburg, one whose father and grandfather before him had been born and bred into the place, can exhibit to you the most interesting aspects of that amiable community.

If, however, you do happen some evening to be in Grantsburg, and are a stranger with nothing to do, do not flop yourself down in the listless lobby of the Commercial Hotel and attempt to kill time by rereading the Courier, or waste an hour watching a traveling salesman extracting bored monosyllables from the proud and haughty newsstand girl; but, instead, go out and walk up Main Street as far as Third, where you turn and go through to Maple Avenue. The houses there are mean and decayed relics of a former grandeur; but never mind—as you proceed on up to Norman Place the dwellings improve. Norman Place, you will observe, is short, and at the end of it you will find the foot of Gainsford Hill.

It is upon the Hill, let me explain, that the solid and intrenched part of Grantsburg resides. The families who live there are all of them at least well-to-do and constitute a compact, rather fastidious social group, to which blood and tradition are not altogether empty terms. Everyone there knows everyone else by familiar names; the middle-aged folks were nearly all boys and girls together. People say "The Hill" is playing bridge this winter or "The Hill" is doing that. All that saves the Gainsford Hill outfit from snobbery is the fact that its members are really excellent, actually well-bred people.

Now, stranger, having reached the beginnings of the Hill, start up the shaded sidewalk that runs along one side of the roadway; go past half a dozen or so substantial dwellings with low stone walls or iron picketings marking off ample grounds—the homes of Colfaxes and Hoyts and Stones—and continue your climb toward the top. Presently you will find yourself approaching a great, almost feudal granite pile, which, you will note, holds the exact crest. Proceed on up to its two huge granite entrance pillars, where the high, dark shrubbery does not obstruct the view, and pause and gaze in. You will perceive that you are looking upon a kind of symbol of wealth and of investments, of security and of sound sleep, a concrete expression of impregnability. That is Prothero Towers, the residence of Anthony Prothero.

Tony Prothero is my cousin; his father and my mother were brother and sister, and, though Holmes is a good-enough name in Grantsburg, Prothero is better. It is the *crème de la crème* of the Hill; for generations there have been Protheros there and they have always been of the best; they have often, in the past, been short on money, but never short on manners. Tony, the sole survivor of the name, is a small, slight man, with a gently fuzzy bald spot back to his crown, a harmless little black mustache, and with at most times a cheery manner, chamois gloves and a stick. He is known for what he is—a thoroughly clean, thoroughly likable, somewhat ineffectual individual, out of whom vitality seems to have been bred.

Continuing the tour, pass over the crest of the hill to an open space just beyond and look off away from the center of the town from which you have just come. The ground dips away into a valley and then in the distance rises again. On the opposite slope, and very probably through a thin veil of silver mist, you will see a spattering of numerous small lights, and maybe a trolley streaking out of them or into them. Anyhow, you will know that those lights signify human habitations, a community where, you will guess, there are stores and streets and schools, and the general paraphernalia for living and working and dying. That is the suburb of Prothero.

Six years ago that opposite hillside was wooded land. To develop it a company was formed, of which Tony Prothero was the president.

At that time my cousin maintained a somewhat ridiculous little real-estate office for such renting business as he had and for the management of what was left of the Prothero estate. He used to go there with fair regularity, but always found ample leisure to keep bobbing familiarly in and out of the homes on the Hill.

A group of men representing the five most substantial fortunes in town took up the suburban project. It is said in Grantsburg—and I used to believe it was true—that these individuals of wealth decided Tony was such a pleasant fellow that it was a shame he was poor; and they determined to make him rich. Once, under Tony's direction, the scheme almost hit the rocks, but these friends did not abandon the plan or forsake Tony; they put in more money and by dint of personal effort made the town of Prothero succeed, thus creating new fortunes for themselves and one for Tony too.

And now, my friend, if you're at all interested retrace your steps to Main Street and strike off into a totally different part of town. With a little inquiry you can discover Ridge Street. It lies almost as remotely as possible from the Hill; and as you stroll up its uninviting length take cognizance of its general character: the small cottages; the little patches of lawn for block after block! They are all identical—noisy children run about; men sit in their shirt sleeves on their front stoops.

There is no decayed grandeur here; at a glance it is a street of mediocrity and failure, and has always been, from the first. Proceeding, you will pass, probably unawares, a cottage in the heart of the general tastelessness, undistinguishable in any way from its neighbors; not marked or designated, but noteworthy, if you can find it, because therein was born, something like thirty-five years ago, a child named Madge King.

Her father was an inconspicuous individual, who devoted a lifetime of effort and a vast amount of shoe leather to the insurance business, and to the most sorry avail; her mother's innate gentility was all but smothered in poverty.

At an early age Madge married a man named Theodore Moulton and went with him to his home in a small community of the Northwest. She remained there for a decade. Concerning what happened there, or what her life there was during that time, she has never spoken; she has put a thick shroud of silence over the period. At the end of it she reappeared in Grantsburg, a widow, penniless and childless, and with the marks of cruel experience upon her face. And then the miracle of Madge's career began.

She was installed in Mrs. Graham's boarding house—one of those shabby dwellings in lower Maple Avenue. First, Mrs. David Colfax, wife of the president of the First National, took her up; then it was Mrs. Phillip Hoyt. Soon every door on the Hill had swung open to her, and with the lapse of a trifle more time she became engaged to and married my cousin, Tony Prothero, and is now the gay mistress of Prothero Towers and very nearly the ruling autocrat of the Hill.

In Grantsburg they will tell you that she is the luckiest woman in the world.

"A drunkard for luck!" I once heard her called; and it is her story that I want to tell. I got it from Tony upon the occasion of the dance the Protheros gave to celebrate the completion of the Towers. In a burst of feeling, natural enough upon the occasion and somewhat heightened by an ill-considered trip or two to his own excellent buffet, it sprang out of him between three o'clock and dawn.

It was toward the end of the evening, but before the guests had begun to depart. Having found myself alone near two deep French windows that opened upon the veranda, I had slipped out and, retreating to the rail, stood gazing in.

Near the window through which I had just passed I could see Madge. Her gown, cut far down the back, exposed a gleaming reach of dark, finely textured skin. Her jet hair was caught up snugly and trimly from the sturdy column of her neck. Beside her was young Tom Emmett, who, only a few years earlier, had come into his father's brewery millions. His ruddy, slightly grossened face was bent eagerly toward Madge. I could hear him begging her to dance, and I grinned, for I knew all about Emmett; he could barely exist except in the light of Madge's eyes and smile.

"Dance with my Tommy?" I heard Madge's vigorous tones ring with a laugh. "I never could refuse him!"

With a certain vivacious grace of her own, she turned and her profile was brought into view. There was not and never had been anything regular or classic in the outline of her features; but there was a lively piquancy in their irregularity, and her full, rich lips wore their almost constant smile. The two glided away, and from the veranda I could see her limpid, faintly anxious eyes roving here and there over Emmett's shoulder.

The music jingled on; couple after couple circled past; all the Hill was there; not one but had come in response to the summons from Mrs. Prothero. Madge appeared across the room; and the rings upon her strong, competent-fingered hand, pressed against Emmett's back, glittered and seemed to tell of her affluence and ease, of motors, of liveried servants, of soft food and drink, of all the creature comforts a full-blooded nature such as hers would crave.

At that I had fallen to thinking of her. There, radiant in the limelight, holding the stage's exact center, was the impecunious widow of a few brief years ago. Placing her meager beginnings in immediate contrast with her present position and riches, the thing seemed amazing. I was still

Digitized by Google

thinking of her and of the singular phenomenon of her rise in the world, when Tony stepped through the French window and joined me.

Immediately I saw that he had been cutting capers round the punch bowl, though generally he was a careful man with his drinks. He was not in the least unsteady or fuddled, but he was over-emotionalized and in a state in which, as I presently reflected, he would be prone to discover drama where he had never discovered it before. Without a word he leaned against the railing beside me. Madge, with Phillip Hoyt, danced across our line of vision. To break the silence, and because I had been thinking of her, I observed to my cousin laughingly:

"Some girl, Tony—that wife of yours!"

He did not reply and I glanced at him. He was pulling at his mustache; but I could see that he was biting nervously at his lower lip, and his pleasant brown eyes, usually so wide, were so pinched and squinted that there were deep fanlike wrinkles at the corners.

"Some girl?" he presently returned, and a little huskily. "My dear Clifford, you haven't half—not a quarter—said it."

"I've no doubt of that, Tony, my boy," I agreed, still smiling.

There was another pause, and then Tony said in a tense confidential whisper:

"I tell you what, Cliff, you don't know—nobody knows—what all this means!" And he shook his head significantly.

"Certainly," I agreed heartily. "It's a big occasion—a fine house ——"

"Fine house!" caught up Tony contemptuously, and regarded me fixedly for an instant before he lifted himself to the rail and went on: "Cliff, this house—this crowd—this party—those ——" And he flung an arm off toward the lights of the town of Prothero and added: "They're nothing—nothing, I tell you—nothing!"

"Nothing?" I echoed in a tone to humor him.

"No; not a thing. They don't make this thing—this dance. It's something else—something else an awful sight bigger!"

"It is, eh? What?"

He did not answer me, but, breathing hard, gazed into the room before us. Somebody halted Madge to say good night, and that brought Tony to his duties of host. He hopped from the rail.

"See you later," he said abruptly, and went in.

I felt that a lot of farewell handshaking would be a bore; so when I perceived that the party was breaking up I decided to take myself out of the way and, going down the veranda and into the somber hallway, carpeted with skins, I found seclusion in Tony's library, a spacious, noiseless room tiered with books, the bindings of which glinted softly, and settled myself with a magazine. I was rather curious about Tony's unusual outburst, but suspected that very likely his mood would have passed by the time the last guests had gone.

For perhaps an hour I heard motors wheeling up the gravel roadway to the door and the shouts and laughter of good nights. Then Tony came down the hall. There was something almost businesslike in the manner in which he opened a small cabinet, took out cigars, propelled a chair over toward me, placed a small stand for an ash tray between us and sat down. I could see that he was still agitated and that he had probably restimulated himself since he had left me on the veranda.

"Cliff," he began between puffs, as he held up a match, steadily enough, to his cigar, "I've got to tell somebody about this thing—I've just got to do it!"

"Careful!" I cautioned.

"Oh, no!" he hastened to assure me. "No scandal—nothing like that; just something that's—that's wonderful!"

"Surely it is!" I laughed, still puzzled. "You've got a fortune and all you could possibly want. It's wonderful! You and Madge are the luckiest folks I know."

I had spoken with the most innocent intention, but that word "luckiest" set Tony off. It brought him out of the engulfing recesses of his chair. He was perched on the very edge of the upholstery as he said excitedly:

"Luckiest folks you know! Not by a good deal! I'm lucky—perhaps; but Madge ——" He paused, waggled a hand in negation, and then said quietly: "No, not Madge! She's not lucky."

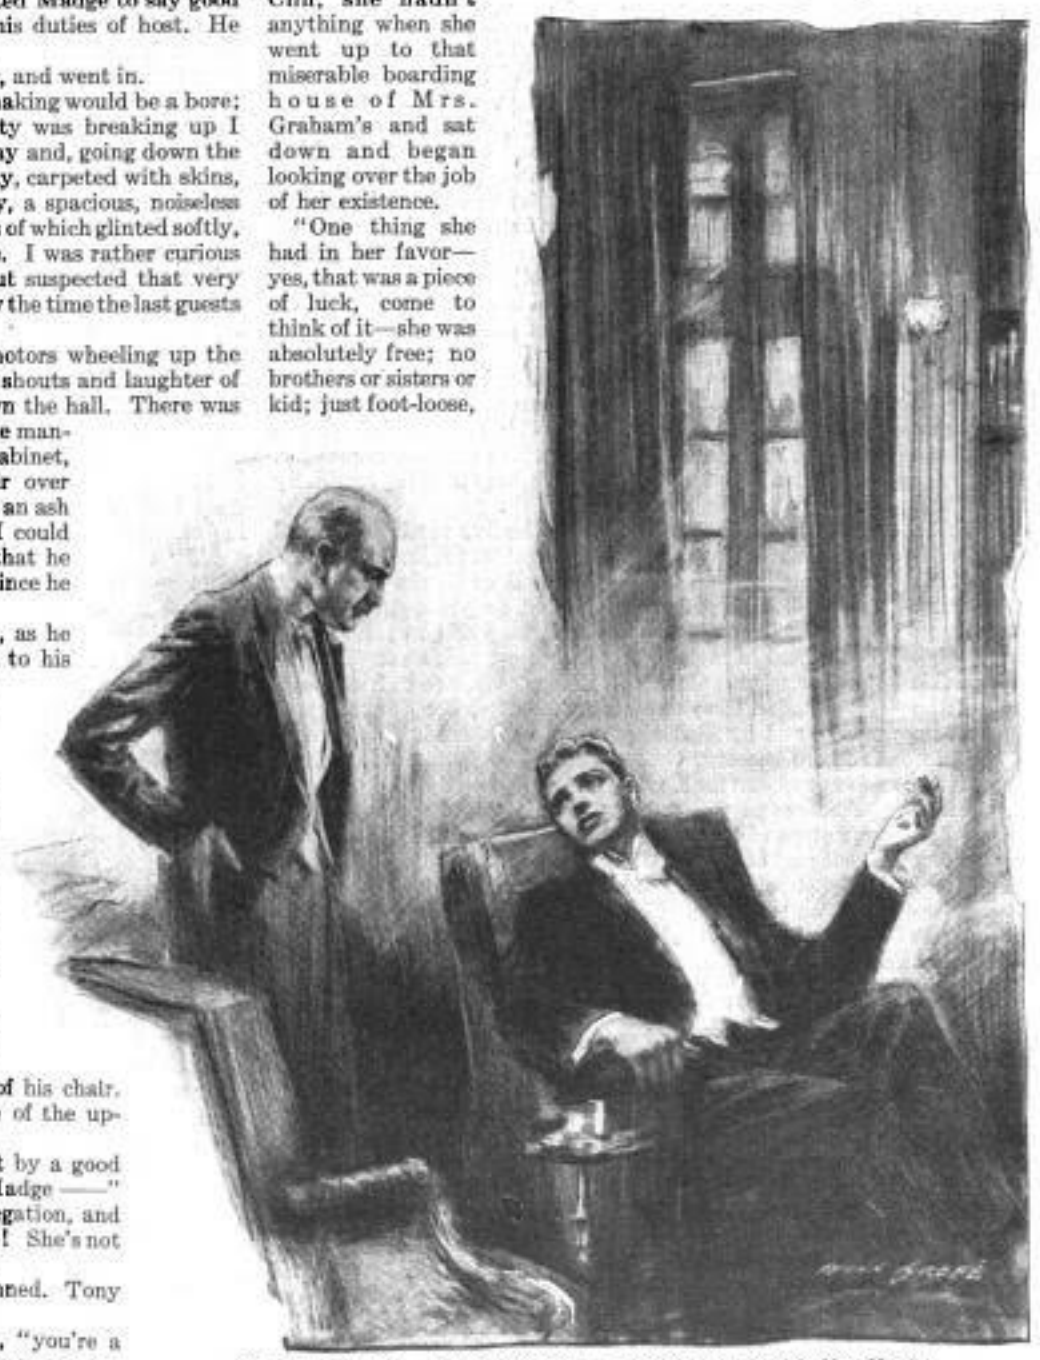
At the absurdity of this I grinned. Tony read my mind.

"Clifford," he said impatiently, "you're a fool! Sparrows may be fed crumbs or manna, or whatever it was; but"—and he shook his cigar at me earnestly—"but not quarter-of-a-million-dollar houses, a thumping bank balance, and simply tons of prestige. No, sir! Things like that, old boy, simply don't happen by—luck!"

He uttered the word with scornful emphasis, and then, hitching his chair close to me, said tensely:

"Clifford, she planned this whole game!"

"Oh, impossible!" I cried, not taking him quite seriously.



"No; not impossible," reiterated Tony firmly. "Fact! And do you know how she got all this?"

He glared at me for an instant. "By having a brain!" he told me and tapped his forehead. "A brain, I tell you, and scheming it all out—every last inch of the way; and by being cautious when she ought to have been cautious; by gambling all she had, and ever hoped to have, when she ought to have gambled; by following the principles of business, knowing where she was going and going there; by keeping her eye, night and day, on the main chance. That's how she got all this. Not luck! Let me ask you something: Is any success—any big success—ever really luck? Not much! Nobody wins haphazard"—and he added impressively—"not even Madge. Why, she's had just about as much luck as—as ——"

Tony was strong on similes. His eyes shot about, searching for a hint. Evidently he was unable to find any adequate comparison for Madge and her lack of luck, for he broke off abruptly, sat down and, passing a bewildered hand over his clean-looking bald spot, began telling me Madge's story—a strangely moralless tale, unless you are interested in humanity upon its everlasting business of getting what it wants.

"It's pretty close to eight years ago, now," he said, "since Madge got back to this town. Moulton had been dead about six months and she had wound up his affairs; and, financially speaking, pretty wretched affairs they were. He left her a little bit of property out there in the Northwest. I'll tell you more about that later; but the income from it was nothing—oh, tiny! Honestly, Cliff, she got off the train at Grantsburg with one trunk and a suitcase and so much less than a hundred dollars that I won't tell you what the amount was. It was shameful! Why, Cliff, she hadn't anything when she went up to that miserable boarding house of Mrs. Graham's and sat down and began looking over the job of her existence.

"One thing she had in her favor—yes, that was a piece of luck, come to think of it—she was absolutely free; no brothers or sisters or kid; just foot-loose, and with a chance to make her future as she chose. And the first decision she made was that she wasn't going to go at it blindly or in any hit-or-miss fashion. Of course that was good sense—the kind of good sense Madge has got more of than all the rest of us rolled into one.

"Is Any Success—Any Big Success—Ever Really Luck? Not Much! Nobody Wins Haphazard"

"It didn't take her long to decide. I guess she pretty well knew before then. She wanted to be somebody and have things—get a place in the sun. You see, she'd never had anything like that. But forget the psychology! She determined to dig out of penury and mediocrity—that's enough.

"Now Madge is like this: If she wants an apple she believes she won't be satisfied unless she has a barrel of them. A picture, say, takes her eye; and she gets the notion that she should start a gallery. If she's shy twenty-five dollars or something, it isn't twenty-five dollars she sets out after; it's a fortune. She's always raising ideas to the nth power. Maybe that's the essence of ambition; maybe you call it vision; I don't know. Anyhow, it's Madge!

"So—don't you see?—when she began to feel her poverty and her lack of friends and connections, and how terribly alone she was, she didn't say, 'I will scrape up an acquaintance with that dressmaker, Mrs. Smythe, across the hall'; or, 'The Friday dances at Liebel's Gardens are all right'; or, 'Come to think about it, I know a couple of traveling salesmen.' Not much, for Madge! She looked the whole game over and determined that she would lay her hands upon all the money and position there was in sight—simply get this town by the throat and make it yield up what she wanted. Extraordinary!

"Now before I am through you're going to wonder about a lot of things. You're going to wonder how I can admire such a person as Madge has confessed herself to be. You'll think I ought to resent a lot of things she's done; ought to resent, in fact, the whole idea of her and her accomplishment. Perhaps you'll call her an adventuress; maybe you'll say she's just a cheap climber; very likely you'll believe that no one could have done what she's done and have either delicacy or proper sensibilities. Anyhow, you're sure to be astonished that people haven't found her out and put an end long ago to her machinations. All those things and a lot of others will bother you; but never mind—let them go. People often take things from Madge because she's Madge; and for the same reason she often succeeds where others fail.

"Well, she had to make a beginning; and the way she began was to find out all there was to be found out about the Hill. Pretty soon she reached the conclusion that two people whose friendships would be most useful to her were Mabel Colfax and Norma Hoyt. Then she set about wondering how she could get in with either of them. Neither of them was aware that such a person as she existed; nor did she know anyone who knew them—fact is, she did not know anyone at all then.

"All of her kin were gone and Ridge Street was worse than useless. But she wasn't discouraged; and between Norma and Mabel, having to settle on one, she picked Mabel Colfax, because she figured that a woman who was as charitably inclined as she had learned Mrs. Colfax was would be more likely to take notice of a lonely widow than a hard-surfaced social person like Norma Hoyt. So there she was, with a total stranger of considerable eminence and wealth picked as the person who was to invite her to her house, introduce her to her friends, and more or less become her sponsor. Pretty stiff proposition, eh?

"Madge always proceeds upon a definite theory, and she made up her mind that the only way in the world by which she could hope to get any kind of foothold at all with Mabel would be by making herself somehow indispensable—fitting herself into Mabel's game in some fashion. Madge is great for that idea—the putting of things on the self-interest basis; doesn't trust anything else. And that's the thing she began to work on; but now the trick was to discover where Mabel needed someone like herself—Madge.

"No use of going into all the ins and outs, because all that was necessary was to be indefatigable; but after a while she got onto the Colfax Boys' Club. Now you probably don't recall, but back in those days the thing was in something of a mess. A lot of the folks who had made enthusiastic promises when the club had been started were getting tired of giving up an evening or so a week. Mabel couldn't bear to abandon the project—Madge got that fact from a salesgirl in a glove shop—and the result had been that poor Mabel herself

Digitized by Google

was *down* there, in the rooms they had, about three nights a week, struggling with her precious boys.

"And it was in that situation when Madge saw her chance to be, first, useful, and then invaluable. So one evening she marched round to the clubrooms and found Mabel *tired* out and in a most receptive mood. She told Mrs. Colfax exactly who she was; that she had lots of leisure and would be glad to help. Mabel was delighted, of course; and then did Madge help? You should have seen her! Never mind just how she did it, but if there was any means of boosting that boys' club, and of making it a credit to Mabel, be sure Madge used it. Soon she'd doubled its membership, everyone was saying what a success it was, and Mabel had invited the lady to a Sunday-evening tea.

"That was Madge's first look in, and she made the most of it. She reckoned that her single, sole job then was to charm Mabel; and she praised her house and her children and her charities, and so on. It's a great precept with Madge: When in doubt, flatter! She says there is no plumb line long enough to plumb the fathoms of human gullibility when it comes to believing the pleasant things about oneself. And, by gracious, she's right! Anyhow, she flattered herself into other and then more invitations, and for some months that sort of thing ran along.

"But after a while she felt that she was not making enough headway. One or two other persons had been kind to her; but they treated her as a charity worker and as if they themselves were doing a kindness in inviting her. She needed something different from that—something more substantial; and so she still had her eye on Norma Hoyt. She wanted to get recognition from her; but, as you perfectly well know, Norma's not an easy proposition, and, looking over the Hoyts, with their millions and all, she couldn't find a crack into which she might squeeze herself.

"That, however, did not discourage her; and she had tucked away an idea that if she could only get hold of something Norma did not have and wanted—could create for herself some kind of exclusive asset that she could, as it were, sell to Norma—then she might succeed. Naturally the problem was, what? And all she could do was to keep her eyes open and wait and watch. Well, she did that, and finally saw her chance.

"Norma, you know, loves parties, and especially her own; and she'd rather lose a thousand dollars than not have one of them go off with a zip. Now all this was back at the time when this dancing fad was just beginning in the East and getting ready to sweep West. Madge saw it coming—everyone did, for that matter; but she also saw in it opportunity. She told herself that if, in some way, she could become the first person in this town to know the new steps, the first to be really a crack dancer, then she would have something the Hoyts would want and would more or less take her up to get.

"That, however, meant going East; and, what with her room and board, and keeping her pathetic wardrobe presentable enough for the Hill, she was pretty low in funds, even for her, and there wasn't a soul in the world from whom she could borrow. It was a question of finances, and nothing else, whether she could seize her opportunity; and she knew there was no time to lose.

"Now this shows you the kind of things people can think up and will do if they are only determined enough: She went to her landlady, Mrs. Graham, and, like the thoroughgoing business woman she is, went at her this way:

"'Mrs. Graham,' she said, 'I'm quite sure you know as well as I do, and maybe better, just what's in those trunks of mine.'

"Mrs. Graham conceded that she did.

"'Very good,' said Madge. 'Suppose some night I should walk out of here with the dress I've got on and a hand bag, owing you a good-sized bill, how much could you realize on my belongings?'

"The landlady calculated, say, fifty dollars.

"'All right,' said Madge. 'I want you to lend me fifty dollars. I'm going away for three weeks; I'll take nothing but a hand bag and the dress I have on. I'll pay you off by the week when I get back.'

"Well, the long and short of it is, she finally got the money. I've told you how she got it only as a little side light on Madge. She went to New York and, working ten hours a day, learned the steps up to the minute of her train-time, and was back here in Grantsburg with something to sell to Norma Hoyt in exchange for recognition. She did not tell anyone what she'd been up to, but merely that she'd had business—'business' is good!—in New York. The trick now was to put herself over; and she got her chance soon enough.

"One evening at Mrs. Colfax', where Madge was sitting inconspicuously by, they began trying steps, and were making monkeys of themselves, when Madge got up. After that it was all off.

"In a week she had been asked to the Hoyts'; in two she had the sensation of a big dance; in a month the Hill had accepted the only person in town who could initiate them into the new fad.

"Now there's no use in going into a lot of things that happened that winter and why they happened. Madge had some pretty severe struggles with proper clothes and money perplexities; but she managed somehow, and she felt that she had made an all-important advance toward her ambitions by getting among people of consequence who had money. The problem was to substantiate her position, to realize on her advantage, and to make her slender foothold count for something permanent; and that, in turn, involved, first, winning the liking of people—and then marriage, if she could pull it off.

"Her popularity came easily enough. All the women liked her because she flattered them and not their husbands, which was a novelty; and most of the men liked her because she was always bright, gay, amusing, danced wonderfully, and generally seemed a living denial that there were really any such things as troubles in the world. Madge says there's nothing a man hates like trouble. Also, she was no end obliging, and her boys'-club work had given her a reputation as a good-hearted soul.

"Oh, well—what's the use? You know Madge's exterior—carefree, vivacious, mundane; and it went with the Hill. She did succeed socially; made friends; got half the women on the Hill interested in her, with Mabel Colfax and Norma Hoyt, to both of whom she had made herself indispensable, as her main sponsors.

"Then it was a question of marriage; and many's the laugh we've had at how she went at it. Characteristically she reasoned out her steps before she took them. One astute conclusion she came to was that she must not try for anyone who would be considered too great a catch. The part of wisdom was to avoid all possibility of rousing hostilities and setting resentful tongues to wagging.

"Consequently she concluded that the plan for her was not to cast her wiles at a man of wealth and position, but to content herself merely with someone who definitely belonged to the Hill crowd. In that way she would cement her place among people with money; and then, being where money was, could later set about angling for some of it for the man she had landed. Well, that's how she came to pick me.

"My psychology, why I liked Madge, and all that, is not important. I did like her, and for much the same reasons, I suppose, that others did. I hadn't a suspicion of what was going on inside her busy brain. We grew to be friends. She used to tell me extremely agreeable things about myself that no one since the day I was born had ever told me—which tickled me. I liked her utter lack of pretense and her candor about her origin and her poverty. Then, too, she was so much that I was not—competent; deft; skillful about things generally. Any marriage, though, is a story in itself; and the great point is that I was fascinated.

"Yes, fascinated—that's the word—and quite prepared to forget Ridge Street and that old life-insurance pest, her father; but I didn't have any money; I didn't see how I could marry her, and I dallied along. Very likely I should be dallying along until this day if Madge hadn't taken hold. That is what she did—she proposed to me.

From the Veranda I Could See Her Limpid, Faintly Anxious Eyes Roving Here and There Over Emmett's Shoulder

"It was like this: One day she walked boldly into the little office I had then; an office was just the place for Madge to do a job like that. Sitting down, she told me she wanted to have a talk; that she believed we two could make a trade. I asked her what; and a zephyr would have blown me over when she replied:

"'You give me position and I'll give you brains!'

"Then she laughed and I laughed, and we went to discussing the idea of getting married. I said I was fond of her; she said she was fond of me—but not in love. Madge, like all out-and-out materialists, is very square. Think of the chances she took then by being completely frank! But, no matter; her idea was that we could make a team. She did not try to garnish over either her humble beginning or her meager circumstances then; without mincing words, she said she would like to belong to the Hill and, also, that she wanted wealth.

"As for me, she declared she thought I was a nice, cheerful, intelligent person, who did not even guess the first principles of manipulating the Universe, but that I'd be

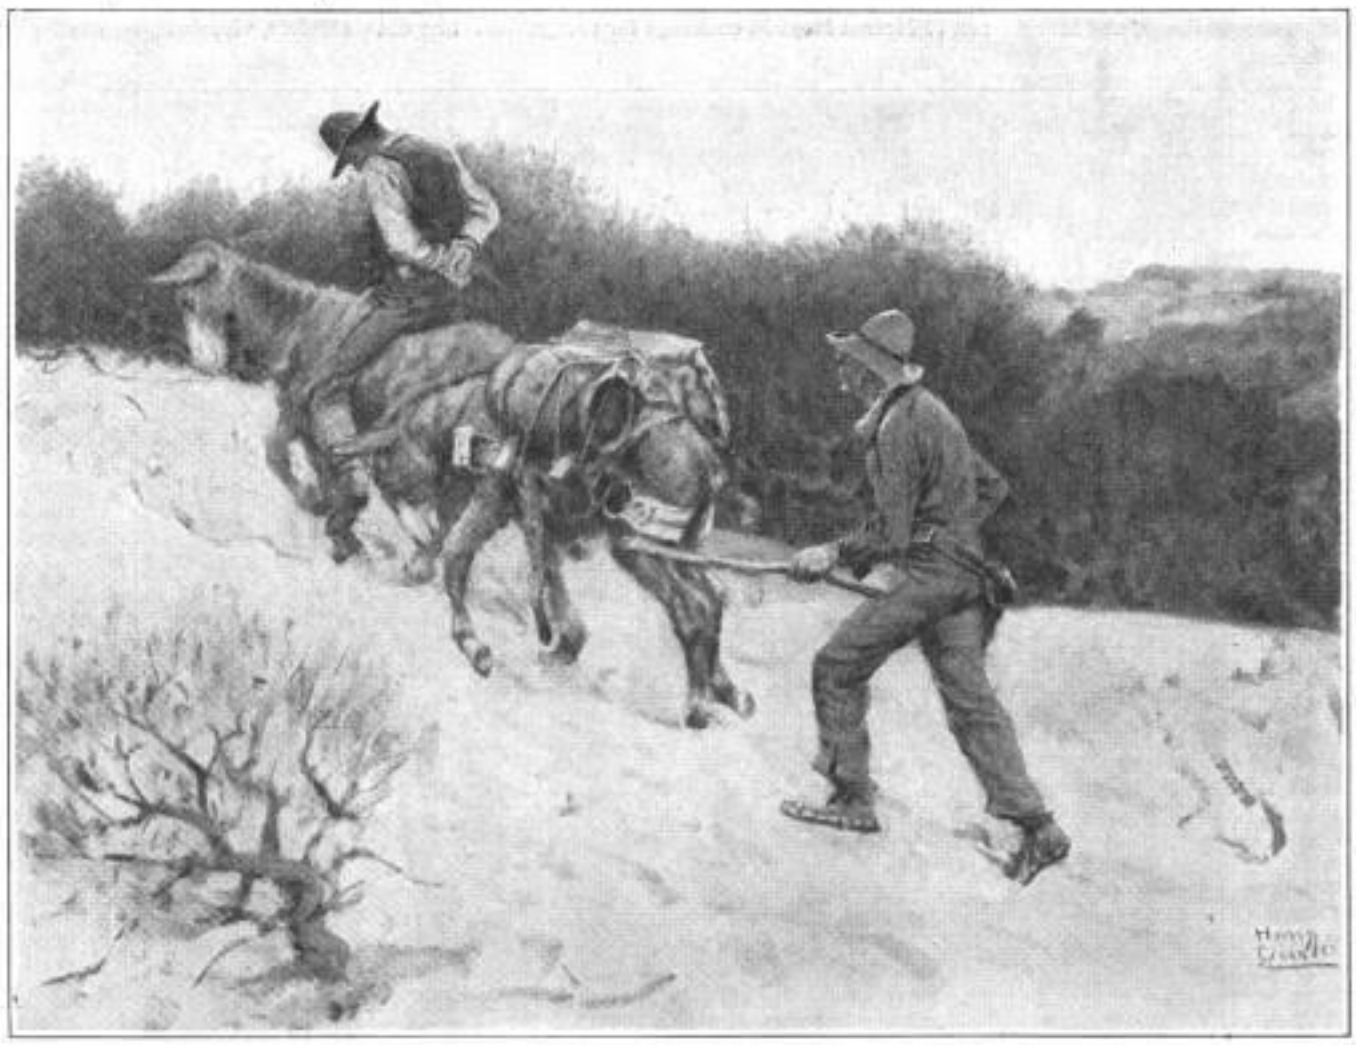
Grandpa Makes Him Sick



By LOWELL OTUS REESE

ILLUSTRATED BY HARVEY DUNN

TO THE casual thought it would appear that a spree is a spree, and just as comfortably enjoyed in one town as in another; but not so.

The shriveled soul of Old Sim Yaples had felt moved to enter upon a spree in the county seat, and therefore the same celebration in Copper Sky would never do—not by any means. There was a vast difference. The potential ethics of the thing lay deep; but the large fact remained that the only place on earth where this particular whiz might be successfully carried to an ultimate triumph was the county seat.

Explain it? It can't be done. Here is a problem in dissolute psychology; but let it pass. 'As well try to solve the mystery of why does the rooster wake himself at two o'clock in the night merely to crow a few times. Why doesn't he sleep, and do all his crowing after the sun is up? The rooster himself could not tell why. Neither could Sim Yaples have explained his peculiar obsession.

Old Sim Padded Along in the Rear, Encouraging the Reluctant Beasts With a Club

I

IT WAS a long street, the main thoroughfare that traversed the length of the county seat; much longer than the main street of Copper Sky. A typical desert street; torn sand, liberally bestrewn with old tin cans and dirty scraps of sun-yellowed paper. On each side many, many swinging beer signs above the rickety board walks, and hitching racks all along the way.

Old Sim did not tarry when he left the train at the county seat. His moccasined feet padded impatiently up the board walks. He moved with the peculiar springing lope-walk of the trailer. One notices it in wild things, this curving ahead of the lean body, head thrust forward and the knees bending at every step. Straight over the toe the old man walked; heel-and-toe, the guit of the Eastern Indian.

Old Sim noted the many beer signs flapping idly in the wind, and to him they seemed glad bunting flung to the breeze to welcome his arrival. A warm glow of satisfaction filled him. He could do a large business here. He turned hopefully into the first resort, humming as he entered:

"He turned me down when I came to town,
This cross-eyed cus-to-mer;
He passed me by with his cold cross-eye—
And me an old-ti-mer!"

As he took up the initial glass he waved it cordially at the bartender, singing the chorus:

"O-o-o-h—
Bury me deep in the clay, boys!
Pity me if you can.
Write this down, when you come to town:
'Beware of a cross-eyed man'!"

Several hours later, still singing his weird cross-eyed song, Old Sim teetered into the Sandstorm Saloon, journeyed precariously up to the bar and called for a drink. Most conscientious he had been, for he had missed nothing on his way up from the station. The Sandstorm was only halfway uptown, but the old man was by no means discouraged. He was going strong and it was still many hours till morning. Sim took up his glass and waved it with an uncertain hand while he sang in a still more uncertain voice:

"I didn't think, when I begged a drink,
How chilly his cold blood ran;
My eyes are wet, for I can't forget
The face of that cross-eyed man."

Old Sim threw back his sunburned bald head and struck the chorus with a prolonged howl, like the unmusical effort of an ancient coyote stricken suddenly with a stomach ache:

"O-o-o-h—
Bury me deep in the clay, boys!
Pity me if you can ——"

The swinging door banged violently open and a large, red-faced man came hurriedly in.

"Where's Red Ochiltree?" he panted.

"I think he just stepped over to the Palmer House, sheriff," said the bartender. "He was here a minute ago. What's the matter?"

"Robbery! Some fellow sneaked into the railroad station an hour ago and got away with a lot of cash." Here Ochiltree came in. "Get your gun and a good horse, Red," said the sheriff, "and hunt up Old Sime Hodapp. I want him to help me trail a man."

Old Sim Yaples set down his glass with a bang.

"Let me go, sheriff!" he begged. "I know the desert and I'm besh trailer in the country; you know that ——"

The sheriff paid him no attention. Old Sim persisted. His entreaties still going unheeded, he caught the sheriff's arm in a beseeching grasp; and the officer lost all patience. Turning, he bent a discouraging glare upon the old man. The sheriff had a prominent cast in his eyes and it gave to his gaze a sinister quality that had made many a victim tremble. He did not like Sim Yaples, and he partook violently of the jealousy that existed between the county seat and its rapidly growing rival, Copper Sky.

"You're drunk, Grandpa!" he said roughly. "And then there are other trailers besides you. The sheriff of this county is capable of running down criminals without the help of the old men of Copper Sky."

Coarse approving laughter greeted his brutal remark and he swelled visibly. An election was due to occur in a few days and he dearly desired reëlection to his high office.

Old Sim, stricken dumb with the insult, looked at the blustering officer, and his bleary eyes filled gradually with tears.

"Bill Hogard," he gulped at last, "you're the sheriff of this county and I dassent fight you. But you lemme tell you shomeshing: I'm goin' to make you sick! I'm goin' to make you the biggest joke thish county ever laughed at! You think you'll be reëlected nex' week, don't you? You wait and see! I'm goin' make you sick!

"You've insulted the constable of Copper Sky! Remember the boys elected me constable of Copper Sky last votin' time? Course you do! Course they were 'most all drunk when they elected me, but they elected me and I've got my star and my cuffs. And you've insulted the city of Copper Sky!"

Sheriff Hogard turned impatiently to Ochiltree, who had just come in again.

"Put Grandpa in the calaboose!" he said. "He's drunk. Then hurry back. I'll be ready to ride as soon as I run across to the Palmer House and get my gun."

Old Sim went, weeping violently; but over his shoulder he spat back the essence of hot hatred through his tears.

"I'll make you sick!" were his last words; and then the crowd forgot him in the excitement over the robbery.

A few minutes later Sheriff Hogard and his deputy, Ochiltree, rode out of town, following a noted night trailer and leading an excited posse of eager citizens. Two days later the sheriff returned; but he brought no prisoner. However, he received from the station agent a scrawled note, which the robber had left behind him with bold insolence, and which had been overlooked in the first excitement. It read:

It breaks my heart to rob such quiet people. I hate to go and fuss up such a kind-hearted sheriff and make him ride away out on the nasty old desert and get all sweaty. It is a shame to wake up a town that is sleeping so sweetly! I hate to take this nice piece of chicken.

But business is business. JIMMIE THE WEASEL.

Had Hogard seen this message before starting forth upon the quest he would have proceeded with far greater circumspection. The Weasel was a famous desert criminal, noted for the audacity of his attack and the marvelously clever execution of his get-away. Hence the sobriquet of Weasel.

The sheriff raged when he read the insulting, ironical note; but he comforted himself with the reflection that nearly every other town on the desert had suffered from the Weasel's visitations and had found the best efforts at effecting a capture to meet with no success.

"Anyway," boasted Hogard, "he won't come back. He knows we will be watching for him after this."

He utterly failed to attach any significance to the writer's reference to the "piece of chicken."

Now the essential characteristics of the weasel are an absolute fearlessness and an unbelievable impudence. You find a chicken fluttering wildly out in the weeds, with a tiny weasel gripping it under the left wing. You set the dogs at the insignificant animal; and after an exciting chase, with a hundred narrow escapes from the snapping jaws, the weasel suddenly vanishes and the disappointed dogs give up the hunt. You regretfully assure yourself that the weasel is in the next township by this time, frightened out of his wits.

Just as you think this, the dying chicken at your feet emits another agonized squawk. Looking down—there is your weasel! Cocky, unafraid, he is curled about his victim again, his vicious little teeth tightly locked beneath the left wing.

II

SULLEN, sore in spirit and full of hopeless pessimism, back in Copper Sky, Old Sim Yaples sat upon a truck in the darkness of the railroad-station platform, chewing over the memory of black wrongs. All alone he sat. So sore

Digitized by Google

was he that he even avoided the comfortable, luxurious lounging chairs in the palatial Directors' Room upstairs *in* Aunt Malindy Crow's Palace Hotel.

Inside the window the telegraph keys clattered incessantly. Down the track, past the ruby and green lights at the end of the switch, a line of telegraph poles disappeared into the night. Up the tracks stretched another line of disappearing telegraph poles. Overhead the myriad stars twinkled in the wonderful sky of a desert night. Away to the east a faint white glow appeared above the far-off Panamints, promising a moon.

Old Sim's mind saw nothing but the black wrongs aforesaid. Earnestly he sat and cursed Sheriff Hogard in his soul. His spree had been so full of promise; and Hogard had spoiled it just when it was getting good. Hogard had given him a whole night in the calaboose, merely because of resentment against being considered unfit for the trail.

"And he called me Grandpa!" Old Sim summed up. "Dang his old cross-eyed picture!" A long interval and then a muttered "But I'll make him sick!"

The telegraph operator stuck his head out of the window in great excitement. He had heard stirring news and was simply obliged to tell somebody.

"Say!" he cried. "What do you think! The Weasel just robbed the bank down at the county seat!"

Old Sim hopped down from his seat on the truck and padded up to the window.

"He came back again?" he asked. "And got away with it?"

"Sure!" grinned the railroad man. "The operator down there just told me. He got away with twelve hundred dollars this time. And he left another note for the sheriff; said something about having come back for another piece of chicken."

He broke off and went back to answer the wire. Presently he closed his key and turned again to the window.

"Hogard has just left with a posse," he said. "Somebody saw the Weasel as he was leaving the bank; so he didn't get a chance to work up his usual clean get-away. He knew he had been seen; so he stole a horse from the corral back of the Sandstorm Saloon and beat it out into the desert. That horse will leave a fine trail that anybody can follow. Hogard will get him—sure! And maybe that won't be a feather in the sheriff's cap! He'll be reëlected, and you can bet a million on it!"

Old Sim was silent for half a minute, thinking.

"Which way are they heading?" he asked at length.

"I'll ask," said the operator, going back to his key. A little later he returned. "Northeast," he reported.

Old Sim went slowly back to his truck and sat down again, still thinking. He cut off a large chew of tobacco and began working on it with his toothless gums.

"Northeast," he mused as he chewed slowly. "Squaw Rock Water Hole. Yes, sir; I'd bet my life he's making for Squaw Rock Water Hole." He continued in thought for several minutes and the conviction grew to absolute certainty in his mind. "No other water in that direction," he reasoned. "It must be Squaw Rock.

"Lemme see: . . . It's forty miles from the county seat to Squaw Rock—forty miles if it's a foot. . . . A good man could make it by ten o'clock to-morrow; and I reckon the Weasel must be a good man. . . . It's only about twenty miles from here to Squaw Rock, traveling straight and walking round a few little hells on the way. I wonder . . . I wonder if Grandpa could stand the strain of such a trip? Grandpa thinks he could!"

The old man slipped spryly from the truck and padded swiftly away toward his quarters in the Palace Hotel, a wicked grin upon his wizened face.

"Here's where Hogard meets up with one of the old men from Copper Sky!" he snickered. "Here's where I make him sick!"

Arrived at his room, Old Sim hastily buckled on the greasy belt of shells, from which dangled a shiny old revolver and an old-fashioned hunting knife. He made up a small, compact pack, which included such things as bacon and cold flapjacks. These things he treated indifferently; but a bottle of rich-looking liquor he bestowed tenderly and with loving care in a hip pocket. He remembered that he also had another hip pocket; so he rummaged for the first bottle's twin, found it, and honored the second hip pocket. Finally he filled two great canteens with water and carried the outfit downstairs and out to the corral, where he saddled his two tough old jackasses.

Before setting forth, he bethought himself of something he had forgotten. Going back to his room he hunted up a great star, with "Constable" stamped upon its shining face. He pinned it carefully upon the breast of his hunting shirt. Searching again he produced a pair of rusty handcuffs and put them in the bosom of his shirt. Then he slipped out into the cool white light of the rising moon.

The Sheriff Raged When He Read the Insulting, Ironical Note

III

SQUAW ROCK BUTTE was a low point of yellow rock, rising but a hundred feet above the surrounding desert. On the very summit of Squaw Rock, Old Sim Yaples lay, flattened behind a bowlder, like a particularly ugly old lizard basking in the sun. A sparse clump of brush grew in front of his face, and through it the old man's rheumy eyes gazed expectantly across a mile of comparatively open country; yellow-gray sand, spotted with scattering greasewood. Beyond this open country the landscape closed up suddenly and became a forest of higher greasewood and still higher yucca trees. The effect at that distance was to make the forest appear like a vast orange grove, with low palmettos growing among the orange trees. It was the fringe of this desert forest that the old man watched.

The rock was becoming uncomfortably hot; still the watcher stuck. At the foot of the butte, and almost directly beneath him, lay the water hole, with considerable brush and desert grass growing among the bowlders about it. Old Sim turned a faded eye downward for a moment, assured himself that nothing had disturbed the tranquillity of the spot, and then returned his gaze to the fringe of forest beyond the open country.

A black speck emerged from the gray-green fringe and began crossing the open ground. At that distance the black speck looked much like an ant. Old Sim's body stiffened.

"Called the turn!" he exulted. "I said he'd come by Squaw Rock—and he's doing it. I figured he'd get here about ten o'clock—and yonder he comes!"

He started worming his way backward along the ground. Once back and out of sight behind the slope of the butte, he sneaked down to the floor of the desert and around among the brush by the water hole, where he hid behind a rock.

Noiselessly as a fox the Weasel entered the brush and approached the water hole. His small nervous eyes watched all directions, but more from force of habit than from any fear of lurking danger. He had been here often. It was a favorite resort of his, for it was the only water within fifty miles, not considering the water at the towns along the line of the railroad. Never had he seen a man's track here; he almost fancied that he alone knew of the existence of the water hole.

He knew there were enemies back on his trail, for he had ridden recklessly, leaving a trail from the county seat to the Chimneys, where he had dismounted and abandoned his stolen horse. A man on foot could do better across the Chimneys than one hampered by a horse. He was safe. The sheriff and his posse would lose the trail at the Chimneys. It would take much time to pick it up again.

He would just take a drink and eat a light lunch here, after which he would fix his feet mysteriously and fade into the desert, leaving no sign. He grinned—a snarling, animal grin—as he pictured the sheriff's discomfiture, and extended himself upon the ground with his lips to the water.

"Don't move!"

A convulsive jerk shook the man's body. Then he was still. He kept his face close to the water, for he noted in the cracked voice the subtle quality which belongs to the man who long has known the soul of the trigger.

"Keep your head down. I got you covered, you know!" went on the voice. "Put your hands up behind your back."

The Weasel obeyed. Behind him there was a faint scramble, a low swish of parted brush. He listened closely, waiting for some sound that would indicate weakness; an instant's lapse and he would —— Even as he waited, tense, dangerous, wicked as a hot rattlesnake, he grinned again that vulpine grin, thinking what an excellent joke on the sheriff it would be to leave a dead man here to meet him upon his arrival! . . . Still, no sound.

Click-click! And the Weasel came to his feet like a flying clock spring, his teeth bared, his body crouched back against the brush like a trapped wildcat's, his small eyes crazy with rage and fear. Never before had his wrists felt the cuffs. Old Sim soothed him as one soothes an unbroken broncho.

"Steady, now!" he urged. "I don't want to shoot you all up! Lie down again—just for a minute. *Lie down!*"

The command met the Weasel's impulse like the pop of a whip. The Weasel abandoned his spring and sank back against the trunk of a yucca tree, his eyes upon the unwavering muzzle of the shiny big revolver. The old man quickly unwound from his own body a long *riata* of tough rawhide and bound his captive's legs securely. He then sat down upon the sand, with his back against a rock opposite the prisoner, and cut off a generous chew of tobacco.

The storm broke. The Weasel raved like a madman. Every insult, every epithet that was vile he flung at his captor. Through it all the old man sat calmly chewing his tobacco and regarding his prisoner with large toleration.

"I know just how you feel," he said sympathetically when, at last, the Weasel lay back against the tree exhausted, with his lean body heaving and the white froth flecking his lips. "I'd say the same things if I was in your place; in fact, I might think of a few remarks that you overlooked." The old man took a bottle from his hip pocket and treated himself to a long drink. "So you can't hurt my feelings none. Just go right ahead. I'm going to wait right here till the middle of the afternoon; so you'll have plenty of time to get through nice and comfortable."

For a long time he sat, chewing his tobacco peacefully, imperturbably, and gradually the Weasel's unreasoning fury died and the habitual animal cunning took its place. Again he began watching for a sign of weakness.

"Are you a deputy of Hogard's?" he asked finally.

The wizened face darkened.

"No!" said Old Sim shortly. "I'd rather be deputy to a yellow houn' dog."

At Last the Figure Ventured Nervously Into the Patch of Moonlight and Knelt by the Rock, Digging Swiftly in the Sand

Digitized by Google

Another long, appraising silence, during which Old Sim drank many times; then:

"There's twelve hundred dollars in my clothes, old-timer. . . . If you'd just take it and go away for a few minutes, and forget the key to the handcuffs—sort of leave the key on that rock you're leaning against ——"

Old Sim opened his mouth in a toothless cackle.

"Twelve hunnerd dollarsh!" he said. "Why, son, I got a million already! What I want wizh more? Ever hear of the Red Hill Mine? Well, I'm one of the owners. Fact! I got so much money that I don't have hardly any fun any more."

Another long drink. Old Sim began to weep, silently and drearily.

"Thish li'l' party of ours is firs' good time I've had since I got rich!" he said. "Always gozzer be on hand to collect my dividends. Want to go prospectin'; can't. Gozzer stick round and attend a directors' meeting. Want to get drunk. Can't even do that wizout picking a day that ain't taken up wizh a conference wizh Superintendent Jimmie Brawley. All the time got to be lookin' after my money. It's hell to be rich! Son, don't you ever get rich!"

"I won't," the Weasel assured him earnestly.

"Have a drink!" The old man presented his bottle to the Weasel's mouth and the captive drank with manifest appreciation. "Have anuzzer!" And again the Weasel toasted the beauties of poverty and drank confusion to great riches.

And so they sat, amicably talking and drinking, far into the day. The sun rose straight overhead, and still they sat on, Old Sim calm and peaceful, the Weasel watching for the psychological moment of weakness, which never came.

"Don't you ever get drunk?" he burst forth at last.

"Who—me?" grinned the old trailer. "Sure! But not at a quiet li'l' party like thish. Why, son, I'm not anyways near it now; jush a li'l' bit ripe round the edges—thash all. When I'm drunk you'll know it—if you're anyways near the spot and listen good!"

Old Sim put the bottle away and in doing so struck his hand against a packet. He drew it forth and looked at it.

"Well, look at thish!" he said. "I put her in my pocket the other day when I went down to the county seat. I meant to spend it all, having a good time. Then thish Bill Hogard stuck me in the calaboose, and I hadn't spent hardly any of it!" His face darkened again. "But I'll make him sick!"

Slowly Old Sim turned out the contents of the packet. Gold coin, and paper of large denominations, it rolled upon the sand before the Weasel's astonished eyes.

"I thought you were talking to your whisky, old-timer," he said, "when you said you were rich. I see you didn't dream it. How much of it is there?"

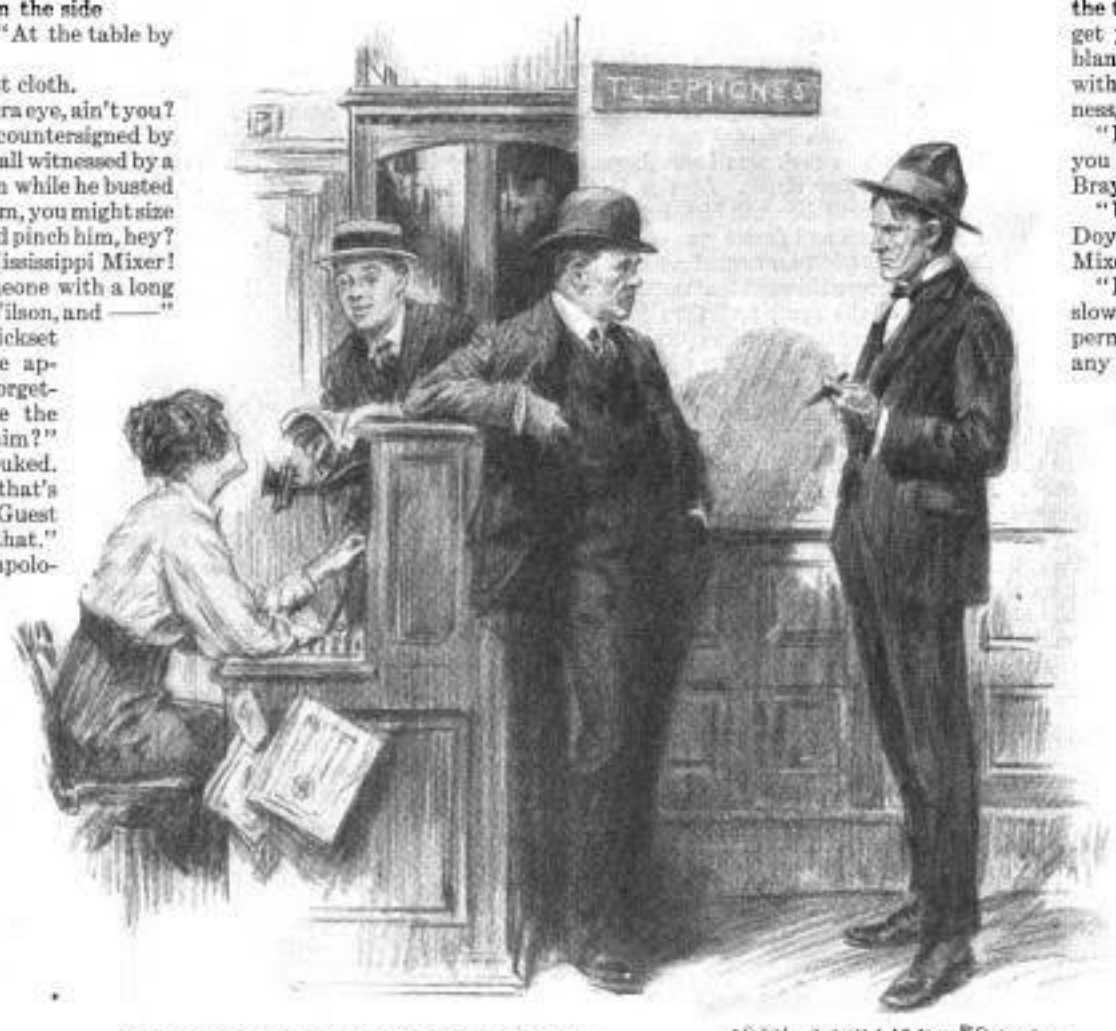
Old Sim counted.

"Fifteen hundred dollars," he said bitterly. "I started in wizh a couple thousand and was having a fine time; but, before I got loose from more than five hundred dollars, this dang sheriff pried me loose from my fun; and it made me so mad that I plumb forgot about thish li'l' wad until thish minute."

The Weasel swallowed hard and then drew a long sigh.

About one o'clock Old Sim unbound the Weasel's legs and drove him over to where the burros were hidden. An hour later, having returned to the water hole for lunch and fresh water, they were journeying back on the Weasel's trail. The prisoner rode ahead, his hands still manacled; and for greater security the rawhide rope was fixed about his body and attached to the saddle horn. Behind followed the pack donkey, Old Sim padding along in the rear, encouraging the reluctant beasts with a club.

"You don't want money," said the Weasel after they had traveled in silence for several miles, "and you hate the sheriff. I never harmed you; then why are you so determined to take me back and collect the little reward that will be up for my capture?"



"Want to make the sheriff sick!" said Old Sim readily. "You wait and see! Know why I rested so long at the water hole? Wanted to give the sheriff time to break his heart crossing the Chimneys! He'll try to ride across—and the Chimneys are plumb hell on a horse. Then he'll

The Scent of Apple Blossoms

By Arthur Somers Roche

ILLUSTRATED BY ARTHUR WILLIAM BROWN

"Have You Got Any Money You Can Afford to Throw Away? If You Have, Go Right Back to Your Little Pal and Begin Throwing It"

THE short, thickset man with the mild brown eyes that were contradicted by the round, scrappy jaw walked over to the bar. He ordered ginger ale, and under cover of the operation spoke from the side of his mouth to the bartender: "At the table by the cigar stand, Jerry?"

Jerry wiped the bar with a moist cloth.

"Gee, Doyle, but you got a camera eye, ain't you? If a murderer give you his photo countersigned by the commissioner, and a confession all witnessed by a notary, and then took you with him while he busted somebody wide open and frisked him, you might size him up as a guy that was wanted and pinch him, hey? Why, that's Russell Bray, the Mississippi Mixer! You want to look out, Doyle. Someone with a long beard will tell you he's Woodrow Wilson, and ——"

"Nice stuff, Jerry," said the thickset man wearily. "Just imagine me applauding, will you? Now then, forgetting that I gave Bray a tumble the minute I saw him—the guy with him?"

"Oh!" Jerry was properly rebuked. "Name is Ordway. Leastwise that's the moniker Bray gave him. Guest here, I think. You'd oughta know that."

"I've been away for a week," apologized Doyle. He drank his ginger ale and walked from the bar to the hotel office. There at the desk he looked over the register, running down the pages with a stubby thumb. Among the arrivals of the day before yesterday he found the entry, "Samuel S. Ordway, Freeport, Miss."

"Mississippi, eh?" Doyle said softly.

He nodded to the room clerk.

"This Ordway here?" He indicated, still with his thumb, the name of the man at present consorting in the bar with the Mississippi Mixer.

The room clerk smiled condescendingly.

"Vacations rest the brain so; don't they, Doyle?" he jeered. "They send you back to work so full of pep and snap, make you alive to the job, and—why that guy Ordway is a millionaire. Farm implements from Mississippi. Bradstreet says that he's Triple A—one with several pennies in the bank. Take a look at him, Doyle. He doesn't look like a short-change artist, honest he doesn't."

"When do you and Jerry put on your act?" asked Doyle kindly. "Your rehearsals go big with me, feller. They certainly do."

"Huh?" But the room clerk's exclamation hit Doyle between his burly shoulders and no answer rebounded. The room clerk returned to the fascinating occupation of placing a meticulous polish upon his finger nails.

Doyle beckoned to a bell boy.

"Page Mr. Samuel S. Ordway. You'll find him in the bar. Tell him that he's wanted at the telephone."

"Yes, sir." And the boy departed on the errand.

Doyle lounged over to the telephone booths and waited. In a moment Ordway appeared in the door of the bar. Doyle had a good chance to size him up as he hurried across the lobby.

Broad-shouldered, dressed in a suit made of expensive cloth but patently not made to measure, a black felt hat, rather wide-brimmed, set quite far back on curly red hair above a face that had been burned copper by the sun, Ordway was hardly the proper companion for the Mississippi Mixer; at any rate, not from the standpoint of Doyle.

"Telephone for me, miss?" asked Ordway of the girl at the switchboard.

Doyle touched the man on the shoulder.

"Excuse me, Mr. Ordway," he said, "but the telephone was just a stall. An excuse to get you out here," he added at Ordway's blank expression. "I noticed you in the bar with one of the cleverest con men in the business, and ——"

"Eh?" Ordway's face hardened. "Are you alludin', seh, to my friend, Mr. Russell Bray?"

"Uh-huh. That's the very man," smiled Doyle. "Better known as the Mississippi Mixer, high-class crook."

"I don't know you, seh," said Ordway slowly, "and if I did know you I would not permit such remarks about my friend, about any friend ——"

"Sure. I've been to see these Southern shows, and I always admire the boys in the restaurants that get up and holler when the band plays Dixie. I like this chivalry stuff. I can't use none of it in my business, but I always enjoy seeing it just the same, Mr. Ordway. As a Southern gentleman you want to pick out my two front teeth and send them to the ash can; but as a business man, Mr. Ordway—I'm talking to you as a business man. Have you got any money you can afford to throw away? If you have, go right back to your little pal and begin throwing it. If you haven't ——" He shrugged his shoulders.

"Why—uh—Mr. Bray is—he was a boyhood friend—I haven't seen him before this week in ten years or more—and ——"

"How much has he asked for?" demanded Doyle. "Or has he got it already?" he added, noting the other's sudden flush.

"Why—uh—no, seh. He—uh—called yesterday, having seen my name in the hotel arrivals in the newspapers, seh, and he—uh—took me round town last night as his—uh—guest, seh. This mornin'—just now, seh—he was givin' me the details of a most remarkably promisin' proposition that ——"

"Knows a friend in a telegraph office that will hold back racing returns, or did it have to do with an option on a mine in Cobalt?" asked Doyle.

"Cobalt," said Ordway. He grinned sheepishly.

"And you were just going to make out the check, eh?"

"Well—uh—Russ Bray and I were boyhood friends, seh, and —— If he's become a crook, why is he permitted in this hotel? You're a detective, ain't you?"

"House detective," said Doyle. "I can't arrest him. No one's ever been able to arrest the Mississippi Mixer.

Digitized by Google

No evidence against him. We just know that his friends always lose money through him. Inside the law always, but that don't put the money back in his friends' banks, does it? Oh, no. I can't even warn him out of here. He'd have a fine suit for damages against the hotel if I did. But I can warn his friends. That's all I can do. If they want to go ahead—that's their business, not the hotel's. But if you must be trimmed, would you mind going across the street to another place? I hate to sit by and watch it done, you know."

He eyed Ordway dispassionately.

"Suit yourself, of course; only suppose you say to him that Colonel Fallon called you up, and just watch the way he takes that."

"Who is Colonel Fallon?" asked Ordway.

"Oh, just a man who went bankrupt because of Bray. Your friend is a charming feller, you know. Great mixer. Go try it."

"I will," said Ordway.

He walked back to the bar and sat down at the table with Bray. Somehow Bray didn't seem the same as he had seemed a few minutes ago. Ordway saw his companion now, not through the haze of memory, but clearly. Bray's eyes were shifty; his mouth was mean and hard.

"Business?" asked Bray.

Ordway nodded.

"A man named Fallon called me up—Colonel Fallon, he called himself. Wanted to meet me right away—some new invention. I told him that I was sorry, but that I was engaged with a boyhood friend from my own home town."

"Did you tell him my name?" asked Bray harshly.

The Mississippi Mixer's face was white. Ordway shook his head gently.

"You must have treated him mighty shabby, Russ."

"Eh? He's a liar! He's a squealer! He's ——"

Ordway pushed back his chair.

"I'm sorry, Russ, but I don't think we can do any business together. I'm mighty sorry, Russ—for you."

He looked a full minute into the eyes of his boyhood chum. Bray wet his lips with his tongue. He tried to speak, but he could not. A film gathered before his eyes. He saw himself fifteen years ago, a half-grown boy; he smelled apple blossoms. . . . He gulped his drink, put down the glass and rose to his feet. Ordway had left the room; evidently he had paid the check. Bray seemed to feel contempt in the averted eyes of the bartender, in the impersonal glance of the cashier.

It was not until after his third drink in a shabby Sixth Avenue saloon that his mood changed from self-contempt to self-pity. Didn't he have the devil's own luck, though? Here was Sam Ordway, rich, respected, married happily, and with a couple of dandy kids, whose pictures, with that of their mother, he carried round with him in his pocketbook. And Sam Ordway wasn't particularly clever either. Clever? Why, but for the unhappy whim of chance, Bray would have hooked him for ten thousand. Ordway had just about promised to go into the deal that Bray had proposed when that cursed telephone call had come for him. Clever? Ordway was lucky, that was all.

A dull lucky boob, and look what he had! And here was Russell Bray, with all kinds of brains, and look what he had! About four dollars if he counted the silver in his pocket. Surely he had done nothing so wicked that he should deserve such treatment at the hands of Fate. If he'd been a little cleverer than certain men and they'd got sore at him, that hadn't been his fault; that had been their fault for being stupid. He'd always kept inside the law, hadn't he? Not a bull in the town had anything on him. He was just as straight as any of these big millionaires, only he didn't have their luck.

He had a couple more drinks; his mood changed again; his lips seemed to grow thinner, harsher, and his eyes were uglier. It was Doyle, that big-footed, fat-witted house detective! He had noticed Doyle at the bar, but he had thought that Doyle hadn't observed him. It was Doyle who had tipped Ordway off! Well, *damn* Doyle!

But what sort of man was Sam Ordway to let a house detective steal an old pal's character away in this fashion? A fine friend Ordway was! One word from a stranger and he believed the worst. How'd Ordway like it if some stranger said something about him to a good friend of his? Supposing someone came along and filled the ears of that wife of Ordway's with a tale of her husband's doings in New York? What sort of wife would Ordway think her if she turned against him in an instant? By George, he wished that Ordway could go through just such an experience, the scented, sainted prig! Then Ordway would know what it was to have your good name stolen in a sentence, and ——

He ordered another drink and consumed it slowly. He didn't know Ordway's wife, and writing letters was bad business. And, anyway, Ordway was on a quick trip and would be returning to-night to Mississippi and would get there as soon as a letter, and could persuade his wife that the letter was untrue, no matter what Bray might put in it.

But if, while Ordway was still away, his wife got a tip that her husband wasn't exactly the nice church deacon that she probably thought he was . . . it would serve Ordway exactly right—the disloyal, squealing, close-fisted pup. And a telegram . . . it was not until after three more drinks had been brought to his sloppy table that Bray finally composed the telegram. Painfully, for he was quite drunk by this time, he wrote it out on a sheet of paper obligingly furnished by the bartender. It read:

"SAMUEL S. ORDWAY,
"Freeport, Miss. Have moved to —— East Manville Street. Please come. Love.
"YSOBELLE LA CLAIR."

That signature was the final artistic touch, he felt. Any girl with that sort of name, Mrs. Ordway would think, would be bound to be exactly the sort of girl that would be sending fond telegrams to a married man.

"Excuse Me, Sir, But I'm Getting Married"

The Mississippi Mixer was very, very careful in everything that he wrote; he looked far ahead. If Mrs. Ordway came hurriedly to New York and, finding that she had been duped, started an investigation, it was not at all likely that Bray would have invited the attentions of the police. It probably was against the law to sign another person's name to a telegram, but surely there was no law forbidding one to sign a fictitious name. And, besides, who was going to know that Russell Bray had had anything to do with it? He dismissed his fears as silly.

"Ring for a messenger," he ordered the complaisant bartender. And while he awaited the boy's arrival he amused himself by picturing Mrs. Sam Ordway's horror when the telegram—it was clever, addressing it to her husband and not to her—arrived. Trust a woman to open a telegram too. He could just imagine Ordway's stammering denials of acquaintance with anyone named Ysobelle. Oh, it was very hot stuff. He wished that he could afford a nice long wire. But it was enough. It would do.

The messenger noted the bartender's pointing finger and came over to Bray's table. He read the message.

"Freeport, Mississippi, hey? I don't know how much it is."

"Well, I do," said Bray. "Sixty cents, and sixty cents is exactly what you get from me."

He counted out the exact amount and gave it to the boy. The messenger sneered at him, but Bray merely leered drunkenly, and the boy left. The Mississippi Mixer was asleep, head in arms and arms on the table, before the boy had reached the sidewalk.

Outside the youngster jingled the coins that were to pay for the message. He was a typical New York messenger boy, and to say that is equivalent to saying that he knew but one sin—piking. To be a piker, to be tight with one's money, was to stamp one as being unworthy of all consideration. The piker was fair game for anyone. And a person who failed to present a tip to a hard-working youth, when the high cost of cigarettes was more appalling each day, was a piker to the nth degree. As a matter of fact, not only was it the correct thing to trim a piker, but it was absolutely incorrect not to do so.

The boy stopped and considered the matter. Freeport, Mississippi, but written "Freeport, *Miss.*" Now there was, as he happened to know, another Freeport, situated in Massachusetts. The abbreviation of Massachusetts is "Mass." The rate to Massachusetts for a ten-word telegram is thirty cents. The sender of the message was a piker; thirty cents from sixty cents leaves thirty cents; appropriate sum for a piker, in the argot of the street, amounts to but thirty cents. The messenger boy drew out a pencil; he lifted one knee; on that knee he rested his black imitation-leather book that was the repository of Bray's message. The least little mark of his pencil and the deed was done—Miss. had become Mass., and the messenger boy was enriched by three dimes. The drunk back in the saloon would forget all about the wire when he got over his little party; and besides, the message looked kinda phony anyway; and he hadn't come through with a tip like he oughta. Even juvenile Mixers find justification in odd corners, as do their elders who have passed beyond the embryonic stage.

When the summer people began to flock to Freeport, Massachusetts, the telegraph company decided to put in an office. They rented a corner of Lon Haslett's drug store; and Lon, being New England born and bred, began to study the code. The second winter following the installation, the company, being offered the services of a fairly competent operator for seven dollars a week, did not discontinue the wire when the summer people had gone, but continued it, with Lon Haslett as operator. It was good business for both sides, as the drug business was slack in the winter anyway, and a dollar a day for monkeying round a funny little key wasn't to be sneezed at. And it was a fine thing for the town, for elections and sporting events were promptly reported. Lon's drug store was more than ever the lounging place of the cream of Freeport's sporting population.

So it was that Lon had a large and appreciative audience on the afternoon in late May when the message addressed to Samuel S. Ordway came through.

Lon wrote it out painstakingly; he read it aloud; then he passed it round, that every individual present might have the pleasure of reading as well as hearing.

"Gointer deliver it now, Lon?" asked Leon Berryman.

"Deliver it? There ain't no Sam'l S. Ordway in Freeport," replied the druggist-telegrapher.

Leon Berryman winked almost audibly.

"I ain't sayin' there is, am I?" he retorted. "But there's an Ordway here, and it looks to me like that message is meant for him. Ain't Gar Ordway just the sort of person that would be getting telegrams from ladies named Ysobelle La Clair?"

Leon took rank from that day as the town's foremost humorist.

"Garfield Ordway!" gasped Lon Haslett.

"Fatty Ordway!" cried the others.

Ten minutes later, leaving behind him a scene of innocent mirth and revelry, young Hen Sawyer entered the dry-goods store of Garfield Ordway.

"Telegram for you, Gar," he said.

Ordway wiped his hands, that were always nervously moist, on a handkerchief. Gingerly he took the yellow envelope, addressed not to Samuel S. Ordway but to Garfield Ordway. He opened it; he read it; his jaw dropped.

"Any answer?" queried young Hen.

"N-no," stammered the amazed Garfield.

"Aincha goin' to see the lovely Y-so-belle?" asked the well-coached Hen, his mouth agrin.

Digitized by Google

And now, of course, Gar Ordway knew that he was the victim of a practical joke. Hen Sawyer dodged under the yardstick wielded by the stout arm of the irate merchant, and beat a hasty retreat to the drug store.

But the beauty of the practical joke is that it is very often immaterial that the victim doesn't bite. The fact that he has been selected as victim makes him a butt. So when Gar Ordway passed the drug store, after closing his shop that afternoon, three husky Freeport citizens dragged him inside, slapped him on the back, uttered many loud course jests, and insisted that Ordway stand treat to the cigars.

Ordway knew the customs of his own home town. He bought the cigars, tried not to blush too vividly at the suggestions uttered by Leon Berryman and the others, and finally broke away. If the boys wanted to have their fun, why, all right, let them have it; he didn't mind. But at home, in his little comfortable house, after he had cooked his own supper and eaten it, and washed the dishes and tidied-up, he looked at the telegram again. Then he went and looked at himself in the mirror.

Gosh, he wished that some real Y-so-belle—he pronounced it painfully and blushingly—would wire him her love and ask him to come. But nobody with a face and figure like his could expect anything like that to happen. He studied himself carefully: where he wasn't bald he was slightly gray; his face was round and much too fat, and the pores of his skin were visible to the casual eye. His neck was very short, and he couldn't possibly encompass it with a collar more than an inch high. And his stomach bulged roundly; and his legs were short, and—oh, gosh!

He tried to read the Freeport Daily News, but ever and again his eyes wandered to the yellow paper on which was printed the jesting message. Y-so-belle La Clair! Sounded kinda Frenchy, and—and—well, interesting. And the address, —— East Manville Street. He'd never been to New York, but he had always thought that all the streets were numbered there. It would be kinda interesting to know —— There was a Guide to New York that some summer person had left in his store last year that he'd brought home —— Yes, there was an East Manville Street, all right. It was in the district south of Washington Square, where there was that fine arch that he'd always wanted to see. . . .

Of course it was a joke, but —— Suddenly he went to the telephone and called up Lon Haslett.

"This is Gar, Lon," he said. "About the telegram I got to-day. Ha-ha! . . . Yes, it was on me, all right. . . . But what I wanted to know was how you fellers knew that there was such a street as that?"

He listened patiently while Lon Haslett cried to the ever-present loungers that Gar Ordway was still interested in Miss La Clair. He returned jocose answers as each of the loungers in turn hurled some ribald jest through the telephone. And finally Lon explained the foundation for the joke.

"It was addressed to Samuel S. Ordway. Some mistake, Gar, so we was just kiddin' you. Changed the name to yours, you know. Ain't got any Cousin Sam that it might have been meant for, have you?"

"Wish I had; I'd steal his girl," said Gar.

He hung up the receiver, amazed at his own answer. What was the matter with him? Whence came this sudden daring—even though verbal only—of his? Would he have tried to steal a nonexistent Cousin Sam's girl? Would he? He wiped perspiration from his forehead; he felt suddenly overcome by the heat of the room, although it was not very warm for May. He walked to the window; he opened it. He owned a small orchard, and the apple trees were just beginning to blossom. The night wind brought their scent fragrantly to his nostrils. His soul expanded; he felt bigger than he had ever felt in his life; his fat seemed to slough away from him; he saw the dull routine of his life as it had been ever since, on his father's death, he had bought the dry-goods store from Eben Blaisdell. He'd never been to New York; he'd only been to Boston on buying trips. He'd never had a girl; he'd always been fat and dull. Of course this telegram wasn't meant for him; wasn't meant even for anyone in Freeport; if he should call on this Y-so-belle La Clair she'd probably think he was crazy, but —— Supposin' the man she really sent her invitation and her love to never heard from her at all? Supposin' she was a nice young girl mournin' for her lover or somethin'? Hadn't she oughta be told about the mistake in the wire, and—and —— A breeze, a little stronger, blew across the orchard and came to him in the window. Apple blossoms! Springtime! Youth! Forty wasn't so terrible old, and —— If a man hustled he could catch the ten-twenty from Yarmouth Center to Boston. He could get to Boston a little after one, spend the rest of the night there and catch a mornin' train to New York. A-course it was crazy, and the girl didn't know him and hadn't sent for him, but —— If a man hadn't ever done anythin' out of the ordinary by the time he was forty, he'd better do it then or he never would.

Gar Ordway caught the ten-twenty to Boston. He arrived in New York at four o'clock. He could have ridden on an earlier train, but a man going to New York had oughta spruce up a little. A wholesale dry-goods house in Boston had cashed a check for him, and a haberdashery and clothing store had outfitted him. It was a Gar Ordway much different from the man that Freeport knew who walked through the Grand Central Station and inquired of a policeman the way to East Manville Street. His shirt was soft and silken; his tie was rich; his suit, though a Fifth Avenue tailor might have carped, was at least well pressed and of good material. He even carried a light stick. Altogether he felt that he was quite impressive and not entirely without justification. He was no slim dandy, but he looked prosperous, and the policeman recognized this and explained the best route in detail.

"But a taxi is the best way for a stranger," he added.

And Gar Ordway, for the first time in his life, rode in a taxicab, resolutely refusing to look at the mounting meter. He did not know how lucky had been his choice of locomotion; how the waiting taxi impressed the slattern servant at —— East Manville Street to the point of summoning her mistress; how it impressed her mistress—on finding that the visitor did not desire a room but merely wanted to know the whereabouts of a mythical Ysobelle La Clair—to the point of inviting him in to drink a cup of tea.

Well, Ordway might just as well, he supposed. Lon Haslett had been a liar. The boys had just guessed at the fact that there was an East Manville Street in New York; there'd never been any telegram at all. And he might just as well drink a cup of tea. He dismissed the taxi and entered the drab parlor.

"And you say you got a telegram from this Miss La Clair saying that she'd moved to this address?" asked the landlady.

Ordway blushed.

"Well, ma'am, it wasn't exactly for me, but ——" And because he disliked lying, and the landlady seemed a comfortable old soul, he told her the whole story. "I guess I musta been just crazy," he said as he finished. "I dunno what I'd said to the lady if I'd found her, anyway."

"I bet she'd found plenty to say to you," said the landlady flatteringly. She eyed her visitor. "So you come from Freeport? I had a lady with me quite recent that come from there. Leastwise she said once that was her home town. Name of Westcott. Martha Westcott. Ever know her?"

Did Gar Ordway know her? Why, he could remember when they had gone to school together. He could remember her yellow hair.

"It ain't yellow any more," said the landlady. "It's pretty gray. Had pretty hard luck, I guess."

"But I thought she'd done mighty well. Was secretary to a rich man ——"

"Uh-huh. But he failed, and she didn't get another job. She's round forty, I guess, and it ain't so easy then. She was a nice woman, too, and I hated to see her go."

A chill gripped Gar Ordway's heart. He'd never known Martha Westcott very well; Martha had left Freeport when she was twenty—right after she'd graduated from high school; her folks had all died. But she was from his own home town, and a woman, and ——

"Why did she have to go?" he asked.

"Because she was too proud to stay when she couldn't pay her board," was the reply.

"Where'd she go?" demanded Ordway hoarsely.

"I dunno. She called for her mail for a few days, and then she didn't come round again. I guess she had the post office forward it."

"Do you think they'd give me her address?"

"Well, you might try," suggested the landlady. "And," she added archly, "if you find her, even if she isn't your Miss La Clair, lemme hear how it all comes out, will you?"

And Ordway, hurrying down the steps, promised.

There was difficulty at the branch post office: it was against the law to give out addresses. But humanity is higher than law sometimes.

"She might be hungry," almost wept Gar Ordway, "and she's from my own home town."

And they gave him Martha Westcott's address. Ordway went there; it was a dingy tenement in Tompkins Street. No one answered the bell; he was compelled to knock at several doors before he found the right one. And when he did find it he hardly knew her. The Martha Westcott of to-day was faded, worn, old. Also she was shabby.

But she remembered Gar Ordway, and she was primly glad to see him, though pathetically ashamed of her poverty. No, she hadn't been doing as well lately. In fact she—and then Ordway saw the piles of vests, whose buttonholes were to be finished if Martha Westcott were to eat, and Gar Ordway's heart melted.

"Martha," he said, "here's why I am in New York."

He told her the whole story:

"You see, I'm a darned fool, Martha. But—but—I'm lonely, I guess, and, Martha, you can't go on this way. And I—I can't go on the way I've been going. Martha, the apple blossoms are blooming back in Freeport; it's quiet there, and comfortable. I got a good store. You would be comfortable—and I wouldn't bother you none. You'd be free, Martha, and I—why, fat men of forty that's just been and tried to make darned fools of themselves ain't got much right to talk love to a nice woman, but I wouldn't talk it, Martha, I'd live it; and—you could stand me, couldn't you? Make it a business proposition! You'd be my housekeeper; you'd have to marry me because it wouldn't look right if you didn't. But you'd be free, Martha, and—you needn't be afraid of me."

She looked at him. Somehow he didn't look like a little fat man to her; he looked like a knight. She didn't notice that his neck was short and his forehead beady with perspiration. Her eyes grew soft. And somehow she didn't look, to Gar Ordway, like a faded woman of middle age. She looked youthfully slim, gentle.

"Gar, I wouldn't be afraid of you," she said. "But I have nothing."

"Listen, Martha, do you really mean it? You can forgive me for being the sort of man to run round looking for an Y-so-belle La Clair that ——"

"Why, Gar," she said, "I think it was noble of you."

The Mississippi Mixer turned and stared truculently into the face of Doyle, the house detective.

Something Yet Again: Chemical Control—By James H. Collins

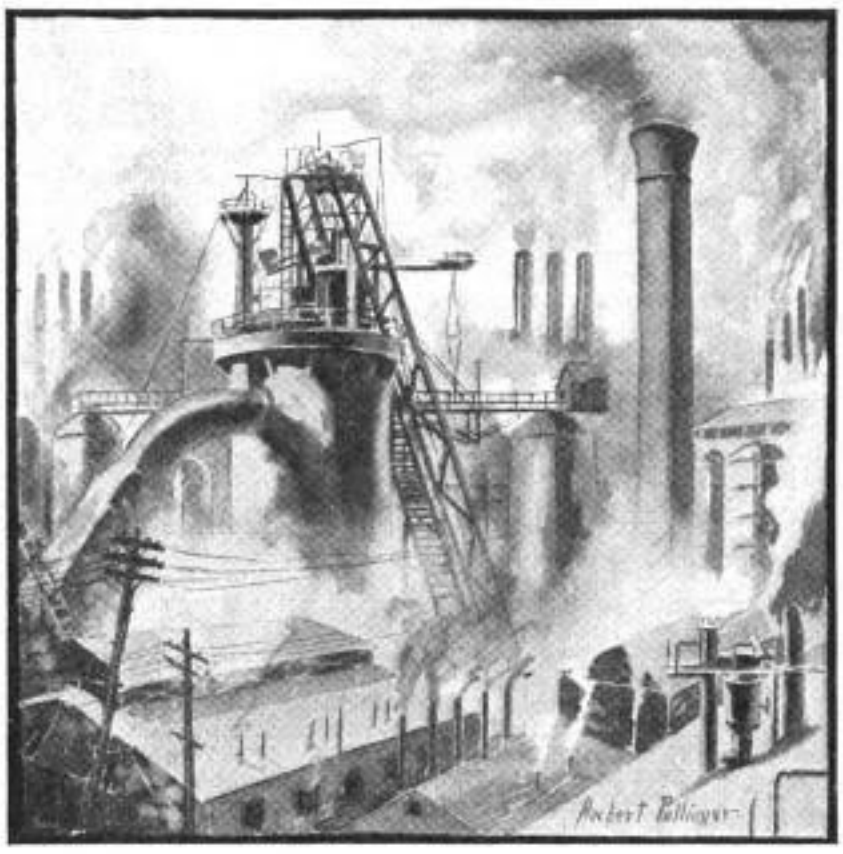
A New Factor in Industry That Calls for Explanation

SIX gentlemen gathered round a table on which were displayed a steel rail, a waterproof shoe, a fifty-cent necktie, and a tin of preserved beef. Each claimed credit for creating these commodities.

"All are products of our wonderful factory system," said the manufacturer. "My foresight built the factory and my management keeps it going."

"How about money?" protested the banker. "Where would your factory be without my financial aid?"

The third man was an engineer.



"Neither factory nor finance would have been of much account without my professional ability in working out processes," he asserted. "Each of these articles embodies hundreds of engineering problems, which I have solved."

"All production rests on labor," declared a workman in cap and overalls. "If I walk out of your factory everything stops!"

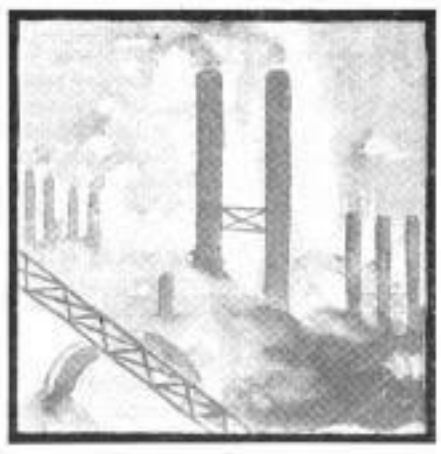
"I built up the consuming demand for your stuff," chipped in the salesman. "Unless you have hundreds of thousands of customers all over the country you could never secure the economies of quantity production."

Finally the sixth man spoke.

"I am a chemist," he said, "and these are all chemical products. All industry to-day is three-fourths chemical. You may think that your steel rail was made in furnaces and mills by purely mechanical processes; but from start to finish it depends on chemical exactness in materials and manipulation; and if the chemistry is lacking, the rail breaks. That chrome-tanned shoe is a chemical achievement. Chrome tanning is a chemically exact process. The necktie is made of artificial silk, a chemical imitation that is at once cheap, good-looking and useful. As for your can of beef, the packing industry has been built up on chemical research, and this meat was probably paid for with chemical by-products. Gentlemen, three-fourths of all our manufacturing to-day is chemical at bottom, and you must recognize that fact if you are going to extend your business and continue to make money."

What Does the Chemist Say?

ENTER a vital new factor in American industry—chemical control.



Look at our manufacturing plants through the eyes of the chemist, and products that you had supposed were entirely mechanical in their nature, such as building materials, metals, machinery, and the like, become products of the laboratory. The food you eat, the beverages you drink, the clothes you wear, the tools you use, your playthings and studies, and the power, heat and light that keep you comfortable in the modern world—in every one of them is subtle chemical supervision. It is an exceptional process or plant nowadays that does not rest fundamentally on chemical control; and if you find one that does not, something is probably the matter with it for that very reason. Everywhere the chemist, through research, is laying bare the delicate, hidden reactions involved in working materials into products and, when manufacturing processes have been established on these basic facts, keeping the process up to chemical standards by frequent analyses and tests.

Here is another way of illustrating chemical control:

Everybody knows that much has been accomplished in the past few years by intelligent study of people in industry—the workers. A manager understands that his people have differences of temperament, education, brains, strength, likes and dislikes. He uses their natural abilities as far as possible and, when these are too pronounced in a certain direction, may check one against another, as by harnessing careless energy and cautious experience together. Even differences of nationality, politics and religion can be harmonized to increase output, raise earnings, cut costs, and abolish waste and accidents.

Now comes the chemist and insists that the materials of industry are just about like the people. They are temperamental. They have warm likes and dislikes for each other. Some are energetic and some sluggish. They differ with mass, temperature, time, and so on, and are swayed by the equivalent of nationality and politics—and cannot help it, because they were born that way. Their differences are as subtle as human whimsies, being detected only with the microscope or delicate reactions in many cases. The chemist aims to bring about with materials the same balance and working harmony that the manager of employees brings about with human beings.

Chemical control was already a big factor in our industries before the European war broke out; but few except the experts had heard much about it. War gave it prominence. Manufacturers found themselves unable to get hundreds of chemical materials that had been coming from Europe as a matter of routine—many from Germany, which has carried chemical control to great lengths in its industries. They faced the problem of making these things or finding substitutes. The public also found chemistry interesting, because it had to pay more for drugs and chemicals.

The dye situation was especially interesting. So much has been said and written about dyes during the past two years that the man in the street knows all about the color in his socks—where it comes from or has gone. Dyes have attracted attention out of all proportion to their importance, for our whole consumption amounts to no more than twenty-five or thirty million dollars a year. But this popular interest has directed attention to the general chemical problem. The manufacturer and the man in the street were very pointed with the chemist when they found themselves running short of things.

"What are you going to do about it?" they asked. "What is the matter with American chemistry, anyway?"

And the chemist dropped his test tubes and microscope, and undertook to explain. He has been explaining ever since. It is rather a complex situation.

There is a twofold general chemical problem. In the first place, we now see that we ought to make many of the crude chemical materials formerly bought abroad. This calls for improvement in present processes, and also new factories. Potash is a fair example. We can get some of it out of cement-kiln gas when we contrive the right process to save what is now waste; and can also make it from kelp, feldspar, Western lake waters and other raw materials, when we build factories. In the second place, we must have a better understanding of the universal importance of chemical control in all our industries, and adjust processes accordingly.

Never Too Much Theory

WE MUST all get acquainted with each other on this new basis, says the chemist. The man in the street thinks of manufacturing as purely mechanical and regards the chemist as a sort of pill maker and medicine man. He must learn that chemical control is far-reaching in business and see its possibilities for efficiency. The manufacturer needs a chemical point of view on his plant, and the politician will be called upon to help. The chemist himself admits that he has been backward about getting acquainted—he has stuck too close to his professional activities and taken no time to explain the broad practical aspects of his work to the public. Most of all, the banker needs enlightenment on chemical control, so that he can coöperate intelligently by investing his money. The situation pivots on the banker.

For an example of what chemical control, backed by flexible banking facilities, can accomplish for a nation, one must go to Germany, where the chemist, the manufacturer, the government and the banker all work together. German industries are more thoroughly organized in this way than those of any other nation, and for that reason the Germans have been able to get fine results in business with rather poor resources.

German banks have been industrial institutions as well as financial. No laws such as restrict banking in England, France and America, have kept them out of business ventures. The German chemist has delved into research and found new ways of doing things, and when his ideas were laid before the great German banks the latter have provided capital for taking a chance. In many cases the idea has been so advanced that private capital would not have taken chances. Even the chemist himself could not tell just how far his idea might be applied in business. But the German banker, guided by his chemical adviser, has backed ideas with money; and nine times in ten he has won. For it is an axiom in science that the discovery of to-day, pure theory, apparently but a beautiful laboratory achievement, will in five or ten years be part of the daily life of the man in the street.

Germans have never been afraid of theory. An American business man once visited the late Doctor Witt, at the Charlottenburg Technical School, and was shown its facilities for research.

"But doesn't this run too much to theory?" asked the visitor, with his true American distrust of everything not plainly practical.

"Why, one can never have too much theory!" the doctor replied, in surprise, like a true German.

THE MAN WHO WAS AFRAID

By Mary Brecht Pulver

ILLUSTRATED BY WILL GREFÉ

IT'S the most trite thing in the world to say that blood will tell. If a snub-nosed, pie-eyed, auger-legged gutter tike stands up in a street fight and shows a bit of thoroughbred metal, we very quickly point to the thin but true-blue strain that dominated him; and by the same token, when a sledge husky goes "bad" it's easy enough to cry "Wolf!" literally, and consign him to his special ancestral devil. Thus, also, with the *genus homo*—the extremes are easily recognized. But the average man—that complacent omnibus in which so many mixed ancestors ride—cannot be so easily classified.

"There's so much bad in the best of us and so much good in the worst of us"—as we used to recite for Teacher on Friday afternoons—that life may mean a constant struggle between our blue-ribbon and yellow-devil strains; and in those unfortunates where they balance fifty-fifty it doesn't pay to be too hasty. Not that I'm trying to defend Benton Clune; I'm only going to give you the facts and let you judge for yourself.

Benton had good metal in him. His great-great-grandfather was one of the first settlers to come out of Connecticut into the New York wilderness. He arrived in a Conestoga wagon with solid wooden wheels, bringing family and household goods, and cleared with his own ax, against heavy odds, a big tract on the Delaware River. He was one of Walt Whitman's "powerful uneducated persons," wearing a coonskin cap, and chumming closely with an old flintlock, affectionately addressed as Sar' Ann.

People respected him for his hardy bravery, unswerving honesty and general sterling metal. He was a good neighbor and, when the need arose, could handle an Indian like a Tom Quick. He feared—apparently—neither God, man nor devil, living valiantly, without special church or creed, through famine, Indian wars and black winter freezes, and died with his boots on. He had a mate worthy of him. She could use an ax like a man, and on one occasion fought wolves away from her door with blazing fagots.

Their son opened the first general store and sawmill in this region when the little clearing budded into a settlement. He handled the first loggers who came down the river from Canada, by right of might, as he had to. They were a rough lot and he had his work cut out for him; but he won through. He was the John Ridd of the countryside for physical prowess and wrestling; and he boasted, and could make good, that he could put down any man's hand he met.

By the time his son, Benton's grandfather, was grown, times had changed. The settlement had grown into a prosperous village, and a man was no longer ranked according to biceps. Law and order had arrived, more or less. Benton's granddad served creditably in the Civil War and, on his return, spent the remainder of his days—his store having prospered and grown expansive—wearing black broadcloth and a gold watch chain and presiding as superintendent of the Congregational Sunday School. No blame whatever can attach to him, since he was a brave man, upright and honorable, who had served his country fearlessly.

The first error was made by Dan, his son. Dan went over to North Riding Settlement and married Maisie Benton. Maisie was his error. He didn't dream this, of course, because the error came disguised as a soft, pink little morsel of femininity in butterfly flounces and a bonnetful of roses. There wasn't a mother's son in the countryside who hadn't let his mouth water for Maisie; but only Dan—God help him!—was lucky enough to win her.

He brought her back to the big house on River Street and gave her a "hired girl," and silks that "stood alone," and all the worship and petting that a great, hulking, coarse male feels is appropriate for a soft, lovely creature who has yielded her life to him—that is, he did during the first year. By the end of it he had found Maisie out—and the discovery was not exactly pleasing. Maisie in petticoats was a pliant, clinging soul who needed constant protection, who demanded it as her right; Maisie in trousers would have been drummed out of any self-respecting community.

If ever a cold coward, a plain ordinary quitter, with not a single inch of spine, walked shoe-leather it was little Maisie Clune, who worshiped so regularly in her big pew in the old Congregational and trusted her God not at all. It was not alone that she feared spiders, tramps, burglars, snakes, storms and dogs, legitimate objects of female fear in her day, but she was afraid on general grounds. She feared everything. She feared thirteen at table, and a raised umbrella in the house—precursor of death; and "tokens"—a bird flying indoors would send her into hysterics; she was afraid of "spooks," of her own society, of ghost stories, of dark o' night, of accidents, of sickness, of death, of the "world to come."

In short, Maisie was afraid! She lived most of her days in tears. And all this might have been tolerable, but there was worse; for Maisie was also afraid of the truth, of a moral issue, of all responsibility, and of maternity. This last she made very clear when young Benton Clune decided to make his début into the world.

At the end of a year devoted to assuaging tears and calming terrors, real and imaginary, Dan Clune, grown considerably bored, passed by on the other side and left Maisie alone spiritually—alone with Bennie.

And Bennie got what Dan had been getting. Only, not being a strong, cigar-smoking male, who could take it out in playing pool down at Weston's, but a small, malleable, human thing-in-the-making, he naturally felt a keener sympathy for his mother's terrors. When a thick August gust crept up over town, and his mother, trembling and white-faced, piled both of them between feather beds on the high old four-poster and, holding his cold little hand, told him how lightning struck folks dead—how men seeking protection under trees were found lying dead with their shoes burned off their feet—Bennie naturally trembled with her and realized the malign pursuing qualities of lightning and man's utter inability to cope with it, and made little frightened resolves never to tempt it at close quarters.

When his mother ran with him through the dark hall on a winter night and uttered little cries of delight in getting "safe away from the big ugly dark, beside the pretty warm lamp," it is small wonder that Bennie realized with anguish the sinister, malignant quality of darkness; the dangers that lurked in the black hall—out there near the hatrack; how necessary for man's safety and development it was to shun it all. Life, as it unfolded under Maisie's hand, was full of ferocious forces; life, in short, little Bennie early realized, was full of dangers.

At six years he would have put his head into a lion's mouth as readily as face the terrors of sleeping in a darkened room; and the sight of a strange man's face sent him screaming to his mother's skirts.

At eight years Bennie was sent to Mrs. Watson's private school, warranted to be a safe fold for the gentler spirits of town; but on the first day, when returning home, Doc Fisher's boy, Pod, caught Bennie and made his unresisting nose bleed. Thereafter Maisie herself escorted her son to and from school, and he became meekly accustomed to moving at his mother's side, like a comet with a small tail of hardier juveniles tagging behind, who cried derisively:

"Chick! Chick! Chick!"

"Bad, naughty, dangerous boys, who will hurt my darling!" Maisie called them; and Bennie believed her.

He got proof every time he went out alone in the form of a swollen nose or a blackened eye, which he accepted with Christian tolerance, having been carefully taught that it was "very wicked to fight."

But the dangerous boys grew tired presently of batting Bennie round like a bean bag, and after a while they permitted him to grow up in peace; and he passed without accident through long curls, first trousers and dancing school into adolescence.

At fourteen his mother selected a polite boarding school, dying slowly of attrition, and he spent three winters there. His father died during the last term; and, college being a harsh, unknown place for the son of Maisie Clune, Benton came home and went into the business.

It was a very pretentious store now—the Clune place—with a stucco front and plate-glass windows, and usually a string of high-powered cars outside waiting for the wives of local plutocrats. In the windows, where the original founder had shown merino and unbleached muslin, cowhide boots and New Orleans molasses, were now moleskin stoles, gold vanity bags and Georgette collars. *O tempora! O mores!*

It was a tidy place inside too: velvet hangings, gold mirrors—that sort of thing. Bennie took to it like a duck to water. He looked exceedingly decorative himself, for he had a natural taste for the sartorial and a physique to display it. Despite the fact that he habitually played nothing more violent than golf, eschewing tennis because his mother feared the effect on his heart, and hockey and skating because of the uncertainty of the river currents, and driving a car himself because—oh, well, because—he had a grace and vigor of form that an Apollo might have envied—a legacy, no doubt, from that ancestor who had petted his Sar' Ann.

He had, also, the devastating blue eyes of Maisie, his mother, black-lashed and deep of hue, a nicely shaped nose and head, fine teeth, and a slight golden crinkle in his chestnut hair. Little shop-dollies felt their hearts swoon as he passed, and the daughters of the plutocrats, who came to buy the before-mentioned stoles and vanity bags, always maneuvered round for a glimpse of Benton.

He had a way with him—Bennie—an air of appreciative sympathy in saying "Yes, madam; we have the new Byzantine embroideries. They will be very good this winter. Please show the bronze trefoil patterns, Parker——" Or "Good morning, Mrs. Trent. Yes, the new pannes have come. There is a beautiful prune shade I especially want you to see."

The beauty of it—the "sickening beauty," in the language of Pod Fisher—was that Benton really knew prune from taupe, and the Byzantine motifs from the Romanesque. These things didn't help any with the sterner sex, but he was very popular with the ladies. The old ones praised his good manners and charm, and Maisie Clune looked upon her work and found it good.

They Literally Ate Him Up With Their Eyes

Digitized by Google

One morning, when Benton was just twenty-four, he went up to his office on the main elevator. He was looking uncommonly well and wearing an English-cut gray flannel, with mauve shirt and tie and uncut amethyst sleeve links. There was a sprig of purple hyacinth in his buttonhole. It would have been remarkable, indeed, if the sole and only other occupant of the elevator—barring the ebony employee—should have failed to make a rather discriminating study of young Mr. Clune's points; and the occupant being Elsie Revere, it would have been impossible for Mr. Clune to escape making a reciprocal study. At any rate, though his destination was the fourth floor, he got out at the second along with Elsie and found himself beside her, saying:

"Is there anything I can do for you?"

He found himself looking into ravishingly soft dark eyes—real Seville eyes—and a gay little pointed face, tip-tilted under an equally gay and tiptilted little hat, with sundry other items thrown in—as hair of matching Spanish darkness, a full, soft little red mouth, and a high-bridged, proud little nose.

"I want," said Miss Elsie Revere, "to look at some tapestry—for upholstering."

"We have a splendid new line that has just come in. I will have someone show you—or, better still, I will show them myself."

The psychology of that "better still" was quite evident. Benton went behind the counter and, with absent eyes and hands that fumbled a little, produced his stuffs.

"Something quite heavy, please," dictated the girl; and Benton, his blue eyes furtively seeking the Sevillian orbs, unfurled a piece.

"Here is a beautiful thing," he declared.

"It is beautiful indeed," said Miss Revere; "but it is not at all what I asked for. It is curtain net and quite thin. It would hardly do I think to re-cover chairs."

Benton blushed; but their laughter rang out together and, though Miss Revere shopped nearly thirty minutes longer, tapestry was not even mentioned.

She Put Out a Hand, Touched the Big Flag and Let Her Cool Eyes Sweep the Figure Before Her From Head to Foot

Benton was formally presented to her the next evening at a country-club dance, where he danced with her an enormous number of times. Within the week he had called upon her four times, and finished up with a Saturday-to-Monday in her society at a friend's bungalow upriver. And, long before that, he knew that this was not the usual temporary "terrible crush," but the real thing—the biggest crisis in a man's life; and he resolved to take Miss Revere into his confidence as soon as possible.

But it was nearly a month before he was given a halfway opportunity; and, while he feinted for a good hold on his subject, Miss Revere set him tingling with an announcement of her own.

"The man I marry," she declared, apropos of one of their soulful talks, "must be a soldier—or soldier stuff, at least. He must be the kind who's willing to go out and do for his country"—her pretty black eyes sparkled—"like the men—the soldiers—in my family."

She was very proud of her family, Miss Revere. There had been hard-fighting Reveres in all the American wars; and she also claimed a lateral connection with that worthy Revolutionary silversmith who conferred an obligation on all Americans by his conduct "through every Middlesex village and farm" on the eve of Lexington.

Reflecting on this, Benton's heart turned a little cold and he said nothing. But after he got home he sat on the veranda and watched the moon rise above the river willows, and took an inventory of himself. This was a thing he did rather frequently anyhow; and the result—contrary to public opinion—was far from pleasing. He knew he was rich and good-looking—his mother permitted no illusions on that score—but he also knew that, as a man in a man's world, there was no one in his city so unpopular. And this was the thorn in his garland of roses; for Benton wanted—had always wanted in his secret heart—to be a "real fellow." But he didn't know how to begin; he hadn't the capacity, the power.

He was a person caught inescapably in a net woven by heredity and circumstance—the prisoner of his own habits of thought. He realized this and feared there was no escape. Such reflections are not pleasant. In his black mood Benton saw himself clearly; he was soft and effete, and mulierose and petticoat-tied; and he could no more free himself than a man can change the color of his eyes—or so he thought.

He reflected on Elsie Revere's speech: "Soldier—or soldier stuff." And he shivered. These were matters quite out of Benton's ken. He had never learned to handle a gun, just as he had never dared to swim in the deeper parts of the river or climb a very tall tree. He had always liked to look at soldiers; the glint of the uniforms, whether in parade or comic opera, carried a certain fascination. It all appealed to his love of beauty and rhythm; but he had never considered the real thing that lay behind. The thing an army symbolized he had been taught to hate. The sight of blood had always sickened him anyhow; and war, he had been taught, always meant just that—bloodshed and death. There wasn't anything to war but bloody madness and destruction, anyhow—an eternal carnage.

Once, when he was a little boy, he had seen a regiment of Spanish War soldiers returning. There had been flags on the houses; the band was playing A Hot Time in the Old Town To-night, and the streets were full of cheering. But his mother had barred her shutters and, up in her bedroom, had made him kneel down beside her.

"War is a wicked, wicked thing, and against God's teaching. These soldiers are cruel men. They have slain others. Some of them died on the battlefield or in a hospital—horribly! It is all wicked waste and means nothing—nothing but dreadful suffering!"

There was a book she had given him later—a fat volume recounting the prison horrors of the Civil War—Andersonville. They had an old gardener who had been there; he, too, furnished details of loathsome particularity. Perhaps if Benton had gone to public school these impressions would have gone home less strongly; but he had been shielded from all contacts with actual life. So, when he observed people salute the flag and recite Lincoln's Speech at Gettysburg, or went to put flowers on his grandfather's grave on Memorial Day, and saw the old G. A. R.'s wabbling round with their little bronze buttons, he knew what was back of it all. It was only a mask for the devilish pageant behind—all sound and fury. And it was a thing to stop a fellow who winced at the sight of a bloody bandage or whose pulse hastened when an ambulance passed. He wasn't soldier stuff, by either conviction or marrow; but he was very much in love—and very unhappy with himself.

"And I look like any other fellow!" he told himself bitterly. "I'm big and strong. What ails me anyhow?" And little by little he tried to force a solution. One morning he announced:

"Mother, I'm going to join Company X."

The earth rocked under Maisie Clune and her face whitened.

"Benton!"

"Nonsense, mother!" He tried to speak brusquely. "It doesn't mean a darn thing—nothing but uniforms and drills and how to shoot. I ought to know how!"—as she winced—"and dances sometimes, and a jamboree with girls—and Tobyhanna. You just ask Mrs. Hallett about it." Mrs. Hallett was comforting:

"It will be the making of Benton, my dear. I think it's rather stunning, myself. Reid joined five years ago, you know. Except for hiking at Tobyhanna, it hasn't meant anything more strenuous thus far than an afternoon at tennis. Reid loves it. And their khaki—oh, when Benton gets his on he'll have all the girls in town crazy about him."

This was a new thought for Maisie. But, of course, her good-looking boy would be handsomer in his suit than anybody else—only another triumph, really. She called up Hastings, the photographer, and made an appointment for Benton without delay; and very shortly a costly portrait of a stunning young militiaman, in full khaki, looked out from her bedroom wall. Below it was written: My Soldier Laddie!

It was not the only photograph put to such soft feminine use. A duplicate smiled from Miss Elsie Revere's wall, and the night she received it she had let Benton kiss her; and she had cried a little with pride and happiness, and had told him that there was nobody else in the world—nobody at all! And Benton's own heart had almost boiled over.

It was a fine thing—belonging to the company—he found. The fellows received him with an apparent change of heart. They were decent, sociable chaps and willing to take him on new grounds. He seemed to discover new phases of himself to people. They forgot to call him Bennie;

Digitized by Google

treated him like any other man. The boys hobnobbed with him willingly and asked him to little shindigs of their own. He almost forgot his former incarnation himself.

When he went to Tobyhanna—his first summer—he was an accredited pal of Pod Fisher and several others. As for the military end, it came surprisingly easy. He took pleasure in doing his bit well, observing the discipline eagerly, studying up manuals and drills, working for promotion. The shooting came easy too. Perhaps it was again the influence of Sar' Ann, but he took to a gun readily and on the range did excellent work, and even presently broke a target record and had his picture in the paper. And of course the social end, the dances and banquets, came even easier. But during November Maisie got her first scare.

"There's a street-car strike in Buffalo, Benton—they think—Mrs. Hallett told me. I called up Colonel Corey right away, but couldn't get him. Company X may be—ordered out ——"

"Oh, well—just strike duty, mother ——" But Benton's own pulse stirred slightly.

"I know, dear—but strikers, Benton!—they shoot, you know—there are always fatalities—I never dreamed—if only you hadn't joined! And they throw stones and bricks. Why, I remember in the last strike ——"

That was a bad time for Maisie Clune, divided between calling up everybody—colonel, captain, lieutenant; anyone she could capture in Benton's company—and praying agonizedly under her Soldier Laddie's picture. But after three days of suspense and big headlines the strike was pacifically settled.

"You hear me, Benton!" she wept: "You get out of the company the moment your term's done. I never wanted you in it—something might happen—and the business here needs you."

Benton promised he would. He tried to tell himself it was to please his mother, but in his heart he scorned himself for the lie. He had not liked to think of what might await him—out there in Buffalo.

"I'll do it," he thought. "I don't really belong there anyhow—not that anything serious ever will arise; but I'll get out. It's true that the business needs me, and I've shown Elsie I'm willing."

But this was one of the best-laid plans to which the Scotch poet referred. Benton had less than thirty days to serve when, one evening after an Armory meeting, he came back to the house bringing disquieting news. That was the spring and early summer when the Mexican pot boiled and sizzled, and Señor Villa thrust himself so resolutely into the pages of American history and threatened to grow too strong for United States digestion.

Benton Clune, in common with the rest of his townsfolk, had kept an eye on the situation, had read news columns and watched Administration moves; but with all the backing and filling, the thing took him actually as unawares as it did almost everybody else. So, when he came in from his company meeting, his face was more than pale.

"Mother," he said, and for a moment he gulped a little, "it's come—the real thing. Mexico, you know. They're talking of war—down there. Colonel Corey had private messages from the Department, and the Press is running an extra."

Maisie Clune took the paper he had brought, with shaking fingers. There was nothing authentic—only headlines and rumors of war, vague hints and, tucked into the bottom of the column, a forecasting of coming moves—a prediction that Company X would be one of the first called; but Benton's mother turned white and sick.

For a space there was silence and the two only looked at each other; then the woman pulled herself together.

But by the next afternoon the news had crystallized to authenticity. The President was mobilizing the guards of New York and Pennsylvania; a definite summons had come to Colonel Corey from Washington; Company X boys were ordered to report daily at the Armory in uniform, to drop other occupations and affiliate for set periods with temporary encampments along the river for drill and preliminary maneuvers. The evening papers printed a call for volunteers to raise the company to full strength, and prognosticated the date of departure for Camp Whitman.

The streets became strangely filled with brown-clad martial figures; little squads were seen going through the side streets in military formation; in twos and threes they moved through town, with long gift cigars in their mouths and endless friendly hands shaking theirs; and some of them, a little anxious-eyed, went about with wives and babies—grown doubly precious—tagging at their heels. Every house wore its big flag and every lassie the thrill of the soldierly pageant in her eyes. And, not to be behindhand, the lassies planned a special dance—"to say good-by to the boys." They were very emotional, our girls, during those days; and Elsie Revere led all the rest.

Benton himself had brought her the news, looking graver and whiter than usual, with the strange look in his eyes that had come into them—and stayed—since that first night of the alarm. Elsie, standing on tiptoes, had kissed him and cried over him.

"Perhaps it won't mean anything—just a scare, Benton; and in any case it breaks my heart to see you go—just! And yet—funny, isn't it?—if you weren't going—if you were one of our stay-at-homes who hadn't even enlisted—how—how ashamed I'd be! I want to keep you and I want to send you."

Benton had told her that he understood. He didn't stay very long or say very much. A queer restlessness seemed to possess him. He went down to the Armory every morning and reported himself mechanically; but he came away quickly. The first night his bed was not even slept in—his mother heard him pacing the floor through long hours. That was the morning she voiced something that lay between them—perfectly understood, but as yet unmentioned.

"The Man I Marry," She Declared, "Must be a Soldier—or Soldier Stuff, at Least"

"I am sure we can do it. It isn't as if we hadn't plenty of money. Money can do anything."

Benton had turned very white, but he did not answer. Within an hour Maisie Clune's electric was standing in front of the office of Timothy Aitken, her attorney; and later it stopped at Colonel Corey's residence; and finally before the Armory itself.

But rumor did not even creep until that evening. It was after drill that Benton himself went up and spoke to Colonel Corey:

"I—I don't believe I'll go, colonel. I've got less than a month to serve and—and I haven't any intention of reenlisting. . . . It would be useless, really—even going up to camp—so short a time. It's—my mother—she isn't young—and the business needs me."

He moistened his lips toward the end—the words came with difficulty, broke off under the colonel's cool gray eye.

"You will report in the morning as usual, Benton. You will continue to report with your company regularly. You will take your part in your company's drills until such time as you are exempt under the terms of your enlistment."

He added more—a few eloquent touches concerning patriotism, a gentleman's duty, and the part of a man of honor; and his own sense of shame for Benton's suggestion.

Benton carried the news to his mother, sitting white and strained in her darkened living room.

"There isn't any way—honorably, mother. I'll have to go."

"Oh, there must be some way—something! We'll find it, Benton. It's absurd! I offered any price—enough to buy a dozen substitutes. Timothy's doing all he can."

Maisie found it the next day. At two o'clock the newspapers ran flaming extras:

TROOPS MOVING TO CAMP WHITMAN FRIDAY!

COMPANY X STARTS IN FULL WAR STRENGTH TO JOIN MAIN BODY!

OUR BOYS LIKELY TO GO TO THE BORDER AMONG THE FIRST!

Benton read it on a bulletin board downtown. Somebody slapped him on the back—Pod Fisher. Pod was in uniform too.

"Great, isn't it? By jingo, I'm just busting!" he said. "We'll have the time of our young lives trimming up those beggars down there!"

Benton hesitated a moment before he spoke:

"B-but war—you know ——" The words crackled on his lips.

"War? Sure! Sherman said it." Pod grinned; then he sobered and gave Benton a long look. "A fellow has to do his bit. It's all in a lifetime, you know."

Behind them in the crowd a thin little shaver—a new recruit, his little mother hanging on his arm—had broken into excited speech:

"Might as well croak for my country now as croak for myself later on," he said; and a thin peal of young feminine laughter cut across his words.

There was babble all about them—excitement; a happy jostling and pushing, with an undertug of emotion in it. It was that way the length of Benton's journey home. Everybody seemed stirred, warmed—except himself. His hands were cold—his cheeks; his knees sagged as he walked. Passing Elsie Revere's house he looked up, seeking a glimpse of her, but saw only the flag on her porch. It blurred under his eyes. His hand was shaking as he opened his front door.

He stopped, amazed at what he saw. There were roses on the tea table, lighted candles, an air of celebration. His mother wore her best silk; there were pink spots on her cheeks. She came to him, laughing hysterically:

"I've managed it—found the way! Oh, Benton, it's all right, my darling! Why didn't we think of it before? Timothy Aitken—I made him telegraph, and he heard less than an hour ago. It's unconstitutional! They can't compel you—you needn't leave your state—you're not in the Federal service yet—you've got the right to refuse—they won't take the oath till they get to the main camp.

Exit Post-Mortem Merchant

By EDWARD MOTT WOOLLEY

MRS. JUSTUS THRIFTY was passing the hosiery department when her glance fell on some white cotton stockings that were priced at eight cents a pair. She turned and called to Mrs. Max Cheaply, who was lagging a few steps behind:

"Look now! Stockings at eight cents!"

Mrs. Cheaply came alongside and picked up a pair of the bargain hose. She fingered the quality and then inspected the price mark with suspicion.

"Eight cents!" she observed. "A funny price for stockings, Mrs. Thrifty!"

"Sure; yes, Mrs. Cheaply! I think we want none of them."

They passed on and presently Mrs. Thrifty exclaimed:

"Come here and see the lovely white stockings at two pairs for a quarter!"

"Now that is more like it," rejoined her companion, testing the feel of the goods. "I think I must get me six pairs."

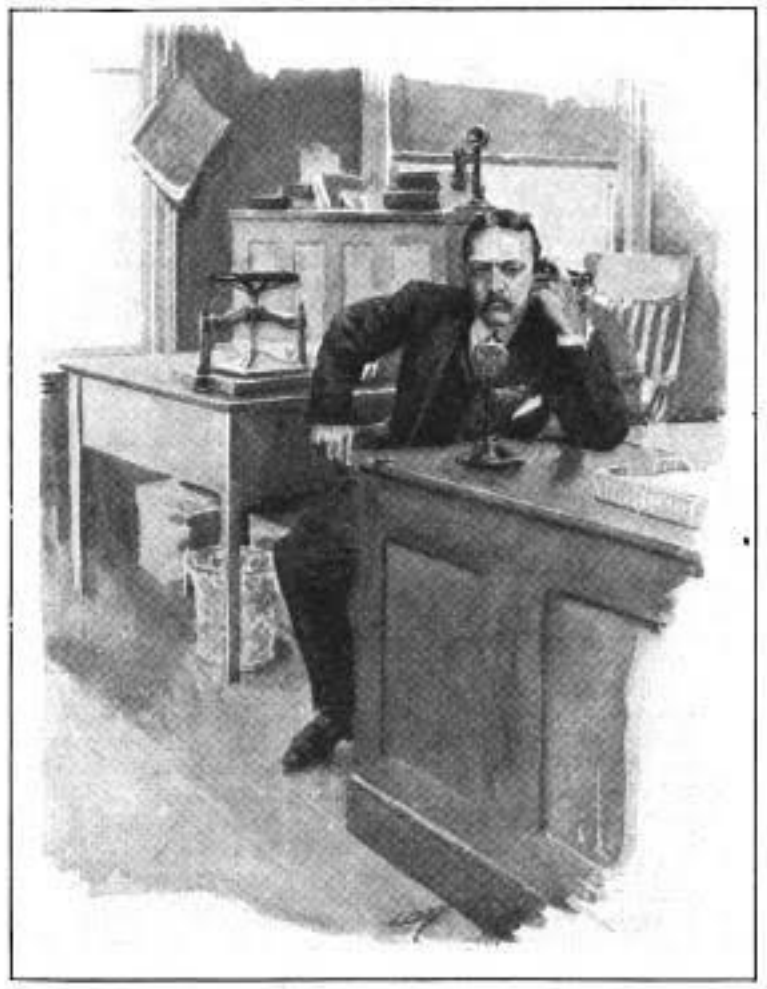
Both of them bought, not knowing that the two lots of hosiery were identical, and that this was merely an experiment of the research department into the psychology of pricing. Two pairs for a quarter was the regular price.

Then along came Mrs. Peter Savemoney, looking for bargains, and Miss Philomena Smallcash, and the Widow Littlechange, and a hundred other woman shoppers. Only one out of ten bought the eight-cent stockings after comparing the two. The public registered its emphatic preference for the twelve-and-a-half-cent price.

The investigation showed plainly that eight cents was a hoodoo price for stockings. Further experiments showed that the same stockings sold badly at fifteen cents for two pairs, and at seventeen cents. This study of prices led into many curious ramifications; and thus the research bureau found that wrong pricing, from a psychologic point of view, had often been responsible for unsatisfactory sales.

Eight cents, you see, was a departure from accepted standards, just as a blue toy express wagon would be a departure in color. The human mind runs in channels of precedent and it is commonly difficult to divert these currents to new courses.

The research department found by experiment that in many lines of goods thirty-six cents and thirty-seven cents were bad, but that thirty-eight or thirty-nine cents would sell the same goods much faster. Eighteen and nineteen cents were good selling prices for other goods, but when these articles were shown at fourteen cents they went begging. Some table linen offered at eighty-nine cents met an indifferent response, but went fast at ninety-five cents. Articles offered at ninety-eight cents encountered unmistakable distrust, but were quickly cleaned out when priced at one dollar. Prices that were graduated upward in jumps of one cent in different qualities of yard goods brought poor results, but two-cent jumps did very well.



Speeding Up Slow Sellers

"ONE DAY," the research manager said to me, "I got a notion that we could sell more muslin underskirts if we raised the average price of the lines being featured, giving better quality. When I suggested the experiment the general manager of the store said I was crazy and had better get some sensible ideas into my noddle. He told me, however, to go ahead and try it.

"First, I went out and did some investigating. I found that another store in our city, catering to a cheaper class of trade, had fixed on one dollar as its best selling price for muslin underskirts, while the best selling price in an exclusive store was two dollars. So we put in our greatest stock at a retail price of a dollar and a half, and this proved to be the best selling figure, increasing the average sale in this line fifty per cent, without any increase in the average selling time."

A department store is the most complicated piece of mechanism extant, but its problems are merely exaggerations of the common difficulties. In recent articles I have touched on various branches of department-store management, and here in this article I am treating the research department, which is about the newest development of all. Manufacturers have long had laboratories and experimental departments, and now merchants are getting them.

The research bureau determines what is responsible for the success or failure of any department. There are no limitations on its scope and it may investigate the work of the president or the janitor. It finds out why the store has so little masculine trade; looks into the shopping habits of women; studies the mistakes of competitors; analyzes the retail market.

There are No Limitations on the Research Bureau: it May Investigate the Work of the President or the Janitor

It happened once that the sale of a line of low-priced dress goods was very slow and the research man undertook to make it move faster. The pieces had been stacked up on the shelves back of the counter, and the store had a rigid rule that all such goods must be rewound immediately after being shown, and replaced in their staid and dignified position.

"Try them out in the aisle, on tables," he said.

Here they attracted more attention, but the floor manager watched the salesman closely and made him keep all the goods rewound and in stiff, even piles.

"Suppose we try a little disorder," proposed the research man. "Let the ends hang down, and muss the cloth a bit."

This scandalized the floor man, who was a servitor of tradition; but the sales of those goods immediately jumped twofold.

The sale of sweaters, too, was doubled by taking them away from the wall and displaying them on circular racks in the aisles.

For many years the silver knives and forks and silver dishes had been kept in the chinaware section on the sixth floor, and never had paid a fair profit. After the organization of the research department this was one of the first things taken up. For several months a record was kept of the number of persons calling for this line of goods at the jewelry department on the main floor, and it was found that this number actually exceeded the total number of customers who bought such goods on the sixth floor.

"In other words," said the research manager, "more than half of our potential customers for silver knives, forks, dishes and that sort of silverware left the store without buying rather than go to the sixth floor. It was very apparent that the location of these goods was wrong; so they were brought down to the jewelry section. In the following year the sales tripled."

This investigation led to some microscopic studies of department location; and here a wide and astonishing field was opened. A classification was made of departments or lines of goods that were not selling as well as they should, and experiments were conducted to determine whether changes of location would benefit them.

The men's clothing had been on the fourth floor, the hats on the third and the men's furnishings on the main floor; so now temporary "squares" were established on the main floor, adjacent to the men's furnishings, for the clothing and hats. These so-called squares were miniature departments. From the start trade was brisker than it had ever been on the upper floors; so the clothing and hats, and ultimately the men's shoes, were brought downstairs, with a forty per cent increase in sales during the year.

Then the research department established a large number of experimental squares throughout the store, and finally the fixed policy was adopted of having every department represented on the main floor by one or more lines of goods.

Mrs. Spendwell, for example, comes into the store to buy some ribbon, and on the way down the main aisle to the ribbon counter she sees some lace neckwear that catches her fancy.

"Of all things!" she exclaims. "I thought the neckwear was on the third floor."

"Yes, madam; so it is," says Miss Salesgirl. "This is just a showing from the third floor. Pretty, isn't it?"

And Mrs. Spendwell buys the piece that caught her attention.

Then come Mrs. Moneybags, and Mrs. Wasteful, and Mrs. Throwcash, and a lot of other woman spenders, and they are captured by those goods in the neckwear square, which they never would have seen on the third floor. As a matter of fact, the neckwear department has been lagging badly; but now it begins to pick up.

Measuring Aggressiveness

BUT this neckwear square on the main floor is not a permanent institution. If it hadn't taken hold with a vim the merchandise manager would have ordered it out, perhaps at the end of a day. Space on the main aisle is relatively as valuable as a store on Fifth Avenue.

Since the research bureau began these experiments in the placing of selling squares most of the department heads have been clamoring almost daily for chances to get one or more of the squares.

Miss Beatitt, of the linings, say, goes down to the merchandise office and reports that she has some mercerized sateen that hasn't been selling well, and she thinks it ought to get on the main aisle.

"I can't give you the main aisle," says the merchandise autocrat; "but I'll try you out with a square at the rear of aisle nine."

This displeases Miss Beatitt mightily, for the rear of aisle nine corresponds to lower Sixth Avenue, she declares.

Mr. Gofast, of the draperies, likewise goes down to the office and complains that some of his new scrims are not having a fair chance with the public.

"If they had a square on the main aisle ——" he begins; but the czar cuts him off:

"Nix for the main aisle; you can have the middle of aisle thirteen."

"Thirteen is the bogy!" pouts Gofast; but he takes it.

This sort of competition became so interesting to the research manager that one day his fertile brain conceived an idea; which fact of itself is not strange, for ideas flow from him all the time. Ideas are the most significant function of the research bureau, and it is interesting to observe that they are not usually extraneous inspirations, but the product of tabulated and analyzed facts.

"Let us keep a record of these demands for squares as they come in from department heads," he said to the president. "It will be a valuable little piece of research."

This was done. During the following month Miss Beatitt came down nineteen times to ask for squares; Gofast, eighteen times; Seller, of the house furnishings, sixteen; Domuch, of the cloaks and suits, eleven; Grabski, of the trunks and bags, seven. On the other hand, Sitwell, of the linens, didn't come down at all.

From a personal viewpoint the merchandise manager might have preferred Sitwell, since the latter did not disturb the quiet of the merchandise office; but from the store standpoint Sitwell wasn't aggressive and enterprising enough. So, as the research manager put it, they "canned" him.

This same sort of research into the personnel of the store was extended to the heads of departments in connection with newspaper advertising. A record was kept, in classified tables, of all the items sent in to be advertised, and it was found that more than half of the department heads were fighting all the time for space, while the others took seats in the back rows of the advertising rumpus.

Jake Rustle, of the ready-to-wear, for instance, was always on the mat, arguing that he ought to have such and

Digitized by Google

such representation in the store's daily campaign. He would send in every day a grotesquely large bunch of items, which he said simply would have to go or he'd quit. Of course they didn't all go and of course Jake didn't quit. The merchandise manager knew Jake was four-flushing; but, just the same, he knew Jake was a live wire.

On the contrary, Bill Fallback, of the groceries, was always lagging. The advertising department would send a house wigwag down to him, as they called the blue note sheet used in interstore messages:

"Why don't you send up your items for the advertising dummy?"

"Not much of anything to advertise to-day," Bill would wigwag back, taking his time for it.

Pretty soon Bill Fallback was fired, because the research department had shown him up as a quitter in the everlasting fight for more business.

Another thing the research department did was to translate the sales of every department into "graphs." Take a mountain range and draw its sky line, and you have something of a graph; though when a technical man makes such a chart he does it on a checkered surface and shows various sorts of percentages.

Take the muslin underwear, in charge of Miss Blanche Cantsell. This young woman didn't know what was the matter with her department, and neither did the merchandise manager. Like the mountain range, it was made up of peaks and valleys—but mostly of valleys. At intervals, when the store got its shoulder under the department and boosted it through costly advertising and special sales, the peaks showed up; but the moment the boosting ceased there weren't any sales peaks on the chart.

Graphs, or in other words graphic charts, are now very popular in this store as a means of showing up existing conditions. Having built a graph, the research bureau proceeds to analyze the why of it.

"There must be a reason why the feminine public is not buying our muslin underwear," said the investigator. "It may be because the women are doing their own sewing."

"Nobody does that sort of sewing these days," returned Miss Cantsell.

"How do you know?"

"I just guess so," she confessed.

"Let's not guess any longer. We must predicate our investigations on absolute facts."

So they asked customers the point-blank question and recorded the information; and they found that forty per cent of their customers made their own muslin attire. Why? Simply because they couldn't get what they wanted ready made at the prices they wished to pay. They desired something better and different; something that would not spoil the fit of outer garments; something with turned seams, less pasted lace and greater comfort.

The problem now resolved itself into better buying and more careful selection. The store had been merchandising, along with its neighboring stores, beneath the requirements of its clientèle.

Shifting Stock

THE matter of shelving doesn't ordinarily appeal to the imagination, but the research man looks about for queer roosts for his fancy. He found that ribbons were kept on twenty-inch shelves, when the proper depth was under fourteen inches. The result was that a lot of stock was hidden out of reach and didn't move. On the contrary, blankets were piled on two-foot counters—much too narrow; they were always falling off, accumulating dirt and causing waste handling. The bureau worked out a schedule of shelving and counter sizes.

Then a study of aisle tables was made. The store was using some tables twenty feet long; and mathematical observations, extending over a period of weeks, showed a constant repetition of the following:

Along would come Mrs. Pursestrings, walking sidewise alongside the table where perhaps there were articles of adornment on the near side and hand bags on the other. Mrs. Pursestrings was not especially interested in the goods nearest her, but those hand bags caught her attention. But they were so far round! No; she'd let the hand bags go—her feet hurt her!

After experiments the research bureau settled on tables eight feet long and four feet wide as best calculated to further the circulation of the people and of cash.

Studies were made of the locations of stairways, with this same circulation problem in view; and experiments were made in tempting customers to walk upstairs and thus relieve the elevators. The moving of a basement stairway a hundred feet caused an increase of three hundred per cent of stair climbers; and on an upper floor the clever location of a furnished cottage brought an increase of five hundred per cent. Mrs. Houselooker could walk up those stairs very nicely so long as she imagined herself going to the second floor of the cottage.

The store often had losses from unsold goods, and the research bureau found ample opportunity here for originality. By gathering and tabulating definite information the surplus of one department was frequently made available for another. An excess of fancy belting was used in the millinery for hatbands. Ribbons were made into girdles, workbags and other fancy articles. Dress fabrics that proved to be bad sellers were made up into skirts and dresses. Laces became infants' caps, neckwear and dainty aprons. Table damask was used for suits and skirts. Dress trimmings were cut into pieces and sold as remnants. Fancy buttons went into brooches and into pin sets for waists. The great craze for pennants was started by an Iowa store when it used up some surplus felt in this way.

One study, embracing many departments, showed that the holding of stock in the receiving room was costing the store more than one per cent on its investment—not to mention lost sales and other troubles. Consequently a timekeeping scheme was adopted to get all stock out of the receiving room within four hours of its arrival there.

By collecting data from other stores, noncompetitive with his own, the research manager discovered that it was possible to do business in some departments on a much lower stock limit, faster turnover and larger net profits. He cut the stock limit on embroideries from eight thousand dollars to six thousand; on silks, from eighty thousand to sixty-five thousand.

The comparison of data is almost a monomania with the research man, but it shows up store weaknesses. If other stores could do a thing, why not his own? In one city of a hundred thousand people he found a department store that did a business of two million dollars a year, yet rarely had an inventory, at cost, above three hundred thousand dollars. It paid thirty per cent dividends on its capital.

A large number of expense items were thus compared with similar items at other stores. The accounting expense percentage in his own store was very much higher; so he put his spotlight on it. His first important observation was that the accounting staff worked evenings more than half the time, and this, on being analyzed, in turn, showed up the incompetence of the chief accountant as an executive. He couldn't get the work done; and they let him go.

Then the telltale comparisons showed a janitor cost fifty per cent too high. Good-by, Janitors Nick, Jack and Blackie!

With charts and graphs the research man traced the inside secrets of the store's departments, and thus wrote a sad story of bad buying, wrong sizes, inappropriate varieties and the like. Then Mr. Furniture Buyer, Mr. Millinery Buyer, Miss Notion Buyer, *et al.*, were invited to read those sorrowful graphs.

"We can't read Chinese or Hindu!" they protested.

"Graphs will be the language of the store hereafter," said the merchandise man. "You people will have to learn it."

I don't want to present the research man as a marvel, or as infallible, or to make light of his own shortcomings and limitations; but at least he is working toward scientific merchandising. He is attempting to chart uncharted seas.

One important piece of research had to do with the causes for mark-downs. Naturally this led directly to a study of mark-ups; for if a retail price is so high that a competitor can beat it by better merchandising, the result will be a mark-down. It led, also, to an intensive study of pay rolls. But consider here the study of mark-downs. Let me illustrate briefly.

A Scientific Study of Mark-Downs

SIMON GLOVER was the buyer for the glove department. The research man said to him:

"Si, I find that the goods in your department had to take a total mark-down of eight per cent last year. Why was it thus?"

Si shrugged his shoulders.

"I should worry!" he said.

"But why was that last lot marked down?"

"Well, some of 'em got soiled; the salespeople's hands will get dirty, you know."

"Were your sizes well filled in?"

"Pretty fair," hesitated the buyer.

"Any weak seams or other defects?"

"Yes—some; always are and always will be."

"Any late deliveries from the manufacturers? Or favoritism by the manufacturers to other stores? Any substitutions or unpopular styles? Have you had the right novelties?"

Simon Glover returned a nonilluminating answer:

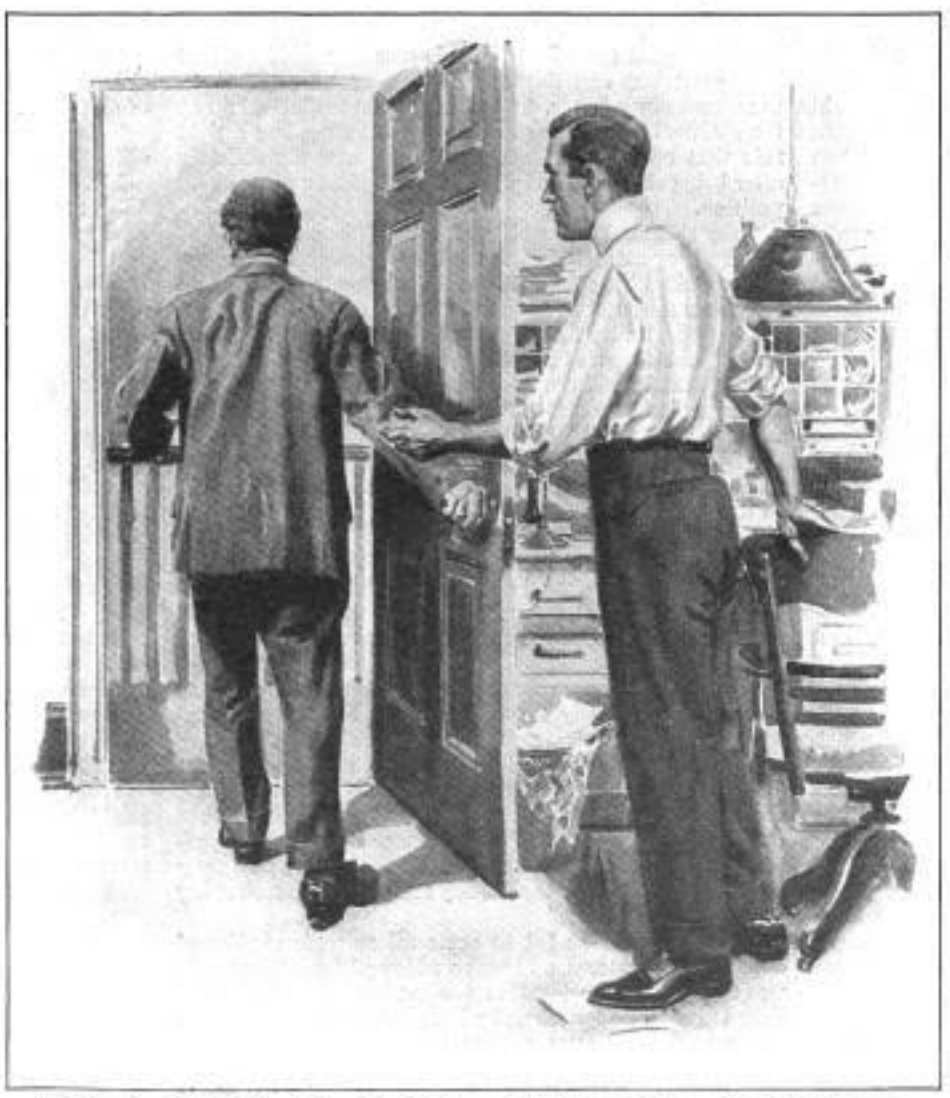
"Yes—and no."

"Where are your records, giving the detailed answers to these questions, purchase by purchase, manufacturer by manufacturer?"

"We have no such records," said Si.

"Well, in order to conduct research work into the causes for mark-downs we must keep records of this sort; and here is a blank mark-down book for you to fill in as occasion requires. I can't use any general mark-down information that is served up to me in a mixture like a lamb stew with vegetables. If you mark down any more gloves because the salesgirls' hands are dirty I must know just what gloves they are and to whom the dirty hands belong. See? If any of the mark-downs come from poor stitching I want the names of the manufacturers, descriptions of the gloves and all details. So on, et cetera!"

This was done in all departments; and when the data of the year were collated, classified and analyzed they pointed unmistakably to certain reforms. One was the necessity for installing concealed washbasins at the glove counters. Another was the advisability of cutting out, for instance, the glove manufacturing house of Gloveton, Gloving & Gloves. Still another was the retirement, without pension, of Mr. Simon Glover.



Meantime the research man was looking into the causes for returned goods. Here he met with a wonderful lack of recorded information. Delving back through the meager records, he found a vast number of unexplained transactions. Thus, Mrs. Woodcliff Lake had ordered, for her dining-room table, a set of asbestos pads, costing five or six dollars. The goods had gone out—and come back. The research man sent for Charlie Quartersaw, of the furniture.

"Why did Mrs. Lake send back those pads?"

"We take back goods without any questions," said Quartersaw. "It's our creed."

"Exactly! But, for the purpose of keeping ourselves afloat, and to enable us to serve our customers better, we must get such information and record it systematically. We've got to tabulate

(Concluded on Page 74)

Pretty Soon Bill Fallback Was Fired, Because the Research Department Had Shown Him Up as a Quitter in the Everlasting Fight for More Business

ONE EVERY MINUTE

XVI

By Edwin Lefèvre

ILLUSTRATED BY F. R. GRUGER

ON THE next day Wilberforce Shadd went to his office full of syncopated happiness, as it were, due to his possession of wealth and to his inability to talk about it, because he could not feel absolutely certain until he had the cash in his clutches and invested in something that he considered good and safe. He was cheerful in an uneasy sort of way. He replied to the office manager's kindly inquiry as to Mrs. Shadd's health by a barely polite:

"Thank you! She has fully recovered."

"I am very glad to hear it," said Mr. Lipps cordially.

Shadd decided to take advantage of the manager's tone of voice and went on:

"Mr. Lipps, I have a little business matter to settle. I know I've been away from the office a lot of late; but, of course, I'll finish up the day's work before I go home."

"Business, eh?" and Mr. Lipps smiled—a good-naturedly superior smile.

"Yes; business," answered Shadd sternly.

If Francis T. Woodcock & Co. had given him his check he would have told this man then and there to give his job to somebody who needed it.

"So long as you keep out of Wall Street," said Lipps teasingly, "it doesn't matter what you do. They had quite a slump yesterday on account of the sinking of the Lusitania."

He didn't think his meek inferior would understand, but there was comfort in hearing his own voice speak of his own tragedy.

"The reaction had to come anyhow," retorted Shadd with as much positiveness as if he had been addressing Francis T. Woodcock's bunch of success worshipers. "If it hadn't been the Lusitania it would have been something else, after such a tremendous rise."

"Why, you talk like an old stager!" said the astonished Lipps.

"I read the papers," explained Shadd, shaking at his narrow escape from self-betrayal. "They can't go up all the time."

"No," agreed Lipps bitterly; "they can't. But others in this office were so bullish that when I suggested —— Well, I guess a man ought to stick to his own business, eh, Shadd?" And he smiled with an utterly inexplicable ruefulness.

"You said it!"

Shadd spoke with such conviction, thinking of his wife's conversation with the man who sold Jersey lots, that Mr. Lipps, thinking the tone a tribute to his wisdom, told him benevolently:

"Take all the time you need, Shadd. And if I can be of any use to you ——"

"Thank you, Mr. Lipps. I may call on you for advice," promised Shadd.

Noon came after a while. The wealthy Mr. Shadd did not take long to swallow a sandwich and a glass of milk. He reached Woodcock's office at twelve-twenty-three.

"How's the market?" he asked loudly as he entered the customers' room.

He remembered hearing Paine ask the same question once, and he had thought it, at the time, a wonderfully sophisticated question—almost professional.

"Rotten!" growled Henry Rumney. "Say, did you really know anything or was it a lucky guess?"

A dozen customers vindictively turned gloomy faces toward this creature who had taken his profit at precisely the right time. And he had done so in plain sight and hearing of the entire office! And they had not followed his example!

"I Know! But How Much Do They Say You Owe Them?"

"Oh, lucky guess! Lucky guess!" replied Shadd so cheerfully that instantly every man in the room knew the liar had lied again.

Ben Meiggs approached Shadd and spoke to him in a voice that he had lowered to show his deference toward a great man and a wise. And besides, why should the others hear?

"Mr. Shadd, do you think they have touched bottom yet?"

"No," answered Shadd loudly and positively, because he knew the negative would give the most pain to these insulting beasts. "Not yet, my boy!"

He hoped that when prices did touch bottom it would be such a bottom as would establish once for all his wisdom in selling out at 300 and 301.

"Then you think," whispered Careful Mike, "that a man shouldn't buy 'em yet?"

"What are you whispering there—you Meiggs? It seems to me you're trying to hog it. If Shadd knows anything good the Lord knows we need a little comfort to-day!"

And Henry Rumney glared so accusingly at the conspirators that Shadd grew angry.

"Why should I tell you anything when you always know better?" inquired Shadd in a voice he never, never used at home.

"That's what's the matter, Henry!" said Paine, laughing—for effect on Shadd.

The other customers understood the flattery conveyed by laughing at Rumney and also turned down their thumbs audibly. Henry, unanimously convicted of being what he was, proceeded to admit it by good-naturedly saying to Wilberforce:

"Can't you take a joke?"

"Hell of a joke, I call it," said Meiggs distinctly.

"I always said," continued the unabashed Henry, "that when a man makes money in Wall Street he loses his sense of humor. What about the market, hey, Shadd?"

"I," replied Shadd with dignity, "don't know anything about the market!"

A chorus of groans was heard—the most artistic form of applause known to men desirous of making plain their enthusiastic incredulity.

The subsidized office boy came in, hurriedly approached Henry Rumney and did that for which he was paid. At least, his lips moved rapidly close to Henry's left ear. Henry nodded vindictively; then, turning to his fellow victims, announced:

"Gentlemen, Undersea Craft is now 240."

He then glared at W. Shadd, who by sneaking out at 300 had committed a sixty-point capital crime. Everybody else did likewise.

Wilberforce Shadd maintained an impassive face. He seemed not to have heard; he appeared not to have seen.

"Do you think," whined Meiggs, "that it's low enough? We might take on a little, so that when the rally comes ——"

"Nope!" said W. Shadd decisively.

And these men, all victims of indecision, did not dream of doubting! How could they? This one man knew because he had known. They had not known, therefore they could not know. And so they didn't.

After that W. Shadd was the greatest man there, and they knew it. And so did he.

Dave Caldwell, the office manager, came in with the face of an undertaker. He beheld Shadd and burst into sunshine.

"Hello, Mr. Shadd! Welcome to our midst! I guess they'll rally now. I tell you, gentlemen, when the bargain hunters cross the dead line at Fulton Street it's time to buy 'em. Just close your eyes and point your finger. One stock is as good as another."

The genial Mr. Caldwell spoke so much as though he were enunciating axioms that all the customers looked toward Mr. Shadd, Bargain Hunter Extraordinary. He felt the stare of the twenty-eight eyes. He said:

"No bargains yet—for me!"

D. Caldwell shrugged his shoulders helplessly. Then, feeling the inadequacy of the gesture, he threw up both his arms and waved them. He meant to convey:

"Well, I did my best for you all!"

Shadd caught Caldwell's eyes and motioned; whereupon Dave, suspecting what was coming, promptly took Shadd's arm and led him deferentially into an inner office. He did not wish the other customers to hear Shadd say he wished to close his account; but, before he could shut the door, he heard Henry Rumney remark to Ben Meiggs:

"Dave's getting pretty fresh."

And Meiggs, for all reply, asked Henry:

"I wonder if Shadd is going to give him a buying order?"

But what Shadd said to Dave was:

"How about that check?"

"You can have it any time you want it," said Dave, making no motion to walk toward the cashier. "Don't you think some bonds are pretty cheap? We are putting our best customers into Suburban Trolley adjustment fives. They'll net you a little better than five and a half per cent, and will surely go to par by fall. The company is earning nearly nine per cent on the stock; but only a few people know it. We got onto their earnings ——"

Shadd shook his head. He was not listening. He could not believe that he would ever get the check. These people would promise and promise; but no check. He would give anything to feel that he really and truly owned sixty thousand dollars. It was not to be. To prove it he said:

"Can you get it certified for me?"

There was no use in trying to talk to a man who listened only to his own voice. Caldwell surrendered.

Digitized by Google

"Sure thing! Right away, Mr. Shadd. But you ought to look into those S. T. adjustment fives. I'll show you a confidential report on the property that we ——"

"Suppose," said Shadd desperately, "you give me my check, instead. I've got an appointment ——"

"Oh, very well," said Caldwell coldly, and disappeared cashierward.

Shadd sat down in an armchair and began to do a little planning, because he at last began to think that he might possibly get the check after all. First of all, he must see Warren, the lawyer, and hire him as his lawyer—provided, of course, he got the check, which he probably wouldn't.

Dave Caldwell came in—empty-handed! It was one thing to make money in Wall Street and another to take it away with you.

"I see bonds don't appeal to you, Mr. Shadd. Now I've got an inside line on a preferred industrial that will net you over eight per cent. They're doing the biggest business in their hist——"

"Where's the check?" interjected Shadd, certain that he was at last about to hear the flimsy reason why Francis T. Woodcock & Co. would not let sixty thousand dollars go out of their office.

Another reason why he must see Warren was to have him sue these crooks!

Dave Caldwell had kept his right hand behind his back. He brought it before him and said:

"Here it is." And gave a slip of paper to Shadd.

Wilberforce read it. The Metropolitan National Bank was told to pay to the order of Wilberforce Shadd sixty thousand and twenty-one dollars and no cents. It was signed by Francis T. Woodcock & Co., and was certified by the cashier of the Metropolitan National Bank, the latter signature illegible, but impressive and reassuring.

Wilberforce Shadd thrilled at the touch of the magic paper, so that the goose flesh, which came all over his back, almost hurt. But he put the check in his pocket nonchalantly and carelessly nodded his thanks. He did not say a word to Dave. He couldn't!

There came upon him an overwhelming desire to run away to some place where he could be alone with his money. He wished to feel that it was his, all his; and he could not feel that way unless he was all alone. He wished so much to have the sense of possession fill his being that it flashed on him that the only satisfying operation would be to cash that check at once; to exchange it for one-dollar bills, and then count them to make sure there were sixty thousand of them. And then he would count them a second time, more leisurely—neatly stacking the bills before him on a table in packages of one thousand each.

He almost ran out of the room, ignoring Dave Caldwell's outstretched hand of congratulation, because he did not see one hand. He saw sixty thousand ones!

In the customers' room he paused a moment, undecided whether to scream the news at the top of his voice or to wave his check in silence.

"You bet your boots," careful Mike Meiggs was saying, "when I cash in on the next bulge I'm going to fix it so that nobody—not even myself—can ever touch the principal!"

"Why?" asked Paine.

"The smartest man in the world," modestly explained Meiggs, "will at times fall for a fool tip. Or else he will go to the other extreme, and from excessive caution put all his money in a dead one. Any of you fellows ever hear of Charley James? I guess he was before your time. Well, he put a million dollars in trust, so that nobody could ever take it away from him."

A thought of thoughts! Wilberforce Shadd saw himself doing likewise. These men, at whom he was now gazing, were about to pass out of his life. He had made a killing and would go away, content to live quietly until he died. Meantime he had better see Warren before Mrs. Shadd did, or he might give in to her tearful face and pleading, terror-stricken eyes. When he did not do as his wife said, he felt like a pig. When he did, he felt like an ass.

XVII

HE WENT straight to the lawyer's office.

Samuel W. Warren was a young man who did not wish to look young, on the theory that he could impress his clients with his wisdom less offensively by accusing them of being younger than by accusing them of being less clever. He wished them to feel that they had taken their troubles to the right man—*aetat.* one hundred and thirty-seven years and eight months. He was bald and his beard was streaked with gray. As if that were not enough, he had married a woman older than himself, and, in addition, cultivated the old man's grin of tolerant good nature toward inexperience.

"Good morning, Mr. Warren," said Shadd.

Instantly he began to fear that Warren, being a henpecked chump, would refuse to do the trick as planned.

"Good morning, my boy!" And Warren nodded and smiled as if saying: "At last! Well, I expected it!"

"Is there any reason why you should not take my case?" asked Shadd and looked at Warren unblinkingly, as if to see with what expression Warren would decline. But the lawyer smiled paternally and said:

"I don't know what your case is."

"I mean I wish you to act as my lawyer."

"As against anybody in particular?" And the lawyer continued to smile, this time meaningly.

"You are a Good Friend, and I Want to Do Something for You"

Shadd stared at him blankly. Warren went on:

"Your wife, for instance?"

Ah, these children! But then, age and Mr. Warren would set them right.

As a matter of fact, even Mrs. Shadd was older than Warren.

"Do you mean," asked the perplexed Shadd, "am I looking for a divorce?"

"Or fearing it," complemented old Mr. Warren.

"No; I don't fear it," replied Mr. Shadd with a gloomy sort of indignation.

"Suppose you tell me what your trouble is," suggested Warren without committing himself to anything. "Begin at the beginning."

Shadd noticed that Warren had not promised to take his case; but he felt he might as well tell all about it.

"Well," began Wilberforce cautiously, "I've been dabbling in Wall Street."

"Is the property in your name or your wife's?" interrupted Warren, frowning in advance.

"In mine!" cried Shadd vehemently.

"Who are your brokers?"

"Francis T. Woodcock & Co."

"How much do they claim you owe them?"

"I don't owe them anything."

"I know! But how much do they say you owe them?"

"For what?"

"That," said the lawyer impatiently, "is what I am waiting for you to tell me. Since this is a declining market, I suppose they claim they didn't get your order to sell and ——"

"Oh, no," said Shadd, shaking his head violently. "They sold it when I told them."

"Then, how do they make out that you owe them ——"

"They don't."

"Then," and Warren frowned the frown of a man with a grievance—deceit and waste of time—"then, why did you come to see me?"

"Because I've made sixty thousand dollars ——"

"And they won't give it to you?"

"They've given it to me. I want to know if you are my lawyer?"

"Where's the money?" asked Warren skeptically.

"Here! It's a certified check for sixty thousand dollars." And Shadd took it from his pocket. Warren reached for it, but Shadd drew it back to safety and held it out of reach. He repeated: "Are you my lawyer?"

"I am!" replied Samuel W. Warren.

"You see, I took all my savings from the bank and I went down to Wall Street; and I bought, outright for cash, two hundred shares of Undersea Craft ——"

"The devil you did!" exclaimed Warren, rising to his feet excitedly. "At what price?"

"Nine."

"What!"

"Nine," repeated Shadd with the humility of greatness. "Plain nine. Nine dollars a share; eighteen hundred dollars for the two hundred shares."

"Why, man, you're a ——" Warren paused, lawyer-like, disliking to tell the truth in plain language.

"And so I sold, one hundred at 300 and the other hundred at 301. The top!" finished Shadd with a deprecatory gesture and gleaming eyes.

"By George!" exclaimed Warren, so admiringly that he forgot to smile senilely. Then he remembered himself and looked stern. "Now, young fellow, what are you going to do with it?"

"That's why I'm here," said Shadd hurriedly. "You know I had to tell my wife—and she —— Well, you know what women are."

"I do," said Warren, so unconvincingly that Shadd began to fear the worst.

Wilberforce's mind at times worked best under the stimulus of fear. It did so now, luckily for him.

"Warren, I want to keep out of Wall Street. I think I've done enough—to run eighteen hundred dollars up to sixty thousand. But, hang it, everybody insists on telling me how to invest my money so it will bring me in eighteen per cent a year."

"Well, you don't want to listen to them. You want to invest it ——"

"No, I don't!" contradicted Shadd vehemently. "I wish to be protected against my own self. I'm afraid of being an easy mark, now that I have money. I want to get a fair income and enjoy it as long as I live. I don't want to speculate! I don't want to make a million dollars! So I've come here for you to tell me what to do."

S. W. Warren looked at Shadd in amazement. Talk about only the old being wise! Why, this clerk had Methuselah and Solomon backed into a corner, positively speechless!

Shadd's fears came back to him.

"Do you th-think," he inquired tremulously, "that I'm f-foolish?"

"Foolish? By George, you are the wisest gink—er—man that ever came into this office. Just shake hands with me, will you?"

They shook hands warmly and Shadd began to hope.

"Can you fix it," he went on earnestly, "so that I myself cannot touch this money, but get the income regularly, and nothing more so long as I live, no matter how many times I—I—I may change my mind?"

"You bet your boots I can!" declared Mr. Warren with conviction.

"Are you dead sure?" persisted Shadd earnestly. "No matter who it is that wants me to invest in oil lands, or mining stocks, or lots in—er—Jersey, or any of those things? I don't want to do it."

"I don't blame you," said Warren sympathetically.

"Sometimes they are your—er—relatives and you'd like to please 'em; but —— Well, a fellow's got a right to look out for himself."

"You're dead right there, Shadd," said Warren, speaking for the first time with real conviction. "I think a trust deed, leaving the principal to your wife, since you have no children ——"

"Couldn't she break it if she made up her mind to do it?"

"Well," admitted Warren reluctantly, "of course you and she together might break it if she, as beneficiary, waived her rights and claims ——"

"That's just what I don't want," said Shadd. "She—er—has spoken to a man who is hellbent on putting money into things that pay a very high rate of interest, and you treble your money in two years to boot ——" Shadd stopped because he did not wish to lie or to admit he couldn't say "No" to her.

Digitized by Google

Fortunately the lawyer was the kind who knew everything better than the client.

"I know the type," said Warren, and nodded frowningly. "If you don't watch out you won't have a cent left. It's too bad you have no infant children! If you had, and made them joint beneficiaries, the deed of trust could not be broken, even though they were willing, until they were of age."

"I see," said Shadd.

He had no children. His wife was, therefore, to blame. Thinking of her guilt brought a second flash of inspiration to him.

"Do they have to be blood relatives?" he asked.

"No."

"How much do I have to leave to them?"

"As much or as little as you wish."

"Then," declared Shadd, "the younger the better! Say, Warren, you go on and draw up the paper, and leave a blank space for three children's names." He would take no chances.

"Oh, I can fix it up in a jiffy! It won't take long. You just give me the names."

"You go ahead and get it ready," persisted Shadd. "I'll be back in a little while."

XVIII

WILBERFORCE SHADD hurried back to his office. He sought the manager.

"Mr. Lipps," said Wilberforce desperately, "have you any small children?"

Lipps stared at Shadd in amazement. Then he decided to answer and send for the ambulance later, if really necessary.

"Yes. I've got a boy of three and a girl baby. Greatest kid you ever saw, that! She's been growing at the rate of ——"

"How old? How old?" feverishly interrupted Shadd.

"One month and three days; and she weighs ——"

"Her name?" broke in Shadd with a bright smile, reaching for a pad and pencil.

"Winifred Lipps. She is the ——"

"Mr. Lipps"—and Shadd looked straight into his superior's eyes—"if you don't mind I am going to do something for her. Perhaps I had better explain to you that I have no children of my own."

"Too bad!"

"Yes; it is. The reason I want to do this for Winifred is because my wife wanted to buy—er—to be ——"

"Too bad, Shadd! I understand. Well, perhaps it is just as well. They are a great care, and unless you are very lucky ——"

"Yes, sir. You've always been very kind to me and I'd like to do something for Winifred. I've always wanted a little girl of my own; but Winnie will do just as well."

"Oh, nonsense!" And Lipps shook his head, but looked pleased. "You look out for your own family."

"You don't know it, Mr. Lipps, but, as a matter of fact, I'm much better off than you'd suspect."

"Oh, I didn't mean that!"

Lipps spoke in horror-stricken tones, but he could not keep his eyes from shining happily.

"I told my lawyer to leave a blank space for the name and he said he'd wait until I got back. Of course I could telephone him or send it by messenger, or leave it for to-morrow at lunchtime."

"You'd better attend to it yourself, Shadd. Take all the time you need. After all, a man doesn't make his last will and testament every day."

And, with a friendly nod, Mr. Lipps left the room—that nothing might delay Mr. Shadd's return to his lawyer.

Wilberforce, however, went into the shipping room and sought Jim Molloy, who used to make him feel brave by saying there were more jobs open than he could fill in ten years.

"Molloy, have you any girls?"

Girls, Shadd decided, were longer-lived than boys. They invariably survived their husbands.

"Four of 'em!"

"Healthy?"

"You'd think so if you had to feed 'em."

"How old is the youngest?"

"The youngest? Eight months old yesterday; no—Tuesday."

"Lively and strong, eh?"

"Say!" Molloy's eyes grew bright and enthusiastic. "Honest, she can ——"

"Enough! Enough!" cried Shadd so excitedly that Molloy actually did not finish the hymn of praise. "What's her name?"

"Alice."

"No middle name?"

"Yes—Alice May. Say, not because she's my kid, but on the level she's the greatest ——"

"Listen, Jim; I've got no kids of my own and so I'm going to do something for yours. Don't say anything to anybody. You are a good friend, and I want to do something for you in case I—er—croak. She is healthy, hey?"

"Say, she grabbed my finger; and I hope to die if I'm not telling God's truth, mister—she just held on ——"

Shadd had picked out no moribund weakling.

"Fine!" he cried, so enthusiastically that Molloy's blue eyes grew moist and tender.

Shadd thereupon rushed away. At the door, standing by the gate of the freight-elevator shaft, was old William Ross, who was known to come of a long-lived family.

"Say, Ross," asked Shadd, "have you any grandchildren?"

"Eleven."

"How old is the youngest?"

"I don't rightly know. Let me see; he was born the year Cleveland ran the last time ——"

"Ninety-two?"

"That's right," said Ross. "He's twenty-three."

"Have you any great-grandchildren?"

"Three."

"Girls?"

"No—all boys. We Rosses are all boy-breeders. My father was one of nineteen—all boys."

"What's the name of your youngest great-grandson?"

"William. My wife got a letter yesterday saying Willie was doing fine. He is seven days old to-day."

"Thank you."

"Why?" inquired G. G. Father Ross suspiciously.

"Why what?"

"Why do you thank me?"

"For coming of such long-lived stock."

Forty minutes later Wilberforce Shadd opened the door of Warren's office and peered in cautiously, fearing his wife might have come in ahead of time. Seeing the lawyer alone, he walked in bravely.

"The names," he announced, "are Winifred Lipps, Alice May Molloy, and William Ross, 'steenth.

"These children are the daughters and the great-grandson, respectively, of business associates and friends."

"Write them," said Warren.

"Mr. Morris, the Time to Go Short of 'Em Was When I Did—er—I Mean, Not Now"

Wilberforce Shadd did so. Warren gave the slip to Miss Walker, his red-headed stenographer.

Five minutes later Wilberforce Shadd read and thrice reread this document:

I give and bequeath the sum of sixty thousand dollars to Samuel Walter Warren in trust, to hold and invest the same, and to pay me the net income thereof during my life, and on my death to pay out of the principal thereof the sum of one hundred dollars to Winifred Lipps, the sum of one hundred dollars to Alice May Molloy, and the sum of one hundred dollars to William Ross, great-grandson of my friend William Ross; and the balance of said remainder to my wife, Ann Elizabeth Shadd.

"Where do I sign?" asked Shadd, looking at the clock.

"Here. And I sign here."

Both Shadd and Warren signed the document typed by the red-headed Miss Walker, who kept book agents from calling twice at that office.

"Are you sure that nobody can touch this money?" asked Shadd.

"Sure?" And Warren smiled. "Sure? I wish you were as sure of heaven as I am of that."

"Well, I must be going. You will invest the money soon, I suppose?"

"At once. I think I can get you five per cent ——"

"Five?" And Wilberforce Shadd frowned.

"Yes; I am compelled by law to invest all trust funds in certain classes of securities. You ought to get pretty close to three thousand dollars a year."

Wilberforce Shadd had been figuring on thirty-six hundred dollars.

From three hundred dollars to two hundred and fifty a month was a big drop.

"That's what a man's wife can do!" bitterly reflected Wilberforce.

Then he thought of what the same man's wife could not do, now that he had signed the little paper; and he smiled pleasantly.

Minus a check for sixty thousand and twenty-one dollars and plus a receipt for same from Warren, Wilberforce Shadd left the lawyer's office and returned to his own.

XIX

LIPPS was not waiting for him; he merely happened—don't you know?—to be near Shadd's desk when Mr. Shadd came in.

"Er—back again, hey?" said Lipps with an ingratiating smile. It wasn't what he really wished to say; but he did not know how to ask the other question.

"Yes, sir."

Lipps hesitated, and then, trying not to look expectant, asked:

"Er—fixed everything to your satisfaction?"

"Everything!" answered Shadd with the pleased smile of a man successfully defying Fate. Then he thought of Lipps and the reason for Lipps' smile, and added: "Winifred's name leads all the rest."

"Oh, I didn't mean to ask anything about that!" And Lipps smiled.

The smile was so kindly, so full of admiration, so inviting of confidence, that before he knew it Wilberfore Shadd took Warren's receipt from his pocket and handed it to Mr. Lipps. (Continued on Page 62)

Wilberforce Shadd Thrilled at the Touch of the Magic Paper

PHILADELPHIA, FEBRUARY 10, 1917

The Tuppenny Beer Men

SEVERAL years ago a famous and venerable English establishment changed hands. The new proprietor, going in and out of his office, noticed that a cheerful and obsequious person always stood near the front door. Being of an inquiring turn of mind, he asked this person who he was; and the person, dutifully knuckling his forehead, answered: "I'm the tuppenny beer man, sir."

Investigation by the proprietor disclosed that a predecessor, more than two generations before, had stationed a man at the door for the purpose of treating to tuppenny beer whoever came to the establishment bringing a message, a parcel, or on a like errand. The cost ran into hundreds of pounds yearly.

Doubtless time was when treating messengers, parcel-bearers, and so on, to tuppenny beer was a good stroke of business. Probably it got the house quicker service. But the tuppenny beer man persisted for many years after the reason for him had ceased.

Every business everywhere in the world tends to load itself up with deadwood in that way. Something is done for a good reason; conditions change, so the reason is no longer valid; but the business goes on doing the old thing from habit and because nobody has the wit to see that a change is needed, and to act upon that perception.

It has been pointed out that one reason for Germany's rapid industrial development in the last half of the nineteenth century was that she took over the industrial system ready-made from England, and in taking it over cut out the deadwood which had grown into it as it developed at home.

War has already cut out much deadwood in Europe. Reorganization after the war will probably cut out still more.

There is undoubtedly plenty of it in the United States. We should say the first step in preparing for after-the-war conditions would be for every American manufacturer and merchant, no matter how big or little, to install a really adequate cost-accounting system—if he has not one already—and study it carefully to detect his pile of deadwood.

The Price of Money

IN THE eighteenth century the British Government was able to borrow money at three per cent. For a comparatively short time in the latter part of the nineteenth century money was so abundant that the government borrowed at little over two per cent. In this year of grace, after the enormous borrowings on account of the war and with no peace in sight, it is able to borrow an immense sum at about four per cent net. The new war loan bears five per cent interest and goes to subscribers at a discount, but the government immediately takes back one-quarter of the interest for income tax; so the net cost of the money is about four per cent, and for those who want assurance that the income tax will not cut still deeper in the future it is issuing a four-per-cent tax-free bond.

Before the war, in the light of a hundred and fifty years' experience, it might be said that three per cent was about the normal price for money in England and the United States. Eliminate risk, give the investor the utmost possible assurance of safety, and his money could be had at about that rate. Whenever a higher rate was paid the excess was in the nature of an insurance premium, compensating the investor for risk assumed.

The vast war borrowings may be regarded as introducing some element of risk, even in the case of a government bond; and that England is still able to borrow at about four per cent net indicates that a high interest rate is not necessary to call forth whatever investable capital there may be in a country.

It has been assumed that interest rates in Europe will be extremely high after the war. If so it will be because competitors bid high for funds and not because investors demand a high rate. Apparently whatever money there is can be had at four per cent as readily as at six.

Preventable Poverty

AN ANNUAL report by the New York Association for Improving the Condition of the Poor says that in ninety-six per cent of the cases relieved the family's plight was due to sickness or death of the wage-earner. In the remaining four per cent the causes were wife-desertion, imprisonment, alcoholism, old age and unemployment.

The report, of course, covered a boom year, when unemployment was at the minimum; but in average times sickness or death and unemployment are the greatest proximate causes of poverty. And they are very largely preventable causes. Better hygiene can reduce sickness. Comprehensive insurance against sickness and death is feasible, as Germany and England have shown. Unemployment and part unemployment, perhaps the most fruitful of all proximate causes of poverty, are to a great extent merely the result of industrial maladjustment, unsocial thinking.

In many cases an employer's first recourse when the normal demand slackens is to discharge workmen. Their buying power paralyzed, they cut down demand in some other direction, and more workmen are discharged. If the problem was considered socially other expedients besides discharging the men might very often be found. There is not enough correlation of seasonal occupations for the purpose of keeping men continuously employed. Public work might be more extensively shaped with a view to lessening unemployment.

One minor cause of poverty may be noted—imprisonment. The state takes charge of a man who is supporting his family, and at once—in most cases—prevents him from fulfilling that primary social, moral, human obligation which he has been voluntarily fulfilling when left to himself. Could stupidity go farther than that?

A great deal of poverty is preventable—with no revolutions or patent panaceas, but only with an intelligent, social-minded attack upon some of the chief proximate causes of it.

A Training Program

WE SHOULD have athletic drill in public schools, approximating, in the high schools, the training a recruit would get; a regular volunteer army of two hundred and fifty thousand men. There is no reason to doubt that volunteers can be had if some pains are taken to make army service more attractive. We must not, of course, have any system which presumes commissioned officers to be of a quite different clay from enlisted men. France has shown that a really democratic army can be the most efficient army. Promotion to the highest commands must be open to any enlisted man.

There should be a moderate increase in pay. Service in the army may be so ordered that a man with army experience would be preferred for various civil employments. Enlistments should be for three years of active service, with ten years or so in a graded reserve.

This would cost something; but any possible increase in land defenses would cost something; and if the country can afford to spend millions under the Hay Bill it can afford to spend millions on a plan that will give some results.

Militarists will not like this program. They want conscription. Perhaps some members of Congress will not like it, for it provides neither pork nor politics. But it is the only plan we know of that meets the country's situation and prospects.

Any of the ambitious plans for compulsory military service, if adopted now, would certainly break down directly after normal conditions were restored in Europe; so the energy and money expended upon them would be mostly wasted.

Some Work at Home

THE details of the latest prison scandal are mostly stereotyped—ill-ventilated, unsanitary buildings, with hardly any chance for open-air exercise; men in damp, unlighted dungeons; criminals hardened in vice herded with young first-offenders; dirt and vermin; convict labor farmed out to contractors under conditions that regard little except the contractors' profits. An old story!

We have been told, for a couple of years now, that the United States ought to look abroad for some great and exigent problems to engage its moral strength, lest that degenerate because there is really nothing at home upon which to exercise it.

Suppose we should take a little elementary moral exercise by really trying to stop heaping stupid and brutal abuses upon the inmates of prisons. Then there is the matter of lynching, and various other possible objects of righteous effort which will occur to any reader.

Prison reform has been a staple object of agitation for many years. The country has been shocked time and again by disclosures of prison barbarities. Evidently all this has not penetrated to the consciousness of many officials.

How shall we put it so it shall penetrate the official consciousness everywhere—and the lay consciousness, too—so that a barbarous prison shall not be tolerated?

That is something of a job. There are others. Unfortunately these hard, grinding jobs at home do not appeal much to the sentimental imagination. They are not dramatic. They require dogged application. The sentimental imagination instinctively shies away from them to larger flights.

All the same, there is quite a bit of work to be done at home.

The Industrial Pace

THREE years ago Canadian industry, broadly speaking, did not know what a war munition looked like. There are now six hundred munitions factories in the Dominion, and they are supplying a very important proportion of the enormous number of shells used on the Western battle-front.

A recent British report compares the output of guns, powder and shells in the United Kingdom at the close of 1916 with that at the end of June, 1915—after nearly a year of war.

Of larger shells the output is from sixty to three hundred times as great; the increased production of guns runs from one hundred to twelve hundred per cent, and of powder from one hundred to four thousand per cent. In 1916, it may be noted, British exports, measured in value, were about up to the normal before-the-war mark, having increased more than fifteen per cent over 1914, which was over half peace.

A report from Germany says that wood-pulp products have been successfully substituted for cotton—the supply of which has been cut off—in the manufacture of explosives; that bags made of paper yarn are taking the place of jute; old rubber is refabricated and substitutes for rubber are introduced.

Whatever the exact facts may be, it is certain that, though supplies of important raw materials have been much reduced or nearly cut off, Germany still manages to make the things she must have.

All of this illustrates the adaptability of modern industry. The world has learned the trick. It has a mastery of productive processes, an organization, a genius that no war can destroy. If it should happen to want wampum as badly as the Indians did it could turn it out by billions of tons with a fortnight's preparation.

After the war's demonstration of human mastery over material things there is no use in saying that Nature sets a limit to what we can have of any necessary material thing.

Foreign Trade

COMPARING our exports in 1916 with 1913, the last preceding year that was entirely free from war influence, is not a particularly flattering occupation.

Exports to Europe increased by a couple of billion dollars; but if the Allies be excluded there was no gain. Exports to North America increased over a quarter of a billion, but more than half of that went to Canada and was mostly a war demand. Exports to Asia trebled, but Russian Asia took the lion's share of the gain; and some of Japan's increased purchases were a war demand. Nearer home the biggest gain, aside from Canada, was in exports to Cuba; but that was largely a product of our increased purchases of Cuban sugar, which, again, was in great part a war demand. Gains in exports to Argentina, Chile, Brazil and China make but an infinitesimal item in the total of our foreign trade.

In short, we have as yet gained comparatively little foreign trade, except as war demand has thrown it to us. We have gained something in understanding the importance of foreign trade and in organizing for it; but Congress, at this writing, is still haggling over the bill to permit coöperation for export business, and even threatening so to amend it as to make it worthless.

It has long been clear enough that more efficient competition for foreign trade requires coöperative effort by our manufacturers; but the machinery moves slowly.

FEEDING A MILLION

Army Housekeeping—By Eleanor Franklin Egan

THE Germans on the Somme and at Verdun have been surrendering to the French and British on rather slight provocation—at least a great many of them have. And the first thing the average German prisoner does when he finds himself safe behind his enemies' lines is to ask for food. Invariably he is delighted and astonished by the quality of the food he is given, and he keeps on asking for more until his great hunger for the white bread, the fresh meats and the fine, fatty soups is appeased. Now if I were a French general and had reason to believe that the stories about a German food shortage were true—and the prisoners say they are—I would inaugurate a new kind of offensive on lines calculated to entice all the German armies out of their trenches.

Whole Trains of Refrigerated Vans are Driven Each Day to the Field Kitchens

I would fill a few bomb casings with generous, thick, buttered and jam-spread slices of *la boule*—as the French call their ration bread—and fire them over into the German trenches as the climax of a bombardment by which I would have cut the men off from their own food supplies long enough to make them good and hungry. I would wrap each tempting titbit in a carefully worded invitation to dinner, in which I would not hesitate to mention beefsteaks, and lamb chops, and real pork sausages, and potatoes stewed in cream—or German fried; and I would follow this inhuman action with a few teasing whiffs of condensed rich food odors, which might be sprayed out across No Man's Land from a gas nozzle. Unless the Germans are superior to all the laws of Nature, the result would be wholesale surrenders; the war would be brought to an end very shortly and hundreds of thousands of lives would be saved.

What Frenchmen are Eating Near Verdun

IN WAR the one thing needful to the man in the fight is food. Munitions and guns would be utterly useless to an army with empty stomachs. The soldier must eat, and that is the only absolute and unqualified "must" which confronts the servants of the state whose business it is to minister to his physical requirements. He does not have to sleep in comfort—at least not often; it is not necessary that he should be warm or clean, and he can be practically shelterless for weeks on end; he can live in his dirt and bodily discomfort, get used to it in no time, and grow rugged and healthy on it, just so long as he is enabled regularly and plentifully to eat. And heroes have prodigious appetites. The French heroes of Verdun, a round million of them, consume approximately twenty-four million five hundred thousand pounds of food every week, and this is counting only the official dry ration, which is variously and abundantly supplemented.

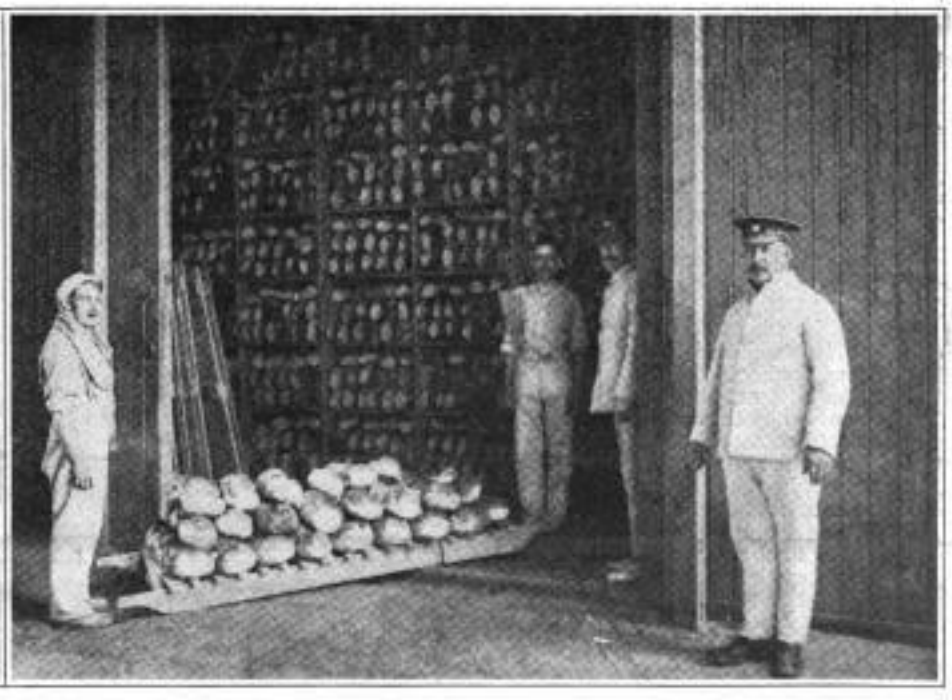
That, I suppose, is as good a way as any to begin. The military statistical sea is much deeper a little farther out; but, even at the million depth, one must rely more or less on the buoyancy of one's own inflated ignorance in order to establish any kind of claim to mental unsubmersibleness. The Germans are so fond of the word colossal that the French, in connection with their own colossal achievements, have begun to spell it occasionally in the German way and to print it in italics by way of pointed and piquant retort—a retort analogous to the one some English soldiers in the trenches made last winter to the German boast: "*Gott mit Uns!*"

The Germans raised a signboard bearing this legend high over one of their trenches where the Tommies opposite them could read it; and the Tommies, not to be outdone, made an imitation of the signboard and painted on it in large black letters: "We Got Mittens Too!" This is a well-known story, but I am not going to apologize for repeating it in this connection, because it seems to me exactly to illustrate the whole answer of the Allies to unanticipated German aggression. The English should name their first successful imitation of a Zeppelin, Got Mittens!

Colossal is the only word to apply to any commissariat designed to meet the demands of millions of men under arms; but in the French commissariat it is not mere size that impresses one most; it is the bewildering variety of minute detail and the perfection of the system that has been achieved. France lays the loss of the war of 1870 at the door of the commissariat. This department was so badly organized, and its bases of supply were so unfortunately located and so inadequately protected, that the enemy was able at the very beginning to curtail its resources to the point of absolute defeat; and that conquest, as everybody knows, became a conquest of starvation.

Whereupon France made a belated Never Again! resolution and went to work. The present magnificent system of supply has grown gradually and in unbreakable solidity upon a foundation of tragic "ifs." If France had only had so and so in such and such a place, how different the result might have been! The French army today is as well fed as any army has ever been; and there is an atmosphere of pride and satisfaction evident in the whole commissary department, which gives one a feeling of great confidence in the eventual issue.

The daily ration of every soldier in France is seven hundred grams of bread; a minimum of four hundred and fifty grams of fresh meat—beef, mutton or pork; thirty grams of bacon or ham; one hundred grams of dried vegetables; sixty grams of dried soup vegetables, in a mixture known as *julienne;* seventy-five grams of jam; one hundred grams of potatoes, spaghetti, rice or macaroni—alternated; thirty grams of coffee; forty grams of sugar; twenty grams of salt; three grams of tea, for those who want it; and one pint of wine, either white or red.



The Trimmings, Fixings and Extras

IN ADDITION to all of this the captain of each company gets a weekly cash allowance for the purchase of fresh vegetables for his men, or anything they may vote for in the way of "trimmings"—sauces of various sorts and small articles of diet dear to the French heart. Food for the men in the trenches when they are under heavy bombardment is a different matter; but I shall come to that later on.

And so you have my mathematical cards on the table. In building up my fine large estimate in pounds a week for the supply of an army of a million men I found it necessary to brush aside a good many decimal crumbs, as any mathematician would soon discover, but hardly enough perhaps to make an appreciable difference in the army food situation. According to my figures, each man still gets about three and a half pounds of food each day, without counting wine or extras; and that is approximately correct. The metric system is in use, I think, in every civilized country on earth except Russia and Montenegro; and it has been

At Least One-Fifth of the Baking Has to be Done at the Front

Thousands Upon Thousands of Big Round Loaves Were Stacked on Racklike Shelves

Cattle With Their Own Feed Strapped on Their Backs

legalized in the United States. But there is a wide difference between legalizing and familiarizing—as much of our legislation annually demonstrates; and I, for one of my imperfectly educated generation, shall never cease to ask how many kilos there are in a pound and how many miles it takes to make a kilometer. I look them up quite frequently and am always surprised to find that it is just the other way round.

As for grams to the ounce, there are four decimal figures after the whole number; and why anybody should be expected to worry over that kind of thing I cannot see. After which deferential acknowledgment of the mental superiority of those to whom decimal crumbs can be an intellectual feast, I will proceed.

When I first mentioned to a French friend the fact that I wanted to know how soldiers in large numbers live and are taken care of, I must, quite unintentionally, have laid special emphasis on baths and clean clothing, these being in anyone's opinion two highly important items of comfortable existence. It came, of course, through my enumerating normal necessities—food, raiment, shelter, fire, beds, baths and laundries.

The Military Shops in Paris

"How do armies get bathed and laundered?" The answer is: "They don't." But, in the interest of the French reputation from the celebrated American standpoint, my French civilian friend thought it better that I should be permitted to learn this for myself—if I could—hoping that, in my rigidly limited and officer-conducted wanderings round, I might come across a laundry or bathhouse somewhere which would be sufficiently impressive and sufficiently dilated upon by my escort to induce in me a belief that France was full of just such admirable institutions. He was being very subtle when he said to me afterward:

"What did you think of our laundries and baths?"

"Your what?"

"Well, of course—I knew it all the time; but I was not going to discourage you. If we were wise—as the Germans are, for instance—we would establish a few things of that character in easily accessible places, just for the sake of striking admiration into the minds of our 'clean above all things' American friends. How you would praise us! But war is war, and we are working at it."

Though the answer to the question "How do armies get bathed and laundered?" is "They don't," I must qualify that answer by the statement that in some cases in France they certainly do. Not so much in the interest of cleanliness and comfort, perhaps, as for purposes of economy. Probably the great obstacle to the systematic conservation of clothing is in the form of a mountain of things that crawl—things which, in some unaccountable way, manage to crawl into every army. And these unspeakable things do not drown easily, fire being the only element to which they do quickly succumb. However, in Paris I have been in workrooms where hundreds of women were engaged in mending army underwear and shirts, and inquiry elicited the information that the garments were sterilized at the Front in big ovens on wheels, and afterward shipped to laundries here and there throughout the country to be washed and delivered to different mending rooms. But the size of this undertaking, as I have seen it, is not such as to give one visions of clean and neatly mended clothing for three million men every Saturday night.

What one does see in astounding quantities is new clothing. The swift packing into bundles for shipment to the Front of one million and a half new shirts all at once and all in one vast workroom is a thing to look upon with interest; a thing to inspire varied and far-reaching speculation. I was assured that a soldier may have a new shirt and new underclothing as often as he needs them, which was exceedingly indefinite, but at least superficially satisfactory to an inquirer who has learned more or less what to expect in the way of information.

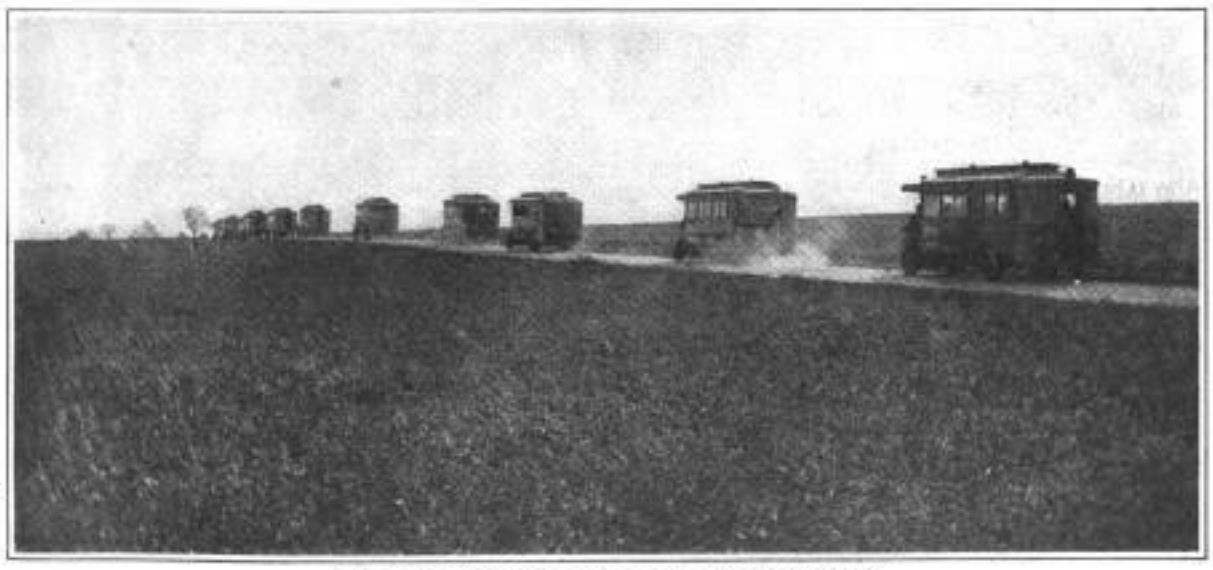
The question as to whether or not a soldier's need is ever determined by himself or by the facts is of absolutely no importance. Down in the Verdun sector I saw men just coming out of the trenches and men just going in, and there was little to choose between them in regard to general appearance, except that the mud on those going in had had a chance to dry, while the mud on those coming out looked as though it had soaked through to their skins—as no doubt it had.

In the front rank of one company on its way in, incidentally, there was a man I shall never forget. He was a living protest against war's hideous sacrifice. He was the only clean man in the ranks. His gray-blue uniform was bright and new and fitted his lithe figure perfectly, making one sure that it had been turned out by his own tailor. He was an unmistakable aristocrat, very tall, and masculinely beautiful in every line. I stared at him; I could not help it. His comrades were laughing and joshing as they swung along, and only he among them all was serious. His level eyes were fixed straight ahead and he carried his rifle with a curious easy grace. He made one think of a shaft of sunlight passing slowly into a bank of cloud. I said to myself: "It is that boy's first time in." I was sure of it—and he was so splendidly young! I do hope he came out merely covered with the glorious mud—"glorious mud" is what they call it.

Women do most of the army sewing and tailoring, just as they make most of the munitions, the metal helmets and wooden trench shoes, and all the other items of soldier equipment. They have become a part of the great system in France, as women have in England; but in France there is no danger of their ever wanting to make their new position permanent. Frenchwomen are essentially home women and feminists in a wholly effeminate sense. Hardly a baker's dozen of them have ever taken any interest in theories of economic independence and equal rights. They don't want to be economically independent. They consider it a woman's privilege to be supported by a man, and they are now doing the work of men because the work has to be done and there is nobody else to do it. They have risen magnificently to meet their country's need, but they perform their great and unaccustomed service rather grimly. It is to their greater credit that their performance in every line leaves so little to be desired.

The average pay for women working in the army-equipment department is four francs—eighty cents—a day for a workday of ten hours. Then there are thousands of women who take work to their homes and are paid so much for a dozen pieces; but in order to get this work they must keep up to a fixed standard of daily production. It is a mill, a machine, and the dead-level monotony of specialization characterizes the whole system. The army must have boots, wooden trench shoes, socks, underclothing, flannel shirts, suspenders, uniforms, overcoats, raincoats, helmets, soft caps, gas masks, blankets, tents, mattresses—sometimes—knapsacks, cartridge belts, gloves and mittens, handkerchiefs, hand towels, and a dozen and one other things; and all these things, or most of them, the women make.

Many of them, especially uniforms, are made in parts and assembled; and when I saw some five hundred women in Paris engaged in turning out an order for a few hundred thousand pairs of uniform sleeves, within a given time, I wondered how much they knew about the other processes of production. Probably nothing at all. Their tired minds must sometimes conjure up visions of valiant regiments going forth in nothing but sleeves. And as for the makers of flannel shirts and undergarments—which are usually referred to in terms of millions—their hours are so long and their weary lives so absorbed, so smothered, one might say, in Canton flannel and wool, that they would be justified in imagining that the beloved army both eats such articles and fires them at the enemy. The amount of materials one sees in actual process of swift destruction is beyond casual comprehension.



The Powers That Be

But I began by saying that all an army really needs is food; and if that can be accepted as a comparative statement it needs no modification. It requires the night and day services of some fifteen thousand men just to feed the army of a million at Verdun. The Battle of Verdun has been fought out and finished, we believe, or hope; but the struggle for Douaumont was in progress when I was down there, and the army of a million was a concentrated reality.

In pursuit of information I went, in the beginning, to the Powers that Be, in Paris, and announced that I wanted to see the national pantry and clothespress—to say nothing of the kitchens, refrigerators, storerooms, wine cellars and other incidentals of national housekeeping, including domestic account books. I knew, later, why everybody laughed. They wondered why I should be choosing such a peculiar life-work. Or was it to cover their own ignorance of the subject? They were ignorant—no doubt about that; and one man at least has since asked even me for small items of information.

Some questions I could and can answer; but most things, be it understood, are known only to some mysterious great person somewhere, who never, no never, will tell. High officials get so in the habit these days of "squirreling" information that they will not even uncover it for the benefit of each other. I found it rather difficult to induce the Powers that Be to take me seriously; but as a matter of fact they take themselves so seriously that their mental capacity for seriousness is completely exhausted before they reach the actual performance of the tasks assigned to them—which sounds rather hateful, but is quite justified. I think I must digress just long enough to give them away.

Let us bring our gardens to your table

Let us give you the benefit of these fresh delicious vegetables so carefully selected and daintily prepared.

Here is a tempting, wholesome food rich in appetizing flavor; full of strength-building nourishment. And it is all ready for your table any time at three minutes' notice. Think how independent you can be, on the food question and the "help" question and the three-meals-a-day question, when your larder is supplied with

Campbell's Vegetable Soup

In this single product you have a perfectly balanced diet—all the elements of nutrition scientifically combined. *We use thirty-two separate ingredients in this nourishing soup.*

Fifteen of these are vegetables; including premium-grade white potatoes—the finest Maine growth, "Jersey" sweet potatoes, red-hearted Chantenay carrots, sweet yellow turnips, baby lima beans, tender little peas, cabbage, tomatoes and "Country Gentleman" corn.

We add rice, barley, celery, okra, fine herbs and delicate leek; besides "A B C" Macaroni, and just a whisper, as you might say, of sweet red peppers. And we blend all these in a rich meaty stock made from selected beef.

You could not imagine a dish more tasty and nutritious. It is not only an inviting dinner-course, but it is the best part of a light meal in itself.

It involves no bother of marketing on your part; no expenditure of time and energy, no cooking expense. It comes to you already perfectly cooked and prepared. You simply add hot water, bring to a boil and serve.

Good soup is positively essential to the properly-regulated diet. All authorities agree on this. It should be eaten once a day at least. And with an assortment of these health-promoting Campbell "kinds" in the house, you are never without a soup that is altogether welcome and satisfying.

Asparagus	Clam Chowder	Pea
Beef	Consommé	Pepper Pot
Bouillon	Julienne	Printanier
Celery	Mock Turtle	Tomato
Chicken	Mulligatawny	Tomato-Okra

A Tempting Dish—
Fried Chicken
Southern Style

Try it—in the

"Wear-Ever"

ALUMINUM FRY PAN

Clean, singe and cut into pieces for serving, two very young chickens. Salt, roll in wet flour having as much flour as possible cling to chicken. Melt tablespoon butter in "Wear-Ever" Aluminum Fry Pan—put chicken in, skin down, cover. Cook slowly for about 15 minutes, turning when necessary. When thoroughly brown and crisp, add 3 tablespoons of water. Cook 3 minutes longer. Take out chicken and drain. Thicken gravy. Serve hot or very cold.

The "Wear-Ever" Fry Pan stores up a larger amount of heat than the ordinary fry pan, sears the meat immediately, thus keeping in the juices—cooks thoroughly and quickly.

The enormous pressure of rolling mills and stamping machines makes the metal in the "Wear-Ever" utensils dense, hard and smooth. They are made in one piece, have no seams to give trouble, no coating to chip off and get into your food, are pure and safe.

Replace utensils that wear out with utensils that "Wear-Ever"

Look for the "Wear-Ever" trade mark on the bottom of every utensil. It is your guarantee of safety, saving and service.

If you never have used "Wear-Ever," we will send you the sample 1-qt. Stewpan as pictured, *for only 30c* if the coupon is mailed on or before March 20, 1917.

The Aluminum Cooking Utensil Co.
New Kensington, Pa., Dept. 18, or (If you live in Canada) Northern Aluminum Co., Ltd., Toronto, Ont.

Send, prepaid, 1-qt. "Wear-Ever" Stewpan. Enclosed is 30c in stamps or coin—to be refunded if not satisfied. Offer good until March 20, 1917, only.

By the Powers that Be I mean, of course, the men of the Press Bureau. They are ensconced in formidable-looking offices, guarded by numerous uniformed old-soldier doormen, and evidently conceive themselves to be charged with the delicate mission of keeping all friendly inquirers as far as possible from the subjects of their inquiries—which is not what they are there for at all; though, in this connection, I must say that the French are almost loosely liberal in comparison with the English. The English maintain an expensive Press Bureau, I sometimes almost think, for the purpose of having someone to blame for the superiority of German propaganda. It was the irritation and danger of German propaganda, almost as much as a recognition of the necessity for taking a proper interest in the efforts of the world's press to keep friendly tabs on their activities, which induced the allied governments to establish Press Bureaus; and all of them, especially the English and French, have voted large sums of money for the purpose.

The endeavors of these institutions are supposed to be directed toward combating German propaganda and establishing correct public impressions in neutral countries, especially in the United States; and in such an important enterprise the Allies are perfectly willing to spend money. But they do not have to spend money; and this is particularly true with regard to France. France has nothing to conceal except such military secrets as she knows how to guard under all circumstances, and nothing to smooth over or explain. In all that concerns French life and French conditions there is little that would not make an enemy envious; and the spreading abroad of information about such things is a wise procedure.

The French were assured at once, and by an American, that the only thing they had to do was to open the way for American and other neutral correspondents, and that the result would be the wide and free dissemination of a great deal of honest and harmless information. They were pleased to believe this; but the establishment of the bureau was a necessity, and a large staff would be needed to look after the details of passes, investigations of character, and all that sort of thing.

All right; some such institution is undoubtedly an indispensable cog in the great machine of war as war exists. There is no question about that; but one may say that such an institution should be organized on lines of the highest efficiency if it is not to be an obstacle rather than an aid to the strengthening of international relationships.

I shall have to admit, gratefully, that, in comparison with the experience of some others, the way has been wide open for me; but to seek vainly for a little up-to-date information is an irritating process, and that is how one spends most of one's time. At the Press Bureau there is one long corridor filled with unpainted pine shelves of the temporary, hurried-looking and immediately necessary variety, on which are piled thousands of copies of pamphlets printed in all the languages.

The Literature of the Press Bureau

Some of the titles of these pamphlets are: German Theory and Practice of War; How Austria-Hungary Waged War in Serbia; The Suppression of the Armenians—German Methods—Turkish Performance; The Violation by Germany of the Neutrality of Belgium and Luxembourg; The German Mental Attitude and the War; The Origin of the War, According to Diplomatic Documents; The Congress of Vienna and the War of 1914; How Germany Seeks to Justify Her Atrocities; and German Atrocities from German Evidence.

If there are other things on those shelves they are probably of like character; but these are all I have been able to find. All are very interesting, of course, and one is glad to get at these subjects from a French point of view; but, as I have said, when I made my innocent demands upon the secrets of the military economic processes everybody laughed, and I think somebody said "*Mon Dieu!*" In their mental race with passing events they have not yet come up to Christmas, 1915.

There is one thing one must plead in excuse for their shortcomings, however, and that is that the Press Bureau is expected to take care of any and every kind of foreigner who comes along with any and every kind of request. The Frenchwoman, for instance, is not allowed to go anywhere in the direction of the armies; nor are Englishwomen allowed to cross the Channel, except on the strictest and most urgent kind of business. But the foreign woman, the neutral, and especially the American, may go almost anywhere if she has the qualities necessary to meet the difficulties of obtaining permits. Two of these are unlimited patience and dogged persistence. One Frenchman, who knows and likes America well enough to be able, without offense, to speak his mind about Americans, said to me that any American woman who has so much as knitted a pair of socks for a French soldier thinks her service has entitled her to the privilege of seeing the armies at the Front—the Front during the past year meaning always Verdun.

This is a vicious exaggeration, but it conveys a more or less correct idea. Nearly every American woman who comes to France, on whatever mission—and most of them come on war relief—asks permission to go to Verdun, or somewhere equally difficult. The fact that most of them want to "see," only that they may go back home and tell what they have seen in an effort to raise more money for the beloved French, complicates things for the gentlemen of the Press Bureau tremendously. Plain heart interest and not mere curiosity is behind a majority of such requests, and point-blank refusal to pay any attention to them is out of the question.

Diplomatic Bureaucrats

The gentlemen of the Press Bureau are much too polite to refuse anybody anything outright, anyhow. They would much rather keep you waiting until your mental attitude resolves itself into a sympathetic understanding of their own great difficulties; and this takes time. They know you will end by apologizing for causing them such endless trouble. And if they have done nothing whatever for you they will assure you that your disappointment is a triumphant and glorious feeling compared with the deep dejection they are suffering on your account; while if they have done what you have asked them to do, even though it be in the line of press work and their appointed job, they will succeed in making you feel that any repetition of the effort would be fatal to them—though *le bon Dieu* would be able to bear witness that they would be perfectly willing to die for you at any moment!

However, if mere incompetence were a crime most of us would be deprived of our liberty. Also and moreover, if we were at war and were running just such an institution for the dissemination throughout the world of accurate information about ourselves, I do not know of an American who could undertake the work in the French department. But, of course, we should know enough, and we should not be too proud, I hope, to employ a clever and friendly Frenchman.

It was several days after my own preliminary introduction at the Press Bureau that I asked permission to investigate the contents of the national larder. Why, yes; of course! Most interesting! The power I addressed would try to get for me "the informations."

"But I want to see."

"See? What do you mean? See what?"

"Everything."

"Oh!" A curious smile he smiled. "But perhaps you could tell me where you want to go?"

"No; how should I know where I want to go? I know only what I want to see. You know what I want to see; don't you also know where I ought to go?"

"Well, yes—surely; but ——"

He didn't. There was a long pause, filled with pantomime denoting serious thought, great interest in the proposition, but private and uncommunicable knowledge of insurmountable obstacles. I was moved to tell him about a certain well-known, affluent and overmannered English actor who was reduced one night to the humiliating necessity of getting into a public conveyance—a common taxicab. He had been having a late supper with some friends; but, late though it was and supper though it had been, his habitually dignified demeanor was unimpaired. He stepped into the cab with studied precision of movement and uttered the one sonorous word:

"Home!"

"Yes, sir. Where to, sir?" asked the cabman.

"Home!"

"Yes, sir; but where, sir? What address, sir?"

(Continued on Page 33)

Clicquot

Pronounced Klee-Ko

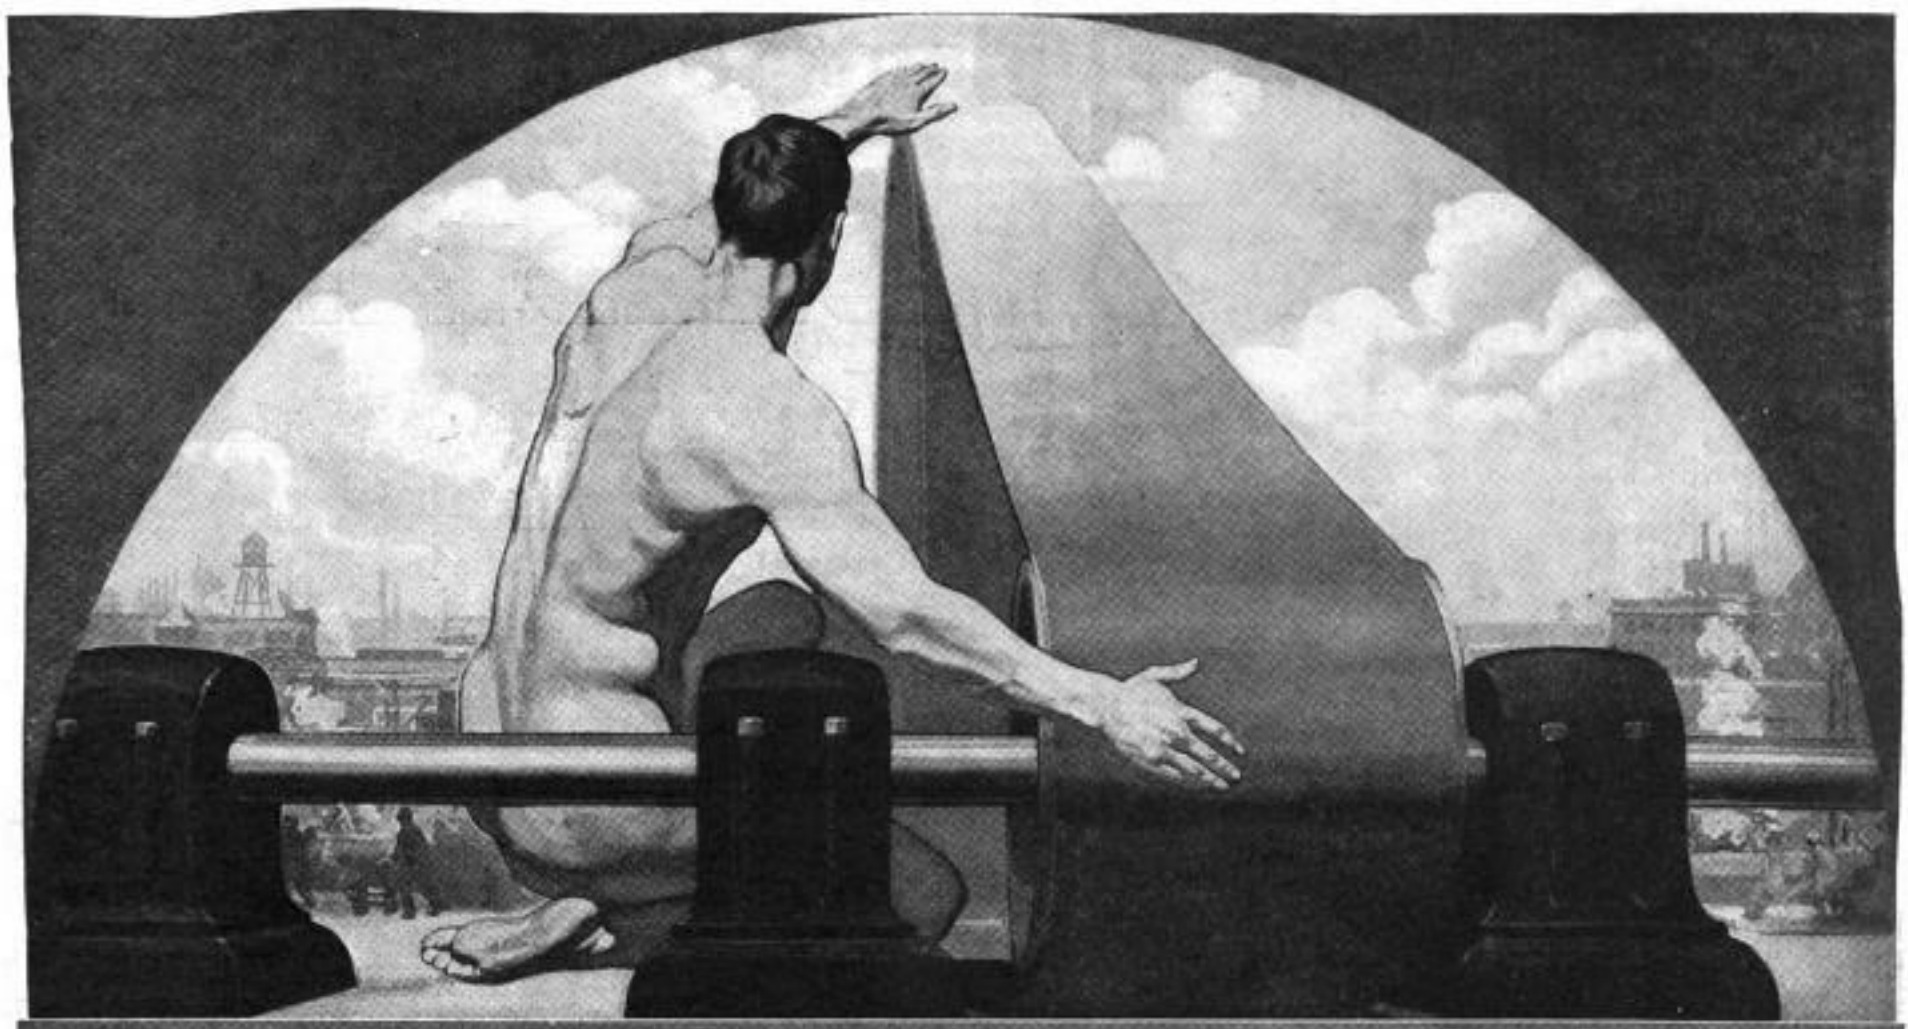
Club

GINGER ALE

Clicquot Club's thorough goodness has made it by far the most popular thirst quencher in America.

Its life and snap, high carbonation and invigorating qualities add much to the enjoyment of those who drink it. It makes thirst a pleasure.

Clicquot Club is made from pure juices of lemons and limes, cane sugar, Jamaica ginger root and crystal-clear water from a deep, dark, underground spring. It cannot help but be good.



A case of Clicquot Club in the cellar and a few bottles always on the ice make the thirst of any member of the family an opportunity for a wholesome treat.

Good grocers and druggists sell it by the case

THE CLICQUOT CLUB CO.
Millis, Mass.

Blue Streak Belts Increase Production

Scores of Blue Streak sales are being made in these times of capacity production solely on the strength of their continuous service records.

An hour's shut-down often costs more in decreased output than the first cost of the guilty belt which brought it about.

And belt breakage and belt stretching cause shut-downs.

Blue Streak Belt construction reduces breakage to a minimum. Only a special-weave duck of 25% greater tested tensile strength than that ordinarily used in the best transmission belts is used.

In consequence Blue Streaks give you the highest possible factor of safety according with efficient transmission.

Stretching is harder to combat, for it is not a question of materials alone but also of construction.

The special-weave duck eliminates some of the stretch.

But more is eliminated by the method of impregnating the plies under enormous pressure with high grade "friction."

By this method the plies are united as with thousands of strong yet flexible rivets, rooted in the very fiber of the duck.

They unite the plies as indissolubly as if they were welded, yet allow the play between plies necessary for the equalized adjustment of strains.

Since all the plies bear an equal load, none is unduly strained; and in consequence the exasperatingly variable stretch so common in stitched and other belts of inferior construction is eliminated.

The merits of the materials used in the construction of Blue Streak Belts have been proved in every industry.

They have demonstrated their long service per dollar of cost, their power-saving efficiency, and their continuous service so conclusively that The Goodyear Tire & Rubber Company unreservedly stakes its reputation on their performance.

* *

The Goodyear Encyclopedia of Mechanical Goods has been compiled by Goodyear engineers from actual cost records kept in many industries using transmission and conveyor belting, hose, packing, and valves. Write for it, naming the particular industry in which you are interested.

Plant Your Garden the TRADE MARK PAKRO REG. U.S. PAT. OFF. SEEDTAPE Way This Spring

Try this better way of planting your garden.

Get some Pakro Seedtape from your dealer and just plant the tape, a whole row at a time, at the depth stated on each package, moisten well and cover with earth.

The simplest, easiest way imaginable, and still intensely practical and one of the greatest scientific improvements in planting discovered in years.

Pakro Seedtape consists of selected seeds spaced exactly the correct distance apart in a thin paper tape.

Pakro Seedtape gives you a better garden with less labor because of the following advantages:

1. A better quality of thoroughly tested seed—every variety grown especially for us and selected by experts from the very best of prize-winning strains.

2. A great saving of time and labor because you can plant the tape a whole row at a time instead of a few seeds at a time, and be sure of getting straight rows and a fine even stand.

3. More economical because only enough seeds are planted to insure proper growth—with loose seeds many more than are necessary are used, resulting in over-crowded, slow-growing stunted plants.

4. No thinning out required on account of proper spacing of seeds in the tape. Those who know what this work implies will appreciate keenly this feature.

5. Not only easier to plant but better to grow—the paper tape absorbs and holds moisture around the seed, with the natural result of a quicker and much higher percentage of germination and a stronger plant life.

These are not theories. They are statements of actual results achieved by thousands of amateur gardeners and some of the most prominent agricultural colleges and experiment stations in the country. W. B. Farrar, President of the experiment station at Blountsville, Alabama, finds that "Seedtape is a very fine device for the gardener. The seeds germinate very readily and it is much easier to get straight rows. Therefore, a much more even stand and better looking garden is possible."

Pakro Seedtape comes in 30 varieties of vegetables and 18 varieties of flowers. Get it from your dealer. ***Write for our beautifully illustrated free catalogue.***

You have every assurance that your garden will be better, more economical and easier to plant if you use Pakro Seedtape this year.

Mr. E. L. D. Seymour has just written a delightfully interesting book for Home Gardeners.

It tells in simple terms how to plan your garden, just when to plant the different Vegetables and Flowers, and just how to plant them. It gives authoritative and exact information that is easy to follow and that should be in the hands of everyone desiring to have a successful Home Garden.

Mr. Seymour is the author of "Garden Profits," "The Garden Almanac," and is associate editor of the "Garden Magazine" and "Country Life in America." The book is beautifully bound in boards, splendidly and abundantly illustrated in colors, and its regular price is $1.00.

We will be glad to furnish those interested in the better Pakro Seedtape way of planting with a copy of Mr. Seymour's book and 5 packages of Seedtape, totaling in value $1.30, for 50c. Simply send us 50c. in form of post office money order or stamps today for the book and Pakro Seedtape.

Oak and Dust

Dust shows more plainly on oak than on any other wood. This dust seems to dissolve and form a scum, thus clouding the real beauty of the grain of the wood.

To thoroughly dust, clean, polish and beautify furniture or floors made of oak, simply dampen a piece of cheese cloth with water, wring it almost dry and then add

O-Cedar Polish

Go over the surface and polish with a dry cloth. A sparkling clean, bright, lasting lustre is the result—a lustre so dry and hard it will not collect dust.

The same O-Cedar Polish should be used for cleaning, brightening, polishing and beautifying all wood work and furniture of every kind.

O-Cedar Polish is sold by all dealers in convenient sizes—25c to $3.00. Your money refunded if you are not delighted with the "O-Cedar Result."

"'S'dress? 'S'dress? Why, how dare you! Do you think I'm going to tell you where my beautiful home is?"

The polite monsieur laughed as a polite monsieur would, but he did not get the application. Perhaps the story had none; but I managed to apply it just the same in painstaking diagram, and it was a pleasing thing to see the light dawn in his eyes.

"Oh, I understand! You mean you can't get anywhere unless you know where you are going."

"Well, something like that."

Nothing came of that interview; but about a week later I went back and found him better prepared. He drew for me a kind of map to illustrate the complications and utter un-get-at-ableness of the subject, but on that map I discovered a few points I thought were quite accessible. Oh, one could go easily enough; the trouble was to get the necessary permissions. Well, that was where he came in. That was what he was there for. Naturally I said nothing to this effect. That would have been fatal. I merely thought it while I puckered my brows in imitation of the way he was doing it and worried with him over the great strain to which I was subjecting him.

Then one day—it took five weeks altogether; make a note of that in case you should be inclined to consider my "grouch" ill-founded—one day I got desperate and announced that it would be "day after to-morrow or never"; and he made it the day after to-morrow with such ease and alacrity that I was sorry I had not introduced the definite note a little sooner.

And that brings me back to the subject of food supply and distribution. Such digression is like showing you over the house and stopping on the stairs to gossip, is it not? A very bad habit.

One must not be geographically definite, of course, because there is just about one chance in a million that it would be dangerous; just about one chance in a million that France knows something about her own affairs which Germany does not know equally well. But for the sake of those who might take this as an occasion for saying unpleasant things about German espionage I might add that it is a reciprocal proposition, and that if any Germans think there is much of importance about German affairs which France and England do not know they underestimate the resourcefulness of their enemies. In any case, the French would be perfectly justified in saying to the Germans: Do you think we are going to tell you where our acres of warehouses, our wheat reserves and bake-ovens are?

The Food-Map of France

A commissariat map of France discloses the fact that the food-supply system embraces practically every square mile of French territory and reaches out into nearly every corner of the earth. All round the coast line are little red anchors marking harbors, many of which, such as Calais, Cherbourg, Havre, Bordeaux and Marseilles, would occur to one's mind at once, but most of which one never heard of. From all these harbors there are railroads running up toward the center of France, where a number of great magazines and mills are located; from these places, small towns generally, there are other lines connecting directly with the food preparation and distribution centers, while many other lines spread fanwise out toward various points in the long battle area and to camps located just behind the Front.

A large red dot on the map denotes a magazine and milling section; a red dot with a ring round it denotes a point of distribution; and all up and down the edge of the fighting zone are little red beefheads, which mark the locations of slaughterhouses. The French soldier likes his meat fresh-killed and will have none of the frozen kind if he can help it; so the cattle and sheep and hogs are transported or driven close up behind the Front and killed as the meat is required. During the summer whole trains of refrigerated automobile vans are loaded with meat at the slaughterhouses each day and driven up to the field kitchens, from which the men in the trenches are fed. Every known kind of vehicle is used to convey food to the Front, however; and it is interesting to see a drove of cattle going from railroad yards to the slaughterhouse corrals with their own food, for the short space of life that is left to them, strapped on their backs in sacks.

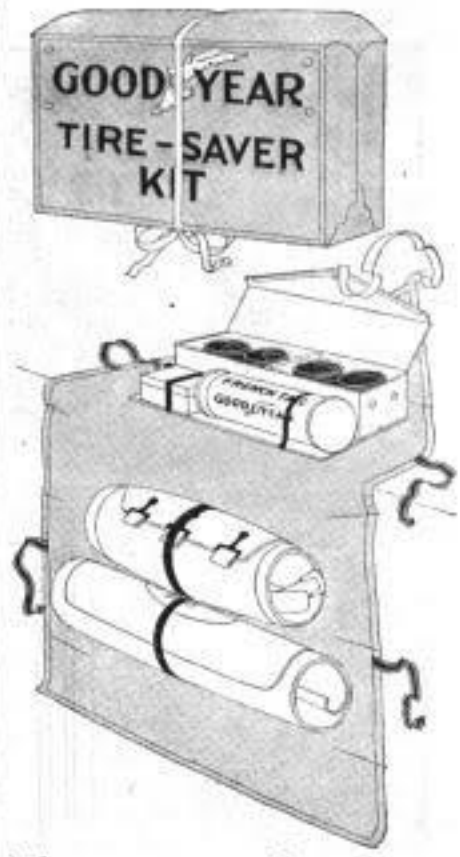
There are nearly three hundred thousand horses and mules with the army of a million at Verdun, incidentally; and they consume something like five and a half million pounds of hay, oats and mixed feeds every day. This presents a picture of tremendous transportation difficulties; but, expressed in tons, it sounds much easier. The figures were given to me in daily rations for each horse; and the item of bran, at least, was not expressed in anything even so generous as pounds; it was expressed in grams. Each draft animal in the army gets three hundred grams of bran each day. Bran is not plentiful, because, for *la boule*, wheat is milled in a manner that leaves a very small percentage of this commodity.

And yet the bread is white—whiter than that which is served in some of the best hotels. This surprised me, because I had eaten war bread in a good many countries, and had come to look upon it as a dose for the health's sake rather than as a palatable article of pleasurable diet. The first place I visited was a distribution center where they prepare and send out three hundred thousand rations every day. If you have any interest in knowing what such a place looks like, all you have to do is to vision to yourself about fifty good-sized, ordinary American country-town freight sheds, set end to end, ten in a line let us say, and with railroad tracks crowded with freight cars between them.

In the Military Bakery

Then you might set perhaps a dozen other sheds at various angles here and there round the outer edges of the main camp—and you have a perfect picture; though it would not do to forget the mud and the muck and the cinders, and, round the bakehouses, the great stacks of wood, which dozens of men are engaged all the time in reducing to the proper lengths for the vast brick furnaces connected with the ovens.

I saw the baking process the first time wrong end to. I came, first, into a bread storeroom, in which thousands upon thousands of big round loaves were stacked edge-up on racklike shelves set crosswise of the room and just far enough apart for a man to pass between them. It was a most extraordinary sight. It was just a part of that day's baking and much of it was still warm from the ovens.



Each loaf is stamped with the date on which it was baked; so there is no chance to deceive the *poilu*. He always knows exactly how old *la boule* is.

La boule, by the way, is merely the army pet name for army bread, and means literally "the bake"—a bakery being a *boulangerie*. Far be it from me to expect anybody to know anything about anybody's language but his own. Goodness knows I don't! And when I am reading what purports to be straight English and come across a foreign word or phrase tucked in in italics, without explanation and with a superior air of ignoring the fact that the Tower of Babel was ever built, I always want to throw the book across the room and break something with it; so please excuse my being explicit.

I passed on through this vast bread-filled room, breathing the fresh fragrance with which its air was laden, and came finally into one of the oven rooms. This room was hot. It was brick-floored, but otherwise only a bare-raftered shed. Along one side of it was a row of ovens and furnaces—ten ovens and eleven furnaces—which made a furnace on each side of each oven. The room was filled with men, most of them stripped to the waist and working like Trojans. Some of them were stoking the furnaces, raking the glowing embers and piling the short pieces of wood far back in the deep interiors. Others were putting unbaked loaves into the ovens, passing them in on long-handled paddlelike shovels; others were taking the baked loaves out with the same kind of implement and stacking them on wheeled shelves to be conveyed to the storerooms.

The busiest man of them all stood next to an oven door taking the perfectly rounded unbaked loaves off their wheeled shelves, covering the bottoms of them with coarse meal and the tops of them with some kind of glaze, and stamping the date deep into them with three unvarying movements as he laid them one by one on the paddle that was to lift them into the depths of the oven. He worked with peculiar swiftness and precision, and there was never a break between his motions and the motions of the man who handled the paddle. In the art of bread baking, where absolute uniformity in a vast

(Continued on Page 35)

Extraordinary Protection

Given four good tires on the rims, a pair of spares behind, and your motorist is adequately protected against any ordinary misfortune on the road.

But the extraordinary misfortune—triplicate trouble, the third tire failing—what of that?

True, it does not often happen—but it *may*. And if it *does*—?

Goodyear has prepared the extraordinary protection to meet and defeat the extraordinary misfortune, and to banish the fear of it forever from the car owner's mind.

It is a handy, compact package, under the name Goodyear Tire-Saver Kit—containing all essential first-aids-to-tires: tire putty, self-cure tube patches, inside and outside protection patches, cement, talc, friction tape, valve parts, pressure gauge and so on—complete and dependable.

It prepares the motorist against any tire accident short of complete ruin, and its cost is trivial in view of the peace of mind it brings.

Goodyear Tires, Heavy Tourist Tubes and "Tire Saver" Accessories are easy to get from Goodyear Service Station Dealers everywhere.

New York's Leading Hotels and Clubs

were quick to realize the excellence of RYZON, The Perfect Baking Powder. Famous for their wonderful cuisine, and catering to the most critical consumers, the celebrated institutions pictured here were the first to adopt RYZON. In addition, RYZON is used in leading hospitals, domestic science schools and many thousands of American homes.

RYZON

THE PERFECT BAKING POWDER

is the creation of a great scientific organization. It is endorsed by leading food authorities, the foremost having said:

"RYZON has qualities of excellence and physiological relations which entitle it to the confidence and patronage of the public."

The RYZON Baking Book is almost as great a step forward in baking as RYZON itself. It is the first accurate, scientific baking manual ever published, with directions given in weights and in *level, standard* measurements. The choicest of the recipes from 10,000 women are in the RYZON Baking Book, which was edited by Marion Harris Neil and contains master recipes from these cooking experts:

Miss JESSIE A. LONG
Instructor in Cookery, Pratt Institute Brooklyn, N. Y.

JANET McKENZIE HILL
Editor, "American Cookery"

KATHERINE LAWRENCE
Director of Household Science Temple University, Philadelphia, Pa.

Mrs. LEMCKE-BARKHAUSEN
Principal, Greater N. Y. Cooking School

Miss ALICE BRADLEY
Principal, Miss Farmer's School of Cookery Boston, Mass.

Mrs. HARRIETT COLE EMMONS
Manager, RYZON Service Staff

MARY MASON WRIGHT
Cooking Expert of the "Designer"

ELIZABETH O. HILLER
Denver School of Cookery

MARIA W. HILLIARD
Wellesley Hills, Mass.

Mrs. ANNA B. SCOTT
Cooking Expert and Food Economist of the "Philadelphia North American"

Mrs. CHRISTINE FREDERICK
Consulting Household Engineer

The RYZON Baking Book is for users of RYZON. It may be obtained free through grocers with the first order of RYZON. If your grocer cannot furnish it, the RYZON Baking Book, with a 35c one-pound can of RYZON, will be sent postpaid upon receipt of one dollar. Leading grocers are invited to communicate with

(Continued from Page 33)

output is demanded, guesswork in timing operations and maintaining oven temperatures is not possible.

Just beyond the oven room was a room where the loaves were placed to go through the "rising" process, and beyond this was the mixing-and-kneading room. The mixing and kneading are done by machinery; and the flour is brought across on an overhead trolley from a warehouse on the opposite side of the railroad tracks and is let down into the mixing vats in a controlled stream as it is required.

The kneading machines were so nearly human that they all but used bad language over refractory lumps of dough; and I could have stood and watched their methodical, marvelous motions for hours on end. One hundred and fifty thousand loaves a day is the output of this bakery—about one-third of the amount consumed daily by the army at Verdun.

Adjoining the mixing room was another storeroom, filled with yesterday's bake, and many men were engaged in loading this into freight cars, which stood on the tracks alongside. For transportation to the Front the bread is not wrapped up or protected in any way, but is packed into the box cars just as it is, in even rows all the way up to the roof. A carload of *la boule* is a rather wonderful thing to see. It means so much in the general, unbelievable scheme of things.

The trains go out from this station with the regularity of a perfect railroad schedule, and in each train there are carloads of every article included in a soldier's ration except fresh meat. There is a slaughterhouse connected with the establishment, but it is for killing animals to be made into Bologna sausages and Frankfurters. These things the Frenchman likes no less than the German, and they are issued occasionally by way of variety in the meat ration.

Coffee is one of the really important items and is as necessary to the Frenchman as tea is to the Englishman. Very few Frenchmen ever drink tea; but, even so, the army manages to consume nearly twenty thousand pounds of it every week. The coffee, coming from Brazil, the East Indies and other coffee-producing countries, is delivered to the distributing centers green and all mixed up with chaff and hulls; so the odor of roasting coffee crowds the odor of fresh bread in the atmosphere of such an establishment. The coffee is first roasted in great round, revolving, self-regulating ovens—which do everything but go to the bins and fill themselves—and is then dumped into clearing screens. When it is cold and perfectly free from chaff and dirt it is sent to the grinding room, where it is run through the mills into sacks; and the sacks are at once packed into freight cars for transportation to the Front.

The Makers of Sandbags

All this is done on schedule time—do not forget that. Everything moves with clocklike regularity. While a train is loading on one side of a warehouse with foodstuffs ready for consumption another trainload of raw materials will be unloading on the other side, the spaces being filled as fast as they are emptied. There were two thousand men engaged at this center, without counting the train crews; and it is only one of many. It takes three such to supply the Army of Verdun, and the meat supply is a thing with which they have nothing to do.

All the supply centers are located on direct lines of communication with the distributing bases just behind the battle area, and each great division of this area has its own centers, together with its own ports and sources of supply. The aim of the transportation department is to avoid waste motion, because waste motion in such an enterprise means waste in a hundred and one different directions.

The item of sacks: Wherever you find a number of women at work in a sewing room, in Paris or in any other town, in some corner or section of that sewing room you will find a certain number of women engaged in making sacks. The *sac à terre*, or sandbag, is everywhere. Can you imagine the millions upon millions of yards of sacking required to make the millions of sacks necessary in the shoring up of hundreds of miles of trenches? It is beyond calculation. There are lines of sandbags belting the world in all directions. One's mind runs up and down the map of France, with the French lines on one side and the German lines on the other; it goes on down into Italy, across to Serbia, into Bulgaria, on to Rumania, across to Austria, thence to Russia, up into Poland, down into Asiatic Turkey; still on down to the banks of the Suez Canal and across to the wastes of the Syrian Desert; everywhere battle; everywhere trenches and protected guns; everywhere sandbags, which descend upon the armies from—the armies know not where—from thousands of sewing rooms, large and small; from hearthsides; from hamlets; from hovels and palaces; from everywhere that sacking is; from every corner where unskilled hands can be employed in this least skilled of all the labors.

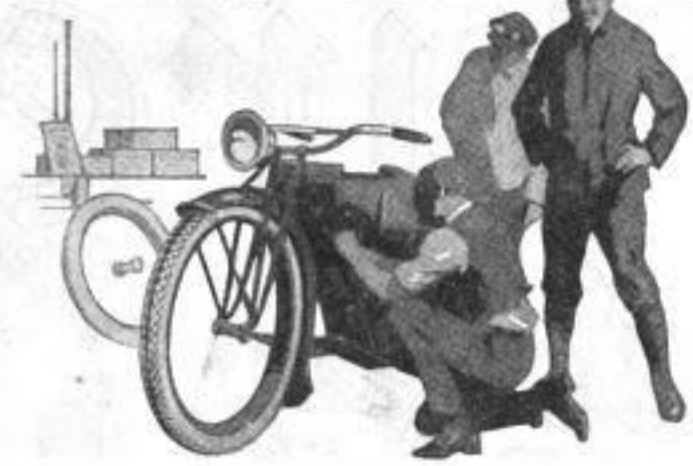
The consequence is that coarse sacking is unbelievably precious. At my center of supply for the Army of Verdun I went into a room where fifty women—the only women employed there—were mending sacks. They were operating American darning machines, which were run by electricity. Some of the sacks had only small holes in them and were easy to do; others were in rags and tatters, and had been mended and remended dozens of times. No matter; no sack is admitted to be hopeless so long as there is any surface left that can catch and hold the darning thread. It was both amazing and amusing. The women get four francs a day and work from seven until twelve and from one until six.

Conservation of Wine-Casks

At night men take their places at the machines and work from seven until midnight and from one until six in the morning. It is a grilling, cruel service—dusty and dirty beyond belief; but the sacks have to be mended. So many things are transported in sacks, you see; and for the indispensable sandbags, which must be uniform in size and quality, all available new material is required.

And almost immediately I came upon another minor but highly important economy. French wine casks are magnificent things. They are made of seasoned wood, and are often bound in brass with twisted thongs or some other kind of ornamental hoops. The older they get the better they are. New wood does something to wine that it shouldn't; I do not know what it is, but it is something very undesirable. Now France has never found it necessary before to transport a million and a half liters of wine in casks every day, and the question of casks is a serious one. The wine is sent from the sources of supply to the distribution centers in large tanks on flat cars—not unlike oil tanks, except that they are made of wood and are squat and rather quaint, instead of being made of steel in elongated and altogether utilitarian-looking form. Casks is the word—not tanks.

From these giant casks the wine is pumped into smaller casks, the size of a coal-oil barrel, and these smaller casks go to the Front. In the big wareroom where they were filling these—through a dozen sections of hose attached to the gigantic tubs on the railroad—I noticed the sign painted on each end of each of them: "Soldiers! Attention! If You Want Wine Take Care of the Casks!" It was exclamatory—imperative.



Then I passed on down the steps and into a vast cooperage shop, where the busy kunk-kunk of hammer and chisel was making a merry din on hoops and staves. New casks? Not at all. The coopers were engaged in repairing old ones that had been broken in transportation. They are worth their weight in wine a good many times over. Every smallest bit of the fine old wine-soaked wood is utilized, and when enough broken staves are collected they are made into kegs—wee, tiny ones sometimes.

This, also, was both amazing and amusing when one thought of the almighty cost and waste of war; but only because an American knows nothing at all about wine. One would think that the millions of *poilus* would be glad to get their wine in any kind of receptacle. But no; even to bottle it is an offense. The Frenchman is brought up from infancy on his light native wine. If the wine was not properly handled there would be one grand ruction in the ranks—and a sick French Army, perhaps. The question of health enters into every calculation of the Commissary Department.

I need only mention that there are enormous stores of everything in the warehouses connected with this central station, and that in the trains which are sent out there are carloads of dried vegetables, *julienne*—or soup vegetables—tobacco, potatoes, rice, spaghetti, macaroni, hams,

BLUE STREAKS

Motorcycle Tires With the Family Likeness

Goodyear Blue Streak Motorcycle Tires are little brothers of Goodyear Automobile Tires.

They have the same fine traits that characterize all the other members of the Goodyear family.

Honesty, courage and loyalty are built into every ounce of them. Ask any automobile owner what he thinks of Goodyear Automobile Tires.

Goodyear Blue Streak Motorcycle Tires occupy the same position in the motorcycle field as Goodyear Automobile Tires do among motoriats.

This is the reason that every motorcycle manufacturer in the country uses Goodyear Blue Streaks as standard equipment.

You can't say any more for a tire than this.

(Continued from Page 35)

bacon, sugar, salt, and—to be remembered later—flour. With all their vast oven capacity, the general-supply stations are not able to produce the necessary quantities of bread, and at least one-fifth of the baking has to be done at the Front.

One day I was on my way down to Nancy. The train rolled into the station of Bar-le-Duc. Bar-le-Duc! One thinks of a wonderful and very expensive little currant preserve, put up in small, thick octagonal glasses—a preserve one orders once in a while with cream cheese. This is where it is made—at Bar-le-Duc, the station for Verdun. The train rolled into the station of Bar-le-Duc, and I looked out of my compartment window in time to see a party of American men, under the escort of a French colonel, get out of a car up ahead and hurry into a war-gray limousine that was waiting for them on the other side of the platform, behind the high picket fence. They were going to Verdun.

A long, rolling, sullen rumble of guns spread itself out across the north horizon. Verdun! Let me tell you that when you are within sound of the guns you can think of nothing else; you can hear nothing else; you can feel nothing else—the guns are killing, and you know it. Their heart-chilling roar is the final ungodly expression of all that war means—sentiment, suffering, havoc and horror, and ruin—the voices of the guns!

From Bar-le-Duc to Verdun—in ordinary times, if you were motoring down round there and should get into Bar-le-Duc along about luncheon time, you would probably say "Oh, come on; let's go on up to Verdun for lunch!" It is just that close. A large part of the station at Bar-le-Duc is an evacuation hospital, and there are many new corrugated-iron sheds off behind the station, which are hospital wards.

Verdun cost France almost a generation of stalwart,. magnificent men, the best France had. The hospital sheds at Bar-le-Duc are eloquent of a soul's agony—and the soul is the soul of France! The triumph of victory soothes, but cannot heal that hurt. You think these thoughts calmly; you look upon long lines of stretchers bearing their bleeding burdens—calmly; the guns chill your heart, but you listen calmly; you go about your business calmly; not one shadow of indifference in anybody anywhere, but in everybody everywhere a mighty calm—even up behind the guns! It is unbelievable; it is France!

On my second arrival at the station of Bar-le-Duc I was one of the alighting passengers. That seemed strange to me, because never for one instant in my life had I wanted to go to Verdun or near any other battle. But I was following food supplies up to the point of ultimate consumption. The ultimate I did not achieve; nor would I ever, except under extreme compulsion. The ultimate is in the trenches.

The Sacred Way

There is a roadway leading from Bar-le-Duc to Verdun, upon which has been fastened a name that will cling to it through the ages. It is The Sacred Way. When the Germans opened their assault on Verdun last February naturally their first concern was to cut the communications in the rear of the fortress; and they succeeded. Every railroad, every highway, was subjected to a raking and continuous bombardment and if it had not been for this little road leading up from Bar-le-Duc the French would have found themselves faced by really insurmountable difficulty. Instantly the commander of the forces called for every available motor truck in France and within a space of hours he had between nine and ten thousand of them. Everything necessary to the defense of Verdun was rushed to Bar-le-Duc—men, munitions and supplies; and within a space of hours the marvelous procession was started. Everything was ordered off The Sacred Way and the motor-lorry trains had but one order: Keep moving!

It is a winding road more than twenty miles long and neither wide nor finely surfaced. But it was the only way! The motor train was started, and from the latter part of February until the first of May, in a double line, it kept moving, day and night—one line toward Verdun, the other toward Bar-le-Duc. And during those two terrible months everything and everybody getting into Verdun got in over this roadway. No wonder they call it The Sacred Way! It saved France!

I talked with a man who drove one of the motor lorries throughout the entire time. He is a middle-aged gentleman and looks tremendously fine in his blue soldier uniform. In ordinary times he is a silk manufacturer at Lyons and is exceedingly prosperous, but he had to enlist for some kind of service; he could not be happy otherwise. He was too old to fight, but he could drive an automobile; so he went into the Transportation Division.

He talks about his two months on The Sacred Way in a curiously detached and humorous manner. He likes best to tell about the crippled cars and how they were treated. It was so funny to see the big, lumbering lorries lying on their backs, with their heels in the air, waiting for help that was generally so slow in coming. The order, you see, was to keep moving and the road was narrow; so if anything went wrong with a car, and it stalled in its tracks, the only thing to do was to dump it off on the roadside, which usually meant seeing it turn turtle down the slope into an adjoining field.

There were two men with each truck, because a man must eat and a man must sleep—and the order was to keep moving. It was twenty-eight hours to and from Verdun, and no one man could stay behind a wheel so long. When a car went wrong and was dumped off the road its crew had to stay with it; and sometimes it took as much as three days to get a repair car up to them. They would have no extra food with them, of course, and would be dependent on the graciousness of passing comrades.

The New Road to Verdun

Nobody could stop to speak with them, but they could usually depend on having food tossed to them from the always-moving line; and so they fared. And I can imagine that with such succor they fared very well indeed, and that such a period of enforced inactivity might have been made the occasion for one grand, long and sorely needed sleep.

Within a very short time this road was a quagmire, and it became literally a case of "navigating" it under difficulties that the least imaginative can easily picture for himself. And, in addition to such obstacles as mud and ruts, the Germans soon discovered the use to which it was being put and began to shell it. They would cut it in one place one day and in another place another day, and there would be casualties, which included both men and motors; but the determined Frenchmen would merely move off and make a detour through the fields, while roadmen followed up the bombardments, filling shell holes and making repairs as fast as the damage was done. It was a magnificent performance, and The Sacred Way will be, to the French, The Sacred Way for all time.

Meantime railways were being built; and at the end of two months there was a perfect system of railway transportation ready for use, and the worn-out motor train could at last stop moving. The railway was built in two months!

My host, the colonel in command of that division of transportation, took me first to the main yards, where I could see the trains being made up for the terminals behind the Front. This was not at Bar-le-Duc, but at a town more directly connected with the zone of operations, as well as with the bases of supply in the center of France. The small railroads leading to different points on the ten-mile Front of this sector are narrow-gauge and necessitate in some cases the reloading of materials; but fortunately much of the rolling stock is adapted to either kind of track.

Having seen the cars being loaded at a base of supply, it was interesting to behold them again at their destination. The railway yards are a network of tracks, with perhaps thirty-odd long sidings, and onto these sidings the cars are shunted as they arrive, and in the order of what they contain. On one track there will be nothing but bread; on another, dried vegetables; on another, tobacco—and so on; while on several there will be long trains of hay cars, or cars filled with oats and other kinds of feed for animals.

To cross these tracks is dangerous business, as I discovered for myself in my own way. I missed being run over by a big switch engine by about three feet, and the engineer shook his fist at me. I apologized. There is a terrific air of constant and swift motion, with engines plunging hither and thither in bewildering numbers. They are

KEEPS KITCHENS COMFORTABLE!

Burns Gas Coal or Wood No Parts to Change

Saved $450 On This Home

It was built on the Sterling System by a man in New York—(name sent on request). He says it would have cost $450 more if built in the ordinary way. All the waste of hand sawing, all the costly mistakes, all unused material, all the "extras" were eliminated. He got his material ready cut, all in shape to erect at once. His price was set. He paid only for what was actually used. He saved on labor also. The Sterling System of Home Building will save you a big percentage on cost of a home built by the old "hand-saw way." Look into it now, before you contract for building.

Sterling System of Home Building

Gives you a modern design by ablest architects. Saves all expense and time of preparing material on the ground. House put up in a third the time usually required. Why not save all the extra cost of the old way of building? Get the facts about the Sterling System anyway.

Send for This Book for Home Builders

Mail Coupon!

This book tells the whole story. It explains how the material for Sterling System Homes is cut by automatic machinery instead of by the slow, uncertain hand-saw method. Also shows actual floor plans and exterior views of over 30 of our master designs—and gives prices, complete ready to erect. A real guide to home building. No matter what style of home you build you need it. Send coupon and enclose 10 cents for postage and wrapping.

International Mill & Timber Company
Dept. 2382, Bay City, Mich.

Don't blame the Gas — Get a Starter that Starts!

ONE weak link in the chain of starting—gas, carburetter, battery, starting-motor, distributor, spark—discredits and defeats the purpose of every *other* link. You can be sure of complete starting-efficiency with Dyneto-equipped cars, because you won't *find* Dyneto Starting-Lighting on cars that do not measure up to Dyneto standards in every other respect. "Appearance," "workmanship," "efficiency" and "stamina" are much-over-worked words, but they have a new significance when used in connection with this really wonderful system. Our Engineering Bureau will gladly answer any question without the slightest obligation on your part. Write!

"My Stars, Only a Nickel!"

5¢

You'll just natchally wonder how we can give you such a whopping-big can of super-cleanser for the small price of five cents—a half-a-dime. 'Specially after you see it in action.

On greasy grills and griddles, dingy tile and linoleum, slippery sinks and bathtubs, Spotless Cleanser goes right to it and leaves everything sweet and clean.

This no-acid, no-caustic, go-gettem cleanser never talks back—never felt a lazy moment in its life. It's always in a genial mood. From the minute you punch the holes in the big, blue can, it's ready, eager and alert.

Spotless Cleanser has no doubles—no rich or poor relatives. It's soft, smooth, snow-white, odorless, and *so* considerate of your tender hands. If you want this unwearied servant at your beck and call, you must ask for it by name.

Sold everywhere in the enameled, rust-proof can. Made by The Reynolds Corporation, Bristol, Tenn.-Va., U. S. A.

SPOTLESS CLEANSER

making up trains for the zone and the process is to take one car from each siding. When a train is finished and ready to go up where the men and the guns are, it has in it a carload of each thing needful.

Most of the motor lorries that were released from The Sacred Way are now doing business close up behind the Front, in the spaces between the railroad terminals and the field kitchens and headquarters, which might be described as "on the brink of the trenches," and from which the soldiers in the trenches are supplied with their daily rations. This is the most dangerous of all the services.

To illustrate how dangerous it is I need only say that in taking Douaumont and Vaux the French lost six hundred water carriers alone—six hundred of them killed, and nobody knows how many wounded. No matter what happens, the water supply must not be cut off. Which brings me up to the emergency trench ration.

Each soldier always carries with him into the trenches twelve hundred grams of war bread—a kind of hard biscuit similar to that which we know as hard-tack; two tins of beef of three hundred grams each; a tablet of compressed coffee of seventy-two grams; a one-hundred-gram cube of compressed soup materials; one hundred grams of sugar; and two hundred and fifty grams of chocolate. This ration is known as "A Picnic Lunch," and is, altogether, about five pounds of food—a two-days' supply. It is for use in emergency, only when a trench or position is under impassable bombardment and cut off from the supplies in the rear. In the trenches the men have all the necessary utensils for preparing hot food, and they are provided with solidified alcohol for cooking purposes.

The Field Bakeshop

As a rather interesting and important small item, each soldier is given fifteen grams of tobacco every day. This does not sound like much tobacco; but for my own benefit, to ease my mind of a fear that it was not enough, I demonstrated that it will make at least twenty fairly plump cigarettes or fill six pipes; and that ought to be sufficient for any man—though, of course, it isn't. The men get only one package of cigarette papers a month and a box of matches every fifteen days. Not a liberal supply of either article; but there is hardly a soldier in France who does not own some kind of little patent device for lighting cigarettes. They are precious articles and excellent things to include always in gift packages to the Front.

As for cigarette papers—well, they cost only a penny a packet, and the French soldier gets the grand sum of five cents a day in the way of wages! He can afford to buy cigarette papers. Matches and tobacco are state monopolies in France, and it would be interesting to know just how much of the army wage of approximately eight hundred thousand francs a day—not counting officers—is returned to the government coffers by the purchase of these articles and turned over to profit in what is known as "indirect contribution."

My colonel made me walk through a mile and a half of railroad sheds—not all in one place, of course; no such thing as all the eggs in one basket—but all located near the railway terminal, just behind the Front.

Then we went to the field bakeshop, where they make up the difference between the daily demand and the daily output of the bases of supply. If I had never seen a base bakery I should have thought of this one as colossal; but, even so, its crudity would have given me my first and most definite impression. It is under canvas, and was cold and uncomfortable everywhere, except in the immediate vicinity of its vast brick ovens and furnaces.

Here they bake one hundred thousand loaves of bread a day, and as everything except the mixing is done by hand there are many men at work. It is a hive. The mixing machines are run by horses. There were two horses at work, a bay one and a gray one; and I thought they looked pitifully bored. They were hitched to long poles connected with a series of cogwheels that turn the shaft attached to the mixing machines, and all they have to do is to go round and round interminably.

I stood and looked at the poor beasts with grave interest, seeing in their unvarying course an illustration of the clocklike regularity of the system by which a great army is provided with the necessities of daily life.

Even a "Two Clerk Office" saves $800 to $1200 yearly by using Machine Bookkeeping

A dealer, by **adapting** this ordinary, visible adding machine for "penless bookkeeping," enabled his typist to post ledger, print statements and help on figuring. Saved 5 to 8 days' time a month. Avoided hiring help costing $800 to $1200 a year!

Save money for **your** firm! Have neat, type-printed, accurate machine-figured books! As in THE BIG MAJORITY of all cases, Baker-Vawter Company supplied the above ledgers, leaves, etc. Having had such vast experience, we can similarly assist **you**!

That THE BIG MAJORITY selects Baker-Vawter equipment **proves it excels.** Write Dept. A for salesman to call.

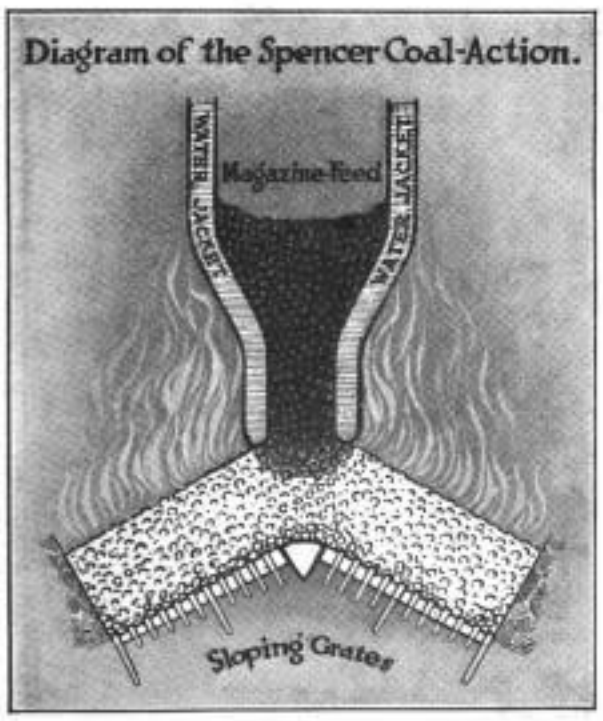
The low-priced coal which the SPENCER uses.

The high-priced **coal which** the ORDINARY **heater uses.**

40% off your Coal Bills!

Those Coal Wagons

Both these wagons carry coal for heating residences and big buildings.



But *one* wagon carries a kind of coal which costs *40 per cent less than the other.*

That coal is for the only boiler which can burn this very low-priced coal successfully, without incessant shoveling—that is the *Spencer Super-Standard Heater.*

Slice Off Your Coal Cost

A Spencer can cut your coal cost by that big slice, for it burns no more of the lower-priced coal than the ordinary heater burns of the usual costly coal.

The low-priced hard coal, usable in a Spencer, may be No. 1 Buckwheat or Pea, in the East. Semi-anthracite or Lignite may be used in the West. Buckwheat and Pea Coke, anywhere. These coals cost from One-third to One-half less than the large domestic sizes needed for the ordinary heating boiler.

Spencer
Super-Standard
Heaters
Steam Vapor Hot Water

How Can The Spencer Do This?

Because it was built for this special purpose—to burn a very small low-priced coal with perfect efficiency, and with the least labor.

Thus, the Spencer has a *Magazine-feed* instead of a surface-feed. Therefore you can fill it up once a day (or twice in extreme weather) and it feeds its coal down automatically.

Under the mouth of that Magazine the Spencer has *Sloping Grates* which prevent the coal from piling in a pyramid, but automatically distribute it at just the depth the fire wants it for perfect, even burning. (See diagram on left).

It Saves Work Also

The Spencer *reduces labor* to a minimum. Because of the automatic action of the Magazine and Sloping Grates, the Spencer needs attention but once a day in mild weather and twice a day in coldest weather. In a *residence*, only a few minutes a day. In a *big building*, the janitor or porter is enough, and he can do a full day's work on his other duties.

No Ups and Downs of Temperature

Perfectly Even Heat is another result of the Spencer's automatic action. You have an unvarying temperature in your rooms at just the degree you want, day and night. No spurts of over-heat or shivering chill.

Entire Cost Paid by the Savings

The Coal Saving pays the Spencer's *Entire Cost* in four or five years, and then becomes a yearly dividend on the investment. It can pay its extra cost over other boilers in one season.

Adds to Property Value

The Spencer adds to Property Value because of the above reasons, and also because it is so built that it rarely needs a repair. A Spencer building sells better and rents better.

Send to us for the interesting Spencer Super-Standard Booklet describing the construction and giving the pictures. Take it to your Architect and Heating Contractor for consultation.

UNION PACIFIC

A little over a hundred years ago all west of the Alleghenies belonged to France, Spain and No Man.

Even in 1850 there were about 100,000 people in the Union Pacific territory. Today there are 10,000,000. Shacks have become skyscrapers. The desert has been made to bloom. Western industries serve the world.

All know of the remarkable development of the 11 Union Pacific States since the completion of the line in 1869.

It was Lincoln who urged the construction of an east and west railway. He insisted that the Government help to build it, "not only as a military necessity" as Gen. Dodge had said—"but as a means of holding the Pacific Coast to the Union."

From this ideal of a United Republic came the name: Union Pacific.

Since the reorganization of this national railway in 1897, over $269,700,000 have been invested in improvements—the debt of $60,000,000 to the Government has been paid in full—and the whole people benefited.

In these 48 years the West has won prosperity. The states have won solidity. The Union Pacific has won the public's gratitude.

Today the nationalized Union Pacific is the main link between East and West—a boulevard of steel for passengers and freight.

Very Temporary Captain McLean

By PHILIP E. HUBBARD

ILLUSTRATED BY H. J. SOULEN

NEXT morning, correctly dressed for his appearance in the rôle of Divisional Commander, Mr. Gavin McLean stood gazing over the rail at the headland on which stands the town of Le Havre, as the S. S. Scorbutic—commandeered as a transport from the Pale Moon Line—dropped anchor in Havre Roads and awaited the arrival of the pilot who was to take her up the Seine to Rouen.

What Mr. McLean saw did not impress him with any idea that he wished to carry his adventure any further; but it seemed that the disclosure of his identity could only lead to serious trouble, if not to capital punishment; whereas, provided General Ferguson was as little known as seemed to be the case, there appeared to be a certain sporting chance that Mr. McLean might be able to pass himself off as that now defunct commander. And it seemed fairly certain that the very boldness of the enterprise promised success.

The pilot boat fussed alongside; the pilot climbed the Jacob's Ladder and took charge of the ship.

A bundle of papers followed him on the end of a line, and presently a quartermaster made his way to where Mr. McLean was standing and, touching his cap, held out a telegram to him.

Mr. McLean took it, glanced at the address, and, seeing that it bore the name of General Ferguson, acknowledged proprietorship with a curt nod and hastily tore open the envelope.

The message was from General Headquarters, and General Ferguson was instructed to report himself by telegram to that assembly on arrival at Rouen, and forthwith to take over command of the —th Division.

"Ach! So!" Exclaimed the German. "What is it You Have to Me Brought? Is it a Joy?"

Meantime the clattering winch on the forecastle head had hauled the Scorbutic's anchor out of the mud of Havre Roads, and, under command of the excited and gesticulating pilot, the boat pointed her nose toward the river and pushed off on the trip to Rouen.

Mr. McLean found the river trip past the quaint little French towns and the luxuriant orchards, where the apples were ripening, quite a pleasing experience; but he was haunted all the time with the fear lest any of the members of General Ferguson's Staff should have been intimately acquainted with that warrior and so challenge the identity of his newly made representative.

However, he argued to himself that, since General Ferguson's appointment had been an afterthought and made in place of a commander who had been incapacitated by sudden illness, the selection of the staff would naturally have been made by the first general appointed to the command. And, since that worthy would probably have selected his own personal friends for the various jobs, with slight reference to their capabilities, it was unlikely that any of Mr. McLean's future satellites would have any knowledge of General Ferguson or of the dead man's personal appearance. To this day there are said to be general officers, living in comfortable châteaux at the back of the Front, who have never been seen by any of their commands except the individuals of their personal staff; so Mr. McLean was really on safer ground than he thought himself to be.

In any case, here was Mr. Gavin McLean, arrayed in General Ferguson's uniform, in possession of his dispatch case and kit; and as senior officer of the division he would be distinctly at an advantage if confronted with any junior who presumed to question his identity. So finally he determined that, in the event of any such gross disrespect from anyone junior to himself, he would promptly place any such misguided junior under close arrest, and take an early opportunity of dealing with him in some way calculated to close his mouth forever.

At length the Scorbutic picked up the lights of Rouen—it is a long trip up the river, and daylight had faded into dusk by the time they reached the city—and was eventually moored alongside one of the quays below the traveling bridge.

The quay was almost deserted, except for a sentry or two; but presently a transport officer strolled down to the ship and, using his hands as a megaphone, shouted an inquiry as to whether General Ferguson was on board. The reply from the bridge being in the affirmative, the officer departed at a brisker pace and disappeared round the corner of a shed.

The gangway was lowered to the ship's side from the quay by a party of Frenchmen in blue overalls. Before it was secured, a party of four officers in service dress, wearing the red badges and cap band of the staff, and headed by the Naval Transport officer who had appeared first, came at a smart pace down the quay and, halting at the gangway, saluted as General Gavin McLean-Ferguson, after a brief farewell to the Scorbutic's commander, walked up the gangway to meet them.

Mr. McLean returned the salute and a pause fell. Evidently military etiquette demanded that the general should speak first.

"Carry on, gentlemen!" said Mr. McLean.

A major stepped forward and saluted. Mr. McLean returned the salute.

"I'm Tripwell, your G. S. O. 1, sir," said the major. "I hope you had a good crossing."

"Verra fair," said Mr. McLean. "Carry on, Major Tripwell."

"Have you had any dinner, sir?"

"Aye," said Mr. McLean. "Carry on!"

The major looked at this general who had absorbed the word of command of the senior service, and then, with a smile, inquired:

"Would you prefer to go to a hotel, sir, first, or straight to the station? The last brigade of the division is entraining now, but they don't pull out till nine-thirty."

Mr. McLean remembered his telegram.

"Ah've or-rder-rs to r-repor-rt at—where was it?—some alphabetical place. Ah'm thinkin' it was ca'ed X. Y. Z."

"X. Y. Z?" queried Major Tripwell, repressing a smile.

"Na!" corrected Mr. McLean. "Ah'm wrang—it wull be G. H. Q. Ah was cer-rtain it was some pair-rt o' th' alphabet."

The staff here supplied the usual "laughter in court" which is the perquisite of all sitting magistrates and broody generals.

"Very good, sir—very good, indeed!" said Major Tripwell.

"Aye," said Mr. McLean; "but the queastion is, wheer dae Ah find this G. H. Q., an' whae micht he be? Ah canna ca' tae mind ony name beginning wi' a Q excep' Quilp. An' it'll nae be yon dwar-rf frae Dickens' Auld Curriosity Shop, Ah'm thinkin'."

The staff rocked with laughter; truly this general was a wit, and there was a twinkle in his eye that they liked.

"General Headquarters has moved to-day, sir," said Major Tripwell; "they've gone up to——"

"Hae they, ondeed! But Ah thocht General French was the Commander-r i' Chief?"

"Very good, sir," replied Major Tripwell with the necessary laugh.

"He and the Headquarters' Staff have all gone up to——"

"Aweel! Ah'll e'en gae after-r them; but we'll hae a wee drap in our e'e fir-rst. Hae ye discover-red a public wheer the stuff's fitten tae dr-rink?"

"The Lion d'Or, sir, where we are staying," remarked a young A. D. C. "Their stuff's quite drinkable."

"Then carry on tae the Lion d'Or, gentlemen," ordered Mr. McLean.

And, again saluting, the staff trooped across the quay toward the hotel.

Arrived there, the —th Divisional Staff, headed by their general, clattered into the salon and, settling themselves into chairs and settees, awaited their commander's lead.

This was speedily given in the shape of "*Whiskee Ecossais et eau-gazeuse!*" And by paying for drinks all round Mr. McLean established a reputation for good fellowship second only to that already made as a wit.

Major Tripwell introduced the remaining members of the staff, and Mr. McLean was charmed with the air of deference that was apparent on all sides. His two A. D. C.'s—he had not the vaguest notion what an A. D. C. might be or what duties he was supposed to perform, but soon discovered that they were to all intents his body servants—were two typically British subalterns, Lord Percy de Warr-Wentwisthle and the Honorable Anthony Hammerfoot, both well-grown, well-groomed young men, conspicuous only for a slight deficiency in the development of the chin, and each the possessor of a diminutive mustache, carefully trimmed to show mouths that might better have been hidden.

The ordnance officer, Major Twigg, who, as he had only the day before been transferred from an infantry regiment, knew nothing of ordnance work, was an excellent fellow, a county cricketer, and a first-class game shot; and to him Mr. McLean took a great fancy.

The remainder of the Divisional Staff—the A. D. M. S. and his deputy, the D. A. D. M. S., and the veterinary officer—being at the moment engaged on duties connected

Digitized by Google

with the entraining, were not present at this first meeting; while the senior A. S. C. officer, commanding the divisional train, had gone on in advance of the troops. But Mr. McLean gathered from Major Tripwell that these noncombatant people—with the exception of Major Twigg—because of his cricket—were not encouraged to associate with the fighting staff for more than an occasional conference.

There was one awkward moment when the Honorable Anthony Hammerfoot was in greater danger of his life than he had ever been before.

"Aw—by the way, sir," drawled the youth, "I—aw—heard from my—aw—aunt, Lady Cowcaddens; she—aw—asked to be remembered to you."

"Indeed!" said Mr. McLean, wondering whether this was a trap.

"Yaas—aw—she saw you'd been appointed to take over the division; she—aw—met you once at some relation of yours in Scotland."

Mr. McLean, whose only living relative was a struggling fishmonger in Edinburgh, thought this improbable. However, he plunged boldly.

"Verra guid o' her leddyship," he said; "ye'll be gien' her ma kin' regair-rds when ye send her a few scrapes."

"Aw!" said Hammerfoot. "Very good of you, sir."

"Naet at all!" deprecated Mr. McLean, and the incident closed; but Mr. McLean decided that the Honorable Anthony Hammerfoot should be the first candidate for any danger point he could find for him.

At twenty minutes past nine Major Tripwell suggested a move toward the station, and, with their general in the van, the staff set out to give a send-off to the last brigade.

"Wull we no' tak' the train?" inquired Mr. McLean.

Major Tripwell reassured his chief. The staff, it appeared, were to proceed by automobile and would not need to start before the next morning early, since they could easily overtake the slow-moving troop train.

Mr. McLean, in anticipation of at least one comfortable night in a hotel bed, reflected that it was better to be a general officer than a private soldier; and as the overcrowded train steamed out of the station he decided that war was eminently a game to be played by those of high social status or advantage in military rank. Before leaving the station, Mr. McLean instructed Major Tripwell to dispatch a telegram to G. H. Q., reporting his arrival. And when this had been handed to the Honorable Anthony Hammerfoot for conveyance to Signals, the staff retraced their steps to the hotel and prepared for bed on the principle that the man with the whisky inside him sleeps better than the man who looks at the label.

General McLean-Ferguson slept the sleep of the full, and was wakened from a dream of diving into a calm blue sea of warm water by his soldier servant, who was profuse in his apologies for having inadvertently upset a cupful of scalding tea over his enraged commander's head and pillow.

"Ye gr-reat gowk!" spluttered Mr. McLean.

"Very sorry, sir!" said the man. "I'll fetch another cup."

Mr. McLean checked him.

"Ah'm no wantin' ma bath i' ma bed," he remarked. "Yon cup ye brocht me'll suffice. Man, Ah've a min' tae hae ye shot!"

The servant withdrew, suppressing a grin, and the moist general rose from his tea-stained couch, bathed and dressed himself, and repaired to the *salle à manger*.

General McLean-Ferguson had not omitted to retain the large sum of money in English notes with which he had left England, so he had no fear of bankruptcy; but, much as it went against the grain to abandon loot, he concluded that it was wiser to say nothing of the car lying in the hold of the Scorbutic. So the Naval Transport officer, finding no claimant for the car, sent it back to England to his own wife, who eventually sold it to the War Office for a good round sum. It is an ill war that brings no patriot any money!

After a substantial breakfast Major Tripwell informed his spurious commander that the cars were ready for the journey to the Front, and the party set out, General McLean-Ferguson in a large limousine, the incompetence of whose driver gave him heartburn every time the man changed gears, and the remaining officers—with the exception of Major Tripwell, who traveled with his chief—in two open touring cars.

Away they sped through avenues of poplars over the splendid roads of Northern France, without incident worth recording till they reached the town of ——, where G. H. Q. was already installed.

The leading car, in which was the Honorable Anthony Hammerfoot, had gone on ahead to report General McLean-Ferguson's arrival, and just outside the town the limousine met this car returning. At a sign from the general both cars stopped and the Honorable Hammerfoot jumped down to make his report.

"The Commander in Chief has gone up to the Front, sir," he reported; "that is to say, he's gone up somewhere at the back of the Front. Here are your orders for the division, sir."

The Honorable Hammerfoot handed a large sealed envelope to his chief, who took it, opened it, and, after a brief glance at the contents, handed the package to his G. S. O. 1, with the exhortation "Carry on!"

After a leisurely lunch at ——, during which Mr. McLean still more firmly set up a reputation as a wit, the party proceeded as fast as the cars could take them to ——ville, where the division was to have detrained and billeted for the night; but on arrival it was found that the orders had been changed. Now when the British Expeditionary Force departed for the theater of war it was the common belief among the optimists who composed it that the war would be of short duration; in fact, many of the officers gave it as their opinion: "We shall knock hell out of the Germans in six weeks!" And that, since one volunteer was worth at least ten conscripts, the superior numbers of the Germans counted for nothing, except to make a larger and more easily seen target, which even a third-class shot could not fail to hit. Everything was taken in a spirit of trust, even to the extent of accepting without verification the statement that the position selected for meeting the German advance had been properly prepared and intrenched; and that all that remained to be done was to occupy the trenches and blow the Germans to "blazes" as fast as they were foolish enough to offer themselves as targets.

Infantry, Cavalry, Guns, Staff Cars and Transport Were Jammed Together in a Mass

While General McLean-Ferguson and his staff were making their way to the scene of operations in leisurely fashion, affairs had been moving. And so it came about that, before Mr. McLean got in touch with G. H. Q. or had any opportunity to really take command of the —th Division, the occupants of the three cars became aware that the road and the adjoining fields in front of them were filled with a disorderly rabble of khaki-clad figures, intent on a Marathon, whose goal was evidently not in the direction of Berlin, as should have been the case.

"What's happened?" exclaimed Tripwell.

"Ah dinna ken," replied his commander; "but Ah hae na noticed ony Ger-rmans passing us on the road, or Ah'd hae thocht mebbe oor laddies weer chasin' them. They seem tae be in a michty haste tae get hame. Ah doot they've killed a' the Ger-rman Airmy, an' the job's finished wi'."

"It's a bally run," murmured the major.

"It's a' that," said General McLean-Ferguson.

"We must stop it somehow," said Tripwell. "Good Lord! It's our own division, or part of it; that's the —st Brigade over there."

Mr. McLean, who had the crook's trained eye for cover, took a hasty glance at the surrounding country. What he saw reassured him to a certain extent, for the three cars had stopped at the far side of a ridge of low-lying hills, from the foot of which the Plain of Flanders stretched away to the northeast, over which the road wound like a white ribbon.

"Gin we can stop some o' these steeplechasers," he said, "there's a fine place at top o' yon hillocks, wheer we could hide them."

Major Tripwell glanced back in the direction indicated. "You're right, sir," he said. "It's an ideal place."

At this moment the leading car dashed round the corner facing them and pulled up in a slither of dust and shrieking of brakes. The Honorable Anthony Hammerfoot leaped down from it and ran across to the limousine.

"There's been a devil of a scrap, sir!" he sputtered. "The Germans aren't playing the game—they started the attack before our people were ready. You'd better get back, sir."

Mr. McLean looked steadily at the young man.

"Mister-r Hammer-r-foot," he said, "I wull ask ya tae notice that Ah'm the mon that gies or-rder-rs here."

"But it's a retreat, sir—a strategic retreat; we shall be caught in the devil of a mess if we don't hustle back."

Mr. McLean looked at Major Tripwell.

"Got the wind up," said that officer. Mr. McLean whipped out his service revolver and covered the Honorable Hammerfoot.

"Mister-r Hammer-rfoot," he said sternly, "gin Ah hear-r another-r wor-rd like that, ye'll nae see England again! Tur-rn yon car-r roond an' get it dr-rawn across the road ower agin' yon cor-rner. An' do ye sit there; an' if ony mon tries tae puss ye, ye'll shoot."

Mr. Hammerfoot, steadied by this sudden ferocity on the part of the general, whom he had hitherto regarded as a comedian, pulled himself together and saluted.

"Yes, sir!" he said, and proceeded to carry out the order.

The advance parties of the strategic retreat were rapidly bearing down on the staff; and, after a hurried consultation with Major Tripwell, General McLean-Ferguson uttered the magic words:

"Carry on!"

Now Tripwell was a good soldier, who knew his job; and he had that magnetic touch about him which is needed for the leadership of men. And as Mr. McLean, being a civilian and quite conscious of his own inability to cope with a military problem, left matters to him, he proceeded to issue sharp, crisp orders to the remainder of the staff, with the result that the first straggling bodies of men were speedily halted and, in their turn, set to policing the road and the surrounding fields.

In a very short time something like order began to show itself. And as the mixed bodies of men were collected and formed up, and more officers sorted out to take charge of them, they were ordered to retire to the crest of the rising ground, to line the hills, and to intrench themselves so far as possible.

Meantime the road ahead had become a scene of indescribable confusion. Infantry, cavalry, guns, staff cars and transport were jammed together in a mass, tailing off along the road and becoming momentarily thicker; while across the road, blocking the way, was an open touring car, in which sat the Honorable Anthony Hammerfoot, with an automatic in his hand, threatening all and sundry who attempted to pass.

Major Tripwell turned his attention to this point as soon as he had disposed of the first policing of the fields, and in an incredibly short space of time succeeded in reducing the chaos to order.

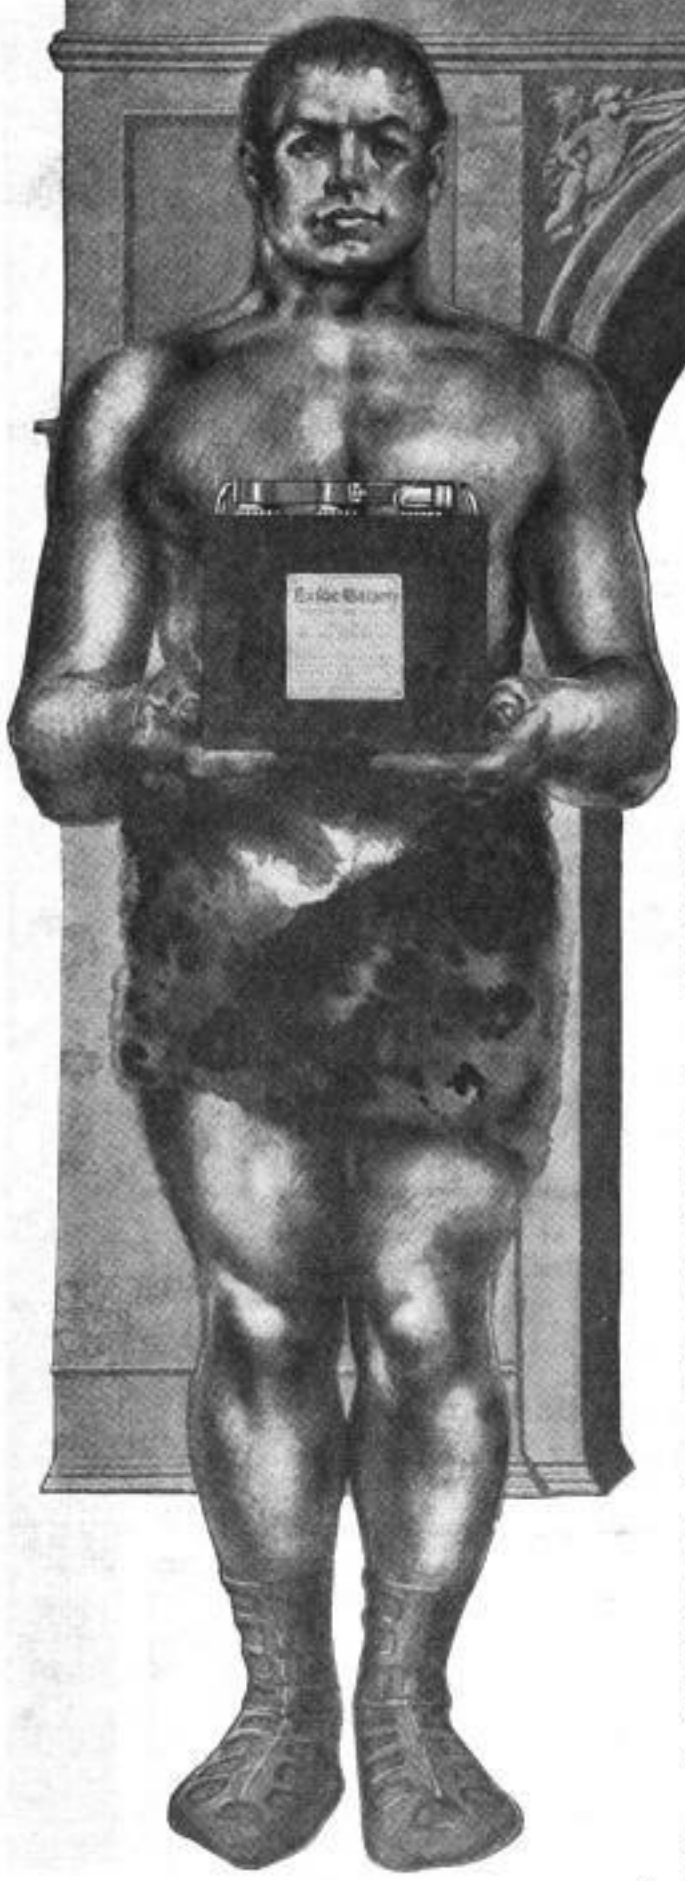
The British soldier is a great-hearted man and, given leadership, can and will go anywhere and accomplish the well-nigh impossible. Major Tripwell was a born leader and, though he didn't know it, had the luck to be acting under the only orders that could help him—the magic words, "Carry on!" given to him by this Scottish crook, who had scandalously usurped the title of G. O. C. Division, and now sat coolly lolling back on the cushions of the big limousine, smoking a cigarette and looking as if he hadn't a care in the world.

Gradually the strategic retreat was sorted out and the mixed troops strung out in a long line near the crest of the rising ground, digging shelter trenches for all they were worth. And, before night fell, the rout that had threatened was reduced to a formation that promised to give the advancing Germans quite a lot of trouble to dislodge it. Touch was established with the columns on each side of the position, and Mr. McLean had the satisfaction of receiving a message from the Commander in Chief, stating briefly his commendation of the action taken and issuing instructions for the coming fight. The message ended with an order to General Ferguson to report at G. H. Q. for verbal conference forthwith.

After consultation with Major Tripwell, whom he again exhorted to "Carry on!" in his absence, Mr. McLean, accompanied by the Honorable Anthony Hammerfoot, departed in the limousine for G. H. Q., greatly wondering whether the C. in C. or any of his understrappers had any personal recollection of the late General Ferguson's personal appearance and mannerisms.

It is wildly improbable that Mr. McLean could have bluffed his way with success through the pitfalls which must have surrounded such a visit. But again his luck intervened, and it chanced that the driver of the limousine made a wrong turn in the gathering darkness; and, before the occupants of the car had time to realize what was going forward, they found themselves in the middle of a very pretty little scrap that was developing on the left of the new position. The Germans were following up their first day's success and no rest was to be given to the "contemptible little army."

Before Mr. McLean could give any orders, they were under heavy fire from the German guns; and as they turned a corner at the edge of a wood a shell burst overhead and scattered shrapnel bullets in an unpleasing shower. The car lurched as the driver fell forward over the wheel. The Honorable Anthony Hammerfoot gave a grunt and slid to the floor of the car, remaining there in a sprawling heap; and the car ended its career in the ditch at the side of the road.



When Mr. McLean came to himself he found, to his surprise, that, beyond a splitting headache and a general feeling of having been severely beaten with a club, he was to all intents unhurt. He crawled

THE ELECTRIC STORAGE BATTERY CO.

1888 PHILADELPHIA 1917

Upholding the

"Exide"

Starting and Lighting Battery

For Automobiles

stands the "Exide" Giant—symbolic of the power, vitality and endurance of every "Exide" Battery.

Behind the Giant is the arch of enduring success built up by twenty-nine years of pre-eminence in the making of many types of storage batteries, each especially designed for its work. In every service where Storage Batteries are used those of The Electric Storage Battery Company, by demonstrated worth, have earned permanent prestige.

The "Exide" Automobile Starting and Lighting Battery was the first commercially successful starting battery manufactured. Its unit cell assembly means big power in small space. Its non-flooding filling plugs prevent overfilling, thus eliminating corrosion. Its patented cover and plug have been adopted for use with the "Exide" Batteries on United States submarines. It is the highest priced battery to buy but the least expensive to use.

When you purchase an "Exide" Battery for your automobile, you are getting the same quality product as that used and endorsed by the **United States Government and by practically every other big storage battery user from Maine to Texas, from New York to California.**

Sales offices in principal cities. Distributors throughout the country.

Try some of these wonderful Branzos muffins

Eat them daily, or alternate with Purina Branzos porridge. They help wonderfully to stimulate the digestive organs to normal daily action.

Besides, they are delicious and very nourishing. You will find the recipes for these and other tempting dishes printed on the package of

PURINA BRANZOS

Purina Branzos is different from ordinary bran, because it is more than bran. It combines all the laxative virtues of the bran coat with the nourishing qualities of the wheat. Has a distinct wheat flavor, and a rich, natural wheat color. Makes delicious cooked porridge; also wonderful bread and muffins.

Get a package to-day at your grocer's. 15c (East of Rockies). In checkerboard packages, only.

If your grocer won't supply you, write us.

Ralston Purina Company
876 Gratiot St. St. Louis, Mo.

If you want your children to have strong, sturdy constitutions, give them Ralston Wheat Food.

It's just what a child needs to build bone and muscle. It nourishes the body and helps to stimulate the digestive organs to normal action. It is a good, wholesome, whole wheat food, with the natural wheat color, and delicious wheat flavor.

Ralston Wheat Food

Everybody likes it. Children never tire of it. Can be served in many tempting ways for breakfast, dinner and supper. Very economical.

Get a package at your grocer's to-day. In checkerboard packages 10c and 15c (East of Rockies).

from under the wreck of the car and endeavored to pull his scattered wits together. Dawn was showing in the eastern sky and it was evident that he had been unconscious for some hours. After a futile attempt to revive the driver and the Honorable Anthony Hammerfoot, who were both very unpleasantly dead, Mr. McLean revived himself with a pull at his flask and reconnoitered the position.

A little farther along the road he found the remains of what had been a field ambulance—shattered wagons, dead horses, and—alas!—dead men littering the ground most untidily. And then, as he listened in the stillness of the dawning day, he heard the tramp of feet and a command given in a harsh, guttural tone.

It dawned upon Mr. McLean that the tide of battle had passed on and left him stranded within the German lines. Very quietly he crept into the wood on his left and concealed himself among some tall bracken.

The tramp of feet and clash of accouterments died away in the distance. Creeping forward among the cool bracken stems Mr. McLean endeavored to get a glimpse of the troops on the road; but he could see nothing, and he was disagreeably wakened to the horrors of war by his hand's coming into contact with a dead, cold face.

Instinctively he drew back; and then, as the light of dawn penetrated the thicket of bracken stems, he saw that the dead man who shared his hiding place was an officer. On the dead man's sleeve was the white brassard, with the red cross, which showed him to be an army doctor.

Mr. McLean considered the position. It appeared to him that, from the commonsense point of view, he was to all intents doomed to be a prisoner of war; and it was obvious that the capture of a British general would be something which would cause a certain elation in the stolid Teuton mind, even to the extent of advertising the fact. If General Ferguson was captured, General Ferguson would, in course of time, be put into communication with friends in England — possibly exchanged; or, at all events, he must meet with fellow countrymen who would discover the fraud, and then —— Mr. McLean was uncertain whether the end would be a firing party or a rope; but it was clear that it would be one or the other.

It seemed expedient, therefore, that General Ferguson should be discovered killed in action, while his unauthorized representative assumed the character of an army medical man.

To this end Mr. McLean stripped off his own service jacket, with its staff badges, and put on the unfortunate medical officer's coat and brassard; and after a hunt among the bracken he discovered the dead man's cap.

Having arrayed the body of the dead doctor in the garb of the late General Ferguson, and ascertained from the dead man's identity disk that for the future his name and rank were to be Captain Dougal McDowell, R. A. M. C., Mr. McLean made his way out of the wood and onto the road.

Gaining the top of the hill, he looked to right and left of him. Away in the distance he could see moving bodies of troops, and his field glasses soon discovered to him that these were Germans pushing on in the direction of the town through which he had traveled on the previous day. He could hear the growling of guns in the distance and, turning, saw the head of an advancing column coming up the hill.

"Aweel!" he reflected. "Gin Ah'm tae be a prisoner-r, it's as weel Ah'm a doctor-r man—gin Ah recollec' aright, there's some fulish rule o' war-r that gies either side the choice o' keepin' the ither-r's doctor-r men tae wor-rk at their ain wounded. Ah ken verra little aboot doctor-rs or medicines, but gin they pit me tae look after-r wounded Ger-rman swaddy men, Ah'm thinkin' Ah could wrastle wi' an ampytation at a pinch; an' the mair Ger-rmans there air i' the wor-rld wi' less than their proper-r complement o' airms an' legs, the better it'll be for Auld Englan' an' Bonny Scotlan' i' th' lang rin."

With which piece of excellent though brutal philosophy, Temporary Captain McDowell, R. A. M. C., *né* McLean, hobbled down the road toward the advancing column of Bavarians, with his hands stretched well above his head as an indication that he was prepared to surrender.

Conscious of a certain lack of dignity in his progress, but stretching his arms high above his head, Mr. Gavin McLean approached the head of the column of German troops; and, since the commanding officer was just then in rear of his command, was forced to the further indignity of surrender to a mere subaltern.

At the moment of his surrender the order to halt was given, and Mr. McLean, under armed escort, with the cold muzzle of a rifle pressed uncomfortably against the small of his back, was hustled to the tail of the column, and there pushed in front of the commanding officer.

That worthy, being a Saxon, received him with more courtesy than Mr. McLean had expected.

The German colonel was a stout, elderly individual, with a large, flat face and multiple chins, who sat astride a Belgian farm horse, whose back, in spite of its strength, sagged under the old gentleman's weight.

"*Ach!* So!" exclaimed the German. "What is it you have to me brought? Is it a spy?"

Mr. McLean, recovering from his surprise at hearing himself addressed in English, shook his head vehemently.

"Ah'm nae spee!" he said.

"Then—*Donnerwetter!*—what is it you in our so-much-to-be-admired and presently-all-victorious ranks do?"

"Ah weer stunned by a shell that exploded maist onpleasantly near tae ma heid."

"*Donnerblitzen!*" exclaimed the colonel. "And this language of the most unpronounceable and barbarous description which you speak—what is it? You English are not—you in the garb of an English soldier masquerade—you are a spy! *Teufel!* We will you shoot!"

"Mon," said Mr. McLean earnestly, "dinna be sae hasty—Ah'm nae a spee, Ah'm tellin' ye. Ah'm a puir Scottish body, wi' the maist honest intentions."

"A Scotlander! *Himmel!* You the truth do not speak. You wear breeches!"

"An' why for no?" inquired Mr. McLean.

The Saxon colonel spat profusely into the road.

"All Scotlanders wear the—how you call?—the accursed petticoat of indecent brevity—you have breeches!"

"A kiltie is it ye'er fashin' aboot? Mon, be not sae fulish! Hae ye ne'er seen a Scotsman i' breeks before?"

"*Nein!*" replied the Saxon stolidly. "All Scotlanders the indecent petticoat themselves wrap with. We an entire regiment of Scotlanders took prisoner only yesterday—there was not a pair of breeches among them—they all the accursed petticoat of too-short-to-be-decent length wore. You are no Scotlander. You are a spy!"

"Mon," said Mr. McLean, feeling that he was arguing for his very life, "Ah'm naethin' o' the sor-rt. Ah'm a doctor-r."

"A doctor! That is than a spy rather worse!" said the Saxon.

"Ah'm inclined tae agree wi' ye," said Mr. McLean; "but there's naethin' i' the rules o' war-r to enable ye tae shoot doctor-rs."

"*Nein!*" said the colonel. "Though, if I my way had, I would all doctors instantly shoot, without trial."

"An' I'm nae denyin' that ye wadna be daein' the best for humanity gin ye did it—for we've a michty lot o' frauds amang us; but Ah claim immunity under the Geneva Convention—Ah'm nae a spee!"

"If you a doctor are, where is your ambulance?"

"Blawn tae hell wi' yon artillery o' yeer-rs—Ah but 'scapit wi' ma life—the rest on 'em's lyin' aboot i' maist ontidy fashion at the top o' yon hillock."

"We will for the necessary and much-to-be-desired inspection of the remains proceed. If you are to me lying—you will be shot."

The Saxon colonel gave a string of verbose orders to his adjutant, and the column resumed its promenade to the top of the rising ground, halting again as the tail of the column arrived at the point where the remains of the ambulance littered the ground. The colonel examined the débris.

"So!" he exclaimed. "You have to me the truth told; but I am not understanding why you do not the indecent petticoat of all-too-much-brevity wear if you are a Scotlander."

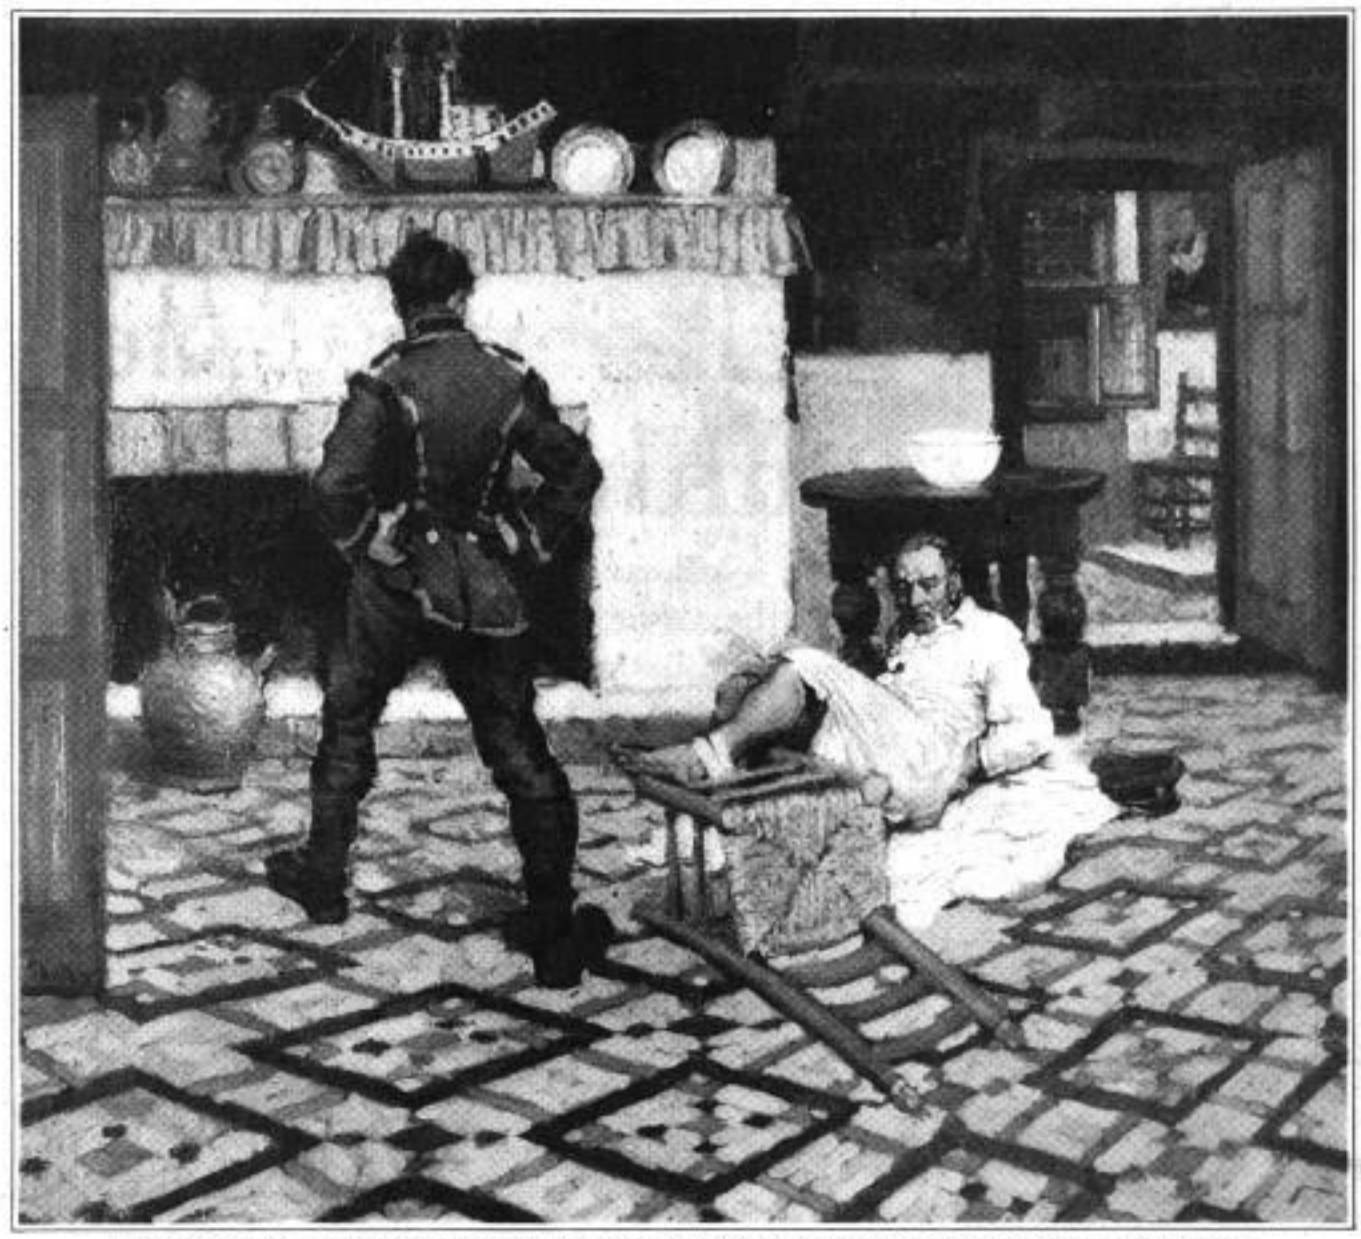
"Ye wull obsairve," said Mr. McLean, "that yon half of an or-rder-rly, in the ditch there, is nae wearin' a kiltie; the British Airmy Medical Ser-rvice dae not wear the kiltie, Ah'm tellin' ye."

The colonel grunted, but appeared to be convinced that Mr. McLean was speaking the truth.

"You are willing to look after my brave and suffering wounded-who-are-to-be when we into action go?" he inquired.

"Aye," agreed Mr. McLean.

"Then we will you to our ambulance attach."



The colonel barked several long-winded orders to a subordinate and the column resumed the march, while Mr. McLean was taken to the ambulance and handed over to the medical officer in charge. This individual proved to be a slow-witted youngster of stolid appearance. However, he was good-natured enough and spoke English more fluently than did his commander.

Seated in his car, Mr. McLean was speedily supplied with refreshment for his inner man; and, as he ate, his captor conversed on war, *Kultur*, and the superiority of Teutonic surgery. From him Mr. McLean learned that the progress of the German armies had been practically uninterrupted since the fall of Liège, and he was amazed at the story of the failure of the allied forces to stem the tide of the Kaiser's invading hordes.

As the column to which he was now attached formed part of the reserves of Von Kluck's army, they met with no resistance to their advance; and for the next three days Mr. McLean had nothing to do but sit in the car and listen to the boasting of the German doctor.

The country they passed through showed everywhere the devastation caused by the fighting, and some of the scenes were such as to cause Mr. McLean to renew his vow that he would, as soon as possible, carry out his intention of amputating everything possible from as many Teutonic patients as might fall to his care.

(Continued from Page 45)

On the fifth day of his captivity, after the column had covered some ten or twelve miles, a halt was called, and Lieutenant Herr Doktor von Leinmann—Mr. McLean's captor and colleague—was summoned to a conference at headquarters. After an absence of an hour he returned, swearing strange oaths in the German tongue; and from him Mr. McLean learned that the German arms had met with an unexpected reverse just as they saw their goal in sight.

It appeared that Von Kluck had disregarded the "contemptible little army" of England, marched across their front; and, between that weary band of devoted warriors and the army rushed out from Paris by the French, he and his army had been outflanked, and their long line of communications so threatened as to make farther advance impossible.

Mr. McLean, who by this time was exceedingly tired of the patronizing attitude of his captor, heard this news with a satisfaction he had great difficulty in concealing.

After a day of indecisive waiting the German reserves were hustled into a position behind the River Marne; and there, on the outskirts of a small village, Lieutenant Herr Doktor von Leinmann established himself and his ambulance in a barn, which had been allotted to him as a temporary hospital. The German forces were strung out in a line of hastily made intrenchments, and the attack of the allied French and British Armies prepared for.

Mr. McLean, arrayed in a white rubber apron, his hands incased in rubber gloves, chatted with Von Leinmann and by skillful evasion and bluff evaded the surgical pitfalls which that worthy arranged for him.

They had not long to wait, for the allied advance was as successful as had been that of the Germans in the first rush, and the force to which their ambulance was attached was soon in the thick of a very pretty fight. The first case arrived; and, as the man was suffering from a compound fracture of the upper arm, accompanied by severe laceration of the muscles, Mr. McLean's counsel in favor of amputation was favorably received by his colleague, if not by the patient.

For some hours, then, Mr. McLean, by a skillful exhibition of bluff and nerve, and covered by the confusion caused by the ever-increasing stream of wounded, assisted the German doctor to cut, hack and probe his way through Teuton brawn and sinew; and even his cold-blooded partiality for lopping off arms and legs, regardless of the future utility of the wretched patients, passed unnoticed in the heat of the moment.

Presently came a lull, and the German surgeon turned his attention to the less serious cases awaiting treatment. Selecting a case of scalp wound, in which the man had suffered only very slight injury to his head, he requested Mr. McLean to deal with it while he himself attended to another case.

Mr. McLean ordered his patient to lie down on the operating table; and, overbearing this strange prescription, the German surgeon interposed.

"For why you require him to lie down?" he asked.

"Tae oper-rate!" replied Mr. McLean.

"But he a bandage requires. What were you about to do to his head?"

"Amputate it!" replied Mr. McLean shortly, and flourished a large and vicious-looking knife.

"Amputate? Nonsense! Are you mad?" exclaimed the German. "How can you amputate his head?"

"Jist as Ah wad hees leg or hees airm," said Mr. McLean; "wi' yon knife."

"The man's mad! Amputate his head! *Donnerblitzen!*" exclaimed the German, aghast.

"Why for no?" inquired Mr. McLean. "Yon's an ugly-lookin' laddie—he'll dae better wi'out a head like yon."

What would have been the upshot of Mr. McLean's rashness is not determined, though one may hazard a guess that it would have led to his undoing; for at that moment the bombardment began again at a range which was evidently closer than before, and as the look of suspicion dawned in the German surgeon's eyes a shell struck the temporary hospital and wiped it out of existence.

When Mr. McLean came to himself he found that he was lying under a heap of rubble, half smothered, but otherwise unhurt, while round him lay scattered portions of the temporary field hospital.

Mr. McLean pulled himself out of the mess that surrounded him and took stock of the situation. Beyond a few bruises, he found he was unhurt; but his clothes had been literally torn off his back.

Looking round him, he discovered that, so far as the gathering twilight would permit him to see, he was alone with the dead, while in the distance he could hear the bark of the guns and see the flares sail up skyward.

"Aweel!" murmured Mr. McLean. "There's nae doot Ah wasna bor-rn tae be shot—here's the second time wi'in a week Ah've been blawn tae shreds an' come oot alive! Ah've the luck o' the deil—God bless him!"

He searched round among the rubbish for something with which to clothe himself; and, seeing two feet sticking out from a pile of débris, he proceeded to unearth the owner. In the course of a few minutes he brought to light the body of a lieutenant of cavalry and transferred that defunct officer's clothes to his own person.

In the pocket of the coat he discovered French, English and German bank notes amounting to a total of over fifty thousand dollars; and, with a view to possible future developments, he ripped open the lining of the coat and hid the notes carefully between cloth and lining.

Just as he finished making his safe deposit he noticed that the musketry and artillery fire were dying down; and, without any very definite plan, except to get away from his German captors, he made off in the direction of what he judged to be the English lines.

Progress was quickly barred by a wide river; but, finding some logs and a few hurdles on the bank, the ingenious Mr. McLean, with some wire torn from a near-by fence, contrived to make these into a raft, and on this, when launched, he sat, and with a long hedge stake endeavored to pole his way across the stream.

The current carried him quickly down the river, and it was not before he had been swept along for more than a mile that he contrived to push his clumsy raft under the opposite bank. Wading through the shallows toward a point where he could conveniently climb the steep bank, he heard an unmistakably English voice give the command:

"Hands up!"

With lightning speed Mr. McLean's hands shot up over his head; and as he reached the landing place he made out through the gloom that his advance was covered by several rifles projecting through the hedge. Being under no misapprehension as to the probable consequences of trying to bolt, he made no attempt to leave the water, but stood there to parley with his captors.

Before one of these showed in the flesh, a thought flashed through Mr. McLean's mind: How was he, who could speak no word of German, to explain his presence clad in the uniform of a German officer? A vision of a firing party and a wall flashed to him, and for the moment he was paralyzed with fear.

"Who are you?" inquired the voice behind the hedge; but Mr. McLean made no reply. "Speak up—if you ain't dumb!" commanded the voice.

This gave Mr. McLean his cue.

"Dumb!" he thought to himself. "Yon's the idee—dumb; an' deef too; like tae yon German swaddy that was brocht in wi' shell shock—dumb an' deef. Yon's what Ah am."

"Speak up, you damn son of a Dutchman!" repeated the voice.

No answer.

"Oh, blow his silly head off an' be done with it!" said another voice.

"Can't do that," said the first speaker. "It ain't done in the best armies—anyway he's all alone and looks struck silly. Go and grab him, Jenkins—you, too, Tonks."

As a result of this command, two privates of British infantry crawled out of the hedge and approached Mr. McLean. Private Tonks jammed the muzzle of his rifle into the pit of Mr. McLean's stomach, while Private Jenkins grabbed him by his outstretched wrists and hauled him up the bank.

"What's your name?" inquired Private Tonks.

Mr. McLean replied with a gurgling noise in his throat.

"Come on aht o' this!" remarked Jenkins.

And with scant ceremony the two soldiers twisted Mr. McLean toward the hedge and urged him forward with their rifle

Digitized by Google

butts, finally pushing him through a gap, to the detriment of his uniform.

On the far side of the hedge Mr. McLean was confronted with a small body of British troops under command of a subaltern, and to the latter his captors escorted him. The subaltern, being unable to extract any word from Mr. McLean, and being satisfied that the latter was a German officer—who else could he be, wearing a German officer's uniform?—came to the conclusion for which Mr. McLean had hoped, that the supposed German must be suffering from some injury which interfered with his power of speech.

Mr. McLean was, therefore, treated with kindly sympathy, given bully beef and biscuit, and presently sent under escort to a spot about half a mile from the river bank, where the British had established a field hospital.

The escort handed Mr. McLean over to the hospital orderly, with the brief diagnosis "Deaf an' dotty, and a son of a gun!" and returned to their hedgerow.

Mr. McLean was interviewed by the medical officer, who, getting no reply to his questions beyond the gurgling sound at which Mr. McLean had now become an adept, diagnosed the case as "Shell shock," and sent him, under escort, to the clearing hospital.

Gratified with the success of his ruse, and inwardly rejoicing in the courtesy and kindness meted out to him by the good fellows of the R. A. M. C., Mr. McLean, as an interesting case—one of the first of many genuine cases to come—was dispatched from point to point along the line until he found himself at Havre, whence, after a brief detention, he was sent to England.

Now in the early days of the war the English, with their insular contempt for all things and people not British in origin, were extremely careless in their manner of guarding their German prisoners. It was presumed that no German officer would attempt to escape, and that if he did escape it would not matter. So, instead of confining prisoners in fortresses and dungeons, after the German fashion, the British authorities put their German officer guests in a large and well-appointed country house known as Donnybrook Hall, treated them with the utmost kindness—not to say slackness—and allowed them very considerable latitude as regards their method of living.

To this courtesy the German officers responded by plotting to escape, and as a preliminary step had dug a tunnel from the cellar of the Hall to a point beyond the inclosing wall surrounding the gardens.

To Donnybrook Hall, in the fullness of time, came Mr. Gavin McLean, known to the authorities, from the name found marked in his clothes, as Lieutenant Horstner; and being there regarded by both German prisoners and English guards as a harmless idiot, he was permitted to roam about the house and grounds much as he pleased. It was not long before his explorations took him to the cellar; and there, to his surprise, he found a party of the prisoners busy disposing of the last basketfuls of earth from the tunnel.

The excavators did not notice Mr. McLean's entrance; and, safely hidden behind an empty wine bin, he watched the Germans creeping back and forth from the tunnel's mouth, and noted how, when they knocked off work, they covered the entrance with loose boards, on which they piled empty cases and old sacks, so that the work was completely hidden from the chance observer.

Mr. McLean deplored his ignorance of the German tongue, but he gathered from the jubilant expression of the workers that their self-imposed task must be near completion.

Hidden behind his wine bin, Mr. McLean remained in the cellar until all the excavators had cleared out, and then proceeded to explore on his own account. He had noticed that the Germans had cached their tools and stores in the mouth of the tunnel; and, as soon as he had removed enough of the covering for his purpose, he lowered himself into the hole and by the light of a match searched among the stores. He found picks, shovels, crowbars and, what was more important at that moment, a supply of electric torches and a compass.

Armed with pick, compass and torch, he crawled cautiously along the tunnel, which led him for a distance of a hundred paces in a direction due northwest. At the end of the tunnel, which had been carefully shored up with rough timber throughout its length, he found that a chamber had been excavated to a sufficient size to allow two men to work. And from this chamber the tunnel took a direction due west, and was carried in an upward slant, which, he calculated, must bring the end of it to the surface at a distance of only a few feet from the point where the tunnel then ended.

Reviewing the situation, he carefully went over the ground a second time, checking his measurements and compass bearings. This done, he pocketed the compass, covered the entrance to the tunnel and returned to the outer air. The German prisoners were scattered about the grounds, and presently the dinner bell summoned them to the dining hall.

Mr. McLean, knowing that his own movements were never very carefully observed, absented himself from dinner and made his way to the side of the house corresponding to the part of the cellar from which the tunnel started.

He took a compass bearing, walked the requisite number of paces, and by this means roughly checked the ultimate direction of the tunnel to a point on the far side of the high wall surrounding the house, and, so far as he could reckon, determined that the exit planned by the prisoners would be within the limits of a thick wood at the back of it. Mr. McLean hurried back to the house and, smiling idiotically, sauntered into the dining room and took his belated dinner.

That night, after "Lights out!" Mr. McLean rose from his bed and with great stealth crept down to the cellar. He opened up the tunnel, selected a pick and shovel, and by the light of a torch crept down the narrow burrow to the far end. Here he removed his coat and, after some preliminary investigation, fell to work to cut upward at the same angle as that planned by the Germans.

It was hard work, and once he came within measurable distance of an unpleasant end by reason of the collapse of his new excavation; but he worked like a Welsh miner, and at last his efforts were rewarded by the feel of the pick driving clear of the last layer of earth and turf that kept him from the outer air. A few more strokes and Mr. McLean felt the fresh night breeze and smelled the scent of the pines.

He enlarged the opening sufficiently to enable his body to pass and then retraced his steps along the tunnel. Halfway to the cellar he stopped and proceeded to cut away the underpinning, with the result that after a few strokes of his pick the earth fell in, cutting off the passage from the cellar.

"Ah'm thinkin' they'll be verra disappointed wi' yon tunnel!" reflected Mr. McLean as he retraced his steps to the far end, picked up his coat—the lining of which was still stuffed with bank notes—and squeezed through the narrow opening to the outer air.

Consulting his watch by the light of the electric torch, he found that it was nearly three o'clock in the morning; and, with a sigh of satisfaction at his regained freedom, he picked his way cautiously through the wood and on the far side of it discovered a main road. A walk of a hundred yards brought him to a signpost, and from it he learned that he was on the main road to Wolverton, while the cross-turning led to the village of Yelmpton, distant about half a mile.

His chief anxiety now was as to his clothes, for to be seen in the guise of a German officer would entail recapture and an ignominious return to Donnybrook Hall. But Mr. McLean had not been an expert cracksman for nothing, and he relied on his past experience in this direction to obtain a new outfit.

On the outskirts of the village he noticed a good-sized house, which stood back from the road; and, with great caution, he entered the gate and crept up the drive leading to the front porch. He found a window that promised well to his practiced eye and speedily slipped back the catch with his knife. Removing his boots, he climbed in at the window, and by the light of his torch saw that he was in a well-furnished dining room.

He crept noiselessly to the door, opened it and listened. Not a sound! Noiselessly he crossed the hall, mounted the stairs and stopped to listen. No sound fell on his ear.

Investigation with the torch showed him three doors leading from the landing on which he stood. He tried the nearest and found it locked. The second yielded to his touch and he swung it gently open. At that

THERE ARE NO MILES IN A BOTTLE OF INK

One of the pleasantest fictions of the tire business is that a manufacturer can repair with a pen what he has failed to accomplish in his factory.

Upon no less fallacious a ground rests the virtue of the definite mileage guarantee.

But the difference between mileage as adjusted over a counter, and mileage as delivered on the road, is pressing hard for recognition upon the intelligence of the American automobile owner.

And the guarantee fast is coming to be seen for what it is—a confusing and unnecessary formality in the case of a good tire, a disappointment and delusion in the case of a bad one.

There is no definite mileage guarantee behind Goodyear Cord Tires.

As for that, there is no definite guarantee behind a gold-piece.

None is needed in either case, for both are recognized measures of value. Both embody a positive dimension of worth.

Would you rather we assert our principles of honest manufacture over our signature, or in the very stuff and substance of the product we sell you?

Would you rather we defend you from fault and hazard by the written word, or by the best materials put together in the best possible way?

Would you rather lay down your minted coin in the expectation of adjustments, or in the expectation of service?

The issue is as sharply defined as that.

For the Goodyear Cord Tire *does* what the guarantee can only *say*.

And what the Goodyear Cord Tire does, it does by virtue of the fact that every penny of its cost is *in the tire*. No charges for "accident insurance"—and the mileage guarantee is only "accident insurance" chiefly benefiting reckless drivers—compromise its quality.

The capacity of Goodyear Cord Tires to deliver what the guarantee commonly promises, rests solidly upon the character of the tires themselves.

Their positive economy springs from a source definite and actual, from specific Goodyear structural features.

Their greater comfort, their lasting strength, their surer security, their downright *goodness*—these are insured and bulwarked by the expert effort of conscientious workmen, by the generous merit of flawless material, by the abiding integrity of Goodyear manufacture.

And behind all, is the Goodyear policy that you—the tire-buyer—*must* be satisfied.

Could you yourself, writing after your own desires in the matter, in fairness conceive a more generous, a more equitable guarantee?

Your satisfaction—does not the compass of the word include everything you may wish for in a tire?

Goodyear Cord Tires are built to so high an aim. You will find it so, when you try them on your car.

You will find them easier under wheel, spryer under shock, stouter under hardship.

Their quality makes them higher-priced—and *better*.

They come in No-Hook and Q. D. Clincher types, in both All-Weather and Ribbed treads, for gasoline and electric cars.

Famous Three-Quarters of a Century

(Concluded from Page 49)

instant a switch clicked and the room was flooded with light.

Dazzled for a moment, Mr. McLean stood blinking like an owl in sunlight, and when he recovered himself he found that he was looking down the barrel of a .45 revolver, held in the steady grasp of a man of about his own size.

"Hands up!" said the man behind the gun; and Mr. McLean, who was getting used to this form of exercise, obeyed with the precision of an automaton. "Breaking in here to carry on as you did in Belgium, I suppose! I've a mind to strew your brains on the carpet!"

The threat sounded ruthless enough, but Mr. McLean detected the shadow of a quaver in the voice, which told him of a bold front to cover a certain nervousness; so he said nothing, but stood like a statue, his arms outstretched above his head.

"Lucky you happened in here to-night," said the man with the gun. "My wife's away, and the servants too; so you won't even have the satisfaction of frightening a woman."

The man with the gun drew nearer as he spoke and, with the boldness of inexperience, stood quite close to Mr. McLean, the muzzle of the pistol almost touching the latter's chest.

On the instant Mr. McLean saw his chance and took it.

With a quick swing of his left arm he struck his opponent's wrist outward, turned sharply to the left; and, as the man involuntarily turned in the direction of the blow, Mr. McLean swung his right and brought a hard fist, with a thud, to the point of the armed man's jaw.

The gun clattered to the floor and the man sank in a heap. Hurriedly Mr. McLean pounced on the gun and pocketed it, dragged a sheet from the bed, tore it into strips, and before his opponent had come to his senses had lashed him firmly and neatly hand and foot with his own bed linen.

Presently consciousness returned to the fallen man, and Mr. McLean, to save trouble and conversation, gagged him with a cartridge from the gun and a strip of linen. Having made his prisoner thus secure, he stood over the disgruntled householder and addressed him.

"Mon," he said, "Ah'm no a German. Ah'm a veectim o' circumstances. Ah want naethin' frae you but a suit o' clothes, an', by the look o' ye, it's yeers that wull fit me fine! Gin ye had treated me as one gentleman tae anither Ah'd no ha' had tae tie ye up; but Ah canna' trust ye the noo. Ye say the ser-rvants are awa'?"

The supine victim nodded his head in assent.

"Aweel! Sae muckle the better. Gin ye gie me yeer wor-rd ye'll nae call oot, Ah'll tak' oot yeer gag. Nod yeer heid gin ye'll behave yeersel."

The man on the floor contrived to nod his head and Mr. McLean loosened the gag.

"Blast you!" said the victim as soon as he was free to speak.

"Gin ye use sweer wor-rds tae me Ah'll e'en gag ye agin. Ah canna abide a mon who sweers."

The victim relapsed into silence, and Mr. McLean, after making sure that his lashings were fast, explored the room and helped himself to a suit of clothes, a shirt, and other necessaries. Dressing himself with care, he selected a pair of boots from the shelf, tried them on, and decided that they were a fit. Then he stood over his host and admonished him: "Ah'm obleeged tae ye for the claes; an', tae show ye there's nae ill feeling, Ah'm leaving ye this five-pun' note tae pay for them. Gin Ah could trust ye Ah'd untie ye an' let ye loose, but Ah canna tak' the reesk; so ye'll e'en hae tae stay here till Ah can telephone tae the police tae come an' set ye free. Guid mor-rnin', ma mannie! An' the next time ye try tae hold up an honest bur-rglar man dinna come sae close wi' yeer gun. It's there ye went wrang."

With which parting advice, Mr. McLean picked up his German uniform, turned out the lights, and closed the door after him as he left the room.

He hurried down stairs, let himself out at the front door, and after removing the collection of notes from the lining of the tunic, heaved the uniform into the depths of a shrubbery and strode away down the drive.

He made for the main road and, taking advantage of a passing farm cart loaded with vegetables for Wolverton Market, swung himself to the tailboard and rode comfortably to within easy walking distance of the town. He went to the station, found there was a train to London in half an hour, had some breakfast at a coffee shop just outside the station, and three minutes before the train was due went to the public telephone in the station and called up the police.

"Hello!" came the reply.

"Hello, yeersel'!" said Mr. McLean. "Wull ye be sae guid as tae send an officer tae the first hoose on the Yelmpton road? There's been an accident and a gentleman needs yeer kind assistance."

"Who's that speaking?" inquired the voice excitedly.

"Me!" said Mr. McLean, with admirable brevity, and hung up the receiver.

The train steamed into the station, punctual to the minute, and Mr. McLean swung himself aboard with the comforting feeling of a man who has done his duty to the suffering.

Mr. McLean had no difficulty in evading all attempts to trace him. He adopted the simple plan of making no attempt to hide, but returned to his Chiswick home and set about conducting his garage and repair business without delay.

By exercising due precaution he contrived to exchange his German and French notes for English gold, and on reckoning up his resources found that his martial experiences had made him richer by some eight thousand pounds.

Being a Scot—and a canny Scot at that—he lost no time in finding a suitable site on which to erect a larger workshop, with room to expand in the near future. This done, Mr. McLean searched round until he saw his way clear to accepting a small subcontract for munitions work, as he was convinced by what he had seen that the war was not likely to be over for some considerable time.

By the purchase of a small existing factory and the development of his new works he has blossomed into one of the most successful English subcontractors. And, with admirable patriotism, he was heard lately to express the opinion that—"Gin the Government would but tak' off that shameful robbery of a supertax"—he would be able to retire from business in six months.

However that may be, there is no doubt that the once Very Temporary Captain McLean is among the most successful of the war contractors; and it will not be surprising if, in the fullness of time, he becomes one of the most respected members of the British Parliament.

He has been nursing a constituency for some months now, and by judicious gifts to the deserving poor—there is no graft in British politics—he hopes to head the poll at the next election, and to become a pillar of the British Constitution, instead of a Very Temporary Captain.

THE END

It Was Not Before He Had Been Swept Along for More Than a Mile That He Contrived to Push His Clumsy Raft Under the Opposite Bank

Sense and Nonsense

Faith

THE eyes of you were dark and sad,
Like pools too deep and still,
Whose lure might drown a wistful lad,
Oh, Moira-of-the-hill!
The way we went o'er the springy sod,
Where the heather met the sea,
Was an old, old way you'd often trod,
But a new, new way to me.

They said: "She keeps no faith with men;
She'll keep no faith with you.
Her heart's a wild bird in the glen
That feeds as wild birds do.
Of all the lasses who live and love
Where the lough lies long and still,
There's none so faithless to troth will prove
As Moira-of-the-hill.

"She'll love you, lad, maybe to-day,
But she'll love young Will to-morrow;
And she'll never have less than her own wild way
With a lad, to his lifelong sorrow—
Unless, indeed, it should come to pass
That the rivers should backward flow,
Or daisies bloom at Candlemas,
Or roses under snow."

So over the world I went and away
Where the stars are gold in the blue.
Dim as a dream was that yesterday
Of the old green land and—you.
Home I came with an empty hand,
And a heart burnt out and chill,
Though I'd loved a lass in every land—
But I found you faithful still!

You'd kept a tryst where was none to keep,
Since that day by the purple sea;
And your eyes were sad, as of those who weep
For the thing that may never be.
Oh, never again will I doubt you, lass,
Whatever may come and go,
Till daisies bloom at Candlemas,
And roses under snow!

—Mary Lanier Magruder.

Discovering Columbus

DURING the recent campaign a Tammany leader on the East Side, a self-made man and one not entirely completed yet in some respects, was addressing a mass meeting of Italian-born voters on behalf of the Democratic ticket.

"Gintlemen and fellow citizens," he began, "I deem it an honor to be permitted to address you upon the issues of the day. I have always had a deep admiration for your native land. I vinerate the mimory of that great, that noble Eyetalian who was the original and first discoverer of this here land of ours.

"Why, gintlemen, at me mother's knee I was taught to sing that inspirin' song: Columbus, the Jim of the Ocean!"

Whereupon there was loud applause.

Not the Right Smell

SOMEBODY sent David Warfield, the actor, a case of rare old rye; and he, in turn, expressed a quart of the stuff to a friend living in a New England village, where local option rules.

Because of the prohibition law the local agent declined to deliver the package, and the consignee went to the station personally to claim it.

"That's all right," he said; "that's just a bottle of ginger ale which was sent to me by my old pal, Dave Warfield."

"Dave who?" asked the suspicious agent.

"Dave Warfield. You know who I mean—Warfield, the Music Master."

The agent shook the package and sniffed at it.

"Call it ginger ale ef you're a-mind to," he said; "but I know better. And, furthermore, I wanter tell you this here parcel never come from no music teacher neither!"

An Exception

MR. JUSTICE VICTOR DOWLING, of New York, who, as might be guessed from the name, is of Irish descent, tells this one on himself:

Once upon a time, a few years ago, he was presiding at the trial of a separation suit between a couple financially and socially distinguished along the Eastern seaboard—a suit that naturally attracted a good deal of attention.

The attorney for the husband was having his inning. It was the aim of the lawyer to show that the lady in the case owned a quick and fiery temper, and that she was addicted to upsetting the domestic arrangements of her home on slight provocation. Pursuant to this intention he put upon the witness stand a tall, solemn Swede, formerly in the plaintiff's employ as a coachman.

The Swede, under the crafty promptings of counsel, told in broken English of a certain occasion when his mistress had flown into a violent passion at a certain footman, and had demanded the luckless footman's discharge upon the assertion that he was drunk.

"Well, was this man drunk?" asked the lawyer when the witness had finished describing the incident.

"No," said the Swede; "his name bane Shaughnessy—but he not bane drunk!"

Those Large Moving Bodies

"ROOSEVELT was certainly the most bellicose president we ever had," said the husband, looking up from his paper.

"Bellicose!" echoed his wife dreamily. "Aren't you thinking of Taft?"

Faint Praise

AT THE Players' Club a group of writers were discussing the work of various artists. Somebody mentioned a popular illustrator who is much given to speaking favorably and at considerable length of his own productions.

Oliver Herford considered for a moment.

"Yes," he said; "if that fellow was as good an artist as he is a talker he would still be a fair talker."

Around the Corner

AROUND the corner I have a friend,
In this great city that has no end;
Yet days go by and weeks rush on,
And before I know it a year is gone,
And I never see my old friend's face;
For Life is a swift and terrible race.
He knows I like him just as well
As in the days when I rang his bell
And he rang mine. We were younger then;
And now we are busy, tired men—
Tired with playing a foolish game;
Tired with trying to make a name.
"To-morrow," I say, "I will call on Jim,
Just to show that I'm thinking of him."
But to-morrow comes—and to-morrow goes;
And the distance between us grows and grows.

Around the corner!—yet miles away. . . .
"Here's a telegram, sir."
"Jim died to-day!"
And that's what we get—and deserve in the end—
Around the corner, a vanished friend.

—Charles Hanson Towne.

The Breath of Scandal

"YES," said a lady of high social distinction at the Colony Club in New York; "I dearly love a Bronx cocktail before dinner, but I never take one. The odor of the gin stays on my breath for hours, and my husband doesn't like it."

"Only too true!" stated Beatrice Herford, the society monologuist, dreamily. "The wages of gin is breath!"

"It was no trouble at all

to get rid of the stumps by blasting," writes R. C. English, Port Matilda, Pa. "I had never used an explosive before and had never seen the work done. But I understood it thoroughly after looking at the pictures in your book. It is easy to blast stumps with

HIPOLITO LAZARO
Tenor of the Generation

YSAYE
World's Master of the Violin

HOFMANN
World's Greatest Pianist

Columbia

What does "Columbia" mean in the world of music today?

It means the supreme art of Ysaye and of Casals, the miracle-voice of Lazaro, the divine colorature of Barrientos, the incomparable genius of Hofmann, Godowsky, Parlow, Seagle, Sembach and Nielsen, the rich beauty of Graveure's baritone, the classic triumphs of the Chicago Symphony Orchestra, the fun of Jolson, the delights of the dance—all that makes for inspiration, for education, for joy and for pleasure.

These are but a few of the many world-renowned artists making records exclusively for the Columbia Company. No artists like them, no art to match their own, and the Columbia process of recording reflects and echoes their very genius with a matchless truth and a *living* beauty that gives *all* of their greatness to an admiring world.

All the beauty, majestic grandeur and soul-thrilling splendor of the immortal music that once heard, haunts memory's chambers forever, is echoed in the *tone* of Columbia Records.

Pyrene
KILLS FIRE
SAVES LIFE

This fire lasted just two and one half minutes.

There was no panic; no wild stampede to a fire-escape or stairway.

There were no shrieks or groans. No wives or mothers waiting, pale with horror, while charred bodies were carried from the ruins.

This employer was ready for fire. Ready with Pyrene. Pyrene on pillars. Pyrene against walls. Pyrene at stairway landings. Pyrene in elevators. Pyrene in the dynamo room. Pyrene in the offices.

When fire came several men grabbed Pyrenes. The concentrated extinguishing liquid smothered the fire in no time. Pyrene kills fire—quick.

Any manufacturer who hasn't his factory equipped with Pyrene plays a monstrous game of chance.

$8.00, bracket included.

Pyrene Manufacturing Company
New York
Every Appliance for Fire Protection

THE SHRINKING DOLLAR BILL

(Concluded from Page 8)

"Nature seems to have conspired against meat production all over the world. We have had two bad corn crops. That of 1914 was frozen and the 1915 crop was burned up. In Argentina they had six months of drought. Now they have the locust scourge. They are buying cattle here that used to be furnished from the Platte country. Australia had bad conditions too. Our Pacific Coast used to swim with Australian beef. Now Australia is buying mutton for its own use from New Zealand, and consequently is not exporting anything to us.

"The men in the trenches are eating an immense amount of meat—undoubtedly a lot more than most of them ever ate before. It is mighty fortunate we had a big crop of hogs in 1916—otherwise a meat famine would be upon us. We had such a good hog year that it saved the situation. The high prices have compelled the Western hog grower to keep his hogs healthy—hence the big crop. Beef is now a luxury and it will continue so.

"Figures will show an increase in sheep. These seven markets in 1916 received 11,637,000 sheep against 11,160,000 the year before; but in 1913 they had 13,500,000 sheep. Our native sheep industry—that east of the Missouri River—has disappeared. The sheep in this country cannot compete with the dairy cow and the hog. Cattle raising is now on a remunerative basis. Cattle will take care of themselves. So will hogs. Sheep must be constantly watched and cared for. Lambs used to sell at six cents a pound; now they are thirteen and a half cents. Sheep used to sell for three cents a pound; now they are worth ten cents. We can raise sheep in this country profitably.

"Another factor is our booming industrial situation, and the increased consumption due to big wages. This is illustrated by the fact that the big steel-making towns are enormous consumers of meat. Pittsburgh consumes more beef a head than any other city in the world; while Gary, Indiana, has a larger individual meat consumption than any other city in this country.

"For a few months after the war broke out, during the temporary lull in manufacturing, the meat packers were sending the manufacturing centers practically nothing; now they cannot fill their orders. If the fires were banked the men would stop eating meat; experience has proved this. Whenever there is a highly profitable season for the workers they seem to try to eat up their wages in the form of meat."

The Men Who Eat Less Meat

In this connection, however, it is well to remember that a large public—men receiving moderate salaries or incomes that have not increased materially—have cut down on their meat consumption. To some extent this has offset the unstinted meat feast of the wage-earner with the fat pay envelope.

Mr. Poole declares that if a strike should occur in New York City the cattle demand at the Chicago Stockyards would drop thirty per cent, the market for meat being very sensitive.

"Export orders," says this expert observer, "do not cut so great a figure in the grand result, after all. If our home industries keep going at a good pace and the workers have plenty of money there will be sales for all our meats. This is the dominant element in the meat situation.

"The trouble with our whole retail system is that its overhead charges are excessive. We are trying to retail meats about as we do whisky. You find half a dozen meat markets in a neighborhood where there should be only one. There are salaries to be paid, high rents and high delivery and collecting costs to be met. There are so many meat markets that they crowd each other and make all demand larger profits in order to earn a living.

"From this condition has sprung into being a new element in the meat game—the meat peddler; the man with the automobile truck who buys his meat at the packing house and pays cash in advance for it by always keeping a thousand dollars on deposit with the packer. He then cuts his meats on benches that are furnished him by the packers and peddles them to the retailer. His profit runs from twenty-five to forty per cent. It is safe to say that this peddler will take at least twenty-five per cent profit. He relieves the packer of the job of delivering and also lifts from his shoulders the necessity of carrying a lot of accounts. This means, of course, that the packer does not need to worry about drivers' strikes and bad accounts. So, of course, the packer encourages these peddlers. The packers want cash and a quick turnover. They are willing to take a small profit provided they can depend upon these two things.

"Just to show you how that works out: The little meat-market man in this neighborhood, who drives over to the packing house and buys direct for cash, can sell his goods twenty-five per cent cheaper than can the average retailer located at a distance. The trouble with the average retail meat man is that there is not enough volume of trade open to him to stand his excessive overhead costs without the addition of excessive profits. So many workers must get their pay out of meat retailing that prices must be boosted to break even.

"The packers do not take big profits. They are content with less than two per cent. But they have such a tremendous volume and get so quick a turnover that—together with the proceeds of their by-products—they are making a mighty good thing out of it."

A Look Into the Future

"Of course these high prices are going to stimulate production. That is one good thing. No country in the world can raise domestic animals at less cost than can the United States. And we are getting back into the cattle game very fast. The Western States are coming back rapidly. When they begin to save beef calves and cows they come back into production at a stiff pace.

"Children and women are saving calves everywhere. I saw a boy with five calves last summer and I asked him what he was going to do with them. He replied that he was going to make five hundred dollars on them next summer. Women are raising calves in orchards and along the roadsides all over the West.

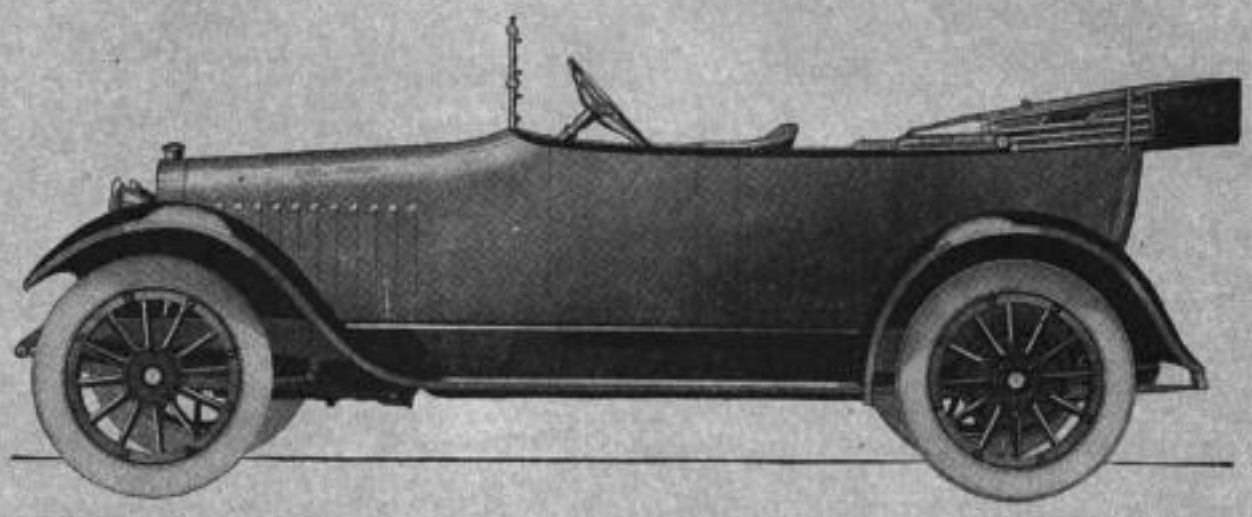
"Just contrast conditions with those of a few years ago. A man who was in here then was asked what he expected to get for his cattle, and he answered:

"'Don't know. Don't give a damn! If they're sold at all they're well sold!'

"Don't make the mistake of thinking that we know just where we are headed for in this matter of meat production. There has been a lot of gambling in cattle and values are inflated. Australia and Argentina will come back and make themselves felt eventually.

"Germany swears by the hog—they're wise over there! The hog is the one best life-saver in the meat game. The fecundity of that animal is something marvelous. Again, it doesn't take so long to make a steer as it once did. We used to market them at four years; now they are turned in at two. There has been a great sacrifice of good small stuff recently, though. Thousands of cattle come in here weighing about eleven hundred pounds when thirty days of corn would add two pounds a day to each creature.

"A few years ago the Canadian packers tried to hog it and would not pay fair prices to the farmers. The farmers promptly went back to grain. The result is that the Canadian packers are buying meat right here, slaughtering it here and shipping it dressed to Canada. They have learned their lesson.



"Though this is an era of strange and unexpected happenings in an economic way, and the meat situation will undoubtedly develop its share of surprises, the consumer may as well dismiss from his mind any fond hope that we are going to see cheap meats again, though they may and probably will become less expensive than at the present moment."

No fact concerning meats that has lately been brought to the surface is of greater interest than the statement made in a 1916 United States Department of Agriculture report, that the stockman or raiser receives from two-thirds to three-fourths of the gross returns in the marketing of beef, the remaining one-third or one-fourth, as the case may be, being divided between shipping and marketing expenses, packers' gross profits, jobbers' gross profits and retailers' gross profits.

Editor's Note—This is the first of two articles by Mr. Crissey. The second will appear in an early number.

CHALMERS $1090

This 5-passenger 6-30 Chalmers has a wide range of use. Neither big nor heavy. Neither small nor underweight. It is a car for touring. For city. For running about. For the woman to drive. For the daughter to drive. And is a man's car, too. Handles well in traffic, because it is easy to steer. Easy to get under way quickly. Easy to stop. Easy to swing around a corner. Easy in shifting gears. Good on the long run because it rides well. Holds the road evenly. Runs straight as a line. And it gets over the ground without noise or effort. Takes the hill with snap. The turning radius is 17¾ feet. The horse power is 45 (on the brake test). The wheelbase 115 inches. The tires 32 x 4. The engine is simple and rugged. A car soundly made—and thus sensible to own.

A rare value at $1090.

Five-passenger	Touring	$1090	Detroit	Seven-passenger	Sedan	$1850	Detroit
Seven "	Touring	1350	"	Seven "	Limousine	2550	"

A Royal Living from a Little Land

IT is a mistaken idea that you *must* live in the country to have the finest, freshest lettuce, juicy tomatoes, tender sweet corn, choice peas and beans and other garden produce.

Whoever has enough ground in his back yard or in a nearby vacant space for a garden can live like a king. All you need is a very little land, the willingness to dig and potter around and the foresight to buy

FERRY'S SEEDS

Why Ferry's Seeds? Extra choice garden things are never accidental. Seeds descended for generations from plants noted for lusciousness and abundance will almost invariably produce luscious, abundant crops. Pedigree profits the planter. Unknown seeds are dear at any price.

Ferry's Seeds are pedigreed seeds. They come from families with known histories and each yearly crop of seeds is tested in the Ferry trial gardens to make sure that the family traits survive, that the strain is running pure and true to type.

Experienced gardeners everywhere know that Ferry's care in seed selection has made Ferry's Seeds most sure of success.

Write today for your free copy of Ferry's Seed Annual. You will value the selected receipts for best ways of cooking vegetables.

Ferry's Seeds are sold by dealers everywhere.

THE MAN WHO WAS AFRAID

(Continued from Page 20)

Those stupid boys—they don't realize! You mustn't go, even to Camp Whitman, Benton. If you got that far you'd probably take it—example, and all that. But there's nothing decided if you refuse even that; you can stay at home—and whatever they do won't amount to anything, because your term's almost out. Think of it! You can stay here, Benton—safe—when the company goes out to-morrow. Timothy says there won't be anything—no court-martial or heavy discipline to face—the War Department won't be able to do much. Everything's all right, dear. You will simply not go!"

She threw her arms about him; but Benton stood rigid.

"That—that's desertion, mother—morally."

"Not for you. You wouldn't go to Mexico in any case. You'd never take that oath. We never meant you should. Nobody decent and Christian goes to war. . . . It's all wrong; a work of the devil. A righteous man has nothing to do with it; and you're out of it—safely—Benton. Oh, my dear! My dear!"

Then, as Benton still stood silent, she drew back from him in terror.

"Why—you don't want to go, Benton!"

The boy looked at her with a face like death.

"Oh, mother," he said, "don't you know me better? Don't you know I couldn't want to go?"

That was the evening when the thing came out of cover and stalked boldly up and down the main-traveled roads of town gossip:

Bennie Clune was not going to the Front—wasn't even going to the main camp!

"Oh, but, my dear, he'll have to! That's desertion, and there's a penalty."

"His mother has arranged for that—and her lawyer. They're not afraid of the consequences. They found out there won't be any heavy ones—Mr. Aitken talked to the Department. . . . And they won't mind what folks think! I think it's a burning shame—a cowardly thing ——"

"Oh, but what could you expect? Why, everybody knows what Bennie used to be like—you'd hardly think he'd stand up to anything with any risk about it."

"Oh, I know, Jim Greely was telling us that he remembers ——"

Yes; it all came out afresh then. All Bennie's dark past roached up its mane and pranced about town recalling to people exactly what Bennie really was. He fell from Benton to Bennie in a jiffy, and all the fine military panoply fell away.

They talked it all over at the farewell dance that night—the dance where Elsie Revere, with flaming cheeks and a rose-and-silver frock, led the march with Pod Fisher. There was no sign of Benton; and, watching Elsie, people whispered again. He was to lose not only honor but love, they said. Elsie was a little soldier-girl—no quitters for her! Bennie must be crazy not to realize; and he was so much in love too! But then, as a few concluded, perhaps it wasn't really true.

Yet it seemed not unlikely. Toward nightfall the Clune household had veiled itself in silence; no member was seen on the streets; the telephone, importunate on behalf of the curious, remained unanswered. There was an editorial in the evening paper referring to "any fellow townsman who shirked his duty and absolved himself on a technicality," with the usual attendant embroidery on "honor" and "manliness."

But, at that, people didn't really believe that he would put it through—would actually quit it cold—until they were forced to; not until, at nine o'clock the next evening, Company X marched out of its Armory and went swinging down to the station in full marching kit, and they saw that Benton Clune wasn't with them. But even then the thing didn't make more than a ripple of interest on the thrilled and watching crowd.

You could hear the noise they all made back in the street where the Clune house stood. The place was darkened; but in an upper room two persons sat listening.

The company band was playing Onward, Christian Soldiers! And they could catch the roars of approval as "the boys" swung by. They could almost see it all—the motor, flag-trimmed, with the handful of proud old Grand Army men in it; the vets of the Spanish War, who marched behind; the band; the ambulance detachment; the company in full turnout.

And as he listened, Benton Clune's breath and spirit failed.

"Oh, God!" he whispered, and a great choking sob surged to his throat.

The woman sought to comfort him:

"My boy, let them go; they are fools and do not realize it. . . . Some of them may never come back. It is all wrong—all wrong!"

The noise had moved on to the station, where the specials were waiting. There was a lull; then the night wind came through the blinds, bringing a thread of sound—a man's voice, barytone, singing to the crowd:

"My country, 'tis of thee,
Sweet land of liberty,
Of thee I sing:
Land where my fathers died ——"

And, on that, the man in the silent upper room put down his head and sobbed like a child.

"Afraid! . . . Afraid, mother! . . . That's what I am! . . . Not a man—just a lay figure. . . . There's not a dog in the street out there but has more sand—more spirit. . . . I've been a coward all my life. . . . Let's be honest and face the truth. . . . I daren't do what those boys are doing!"

She came and touched his hair softly.

"You're just overwrought, Benton. To-morrow ——"

He sprang up at her touch.

"The truth! It's the truth! Don't you see? It's the coward's part—the one I've always played. And it's your fault, mother. Oh, I've a yellow streak, no doubt; but you helped me—you taught me fear all my life! To be a coward! Think of it! I've had good ancestors, real men—fighting men—Americans! . . . And you—you and I—have let me be like this. Afraid! I want to go, mother—part of me; I want to rush out there and be a man—and I daren't! I'm afraid! . . . That's what I'm like. Coward! Coward!" he screamed suddenly. "Not honor or the girl I love counts—nothing but fear! Fear!

"Mother"—he spoke more calmly—"do you know who they've got down there? Do you know who my marching mates would be? Sam Hedrosian, a naturalized Armenian—Armenian, mother—a shoemaker; and Pat Flynn, a cabman; and the two Schwartz boys, whose father runs the Dutch brewery—they're going out to fight if need be—if they must—for my country—'My country, 'tis of thee'!" He laughed bitterly. "And I am an American, mother—what they call a real one, with roots way back in Colony days. . . . And you—my mother—a Daughter of the Revolution! And I daren't go! I daren't! They are the true Americans, and I—I'm just afraid!"

He flung himself down, his face buried.

For two days no one emerged from the Clune house. On the first morning people observed a figure propped up on their veranda—a dummy figure of a soldier, crudely dressed in brown hook muslin, to represent khaki. There was an infant's feeding bottle tied to it and a placard on its breast. One or two got near enough to read it:

I AM THE LATEST WAR BABY.
I ALWAYS STAY AT HOME, SAFE WITH MY MA.
I LET THE OTHER FELLOW DO IT.
I AM THE MAN WHO IS AFRAID!

Presently a servant came and removed it.

Toward nightfall of the second day Benton Clune went out of the house for the first time. He walked down the street, looking neither to the right nor the left until he came to Elsie Revere's home. There he stopped and made as though to enter, putting a foot on the first of the veranda steps. As he did so the door opened and Elsie herself came out. At sight of Benton she turned white and seemed about to speak. Then she put out a hand and touched the big flag behind her. As though its touch heartened her, she lifted a proud head and smiled, instead—not a pretty smile—and let her cool eyes sweep the figure before her from head to foot. After a moment she turned her head away indifferently.

It was on the fourth day after that, when Benton came out of his room and spoke to the white-faced old woman who sat huddled in her chair.

Heat Your Home The Moistair Way!

Could Your Family Live in a Dry Kiln?

Yet thousands exist under conditions *little better!!*

Cold weather arrives. Doors and Windows are shut *tight*. Fresh air is excluded. The heat is turned on—and the whole family hibernates! Now for a winter of hot, stuffy air—air with the dryness of a dry kiln—unhealthful, dangerous! The air is breathed over and over! It fairly reeks with "dead" gases—poisonous, disease breeding.

And then come coughs, colds, headaches, lung diseases, sickness, inefficiency—and the doctor!

Avoid all this! When you build or replace your present heating plant, see that your heating system furnishes healthful air; that is, fresh, warm, *moist* air. Install a

ROUND OAK
Moistair Heating System

The Only Heating System that AUTOMATICALLY Ventilates and Humidifies

The Round Oak Moistair Heating System *absolutely* solves the heating problem, and for a lifetime!

It floods your home with cheery warmth and comfort, regardless of outside blizzards.

It cuts down your fuel bills—burns any fuel.

It keeps your house free from dirt, dust and coal gas.

It is convenient, cleanly, easy to operate—has nothing to ever get out of order. It sends an ever-changing current of warm, *fresh* air circulating through the house. And besides all this, it AUTOMATICALLY humidifies—keeps the air both fresh and *moist*.

Saves Fuel by the Ton

Warm fresh air, *properly humidified* as it is by the Round Oak, is more comfortable at 68 degrees than *dry* air at 75 degrees.

The saving of 7 degrees thus effected by the Round Oak Automatic Humidifier and other exclusive features listed opposite literally means a fuel saving of *one ton in every nine*.

Surely this saving is worth taking into account.

Consider that more than 60,000 Round Oak Systems are in use, and that *every one*, so far as we know, is giving satisfaction. Reflect that they are backed by 46 years of experience and that they are made by the makers of the famous *Round Oak* STOVE—then

Write for Valuable Book and Heating Plan— FREE

Handsome illustrated book fully describes this modern plant. With book goes a blank, which filled out and returned to us will shortly bring you a scientific Heating Plan drawn up by our engineers to meet your exact requirements. Cost of installation, etc., goes with Plan. And with no obligations to you. Send Coupon NOW!

With Book we also send name of nearest authorized dealer selling-and installing Round Oak Moistair Heating Systems. Many dealers sell on easy payments. To get the genuine, look for the trademark, which shows the Round Oak Indian.

Five Star Points of Round Oak Supremacy

***Health.** Only Heating System that automatically ventilates and HUMIDIFIES.

***Comfort.** Delivers pure, warm ever-changing moist air, free from dust, gas, smoke—fitted with gas-tight doors and dampers.

***Economy.** Longest fire travel all inside casing; improved hot blast *Ring*; extra deep fire pot; extra large combustion chamber affords perfect combustion; most heat on minimum of fuel.

***Convenience.** Simple regulator controls entire system. Self-cleaning. Ash pit dust-proof—seamless; fitted with sprinkler. Non-leak door frame cast on—not bolted. Easy to operate.

***Durability.** Materials used stand highest physical tests. All hinge pieces *drilled*, not cast. Never a bolt where a rivet will do! Tight fittings guaranteed. *Good for generation of service.*

Waiting for you to tap its Greater Comforts and Conveniences

The electric socket on your wall is just a gateway through which you can get not only MORE and BETTER LIGHT, but the many other electrical comforts, conveniences and economies afforded by science and invention.

One key to all that lies behind the socket is the *lamp* you use. What you get from the socket depends upon the *kind* of lamp you use.

You can open the socket wide with EDISON MAZDA LAMPS. Without any increase in your current bills you can, with EDISON MAZDA, make your electric current go three times as far as with old-style carbon lamps.

Since the economy of each individual lamp is multiplied by the number of lamps you use, you get the most light and save the most current for other uses when you put an EDISON MAZDA in every socket in every room.

If your house isn't wired for electricity—now is the time to have it done. In the springtime, in many localities, special house-wiring rates are made. Your lighting company will tell you how little it will cost and show you how simply it is done.

EDISON MAZDA LAMPS

Made in U.S.A. and
backed by MAZDA Service

The brighter, whiter, less-expensive light of Edison MAZDA Lamps symbolizes the object of the General Electric Company in its development of *all* the branches of the electrical industry; for its purpose is to make "Electricity for Everybody" not only possible, but economical and practical.

EDISON LAMP WORKS of General Electric Co., Harrison, N. J.

(Concluded from Page 58)

"I'm going, mother. I can't stay and face it out—I'm going away where people don't know me. Perhaps I can find it yet—courage."

"Where will you go, Benton?"

"Anywhere to forget—everything. I've come to the end of things here."

He slipped away at dusk. He didn't even buy a ticket. They were making up a freight on a siding and he hid away in an empty box car.

It didn't improve matters back home, his going. "Full quitter's act," of course, people called it. Instructions had come from headquarters to penalize—lightly enough—the deserters who had stayed behind in the various towns. Benton Clune, it was learned, was to be reprimanded severely and assigned to the home recruiting station until the expiration of his term. But Benton wasn't there.

And after a while we forgot him. We were too busy reading about Camp Whitman, and the mud and rainstorms, the hikes and inspections, the Government processes, the potential military cabals, and speculating about war—real war—and our boys in particular. And suddenly Camp Whitman ceased to interest us. Our boys—our Company X—were to go to Mexico at last. The special train would pass through the home town en route.

They were due at eight o'clock; and at seven-thirty the little woman—a strangely aged and stilled woman these last days—who rocked and rocked herself so desolately all day in the big Clune house, looked up at a slight sound in her doorway.

She did not know him for a moment, so tattered and dirty and worn and torn he was. When she recognized him she cried out in terror; and, at that, he came quietly into the room. Under the lamplight he looked even worse, with a face strangely older, harder, and the eyes of one who has faced torture. He was bearded, unkempt, and bore the marks of a man who has, even if futilely, tried to pay his toll among men with fist and right arm. There was a long stripe of purple bruise on his face, and the scars of conflict about him.

"Benton!"

He spoke very quietly, quite without emotion:

"I have come back, mother. Do not ask me where I have been. . . . You may call it hell if you wish. It has been just that. You see, I made a mistake. I tried to run away from it all; I tried different ways—drink—different people—a new life—hard work. But I have found out the truth. If a man knows himself—a man like me—there is only one way." He swung round and faced her. "Mother, the only thing he can do is to fight himself—where he lost himself. That's why I'm here. I've come to ask you for a bit of supper—and a bath. The soldiers' special comes through in half an hour and I am going to meet it. Mother, I'm going to Mexico, and fight—me!"

Then a strange thing happened: the little woman began to sob.

"Perhaps you are right," she said. "You must do what is honorable."

It rained that night and only the persons most concerned went out to meet that train. Few saw the young man in civilian clothes, carrying a military kit, who ran out from the shadows of the freight house and straight toward the officers' section.

Colonel Corey and several others had gotten out and stood on the wet platform. The young man went up to the colonel and saluted.

"I am Benton Clune," he said, "and I've come to ask for another chance. I wrote to you from Downingsville ——"

"I have your letter."

"I wish to go with my company, if it is possible, sir—to take the Federal oath and enter the United States service."

Right up at his left loomed a flat car, loaded with big caissons; but he did not wince.

Our old Corey is a psychologist; a stickler for military etiquette, too, but a diagnostician of situations—and men. He looked at his watch now, quite casually—the big engine was getting up her head, drawing long snorting breaths—then back at Benton.

"Technically you belong here in the recruiting station, Benton; but on receipt of your letter I communicated with Sergeant Mayhew, and the matter has been arranged. You may take the oath and go with the company. You will report immediately to Lieutenant Ainslie."

Then the whistle sounded and Benton Clune started for Mexico.

No; there was no war; no chance for the spectacular; no thrilling dash to assist beleaguered comrades; no message-to-Garcia business; no rescue of a beloved officer, single-handed, in a hail of soft-nosed Mexican bullets—only the chance for reinstatement—to "come back"—that the daily grind of camp life offers. A fellow had to do it by grace of simple daily little things—not an easy matter; yet somehow Benton Clune did it.

You see, everybody knew what the mere first step had cost him—what it meant to break through the wild funk he had gone into; and everybody appreciated it.

Benton wasn't asking any favors either. He kept to himself and asked odds of no one, and bore silently the glances, the innuendoes and patronage of the less friendly spirits; he understood the embarrassment his appearance caused in a jolly, chaffing group, and he bore no rancor. He was alien—set apart by his own act. He threw himself passionately, instead, into the business at hand—set himself the task of becoming a good soldier. And little by little he slipped back into the respect of his comrades. And then came the thing that happened on the Juanarez River.

We got it in the papers via the messages of Special Representative Chester, who went out with the company:

"A brilliant rescue was effected last Saturday, when Private Clune, of Company X, saved the life of Private Hedrosian in the Juanarez River. A small detachment from the company had gone up the Juanarez and, returning, attempted to ford it. A mistake was made in the location of the ford, and not until the party were in midstream was it detected. The crossing they selected, though comparatively shallow, is filled with quicksands, and the men in advance drew back just in time. Unfortunately Private Sam Hedrosian, not realizing the situation, undertook to go through with it. In a few seconds he found himself sinking rapidly.

"For a minute it seemed Hedrosian would lose his life. But even while his comrades were frantically devising a lifeline Private Benton Clune, bringing up the rear, went out into midcurrent and literally pulled Hedrosian out of the jaws of death. He was able to get near him only by making a detour, working upcurrent, and fighting inch by inch for a foothold. His own life was endangered a dozen times, and his comrades will not soon forget the daring and plucky rescue, and the unselfish and generous impulse that led him to offer his life to save a naturalized American soldier."

Well, well! Were we proud? I guess yes! Bennie Clune, our man-who-was-afraid, to do a thing like this, a real man's stunt! To go out and play with death—and voluntarily court the sucking lips of that quicksand! . . . Shows what stuff the boy had in him after all; good stuff!

"Why, he's a regular fellow after all!" we said.

The boys got back only yesterday after four months on the Border.

Good Lord, but we got excited! At least five thousand of us were down there in space hardly enough for one—and all the flags were out again—and the bands—and —— Well, we certainly were glad!

There was an extra force of police to keep back the crowd, but they melted like snowflakes in Hades when the women saw those brown-clad arms and shoulders through the windows. They charged that train like a troop of Boches; and there were mothers and sweethearts and sisters and infant offspring all over the landscape.

And right in the thick of it were two women clinging to each other—one little and elderly; the other young, radiant, clad in white, her arms full of flowers. They went right up to a window where a good-looking, blue-eyed, rather thin young fellow looked out, and they literally ate him up with their eyes. The older one could not speak at all—could only look up, worshiping and weeping; but the younger one held up her flowers, and a soft small hand besides.

But the boy did not take her hand for a moment. He looked down at her, his heart in his eyes, and spoke falteringly:

"Elsie—you said—before I went—the man you marry would be soldier stuff ——"

"He is!" the girl flashed back proudly.

Then they couldn't hear the sound of their own voices for all the joyful racket we made because the boys came home.

Goodyear Tires, Heavy Tourist Tubes and "Tire Saver" Accessories are easy to get from Goodyear Service Station Dealers everywhere.

This Tube *Holds* the Needed Air

Whatever the merits of this or that casing, the fact remains that it's *air* that carries the car—and the *tube* that carries the air.

A tube that *won't* carry air, and carry it at pressure day in and day out, is about as diligent an enemy to long casing-life as can be conceived.

A tube that *will* carry air, and hold it under shock and blow, is about the best friend a good casing has.

For the good of your casings, then, and the sake of your own satisfaction, use Goodyear Tubes on your car.

They are built to *hold* air, and *keep on holding it*—they are strong, spry and enduring, made up of many paper-thin sheets of rubber laid one upon another, and vulcanized into a perfect air-retaining unit.

They are heavier than ordinary tubes and more able to enforce the full service of which a casing is capable. Their valve stems are vulcanized in—not stuck on—and one of the commonest causes of tube trouble is here eliminated.

However you consider them, in service or substance, Goodyear Tubes are an extra-value product. We especially recommend the Heavy Tourist type for severe and sustained service.

How to Become a Master of English

MARY ROBERTS RINEHART

Eminent Novelist, Dramatist, and War-Correspondent, Author of "K," "Kings, Queens and Pawns," etc.

"Your lessons seem to me excellent for the purpose. Also the selection of books for study appeals to me very strongly. It looks like a scholarly and most intelligently compiled course of instruction and writing."

BOOTH TARKINGTON

Distinguished Novelist and Short-Story Writer, Author of "Monsieur Beaucaire," "Seventeen," etc.

"Your course is almost painfully needed by many professional writers and speakers. A student who intelligently follows your course will know what he is talking about when he talks or when he writes. His audience will certainly know, because he will talk well, no matter what his subject."

THERE is not a walk in life in which a mastery of the English language will not bring advancement, a larger income, wider influence. It will make the road to success smoother and surer.

To think straight and purposefully you must know words, for they are the finger-posts of thought. *Get a command of words* and it will give you a command of men—of circumstances. It will aid you to meet customers, to make sales, to close contracts, and to impress men of affairs. It will enable you to express yourself clearly and forcefully. It will help you to write in a clear, bold, vigorous style that carries conviction. It will give you power and personality. Good English is good sense, good business. Read what

These Master Word-Artists

have to say of the advantages to be derived from the study and application of Grenville Kleiser's *Mail Course in English*. Here you have expert opinions from people who know all the ins and outs of the literary craft, who are paid large sums for their work, and who can appreciate, as no amateur can, the vital importance of a mastery of English. For the young writer, or for the old one, either, for that matter, to take up and work through this course faithfully is to secure an increase in efficiency that will be worth much every year in real cash. No other asset will be of such value to you in your career.

It Will Work Wonders for You

But it is not only in the teaching of a correct use of words or in the gradual upbuilding of a pure and effective English style that this course is of such splendid service to you. It has above and beyond this an inspirational value, an educative power, a character-forming influence that will accomplish wonders for you, that will make you twice the man or woman you were. Grenville Kleiser can teach you by mail in spare moments at home, how to

Enter Good Society—
Be a man of Culture, Power, and Influence in Your Community—
Use the Right Word in the Right Place—
Become an Engaging Conversationalist—
Write Tactful, Forceful Letters, Advertisements, Stories, Sermons, Etc.—
Enlarge Your Stock of Words

"I am so favorably impressed with Mr. Kleiser's Course—his method of instruction—that I would advise every person to take it as part of his education."—*Dr. H. J. Boldt*, New York City.

"If one desires to enlarge his vocabulary, improve his diction, polish his style, and express his thoughts in clear, terse English, he cannot do better than take your course."—*Rev. S. A. Wallin*, Nebraska City, Neb.

IRVIN S. COBB

Famous War-Correspondent, Humorist and Writer, Author of "Back Home," "Judge Priest," etc.

"Any man who helps English-speaking people to a better knowledge of practical English deserves praise and has mine."

JOHN BURROUGHS

Venerable Naturalist and Nature Writer.

"I see valuable and helpful hints in these lessons. Any young man or woman who has an undeveloped literary talent ought to profit greatly by this course."

Whatever Your Business or Occupation Grenville Kleiser Can Make You More Successful

What is true of the writer is true of every other profession. Whether you are a doctor, a lawyer, a merchant, a clergyman, a teacher, a salesman, a clerk, or in business of any kind, command of English will bring you to the front and lack of it will be a drag on your upward climb. You need good English in every relation of your life and it will help you as no other single thing can do to reach the goal of your desires and achieve success.

ELLIS PARKER BUTLER

Popular Humorist and Short-Story Writer, Author of "Pigs is Pigs," "The Incubator Baby," etc.

"A good idea excellently worked out. Supplies what nine out of ten men and women need before they put pen to paper or open mouth before an audience. I should especially recommend it to college graduates and others who have been stuffed with petrified English and turned loose with no knowledge of working English."

FREE—"How to Become a Master of English"

RUPERT HUGHES

Noted Novelist, Poet, and Dramatist, Author of "Empty Pockets," "Excuse Me," etc.

"You have provided an effective and sufficient course of lessons in the mechanism and the art of writing English. I congratulate you on your achievement and I congratulate those who are fortunate enough to approach the chaotic vastitude of our dictionary under your guidance."

We want you to read this booklet that you may understand what this course will do for you, the real practical help it will give you in a hundred different ways. You have a message, a something within you that demands expression. You need no longer be voiceless. Learn the mastery of English and realize your own possibilities. Be yourself at your best. It means more money, more power, more life in every way. Sign and mail this coupon NOW. Tomorrow you may forget and the opportunity will be lost.

Funk & Wagnalls Company
354-360 Fourth Avenue, New York

Gentlemen: Please send, at no cost or obligation to me, the booklet, "How to Become a Master of English," with full particulars of the Grenville Kleiser Mail Course in English.

ONE EVERY MINUTE

(Continued from Page 25)

The office manager read it and returned it to Mr. Shadd. His staring eyes were darting such volleys of interrogations that Shadd volunteered:

"Mr. Lipps, that represents—er—a part of one of my —— Well, you might call it one of my lucky investments. I have made it a practice to trustee one-half of the profits of such deals. I am sure of the income at all events. After my death the principal goes to my—my beneficiaries. My wife is the chief one, of course; but Winifred comes right after her."

"I'll be da—er—I'm sure I'm much obliged to you, Shadd," said the office manager deferentially. "I hope you will visit us and see for yourself what she is like."

"I bet she's a little queen," said Shadd happily, thinking of his own royalty.

"Thank you," said Lipps with respectful gratitude.

Fortune had waved her magic wand over these two men and they had changed positions.

"And you won't say anything about it in the office, will you, Mr. Lipps?" said the modest benefactor.

"No. But say, Shadd —— Well, I never dreamed you—er ——"

"I don't blab my business all over the shop. That particular investment was a little deal of mine in one of the war brides. I closed it out just before the news of the sinking of the Lusitania reached the Street. But the reaction had to come."

"So you said. Well, they are still going down," said Lipps, gazing with a sort of gloomy admiration on Mr. Shadd.

"Are they?"

"Yes; I just had 'em on the phone ——" Lipps stopped himself—too late.

Shadd smiled commiseratingly, lumping Lipps with the Rumneys and the Meiggses and the Paines. Then he observed slowly:

"Well, I've never had any trouble in knowing when to get out. Even before I buy, I figure out at what price I'll let 'em have mine. A man ought to know what profit will satisfy him, and when his price is reached he ought to slide out, no matter if everybody says the stock is going a hundred points higher. Why, when I sold my Undersea ——"

"You didn't have Undersea?" And Lipps stared, awestricken, at this clerk, suddenly revealed a great man.

"Two hun—lots of two hundred shares each, bought at eight and nine—plain nine! I sold one lot at 300 and the other at 301."

"What!" almost shrieked Lipps. "I bought ten shares at 185 and another ten at 200 on inside information, and I thought I was a plunger—paying such prices."

"I wasn't gambling," said Shadd almost reprovingly. "I happened to know what business the Undersea Craft Company stood a good chance of getting."

"How did you know it?"

"I—I—I have a friend, and—— Well, I make it a point to keep posted."

Shadd had doubled his purchases and his profits in the telling; and though he did not yet believe his own lies he found no trouble in making Hen Wilkins an insider.

"Well, I'll be blowed!" exclaimed Lipps, looking at Wilberforce as if he couldn't believe his eyes. "I never should have thought ——"

"You'd never what?" And Shadd frowned, thinking Lipps thought he was lying.

"I'd never have held on to mine if I'd only known you were selling yours," Lipps corrected himself, trying to look as if Shadd were the source of all wisdom.

After what Wilberforce had received in Woodcock's office, the tribute left him calm. His indifference impressed Lipps profoundly and he said:

"You might have told a fellow."

"I—I don't talk about my little deals."

"Little deals?" echoed Lipps; and Shadd was rewarded. "I know you don't, you old oyster!" And the manager slapped Shadd's back tentatively in lieu of the old-time nod.

Shadd noticed that Lipps went into the private office. He never knew what Lipps said; but that night both partners, as they went home, stopped and shook hands with Wilberforce Shadd. And both partners said, most cordially:

"Good night, Shadd."

Lipps said:

"Good night, old chap. I'm not going to thank you again for Winifred. But, say, the next time you have a good thing ——"

Shadd shook his head. He knew he should never again gamble. He had no money to gamble with; and, moreover, tip giving was dangerous to a reputation for infallibility.

Lipps frowned. Stinginess with money is bad, but stinginess with stock-market tips is far worse. But Shadd, thinking of Henry Rumney, remarked slowly:

"The last time I gave a tip to a friend he made fifteen thousand dollars. You'd think he would have been grateful, wouldn't you?"

"Yes, I would. I know that I ——"

"Well, he called me a skunk because I didn't make my tip strong enough for him to have mortgaged his home, and so on. He said I ought to have made him buy enough stock to make one hundred and fifty thousand dollars. He blamed me for not making it. We don't speak now. I don't say you'd be the same, Mr. Lipps; but I'd like to keep your friendship."

"No matter what you did to me, I'd be your friend," said Lipps earnestly. "So long as you mean it for the best, I am not the kind to whine if the tip—if things don't come out as we hoped. Just try me, Shadd, the next time you have something good enough for you."

Shadd, noncommittally not answering, turned to his work. Whereupon the manager said:

"Go home, man! People will think I'm a slave driver. You have all day to-morrow. Come on! I'm going your way."

Wilberforce did not wish to go with Lipps, because it suddenly struck him that he had to do too much lying to the manager. He never before had been obliged to lie about anything; but his stock-market winnings somehow made him say things he never meant to say. To begin with, the very winnings did not seem true. He could not quite persuade himself that he really and truly was worth sixty thousand dollars. It, therefore, did not seem any less true to imply that he was worth one hundred and twenty thousand dollars. If you believe in miracles there is no need to be conservative. That is probably why all men magnify their market winnings.

"I've got to finish," said Shadd determinedly.

"That's some employee!" muttered Lipps, thinking of Shadd's wealth and Shadd's loyalty. Then he said: "Fine chap!"

Thinking of Winifred's luck, he wondered what the precise amount might be. Well, it was velvet, anyhow.

XX

WILBERFORCE SHADD left the office pleased with himself. Lipps' kindness; the new amiability of both partners; the deference of Molloy and Ross; the respect, bordering on fear, with which he was regarded by the lesser clerks, who had heard whispers of millions—curiously enough did not strengthen his sense of loyalty to the firm. No longer fearing, he no longer could feel grateful. What he thought was that he was a man with two thousand and eighty dollars a year from his salary and three thousand dollars from his investments. This did not give him earnings of five thousand and eighty dollars a year; it gave him the five thousand and eighty dollars without the need to sweat.

He carried his head high. His eyes were bright, his step elastic, his entire bearing that of conquering youth.

His wife was in the kitchenette, and not, as he half expected, in the vestibule, waiting for him as a sort of reception committee. He sought her, his eyes beaming brightly and kindly.

"That sure smells fine!" he vouchsafed, taking a deep inhalation of beefsteak-pie steam; others might as well share his happiness if talk could give it to them.

She turned toward him eyes utterly free from fear; so that he scarcely recognized her.

"Say," she asked bluntly, "what did you tell Mr. Warren?"

"Mr. Warren?" he echoed, and looked blank.

There was no need to lie, but it is always well to play safe; and, moreover, there was a curious expression in her eyes—a sort of challenge that made him uneasy, on general principles.

At Your Age Refuse to Grow Old

BEGIN now with Pompeian MASSAGE Cream and let your face stay young. Pompeian is the key that opens many a door to business opportunity and social joy, because Pompeian gives a clear, attractive, athletic glow that suggests health, youthful vigor and clean living.

Think how many years older your face looks than skin that is unexposed—for instance, on your arm. Yet the world judges your age by your face! How unfair to yourself not to counteract the evil effects of dust, dirt, wind and weather; not to have the clear, youthful, healthy and attractive skin that is rightfully yours!

And it really is so easy to acquire!

Pompeian MASSAGE Cream

A pinch of Pompeian MASSAGE Cream rubbed in and then rubbed out again, cleanses and purifies the pores. The gentle frictionizing stimulates circulation, brings out the glow of health that soon becomes characteristic of Pompeian users, whatever their age.

Make This Test

When called to meet some one before whom you wish to appear your best, do this: Rub a pinch of Pompeian MASSAGE Cream into your cheeks. Rub it out again!

What happens, besides the removal of hidden dirt and grime? Your mirror tells you! Shine and oiliness have gone. Gone, too, the drawn, weary expression. Refreshed, youthful cheeks smile back at you.

But best of all is the greeting of your friends, "Why, how well you are looking!"

We repeat, "Refuse to grow old."

Pompeian MASSAGE Cream in jars, 50c, 75c & $1, at stores wherever toilet articles are sold. Buy a jar today in the one nearest you.

The Pompeian Mfg. Co., 49 Prospect St., Cleveland, O.

Mary Pickford Panel
and Trial Jar

Miss Pickford has granted the makers of Pompeian toilet preparations permission to offer the **FIRST** Mary Pickford Art Calendar. Size 28 x 7¼ inches, in beautiful colors. Art store value 50c. Our price 10c. A trial jar of Pompeian MASSAGE Cream will be included.

Pompeian NIGHT Cream
For Dry Skins

Yes, Mr. Close Shaver, we frankly made Pompeian NIGHT Cream for the ladies, to soothe and beautify their dry, chapped skins at night. To our surprise we find that Mr. Man has acquired the habit of dipping into his wife's jar after a close shave on a cold, skin-drying morning. Then he gets a tube for himself! Yet we did not have him in mind at all when we originated this wonderfully soothing, snow-white cream! Jars 35c & 75c; Motorists' tubes 25c, at the stores.

P. S. Good for the kiddies' chapped hands and lips, too.

Pompeian HAIR Massage
For Dandruff

For dandruff, nearly everybody has tried something either over-perfumed or actually unpleasant in itself. Pompeian HAIR Massage is neither; has a *vanishing* perfume and is wonderfully effective. Enthusiastic men and women write us about Pompeian HAIR Massage. Men sprinkle it on the hair; massage it into the scalp gently for a few moments and then use a soft towel. Presto, in three minutes the scalp is cleansed and the hair fluffed up so it looks twice as thick as it really is. In a short time dandruff goes. Applications and bottles at the better barber shops. Bottles, at the stores, 25c, 50c & $1.

THE BROTHERHOOD MAGNIFICENT

THE most glorious reward we can point to for the social strivings of this and past centuries is the many ways, and the stable, practical ways, in which the Brotherhood idea is manifesting itself today. The basic yearning in man for fellowship and mutual aid, cradled and ever nourished in the Church, now finds expression through innumerable channels.

Early Societies and Guilds did their part. The State now assumes vast responsibilities; the commercial corporations have their welfare programs. The Masons, Odd Fellows, Knights of Pythias, Knights of Columbus, in addition to a great number of Beneficiary Societies, all are manifestations of the Brotherhood idea.

It is in this spirit that we want to welcome you into the order of The Maccabees, where the Brotherhood idea means not only warmth of fellowship but financial provision for the future, with complete independence. The Maccabees found their inspiration in the words and acts of Judas Maccabeus. Before going to battle twenty-two hundred years ago, facing ten to one in numbers, he said to his little army: "If any of you has builded a house, or married a wife, or planted a vineyard within a year, step out of the ranks."

Thus do The Maccabees provide for the women, the children, the old and the sick. Here is a great modern organization, with investments in bonds and other assets of over **$21,000,000** and a live membership of **300,000** serious, practical people. A true fraternal and economic brotherhood, owned by the people, run for the people, giving all the benefit of the economy in operation through co-operation, as evidenced in low premiums.

The Maccabees was the first large fraternal organization to take the important step of getting right financially and computing its rates on a standard that would bear rigid commercial analysis. ***A Maccabee certificate is as good as gold.*** Maccabee homes have already received over **$90,000,000** in benefits paid.

Whole Life 20 Annual Payment Certificates

This is one of the many popular forms of Insurance protection now offered by The Maccabees. It appeals strongly because it enables men to provide in fruitful years ***a paid up certificate*** which will guard them against want and dependence in later or less prosperous times. White persons from 18 to 50 years of age are eligible, if in sound health. There is doubtless a local lodge or "Tent" near you. Inquire of its officers or write any branch manager or headquarters for information and address of nearest lodge—"Tent."

(Continued from Page 62)

"Yes; Mr. Warren," she firmly repeated.

He looked at her steadily. Then, having found an excellent answer, he replied with much dignity:

"I said to him I wished to give my wife the sixty thousand dollars I made in Wall Street by investing my money in a stock that everybody said wasn't worth ——"

"He said you had tied it up so that nobody could take it away from you."

"You didn't understand him, my dear."

"He said so, himself," she insisted.

"It's true, in a way," admitted Shadd conciliatingly. "I've given the money to Mr. Warren to invest safely according to law, and hold it in trust for you, so that nobody can touch the income—not even for debt. The money itself is yours."

"How is it mine—and I can't touch it?"

She gazed at him in the utter noncomprehension of a logical mind.

"The idea is to protect you against loss as long as you live."

"Well, I never wanted to lose it."

"You would have if you had bought those Long Island lots, and ——"

"Who wanted to buy Long Island lots?" she said, beginning to blink her eyes.

"Jersey, I meant; or any other wildcat scheme." He felt he was not of the stern stuff of which conquerors of dollars are made; and to conceal his growing weakness before the menace of her tears he asked with a ferocious frown: "How did you know I was in Warren's office?"

"I went there, myself. You hadn't been gone an hour. He said you were the only man he ever heard of who had brains enough to salt away for keeps the money he'd made in Wall Street. That doesn't prove it's my money, does it?"

"Oh, no!" he said deprecatingly, not having heard her last eight words. "Oh, no! I'm not the only man."

"He said so," she asserted.

"Very well, dear." He had done his best to be modest.

She looked at him with the admiration of their courtship days. He felt himself getting first hot and then cold. What if she ever found out the truth about his wisdom? Presently she asked:

"Will you always have the sixty thousand dollars drawing interest?"

"Always."

"You can't lose the money—not even if you try?"

"No."

"Mr. Warren said to me: 'Well, Mrs. Shadd, you don't have to save money. It's already saved for you,' he says. 'All you have to do is to spend your income in having a nice time. You can't be really extravagant,' he says, 'no matter what you do with your money.'"

Mrs. Shadd shook her head to show she didn't believe the lawyer; and looked at her husband to see whether he would confirm Warren.

"He's right," said Shadd in a judicial voice. Then, still judicial, he added: "He did exactly what I told him to do."

But he did not say he told Warren to do it because he wanted to put the money out of the reach of Mrs. Shadd.

"In that case ——" Mrs. Shadd paused and looked frightened.

Her look of fear made Shadd look brave. He prompted encouragingly:

"In that case what?"

"I might have an automobile."

"For what?"

"For me to drive," said Mrs. Shadd uncomfortably. "Mrs. Warren uses Mr. Warren's all the time."

"She does!" sneered Shadd.

"She knows we've got the money," confessed Mrs. Shadd.

She did not tell her husband that Mrs. Warren's new friendliness was something wonderful—especially about giving advice. Mrs. Shadd had been inhaling incense all the afternoon; and, while she was getting her poise back, it had not been an unpleasant experience.

"You'll break your neck," said Shadd crossly.

"Mrs. Warren says it's the easiest thing in the world. I met so many nice people. They all drive their husbands' cars."

"Your husband hasn't any."

"Mr. Warren said no matter what you did, you couldn't lose your money. He said I simply couldn't be extravagant. I don't want to throw away money, but I ——"

"Warren's an ass!" said Shadd.

"But I promised to go with Mrs. Warren to look at some cars to-morrow. They demonstrate them for you, you know. And you don't have to buy if you don't feel like it."

"What's the use of going if you are not going to buy one?" he asked disagreeably. "You'd better tell her you can't go."

"I—I can't, Wilberforce!" she almost wailed. "I said I would. I—I ——" She paused, not liking to admit audibly that she was ashamed to back out. "I—I've just got to go!"

She went over to him and kissed him. Her cheeks were wet. He felt it with his own. He did not kiss her back.

"Damn!" he muttered.

The automobile was hers and he knew it. He hadn't bought a thing for himself. At the rate she was going how long would the money last? What were these women trying to make his wife believe she was?

XXI

BOTH partners believed the stories of Shadd's success in Wall Street. Why shouldn't they? The thitherto taciturn clerk was the kind of expert who could say about a stock "I don't know anything about it!"—and smile. So everybody knew that what he did not know was much more valuable than what other people said they knew.

Shadd, finding that his words were listened to with eager interest, began to think well of the speaker. He perceived that they knew he had beaten the unbeatable game; and they naturally assumed, first, that he had beaten it to the tune of at least a million, and, second, that his triumph was the result of both brains and valor. He perceived, also, that it was not necessary actually to have money in order to be considered a success. It was enough to be suspected of having it. Perceiving these things so clearly, he also perceived no reason why he should not think Wilberforce Shadd was everything the world thought him.

On the same day that poor Mrs. Shadd was literally forced by Mrs. Warren's success worship into buying the automobile, to pay for which Shadd had to borrow the money, anticipating his coupons, Mr. Morris looked up from the Wall Street page of the Tribune and said to Cunningham, the junior partner:

"I thought he lacked ambition, and all the time it was that he didn't need the money. No wonder he was the only man in the office who never asked for a raise!" He spoke as if he had succeeded at last in explaining the utterly inexplicable.

"No," agreed Cunningham perfunctorily. Then, with real animation: "I asked him whether he thought the decline was over. He said he didn't think so. Then I asked him point-blank whether he was doing anything in the market, himself." Cunningham paused to admire his own courage and sagacity.

"Well? Well?" said Morris impatiently.

"He looked me straight in the eyes—you know we used to think we ought to fire him because he always avoided looking at us—well, he looked straight at me and said: 'Mr. Cunningham, I am not buying anything.' And so I've decided not to begin averaging yet."

"That's all very well; but why in blazes didn't you ask him whether he was selling 'em?"

"I didn't think of it," confessed Cunningham. "Fool!"

He meant himself. His partner nodded a cordial agreement and said:

"I shouldn't be surprised if he was short ten thousand shares of Structural Steel."

As that particular stock had broken forty points since the sinking of the Lusitania, the little deal would have given Shadd a paper profit of four hundred thousand dollars.

"Great Scott!" exclaimed Cunningham, naturally assuming that Morris' surmise was a fact.

"I am going to promote him," went on Mr. Morris with the look of a man bent on doing justice.

"There's no vacancy," objected Cunningham, who saw at once through the subterfuge.

"I—er—we'll create a position in which his judgment will be of value to—er—the firm."

Mr. Morris, thinking of infallible stock-market tips, spoke almost piously. But Cunningham, knowing that Morris hated to raise salaries, pointed out:

"If we do we'll have to pay him more."

"Not at all," denied Morris. "He has his future assured. He doesn't have to worry about panics or business depression or the

CHESTERFIELD—the Extra-Thin Watch

WHEN selecting a high-grade watch, assure yourself of four things:—

The ability of the watch to keep accurate time. · Inbuilt sturdiness which insures lifetime durability. · Style and beauty in accord with modern design and pleasing to your individual taste. · The satisfaction of knowing that your watch is a recognized standard among timekeepers.

South Bend Watches have all these features.

Comparative tests have proved, over and over again, that no watches can excel these purple ribboned watches for dependable timekeeping. They are so designed and constructed that lifetime durability becomes a matter of course. Their beauty and modernness of design is at once apparent to the discriminating, and they are backed by an organization of unlimited resources and skill in the making of high-grade watches.

Among the wide variety to select from at prices ranging from $16 to $125, are: Studebaker Railroad Watches, making wonderful timekeeping records in railroad service; Chesterfield *Extra-Thin* watches, famous as thin watches of real accuracy, and a new model 19-Jewel *Extra-Thin* watch at $27.50 that sets a new standard at that price.

See them at your jeweler's or write for interesting booklet, "The Making of a Marvelous Mechanism."

loss of his job. By trusteeing half of his profits he never plays except on velvet. Great trick, that! Probably that's why he has always beaten the game."

"Bet your life!" agreed Cunningham, recalling that he himself had never had any velvet to play on in his life.

"He always," pursued Mr. Morris, still intent on not raising the salary of the man from whose stock-market tips he expected to make a fortune, "is in the contented frame of mind of a man who knows that a nice little income is waiting for him the moment he wants to quit his daily grind. Why, with such a man we have all the benefits of a pension system—at his own expense!"

"Supposing," inquired Cunningham coldly, "he should ask where the promotion comes in?"

"Well," replied Morris, "we'll give the position a high-sounding title. There are men who would rather be spared the humiliation of punching the time clock than get more wages. All a matter of titles!"

"Shadd isn't that kind," said Cunningham. "However, I'll see him; and I'll ——"

"No. I'll talk to him, myself," the senior partner broke in hastily. "He's a valuable man. I'll do it now." And he left the private office.

Cunningham sneered. Then he decided to take Shadd out to luncheon and immediately thereafter invite himself to accompany Mr. Shadd downtown to Mr. Shadd's brokers. He would love to see how that quiet, taciturn man, who had fooled them all for years by keeping his mouth shut, went about the business of making the ticker cram bushels of dollars into his pocket; and ——

"Well," announced Mr. Morris, picking up a letter from his desk so he shouldn't have to face his partner, "I did as you suggested. I raised his salary."

"I suggested?" indignantly interrupted Cunningham.

"Certainly you did."

"Not I," denied Cunningham. "With our increase in expenses, I thought you might give him the title of Imperial ——"

"After I told him that I—we had decided to make him confidential adviser and a sort of assistant general manager, he asked: 'And the salary?' Then, of course, I had to tell him we'd give him an increase of fifty ——"

"Fifty!" yelled Cunningham, sure now that Shadd would give them all to Morris first.

"Fifty per cent," explained Morris. "Why, that's only twenty dollars more a week. It sounds bigger when you say 'An increase of fifty per cent.'"

"Did you ask him whether he was short of the market?" interrupted Cunningham, weary of listening to unessentials.

"No; I didn't. I—did—not!" replied Mr. Morris with much dignity.

"Then, if we don't know what he's doing in the market, what was the sense of increasing his salary?"

"He's an old employee, who should have had an increase long ago," rebuked Morris.

What he did ask Shadd, to use the precise words, was:

"Do you think any big money is to be made on the short side of the market after the big reaction some of the stocks have had?"

And Wilberforce Shadd, at once flattered and frightened by his responsibilities, astutely guessed the kind of answer that Mr. Morris, being long of stocks, desired. So he reverted to the elemental wisdom of children and poker players, and replied:

"Mr. Morris, the time to go short of 'em was when I did—er—I mean, not now."

Whereupon Mr. Morris realized that no increase in salary was too great for this man, who had lifted a great weight off his mind.

xxii

THE stock market had begun to stiffen and, with it, the hopes of the men who, not being so wise as Wilberforce Shadd, had not sold out at the top. To buy or not to buy is always an interesting question with people who have no stocks and do not wish to buy prematurely.

But to people who have stocks bought higher up, and wish to average, the question becomes vital.

Shadd entered the office with a frown on his face, as if he was greatly displeased—not with anything he had heard, but with something he had thought. This, however, did not discourage Lipps, who was waiting for him, his newspaper open at the financial page.

"Good morning, Wilberforce," said the office manager. "How are you this fine spring morning?"

"'Lo, Lipps!"—short and snappy from Shadd.

"My boy, you haven't answered my question." Mr. Lipps' rebuke was plainly prompted by affection.

"What question?"

"How do you feel?"

"Rotten!"

"Not sick, old man, are you?"

Lipps' face showed real solicitude. If the previous day's strength foreshadowed the resumption of the bull market, it wouldn't do to have the great conqueror of dollars in the hospital.

"No, not sick; only married," answered the philosopher Shadd. "I tell you, Lipps, just as insufficient capital is the cause of ninety-five per cent of our commercial failures, I firmly believe wives —— Oh, pshaw! Let's talk of something else."

Lipps was more than willing to obey his dear Wilberforce. He promptly said:

"I see the market closed pretty firm last night."

He gazed at Shadd, with his soul in his eyes. Shadd, a married man and, therefore, an adept at seeking painful forms of self-torture, instantly thought of the worst thing that could happen to any human being: To see the market go up by leaps and bounds, day after day, with nary a reaction, and he long of nothing—not one share!

He turned to the office manager and said solemnly through his clenched teeth:

"Lipps, we are going to have the biggest boom this country ever saw. Yes; that the world ever saw! Everything that's happened up to now is nothing, absolutely nothing! compared with what's coming!"

Lipps was thrilled by the speaker's voice, by the speaker's look, and by the vision of what the biggest boom this country ever saw would do to the bank account of Mr. Alvin J. Lipps. Then, to convert the bank-book figures into hard cash, he asked with a sort of deferential eagerness:

"What stocks would you buy?"

"Any of them! All of them!" answered Shadd savagely.

Lipps could not help looking disappointed. General tips were never satisfactory. It would be his luck to get into the one dead one in the entire list. He thus began to feel that the boom would do him no good. This thought made him desperate. He asked—almost on his knees:

"Wilberforce, won't you please tell me when you buy anything? I want to trail behind you and keep my mouth shut. If I could get in when you do, and slide out with you, I'd be more than grateful. You don't have to give me any reasons. Just say 'Do this!' and I'll do it."

He looked as he felt—ready to obey Shadd, no matter what the command might be—to the death!

Shadd shook his head.

"I don't know," he said gloomily, "whether I'll ever touch 'em again."

By speaking of American securities as though they were playing cards he gave himself a professional standing that made Lipps, thinking of his uncashed ticker profits, say in genuine distress:

"Don't talk that way, old chap! I don't know what's happened and I don't want to pry into your private affairs. But whatever it is, you want to forget it. If what you say is coming, it's your duty—by George, it is!—to—er—to take advantage of it."

"What's the good?"

"You want to get out of that mood. There is no reason why you shouldn't be contented. You've got everything a man could ask for—money, health, the good will of your fellows, the certainty of a partnership in the old firm before very long ——"

"And a wife!" said Shadd, completing the catalogue of his blessings.

Lipps shook his head commiseratingly, and discreetly kept his mouth shut. Then he ventured on a muttered:

"Too bad!"

It turned Shadd's trouble into words, as verbal sympathy is so apt to do:

"Sometimes, when I think—I don't want to tell you my troubles, Lipps."

Lipps did not want to hear them, but he thought of the future supply of tips. He said:

"Sometimes it helps a man to speak. If you think I can do any good—why, go on and tell me, old man. After all, a friend is a friend."

Lipps was looking sympathetically at Shadd, but he was thinking how hard it was sometimes to tell good tips from bad. The last time he got two at the same time—from a banker and from Vin Markey, the cashier at Kendall & Robert's, a rival firm. Lipps took the banker's tip. The stock went down seven points, while Vin's stock—which he didn't buy—went up twenty-three. What he would do would be to follow not Shadd's tips, but Shadd's actual operations. There would be no bad tips that way. He therefore put his hand on Shadd's shoulder and said fraternally:

"Just what's the matter, brother?"

"I married her because her father was a man who couldn't keep a cent—went through half a dozen fortunes! Never had any money in the house. It made his folks learn to count their pennies. I didn't have very much when I married; but she was—my wife, I mean—she was a great manager. Say, at times she really was what you might call close!" And Shadd, thinking of Ann Elizabeth as she used to be, now looked indignantly at Lipps.

"Some of them are," admitted Lipps reluctantly.

"My mistake," pursued Shadd, "was in letting her know I had made that—that I ever made a cent in Wall Street. I ought to have let her think my salary was all I had."

He shook his head in wonder at his own imbecility. In the old days they used to save money. Now he had been obliged to borrow one-half of the first year's interest on the sixty thousand dollars to pay for the wholly unnecessary automobile. He hadn't spent a cent for himself except for actual necessities. He couldn't afford it!

"You couldn't live on your salary," smilingly expostulated Lipps; he didn't like tightwads; but this was a friend.

"We did, for—er—quite a time," said Shadd, who had become an expert at catching himself in time. "And now she is running round with a lot of bens who have nothing to do but gab and spend their husbands' incomes. Say, she's opened charge accounts in every shop in the city!"

He did not say that Mrs. Warren had made Mrs. Shadd do so, and that Mrs. Shadd had bought nothing.

"It's too bad! But after all, old man, you can afford ——"

"I can't afford to buy a three-hundred ——" He paused. Mrs. Shadd had timidly asked for a three-hundred-dollar diamond ring, because all the other women wore them. Shadd went on, the pause barely two seconds long: "—— thousand-dollar pearl necklace, can I? Especially when she'd never wear it, but keep it in the safe-deposit box, afraid she'd lose it. Can I afford it? And a thousand other things a day?"

"You're right."

"She thinks, because I trusteed—er—half my Wall Street winnings, that my principal is income; and, of course, she doesn't see why she shouldn't buy everything that's for sale, and ——"

"Telephone, Mr. Shadd," interrupted an office boy respectfully—the office had decided that the real boss was Shadd, the millionaire, seeing how deferentially he was treated by Mr. Morris, Mr. Cunningham and Mr. Lipps. Jim Molloy and old Ross confirmed the office suspicions.

It was Mrs. Shadd, who at one time feared that Wilberforce might lose his job if he was five minutes late, or if he wore a sporty necktie. The wheels of the ticker had revolved since then, and her new friends were sowing seeds in the garden of her soul.

"Oh, Wilberforce dear!" she said. "The Reverend Ernest West is getting up subscriptions for the most wonderful charity ——"

"Don't you sign any paper!" interrupted Shadd in a shrill voice.

"I haven't. Mrs. Warren wanted me to give him a check, but I told him to see you. He's going to get one thousand strong, healthy orphan boys. Then he's going to buy a thousand acres of good orchard land; and he'll set out one hundred thousand apple trees. The boys will do all the work; it's easy, you know—pruning and mulching, and all that. And by the time the boys are of age Mrs. Warren says the trees will be bearing; and, instead of being the flotsam and jetsam of a great city, or homeless wanderers along the nation's highways, they'll be expert orchardists and rich men. The land costs only fifty thousand dollars—for a thousand acres, dear; just think of it! And the trees ——"

"I see where the Reverend Ernest comes in," said Shadd, cuttingly, and hung up the receiver.

He turned to Lipps, murder in his eyes.

Thinking of You

HERE is a great big institution which is governed by the same simple, everyday thoughtfulness and anxious desire to please you that makes what your mother cooks for you taste better than anything else.

You know that when your mother prepares a dish for a meal, that dish becomes the *chief feature* of the occasion. Your mother has been careful in selecting the materials, she has been *particular,* she has been watchful—she has been *thinking of you.*

We try to attain what is really a home influence in the preparation of our products.

OF the thousands of hams selected for our curing and smoking only an average of *four out of ten* have just the right firmness of meat, the right proportion of fat, the right smoothness of skin—the self-evident *quality* to earn Wilson Majestic label.

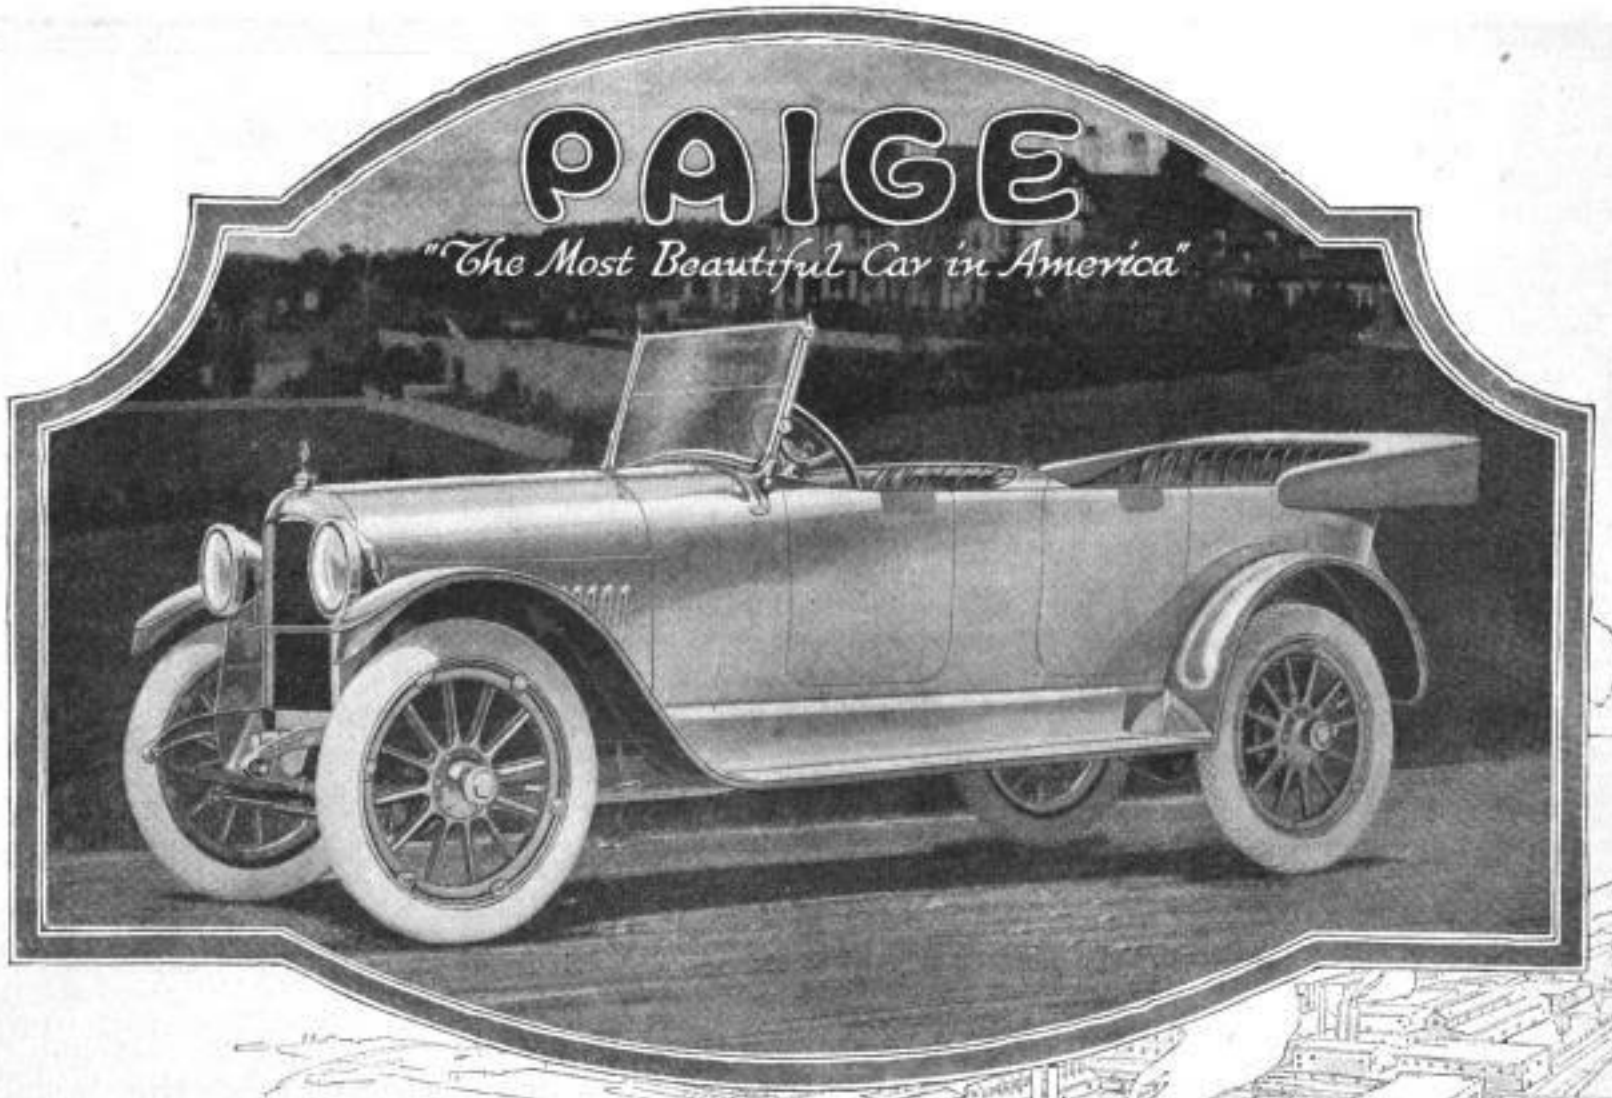
So with the selection of meat for Majestic Bacon. The very choicest pork sides are chosen, and only the *heart* of each side is accepted, to be cured and smoked as Majestic.

There, then, you have the *secret* of the "deliciously different" old-time taste which appeals to and gratifies *particular* people.

AND every step of the curing and smoking and packing is watched and inspected and protected, because we insist that Wilson's Majestic label must be your guaranty of the cleanest, choicest food products.

That label itself says to you: "Here is a food product which is pure; clean, excellent, prepared with respect —and *good.*"

Order Wilson's Majestic Ham and Bacon today. Buy the whole ham or whole piece of bacon, as a matter of economy.



All Wilson and Co. food products are prepared under U. S. Government supervision.

"This mark WILSON & CO. your guarantee"

CHICAGO NEW YORK KANSAS CITY OKLAHOMA CITY LOS ANGELES

Be particular—ask for Wilson's Majestic

The Home of "The Most Beautiful Car in America"

THE Paige Car is made in a mammoth plant which covers more than ten acres of floor space.

Here—in the home of "The Most Beautiful Car in America"—the art of precise manufacturing is found in its highest form of development. There is no guess-work—no "rule of thumb" measurement.

Many of the operations require one one-thousandth of an inch precision, and a rigid, uncompromising inspection system sees to it that these standards are maintained day in and day out.

Paige Cars are manufactured as carefully as the finest Swiss watches. Only the most expert mechanics are employed, and practically every labor-saving device known to modern shop practice has been installed to insure economic production.

The Paige Car is superbly built. For that reason it is a glutton for hard work and constant service.

The Paige Car is superbly designed. For that reason it is universally recognized as "The Most Beautiful Car in America."

Stratford "Six-51" 7-passenger	$1495 f.o.b. Detroit
Linwood "Six-39" 5-passenger	$1175 f.o.b. Detroit

(Concluded from Page 66)

"What is it now?" asked the alarmed Lipps.

"A thousand-acre orchard for fifty thousand dollars and one thousand orphans ——"

"A thousand orphans!" interjected Lipps incredulously.

"That's the way she does things," said Shadd.

"A thousand orphans?" repeated Lipps.

These ticker fortunes have a habit of shrinking when the unexpected happens in the stock market, as it always does. But, even though part of Shadd's principal was held in trust, no fortune could stand such an increase in its family.

"One thousand!" Shadd spoke with bitter distinctness. "And she's sending the Reverend Ernest West to get a check from me."

"Are you going to give it to him?" indignantly inquired Lipps, thinking of Winifred's legacy.

"N-no! But"—Shadd paused, for the reaction had left him less murderous—"he'll chin; and if I am polite to him he'll persist. And if I lose my temper and tell him to go to Hades, I'll feel rotten all day. And just when I wanted to keep my head clear!"

"Don't bother! Just you let me see him," said Lipps, thinking that the clearer the head, the better the tip. "I'll tell him!"

He would care for Shadd's fortune with his life. Shadd was a nice chap—and childless.

"Will you?"

"Yes. It won't spoil my appetite!" said Winifred's father.

(THE END)

THE SCENT OF APPLE BLOSSOMS

(Concluded from Page 16)

"Well," he demanded, "what do you want? That was a fine piece of work you did, lying about me to an old friend."

"I got a note for you, Bray," said Doyle.

"Ordering me off the premises, hey?" sneered Bray. "Well, let's see it."

Silently Doyle handed him the note. The Mississippi Mixer read it.

"*Dear Russ:* I can't forget that we were old chums. There are two things waiting for you in the manager's office. One is a ticket to Freeport. If you come there's a job, a job of hard work, waiting for you. You can make good if opportunity and yourself will help. The other thing is a check for a thousand dollars. If you take that, I will know that the Russell Bray I used to pal round with is dead, and I shall never expect to hear from him again.

"Your old friend,
"SAM ORDWAY."

"Is this straight?" demanded Bray of the house detective.

"I know that I had a talk with your friend Ordway before he left," said Doyle. "I told him that you were a likable guy, and maybe if you had a chance that you'd straighten out and ——"

"Quit the preaching! I mean the thousand. Is it there?"

Doyle looked his contempt.

"The cashier will give you the money for the check."

He turned his back as Bray rushed to the manager's office. Five minutes later, a thousand dollars in fifties in his pocket, Bray sauntered down Fifth Avenue. It was a great thing, this having made friends. Even after they got sore at you they sometimes made good. A thousand dollars would just about fix him up so that he could put across a nice little deal that would net him four or five thousand, with no comeback from the police either. Ordway was a soft one! With his pretty little sermon —— Oh, hell, it made Bray sick!

He stopped at the corner of Twenty-ninth Street. He had a hard head, and yesterday's libations had not affected his nerves or his stomach. A good luncheon now. Lucky that Ordway didn't know of the telegram. Well, let him suspect! Bray had his cash. He laughed.

A little fat man, emboldened by the smiling countenance, accosted Bray:

"Excuse me, sir, but I'm getting married."

"Well, don't let me stop you," said Bray.

"N-no, sir. But I'm a stranger in this town, sir. The lady, she's got an old landlady of hers to stand up with her, but I don't know a blamed soul in this town, and—and—it's just this church. I wonder ——"

"Best man, eh?" Bray's eyes narrowed. The little man looked prosperous. "Well, you bet I will."

He was best man at the wedding of Martha Westcott and Garfield Ordway; nor did he decline an invitation to the late breakfast that followed the ceremony. The lady who had "stood up" with the new Mrs. Ordway was much impressed with the bearing and manner of the Mississippi Mixer. She devoted herself to him. Bray hardly heard her. He was amused with idle speculation as to for how much and how easily he could trim the groom; but he started as the landlady said:

"And if it wasn't for someone sending a telegram, with that French lady's name signed to it, to a Mr. Sam Ordway, just think! They'd never met, and ——"

"What's that?" demanded the Mississippi Mixer.

The matron of honor decided that she had not been making so great an impression as she had thought. She repeated with detail. Bray stared at the bridal couple. So he, Russell Bray, had brought them together. "Miss." "Mass." He could visualize the messenger boy stealing thirty cents by altering a letter.

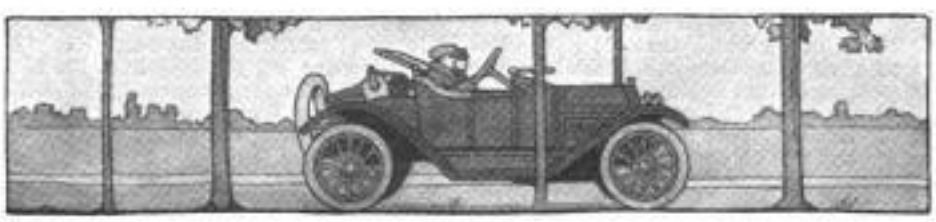
Then Sam Ordway would never know of the dirty trick that Bray had tried to play upon him. Bray felt suddenly ashamed—and glad.

He looked at the bride and groom. By George, they were already in love with each other! And they were going back to a jerk town in Massachusetts, to live like clams, and ——

"See, Martha? I made him promise to search the whole city, and I guess he did, but he got them! My, don't they smell fine? There'll be loads of them right outside your window, Martha, when you wake up to-morrow mornin' back home."

Ordway sniffed loudly as the smiling head waiter brought the bough of apple blossoms to their table.

"Some says orange blossoms, but I says apple blossoms for a bride," he cried. "What do you say, Mr. Bray?"



Bray smelled the fragrant odor. He saw himself, fifteen years old, palling round with Sam Ordway. To live like a clam, but —— He rose to his feet.

"I just remember an important engagement, Mr. Ordway," he said. "Will you forgive me if I wish you and your wife all happiness, and leave?"

"But I want to hear from you sometime," protested Ordway. "What's your address, Mr. Bray?"

"My address?" Bray's nostrils quivered faintly. The apple blossoms' fragrance filled the air. He could go back to the hotel, surrender his thousand dollars to the cashier, get the ticket, the ticket to—home! To home, where there were Martha Westcotts that he'd played round with as a boy, only their names were Sally Blair, and Peggy Joralemon, and —— They couldn't all be married, and—he sniffed the apple blossoms once again.

"My address?" he repeated. "It won't be hard for you to remember—it's Freeport, Mississippi."

More Coal Bills Cut One-Half to Two-Thirds

Guaranteed With the Williamson *Underfeed*

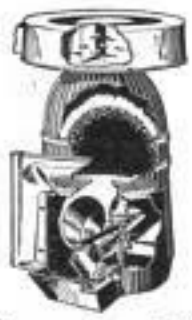
House Number One—9 rooms, coal bill reduced 50%. House Number Two—$37 heats 8 rooms. House Number Three—9 rooms heated for $36. Read the letters to the left. Then remember that we have thousands of others just as interesting—telling of coal bills cut ½ to ⅔, *guaranteed with the UNDERFEED!*

House No. 1 Saves

"The UNDERFEED is heating nine rooms and giving very successful results with about ten tons of soft coal per season. You can always rely on my putting in a good word for the UNDERFEED, as it is saving me at least 50% in my fuel bills each season."
(Signed) Herman W. Koch,
725 Chestnut St., Burlington, Wis.

House No. 2 Saves

"Referring to the New-Feed UNDERFEED furnace I can not say enough for it; it has cut my fuel bill more than half. It only cost me $37 this season and we heated 8 rooms and we were good and warm.
"We have a hard house to heat because it is all opened up. If it hadn't cut my fuel bill any I would not say a word because it is a comfort to take care of and also clean. We burn Cripple Creek Slack, $3.25 a ton."
(Signed) Frank Wellman,
Grand Rapids, Mich.



House No. 3 Saves

"The UNDERFEED is in every way satisfactory. I have a large house; four rooms about 16 feet square and five rooms smaller. Use low grade slack costing $2.00 per ton. Used about 18 tons coal; long, hard winter."
(Signed) C. C. Watson, Butler, Pa.

And all this guaranteed money-saving has a real meaning for you. The UNDERFEED *saves* because, first of all, it burns the cheaper grades of coal without dirt or waste. It *saves* because of its scientific principle by which coal is fed from below—the hot, clean fire always on top in direct contact with the most effective radiating surfaces. It *saves* because smoke, soot and gas are consumed as they pass *up through* the fire. It *saves* because there are no clinkers or partly burned coals—everything reduced to a clean white ash.

And the UNDERFEED *saves* time and labor, because it is operated from a standing position. No stooping. No grubbing. A boy of 12 can easily do it all with "expert" results!

WILLIAMSON UNDERFEED
Furnaces and Boilers
Cut Coal Bills ½ to ⅔ Guaranteed

Cut-out view of UNDERFEED shows how it burns coal on the "candle" principle. Hot, clean fire always on top of the fuel supply. No heat wasted. Smoke, soot and gas consumed as they pass up through the flame.

Besides all this, the UNDERFEED insures the same guaranteed ½ to ⅔ saving whether you heat with warm air, hot water, steam or vapor. No house too large or too small for the UNDERFEED—just the right heat always, no matter how variable the weather.

Get This Book Now Free

It is called "From Overfed to UNDERFEED." Tells the interesting UNDERFEED story by word and picture. You may not be thinking of installing a new heating system now, but get the book NOW. It will save you many a dollar later where your coal cost is concerned—to say nothing of cleaner, better and more uniform heat. Free for the asking—no obligation. Send the coupon NOW.

GRANDPA MAKES HIM SICK

(Continued from Page 14)

finally have to get off and lead; and I guess it's some job to drag a horse across the Chimneys!

"And about the time he gets across he'll meet us coming back!" Old Sim laughed long and weirdly. "And then he'll have to turn right round and cross the Chimneys again! Won't he be sick? Soft as a ripe tomato, Bill Hogard is. Nearly all the riding he's ever done has been on a chair in the Palmer House barroom. And about the only kind of criminals he ever caught were peaceful, law-abiding citizens, who just wanted to get drunk a little bit."

They traveled on. Old Sim had picked up a greasewood club, thick and tough, with a huge knob on one end, which caused it to resemble an exaggerated drumstick. With this resourceful implement he enlivened the Weasel's phlegmatic mount, bestowing upon its listless rump thumps of superior puissance, and scandalous invective of the vintage of Forty-nine.

Soon the country became more difficult. The desert growth grew higher and they began to encounter vast fields of cactus growing among the endless stretches of piled bowlders and yucca trees.

Emerging into a comparatively open space they came upon the sheriff. He sat in the stingy shade of a yucca, fanning himself with his hat. About him sat the members of his posse in varying degrees of semi-exhaustion. All were hot, weary and discouraged. Old Sim had been right. The ride across the Chimneys had broken their hearts. Near by stood the sorely tried horses of the party, their noses drooping nearly to the ground.

At first the astonished sheriff saw the Weasel only. He got to his feet as quickly as his stiffened muscles would permit and started to approach the captive, who sat upon his burro, inscrutable and passive.

"Well, Weasel," he exulted, "we've got you, haven't we!"

"*I've* got him!"

Old Sim Yaples gently interposed himself between the prisoner and the sheriff.

"What do you mean?" demanded Hogard. His sinister cross-eyed glare menaced Old Sim. "Ain't I the sheriff of the county? I've been trailing this man. Now I've got him; and I'll take him ——"

"*I've* got him!" Old Sim softly corrected again. "I'm a regular sworn peace officer of the thriving city of Copper Sky. I've arrested this man. We're in another county now—had you thought of that? And you'll *not* take him! He's my prisoner and I'll deliver him at the courthouse in the county seat and collect my reward. I don't trust any man with an eye like yours, Bill Hogard. I'll hang on to my prisoner if all hell pops!"

The old man's bleary eyes met the sinister, cross-eyed glare—and stayed. The sheriff hesitated.

"Where's your warrant?" he asked.

Old Sim relaxed and worried off a chew of tobacco.

"If you look close," he suggested, "you'll see my warrant!"

The sheriff's eyes traveled over the old desert man, took in the enormous star glittering upon his breast, and clung at last to the big shiny revolver in his belt, one brown old claw hovering near—unostentatious but handy.

Tales of Old Sim Yaples, vague tales but dark, recurred to the sheriff's mind; stories of men who had stirred up this viperish old desert rat, and ——

He recalled, moreover, the old fellow's reputed proficiency with that same worn revolver. It was notable, also, that Sim Yaples was always pleasantly willing to use it. . . . He hesitated yet again and the cross-eyes wavered slightly. Old Sim turned.

"Hup kai!" he yelled, and whacked the sleeping jackass upon the same old spot. "*Vamos pronto!* Hup kai!" And he was off over the awful going of the Chimneys.

The sheriff, still irresolute, turned to his posse.

"The old hellion's drunk!" he said. "Maybe it's just as well to humor him a little. We'll let him go ahead a while."

"You better watch that old poison lizard," advised Red Ochiltree. "He's hatching something in that bald head of his."

It was a hideous journey, back over the hot inferno of the Chimneys, across which the sheriff and his posse had already toiled. However, Old Sim Yaples seemed never to tire. His moccasined feet sought surely and with unerring judgment the best going and his ancient shins always miraculously escaped the knobbed stalks of the wicked desert cactus, appropriately named the Devil's Walking Stick.

And the sheriff, perforce, followed. He dared not lose sight of the prisoner; but his tortured body begged for rest and every step of the way was like the cruel massacre of Saint Bartholomew. So weary he was that he could not think calmly and with the good judgment which should distinguish a man holding his high office.

Old Sim was a constable; there was no gainsaying that. He had made his arrest in another county; that also was not to be denied. To take his prisoner from him by force—that was the problem which worried the sheriff. He could not figure out exactly what would be the result of this proceeding. If only the diabolical old walking machine would stop and camp until tomorrow! Perhaps he could be made drunk; or failing this, perhaps he might be bribed—no, that wouldn't do; the old man already was worth a million, so it was reported. . . .

Over and over the sheriff mulled the problem, until his mind grew as weary as his body. But still the procession wound onward through the devilish desert wilderness, a wilderness high enough to shut out the air and the wider view, but not high enough to shelter one from the brassy sun which beat upon the sheriff's palpitating brain.

Night came. The moon was just coming up over the Panamints when Old Sim at last condescended to camp for the night. Ignoring the sheriff and his posse he helped the Weasel to dismount, took the cuffs from his hands, and gave him his supper. Afterward he put the Weasel carefully to bed and sat by his side while he slept; all through the night his faded old eyes were alert, vigilant and sleepless.

At an ungodly hour he was on the trail again. He had made no noise and the sheriff very nearly got left. The bedeviled officer, awakening barely in time, hustled to horse without any breakfast, and again took up his position at the tail of the procession. The prisoner's hands were now manacled in front of him and he smoked a cigarette.

"Better turn him over to me now, Yaples," called the sheriff as he rode up.

"Much obliged!" retorted Old Sim with elaborate politeness. "But I'm going strong yet, sheriff—that is, for an old 'Grandpa' of Copper Sky!"

Again the sheriff hesitated. The saddle had used him most cruelly and he had had no breakfast. Nor had his sleep been all that it should have been. No man can feel the proud swelling of conscious superiority when his whole body is one grand ache, crying out for food and sleep and comforting embrocations. He fell in behind again.

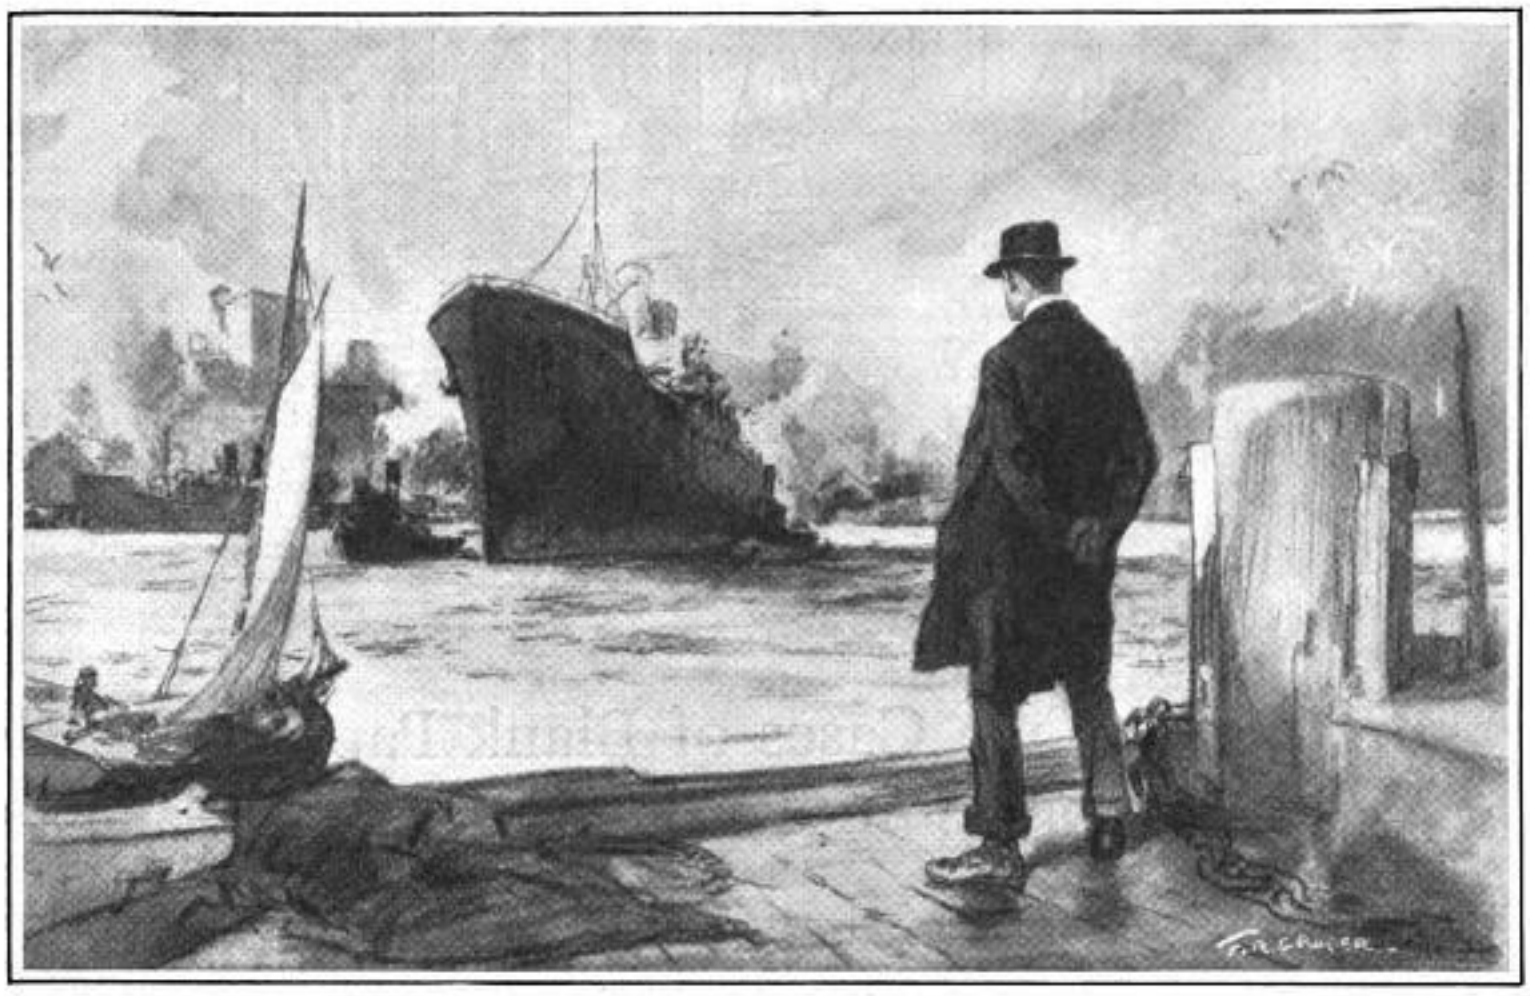
"I'll ride up close," he said.

"Ride where you dang please," said Old Sim ungraciously, "just so you don't bother my prisoner."

It was yet fifteen miles to the county seat. They had traveled long, but their progress had been slow, for speed was not to be thought of when crossing the Chimneys.

IV

IT WAS late in the afternoon when the motley cavalcade swung into the lower end of the county seat's main street. Old Sim had been drinking for an hour and somewhere he had lost his hat. Before entering the main business section he stopped and led the pack burro ahead. The long rawhide rope was still attached to the Weasel's manacled hands. Sim took the other end and climbed upon his pack donkey with it, sitting astride the mountain of water casks and camp paraphernalia. He kept the rawhide rope ostentatiously in his right hand, thus establishing clearly in the observer's mind that the Weasel was his individual captive. In his left hand he still carried the knob-ended club.



"Better rush him now, sheriff," suggested Ochiltree. "Quick—now ——"

But at that moment, looking straight ahead like a Roman general heading the triumphal march into his home city, Old Sim drew the big revolver from his belt; and again, just for a moment, the sheriff hesitated—just for a moment, but that moment was fatal.

Old Sim's skinny brown hand shot into the air, holding the gun and the rawhide

(Continued on Page 73)

The Man on the Dock

DOWN on a dock at New York, where ships come from afar to discharge their cargoes of crude rubber, is a man with a strange occupation.

He goes from case to bale marking the rubber.

His wonderful skill rejects or accepts the rubber according to its fitness, and the best of it goes to 47 factories of the United States Rubber Company, **the largest rubber manufacturer in the world.**

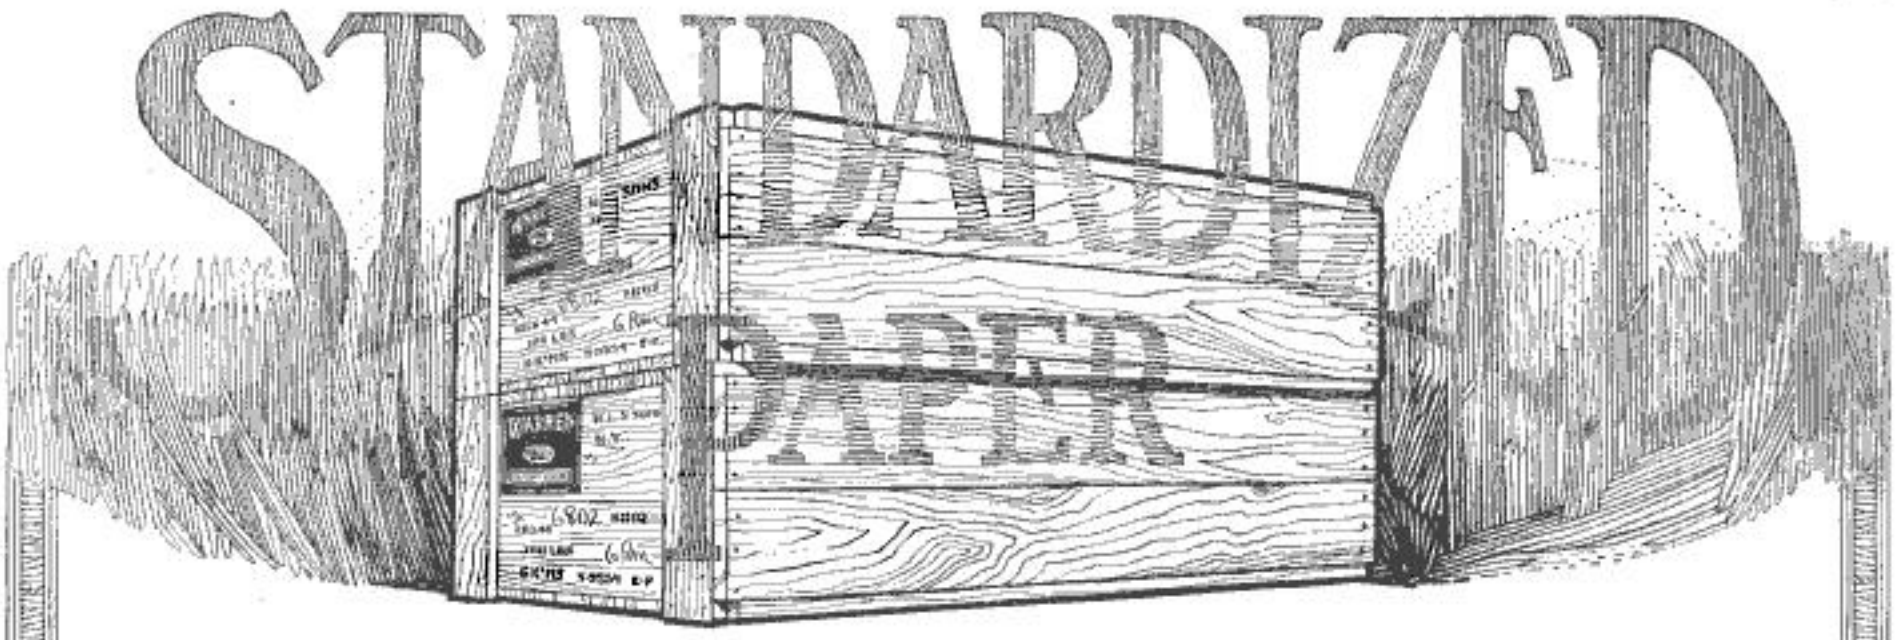
The man on the dock is the outpost of a scientific organization, a magnificent body of **260 chemists,** engineers and other technically trained men, who, with **841 inspectors,** stand guard over the integrity of the rubber goods made by the United States Rubber Company.

When the rubber moves from dock to factory it meets the advance guard of these men. They sample and test it by the most exacting methods known to the chemistry and physics of rubber. They divide it into classes according to the varying characteristics of its parts. They blend and treat each huge class to make it uniform.

They select and mix these different classes of rubber to get just the combination of desired properties.

This is because each kind of goods made—tires, shoes, garden hose—demands its own peculiar group of specialized characteristics.

As these various products move through the factory, they pass at every step under the keen eyes of inspectors, alert for flaws and faults.



But not yet do they reach the selling force. The finished factory products are tested repeatedly to see that they conform to the quality standard set for strength, elasticity, softness, resistance to wear, and the effect of heat and light. They are run on special machines that in a few hours duplicate the wear and tear of months of use; and finally pass the last ordeal of severe actual-service tests.

The consummation of all this skill and care is found in every product you buy under the United States Rubber Company's trade-marks.

From the forest tree to the purchaser, this scientific control shines out in all our enormous production—**all styles of rubber footwear; canvas rubber-soled shoes; weather-proof clothing; tires for automobiles, motor trucks and all other vehicles; druggists' rubber goods; insulated wire; soles and heels; belting, hose, packing, mechanical and moulded rubber goods of every description.**

United States Rubber Company

In These Two Cases of Blank Paper Are a Million Dollars in Potential Catalog Sales

When your copy is written and your type is set—

When your drawings are completed and engraved—

When the last proof has been corrected and the final O. K. has gone to the press-room where the forms of your new booklet are locked tight on the press bed—

Then something vital to the success of your booklet happens.

A press-tender wheels a truck-load of blank paper from the stock-room.

This paper is to be the physical structure of your booklet. It is what people will see, feel and hold.

The soul of your booklet may be its message but its body is paper.

The paper can endow your booklet with a beautiful, strong, magnetic personality, or it may make of it a poor, crippled, ugly, limping booklet, stuttering a wonderful message that none will stop to hear.

The press starts to turn. In a few seconds it is rolling away at its usual speed—its standard speed.

Was the paper made to take impressions this fast?

Your fine screen halftones approach, touch and leave a sheet of paper—another sheet—another sheet—another sheet—nearly a thousand an hour!

How are they printing? Are there to be good pages and poor pages in your catalog—good copies and poor copies—copies that make sales and copies that fail?

It's up to the paper.

The printing papers manufactured for fine printing by S. D. Warren & Company are known as Warren Standards because they are standardized papers—whether considered by the sheet, ream, case or carload.

Do you know what the point system did for type?

Do you know what standards in the size and height and alignment of printing types have meant in efficiency, economy, beauty?

Warren's STANDARD

Printing Papers

The Warren Idea of Standardization in printing papers works along the same principle.

Warren's Cameo is *Warren's Cameo*. A case of *Cameo* is not an assortment of good *Cameo* and poor *Cameo*. If you buy a tinted paper of a Warren Standard you do not find some sheets of strong and some of weak tint.

If you buy *Warren's Cumberland Coated* or the still glossier *Warren's Lustro*—the coating will not adhere on some sheets and pick off on others.

One page of *Warren's Silkote* will not be noticeably thicker than another page in the same job. One booklet on *Warren's Printone* will not fold perfectly, while another cracks or "buckles."

The Warren papers are tested, made to a standard—every sheet.

Good printers tune their presses—their ink fountains—their folders—their binders to the standards of Warren's Standard Papers.

Beautiful examples of what may be done with standardized blank paper are in the Warren Suggestion Book. It, as well as interesting supplementary booklets, will be sent you on request. Address

S. D. WARREN & COMPANY, 162 Devonshire St., Boston, Mass.

(Continued from Page 70)

that advertised his prowess. The heavy gun cracked. Chairs went over backward on the Palmer House porch, a block ahead, and the loafers in front of that high-toned hostelry sprang to their feet and looked down the street.

Again the gun popped; and Old Sim, one hand still holding aloft the revolver and the end of the rawhide, the other hand beating time with the knobbed club upon the pessimistic donkey's resounding ribs, lifted up his screeching voice and sang. Unmusical was the song, but full of interest. The accented syllables indicate the beat of the club at regular intervals:

"He *turned* me *down* when I *came* to *town*,
This *cross*-eyed *cus*-to-*mer*;
He *passed* me *by* with his *cold* cross-*eye*—
And *me* an *old*-ti-*mer*!"

At the first bark of Old Sim's gun it developed that the sheriff's horse was gun-shy. The weary brute came to life as though struck by an electric shock, lifted its forefeet into the air, brought them down, and then flung its rear heels skyward. A poor rider at best, the sheriff struggled with it; but the frightened animal refused to consider reason. Another crack of the revolver and it came buck-jumping after the procession as Old Sim, throwing back his bald head, once more emitted the introductory "O-o-o-h—" that always preceded the chorus, the drumstick held aloft; then—thump:

"*Bury* me *deep* in the *clay*, boys!
Pity me *if* you *can*.
Write this *down*, when you *come* to *town*:
'*Beware* of a cross-eyed *man*'!"

The crowd on the Palmer House porch roared wild Homeric laughter. Even the prisoner laughed, bending over his irons. As far as one could see, the saloons were pouring the howling citizenry into the street.

The parade moved slowly along between two gathering gales of crude, unrestrained mirth, and still the sheriff struggled with his crazed steed, killing fury in his cross-eyes and his face mottled with exertion. Opposite the Palmer House he lost the reins and thereafter he clung to the saddle horn. Still, with a strange, unreasoning animal perversity, the accursed horse kept its place in the procession; and, though it circled all over the street, it kept going forward. And always, above the din, the voice of Old Sim Yaples, coming to the chorus with that eldritch screech of an afflicted coyote:

"O-o-o-h—" Then—thump:

"*Bury* me *deep* in the *clay*, boys!
Pity me *if* you *can* ——"

At last to the sheriff's horse came a dim flicker of horse sense. He saw a side street and recognized it as the avenue leading to his livery-stable home. He shot down this side street and the sheriff assisted the departure with savage curses, still clinging to the saddle horn. He was out of the parade for good.

He was through, and he knew it. Not one chance in a thousand would he have of reëlection. Before midnight Old Sim would have related the story to appreciative voters in every saloon of the county seat—of how he had gone alone into the desert and caught the Weasel; of how he had stood off the sheriff and his posse; had maneuvered them into the main street of the town to make fools of them.

"I'll make you sick!" the old man had threatened.

And he had made his word good. The sheriff was indeed sick. His very name, he knew, if mentioned in that town during the next twenty years, would be the signal for a loud, coarse guffaw.

There was something pathetic in the downfall of the man—something deserving of pity; but the desert is pitiful only to the strong.

Old Sim Yaples delivered his prisoner at the courthouse jail as he had promised. Just as he was getting ready to go out and collect his reward he and the Weasel were left together, with no one near.

"Weasel," whispered the old man, "I spent a night here not long ago. This jail won't hold a good man till midnight—and the sheriff will sleep sound to-night, won't he?"

"Sure!" said the Weasel, his quick cunning leaping ahead of Old Sim's words. "What is it? Quick!"

"You remember the stone I leaned back against when we were having our li'l' party at Squaw Rock Water Hole? After I had cuffed you?"

After Meals—*Billiards!*

Of all the hours in the day the "Billiard Hour" is best. Then fathers and mothers gather with their happy brood around the Brunswick Carom or Pocket Table, now the life of thousands of homes.

Dull care vanishes when Billiards starts and sport is king till bedtime comes.

For parties, holidays and leisure hours—for health and happiness—*your home needs billiards.*

BRUNSWICK
HOME BILLIARD TABLES

Live cushions, true angles, fast ever-level bed—on Brunswick Tables your skill will triumph best.

Beautifully built of rare mahogany and oak—life-time construction and scientific playing qualities.

A Size and Style for Every Home

"Quick Demountables" can be set up easily and folded away in a closet when not in use.

"Baby Grand" and "Regulation Grand" for homes with a spare room, basement, loft or private billiard room.

Cues, Balls, Etc., Free

You can enjoy the delights of Carom or Pocket Billiards every day without incessant expense. There is nothing to buy but the table—we include a High Class Brunswick Playing Outfit Free!

Write Today for Color Catalog

Low prices, easy terms and home trial offer all explained in our handsome billiard book and catalog—"Billiards—The Home Magnet."

It pictures all tables in actual colors, shows photos of homes like yours with letters from Brunswick owners that will show you the endless amusement you are missing.

"Sure—yes! Come on, old-timer; come on! They'll be back here in a second ——"

"Scrabble in the sand where I sat. You'll find twelve hundred ——"

The jailer came up then, and Old Sim went forth to enter upon a spree that should far outshine the celebration which the now humiliated sheriff had ruined just when it was getting good.

A big round moon stood high above Squaw Rock, making of the landscape a spatter of shadow and white light. Into one of the patches of moonlight came a figure. It looked like a man, but it moved like a wild thing.

Twice it started to approach the rock by the water hole and twice it hesitated. Then it circled entirely round the spot, noiseless, furtive, exactly like an animal that has once found a trap and suspects another. At last the figure ventured nervously into the patch of moonlight and knelt by the rock, digging swiftly in the sand.

Presently there was a low exclamation. The man came to his feet, holding something in his hands. It rustled; also, it clinked with a dull and pleasant sound. There was a gleam, too, as it turned in the moonlight.

"He played square!" whispered the man. "I thought maybe it was a trap—but I risked it. And he played square!"

Perplexity, amazement, exultation and many more emotions were in the attitude of the man as he stood in the patch of moonlight, looking at the double handful of paper and gold.

Then —— A wandering rabbit, perhaps, or a night owl flapping to the ground by the water hole; but an instant after the faint crackle in the brush the patch of moonlight was all white again—and the Weasel had melted into the desert.

EXIT POST-MORTEM MERCHANT

(Concluded from Page 22)

our mistakes and trace them down to their sources. Understand? Look here, Quartersaw, do you know what happens every time goods are returned to us?"

Answering his own question, he handed the furniture man a schedule of thirty-three distinct things that had to be done in such cases. Nine executives were involved and twelve other employees. With considerable labor the research man had ferreted out this schedule from the routine of the store. Roughly he estimated that the money cost of one such transaction, in time and other expense, ranged from five to twenty dollars—sometimes more.

"It cost us somewhere round ten dollars to take back those table pads, Quartersaw. Now I want you to find out—diplomatically—why Mrs. Woodcliff Lake wouldn't keep them."

Later Quartersaw reported this:

"She says they were a week late in reaching her; so she bought elsewhere, not wishing to mar her new mahogany table."

To-day there is a system in that store, developed out of the investigations of the research bureau, which pins the responsibility on the very man who does a thing or doesn't do it. Of course this system, like all others, breaks down at times. But let us suppose that it breaks down in the furniture department and it isn't possible for the executives to tell what particular man is to blame for returned goods, or for something else. In that unhappy event Quartersaw himself must take the full blame, because he is the head of the department. A certain number of demerits are added to his record, anyway, no matter who is at fault in his department; but if the blame cannot be definitely fixed he gets a lot more of these demerits.

Tough? Yes; but the research man smiles and shoulders the blame for Quartersaw's predicament, for the store has cut down its returned goods sixty-five per cent.

Some research work devoted to charge accounts revealed the fact that the store had been neglecting some fertile fields. The credit manager had worked along conventional lines, and had lacked the imagination to undertake a statistical study of potential and actual customers. Curiously it requires imagination on which to base a mathematical inquiry.

"What kinds of charge customers pay the most promptly?" asked the research man of Mr. Cashdue, the credit chief.

"In a general way I should imagine ——" began Cashdue. But the research man didn't care for that variety of imagination.

"Omit generalities," he said. "Have you any exact facts that will show whether our charge customers who work on salaries are better payers than those in business for themselves, or vice versa? Have you ever dissected your credit records to discover whether families that have incomes round twenty-five hundred dollars a year, say, are more desirable relatively than those who have ten thousand? Did you ever take these two classes of families and analyze their purchases for a year, to discover what kinds of goods they bought and what the approximate net profit to the store might be on each class?"

"No; we have never been equipped with the office organization to make such an investigation."

"Did you ever make any such investigation based on groups of our charge customers, classified by ratings? Is the man worth ten thousand dollars as good a customer relatively as the man who ranks in the hundred-thousand-dollar class?"

Cashdue had opinions, but only meager facts.

"Have we ever gone out into suburban districts, or into the city itself, and made systematic studies of the residents, in order to provide ourselves with lists and information on which to carry out a campaign for good credit accounts?"

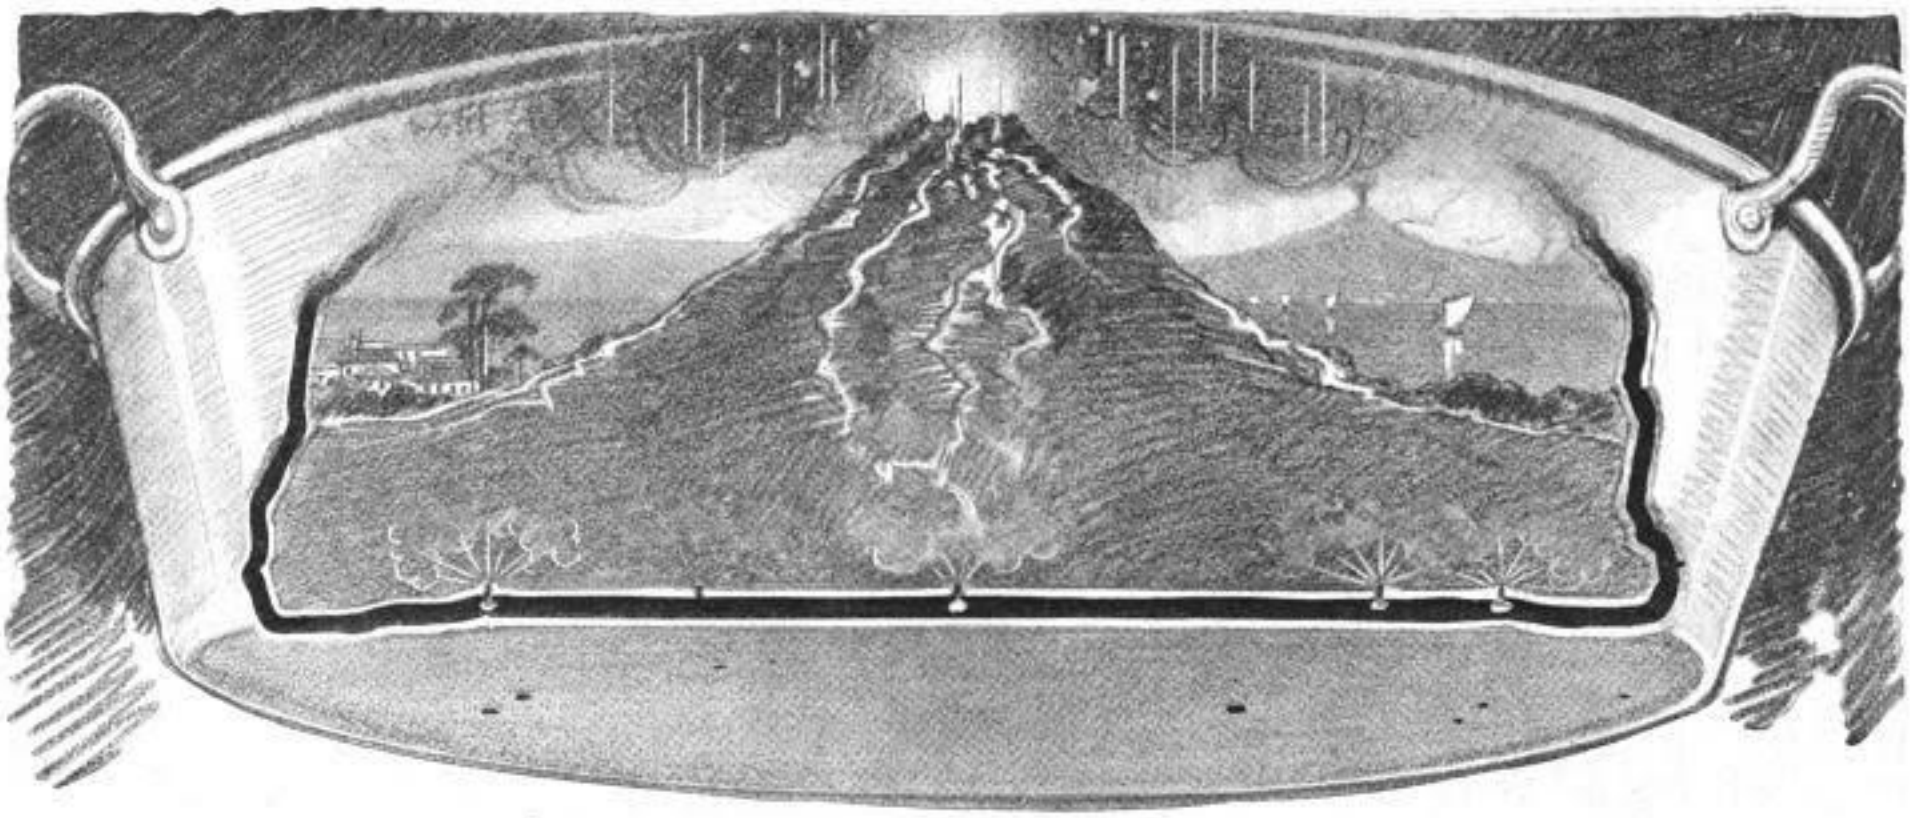
"No."

"Have we ever made an intelligent research into groups of spot-cash customers—people who have no charge accounts with us, but who might be much more valuable to the store if they had such accounts? Wouldn't it give us a great leverage if we were to list a few thousand of these people with cash in their pockets, and get concrete facts about them?"

Cashdue, of course, had vaguely contemplated the possibility of some of these things; but the research department is organized to turn contemplation and inaction into coördinated investigation, and this credit research is now being made. As the names and facts are gathered, the research man takes them and handles them from the standpoint of the economist and statistician. It is safe to say that ultimately this store will largely increase its credit business along conservative and profitable lines.

Analyzing the store's advertising, this research man found that certain departments were not getting adequate representation. It was found that some lines of goods—notably commercial stationery, linings and jewelry—actually had been given no space at all for nearly a year.

At various times the research man sends his assistants about the store to count the customers who trade at the various departments or who pause to examine goods but do not buy. These lookers are recorded as carefully as the regular customers; and when special advertising is done a certain allowance is made, in the calculation of sales results, for the nonbuying visitors. This factor is called advertising goodwill, on the theory that many of these people will become purchasers at the store in the future.



The men who do the counting of customers use small watchlike machines, which they hold in their hands; and they supplement the bare counts with pencil and notebook. They keep track of men, women and children; young, middle-aged and old; and, for purposes of special study, sometimes note the characteristics of the customers, such as faultfinders, boosters, discriminating or careless buyers, and so on.

Sometimes, for periods of days or weeks, the tally men are stationed at all entrances and a record is made of the total number of shoppers. Similar counts are made at the entrances of competing stores.

All this information is grouped and analyzed. It shows, for example, various kinds of ratio in each department. It shows the sales peaks and valleys, department by department and hour by hour, and thus indicates the number of clerks required. It reveals the time of the average sale in the different lines of goods; and this, when reduced to comparative studies year by year, and in connection with the same studies in other stores, gives important efficiency data.

Post-mortem merchandising is going out of fashion at the big stores. Post-mortems come too late; but the research man forestalls them.

Every Gas Pocket Becomes a Miniature Vesuvius

Imperfections in enameled surfaces come from impurities in the iron underneath. Chief of these are tiny pockets of gas. This gas expands rapidly and irresistibly in the heat required to bake the enamel. As the gas expands it forces through the surrounding iron and enamel coating—just as gases, lava and fire crack open the earth's surface in volcanic eruptions.

You know the result—rough places, blisters, easily cracked enamel and rapidly rusting base metal. Because of its comparative freedom from these gas pockets, because of its purity and evenness, many manufacturers of enameled products use

ARMCO IRON

Armco (American Ingot) Iron prevents waste. When you buy products made from it you have the most durable iron made. Whether galvanized, enameled or in plain sheets it stands up against corrosion or rust. Its purchase is economy.

The use of Armco Iron for enameled products insures a perfectly enameled surface which is easy to keep clean; is sanitary and a pleasure, besides, to the housewife's eye.

Manufacturers of enameled ware benefit by using Armco. It adds, of course, to the quality of their products. A far greater advantage, though, lies in the prevention of waste. Imperfect pieces are reduced to a minimum—there are practically no culls.

The distinguishing virtues of Armco Iron—rust resistance, enameling qualities, welding properties, electrical conductivity, workability—do not rest on its purity alone. Although it is the purest iron made, every step in its manufacture and handling is the subject of scientific and conscientious care. As a result it is most nearly perfect in respect to evenness and all the other qualities that form the basis of rust-resistance and waste prevention.

Of the many products made of Armco Iron these are representative: Furnace Radiators; Ventilator Ducts; Enameled products of all kinds; Kaustine Waterless Toilets; Metal Lath; Water Tanks; Boiler Tubes; Grave Vaults and Caskets; Corrugated Culverts; Underground storage tanks; Roofing; Fencing; etc.

If you have trouble securing any sheet metal product you want made of Armco Iron write to us. We will put you in touch with a manufacturer or dealer who will supply you.

Write for "The Story of Armco Iron"—Free. Any maker, any user of enameled products should know the superiority of Armco Iron. The whole story is told in this book. Get it today.

Manufacturers with special problems are invited to call on Armco Laboratories for data and research. They are both able and willing to render effective assistance.

THE AMERICAN ROLLING MILL COMPANY, Box 844, Middletown, Ohio

Licensed Manufacturers under Patents Granted to The International Metal Products Company

BRANCH OFFICES: Chicago Pittsburgh Detroit New York St. Louis Cincinnati Cleveland San Francisco Atlanta

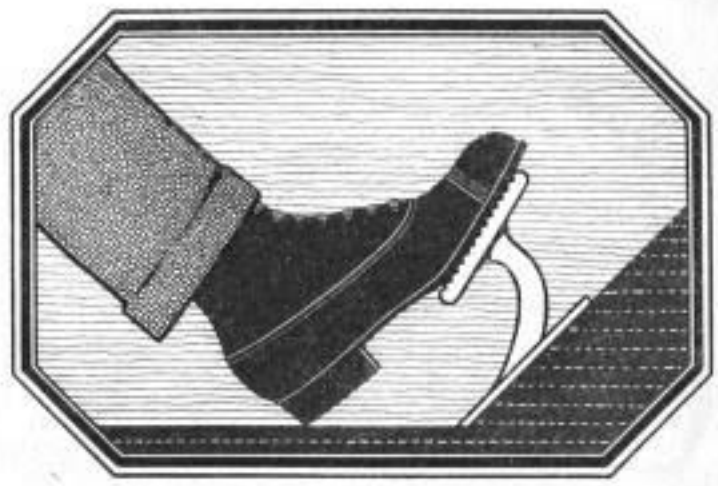
The Leonard Cleanable Refrigerator. This handsome enameled Armco Iron product, made by the Grand Rapids Refrigerator Co., Grand Rapids, Mich.

"Albairon" white porcelain enameled tops for kitchen cabinets and tables, manufactured of Armco Iron by the Enamel Products Co., Cleveland, Ohio.

"Albairon" white porcelain enameled tops for kitchen cabinets and tables are manufactured of Armco Iron by the Enamel Products Co., of Cleveland, Ohio, for the following firms: Cambell-Smith-Ritchie Co., Lebanon, Ind., Coppes Brothers & Zook, Mutschler Bros., Nappanee, Ind., the I-X-L Furniture Co., Goshen, Ind., and Wasmuth Endicott Co., of Andrews, Ind.

Perfect enamel work is shown in the "Armco" Iron Enamel Tank made on an Armco Iron base by the Kalamazoo Sanitary Mfg. Company, Kalamazoo, Mich.

Over seventy stove manufacturers testify to their belief in Armco Iron by using it for the sheet metal and enameled parts of their ranges.



The trade-mark ARMCO carries the assurance that iron bearing that mark is manufactured by The American Rolling Mill Company with the skill, intelligence and fidelity associated with its products, and hence can be depended upon to possess in the highest degree the merit claimed for it.

ARMCO IRON Resists Rust

How often do you press the brake pedal ?

←LOOK FOR THE SILVER EDGE→

You can't expect to get more out of your brakes than you put into them

YOU are particular about the tires you buy. Are you quite so careful when selecting brake lining? Both are equally important and in continuous use when car is running. Service in each case depends upon quality. Inferior tires are worthless. "Cheap" lining goes to pieces quickly. You can't expect to get wear out of your brakes unless you put wear into them. Safety, surety, prompt action are weighed in the balance. Why not pay a few cents more for genuine Raybestos? Remember that—

Raybestos

BRAKE LINING WEARS

It wears like a strip of steel—solid wear all the way through. And every foot of Raybestos possesses that *necessary* hardness which means wear. For the sake of safety and economy, avoid imitations. The Silver Edge prevents substitution. Patronize one of the 12,000 reliable dealers who sell Raybestos—*the brake lining that wears!*

The Raybestos Company, Bridgeport, Conn.

SOMETHING YET AGAIN: CHEMICAL CONTROL

(Continued from Page 17)

Again and again the banking experts of other countries have pointed out dangerous tendencies in the German scheme of finance and predicted a smash-up; but the German scheme has simply gone on working. It gets results for the Germans, whatever it might lead to in other countries.

Here is one illustration: The incandescent gas mantle, developed from rare earths that were nothing but mineral curiosities a generation ago, gave the gaslighting industry of the world a new means of growing in the face of electrical competition. When the war broke out supplies of thoria, which had come wholly from Germany, were stopped. John Bull was in a bad way for material, as we were ourselves. Investigation showed that the best deposits of thoria were in India, a British possession; but that German chemistry, backed by German banking, had secured a monopoly of these deposits, which had been worked for years at very high profits. John Bull had to take steps to gain control of his own thoria. The United States has deposits too.

When the American chemist goes to our bankers he finds a very different state of affairs. The average American banker has no conception of chemical values in industry, and is not able, under our banking laws, to do much about it if he had.

Our banking system has been compared to a pawnshop. Until lately it lent money, chiefly on stocks and bonds, to gentlemen who wanted capital for extending their speculative enterprises. You brought your securities to the banker just about as you would take your watch to your uncle, and the banker, after applying a drop of acid to your valuables, handed over part of what they were worth as a loan, and locked them up in his safe as a pledge.

Our new banking law extended the system to foreign commercial paper and to trade acceptances. Acceptances for merchandise bought of manufacturers or jobbers, and other negotiable instruments arising from trade and commerce, became rediscountable pledges for bank loans.

When Science and Capital Combine

We are now entering on a new era in business, when chemical industries and chemical control will need vast sums of money for development. Because our banking facilities are inflexible, it is difficult to get bank funds for these developments. The chemist does not blame the banker for legal restrictions imposed upon him by our banking system; but he does think the banker's knowledge of chemical values can be improved. If you take an article of value to a sure-enough pawnbroker, he will appraise it in a few minutes, and very shrewdly. It may be a watch or diamond, or your overcoat or ukulele—no matter; he knows values. But many a banker is not even a good pawnbroker within his own field. Though he has a fairly good eye for the things in which he is accustomed to deal, such as a listed railroad stock, a public-service bond, an industrial stock or a piece of commercial paper, there are other sound business assets that he does not understand, because he knows very little about the character of the business involved.

Sometimes he is timid and refuses to lend at all; while, again, he deceives himself and lends too much. When an enterprise involving chemical control is brought to him he will perhaps not see it at all. This is a bad state of affairs, for during the next ten years our industries are going to be improved and enlarged along this chemical line.

Even where the banker cannot furnish capital directly, his understanding and coöperation will help in securing it from promoters and investors not restricted by our banking system.

It is not well to scold the banker too harshly, however, for the importance of chemical control is not generally understood by the average business man. Almost any consulting chemist can point out factories in different industries that are operating on incorrect chemical principles. The fundamental chemical processes involved in their activities are wrong, and sooner or later they must fail, either of themselves or in competition with efficient competitors here or abroad. It is a hard job to straighten out these obscure chemical tangles, considering the lack of technical knowledge and the inertia of many business men.

A certain big corporation has a chemist on its staff. Several years ago this chemist worked out an improved process for making some of its products. Two hundred thousand dollars' worth of new machinery was needed to install the process, effecting remarkable economies in production cost. The chemist appeared before the board of directors again and again, explaining the technical details, but got no attention. The board simply yawned or looked up at the stars when he talked about his reactions and refinements, and said "Theory—blue sky—too much up in the air for us!" Meantime old methods were causing losses of thousands of dollars every month. One day the chemist appeared with a new argument.

"If you install this improved process," he said, "you might be able to sell the old machinery to some competitor. It will kill him to use it."

That so tickled the directors as a practical business maneuver that they ordered in his process immediately.

Insurance Against Costly Mistakes

The war emergency caused a shortage in a certain kind of imported material and led to the formation of a company to manufacture the stuff here, from substances found in a Western State. The management of this company called in a consulting chemist to advise on what it considered minor details of the process. The chemist outlined a complete plant, calling for an investment of twice the capital that had been thought necessary.

This looked preposterous to the management, and a civil engineer was engaged to design and erect a cheaper plant. He was a good civil engineer and built a factory beautiful in every way from the mechanical standpoint. Materials are taken in and handled with all the latest mechanical refinements; but the whole product rests on organic chemistry, and that plant will surely fail unless remodeled on a basis of chemical control.

It will fail and a group of investors will lose perhaps a quarter of a million dollars. Then a second company will tackle the problem, profit by the mistakes of the first and come nearer success. By that time, however, methods abroad may have been improved, and the second plant may fail. When a third company enters the field it may succeed; and so we shall have finally learned to make the stuff.

This is a wasteful way of establishing new industries. The Germans found that out long ago. They learned that they could not afford it.

The Germans spend just as little money as possible on their mistakes, at the same time making their mistakes large enough, so that a new industry is transplanted from the laboratory to actual business. A chemist can usually get wonderful results in the laboratory. He works out a new product or process, covering every possible factor and contingency, and attains eighty per cent efficiency, ninety per cent—maybe a clean hundred. He knows that things will not work like that in actual manufacturing, however; for when large quantities of material are manipulated, with differences in mass, temperature, time, and so on, results will be quite different. In the factory he will have to invent his process all over again.

Where we do this secondary research work in a plant built on a scale for making stuff to supply demand, the Germans have a thrifty way of building a test factory, at a cost of ten thousand, twenty thousand or fifty thousand dollars—as little capital as possible, but still enough. This test plant may not be intended for making a product to sell, but to determine the conditions under which a real factory must be built and operated. When the Germans know they go further; and if the project is not chemically or industrially or commercially feasible they drop it, and consider the money spent in finding out things well invested—a sort of mistake insurance, safeguarding national business affairs.

"Why can't American chemists do as well as those Germans?" the man in the street has been asking lately.

Dyes

THE Chemical Manufacturing Plants of The Sherwin-Williams Company located at Kensington, Ills., which commenced operations early in 1916, have recently been greatly extended.

Since the opening of the plants in March 1916 approximately 250,000 pounds of Beta-Napthol and 200,000 pounds of Paranitraniline have been produced. The quality of these materials has been in every respect equal to the best standards of the world's markets before the war. Additional machinery is now being installed which will greatly increase the daily output of these two important dye materials.

In addition to the above the Company is now manufacturing a number of intermediates and dyes particularly for the manufacture of pigments and lakes. The Company is especially proud of the achievement of having been successful in the commercial production of large quantities of Metanitroparatoluidine and Paranitranilinesulfonic Acid, from which are manufactured Helio Fast Red R and Lake Red P, colors employed for the preparation of the finest and most modern printing inks.

All organic chemicals are manufactured at the Company's plant from refined coal tar products, Benzol, Toluol, Xylol and Napthalene. The Company also operates its own Aniline Plant with a daily capacity of five tons of Aniline Oil. The Company operates plants for the manufacture of Glacial Acetic Acid, partly with a view to utilizing by-products, and also to follow its well defined policy of logical, efficient and conservative development. The Company is also producing a limited number of dyestuffs for textile and similar uses and is gradually adding to and augmenting this line.

We invite inquiries from all consumers of Dyes to whom we will gladly send detailed information.

The "Viceroy," Plate V-14 (Patent Applied For)

There has never been any reason to reproach American chemists—or British chemists, either—when it comes to actual scientific achievements. Their results compare well with those of any other nation. Indeed, the American chemist, in discussing pure science, sometimes discounts the Germans, maintaining that their results show not scientific ability so much as ability to organize other people's discoveries commercially, and hand the results over the counter in a package.

However this may be, the man in the street often gets the product first bearing a German label and thinks the Germans made it all out of the air. Undoubtedly the German deserves all the credit he gets through his business organization, for that is a kind of genius, too, and one which we now see must be developed. In every case where American scientific discoveries have been backed up by American capital and commercial organization, results have been remarkable.

How shall we go to work to bring chemical knowledge and business organization together?

The chemist has been thinking about this ever since the war started, because the man in the street, on one hand, has been asking him what he is going to do to supply shortcomings in our industrial world, and the banker and business man, on the other hand, have been backward in coöperating with him to develop the chemical side of our industries. The chemist says we must begin by all getting together, for explanation and mutual education.

Bankers and business men must get the chemical viewpoint and learn to pass on chemical values. They now call in the engineer for professional guidance when they make investments and start new enterprises. They must learn to call in the chemist, in the same way, and use his knowledge in clearing up technical problems. Their relation with the engineer was not established in a day.

A similar relation with the chemist will take time. For the present, they should cultivate an acquaintance with chemists and do a little chemical reading.

The chemist, on his part, recognizes that he has been too closely absorbed in his profession, and that he must now cultivate the acquaintance of the banker, the business man and the man in the street, and show them where chemistry touches everything in modern life.

Suitable Provocation

ACCORDING to Andrew Mack, a friend of his, a retired contractor of New York residence but of Irish birth, a Fenian at heart and a fighter by instinct, was returning from a voyage abroad. One frosty evening he lay in his steamer chair, snugly wrapped in a plaid steamer shawl, when a little Cockney, for whom he had a personal as well as racial distaste, halted on the deck alongside the old Irishman to shiver.

The newcomer wore no overcoat and he suffered cruelly in the icy breeze that swept across the Atlantic and whistled through the rigging and the smokestacks. For a little while Mack's friend observed the sufferings of the other in silence.

Then he spoke to him; and his voice was very sweet and kind.

"For why do you stand there and shake?" he asked.

"It's like this," stated the Cockney from between his chattering teeth: "If Hi go below, the 'eat makes me seasick; and so Hi 'ave to come up again. But Hi didn't bring me overcoat with me; and so Hi almost freeze."

"Thot's too bad!" commiserated the Irishman. "Why don't you take this here thick, warrum blanket of mine and wrap yourself up in it?"

"But, Hi say, what would you do?" asked the Cockney.

"Me?" roared the Irishman in an entirely different tone, as he moistened the palms of his two hands and straightened up. "I'd knock the hell out of you!"

Here's Health!

Health without drug-taking. If you need a natural, gentle laxative, just eat, each day, a delicious bran muffin made from

Pillsbury's Health Bran

The larger, cleaner, coarser flakes supply the right amount of roughage to accomplish the desired laxative effect. Then too—the Pillsbury recipe, printed on the Pillsbury package, produces a breakfast muffin that is really delicious! What 15c WILL BRING You FROM THE Nation's Capital

The little matter of 15c in stamps or coin will bring you the Pathfinder for 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation; a paper that prints all the news of the world and tells the truth and only the truth; now in its 23d year. This paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is at last. Send only 15c to show that you might like such a paper, and we will send it on probation 13 weeks. The 15c does not repay us, but we are glad to invest in New Friends. Address

The Pathfinder, Box 96, Washington, D. C.

Friction

Almost Ended in the

Hudson Super-Six

Here is the basic reason for the Super-Six performance. This is why Hudson holds all the worth-while records. Why this motor has proved itself such a marvel of endurance. Motor friction, in the Super-Six, is reduced almost to nil.

A unique situation exists in Motordom today—one never met before.

The world's greatest motor—proved by hundreds of tests—is controlled by Hudson patents.

It has won all the stock-car records which can demonstrate supremacy. It has excelled in all feats of endurance.

It gives to the Hudson a pinnacle place, which rivals have not equaled.

It is vital that you know why. There is a medley of types—Sixes, Eights and Twelves—all opposed to the Super-Six. You must know the facts to form judgment.

Friction is the Foe

Why was the Six-type adopted?

Why was the heavy Six abandoned for the small-bore Light Six type?

Why did the Light Six—in 1915—seem to be a waning type? Why did many leading makers, including the Hudson, test out Eights and Twelves?

The answer to all is Friction. Too much power was wasted through motor vibration. Too much wear was caused by the resulting friction.

That was the Light Six limitation. And the trend toward V-types was an effort to reduce it.

The Best Solution

Hudson engineers, in the Super-Six invention, offered the best solution. They kept the Light Six. But they added 80 per cent to the motor's efficiency by reducing the vibration.

The Super-Six isn't perfect. It doesn't completely end friction. If it did we should have perpetual motion. But it comes close to perfection—so nearly ends friction—that there is no probability of getting any nearer.

It has done in the Hudson what a motor car never did before. It has made records in speed, in power and endurance such as all men deemed impossible. And Hudson stands today, beyond any question, the greatest motor car in existence.

Record Endurance

The amazing records made by Hudson Super-Six have all been due to super-endurance.

Even its speed records—as high as 102.56 miles per hour—were due to absence of motor friction.

It broke the 24-hour record by 52 per cent. It won the Pike's Peak hill-climb. It twice broke the ocean-to-ocean record in one continuous 7000-mile round trip.

It was all through endurance.

You may not care for the fastest stock car. You may not have need for the greatest hill-climbers. You may never use half the Super-Six capacity. But you do want supreme endurance.

And you do want the car that stands first, when you buy a high-grade car. Pride of ownership requires it.

New Gasoline Saver

The Hudson now holds the same place in luxury that it holds in performance. The latest Hudson designs are exquisite productions.

And the car is now equipped with a gasoline saver which gives to the Hudson another advantage.

Go let your local Hudson dealer prove all these facts to you.

CORONATION OF THE CAR

1917 SHOWS

THE CROWNING ACHIEVEMENT in the Light Six field is well represented by the new Velie Biltwel at the Automobile Shows. The approval of all motordom has been won by such distinctive values as the longer, roomier bodies with deep-tufted, genuine leather and curled hair upholstery—the powerful Velie Special Continental motor—Timken axles front and rear—long, easy-riding, underslung springs—everything in and on, ready for the road.

Eight different body styles, both open and closed. Touring Sedan, Snappy, Four-passenger Roadster, Exclusive Town Car, etc., give you the widest range of choice. Each Velie built and backed by one of the most substantial concerns in the Industry.

See these cars at the Shows, on the highways, or at the nearest Velie dealer's. Ask for a convincing test. Comparisons will acclaim Velie *first* in quality and value.
Illustrated booklet—"How Velie Cars Are Made"—sent on request.

THE HOUSE OF CRAIGENSIDE

(Continued from Page 5)

"I'm not an imaginary man," said Dave, disgruntled. "God knows Amos had enough on his conscience to walk after death, and I should know the mark of his foot if any man should. We were boys together."

"And you have seen this mark?"

"Call me a liar seven times," asseverated the fisherman. "I have seen tracks of the thing in the sand as plain as a pikestaff."

"Of old Amos?"

"Of old Amos, certain."

"How do you prove this?"

Dave leaned forward mysteriously:

"Because this was the track of a man with six toes on his right foot. Now you know as well as I do that old Amos had six toes. That was the deviltry of him, wasn't it? No natural man would have six toes. Of course that's only my way of looking at it. Every man is entitled to his own opinion."

"You have seen this six-toed track?"

"As plain as I see you. I was coming in from my weirs at sunrise, and just as I was passing the tomb I happened to look down, and didn't I see the sprawling mark of it there in the sand!"

"And was it coming or going?"

"That I can't say because I didn't stop to consider. I didn't wait for aye, yes or no."

"Wait a moment," said the doctor, shaking with silent laughter. "You are familiar enough with ghosts by this time, aren't you, Dave?"

"Yes, I am," said Crooker stoutly. "There ain't a man along this coast that has had more to do with 'em than I have. What I mean—that has come into more downright contact with 'em. I have had my grandfather and my two maiden aunts perching on the foot of my bed at one and the same sitting, and you ain't the man to argue me out of what I have seen with my own eyes."

"Well, then," went on the doctor, "I'm not denying it. I simply ask you, man to man, Did ever you know a ghost to leave a track in any way, shape or manner?"

"There has to be a first time with everything," said the fisherman, undaunted.

▼

WE LAUGHED him out of sight, and thought nothing more of him at the time; and yet wrapped in the little fisherman's simple tale of a ghost record on the sands of the dunes was the germ of a mystery destined to have a terrible solution.

It is hard to credit even now the strange way in which the fortunes of the house of Craigenside were caught up in the folds of that mad Oriental nightmare which played itself out along this solitary coast. I have recalled the house to memory many times; and Mercy Cobb's mansion crouching in its shadow, shining under the moon with a wan light on its gray shingles, and bringing back the night when I encountered within its walls the scarlet figure which had become so puzzling and monstrous a problem to us. And even while standing there, with the dunes in prospect, I find it hard to summon in all their reality the details of that vain phantasmagoria of living men in the clutch of false gods. The dunes seem calm and lonely and secure. Sea goldenrod runs riot over the tomb of the Craigensides. The whole waterside is as serene as an old maid's sunbonnet. And yet I know that the things are literally true which had their rise in the first coming to Silver Glade of Mr. James Smith, the ornithologist, an event which occurred on the morning of our discussion of Dave Crooker's ghost.

James Smith was a huge, pasty, quaking man, with skin of a yellow pallor. His most striking characteristic was a lamentable and comprehensive baldness. He was bald in the usual manner, and beyond this he had no eyebrows, no eyelashes and no hair behind the ears. Just above the bridge of his nose he bore a protuberance, a small white knoll of flesh, which in moments of stress grew scarlet from a rush of blood into it. And this scarlet knoll accentuated the glossy pallor of his cranial arch and made him rather ghastly on a first acquaintance.

Moreover, although he spoke the best of English, there was a haunting foreign suggestion in the cast of his countenance which at first led me to think of a highly cultured Eskimo, and later of a still more gifted Mongol. The name James Smith ill sorted with this intimation of outlandish character.

The worst of Mr. Smith was in his eyes. They were grayish in color, drawn to a perpetual squint, perhaps instinctively and owing to a lack of lashes. The lid appeared double. When listening he often closed these eyes altogether, and then when he opened them the lid drew back with a slow, snakish motion, and there the eye appeared again, fixed as if it had all along been staring through the lid itself. I did not like the eyes of Mr. Smith. I did not like any part of him.

Very early on the second morning of his visit his shadow fell across us as we were polishing canoes. The sun had risen, and behind us the shopworn pines of the Glade loomed sallow green. Mr. Smith wore carpet slippers; he talked quietly of the beauty of the spot, and of its calm, its holy calm.

He raised his eyes to the dunes. Their tawny flanks were in dazzling contrast with the exceeding blueness of the morning sea and with the worn black hull of the Asphodel.

"The world in a crystal," he said pleasantly. "It is like the projection of a hypnagogist, isn't it, gentlemen?"

We assured him that it was. We were excessively amiable young men. With his eyes still on the dunes he inquired how the flight of black heron was along the coast.

In this way we came to know that he was an ornithologist.

"I am wise enough to have a hobby for my old age," he said jocosely. He was not an old man.

He gave us to understand that he appeased his intellect and exercised his legs by taking photographs of sea birds in their native haunts.

"I have special apparatus for creeping up on them," he said.

His apparatus was ingenious, as we discovered by sculling over toward his favorite dune one sultry mid-afternoon.

His method was to ensconce himself in a great burlap bag, held by wires to something the shape of a barrel. This bag had two holes in it, one for the eye of Mr. James Smith and one for the eye of his camera. So equipped, he selected some spot among the dunes, and settling back on a little plush-covered hassock became by slow degrees part and parcel of the scant scenery.

Nothing could be simpler, nor yet better calculated to get characteristic pictures of sea birds, taken in their unsuspecting midst.

"But what patience! What ungodly patience!" muttered Sturgis, aghast.

The resignation of the Oriental was manifested in the mind which could be content to station itself for so many blazing hours between sea and shore on so small a chance of action. Sturgis suggested that he must be under pay, in the service of some university perhaps—in short, a man making a virtue of necessity.

At least he never complained, but whether he secured photographs we were unable to determine. He was not a fraternizing man.

So matters stood until perhaps the fourth or fifth day of his stay in Silver Glade, when, in the course of a single afternoon, the ornithologist acquired another and more sinister character in my eyes. The management had sent to Silver Glade a box of fireworks.

These were to be set off by night from a raft in mid-channel, and I went across the river with a thought of warning the Craigensides to beware of the fall of rocket sticks and to have an eye out for sparks.

As it happened, Jane Craigenside herself met me at the little stone pier. As she took the painter from my hand I felt her fingers for an instant cold against mine. Her eye had never seemed blacker; it had gathered and concentrated rays of uncertain meaning. Her hair, braided in a blue-black coronal, gave a fine distinctness to the whole outline of the head. Her effect of melancholy was heightened usually by wistful upward curves of the lips, but to-day they were pressed tight.

She listened to what I had to say about the fireworks, nodded once or twice, and then with an uneasy gesture added:

"Won't you come up to the house? I want you to know my Uncle Ruel."

We went up the tiptilted old flags together. The late sun poured a deep, warm light through the pines across the river. In a moment the six wooden dragons became visible. Crouching with mouths wide open and weather-beaten wings outstretched, they were like guardians of some mythical treasure house. They gave a fantastically hostile air to that gaunt dwelling.

The Discovery
of Puffed Grains
Brought Ideal Foods to Millions

Prof. A. P. Anderson, when he found a way to puff wheat, gave children a better wheat food than they ever had before.

Every expert knew that whole wheat was desirable. It is rich in elements lacking in flour. And rarely a child got enough of them.

But whole wheat, for its purpose, must be wholly digestible. That is the problem Prof. Anderson solved when he discovered this way to explode it.

Puffed Grains in Milk or Cream

He Bubbled the Grains

He sealed up the kernels in guns, and applied a fearful heat. Then he shot the guns, and out came the kernels puffed to eight times normal size.

What happened was this: Inside each food cell a trifle of moisture was changed to steam. When the guns were shot, a hundred million explosions occurred inside each kernel.

Every food cell was blasted, so digestion could act. Thus every element was made available, and every atom fed.

Puffed Grains Mixed with Fruit

And the grains were made into food confections, flaky, toasted, airy, crisp. So these hygienic foods became the most delightful foods you know.

Puffed Wheat

Puffed Rice

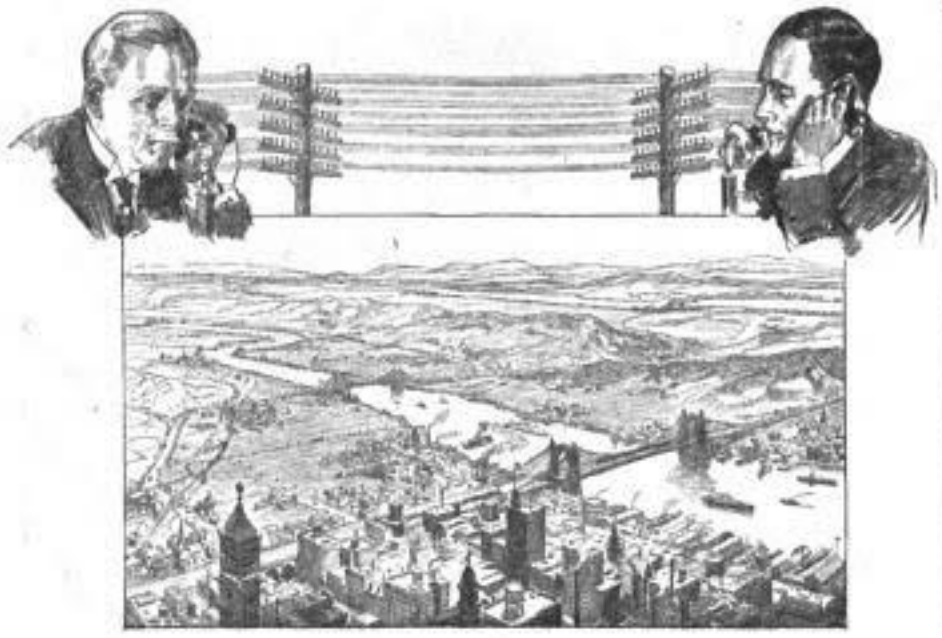
and Corn Puffs

Each 15c Except in Far West

Don't let your children lose the benefits of this great food invention. Don't confine Puffed Grains to breakfast. Serve them for supper in bowls of milk. Douse them with melted butter when children get hungry between meals.

Puffed Wheat and Rice are whole-grain foods. Corn Puffs are corn hearts puffed. They taste like nut meats, bubbled and toasted. But they are in fact the best foods wheat, rice or corn can make.

Keep all three kinds on hand.



As Confections

A Bee-Line to Everyone

Straight as the bee flies and quick as though caught by lightning the voice in the telephone carries near and far over this Nation.

This marvelous instrument is the pre-eminent vehicle of speed and speech. Railroads cover the country, but your traveler often must alight with bag and baggage and change trains to get to a given point. Railroads reach cities, towns and villages. The telephone reaches the individual.

The telephone offers continuous passage for the voice and unbroken connections to the uttermost places because it is a united System co-ordinated to the single idea of serving the entire people of this country.

It has been a powerful factor, along with the transportation systems, in the magnificent achievements of the United States—helping to prepare the way where latent possibilities of mines, forests and farms were to be developed.

The continued growth of our national prosperity depends in a great measure upon the maintenance and continued growth of the utilities which furnish the means of intercourse and interchange. They are the indispensable servants of the individual, the community and the entire nation.

The Original Food-Drink for all ages. More nourishing than tea, coffee, etc. **In the home, or at Hotels and Cafés.** Substitutes cost YOU Same Price.

The portico was strewn with round reed mats and tumbled magazines and at the far end of it sat old Mercy Cobb asleep in a horsehair chair, the beak of the albatross peeping out of her lap. Her little black figure was strangely relieved against the dunes, now flushed deep crimson.

"He is on the bridge, I guess," the girl said, pausing on the threshold. This bridge had been placed on the roof of the house over the pediment.

The old lady woke up and said tartly, "Where's the wind," staring straight at me.

I began to explain to her that I never took notice of the wind, when the girl at my side suddenly seized my wrist in her hand and whispered: "What is that thing? Have you any idea?"

She had seen the ornithologist in his bag.

He, of course, was quite invisible; but he had come much closer to the house than was his wont. Indeed, he had settled down on a ridge of sand not two hundred yards from the stone wall which marked the western limit of the Craigenside terraces.

This wall, as I have said, had broken down in one place and I could very easily see that corpulent brown cylinder which concealed my fat friend rising from a tangle of sea goldenrod.

"What is it?" the girl repeated sharply.

"The ornithologist," I laughed. "Is he a bear to bite you?"

I looked at her narrowly. It struck me as odd that this device, so easily explained, should upset a woman whom I could not believe to be nervous or fanciful.

"The ornithologist. Whom do you mean? Why is he here?"

I explained briefly the nature of the apparatus which Mr. James Smith had invented for stealing into the midst of black heron.

"You see, he is a very patient man," I added.

"'Patient' is not the word for it," she answered in lower tones.

She shook her head impatiently, as if to throw off the weight of some childish oppression which had overborne her.

"Let us find my uncle," she said.

We passed in together.

The hall ran from porch to porch. Its walls were hung with musty Eastern fabrics, displaying in black against a yellow ground a pattern of sedate mandarins and writhing dragons. Nested in the stiff folds were foreign arms and armor. I noted particularly a dagger curiously sheathed in ivory. High on the wall hung a stiff portrait of an old lady with a black mustache.

The hall had the invincible odor of must which hangs about old houses; but the smell of the fireplace at the north end was sweet and the faded reds in the carpet had a comfortable look of use and occupation. On the staircase wall hung three speckled canvases of square-rigged ships. It was a house of seamen.

I followed Jane Craigenside to the top of the house and into an unfinished attic. Hand-wrought nails protruded through the boards of the roof; the anvil on which they had been pounded out was capsized in one corner, and in a long line under the eaves stood the sea chests of those master mariners. These chests, blue in color, iron or brass bound, were equipped with rusty padlocks and with white painted rope handles linked together by very ancient cobwebs. One of the chests lay open, and a mass of blue log books was visible therein.

"There you may read the secret history of the Craigensides," said the girl half jestingly.

I heard the scrape of a foot over my head. My eye fell on a flight of worn steps leading out of the attic.

"There he paces back and forth half the day sometimes," said the girl in a low voice. "Come."

She led me out upon the iron bridge, a structure perhaps thirty feet long, which straddled the peak of the roof. Here I found Captain Craigenside in a white shirt turned away at the throat, blue overalls and sennit slippers. He was a tall man, strongly made and wearing a black square beard. He had the fist of the Craigensides.

"This is Mr. Weymouth, of Silver Glade, uncle," said the girl.

The look that passed between them seemed to betoken on her part some secret pleading, on his a stern denial.

"What do you think of the wind, sir?" he said in a deep voice. "Is it backening in, or will it haul round to the south with the sun?"

"I never can tell you how the wind is blowing," I said for the second time that afternoon.

"You never had to sniff it out, I take it."

"Never."

"You're a lucky man, then," he returned gloomily, but there was a trace of contempt in his voice. To a seaman it is strange that a man can live with the winds all his days and yet not know one from another. Winds are the great factors in his life; they are invisible, and yet he is cheek by jowl with them always, and so it comes, perhaps, that he has so great a trust in the operation of unseen powers and in all manner of devilries that pass his comprehension and muster themselves out of the range of his vision. Hence also his willingness to lend a zestful ear to the follies of superstition.

I do not know if this fully explains the strange credibility which hurled Craigenside to his untimely end—the influence of that accursed jade may have had a deeper spring; and yet it was the invisibility of its devil's power which first had brought him to his knees, as I learned later.

He turned his face seaward again. The aspect of the sea was calm, the horizon like the edge of a metal disk tilted up from the dunes. A thin streak of smoke lay on the skyline. A warm green was on the land side, and the placid river reflected long, sharp clouds like daggers plunged in blood or dripping fire. To the south there was a good view of those jagged cliffs which began where the dunes ended.

The girl's eye sought the unsightly bag in which the ornithologist was lodged. The fellow was on the very edge of the inmost dune now—in fact, had come surprisingly close to the broken line of the stone wall, considering the business he had in hand.

"Uncle Ruel," she said, "Mr. Weymouth has explained the mystery. There is a man in that bag studying birds."

Craigenside's head came round sharply and his eyes were fixed on the bag.

They held a fierce light, as of an emotion hovering between fear and black defiance. And then even this expression left his face. His jaw sagged; he stared in a stony-eyed trance, and a series of bright flashes came from the bag, at a point near the middle of it. The ornithologist was evidently turning the lens of his camera. The behavior of the burly skipper was certainly strange, and a sense of something unnatural in his position began to steal over me.

"He must have got his eye on something," I tried to say lightly.

Craigenside was as still as if his soul had left his body, and the girl uttered a long, nervous sigh.

Meantime, the shadow of the bag had lengthened by imperceptible degrees across the sand. The thing was motionless; it began to seem hideous and fateful. I thought of the jellylike, hairless being crouching there, and how his pale eye had glinted under the infernal double lid.

I remember saying, "He is probably sent here from some university," when suddenly the intermitted flashing of the lens ceased, the bag upreared, slackened, bellied out and began to crawl toward the sea beach, swaying from side to side like a bloated spider.

Craigenside muttered in his beard: "The bird catcher! He smears his lime!"

VI

YOU may believe the ornithologist was a figure to intrigue me after that. Was his ornithology a pretext, and was his bag a sort of ambush? Why should he stalk that house in company with those gulls of ominous prophecy? It seemed a method too absurd to admit of sinister interpretation, yet why should Ruel Craigenside stand with a slack jaw and glazed eyes at the mere flashing of a lens? And what had been that urgent something in the girl's eye at the moment of my introduction to her uncle?

Mr. James Smith himself did not enlighten me on these points. His talk was chiefly of bird photography, and of the enormous difficulties there were in the way of getting characteristic domestic scenes. He might wait for hours, he said, only to have the picture dispersed by the shriek of a gull or a slight rising in the wind.

How could I suspect him of improper motives? This novel avocation could not be less than genuine. One day he came toward us chuckling and holding gingerly in his fat thumbs a negative he had just developed. He had caught a cloud of angry sea gulls on the wing, chasing a cat which had broken in upon their nests and eaten the eggs.

Witnessing the flight of the unfortunate cat under those harpy wings, I recalled the girl's suggestion that these gulls were possibly the reincarnation of the Craigensides,

FLavo FLour Nature-Flavored

EVERY one is demanding better, more wholesome bread.

Here is the flour that gives you all this and real flavor. It makes you want more. For bread made with "FLavo FLour" is moist, flavory, so good. Not dry and tasteless.

"FLavo" is a Nature flavored flour. Made only on the American Marvel Self-contained Roller Mill, by members of the Community Marvel Millers Association. It contains the entire food values of the wheat berry. It is creamy white, the purest flour that can be made. The essential aromatic oils of the wheat wherein lies the flavor are not milled out of it.

All American Marvel Mill products are inspected by us every thirty days. Every sack of "FLavo FLour" is certified. Ask for this Nature flavored flour and you will eat more bread—bread with the highest food value.

What Housewives Have Long Been Looking For

"FLavo FLour" once used, nothing else really satisfies in ways like this, which thousands of women are testifying to among their friends and to us every day: "Far Superior"—"White"—"Rich Taste"—"Has More Life and Moisture"—"Makes Better Bread, Pastry and Biscuits"—"Sweet Nutty Flavor"—"Like Mother Used"—"Best in 60 Years"—"Flaky, Nature-Flavored"—"Takes Less of It"—"Every Sack Alike in High Quality"—"Long-Lasting Freshness"—etc., etc.

Where To Get "FLavo FLour"

If your local flour miller, or merchant, cannot supply "FLavo FLour," advise him to write us at once. Tell us his name. Then we will at once write you or him the name of the nearest Community Marvel Miller so you can get "FLavo FLour" from him until some local man or your miller can arrange to put in an American (Midget) Marvel Mill and make "FLavo FLour" for your community.

THE ANGLO-AMERICAN MILL COMPANY, Inc.
Sole Makers of American (Midget) Marvel Mill (Self-Contained)
136-142 Trust Building, Owensboro, Ky., U. S. A.

Our Offer

THE ANGLO-AMERICAN MILL CO., Inc.
136-142 Trust Bldg., Owensboro, Ky., U. S. A.

Please send me your complete proposition and facts about the opportunity to get started making "FLavo FLour" with an American (Midget) Marvel Flour Mill in my community, also information about your "Confidential Selling Plans," Service Department and how to become a member of the Community Marvel Millers Association. Send book—"*The Story of a Wonderful Flour Mill.*"

Name _____

Business _____ *Address* _____

NOTE PLEASE: Book is not for housewives. It describes the 6 sizes American (Midget) Marvel Mills we build—15, 25, 40, 50, 75 and 100 barrels per day, and it will be sent only to men who are interested, such as grain men, millers, elevator men, bankers or investors seeking a profitable business opportunity.

Many Opportunities

Men in every community and millers who have long-system mills and are not making the money or kind of flour they should, can get back quickly into money-making with an American (Midget) Marvel Mill making "FLavo Nature-Flavored FLour."

Unprecedented Endorsement

MOST new and important inventions have had to *force* recognition against great opposition.

Not so with the Ampico Reproducing Piano. Its significance was too astounding. Even the super-critics—the distinguished gathering of artists and concert patrons who attended that memorable Godowsky-Ampico recital at the Biltmore last October—were forced to applaud the uncanny perfection of the reproduction of Godowsky's playing.

The Ampico was Godowsky—even to them. And it was more. It was an interpretation made by Godowsky and studied by Godowsky until pronounced perfect by the master himself.

That is how an Ampico master roll is made. Such artists as Godowsky, Goodson, Busoni, Hambourg, Ornstein, and many others not only endorse the Ampico, but have unhesitatingly adopted it as the only perfect means of transmitting a permanent record of their art to posterity.

The Ampico is remarkable not alone as a reproducing piano. It may also be transformed readily into a player piano with wonderfully sensitive controls by means of which you may impart your own interpretation to the piece. Used as a player piano the Ampico will play any 88-note roll. And finally the tone and touch of the piano itself are unimpaired for hand playing.

The Ampico may be had in the world's oldest and best pianos: the Knabe, Haines Bros., Marshall and Wendell, and the renowned Chickering. Our new illustrated catalogue will be sent on request.

(Continued from Page 82)

a race of men now doomed to wrangle among themselves eternally, wheeling and tossing along that forlorn coast and fishing for a living in the very shadow of their earthly tenement. It was a metamorphosis of Oriental imagining.

I began to haunt the house of the Craigensides more devotedly than ever. One afternoon I found its terraces deserted. The great blistered front door stood half open and the sun flashed on that brazen body of a mermaid rising from foam which constituted a knocker. The dragons stood with yawning mouths. In the still peace of late afternoon I felt more deeply than before the something dark and fateful which seemed to cling to every corner of that lonely place. It had woven a shroud of its own traditions; it faced the sea like a hooded menace. In the midst of that immense loneliness of sea and shore it had power to affright and conceal lurking horrors within its cavernous and musty depths.

How was it that this haunting suggestion of terror became so invincibly linked in my mind with the house and fortunes of the Craigensides? Was it the voice of the sea, interpreting to me what was austere in the fated lives of all those seamen whose chests I had seen ranged under the eaves? Was it the look of wild beauty which the turf terraces had, their long grasses bending and shimmering in the sea breeze, conveying to me the sense of a structure which perhaps had outworn even Destiny's patience? I cannot say. But something devilish was there, something formidable; avenging shades trooping in the train of that strange old woman, perhaps.

As I sat musing, my legs sprawled on the warm stone flags, I heard the tap of her cane as she came toward me feebly. Her black eyes burned on me. It was always her right foot that she put forward, and so the suggestion in her shuffling gait was of a person moving in utter darkness, and fearful of bringing up somehow with a round turn. Yet there was no suggestion of blindness or even dimness in the sharp eyes which she fixed upon me mistrustfully. She looked, poor old lady, more than ever like a shrunken black beetle in its shining case.

She crossed her hands over the worn pink bill of an albatross which constituted the head of her cane. The sun had caused her eyes to water and an amazing net of fine wrinkles to be cast suddenly athwart her haglike face.

"How is Captain Craigenside?" I said.

"As well as a body can expect," replied the Tartar.

"He seemed a little out of tune when I was here before," I ventured.

"Ha! Laughing on the wrong side of his face, I guess you mean?"

"It seemed to me that he had certain—apprehensions, shall we call them?"

"Ah, the world is full of those," said the old lady, opening and shutting her lips several times as if she were tasting something bitter. "I've been chased by blue devils since I was knee high to a grasshopper, and many times I've wished the streets were built crooked here, as they are in China, so that I could dodge out of the way of them."

"The blue devils, yes," I said. "But such devils are aimless—mere premonitions or foreshadowings. A sea dog, such as Captain Craigenside, can't be thought to have them."

Mercy Cobb came close to me.

"Young man," she croaked, "I read you like a book of print. But you want to know more than will be good for you."

"Such words can have no meaning to an officer of the law," I said sharply. "Some form of peril lurks about this house."

"If there is," she said, tapping with the cane at each word, "it is not what mortal hand can turn away."

"How shall I judge that?"

"By taking the word of an old lady for it, my dear."

I muttered that I was a policeman, and as such sworn to keep my eye on all unlawful doings.

"There are no unlawful doings round about this house," she answered harshly, and with those words the hidden Tartar stood boldly in her black eye.

"Then why this atmosphere of dread, this furtiveness?" I cried in a low tone. "Do you mean to tell me that that man in there is not afraid of something? Because if you do, you tell me what I know is false by the testimony of my own eyes."

"It's the truth, something has come over him," said Mercy, sinking back. "He was never the man his father was, no more than chalk is like cheese; but now he's not even the man he was. He isn't in a fit humor to be seen any hour of the twenty-four."

"He is afraid of the man who sits out there on the dunes under a burlap bag," I sharply returned.

She thrust her chin out over the handle of her cane and presently muttered:

"Have it your own way! Have it your own way! I'm an old body and one of these nights I'll be going out with the ebb, for that's the way with old folks hereabout, young man. They go out with the tide. Yes, yes, it drains their lives away."

Her voice died, the lids drooped over her sharp eyes. Immediately she reopened them, and said:

"I hope you may never see what these old eyes have seen. No, no!"

She sighed, clucked her tongue, and the skin under her throat drew up in folds.

"Is there nothing you can say to me?" I urged.

"The heart's its own secret," she whispered mournfully. "So we say, we old women. Why should you come prying here into this moldy house? Go away, young man, before it lays a finger on you."

There came from the depths of the hall a sort of hiss, followed by four jangling strokes of a bell. I heard old Mercy's finger nails screech on the table top between us.

"There's part of his misery at any rate," she said. "Is it a pleasant thing for a man to live in the company of his own coffin? For it's fallen to him since Amos died abroad and was leaded up for transportation."

"Then why not throw the thing away?"

Mercy Cobb smiled a ghastly smile and put out a hand to me.

"Help me up. Oh, dear, my shoes are pints and my feet are quarts since this rheumatism came on me. Here, this way. Let me get my foot over the sill."

She stood in front of Time and Eternity, and bending forward swung open the dark lid.

Peering within, I saw the rusty pendulum swing back and forth, and behind this was a wooden shelf on which had been built a little cage of five or six vertical wooden slats. Within this cage I saw, as if held in captivity, a little pug-nosed idol of green jade. The thing was not over twelve inches high. It showed the usual precise Oriental workmanship, and the eyes in a certain light emitted a curious green flare from the depths of shadowy sockets.

Before I had more than glimpsed it the old lady whipped to the lid again, hearing a heavy footstep overhead.

"He's the last to come under the curse," she whispered; "and what form the thing will take he doesn't know."

"Perhaps the ghost of Amos walks to make that clear to him," I said musingly.

"What's that?" cried the Tartar, pouncing on me with the savage certainty of a fishhawk. "The ghost of Amos?"

"Yes. Tracks of his six toes have been seen recently, I understand."

At this intelligence the countenance of the old lady was hideously transfigured.

"A track!" she gasped feebly. "With six toes? Where?"

"In the sand leading from the tomb."

"Ruel, come here," breathed Mercy Cobb, staring at Craigenside, who came toward us sullenly. Her eyes flared strangely, and the jaws of the albatross clicked against the black beadwork of her dress as the cane twirled idly in her nerveless hands.

"A six-toed track, you say?" Craigenside repeated stupidly.

"Idle talk, no doubt," I answered. "You know Dave Crooker's reputation. This is how legends take their rise."

"This is how devils heat their irons," said Craigenside huskily, and supported the old lady, half fainting, into the house.

VII

SILVER GLADE lay directly across the river from the Craigenside estate. It was an amusement park, owned and operated by a trolley company which ran between the two towns of Dockport and Hanbury.

The Glade was the device of a new management to increase summer travel on the line. Here on pleasant nights hundreds, in the typical mood of the pleasure seeker, thronged to bowl in its warped alleys, sail in its blistered little rowboats, sit in its creaking swings, and eat its execrable shore dinners, while children paddled in the water with red and blue tin pails, and snatched at rings in the mad whirl of the merry-go-round, gripping the necks of varnished tigers and world-worn lions with melancholy eyes.

Many great Government departments cut the yearly expense of obtaining positive electrical protection 80% by renewing a *part* instead of the *whole fuse* after it has operated.

They use ECONOMY renewable FUSES

that are instantly renewed to their original efficiency by the insertion of an inexpensive "Drop Out" Renewal Link, instead of discarding an entire non-renewable fuse after it has done its duty in opening an electrical circuit.

What is your fuse method?

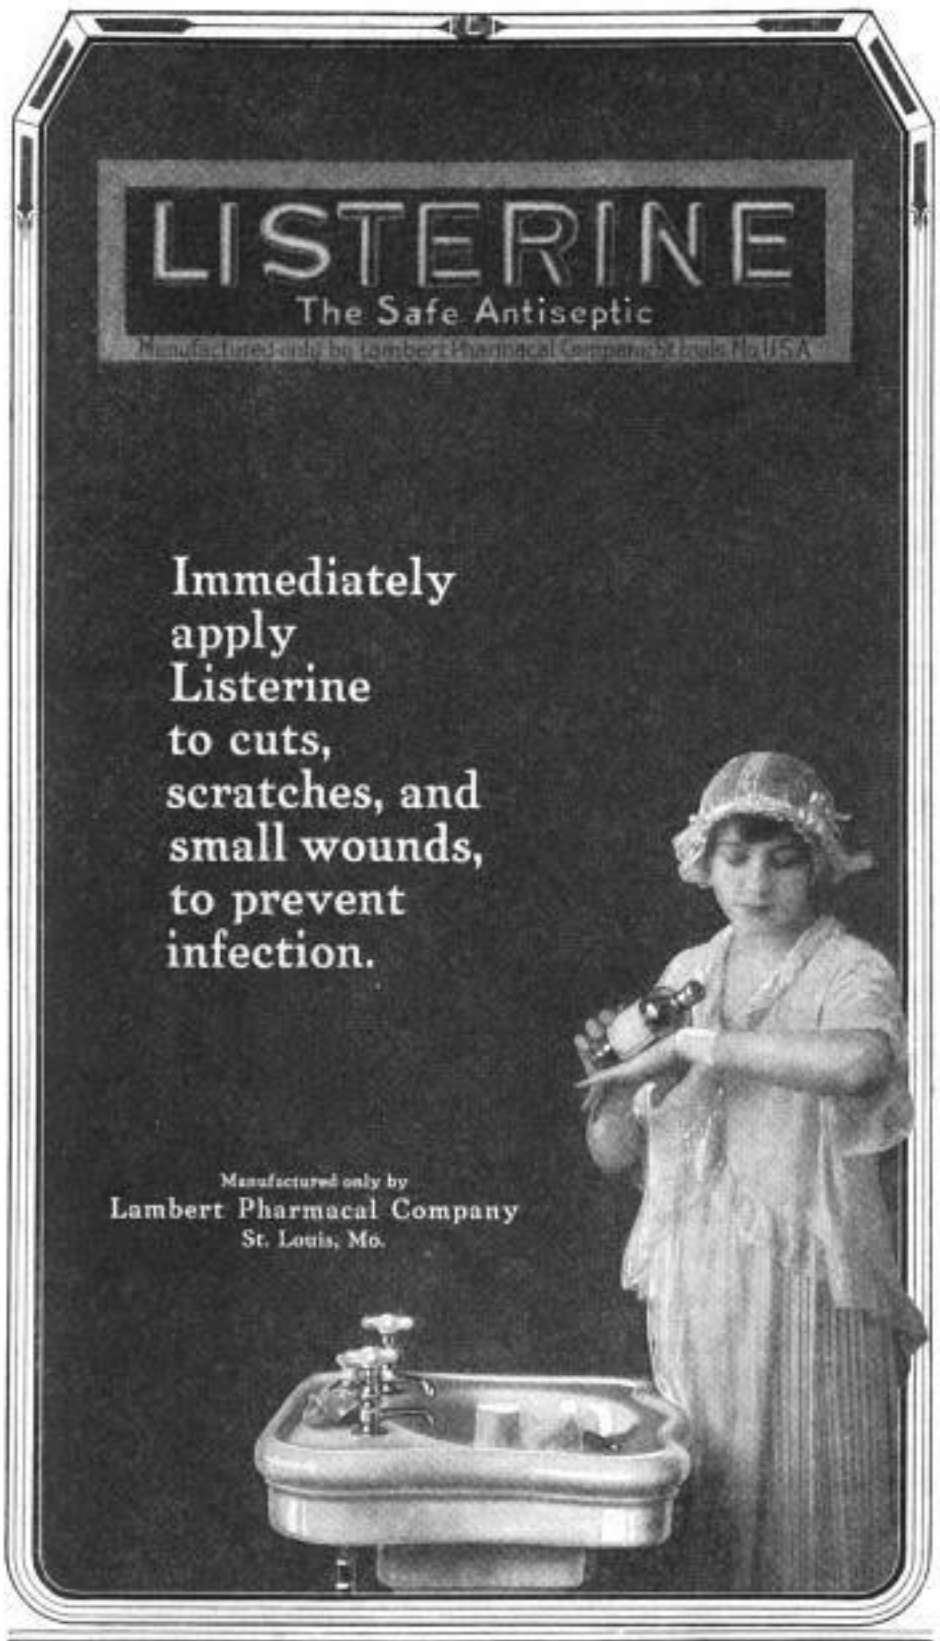
If you use electricity for power, light or heat, you must use fuses to protect lives, apparatus and buildings against the fire hazards of overloads, short-circuits, and the effect of lightning discharges on electrical circuits. Do you still use "one-time" fuses, useless as an empty fountain pen after they have operated? If you do, you are paying five times more than necessary for electrical protection.

This is a sectional view of an Economy ferrule type renewable fuse. They are made in all commercial capacities (both ferrule and knife blade types) from 3 to 1000 amperes in both 250 and 600 volts.

"Drop Out" Renewal Links are accurately rated, inexpensive, and their use renews an Economy Fuse over and over again. They cut annual fuse maintenance expense a full eighty per cent.

Buy Economy Fuses. Most electrical dealers and jobbers sell them. But buy by name, refusing less accurately operating, cheaper and often dangerous substitutes.

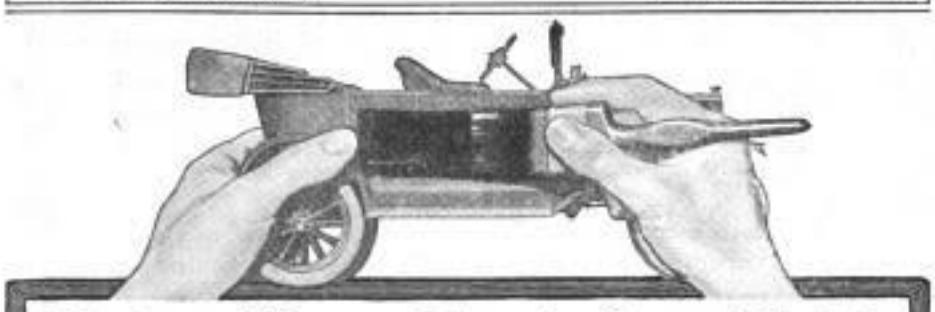
Use Economy Fuses over and over again. A stock of "Drop Out" Renewal Links represents only a small investment.



Feel secure in the complete protection Economy Fuses afford your circuits. They invariably operate at their prescribed ratings, and that means an automatic safeguard against fire and accident hazards.

Write at once for Booklet S and details of our liberal sample offer. Do this whether you use one or thousands of fuses a year.

ECONOMY FUSE & MFG. CO.
Kinzie and Orleans Sts. CHICAGO
Also made in Canada at Montreal



Economy Renewable Fuses have been carefully investigated by the U. S. Government Bureau of Standards.

GLIDDEN AUTO FINISHES

The Glade was made up largely of chafed and shopworn pines. These were situated on a side hill, and this hill on its river side furnished the right slant for the auditorium of an open-air theater. This theater was inclosed by a high board fence, and served as a kind of left ventricle in the general scheme for circulating patrons through the Glade. At the hour of eight o'clock everybody in the Glade began to drift through the gate in the fence, to sit, wrapt or clamorous, until the hour of eleven, when they poured out through side entrances, rosy and rejuvenated, and were reabsorbed by the power of capillary attraction which the minor concessions of the Glade possessed.

There was that week an attenuated musical comedy on the boards, and the members of the company had formed a habit of coming down fantastically wrapped in sheets to go swimming in the early morning hours.

On the night following my strange session with old Mercy, roused by gleeful shouts I came out of my room at the extreme end of the bathhouse and strolled down to the water's edge. My attention was deflected from the bathers by the sudden appearance of Doctor Starr and Sturgis out of the shadow of the canoe shed.

"Mercy Cobb has taken to her bed at last," said the doctor. "A very queer old lady, beguiled and fooled too long. And not long for this world now, I am afraid."

"It is a curious notion of hers that she will go with the tide," I remarked.

"Did ever you know it to fail?" replied the doctor.

He explained in his high tones that the withdrawing tide took on its bosom some of the electricity in the air, so that the vitality even of healthy people was lowest at the ebb; and what wonder then if the sick gave up the ghost!

"The sea has been her life," he went on, "above and beyond all this. I don't know how many years she went as stewardess, all because she had the trick of embalming. I know for a fact that Amos Craigenside had a horror of being thrown to the fishes in those hot oceans."

"It is good, clean burial," said Sturgis slowly.

"Young man," replied the doctor, "the longer you live the clearer you will see that good, clean burial is not enough. Locality comes in. One man will want burial under a tree, and another on a hill. Old Amos wanted to lie beneath those dunes."

He lowered his voice:

"It was said of him that he had sold himself to foreign devils. I've heard it said that he bowed down to an idol near the close of his life. Did ever you hear those women speak of an infernal little god, no bigger than the length of a man's arm?"

"I have seen it myself. It is in the tall clock, Time and Eternity."

Doctor Starr shrugged his shoulders.

"There's stranger things happened in that house than worshiping false gods," he vouchsafed us. He showed his teeth. "Maybe he's paying for it now by being driven out of his tomb. Well, the old Tartar did her best for him in his days of nature. And yet he wasn't grateful, and on his last voyage he had no mind to take her at all, but she rowed out to the ship in spite of him, and wasn't to be denied."

Doctor Starr and Sturgis went on up the hill.

Alone again, I returned my eye to that interesting raft, when an object nearer at hand engaged my attention. The theater stage was built at the river's very edge, to give all the room possible for seating capacity. In consequence the dressing rooms behind the stage overhung the water and were founded on long piles. What I had suddenly seen was my ornithologist sculling out from between two of these piles in one of the smaller boats.

"How the tide runs here!" said Mr. James Smith as soon as he could bring his boat to the bank. "I was swept under there in a twinkling."

"Yes, it must be swift," I said, "to bear its burden of lost souls."

His eye flashed into mine.

"How do you mean?" he said.

"I mean that old ladies have a habit of dying at ebb tide," I replied.

"Ah, you are a cryptic young man," said Mr. James Smith; and immediately, with a movement of his thumb toward the dressing rooms, he added composedly: "This is a curious structure."

I explained the reason for it. He nodded, and with a vague movement toward those shapes of sin indicated on the moonlit raft, he continued:

"So much the easier to gratify a suicidal impulse after a bad performance." I laughed, and Mr. James Smith at once said: "I speak professionally. Photography is my hobby; in daily life I am an exponent of the high art of vaudeville."

"May I ask what is your act?"

"Certainly. It is called Man or Mechanism. However, I will not explain it, because I am very shortly scheduled to transfer it to this circuit, and you will then have a chance to see for yourself."

We began to walk together toward the hotel, and I asked him how he had fared in the matter of black heron. He smiled and said:

"No luck as yet. But I shall get them Patience! Patience!"

"You must know the dunes pretty well by now," I said, struck by a certain thought. "But you have not met with the ghost of Craigenside, I suppose?"

He smiled amiably.

"What form would it take?"

"It leaves a track in the sand—a track with six toes," I returned lightly.

Not one feature of that Oriental mask moved; but I remember to this day the mysterious rush of wind among the black pines, the devil's dance on the raft, and then the sudden pausing of that man as if a hand had been laid upon his shoulder.

"I shall have to keep my eye out for this ghost," he said calmly. "They say photography will detect invisibilities."

He passed into the hotel.

Sturgis and I roomed together in the end of the bathhouse nearest the river. That night when he came in he turned and stared long and hard at the ship in mid-channel. A ship at anchor is a wonderful and portly personage, with mystery scored on her dumb sides and romance in every seam. The Asphodel was doubly mysterious by reason of the situation of her skipper.

"Are you awake, Dal?" asked Sturgis.

"Yes."

"I have just been talking with the watchman of that ship. He tells me a strange thing. Craigenside is ratty in one particular at least—he hears bells."

"Bells?"

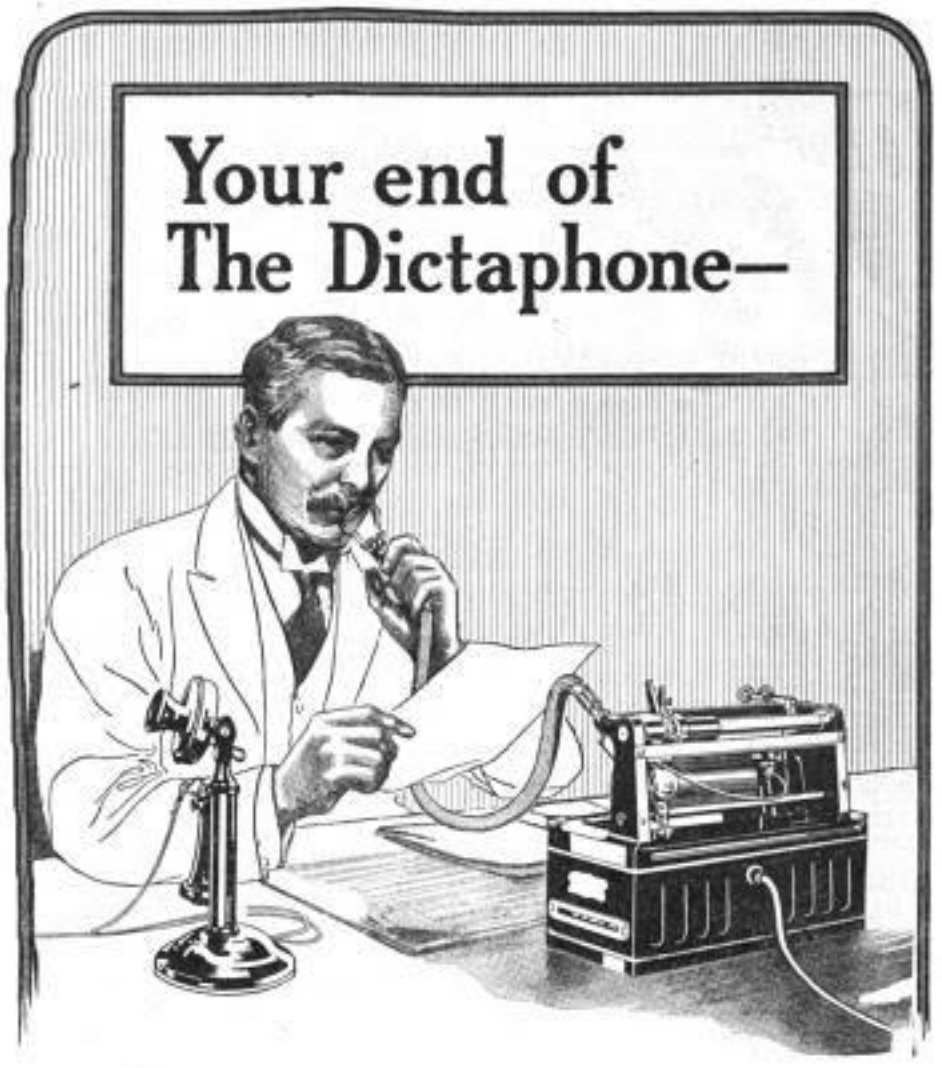
"Yes, tingling over his head or under his feet, but, bless you! not heard by anybody else."

"I give him up," I murmured, half asleep. "Or better, refer him to Mr. James Smith."

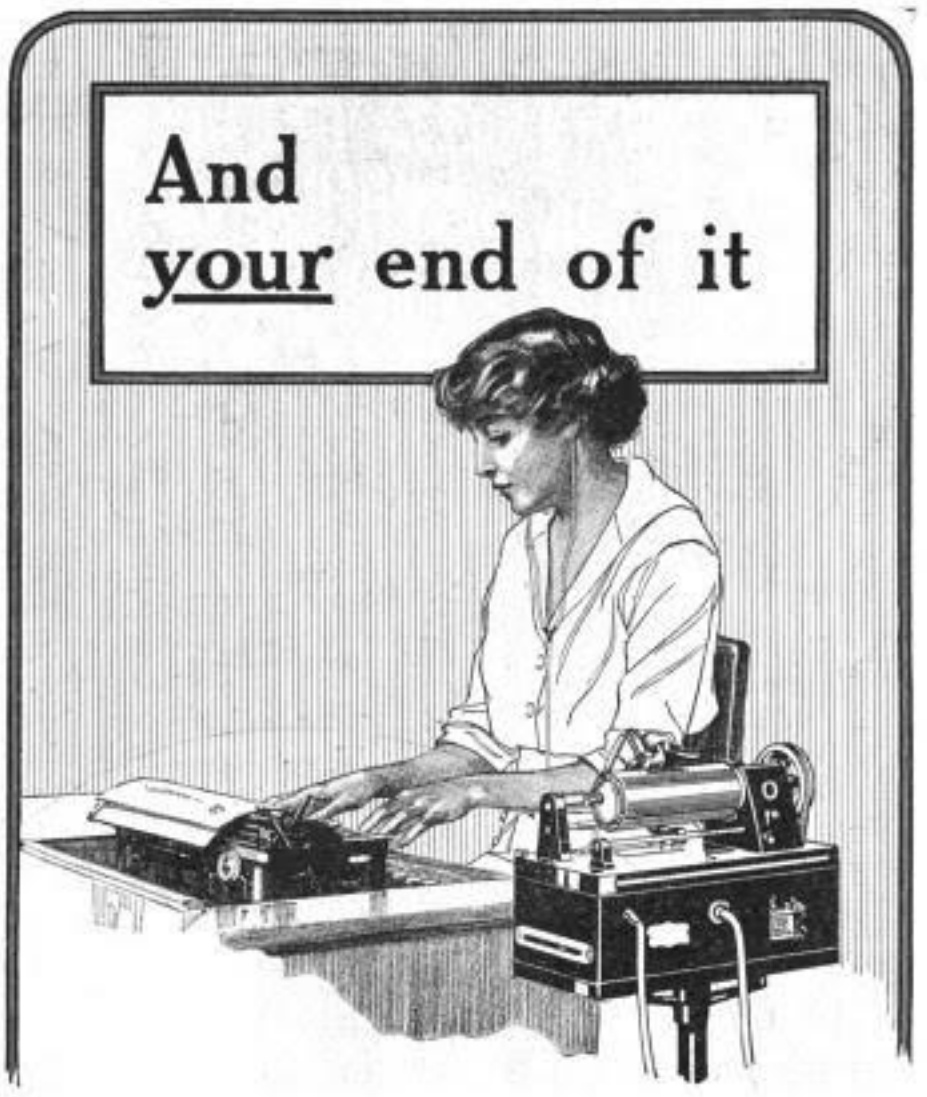
But in the morning Mr. James Smith was gone.

(TO BE CONTINUED)

A Spilt Yuletide



COPELAND TOWNSEND, who owns a hotel in New York, used to live in a small town out in Wisconsin. One of the official characters of the town was an aged negro, chiefly noted for his brevity of speech and his love of alcoholic compounds.



One twenty-fourth of December, at a late hour in the evening, the old darky was carrying home a quart bottle under his arm. He stumbled, and the flask slipped out of the protecting crotch of his elbow and hit the earth, with a crash of splintering glass. The owner contemplated the ruin, meantime sniffing the freed odor of cheap gin.

"Umph!" he said, wagging his head disconsolately. "C'rismus done come and gone already!"

Here's the whole story—both ends of it

You start dictating the minute you are ready—no waiting. You keep at it steadily, or off and on, as you feel like. Full speed or as slow as you want. Correct yourself or repeat as often as you care to. In the meantime your typist is typewriting or doing other important work, no part of her time is required for note-taking sessions. If you have much dictation at a time, she has a lot of letters already written before you are through dictating. That is all. And it is even easier than it sounds.

You hear the dictator's *words*. You get what he says; no deciphering shorthand notes of what he said. You do not have to stop and wait every time the dictator stops and thinks. You control the dictation—you can make the dictator repeat forty times without annoyance to him or embarrassment to yourself. You dodge the nerve strain of taking shorthand notes and the eye strain of "making them out." You get through your work quicker, easier; you write better letters and more of them. And you have time for other important work. You write your letters *once*, on the typewriter.

That's how The Dictaphone works

But it does not begin to convey the full measure of comfort and convenience both for the dictator and the typist. Besides the personal side of The Dictaphone—there is the money side of it. With all its other advantages it saves you a full third on the cost of every letter written. And certainly that is not the least important feature of dictating to The Dictaphone.

You can't buy a Dictaphone under any other name
The Genuine bears the name The Dictaphone

A REMARKABLE success in any line always attracts scores of imitators.

For instance: there is no other system like the Stewart Vacuum System—and there is no other in sight.

But doubtless because of its astonishing success, a few crude imitations of Stewart Vacuum System will make a bid for public favor.

But they will always be experiments—nothing more.

The Stewart principle is so exceedingly simple it cannot be imitated.

The Stewart Vacuum System is now used in over 70% of all American makes of cars.

It can be easily put on any car—old or new. Don't fail to have it on yours. $10 complete.

See that your car is equipped throughout with Stewart Products.

The Stewart Speedometer has been specified for 95% of all makes of cars built in 1917. No other motor car accessory has won such unanimous approval. It is the speedometer you want on your car.

The Stewart Tire Pump saves you that hard, back-breaking work of pumping by hand. It's easily attached to the motor or transmission of any car. Comes as standard equipment on many of the best cars. Don't be without it on yours.

Is your Warning Signal a Stewart? It should be. Stewarts are by far the best built—easily the most dependable—either motor driven or hand operated. Remember your safety depends on a good signal and get a Stewart.

Stewart V-Ray Spark Plugs have four sparking points. They are absolutely sure fire. They have an oil-proof, soot-proof, fracture-proof core. Buy a set the next time you replace your plugs.

If you own a Ford you ought to have the Stewart Ford Speedometer—$10—or mounted in the center of a handsome black enameled steel cowlboard—$11.25. It tells how far and how fast you go. It gives you an accurate check on gas consumption.

Stewart Products are for sale by leading garages, accessory dealers and jobbers everywhere

THE MAIN-CHANCE LADY

(Continued from Page 11)

a much nicer and more cheerful person if I had money—and I am! She did not *tell* me then—in fact, not until after our marriage did she tell me—of the schemes and devices she had employed to gain the *entrée* she then had; but she was very certain that, together, we could not only be happy but become rich.

"I spoke of my lack of money; she replied that it did not matter; and that, to prove her confidence in our joint future, she would liquidate the few thousand dollars which gave her her tiny income and gamble it upon what we should mutually accomplish. Why, Cliff, she told me then and there that she'd have the game going in under two years!

"Well, I said I'd think it over; that I didn't like the idea of her risking everything she had, or the idea of benefiting by her atom of prosperity. At which she laughed and told me that her whole suggestion did not rest on sentiment but on business, in which risks were inherent and sentiment did not count; and that if I went into the arrangement she had proposed it would be the first really businesslike thing I had ever done. And so it went. You know the result. I braved criticism and we were married.

"No need to tell you about the little house we got or the way in which we began. Before we had settled, Madge had cashed in her property and had enough money, so that, with what I had, we were insured a couple of years of fairly good living, including a certain amount of entertaining.

"More important, though, she had her plan. You've probably surmised already that the town of Prothero was her conception. She saw lots of advantages in it—a new prestige for the name Prothero, but, most particularly, wealth. The weakness, however, in the scheme was, after all, I suppose, I. Anyhow, she realized—and so did I—that a suburban development, with me as its head, wasn't going to attract capital swiftly and automatically. It was a matter of forcing it in. And, so long as memory lasts, I shan't forget Madge's skill in accomplishing that.

"Naturally she began by having me secure a list of the big, solid fortunes in Grantsburg. I got it; there were about ten names, and I recall how one evening we sat down together and she pried and prodded at every name. I had calculated—and at the time I was certain that I was right and safe in my figures—that about a quarter of a million dollars was necessary with which to start. Madge said five men for fifty thousand each. She hit upon that sum because she believed it was enough, so that no one, once in, should drop out too readily, and yet wasn't so large as to frighten off any really rich man. Anyhow, we selected five names out of the ten. They were David Colfax, or Mabel, who actually had the money; old Major Stone; Phillip Hoyt; Axtel Wrenn; and this boy, Emmett.

"'Fifty thousand apiece from each of them,' declared Madge; and I remember the little jerk she gave to her head. 'That's my job for the next two years.'

"And it was! All five eventually came in; Madge never missed fire once, and upon the day, about eighteen months later, when I got those men together for the final say-so there wasn't one of them who didn't have some excellent private reason for not wishing to back out. Every one of those reasons had been carefully created in advance. Oh, she did a stunning job!

"Take the Colfaxes: They were easy. A great principle with Madge is always to nurse your assets. Her friendship with Mabel had steadily grown. Not only had Madge not abandoned interest in the boys' club but she had done myriad other things to tighten her relations with the lady who had a good many hundreds of thousands in her own name—Christmas gifts, week-end excursions together, parties for the Colfax children, oceans of flattery—and much more. When David Colfax, acting for his wife, sat in at our little meeting it's certain Mabel had said to him beforehand that she should dread any coolness to come up between her and Madge.

"Axtel Wrenn was a proposition of a different sort. With him there was a tacit but none the less actual bargain. You see, Wrenn had been piling up money in the brokerage business hand over fist, and with his money had come an ambition to be in with the 'swells,' as I have heard he used to term the Hill crowd. No one had ever exactly wanted to know Wrenn, with his clublike mustache and air of brutal commercialism; but he wasn't altogether impossible. Madge perceived in the situation that for which she always searches first—the elements of a trade, of a business deal; she'd have him at her table, introduce him, give him every chance to make his way if he'd stand ready to deliver a *quid pro quo* when she gave the word.

"Of course they didn't throw the thing out in the open between them; but when two clear-visioned, thoroughgoing mercenaries like Axtel Wrenn and Madge look each other in the eye, each knows the other for what the other is, and they could buy and sell a continent merely by discussing an invitation to dinner. Words with such folks are futile; when Wrenn found himself being included among Madge's guests he knew that an hour for payment would inevitably come. And so, she having pronounced upon him the social benediction she had become able to pronounce, he became in due course a backer of the town of Prothero.

"The case of old Major Stone was odd. It was an example of Madge's everlasting genius—the genius I believe all the real getters of the world have—for catching up the unconsidered trifle and turning it to account; for being aware of value and opportunity where others are not. Why, Madge is the sort who, if she had a sore throat, could make money out of it! Anyhow, she saw a possible fifty thousand dollars for the town of Prothero in that miserable son of the major.

"You remember—he was a drug fiend, and though his father continued to support him, he was steadily sinking lower, and was stalking about town, lean and emaciated as a question mark and a veritable outcast, when she took hold of him. The poor weakling adored her because she was the first decent woman in years to treat him as if he were not loathsome.

"Maybe you've heard how she walked him until he staggered, danced with him in our house until he almost dropped, stung his dead pride until he almost wept. That was how she cured him; and a day came when the old major stood in our tiny hall, tears streaming down his cheeks, his hands shaking on Madge's shoulders, as he tried to thank her. Did the major turn down the suburban land scheme? Not much!

"Young Tom Emmett? Well, Madge had long observed that Tom was susceptible—yes, very susceptible. First, it was one lovely lady and then another; and he was always letting his newest enthusiasm run away with him. A weakness, you see—and weakness in one person always spells opportunity for another. Like the minx she is, she bided her time; and then, a month or so before the launching of the idea for the town, she furbished up every instrument of lure she had.

"Oh, yes, she told me; I didn't care—I knew Madge. Anyhow, Tom Emmett was dwelling upon the heights of madness when he joined the final session of the backers. He still is; Madge says you never can tell what's going to turn up.

"Now that leaves the Hoyts; and the reason Hoyt, for all his canniness, did not fail us was because Madge is thrifty with everything she has. For example, she had made Mabel Colfax her own personal intimate; she and Mabel did the woman things together; it was a friendship between two women. But there was another kind of friendship that could be employed—the kind that married folks have between them as married folks—family friendships; and Madge made our relations with the Hoyts distinctly that.

"We and the Hoyts were constantly doing things as married pairs, while Madge and Mabel were constantly doing things as two friends. To Madge it would have been pure waste to have made the Colfaxes our family friends; and, because she had manipulated the Hoyts and not the Colfaxes into that particular relation, Hoyt, when the check-signing moment came, would have found it awkward and embarrassing to stay his hand.

"Anyhow, that's the story; and those five men, with five big fat fortunes behind them, all found themselves in positions where each one felt he couldn't exactly throw the Protheros down. Of course you must remember that the scheme was really

Dutch Boy Products

THE metal *lead* is the foundation of Dutch Boy Products. Even *paint* (i. e., *the best* paint) comes from lead.

Many people don't know that. Dutch Boy Linseed Oil isn't lead but is needed to make white lead *liquid* enough to paint with.

Read about the other Dutch Boy Products.

Paint that pays for itself

Almost any paint will beautify your house when first applied—even the cheap kinds.

Time is the test.

Paint made of Dutch Boy pure White-Lead and Dutch Boy pure Linseed Oil, does stand the test. Such paint is an investment.

It not only makes a beautiful coating—it stays so.

That's paint economy.

Painted walls that wash like tile

For wall decoration use Dutch Boy pure White-Lead mixed flat or dull.

The result is that handsome, dull, velvet finish which is one of the charms of elegant homes—simple, yet rich.

Treatment may be smooth or stippled, plain or mottled, (tiffany). Any color, from delicate tints to bold combinations.

And—note especially—*as washable as a tiled wall.*

It is SO easy to prevent rust

For protection from rust—whether on iron fences, pipes, railings, gutters and gratings about the home, or the machinery on a farm, or the steel work on great buildings and bridges—no other material *sticks* and wears on metal like red-lead.

Dutch Boy Red-Lead is ground in Dutch Boy pure linseed oil to a thick paste, to be handled like white-lead—just thin it down with linseed oil.

Bearing metals and solder

Are you a user of bearing metals? Of solder?

If so, you know that the big problem in buying these mixtures of the soft metals is to be sure that the metal which you buy today is the same which you found so suitable to your purpose yesterday.

Dutch Boy Phoenix metal is always the same and guaranteed. So with all the other *Dutch Boy* varieties of babbitt. So with the Dutch Boy series of solder, from Dutch Boy 111, for the most particular work, down to the rough-and-ready Dutch Boy 888.

Moreover, we study *your* problem. Our testing laboratories are at your service, and our experts will take up with you any bearing problem, any die-casting possibility, any soft-metal product or proposition whatsoever.

Write our nearest branch.

If interested in painting, ask for Dutch Boy Paint Facts No. 141.

If interested in solder or bearing metals ask for Dutch Boy Metal Facts No. 141.

Why a BLEND of good tobaccos is better than any ONE tobacco

Some day the scientist who grew a fruit which was half pear and half apple may be able to "cross" rich tobacco with mild tobacco and grow a new, unheard-of leaf having the qualities of several tobaccos. But until he does, no one kind of tobacco can ever be both rich and yet delicately mild at the same time.

It requires a *blend* of good tobaccos. Harmony Pipe Blend gives you this desirable flavor "rich-mildness" because its rich and mild tobaccos are *exactly* suited to one another and *exactly* proportioned.

Let your mellowest old pipe show you how much more delicious a *blend* is than any one tobacco by itself.

15¢
Full weight 2-oz. tin

a good scheme; it was a matter of stretching a point for me or for Madge, as you choose to look at it. But creating and finding reasons why others should stretch points for you is about half the art of making bricks when you haven't got straw.

"Ah, well—now let me see. They gave me a substantial salary and we moved into a larger house. We were very comfortably fixed now, and for a little while Madge hadn't very much on her mind. Nevertheless, she kept up her interests and her friendships, and in scores of ways cultivated what she's always termed her assets. She had become a good deal of a personage by now and enjoyed being one. She never paid attention to the work out at Prothero, where we had broken ground and had begun laying out streets and sewerage systems, and so on, except to ask how it was moving. It was not till nearly two years more had gone by that she got into action again.

"I hardly know how to begin telling you the end of this yarn. Very likely you remember some of the circumstances—how the town of Prothero was very nearly on the verge of smash when, as luck would have it, we happened to be entertaining the governor of the state, Ernest Holt, and his wife, at a dinner at which the other guests were, naturally enough, the most prosperous men in town, and also the backers of the town of Prothero.

"The eyes of the state, you may recall, were more or less upon the Hill at that particular time. It has often been said that, for me, it was a happy coincidence that the governor should have come to us just when he did, because his visit made it well-nigh impossible for my friends to let me down just then. They were almost as much in the limelight as Madge and myself; and, had there been an ugly smash, they would have been bespattered by the awkward situation almost as much as we should have been. That was another case of Prothero luck.

"Now I'll tell you about it. It was way back at the end of the preceding summer. Everything had been costing more than I had figured it would, and the original money was not going so far as I had calculated. Finally, when it came to constructing a big retaining wall at the far side of the town, I cut down expenses as much as I dared. The wall wasn't what it should have been; there was a chance—a remote one, to be sure, but a chance—that it wasn't stout enough.

"Neither the engineer nor I was precisely worried, but we were not altogether satisfied. However, we knew that if it held through the freshets of the next spring all would be well. If it did not hold, and it was necessary to build a new wall, either more capital would have to come into the enterprise or there would never be any town of Prothero, and the Prothero Development Company would become a busted concern.

"The matter was enough on my mind for me to mention it casually to Madge. At my first words she was on the alert. I tried to assure and reassure her that there was no real cause for concern. She kept pinning me down and finally I admitted there was, say, one chance in a hundred that a catastrophe might occur. That was enough for Madge, and within a week she was on the move. But what possible connection her new activities could have to my retaining wall was far beyond me.

"That was the year for the election of the governor of the state and Madge had gone to the headquarters of Ernest Holt and enrolled herself as a worker. For two months she beat up and down the state trying to align the suffrage vote for her candidate. You remember about that and the speeches she made—good speeches they were too. The Hill roared. Everyone said it was just like Madge—always up to something. I was puzzled; but not a peep could I get out of Madge. She'd only smile at me, or pat me on the head and tell me not to forget the spring freshets. Finally the election came and, as you know, Holt won. As soon as we knew the result Madge said to me:

"'I don't know that I care whether the wall holds or not. Perhaps I'd rather it wouldn't.'

"'Rather it wouldn't!' I cried.

"'Exactly! If the wall breaks and those backers put up more to rebuild it they'll be in so deep that afterward none of them will dare quit. They would then be in a position in which, whether they chose to or not, they'd have to see the scheme through—have to get their money; and in doing that —— Well, we'd be rich!'

"I realized that what Madge said was true, but I asked her how she expected to force the backers to go on.

"She wouldn't tell me. All she did was laugh and say that she had made a new asset against an evil day in her friendship with the governor and his wife. And now let me tell you how she used it:

"Early in March she began going over pretty regularly to the town site. There she would get after the engineers and me to see what the prospects were for the big testing out of our retaining wall. It began to look as if the heavy water flow would come along between the middle and end of the month. Madge was off. Without an explanation she boarded a train and went up to see Mrs. Ernest Holt at the state capital. When she returned she very calmly and smilingly told me that the Holts were to dine with us at a large dinner upon the night of April the first.

"Well, I imagine this brings the story nearly up to date. As, of course, you know, the retaining wall gave way on March eighteenth; on March twenty-ninth, after having whiffled round for several days, the gentlemen composing the directorate and financial backing of the enterprise gave out word that the damage done by the freshets at the suburban development would be promptly repaired, and that much additional capital would be put into the enterprise in order to insure its ultimate success. On April first Madge gave her dinner. Isn't that clear? Don't you see? More Prothero luck!

"Oh, Cliff, the woman's a marvel! In one set of circumstances she'll gamble every last cent she has; in another she'll slave herself to the bone to guard against the smallest contingency. She's superventuresome and she's supercautious—all true materialists are like that. And that's Madge!"

Tony had finished; it was dawn, and I was staring wide-eyed at a funny faintly disheveled little man who, with a red-flushed bald spot, stood above me. A hundred questions were on my lips.

For example, I wanted to ask—but never mind. That very injunction came to me upon the moment: Never mind! Madge was Madge and Tony was a little drunk; and, any way you considered his narrative, an amazing, a grotesque portrait had been etched for me. Why not let it go at that?

I was willing to, but there was one point which, in the perverse hour of sunrise, I could not resist. I had spoken of luck and Tony had snatched me up. But surely, when it came to the matter of getting things, it was luck to have been born with such bloodlessness, such cool calculation, such utter materialism. I said as much.

"Huh!" jeered Tony. "She wasn't born that way—not by a good deal! Something else did that—changed her."

"That—er—first marriage?" I asked guardedly.

Tony only nodded.

We did not move immediately. The thing began to creep over my comprehension—the horrible tragedy of what her life with Moulton must have been. I recalled the mystery she had made of it. I remembered that upon an occasion I had veered near the topic with her.

"Now, Cliff," she had said, "we will not go into that, if you please."

And it had been one of the few moments when I had ever seen her stern. I had concluded then that the Moulton affair was too painful for discussion; and I may add that once or twice I thought I had detected, beneath her light, gay exterior, a subsurface—not precisely of bitterness, but rather of a kind of hardness, which life with a beast of a man might produce. I yawned and got to my feet.

"What was he?" I asked. "A dope fiend or a drunkard—or a crook?"

"Who?" demanded Tony sharply. "Moulton?"

"Yes; what did he do to freeze Madge up so?"

Tony glanced at me in the oddest manner; and then very quietly he said:

"He died."

"Died?"

"Why, certainly!" my cousin almost shouted. "You idiot! Don't you see? She was mad about him—mad. Gave him all the love and warmth and affection she ever had and ever could have had. For nine years they lived clean above the world and filth and money. She gave him her youth and gave him her soul, and they were in Paradise together. Then he died—that's what he did; and her soul died. And Paradise was empty—and she came down. More of Madge's luck? Cliff, you're a fool! Come to bed."

Saves His Company $80,000 a year

How an ambitious man increased his value to a five million dollar corporation

THREE years ago an ambitious young man entered a company as auditor. This company manufactures more than 5,000 separate products, and is the largest in its line.

Many men would have been contented to perform nothing but the many hard duties of that job. He wasn't.

He spent his spare time equipping himself for bigger work.

He went to school again

He learned every phase of business outside his own department. In order to get a broad, sound knowledge of modern business methods, he studied the big principles that underlie all business.

His growth and increased value were recognized by the heads of the five million dollar corporation. He was soon entrusted with greater responsibilities. He put into force many new methods which increased the company's efficiency and its business. One plan of his, changing their branch office policy, saves the company $80,000 a year.

The secret of his rapid rise

This successful man gives a generous measure of credit for his success to the thoro grounding in business principles which he acquired by reading the Modern Business Course and Service of the Alexander Hamilton Institute. On his recommendation many of the progressive men in his company are now taking advantage of this same short cut to business knowledge.

The secret of his rapid rise to place and power was that he learned from the Modern Business Course to solve quickly and correctly the problems every executive must meet.

The important decisions any executive must make *every day* must be backed up by a clear grasp of the why and how of the problem in hand. He must know the principles that underlie every phase of business, and he must know how to apply them practically.

Many of the problems that an executive must face are far more complicated than those listed here. Yet these comparatively simple business problems are the very rocks upon which business careers are smashed. Sooner or later you, too, will have to face these questions. How will you answer them?

Do you know why most inexperienced promoters fail in trying to raise money for a new business, and how to avoid their mistakes ?

Do you know what facts to get in order to figure the percentage of its sales that a business can afford to spend for advertising ?

Do you know the vital difference to a business man between "getting a loan" and "discounting his note," and when each is necessary ?

What are the essentials a business man should watch for and satisfy himself on before he signs his name to a business paper ?

Can you answer a letter of complaint so as to satisfy the complainant and yet preserve the firm's prestige ?

Can you analyze the market of a proposition so as to tell accurately whether it will be cheaper to sell direct by mail, or thru usual trade channels ?

By comparison of a series of financial statements, can you tell whether the business is going as it should, and then put your finger on the weakness or strength shown ?

The knowledge that carries men thru

You cannot catalog the answers to these broad questions. Circumstances vary. But the underlying principles always remain the same. It is the knowledge of the *basic principles* that carries men thru to success.

It is this broad grasp of the fundamentals of business that the Alexander Hamilton Institute is giving to more than 50,000 business men today.

The Modern Business Course and Service of the Alexander Hamilton Institute gives you a logical foundation on which to build your future business knowledge and experience. All departments of business are covered and presented to you in interesting, practical form.

Based upon the actual experience of thousands of successful business men

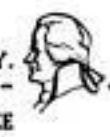
The Institute collects, classifies and transmits to you, thru the Modern Business Course and Service, the best thought and practice in modern business. It will give you a thoro and sound training in the fundamental principles underlying all departments of business. It will give you a knowledge that could otherwise be obtained *only* by years of bitter experience—if at all.

Advisory Council

Business and educational authority of the highest standing are represented in the Advisory Council of the Alexander Hamilton Institute. This Council includes Frank A. Vanderlip, President of the National City Bank of New York; Judge E. H. Gary, Head of the U. S. Steel Corporation; John Hays Hammond, the eminent engineer; Joseph French Johnson, Dean of the New York University School of Commerce; and Jeremiah W. Jenks, the statistician and economist.

The kind of men enrolled

Presidents of big corporations are often enrolled for this Course and Service along with ambitious young clerks in their employ. Among the 50,000 subscribers are such men as H. C. Osborn, President, American Multigraph Sales Co.; Melville W. Mix, President of the Dodge Mfg. Co.; George M. Verity, President of the American Rolling Mills; William H. Ingersoll, Marketing Manager of the biggest watch company in the world; N. A. Hawkins, General Sales Manager of the Ford Motor Co., and scores of others equally prominent.



In the Standard Oil Co., 242 men are enrolled in the Alexander Hamilton Institute; in the U. S. Steel Corporation, 450; in the National Cash Register Co., 194; in the General Electric Co., 282; in the Pennsylvania Railroad, 87; and so on down the list of the biggest concerns in America.

"Forging Ahead in Business"

A careful reading of this 135-page book, "Forging Ahead in Business," copy of which we will send you free, will repay you many times over. It will help measure what you know—what you don't know, and what you should know—to make success sure. This Course and Service will fit you to grasp the opportunities that are bound to come to those who are *prepared*.

24th Successful Year
1893–1917

"America's Greatest 'Light Six'"

HAYNES

"Light Six" $1595

"Light Twelve" $2095

"America's Greatest 'Light Twelve'"

Greater power—longer life—lower upkeep costs!

A 100,000,000 mile "endurance run," by some 15,000 Haynes "Light Six" owners during the past 2¾ years, is made the basis for all statements herein contained. For the 1917 Haynes is akin in *power-plant, weight and principal mechanical structure* to Haynes "Light Sixes" of the last 33 months.

Fifteen thousand owners have found these cars close to mechanical perfection. A few minor structural betterments have been the limit of change. This despite our quarter-century of motor and car building experience.

Thus—in 1917 cars, which we believe, for refinement and modernness of equipment, excel all other new models—are you able to know accurately in advance:

That upkeep will be *extremely low* for years to come. That good performance is *permanent*. That *long life* is a certainty. That depreciation will be *slight*.

8,000 miles on tires. Remarkably high mileages from gas and oil. A mere fraction of a cent per mile for repairs. Everywhere you hear it said "The Haynes is a big, powerful car *but you can afford to run it.*"

The Haynes "Light Six"—the car YOU get with its regular stock gear ratio—will *perform for years* as follows:

- **Any speed between one and sixty miles per hour *without shifting from high gear.***
- ***Pick-up* from a stop to thirty miles per hour in 7½ seconds.**
- ***Climb* "low gear" grades on *high*.**
- **Develop *more pulling power* at moderate speeds, or through sand, mud and snow, *than any other* 3½ x 5-inch, 6-cylinder motor.**

You are virtually given a guarantee of satisfaction, not alone for 1917, but for 1918, 1919, 1920 and on.

"Demonstrations" *prove little*. What "doctored up," specially-geared "stock" cars, nursed along by skilled professionals, can do, *proves nothing*.

But take 15,000 cars. Let 15,000 average everyday motorists run them for 100,000,000 miles. Let them drive over all kinds of roads—in weather fair and foul—for periods up to nearly three years.

There you have a *test*. There you have a *true examination* for endurance. The results of *such* use *mean everything*.

And such is the 100,000,000 mile "endurance run" which assures the *long life* and *permanently low after costs* of each Haynes.

* * * * * *

The Haynes "Light Twelve" for 1917 is a masterpiece of multi-cylinder perfection. Vast power, record speed, marvelous flexibility and lightning pick-up blend with upkeep economy in characteristic Haynes fashion.

* * * * * *

Demand always exceeds the supply of Haynes cars. We advise early action again this year.

Lemons for Hot Tea

Fashion and *Reason* Both Say "*Lemons With Tea*"

"Lemons for Usefulness"

A cup of hot tea—for rejuvenating warmth—plus a slice of zestful lemon!

Few drinks have more character—few are more dainty—and few are better for you.

"Tea isn't tea without lemons," so they say abroad. And few American housewives who entertain serve tea today without them.

Thus have lemons become fashionable—and in a beneficial way. It is wise—not merely whimsical—to follow a fashion that so improves a food or drink.

Order lemons today—serve them always with tea.

Learn the many ways in which lemons serve to add to the pleasures and lighten the cares of housekeeping. There is no other fruit that compares with lemons when it comes to usefulness.

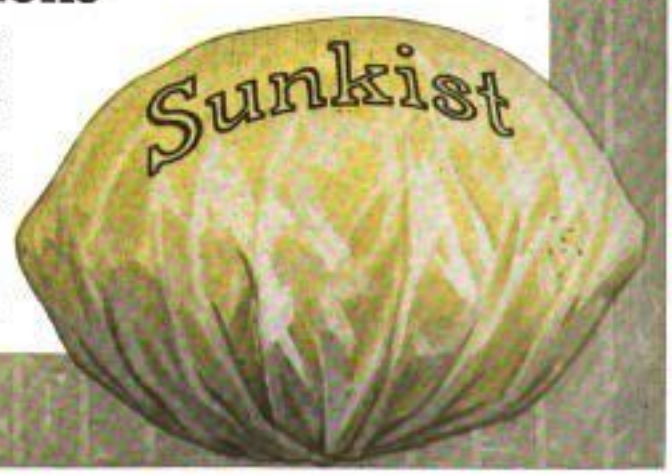
Sunkist

Uniformly Good Lemons

Boston Cooking School Recipes

A valuable illustrated book containing 200 tested Orange and Lemon recipes, by the authors of the famous Boston Cook Book, will be sent without charge to housewives who answer this advertisement, giving their dealer's name and address. Send for your copy now.

Also please state your greatest single use of lemons.



Lemons are healthful. Sunkist lemons are juicy, tart and practically seedless. They are mechanically washed until bright and waxy and are sent to your dealer in clean, crisp, tissue wrappers. Sunkist come in several different sizes at the same prices asked for ordinary lemons. Ask to have them delivered in the original wrappers.

In order to keep lemons most satisfactorily, leave the wrappers on the fruit. This prevents the air from shrinking the skin.

Tobacco Co.

P. A. quality wins men quick to smoking joy!

Hands out such go-to-it-again flavor and fragrance and satisfaction without bite or parch that it keeps putting squad after squad of new smokers on the firing line and jams real and true delight into fresh crops of "regulars" day after day!

Make P. A. in the tidy-red-tin your pocket-pal!

PLAY this Prince Albert smoke-tip like a thoroughbred—and, it's tobacco-joy-for-yours on a silver platter! Can't any more stop you having the smoke-sessions of your life with P. A. than you can put thirty days in February!

No matter how long you've been on the trail of tobacco-that-hits-the-spot, *you quit now* while the year's young! For with Prince Albert for a smoke-pal you've landed right, at last! You've hit ore! You've uncorked a mine of quality-smokings that'll keep you pleasure-puf-f-f-f-ing as long as the flowers bloom in springtime!

Your taste will flash a speed-o. k. that Prince Albert's flavor beats all-hollow your pet dream of tobacco joy! *Your tongue* will signal "go-ahead-to-beat-the-band" because P. A. won't bite it any more than a wax doll! Bite and parch are *cut out of Prince Albert* by our exclusive patented process!

Prince Albert lets you drill-mighty-deep into smoke-smiles, it's so friendly and cheery in a jimmy pipe or whicheverway you fire-up! P. A. is your certain-sure-proof of the bang-up-happiness and content that *can come* via tobacco quality! For, Prince Albert hands you *nothing but quality!* We prefer to give you tobacco that smashes all smoke-rules-and-records and lets you take-a-smoke *without a comeback* fast as your smokeappetite shoots in a demand!

PRINCE ALBERT

the national joy smoke

Prince Albert is to be had everywhere tobacco is sold. Toppy red bags, 5c; tidy red tins, 10c; handsome pound and half-pound tin humidors —and—that clever, practical pound crystal-glass humidor with sponge-moistener top that keeps the tobacco in such perfect condition.

Big Ben

A *Westclox* Alarm

There's Success in His Wake

BIG BEN at six a. m. for the big man of business—who knows the luxury of ample time—who's up before duty insists. Try Big Ben in the business of living. Set him a little ahead.

"Click," goes the time-lock on sleep—you dart across the room—nudge him quiet—smile.—With brain afresh and mind alert you're on good terms with a new day.

Puts an edge on your razor and appetite—and time to use both—brings a whistle that starts in the tub and puckers again at each lull in your work.

To get your salary up, a year of Big Ben get-ups is better than a *pull* with the Boss. You'll like Big Ben face to face. He's seven inches tall, spunky, neighborly—downright good all through. He rings two ways—ten half-minute calls or steadily for five minutes.

Big Ben is six times factory tested. At your jeweler's, $2.50 in the United States, $3.50 in Canada. Sent prepaid on receipt of price if your jeweler doesn't stock him.

Westclox folk build more than three million alarms a year—and build them well. All wheels are assembled by a special process—patented, of course. Result—accuracy, less friction, long life.

La Salle, Ill., U. S. A. **Western Clock Co.** Makers of *Westclox*

HER DAIRY

By Mary Roberts Rinehart

ILLUSTRATED BY MAY WILSON PRESTON

Being the Daily Journal of the Sub-Deb

I Still Think I Would Not Have Been Recognized by the Familey Had I Not, in a Very Quiet Jeen, Commenced to Sneaze

JANUARY 1ST. I have today recieved this dairy from home, haveing come back a few days early to make up a French Condition.

Weather, clear and cold.

New Year's dinner. Roast chicken (Turkey being very expencive) mashed Turnips, sweet Potatos and minse Pie.

It is my intention to record in this book the details of my Daily Life, my thoughts which are to sacred for uterence, and my ambitions. Because who is there to whom I can speak them? I am surounded by those who exist for the mere Pleasures of the day, or whose lives are bound up in Resitations.

For instance, at dinner today, being mostly faculty and a few girls who live in the Far West, the conversation was entirely on buying a talking machine for dancing because the music teacher has the meazles and is quarentined in the infirmery. And on Miss Everett's couzin, who has writen a play.

When one looks at Miss Everett, one recognises that no couzin of hers could write a play.

New Year's resolution—to help some one every day. Today helped Mademoiselle to put on her rubers.

JANUARY 2ND. Today I wrote my French theme, beginning, "Les hommes songent moins à leur *Ame qá* à leur *corps*. Mademoiselle sent for me and objected, saying that it was not a theme for a young girl, and that I must write a new one, on the subject of pears. How is one to develope in this atmosphere?

Some of the girls are comeing back. They straggle in, and put the favers they got at cotilions on the dresser, and their holaday gifts, and each one relates some amorus experience while at home. Dear dairy, is there somthing wrong with me, that Love has passed me by? I have had offers of Devotion but none that apealed to me, being mostly either to young or not atracting me by physicle charm. I am not cold, although frequently acused of it. Beneath my fridgid Exterior beats a warm heart. I intend to be honest in this dairy, and so I admit it. But, except for passing Fansies—one being, alas, for a married man—I remain without the Divine Passion.

What must it be to thrill at the aproach of the loved Form? To harken to each ring of the telefone bell, in the hope that, if it is not the Idolised Voice, it is at least a message from it? To waken in the morning and, looking around the familiar room, to muze: "Today I may see him—on the way to the Post Office, or rushing past in his racing car." And to know that at the same moment *he* to is muzing: "Today I may see her, as she exercises herself at basket ball, or mounts her horse for a daily canter!"

Although I have no horse. The school does not care for them, considering walking the best exercise.

Have flunked the French again, Mademoiselle not feeling well, and marking off for the smallest Thing.

Today's helpfull Deed—asisted one of the younger girls with her spelling.

JANUARY 4TH. Miss Everett's couzin's play is comeing here. The school is to have free tickets, as they are "trying it on the dog." Which means seeing if it is good enough for the large cities.

We have desided, if Everett marks us well in English from now on, to aplaud it, but if she is unpleasent, to sit still and show no interest.

JANUARY 5TH, 6TH, 7TH, 8TH. Bad weather, which is depressing to one of my Temperment. Also boil on noze.

A few helpfull Deeds — nothing worth putting down.

JANUARY 9TH. Boil cut.

Again I can face my imige in my mirror, and not shrink.

Mademoiselle is sick and no French. *Miséricorde!*

Helpfull Deed—sent Mademoiselle some fudge, but this school does not encourage kindness. Reprimanded for cooking in room. School sypmathises with me. We will go to Miss Everett's couzin's play, but we will dam it with faint praise.

JANUARY 10TH. I have written this Date, and now I sit back and regard it. As it is impressed on this white paper, so, dear dairy, is it written on my Soul. To others it may be but the tenth of January. To me it is the day of days. Oh, tenth of January! Oh, Monday! Oh, day of my awakning!

It is now late at night, and around me my schoolmates are sleeping the sleep of the young and Heart free. Lights being off, I am writing by the faint luminocity of a candel. Propped up in bed, my mackinaw coat over my *robe de nuit* for warmth, I sit and dream. And as I dream I still hear in my ears his final words: "My darling. My woman!"

How wonderfull to have them said to one Night after Night, the while being in his embrase, his tender arms around one! I refer to the heroine in the play, to whom he says the above raptureous words.

Comeing home from the theater tonight, still dazed with the revalation of what I am capable of, once arouzed, I asked Miss Everett if her couzin had said anything about Mr. Egleston being in love with the Leading Character. She observed:

"No. But he may be. She is very pretty."

"Posibly," I remarked. "But I should like to see her in the morning, when she gets up."

All the girls were perfe tly mad about Mr. Egleston, although pretending merly to admire his Art. But I am being honest, as I agreed at the start, and now I know, as I sit here with the soft, although chilly breezes of the night blowing on my hot brow, now I know that this thing that has come to me is Love. Morover, it is the Love of my Life. He will never know it, but I am his. He is exactly my ideal, strong and tall and passionate. And clever, to. He said some awfuly clever things.

I beleive that he saw me. He looked in my direction. But what does it matter? I am small, insignifacent. He probably thinks me a mere child, although seventeen.

What matters, oh Dairy, is that I am at last in love. It is hopeless. Just now, when I had written that word, I buried my face in my hands. There is no hope. None. I shall never see him again. He passed out of my life on the 11:45 train. But I love him. *Mon Dieu*, how I love him!

JANUARY 11TH. We are going home. *We are going home.* WE ARE GOING HOME. WE ARE GOING HOME!

Mademoiselle has the meazles.

Digitized by Google

JANUARY 13TH. The Familey managed to restrain its ecstacy on seeing me today. The house is full of people, as they are haveing a Dinner-Dance tonight. Sis had moved into my room, to let one of the visitors have hers, and she acted in a very unfilial manner when she came home and found me in it.

"Well!" she said. "Expelled at last?"

"Not at all," I replied loftyly. "I am here through no fault of my own. And I'd thank you to have Hannah take your clothes off my bed."

She gave me a biter glanse.

"I never knew it to fail!" she said. "Just as everything is fixed, and we're recovering from you're being here for the Holadays, you come back and stir up a lot of trouble. What brought you, anyhow?"

"Measles."

She snached up her ball gown.

"Very well," she said. "I'll see that you're quarentined, Miss Barbara, all right. And if you think you're going to slip downstairs tonight after dinner and *worm* yourself into this party, I'll show you."

She flounsed out, and shortly afterwards mother took a minute from the Florest, and came upstairs.

"I do hope you are not going to be troublesome, Barbara," she said. "You are too young to understand, but I want everything to go well tonight, and Leila ought not to be worried."

"Can't I dance a little?"

"You can sit on the stairs and watch." She looked fidgity. "I—I'll send up a nice dinner, and you can put on your dark blue, with a fresh collar, and—it ought to satisfy you, Barbara, that you are at home and posibly have brought the measles with you, without making a lot of fuss. When you come out ——"

"Oh, very well," I murmured, in a resined tone. "I don't care enough about it to want to dance with a lot of Souses anyhow."

"Barbara!" said mother.

"I supose you have some one on the String for her," I said, with the *abandon* of my thwarted Hopes. "Well, I hope she gets him. Because if not I darsay I shall be kept in the Cradel for years to come."

"You will come out when you reach a proper Age," she said, "if your Impertanence does not kill me off before my Time."

Dear Dairy, I am fond of my mother, and I felt repentent and stricken.

So I became more agreable, although feeling all the time that she does not and never will understand my Temperment. I said:

"I don't care about Society, and you know it, mother. If you'll keep Leila out of this room, which isn't much but is my Castel while here, I'll probably go to bed early."

"Barbara, sometimes I think you have no afection for your Sister."

I had agreed to honesty January first, so I replied.

"I have, of course, mother. But I am fonder of her while at school than at home. And I should be a better Sister if not condemed to her old things, includeing hats, which do not suit my Tipe."

Mother moved over magestically to the door and shut it. Then she came and stood over me.

"I've come to the conclusion, Barbara," she said, "to apeal to your better nature. Do you wish Leila to be married and happy?"

"I've just said, mother ——"

"Because a very interesting thing is happening," said mother, trying to look playfull. I—a chance any girl would jump at."

So here I sit, Dear Dairy, while there are sounds of revelery below, and Sis jumps at her chance, which is the Honorable Page Beresford, who is an Englishman visiting here because he has a weak heart and can't fight. And father is away on business, and I am all alone.

I have been looking for a rash, but no luck.

Ah me, how the strains of the orkestra recall that magic night in the theater when Adrian Egleston looked down into my eyes and although ostensably to an actress, said to my beating heart: "My darling! My woman!"

3 A. M. I wonder if I can controle my hands to write.

In mother's room across the hall I can hear furious Voices, and I know that Leila is begging to have me sent to Switzerland. Let her beg. Switzerland is not far from England, and in England ——

Here I pause to reflect a moment. How is this thing posible? Can I love two members of the Other Sex? And if such is the Case, how can I go on with my Life? Better far to end it now, than to perchance marry one, and find the other still in my heart. The terrable thought has come to me that I am fickel.

Fickel or polygamus—which?

Dear Dairy, I have not been a good girl. My New Year's Resolutions have gone to airey nothing.

The way they went was this: I had settled down to a quiet evening, spent with his beloved picture which I had clipped from a newspaper. (Adrian's. I had not as yet met the other.) And, as I sat in my chamber, I grew more and more desolate. I love Life, although pessamistic at times. And it seemed hard that I should be there, in exile, while my Sister only twenty months older, was jumping at her chance below.

At last I decided to try on one of Sis's frocks and see how I looked in it. I thought, if it looked all right, I might hang over the stairs and see what I then scornfully termed "His nibs." Never again shall I so call him.

I got an evening gown from Sis's closet, and it fitted me quite well, although tight at the waste for me, owing to basket ball. It was also to low, so that when I had got it all hooked about four inches of my *lingerie* showed. As it had been hard as anything to hook, I was obliged to take the scizzers and cut off the said *lingerie*. The result was good, although very *decollte*. I have no bones in my neck.

And now came my moment of temptation. How easy to put my hair up on my head, and then, by the servant's staircase, make my way to the seen below!

I, however, considered that I looked pale, although Mature. I looked at least nineteen. So I went into Sis's room, which was full of evening wraps but emty, and put on a touch of rouge. With that and my eyebrows blackend, I would not have known myself, had I not been certain it was I and no other.

I then made my way down the Back Stairs.

Ah me, Dear Dairy, was that but a few hours ago? Is it but a short time since Mr. Beresford was sitting at my feet, thinking me a *debutante*, and stareing soulfuly into my very heart? Is it but a matter of minutes since Leila found us there, and in a maner which reveled the true feeling she has for me, ordered me to go upstairs and take off Maidie Mackenzie's gown.

(Yes, it was not Leila's after all. I had forgotten that Maidie had taken her room. And except for pulling it somewhat at the waste, I am sure I did not ingure the old thing.)

I shall now go to bed and dream. Of which one I know not. My heart is full. Romance has come at last into my dull and dreery life. Below, the revelers have gone. The flowers hang their herbacious heads. The music has flowed away into the river of the past. I am alone with my Heart.

JANUARY 14TH. How complacated my Life grows, Dear Dairy! How full and yet how incompleat! How everything begins and nothing ends!

He is in town.

I discovered it at breakfast. I knew I was in for it, and I got down early, counting on mother breakfasting in bed. I would have felt better if father had been at home, because he understands somwhat the way they keep me down. But he was away about an order for shells, and I was to bear my chiding alone. I had eaten my fruit and serial, and was about to begin on sausage, when mother came in, haveing risen early from her slumbers to take the decorations to the hospitle.

"So here you are, wreched child!" she said, giving me one of her coldest looks. "Barbara, I wonder if you ever think whither you are tending."

I ate a sausage.

What, Dear Dairy, was there to say?

"To disobey!" she went on. "To force yourself on the atention of Mr. Beresford, in a borowed dress, with your eyelashes blackend and your face painted ——"

"I should think, mother," I observed, "that if he wants to marry into this family, and is not merly being draged into it, that he ought to see the worst at the start." She glared, without speaking. "You know," I continued, "it would be a dreadfull thing to have the Ceramony performed and everything to late to back out, and then have *me* sprung on him. It wouldn't be honest, would it?"

"Barbara!" she said in a terrable tone. "First disobedience, and now sarcasm. If your father was only here! I feel so alone and helpless."

Her tone cut me to the heart. After all she was my own mother, or at least maintained so, in spite of numerous questions enjendered by our lack of resemblence, moral as well as physicle. But I did not offer to embrase her, as she was at that moment poring out her tea. I hid my misery behind the morning paper, and there I beheld the fated vision. Had I felt any doubt as to the state of my afections it was settled then. My heart leaped in my bosom. My face sufused. My hands trembled so that a piece of sausage sliped from my fork. *His picture looked out at me with that well remembered gase from the depths of the morning paper.*

Oh, Adrian, Adrian!

Here in the same city as I, looking out over perchance the same newspaper to perchance the same sun, wondering—ah, what he was wondering?

I was not even then, in that first Rapture, foolish about him. I knew that to him I was probably but a tender memory. I knew, to, that he was but human and probably very concieted. On the other hand, I pride myself on being a good judge of character, and he carried nobilaty in every linament. Even the obliteration of one eye by the printer could only hamper but not destroy his dear face.

"Barbara," mother said sharply. "I am speaking. Are you being sulkey?"

"Pardon me, mother," I said in my gentlest tones. "I was but dreaming." And as she made no reply, but rang the bell visciously, I went on, pursuing my line of thought. "Mother, were you ever in Love?"

"Love! What sort of Love?"

I sat up and stared at her.

"Is there more than one sort?" I demanded.

"There is a very silly, schoolgirl Love," she said, eyeing me, "that people outgrow and blush to look back on."

"Do you?"

"Do I what?"

"Do you blush to look back on it?"

Mother rose and made a sweaping gesture with her right arm.

"I wash my hands of you!" she said. "You are impertanent and indelicate. At your age I was an inocent child, not troubleing with things that did not concern me. As for Love, I had never heard of it until I came out."

"Life must have burst on you like an explosion," I observed. "I suppose you thought that babies ——"

"Silense!" mother shreiked. And seeing that she persisted in ignoreing the real things of Life while in my presense, I went out, cluching the precious paper to my Heart.

"Oh, I Don't Know," He Said. "It's Pretty Convenient to Have a Familey to Drop on When the Slump Comes"

JANUARY 15TH. I am alone in my boudoir (which is realy the old schoolroom, and used now for a sowing room).

My very soul is sick, oh Dairy. How can I face the truth? How write it out for my eyes to see? But I must. For *something must be done.* The play is failing.

The way I discovered it was this. Yesterday, being short of money, I sold my amethyst pin to Jane, one of the housemaids, for two dollars, throwing in a lace coller when she seemed doubtful, as I had a special purpose for useing funds. Had father been at home I could have touched him, but mother is diferent.

I then went out to buy a frame for his picture, which I had repaired by drawing in the other eye, although lacking the Fire and passionate look of the originle. At the shop I was compeled to show it, to buy a frame to fit. The clerk was almost overpowered.

Digitized by Google

"Do you know him?" she asked, in a low and throbing tone.

"Not intimitely," I replied.

"Don't you love the play?" she said. "I'm crazy about *it*. *I've* been back three times. Parts of it I know off by heart. He's very handsome. That picture don't do him justise."

I gave her a searching glanse. Was it posible that, without any acquaintance with him whatever, she had fallen *in* love with him? It was indeed. She showed it in every line of her silly face.

I drew myself up hautily. "I should think it would be very expencive, going so often," I said, in a cool tone.

"Not so very. You see, the play is a failure, and they give us girls tickets to dress the house. Fill it up, you know. Half the girls in the store are crazy about Mr. Egleston."

My world shuddered about me. What—fail! That beautiful play, ending "My darling, my woman?" It could not be. Fate would not be cruel. Was there no apreciation of the best in Art? Was it indeed true, as Miss Everett has complained, although not in these exact words, that the theater was only supported now by chorus girl's legs, dancing about in uter *abandon*.

With an expression of despair on my features, I left the store, carrying the Frame under my arm.

One thing is certain. I must see the play again, and judge it with a criticle eye. *If it is worth saveing, it must be saved.*

JANUARY 16TH. Is it only a day since I saw you, Dear Dairy? Can so much have happened in the single lapse of a few hours? I look in my mirror, and I look much as before, only with perhaps a touch of paller. Who would not be pale?

I have seen *him* again, and there is no longer any doubt in my heart. Page Beresford is atractive, and if it were not for circumstances as they are I would not anser for the consequences. But things *are* as they are. There is no changeing that. And I have read my own heart.

I am not fickel. On the contrary, I am true as steal.

I have put his Picture under my mattress, and have given Jane my gold cuff pins to say nothing when she makes my bed. And now, with the house full of People downstairs acting in a flipent and noisy maner, I shall record how it all happened.

My finantial condition was not improved this morning, father haveing not returned. But I knew that I must see the play, as mentioned above, even if it became necesary to borow from Hannah. At last, seeing no other way, I tried this, but failed.

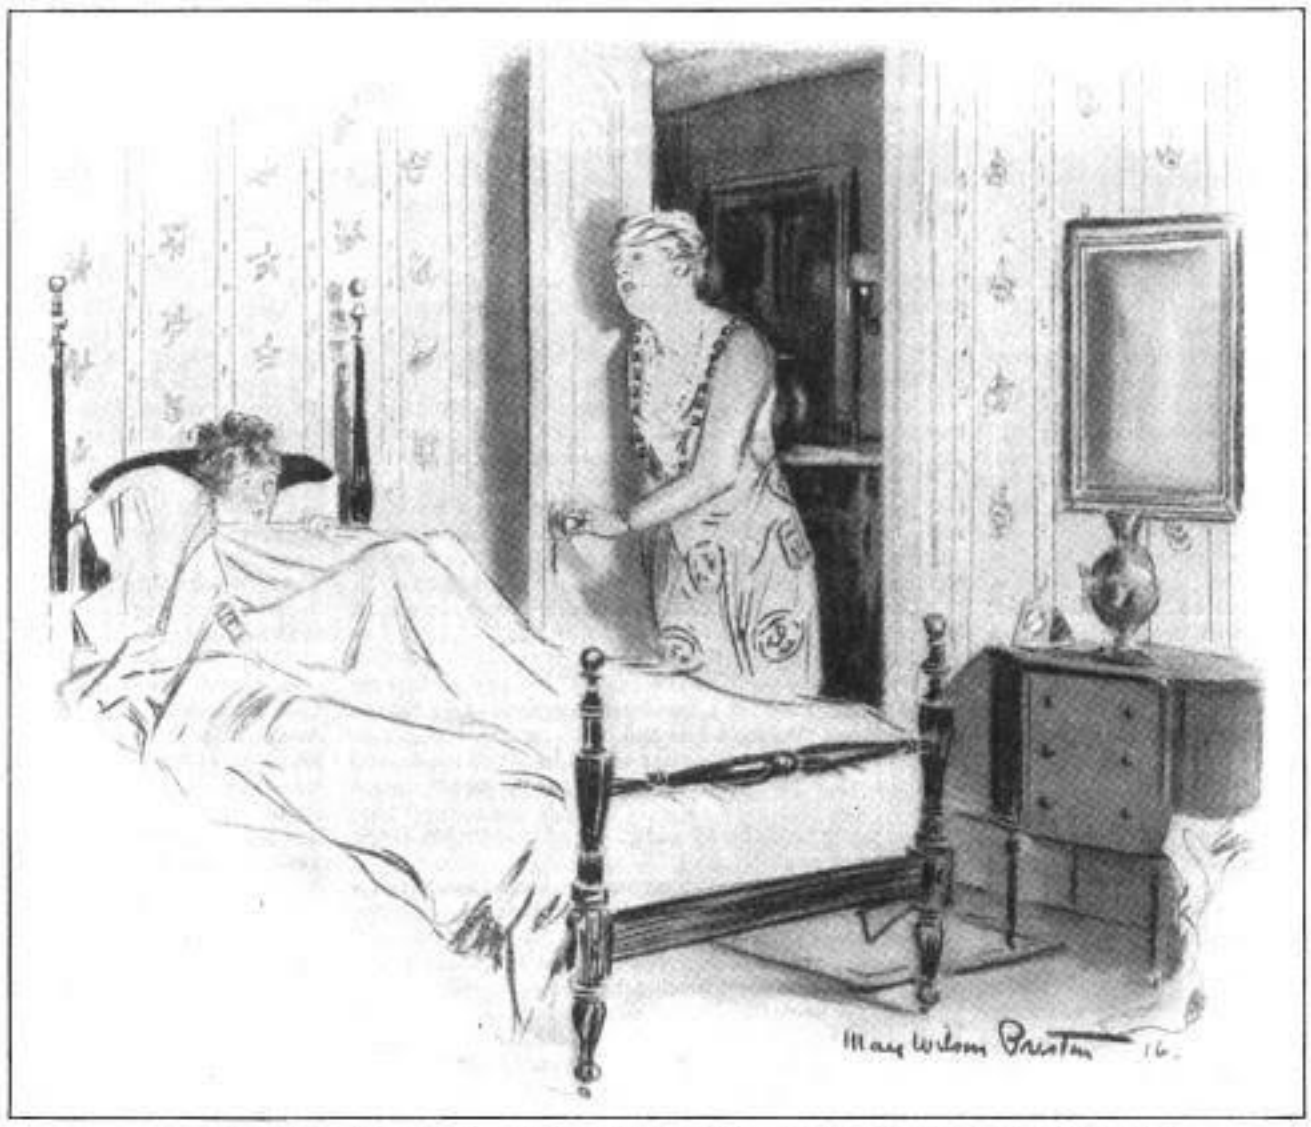
"What for?" she said, in a suspisious way.

"I need it terrably, Hannah," I said.

"You'd ought to get it from your mother, then, Miss Barbara. The last time I gave you some you paid it back in postage stamps, and I haven't written a letter since. They're all stuck together now, and a totle loss."

"Very well," I said, fridgidly. "But the next time you break anything ——"

"How much do you want?" she asked.



I took a quick look at her, and I saw at once that she had desided to lend it to me and then run and tell mother, beginning, "I think you'd ought to know, Mrs. Archibald ——"

"Nothing doing, Hannah," I said, in a most dignafied maner. "But I think you are an old clam, and I don't mind saying so."

I was now thrown on my own resourses, and very biter. I seemed to have no Friends, at a time when I needed them most, when I was, as one may say, "standing with reluctent feet, where the brook and river meet."

Tonight I am no longer sick of life, as I was then. My throws of anguish have departed. But I was then uterly reckless, and even considered running away and going on the stage myself.

I have long desired a career for myself, anyhow. I have a good mind, and learn easily, and I am not a Paracite. The idea of being such has always been repugnent to me, while the idea of a few dollars at a time doaled out to one of independant mind is galling. And how is one to remember what one has done with one's Allowance, when it is mostly eaten up by Small Lones, Carfare, Stamps, Church Collection, Rose Water and Glycarine, and other Mild Cosmetics, and the aditional Food necesary when one is still growing.

I Had to Duck Back Into Bed and Crush Everything. But She Only Looked In and Said to Try and Behave for the Next Three Hours

To resume, Dear Dairy; haveing uterly failed with Hannah, and haveing shortly after met Sis on the stairs, I said to her, in a sisterly tone, intimite rather than fond:

"I darsay you can lend me five dollars for a day or so."

"I darsay I can. But I won't," was her cruel reply.

"Oh, very well," I said breifly. But I could not refrain from making a grimase at her back, and she saw me in a mirror.

"When I think," she said heartlessly, "that that wreched school may be closed for weaks, I could scream."

"Well, scream!" I replied.

"You'll scream harder if I've brought the meazles home on me. And if you're laid up, you can say goodbye to the Dishonorable. You've got him tide, maybe," I remarked, "but not thrown as yet."

(A remark I had learned from one of the girls, Trudie Mills, who comes from Montana.)

I was therfor compeled to dispose of my silver napkin ring from school. Jane was bought up, she said, and I sold it to the cook for fifty cents and half a minse pie—although baked with our own materials.

All my Fate, therfor, hung on a paltrey fifty cents.

I was torn with anxiety. Was it enough? Could I, for fifty cents, steel away from the sordid cares of life, and lose myself in obliviousness, gaseing only at his dear Face, listening to his dear and softly modulated Voice, and wondering if, as his eyes swept the audiance, they might perchance light on me and brighten with a momentary gleam in their unfathomible Depths. Only this and nothing more, was my expectation.

How diferent was the reality!

Haveing ascertained that there was a matinee, I departed at an early hour after luncheon, wearing my blue velvet with my fox furs. White gloves and white topped shoes compleated my outfit, and, my own *chapeau* showing the effect of a rainstorm on the way home from church while away at school, I took a chance on one of Sis's, a perfectly madening one of rose-colored velvet. As the pink made me look pale, I added a touch of rouge.

I looked fully out, and indeed almost Second Season. I have a way of assumeing a serious and mature maner, so that I am frequently taken for older than I realy am. Then, takeing a few roses left from the decorations, and thrusting them carelessly into the belt of my coat, I went out the back door, as Sis was getting ready for some girls to bridge, in the front of the house.

Had I felt any greif at decieving my familey, the bridge party would have knocked them. For, as usual, I had not been asked, although playing a good game myself, and haveing on more than one ocasion won most of the money in my house at school.

I was early at the theater. No one was there, and women were going around taking covers off the seats. My fifty cents gave me a good seat, from which I opined, alas, that the shop girl had been right and busness was roten. But at last, after hours of waiting, the faint tuneing of musicle instruments was heard.

From that time I lived in a daze. I have never before felt so strange. I have known and respected the Other Sex, and indeed once ortwise been kissed by it. But I had remained Cold. My Pulses had never fluttered. I was always conserned only with the fear that others had overseen and would perhaps tell. But now—I did not care who would see, if only Adrian would put his arms about me. Divine shamlessness! Brave wrapture! For if one who he could not posibly love, being so close to her in her make-up, if one who was indeed employed to be made Love to, could submit in public to his embrases, why should not I, who would have died for him?

These were my thought as the Play went on. The hours flew on joyous feet. When Adrian came to the footlights and looking aparently square at me, declaimed: "The World owes me a liveing. I will have it," I almost swooned. His clothes were worn. He looked hungry and ghaunt. But how true that

"Rags are royal raimant, when worn for virtue's sake."

(I shall stop here and go down to the pantrey. I could eat no dinner, being filled with emotion. But I must keep strong if I am to help Adrian in his Trouble. The minse pie was excelent, but after all pastrey does not take the place of solid food.)

LATER: I shall now go on with my recitle. As the theater was almost emty, at the end of Act One I put on the pink hat and left it on as though absent-minded. There was no one behind me. And, although during Act One I had thought that he perhaps felt my presense, he had not once looked directly at me.

But the hat captured his erant gaze, as one may say. And, after capture, it remained on my face, so much so that I flushed and a woman sitting near with a very plain girl in a Skunk Coller, observed:

"Realy, it is outragous."

Now came a moment which I thrill even to recolect. For Adrian plucked a pink rose from a vase—he was in the milionaire's house, and was starveing in the midst of luxury—and held it to his lips.

The rose, not the house, of course. Looking over it, he smiled down at me.

LATER: It is midnight. I cannot sleep. Perchanse he to is lieing awake. I am sitting at the window in my *robe de nuit*. Below, mother and Sis have just come in, and Smith has slamed the door of the car and gone back to

Digitized by Google

the *garage*. How puney is the life my Familey leads! Nothing but eating and playing, with no Higher Thoughts.

A man has just gone by. For a moment I thought I recognised the footstep. But no, it was but the night watchman.

JANUARY 17TH. Father still away. No money, as mother absolutely refuses on account of Maidie Mackenzie's gown, which she had to send away to be repaired.

JANUARY 18TH. Father still away. The Hon. sent Sis a huge bunch of orkids today. She refused me even one. She is always tight with flowers and candy.

JANUARY 19TH. The paper says that Adrian's Play is going to close the end of next week. No busness. How can I endure to know that he is sufering, and that I cannot help, even to the extent of buying one ticket? Matinee today, and no money. Father still away.

I have tried to do a kind Deed today, feeling that perhaps it would soften mother's heart and she would advance my alowance. I offered to manacure her nails for her, but she refused, saying that as Hannah had done it for many years, she guessed she could manadge now.

JANUARY 20TH. Today I did a desparate thing, dear Dairy.

"The desparatest is the wisest course." Butler.

It is Sunday. I went to Church, and thought things over. What a wonderfull thing it would be if I could save the play! Why should I feel that my Sex is a handycap?

The recter preached on "The Opportunaties of Women." The serman gave me courage to go on. When he said, "Women today step in where men are afraid to tred, and bring success out of fallure," I felt that it was meant for me.

Had no money for the Plate, and mother atempted to smugle a half dollar to me. I refused, however, as if I cannot give my own money to the heathen, I will give none. Mother turned pale, and the man with the plate gave me a black look. What can he know of my reasons?

Beresford lunched with us, and as I discouraged him entirely, he was very atentive to Sis. Mother is planing a big Wedding, and I found Sis in the store room yesterday looking up mother's wedding vale.

No old stuff for me.

I guess Beresford is trying to forget that he kissed my hand the other night, for he called me "Little Miss Barbara" today, meaning little in the sense of young. I gave him a stern glanse.

"I am not any littler than the other night," I observed.

"That was merly an afectionate diminutive," he said, looking uncomfortable.

"If you don't mind," I said coldly, "you might do as you have hertofore—reserve your afectionate advances until we are alone."

"Barbara!" mother said. And began quickly to talk about a Lady Somthing or other we'd met on a train in Switzerland. Because—they can talk until they are black in the face, dear Dairy, but it is true—we do not know any of the British nobilaty, except the aforementioned and the man who comes once a year with flavering extracts, who says he is the third son of a Barronet.

Every one being out this afternoon, I sudenly had an inspiration, and sent for Carter Brooks. I then put my hair up and put on my blue silk, because while I do not beleive in Woman useing her femanine charm when talking busness, I do beleive that she should look her best under any and all circumstances.

He was rather surprized not to find Sis in, as I had used her name in telephoning.

"I did it," I explained, "because I knew that you felt no interest in me, and I had to see you."

He looked at me, and said:

"I'm rather flabergasted, Bab. I—what ought I to say, anyhow?"

He came very close, dear Dairy, and sudenly I saw in his eyes the horible truth. He thought me in Love with him, and sending for him while the Familey was out.

Words cannot paint my agoney of soul. I steped back, but he siezed my hand, in a caresing gesture.

"Bab!" he said. "Dear little Bab!"

Had my afections not been otherwise engaged, I should have thriled at his accents. But, although handsome and of good familey, although poor, I could not see it that way.

So I drew my hand away, and retreated behind a sofa.

"We must have an understanding, Carter," I said. "I have sent for you, but not for the reason you seem to think. I am in desparate trouble."

He looked dumfounded.

"Trouble!" he said. "You! Why, little Bab ——"

"If you don't mind," I put in, rather petishly, because of not being little, "I wish you would treat me like almost a *debutante*, if not entirely. I am not a child in arms."

"You are sweet enough to be, if the arms might be mine."

I have puzled over this, since, dear Dairy. Because there must be some reason why men fall in Love with me. I am not ugley, but I am not beautifull, my noze being too short. And as for clothes, I get none except Leila's old things. But Jane Raleigh says there are women like that. She has a couzin who has had four husbands and is beginning on a fifth, although not pretty and very slovenly, but with a mass of red hair.

Are all men to be my Lovers?

"Carter," I said ernestly, "I must tell you now that I do not care for you—in that way."

"What made you send for me, then?"

"Good gracious!" I exclaimed, loseing my temper somwhat. "I can send for the ice man without his thinking I'm crazy about him, can't I?"

"Thanks."

"The truth is," I said, sitting down and motioning him to a seat in my maturest maner, "I—I want some money. There are many things, but the money comes first."

He just sat and looked at me with his mouth open.

"Well," he said at last, "of course—I suppose you know you've come to a bank that's gone into the hands of a receiver. But aside from that, Bab, it's a pretty mean trick to send for me and let me think—well, no matter about that. How much do you want?"

"I can pay it back as soon as father comes home," I said, to releive his mind. It is against my principals to borow money, especialy from one who has little or none. But since I was doing it, I felt I might as well ask for a lot.

"Could you let me have ten dollars?" I said, in a faint tone.

He drew a long breath.

"Well, I guess yes," he observed. "I thought you were going to touch me for a hundered, anyhow. I—I supose you wouldn't give me a kiss and call it square."

I considered. Because after all, a kiss is not much, and ten dollars is a good deal. But at last my better nature one out.

"Certainly not," I said coldly. "And if there is a String to it I do not want it."

So he apologised, and came and sat beside me, without being a nusance, and asked me what my other troubles were.

"Carter," I said, in a grave voice, "I know that you beleive me young and incapible of Afection. But you are wrong. I am of a most loveing disposition."

"Now see here, Bab," he said. "Be fair. If I am not to hold your hand, or—or be what you call a nusance, don't talk like this. I am but human," he said, "and there is somthing about you lately that—well, go on with your story. Only, as I say, don't try me to far."

"It's like this," I explained. "Girls think they are cold and distant, and indeed, frequently are ——"

"Frequently!"

"Until they meet the Right One. Then they learn that their hearts are, as you say, but human."

"Bab," he said, sudenly turning and faceing me, "an awfull thought has come to me. You are in Love—and not with me!"

"The Truth is," I Said, Sitting Down and Motioning Him to a Seat in My Maturest Maner, "I—I Want Some Money"

"I am in love, and not with you," I said in tradgic tones.

I had not thought he would feel it deeply—because of haveing been interested in Leila since they went out in their Perambulaters together. But I could see it was a shock to him. He got up and stood looking in the fire, and his shoulders shook with greif.

"So I have lost you," he said in a smothered voice. And then—"Who is the sneaking schoundrel?"

I forgave him this, because of his being upset, and in a wrapt attatude I told him the whole story. He listened, as one in a daze.

"But I gather," he said, when at last the recitle was over, "that you have never met the—met him."

"Not in the ordinery use of the word," I remarked. "But then it is not an ordinery situation. We have met and we have not. Our eyes have spoken, if not our vocal cords." Seeing his eyes on me I added, "If you do not beleive that soul can cry unto soul, Carter, I shall go no further."

"Oh!" he exclaimed. "There is more, is there? I trust it is not paneful, because I have stood as much as I can now without breaking down."

"Nothing of which I am ashamed," I said, rising to my full height. "I have come to you for help, Carter. That *play must not fail*."

We faced each other over those vitle words—faced, and found no solution.

"Is it a good play?" he asked, at last.

"It is a beautiful play. Oh, Carter, when at the end he takes his Sweetheart in his arms—the leading lady, and not at all atractive. Jane Raleigh says that the star generaly *hates* his leading lady—there is not a dry eye in the house."

"Must be a jolly little thing. Well, of course I'm no theatricle manager, but if it's any good there's only one way to save it. Advertize. I didn't know the peace was in town, which shows that the publicaty has been roten."

He began to walk the floor. I don't think I have mentioned it, but that is Carter's busness. Not walking the floor. Advertizing. Father says he is quite good, although only beginning.

"Tell me about it," he said.

So I told him that Adrian was a mill worker, and the villain makes him lose his position, by means of forjery. And Adrian goes to jail, and comes out, and no one will give him work. So he prepares to blow up a Milionaire's house, and his sweetheart is in it. He has been to the Milionaire for work and been refused and thrown out, saying, just before the butler and three footmen push him through a window, in dramatic tones. "The world owes me a liveing and I will have it."

"Sócialism!" said Carter. "Hard stuff to handel for the two dollar seats. The world owes him a liveing. Humph! Still, that's a good line to work on. Look here, Bab, give me a little time on this, eh what? I may be able to think of a trick or two. But mind, not a word to any one."

He started out, but he came back.

"Look here," he said. "Where do we come in on this anyhow? Supose I do think of somthing—what then? How are we to know that your beloved and his maniger will thank us for buting in, or do what we sugest?"

Again I drew myself to my full heighth.

"I am a person of iron will when my mind is made up," I said. "You think of somthing, Carter, and I'll see that it is done."

He gazed at me in a wrapt manner.

"Dammed if I don't beleive you will," he said.

It is now late at night. Beresford has gone. The house is still. I take the dear Picture out from under my mattress and look at it.

Oh Adrian, my Thespian, my love.

JANUARY 21ST. I have a bad cold, Dear Dairy, and feel roten. But only my physicle condition is such. I am happy beyond words. This morning, while mother and Sis were out I called up the theater and inquired the price of a box. The man asked me to hold the line, and then came back and said it would be ten dollars. I told him to reserve it for Miss Putnam—my middle name.

I am both terrafied and happy, dear Dairy, as I lie here in bed with a hot water bottle at my feet. I have helped the play by buying a box, and tonight I shall sit in it alone, and he will percieve me there, and consider that I must be at least twenty, or I would not be there at the theater alone. Hannah has just come in and offered to lend me three dollars. I refused hautily, but at last rang for her and took two. I might as well have a taxi tonight.

1 A. M. *The Familey was there.* I might have known it. Never do I have any luck. I am a broken thing, crushed to earth. But "truth crushed to earth will rise again."—Whittier?

I had my dinner in bed, on account of my cold, and was let severly alone by the Familey.

The Control of Food Supplies in Blockaded Germany

By ALONZO ENGLEBERT TAYLOR

THE Government of the United States, under Abraham Lincoln, maintained a complete blockade of the Confederacy. The Confederacy had not the power of organization to devise measures of protection and suffered severely under the blockade. The Entente Powers have established a complete blockade of the Central Powers. The Central Powers, possessing highly efficient powers of organization, devised internal measures of defense. In what have these measures consisted? To what extent have they been effective? These are not political questions; they are economic and industrial questions.

The food supply of Germany under blockade by the Allies is a subject that possesses interest for different groups of individuals occupying widely varying viewpoints. It interests the sociologist, since the German measures represent the most highly specialized social-service legislation ever attempted. The student of nutrition is interested, since now for the first time a people is subjected to a rationing on a physiological basis. To the economist the German legislation furnishes illustrations of the enactments that are found necessary to erase the laws of trade and install a veritable state socialism.

The German food problem interests a neutral people whose citizens face the constantly increasing cost of living and wish to determine to what extent increase in the cost of living represents higher standards, disparity between production and consumption, increased cost of production, increased cost of distribution or motivated manipulation of the factors of supply and demand. The German experiences furnish illustrations of the legislative technic of control of production, regulation of distribution, limitation of price and standardization of consumption. The experiences of one people are the lessons of all, and the efficiency of wartime differs from that of peacetime in rigor but not in principle.

In a war of the first magnitude every human being, every animal and every factor in life acquires a military value. In a magnetized bar of iron the atoms of the metal are pictured as polarized in space; in a great war the citizens of a state are polarized in activity. Not alone are military forces, science, industry and agriculture marshaled for the state; the humanities, the arts and religion are inevitably entrained.

Development of Efficiency

IN THE carrying on of a great war military, industrial, economic and social factors are directly concerned. These overlap; and often in the very overlappings lie the most critical features. Perhaps the best materialistic expression of the state of society in a great war is contained in the statement that in a great war the laws of supply and demand are replaced by the law of efficiency. Efficiency is the single rule with which all war operations are measured.

The individual has no rights, and he has but one duty—and that is the duty of a rôle in efficiency. War measures are the visible means by which the forces of society are organized for the one purpose of carrying on the war. In the hour of maximum need war measures have unlimited scope. This is the situation in which the belligerent countries find themselves; and from this point of view must they be judged.

A scheme of war measures, offensive and defensive, comprises the following enactments:

The mobilization of military forces.
The mobilization of transportation facilities.
The mobilization of technical industries.
The mobilization of food supplies and clothing.
The mobilization of capital.
The mobilization of labor; organization of the civil-service army.

The order of enactments may not be the same in different countries, but in the end the necessity for maximum efficiency will enforce extreme war measures along all lines. It was not through necessity alone that Germany first undertook elaborate war measures; the national spirit of Germany had been for three decades the spirit of organization. Individualism in Germany had possessed a smaller content than in France and England; the lesson of communistic efficiency was, therefore, the more easily taught. The Frenchman and Englishman had more liberty than the German; the lesson of communistic efficiency was, therefore, the more painful to learn. But, after two years, the consciousness of the Allies thinks as much in terms of efficiency as does the consciousness of Germany.

Current opinion in the United States is apt to judge the situation in the food supply of Germany solely from the standpoint of the blockade. This is incorrect. The German regulation for the control of the food supplies, the mobilization of the various factors of national subsistence, was in reality a war measure. The food supplies would have been mobilized in Germany had there been no blockade. The establishment of the blockade against foodstuffs accelerated the introduction of regulations for the control of food supplies of the empire, and in part determined the enactments and modified the scale of nutritional units.

The blockade made the mobilization of foodstuffs more difficult in many ways; but, as will be later elucidated, the blockade made less difficult in some ways the enforcement of measures considered necessary by the authorities. The mobilization of food supplies in Germany through governmental control represents, therefore, a war measure and an antiblockade defense, but primarily and essentially an internal war measure. Entirely apart from external considerations, it was necessary for Germany to enact measures to prevent manipulation and speculation in foodstuffs, to eliminate waste and enforce economy.

Switzerland mobilized her grains three months before Germany did. Germany did not undertake serious and studied-out mobilization of her food supplies until eighteen months after the war began. England and France are now undertaking mobilization of food supplies, over two years after the beginning of the war. By March, 1917, regulations for the control, distribution and utilization of foodstuffs and feeds will be in force in England that will lack little of the severity of the present German regulations, though they will doubtless be less elaborate. The inevitable regulations in England have the same foundation as in Germany—efficiency in organization.

Lloyd George and Robertson are as keen on efficiency as Helfferich and Groener, though they have a more individualistically schooled public to deal with. England has one element to contend with that does not exist to embarrass Germany—the pacifist, who regards himself as outside the scope of war measures and may feel inclined to expect the dietary of peacetime. Effective regulation of the production, distribution and prices of foodstuffs must be practically the same problem in all countries in which such control might become necessary, and the enactments would vary little in different countries. Not so with rationing. The rationing of a people will be easy in direct proportion to the efficiency in the households of the masses.

Therefore, the rationing of the French people would be easier than the rationing of the German people, and this in turn easier than the rationing of the English people. Most difficult of all would be the problem of rationing the people of the United States, because we are, of all civilized peoples, the least efficient in household management and the most cantankerous in our notions of diet. In order to understand what Germany has accomplished in the matter of control of the food supplies of her people under stress of blockade it is necessary to have a clear understanding of the factors and quantities concerned in the nutrition of the human body.

Elements of Human Nutrition

THE elements of animal nutrition may be divided into two groups—essential and invariable; accessory and variable. The internal, essential, invariable elements in nutrition are five: Protein; carbohydrate; fat; salts; vitamins.

The body requires certain inorganic salts in variable amounts—chlorides and phosphates: sodium, potassium, iron and calcium. Under the term vitamins are grouped substances of unknown chemical nature that are now known to be necessary in a diet. A diet of polished rice, containing all the known qualitative ingredients of a normal diet, will not maintain normal nutrition in man. If the rice be taken in the natural state, unpolished, the same diet is found to be competent. In the covering of the rice berry is an organic substance that is essential, and this water-soluble substance we term a vitamin. If white rats are given a ration of pure protein, fat, carbohydrate and the normal salts, the animals will not thrive. If, however, a little native fat be added, nutrition becomes normal. In the native fat is a fat-soluble organic substance; that, again, is termed a vitamin. All native meats, grains, vegetables and fruits probably contain vitamins. It will, therefore, be only under most unusual conditions of diet that nutritional disturbances of this kind can develop; and they are indeed uncommon in Caucasians.

Under the term protein we include all the forms of nitrogenous organic substances that are related to the composition of our tissues—white of egg, muscle plasma, blood serum, casein, gluten, gelatin, the albumins, and so on. These proteins, present in both plants and animals, are the food material upon which the growth and repair of the body cells are principally dependent. Some cells of the body endure as long as the body lives, but have a wear and tear; internal parts of the cells must be replaced. Other cells die and must be replaced by new cells. Fats and carbohydrates are needed in the structure of cells, but the amounts involved are minimal in contrast with protein, which is, therefore, termed the chief material for the growth and upkeep of the tissues of the body.

Under the term carbohydrate we include all starches, gums and sugars. These substances are, apart from the sugar of milk, almost entirely of plant origin.

Under the term fats we include all oils, tallows, greases and fats, of either plant or animal origin—suet, lard, butter, olive oil, cottonseed oil. The fats of plant and of animal origin have the same rank in the diet.

The proteins are composed of collections of substances called amino acids, of which some twenty are known. These are regarded as the building stones of the proteins. When proteins are digested they are split into the component

Digitized by Google

building stones. These are then absorbed, carried to the different tissues of the body, and from these building stones the cells construct the protein needed for growth and repair. The protein of the diet must furnish the different building stones in the needed amounts.

So long as the protein in the diet does furnish the needed building stones in the required amounts it is immaterial from whence the proteins were derived, from plant or animal sources. Plant protein is just as good as animal protein, provided it yields all the building stones; and the mixed plant proteins of a properly selected vegetarian diet do this, though considerably larger amounts are required.

All starches and sugars are in digestion converted into one form of body sugar, glucose. It is, therefore, immaterial from what sources in grains, roots, leaves or fruits the starches are obtained, the final result is the same in the body—glucose, the blood sugar that is the material for all uses of sugar in the body, in growth, in repair and as fuel.

There are four chief utilizations of food in the living body: Food is needed for growth; protein, carbohydrate and fat are all concerned in growth, the protein predominatingly. Food is utilized in upkeep. Food is required in the maintenance of body heat. Food is used in work, through the medium of muscular action. Food utilized for the maintenance of body heat and work is fuel, just as coal is the fuel of the locomotive.

Protein, carbohydrate and fat are alike able to serve as fuel. Fat and carbohydrate are, chemically considered, more naturally to be regarded as fuels than is protein, because fat and sugar are completely burned in the body to water and carbon dioxide, while protein is only partly burned, leaving an unburned residue—urea—which must be removed through the kidneys. In theory, therefore, the ideal relations of the components of a diet are that there shall be enough protein to provide fully for growth, wear and tear and upkeep, the fuel needs being supported by carbohydrate and fat. The body always burns sugar in preference to fat when both are available.

Food Units Required

THE unit of measurement of heat in the body is the calorie. The large calorie, used as the unit in animal nutrition, is equal to the heat required to warm one liter of water one degree centigrade. One gram of protein yields in a calorimeter—a heat-measuring apparatus of the laboratory—about 5.5 calories of heat. Since, however, a portion of the molecule of protein cannot be burned in the animal body, but remains to be eliminated by the kidneys, one gram of protein has in the animal body the heat value of about 4.2 calories. Starch has in the calorimeter and in the animal body the same heat value, about 4 calories to a gram. Fat has in the calorimeter and in the animal body the same heat value, about 9.3 calories to a gram. The gram equals 15.432 grains; the ounce equals about 28.3 grams.

How much protein is required in the diet to maintain growth, wear and tear and upkeep in tissues? This has been one of the great questions of physiology. The earlier standards, fixed in the German laboratories, gave a figure that amounted to about fifteen grains of protein in the diet for each pound body weight of the normally fleshed adult. Children were supposed to require a little more; women and old men a little less. This figure was later somewhat reduced in the standards of Rubner, the leader of the modern German school of dietetics. The British, who are heavy meat eaters, adopted this standard.

The American and Scandinavian schools of physiology, led notably by Chittenden, have long regarded this figure as much too high. Direct experiments on human beings have shown that less than half of this amount is adequate for the protein intake. The statistics of food supplies of different peoples indicate that the figure is much too high. A majority of American teachers of physiology teach that seven grains of complete protein for each pound body weight a day is fully adequate to offer to the body all the building stones required for the tissues of the body. The body weights of Americans, Anglo-Saxons, Teutons and Russians vary from 130 to 155 pounds; the averages in the Latin races are some ten pounds less.

How much fat is required in the diet? As stated, fat and sugar are in large part equivalent. Fat is an expensive fuel on the world's market; starch is the cheap fuel. A diet free of fat is certain to prove incompetent. A diet low in fat is particularly prone to result in nutritional disturbances in children. The average fat inputs—plant and animal fats—in the diet of Americans and Europeans vary between one and three ounces a day, the highest being that of Americans. The input in Japan is much lower, probably not over 0.4 ounce a day.

How much carbohydrate is required in the diet? This depends upon the fuel requirements. The body can be maintained on a diet of protein and fat alone; but it is not an efficient diet, as the protein requirement is much higher in the absence of sugar from the diet. The heat production of the adult fasting body will vary from 1400 to 1700 calories a day, depending upon the size of the body. The heat production of the suckling babe is about 500 to 600 calories.

Let us say that the heat production of a certain man, resting and fasting, is determined to be 1700 calories. When the same resting man is fed the heat production will rise, probably about 150 calories. If he be given 2.5 ounces of protein and 1.3 ounces of fat, these will yield 650 calories, leaving 1200 calories (1850—650) to be obtained from carbohydrates, requiring 11 ounces. If the man be up and about more fuel will be required, even though the type of life be what is termed sedentary. Work requires increasing amounts of fuel with increasing exertions. We speak of light, medium, hard and severe work. A man of average size will require about 2500 calories a day for light work; 3000 for medium work; 4000 for hard work; and up to 6000 for very severe work.

Bodies of different sizes produce different amounts of heat for body heat; but, in general terms, the same unit of work done by men of different sizes requires the same amount of fuel—that is, the mechanical efficiency in men of different sizes is about alike. When a unit of fuel is burned in muscular work three-fourths of the energy is dissipated as heat; one-fourth is converted into work.

The animal muscle is, therefore, about as efficient as the internal combustion engine of best design. The man of 155 pounds body weight, to whom we have given 2.6 ounces of protein and 1.3 ounces of fat, can support any amount of work by the ingestion of appropriate amounts of carbohydrate alone. In actual life, however, men who work hard are in the habit of increasing the fat beyond 1.3 ounces—even beyond 6 ounces.

All protein ingested in excess of the needs of the body will be burned as fuel; it will serve no synthetic purpose in the body. The animal body will store sugar as glycogen, and it will convert excess of sugar into fat; it will store fat as fat; but it refuses to store protein. The body burns of fat and sugar only as much as the heat needs and work needs of the body demand; it burns all protein ingested in excess of tissue needs. Therefore, the urea in the urine in health always corresponds to the protein in the diet. Protein has no virtue as a fuel over sugar; rather the contrary, since the elimination of the urea imposes work upon the kidneys. Protein is expensive, and ought not to be used as a fuel, since cheap carbohydrate serves just as well.

External Factors

A NORMAL diet must contain, in addition to the denominated nutrients, indigestible material sufficient to form a certain bulkiness in the stools. Fruits and vegetables contribute such indigestible residue, most of all if consumed raw; and every diet should contain some raw fruit or vegetable.

A normal mixed diet—mixed in the sense that both plant and animal foodstuffs are included, so chosen as to contain the needed calories—will in practically all instances contain the minimal amounts of protein and fat stated. Individual idiosyncrasy, peculiarity in taste or unusual situation in life may rarely bring about a dietary habit in which the protein and fat are below the minimal norm with a normal caloric intake. But, as a practical rule of diet, a mixed diet containing sufficient total calories always contains sufficient fat and protein. This dictum holds for Caucasian peoples only. In the Orient subnutrition in fat and protein is unfortunately of frequent occurrence. In England, Australasia and the United States are encountered the highest intakes of protein.

The accessory and variable factors of a diet are related to the life habits and personal tastes of the individual. The Kanaka and the Eskimo would each find the diet of the other insufferable. The East Indian regards meat as revolting; the European requires plenty of it. The less civilized and sophisticated a people, the fewer external standards of diet will they possess, apart from such as are grounded upon superstition and religious tenets. The more highly civilized the nervous system, the more exacting become the tastes relating to food and the act of eating.

The least sophisticated of men can be rationed practically as easily as livestock; more easily, in fact, than certain highly bred dogs, cats and horses. The excessively fastidious individual requires certain foodstuffs, obtained in such and such ways, treated with such and such methods, conserved in a certain way, cooked according to a particular recipe, and served in accordance with the most exacting standards of delicacy. The Russian peasant represents the one extreme, the parasitic woman represents the other extreme; the former may be rationed in accordance with the rules of feeding farm animals; the latter must be nourished in accordance with her idiosyncrasies.

Whole peoples possess tastes that

The All-American Handicap

Digitized by Google

FELIX

By DAVID GRAY

ILLUSTRATED BY WILL GREFÉ

IT IS said all things are interrelated. The falling of a hair affects the universe. There is no great and no small to the mind of the true philosopher.

But the poor, stumbling, average man is not a philosopher. He ignores the significance of trifles and takes the consequences.

To De Brancheville, loitering, swinging his walking stick, there approached a dog that sniffed his leg, satisfied his curiosity and passed on. De Brancheville had no suspicion of interrelation or entwined fates. Neither had the dog. The Airedale possessed a certain grave charm which appealed to De Brancheville. "I must get a dog like that," he thought. And there apparently the matter ended. Other dogs might have prompted the same remark, for it is a theory with bachelors that nothing is so comforting as a dog with wistful, yearning eyes. A dog understands the loneliness of single life, likewise its preciousness.

It was the ninth of May and the gods had shed upon Paris one of those mornings that compel thanksgiving for mere unblessed existence. These were the halcyon days, before the war, when Paris was the Paris of Americans. The young green of the grass and trees shimmered ecstatic with spring. The street crowds moved gayly. Men and women smiled without knowing why. Even the patient anglers on the quays fished with a livelier hope, and above spread a sky of milky blue into which Notre Dame thrust its gray ancient towers.

As they say of pickpockets, De Brancheville's dog friend was "working the street."

He was very thorough. He left nothing unexplored which might have sheltered a cat or an uncovered garbage pail.

"Magnificent!" thought De Brancheville. "A life without a lost opportunity! I certainly must get a dog like that." But he knew that he never would. He had kept dogs in bachelor's rooms before. He was waving a friendly adieu to the Airedale, when the rattle of pole chains and clatter of high-stepping horses attracted his notice. In a landau of the Second Empire sat an old lady straight up, an old lady that was obviously a personage. She had seen him and called to the coachman. The carriage swept up to the curb.

"So it is really you," she said abruptly. "I predicted you were never coming back."

De Brancheville raised his hat.

"To err is human, darling aunt."

"Unchanged," she observed, "irreverent to the old, and I suppose," she added, "no more obedient!"

He laughed. "Perhaps disobedience is no longer necessary. I hear she married Gogo and has twins."

"It is true, but grandpapa has now another one selected for you. He is going to give you another chance. He will be pleased to know you have come back."

De Brancheville looked at her suspiciously.

"It is the truth," she said. "He talks of her the whole time. 'What a wife for George!' he says."

"Suggest that he marry her himself!" said De Brancheville.

"He might at that," she answered, "only he is obstinate. He insists that you must do it, if only to make amends. He was very angry when you ran away."

"Is a man to marry to please his grandfather!" cried De Brancheville. "Mark you, darling, I marry no one! I am through with women. I have pleasant things to do and not so many years in which to do them. I am not going to encumber myself."

"But, my dear, you are a beggar! You are dependent on grandpapa!"

"Perhaps," he said; "perhaps not."

Her old eyes fastened on him.

"You have made money, eh? A De Brancheville that has made money!" She threw her head back and laughed.

"Let us talk about you," he suggested. "How are you?"

"Why, older, of course, and in trouble as always. *Tenez!* There is something you can do for me. You are just the one! When will you come?"

"This afternoon."

"Good." She held out her hand. He kissed it dutifully. She spoke to the coachman and was gone.

"A very bad and delightful old woman," he commented. He stood by the curb gazing after the carriage, meditating upon her information. So grandpapa had again selected a wife for him! That old man's hobby was selecting wives. It made life difficult.

What De Brancheville's experience with the female of his species had been only the Recording Angel knew, but it was common knowledge that he had fled home and prospects to avoid marriage. Now he had come back, to find the same situation facing him. There was, however, one helpful circumstance. He was now independent of grandpapa.

Within an Hour He Returned With an Airedale of Bluestock Strain

Before he had fled penniless. He had gone hungry and cold. He had labored. He had staggered with parched tongue across the desert toward the mirage, only to have it vanish again and again, but in the end he had been victor. As he ran over those years in memory, he asked himself why he had left that large open country. The desert refreshed him. The Arizona night thrilled him. The purple mountains at sunset stirred him to tears, but something stronger than these had brought him back. What was it? He could not say. Of only one thing he was sure. It was not to marry a lady selected by his grandpapa. It was not to marry anyone. His younger brother could do that and succeed to the family honors. He himself was for freedom.

Suddenly a cat's snarl rent the air, followed by the rush of padded feet. Almost instantly a dog's wail of agony followed. He knew what had happened. A dog pursuing a cat had been struck by a motor car. Looking round he saw a limousine stop abruptly. The door was flung open and there leaped out a figure lithe and swift and light; a vision white and pink and blossomy.

When he reached her, she was hugging his friend, the muddy Airedale, comforting it passionately. Tears were in her eyes.

"No, not that way, Bobby," she called to the young man in the car. He was struggling with the rug. "Fold it double! That's wrong again! You hold him!"

Bobby hesitated. It seemed superfluous that two people should be contaminated.

"Permit me," said De Brancheville, in English. He rested his walking stick in the car and the dog was in his arms.

The girl gave him a little grateful look, leaped in, spread the rug according to her own ideas, and directed the operation of placing the patient upon it.

"It's nothing very serious," said De Brancheville. He had been going over the case. "Ribs all right. The wheel missed his body. There's just the broken leg."

The patient's tongue slipped out and licked gratefully at his wrist.

Her hat brim lifted and she was smiling in his face, out of misty half-closed eyes.

"He's fond of you!" she said.

"Yes," he answered vaguely. He might as well have said no. But he was gazing into her face, and he did not know what he said. She bent her head again and the hat with the pink roses came down between them. She slipped her hands out of the wrists of her long white gloves and stroked the dog's head. Something dewy and tender glistened in her half-shut eyes, some ineffable grace of spirit shone through her movements. To De Brancheville came a sense of meeting Spring face to face.

Suddenly she looked up again.

"What is his honorable name?"

He did not even hesitate. It was fate.

"I call him Felix," he said.

"Meaning lucky?"

"Exactly!" Liar and dog thief, he stood unashamed and gazed at the vision, till the unfeeling hat brim came down again.

"Vera," said the young man in the car, "you promised to be at Carruthers' at eleven. It is now ten minutes past."

There was a moment's hesitation, then she answered: "Carruthers can wait! We must take the dog home!"

"The dog is comfortable," said Bobby. "Why not drop us at the bank first?"

"Well," she said doubtfully.

"It is the only thing to do," said De Brancheville. He mounted to the front seat as if the matter was settled.

For a moment she was nonplused. A strange man was on the front seat of her car, his dog on the floor and his walking stick standing familiarly in the corner. Her eyes rested a moment on the cane and an exclamation stopped on her lips. Her expression changed to amused wonder.

"To the bank," she said to the chauffeur.

Bobby looked at her in amazement. She smiled sweetly but said nothing.

As the car rolled down the Rue Faubourg St. Honoré, De Brancheville repeated a name under his breath:

"Vera," he murmured, "Primavera, Spring herself."

Near the Bourse they turned and drew up before the banking house of Carruthers.

"Bobby," she said, "go in and find out what they want. I'm not going in if I can help it." With a glance at De Brancheville's back and a suppressed giggle she slipped down to the floor and began to fondle the dog.

De Brancheville turned and regarded the scene. The lot of the dog seemed enviable.

"Really," he said, "you will spoil Felix."

"You can't spoil a dog," she answered.

They both laughed and her hat brim came down again.

"His collar seems to be uncomfortable," she went on. "You must take it off when you get home."

It was a curiously thick collar, studded with brass nails and set with a name plate which was on the underside of his neck, and for the most part out of sight.

He assented and there was a pause.

"I feel very guilty," he began presently, "at causing *monsieur* and yourself so much trouble."

"*Monsieur?*" she repeated. "You mean Mr. Clay?"

Apparently, then, she was not married, which was odd, for hers was not the charm of a girl but of a woman in the thirties.

"I suppose so," said De Brancheville.

"He doesn't mind," she went on. "He has nothing to do."

At this moment Bobby appeared.

"They want you to come in," he said.

"I won't," she answered without looking up. "If I've overdrawn they can notify Purdy."

"Vera," he began, "you've got to come in."

She looked up. "What's the matter?" she demanded.

He hesitated, glancing at De Brancheville.

"Go on," she insisted.

"Well," he said, "apparently you've been buying rubber; the market's broken; Purdy's gone to Nice with the keys of your box; and you've got to put up more margin before the Bourse opens. You've got twenty minutes."

"But, Bobby," she began. Then stopped hopelessly.

"Father's somewhere in Spain," he said. "I don't know what to advise."

Primavera in distress was silent. Again fate inspired De Brancheville with an idea. After all what was more natural? He twisted himself round on the driver's seat:

"I know these people. If you will permit me I think I can make them undertake to protect your securities for the time being at least."

She turned grateful eyes upon him.

Digitized by Google

"No! No!" she said, but he had leaped from the seat and was disappearing into the bank. Once inside he paused but there was no turning back.

"Take my name to Mr. Carruthers," he said. A few moments later the attendant ushered him into a private office, where Mr. James Carruthers sat at a mahogany desk.

"For the love of heaven," exclaimed Carruthers, "where did you drop from?"

"The sky," said De Brancheville. "But that's neither here nor there. What does Purdy mean by going off to Nice with her keys?"

"You'll have to ask Purdy," said Carruthers. He evinced no surprise at De Brancheville's appearance in the transaction. "We carried her yesterday. We can't do any more."

"You're not going to sell her out?"

"Got to."

De Brancheville looked blankly at the wall.

"Well, of course, you can't do that," he said thoughtfully. "How much have you got to have?"

"She's in pretty deep," was the answer.

"Well?" said De Brancheville.

Carruthers consulted a memorandum and pushed it over to his visitor.

De Brancheville examined it, took out his pocketbook and tossed a check on the desk. It was the gesture with which a man pays for a newspaper with a dollar bill.

Carruthers glanced up at him.

"That'll more than do," he said.

"Keep the change," said De Brancheville impassively; "I'll indorse it."

"George," said the banker, "of course I can understand why you do this, but all the same it's awfully decent of you. Not many men would."

De Brancheville eyed him thoughtfully. So Carruthers understood. He wished he did. However, there was nothing to say. He rose. "Just one thing, Jim; don't let anyone know about this!"

"I'll have to tell her."

"No, not even her," said De Brancheville. "She's to think you've carried her. When Purdy gets back put the check to my credit." He went out.

He met her at the door of the bank. She was coming in.

"It's all arranged," he said casually. "Sorry to keep you so long. You see it wasn't anything serious."

"You are so very good," she answered. "I was fearfully worried. I don't see how I can ever thank you."

He bowed.

"Don't try!"

As they went out she gazed at him a moment with half-shut eyes, and De Brancheville was not displeased.

"We must get Felix attended to," she said.

"Felix? Oh, yes," he answered. "For the present I'm stopping at the ——. If you would drive us there ——"

She shook her head.

"That won't do. You know where they'd keep him?"

"I might manage to have him in my rooms."

"No, I tried it once. The only thing to do is to let him go home with me."

"You're very good," said De Brancheville solemnly, "but, of course, that wouldn't do!"

"But you could come and see him," she broke in. "It certainly isn't fair to have him cooped up in that fearful place they'd keep him in at the hotel."

"If you put it that way, what can I do?" he said.

She smiled at him and then the hat brim came down.

"Bobby," she commanded, "go some place and telephone Doctor Dupin that I want him to come at once and set a leg. Don't say whose leg!"

Bobby departed.

"Do you really think you ought to do this?" said De Brancheville. "Picking dogs out of the street is all very Christian, you know, but what will your family say?"

"I don't see how it concerns anyone but Felix," she retorted.

"But you know nothing of Felix."

"One takes a dog for what he appears," she answered. "However," she added whimsically, "it might make Felix more comfortable if I knew something about him. What sort of life has he led?"

Their eyes met.

"What would you guess?"

"Perhaps diplomacy? The pet of courts; things like that?" There was a disingenuous ring in her voice, but it escaped him.

De Brancheville shook his head.

"Things like this: Bartender in Los Angeles, cook with a cow outfit, watcher in an Albuquerque gambling house, prospector, miner."

Her color deepened a little and she dropped her eyes.

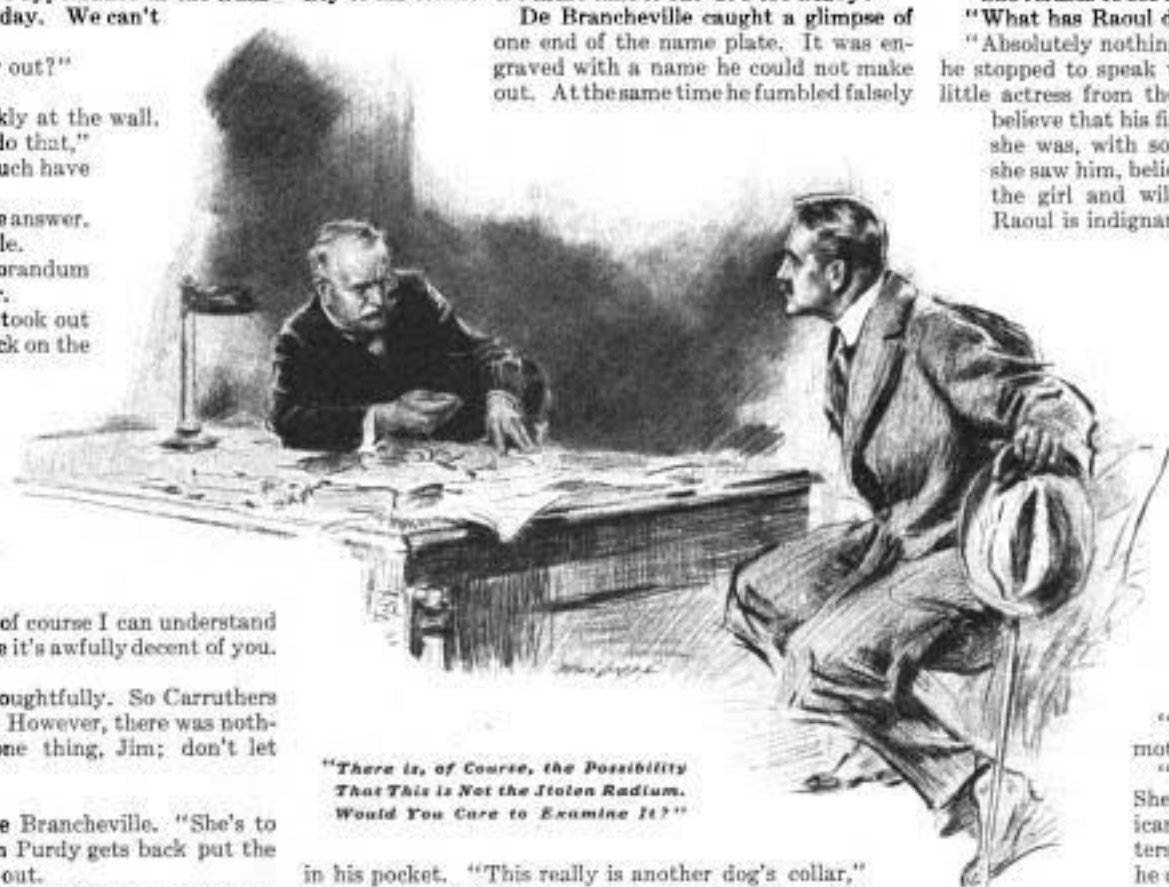
"Then he's seen a great deal of life."

"If you call it life."

"It is my idea of life. If the West gets into the blood it's there always. Why is it that the desert gets hold of you so?" As she spoke she seemed to be gazing across unseen wastes of mesa.

"The mirage," he answered; "one is always following it expecting it to come true."

"And it never does?"



"It never has," he answered. "But who knows? You know the West?"

"Yes," she said.

Then Bobby appeared.

"While I think of it," she said, "you might give me the key to his collar. We must take it off. It's too heavy!"

De Brancheville caught a glimpse of one end of the name plate. It was engraved with a name he could not make out. At the same time he fumbled falsely

"There is, of Course, the Possibility That This is Not the Stolen Radium. Would You Care to Examine It?"

in his pocket. "This really is another dog's collar," he said, "and the key must be in my baggage. Have the lock filed! I'll get a new one."

"If we're to be back by noon," said Bobby, "we'd better be off."

"Can we drop you anywhere?" she asked De Brancheville. "I'm sorry, but some people are coming to breakfast."

"I'm walking," he answered and got out of the car.

"Don't forget," she called, "Felix will be in at five," and the car shot forward.

"But where?" called De Brancheville. His voice was lost in the noise of the machine. A little hand waved once and the car glided on. De Brancheville stood for a time gazing after it. Obviously she assumed that he had found out who she was from Carruthers. It was unfortunate but hardly serious.

II

THAT morning De Brancheville had planned to drop in at his club, get someone to lunch with him and pick up the threads of his old life. Instead he went back to the hotel and lunched in his room. At this juncture an analytical man would have consulted his watch and observed that, whereas exactly one hour and twenty-three minutes before he had been in possession of complete personal liberty, a sane mind and a small fortune, he was now penniless, save for the money in his pocket, had stolen someone's dog and was in anything but a state of philosophic calm.

De Brancheville, however, was not analytical. He was a man of action, and the thing to be done was to find out who Primavera was and where she lived. He decided to go to Carruthers and make a clean breast of it. He had been too clever with Carruthers. He got to the bank about two and found that Carruthers had gone for the day, presumably racing. Then he had an idea that there might be a clew in Purdy. Purdy must have an office. He got a telephone book, found six Purdys and gave that up. Fate being against him, he killed time till five and then, according to his promise, presented himself at his aunt's.

"George," she began, "you roused my curiosity this morning. Obviously you have made money. I want to know how. Have you married a black heiress?"

He shook his head.

"A gold mine?"

"Not a gold mine."

"But a mine—silver perhaps?" Her keen eyes lighted.

"No, darling," he said, "not a silver mine. The fact is, I stumbled on a very extraordinary deposit of pitchblende, or uranium oxide, from which radium is extracted. To make a long story short, I brought back my fortune in my waistcoat pocket, the only safe place except the stocking."

"I can never tell whether you are joking," she said; "but you must have money or you would not be so independent of grandpapa."

"Your reasoning is sound," he answered. "Moreover, if money or lack of it is the trouble you mentioned ——"

"Money is not my trouble," she answered. "It is your cousin Raoul. I suppose you have not heard. He is engaged to marry an American."

"And you and grandpapa oppose it?"

"On the contrary we like it very much. She is adorable and well to do."

"Then what is the fly in the ointment?"

"She refuses to see him. She is behaving unreasonably."

"What has Raoul done?"

"Absolutely nothing. At Longchamps, three days ago, he stopped to speak with De Belleville, who was with a little actress from the Follies. Raoul had no reason to believe that his fiancée was there, but of course there she was, with some English people. Of course also she saw him, believed that it was he who had brought the girl and will hear no explanation. Naturally Raoul is indignant, but what can he do?"

"Is she fond of him?"

"She adores him."

"Then why worry? It will come out all right."

"But the end of the week we are all to go to grandpapa's in the country. Now she refuses to go to the country and she threatens to write and tell why. You know the duke."

"He can be unpleasant, like all moralists," said De Brancheville sympathetically. "But what can I do?"

"You must see her and persuade her. She will listen to you. You have a bad reputation and besides are attractive."

De Brancheville bowed.

"But why don't you see her mother?"

"You can do nothing with the mother. She refuses to interfere. These Americans have no authority with their daughters. And there is no father. I believe he died before the child was born. You must see the girl herself."

"But is it proper?"

"I shall arrange that. I shall write the mother. Besides, have I not told you they are Americans?"

"Well," he said resignedly, "I suppose I'm to be the goat."

"The what?"

"It is slang, darling," he explained. "American slang. It means I'll go. Not to-morrow. I have business to-morrow afternoon, but the next day."

"I can arrange it for to-morrow morning," she said. "Say eleven; there is need of haste."

"Very well then, to-morrow morning."

"I knew you would go," she said affectionately. "You grow more delightful every year. It is the accumulation of sin."

"I want you to know I'm extremely good," he said reprovingly. "And if I accept this embassy, the least you can do is to mollify grandpapa. Whom does he want to marry me to this time?"

"A widow," she answered. "And that is all that is good for you to learn from me."

"A widow!" murmured De Brancheville. "Holy Blue! A widow!" Never had the idea of marrying a woman selected by his grandfather seemed so objectionable.

Tea was brought in and they talked of other things. As he rose to go, his aunt gave him a note of introduction to his cousin's prospective family. He put it in his pocket, presented his cheek to be kissed and departed. This duty over he drove to his club and telephoned Carruthers' house. It was time Carruthers should have returned from Longchamps. The answer to his inquiry filled him with dismay. Carruthers had not gone racing but to London. He might not return for several days.

De Brancheville walked back to his hotel meditating a telegram to Carruthers. It was not an easy telegram to frame. Moreover, he would first have to wait till Carruthers reached London and then obtain his address. Entering the hotel he bought an evening paper and glanced at the Bourse news. Rubber, after a stormy day, had recovered three points. He was about to toss the sheet into a wastebasket when his attention was attracted by an advertisement that read as follows:

LOST—Male Airedale terrier, with brass-mounted collar bearing name Blazonby Bluestock. Five thousand francs reward. No questions asked! Notify this office!

A premonition told him that this referred to Felix. Some foolish woman was the owner. Hence the enormous reward. Ruminating on the import of this new development, he crossed to the office and inquired for letters.

Digitized by Google

"Some packages were left for you," said the clerk. "I had them sent to your room. There are no letters."

As De Brancheville entered his sitting room he saw on the table a little bundle wrapped in white tissue paper and tied with narrow ribbon. A card was attached to it, on which his name was written in a woman's hand. He opened it and gazed upon the dog collar that Felix had worn. It was engraved Blazonby Bluestock.

De Brancheville whistled softly. The unknown goddess of spring knew his name. She must have telephoned Carruthers as soon as she got home. But that was neither here nor there. A bereaved female was advertising frantically for Felix. Two courses lay open to him. One was to confess the truth as soon as possible and be ejected like Adam from the garden. The other was to acquire honest title to the dog and confess only when nothing was to be risked by confession. There were difficulties, however, in the way of the latter plan. A woman that would offer a thousand dollars reward for an Airedale would be unlikely to sell it at any price. Moreover, until rubber further recovered, or until Purdy came back, all the money that De Brancheville had in the world was some twenty-five hundred francs in notes.

Suddenly an inspiration came to him. He would purchase an Airedale, as much like Felix as possible, and return it anonymously with the Blazonby Bluestock collar. The only chance of a slip-up would be if Primavera should happen to see the advertisement. Even then there was a way out. He had intimated that he had once owned Blazonby Bluestock. Well, Blazonby was now the property of Mrs. John Doe. His ingenuity exhilarated him. It was the perfect alibi. He glanced at his watch and hurried out, stopping first to purchase a new padlock, the key of which fitted the old one, and then on in search of dog fanciers. Within an hour he returned with an Airedale of Bluestock strain, to all intents and purposes the double of Felix. It was wholly possible that the two might have been brothers. He then wrote an unsigned note, waiving claim to the reward, addressed it to the owner of Blazonby Bluestock and sent it with the dog by a messenger to the newspaper office. By this time he was ready for dinner. Stopping at the office desk to have a bank note changed, the mail clerk smiled and inquired if monsieur had received the packages which had been sent to his room.

"I got one," said De Brancheville; "were there more?"

"There were two," said the clerk. "One like this"—he indicated with his hands the size of the package that had apparently been the dog collar—"and another quite small, cubical, like a little package of chocolates but heavier. They were both wrapped in white tissue paper and tied with ribbon."

"I found the large one," said De Brancheville; "that was all."

The clerk looked troubled. "The servant who took them to your rooms has gone for the night," he said. "If monsieur doesn't find it, please notify me and the first thing in the morning we shall investigate." He felt sure, however, that monsieur would discover it.

"All right," said De Brancheville; "but it can be of no great importance."

He went to his rooms. No small cubical package was in evidence. As he bathed and dressed he kept up an intermittent search. Once it seemed to him that someone had been through the drawers of the chiffonier. His neckties were disarranged and his shirts looked as if they had been taken out and hurriedly replaced. But nothing was missing. His necktie pins and pearl studs were in his jewel box. He dismissed his suspicions and went down to the restaurant for dinner, notifying the clerk that the cubical package had not been found.

De Brancheville dined well that evening. An old Burgundy sent a pleasant warmth through his veins. He reviewed the day and his reflections were agreeable. He congratulated himself upon the happy inspiration which had prompted him to name the dog Felix. Felix was indeed a lucky dog for him. It annoyed him, to be sure, that Primavera should be perhaps close by and he powerless even to send her a message. He wanted to send her endless pink roses addressed to The Mirage, but he could do it on the morrow. As he lighted his cigar he gave over day dreaming. He must get Carruthers' London address and wire him. He went to his room and was at work on the telephone directory when the salon door opened noiselessly and two strange men entered.

"One usually knocks," said De Brancheville.

"You are Monsieur De Brancheville?" asked one of the men.

"I am," said De Brancheville. "What do you want?"

"We have business with you," said the second.

"It is my duty to inform you," the first man explained, "that you are under arrest."

De Brancheville regarded him calmly. "Will you have the goodness to explain why and for what?"

"You will be informed by the proper authorities," replied the officer. "Are you ready to accompany us?"

De Brancheville reflected. Clearly there was no use arguing with the plain-clothes men. He could guess what had happened. In some way the dog's owner had discovered the fraud and De Brancheville's connection with it. It was awkward, but there was nothing to do about it but explain as well as he might. Felix was perhaps not so lucky as he had imagined, but it could not be very serious.

"I am ready," he said; "take me to the *préfet*, or magistrate, or whoever it is that I can explain this matter to."

"The handcuffs will not be necessary," said the officer to his companion, who thereupon put those instruments back in his pocket.

De Brancheville surveyed him gloomily, put on his overcoat and went with his captors.

Twenty minutes later he was sitting in a room at the Central Préfecture waiting for someone—he knew not whom. There was a carpet on the floor, comfortable chairs, a desk with many papers on it and an electric writing lamp. Obviously it was the office of someone of importance. He was puzzled. "Would you mind telling me whom we are waiting for?" he asked one of the detectives.

"Monsieur Le Febre," was the answer.

De Brancheville looked blank. His knowledge of police procedure was vague, but why the great Le Febre should be investigating a case of dog-stealing was beyond him. Presently a mild little man with a sympathetic smile entered. The officers rose and saluted. De Brancheville looked on curiously. He had pictured Le Febre as somber and terrible, with piercing eyes.

The newcomer bowed to De Brancheville, dismissed the detectives and took the chair behind the desk.

"Monsieur De Brancheville," he began, "in view of your family connection we have been in consultation with the Department of Justice, in the endeavor to ascertain if it would be possible to release you on bail, but I regret to state that it has been found impossible. Your offense is, in a double sense, one against the republic."

"Against the republic?" repeated De Brancheville.

Le Febre nodded.

"But conceding that it was technically a theft," said De Brancheville indignantly, "you can't imprison a man for stealing a dog."

Le Febre looked at him mildly.

THE STUDY OF FOOTPRINTS

The Shod Foot—By Melville Davisson Post

SKETCHES BY W. D. I. ARNOLD

IT USED to be said by Matthew Arnold that hardly anybody would think of taking an English book of reference if he could get a French or German one. At any rate, no one ever seemed to realize precisely how a man walks until the Teutonic scientists began to study the subject.

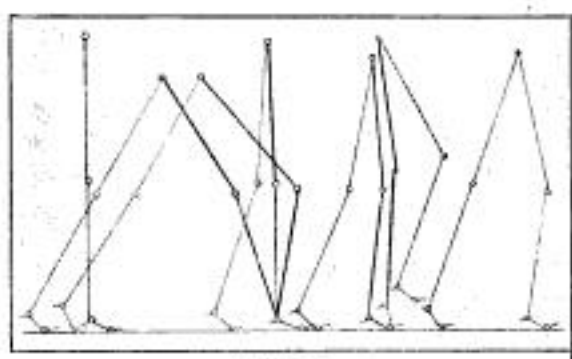

Figure 5

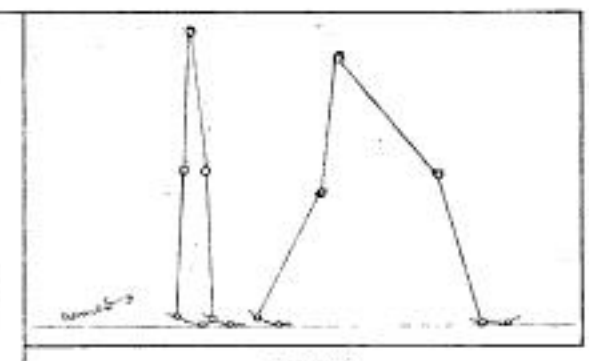

Figure 6

It was commonly explained that the physical method of walking was to throw the body forward, out of equilibrium, and catch it with the foot. Gross pointed out that this theory was ridiculous. We, in fact, walk by advancing a leg and then leaning the center of gravity upon it in order to continue in the same manner with the other leg.

With this theory for a base, the criminologists in the great universities were presently able to equip the police inspector with a number of rules of primary importance.

The police of a great Germanic city found themselves confronted one day by a puzzle they were wholly unable to work out. The owner of a warehouse situated in a suburb of the city maintained that a bale of valuable rugs had been carried out of the warehouse on the night of the sixteenth of April.

The police took immediate charge of the case. There had been a little rain on the evening before and they found two lines of footprints where a man had come to the warehouse door and returned from it. They were able to follow these tracks to the shop of an Austrian who dealt in antiques. In America this man would have been called a junk dealer, since he possessed only a single room with a dirt floor, situated in the environs of the city and filled with articles of but slight value.

The police were able to show that the Austrian had made these footprints. But here the mystery presented itself: When the man understood what the police were after he at once said that he had gone to the warehouse, on the evening in question, in order to inquire whether the merchant had for sale any of the articles in which he commonly dealt; but that when he arrived the warehouse was closed and he had returned to his shop.

The police searched the shop with German thoroughness, but found no trace of the bale of rugs. They were able to see that the man had not left his shop after he returned from the warehouse, for there were no other footprints in the wet earth in the environs of the shop; evidently he had not gone out after he returned. And, also, it was evident that no bale of rugs was anywhere about his shop.

The police, profoundly puzzled, returned to the merchant. They thought he was not precisely clear about the bale of rugs he said was stolen. He was not able to produce an invoice of it. But he said it had been a long time in the shop, was of great value, and showed them the outline in the dust on the floor where it had been lying.

The Bubbles on the Floor

UNABLE to unravel the mystery, the police sent to the authorities for an expert. The expert came and looked at the two lines of tracks. He at once said that the man who came to the warehouse on the night of the sixteenth of April had come empty handed, but had unquestionably gone away carrying something heavy. He explained that when one is walking without a burden one travels in a straight line, turning the feet out at an angle common to that individual. See Figure 1. But that when one is carrying a heavy burden one invariably walks with the feet straight and the legs wider apart, in order to give the body a more stable support under the added weight. See Figure 2.

Thus, when we find a line of tracks going straight ahead close together with the feet turned out, and afterward these same tracks wider apart and the feet set straight, we may be certain that the person who had begun to walk without carrying anything had now taken up a burden to carry.

It may be interesting to add the method by which the expert discovered the concealed rugs. When he arrived at the Austrian's shop he took a kettle of water and poured it on the dirt floor. He went over the whole floor very carefully. Presently at a certain point he directed the police to dig up the floor. They found the bale of rugs buried at this point.

Figure 10

The Austrian had dug up the floor, concealed the rugs, and tramped earth down so that the eye could not detect anything unusual. But the expert knew that if the earth of a hard dirt floor had been recently disturbed, and one bubbles would poured water on the surface, air bubbles when he found appear. Thus, he was certain the earth of the floor had been disturbed.

Even a cursory examination of the grams will give German dia- deal of information about how a man walks. In Figure 3 the line A A running through the border of the heel is called "the line of march." The lines C C show the direction of the footprint with respect to the line of march. The Germanic authorities maintain that when the normal person walks in a straight line a line drawn through the center of the heels will also be a straight line—that is to say, the heels go ahead precisely on a straight line.

But other investigators are inclined to doubt this. They say that when the normal person walks in a straight line this line of march will touch only the inner border of the heel instead of running through the center of the heel. It may be that with the German military step the line would go through the center of the heel. But in nonmilitary countries, like America, it will usually be found, in normal instances, that the line of march touches the inner border of the heel and not the center.

This is true of normal persons walking in a straight line. But in abnormal persons—sailors, fat men, the aged and infirm, and children—the line running through the heels will be a zigzag, like the line B B in Figure 4.

The Germans say that persons of leisure turn the foot out more in walking than do workmen or persons in trades. It is thought that women turn the foot out less than men. It is also believed that certain races, like the negro, walk with a very exaggerated foot angle; while the North American Indian travels with the foot almost parallel to the line of march.

Gross undertook to demonstrate the mechanical factors in the act of walking. These factors are outlined in Figure 5. He points out that when one takes a stride the perpendicular distance from the hip joint to the ground is reduced, and that as the stride is increased this distance is lessened. Thus, with each step, as the body is lowered, it has to be again lifted. This, he said, was the reason why it was easier for a man to run than to walk rapidly with a long stride. See Figure 6.

It is said that one day, when Gross was driving through the park with an acquaintance, his friend pointed out that several persons had gone along in the dust on the road before them. He asked Gross whether he could tell him who the persons were.

The professor got down out of the carriage and drew a mark across the road with his cane; then he stepped off fifty feet along the road in the direction in which the tracks were made and drew another mark across it. He then counted the number of footprints in each of the three tracks within that distance.

One of the lines of tracks showed fewer prints than the other two. Gross, therefore, said that this track had been made by a tall man. The tracks showing the greatest number of prints indicated a short person, while the third track was that of an old woman with a stick.

The persons had not gone along the road together. The tall man had gone first. The peasant woman had followed, since the point of her stick was sometimes to be seen inside the track of the tall man; while the short man had been the last on the road, his track now and then overlapping that of the peasant. Gross thought the tall man was a peasant by the formation of the shoe, and that the short person was a cavalry officer, as he had a tendency to turn in the toe as one does in the saddle.

Zenker used to say that the bare foot gave the most information. But Shauenstein maintained that the shod foot gave more signs of identity. He used to relate a case in his lectures in which it was known that an assassin had carried away the body of his victim, because of the changed manner in the line of march. But the particular thing about this case of which Shauenstein was especially proud lies in another direction:

He was shown a coat, which was supposed to belong to the man who had disappeared. There was no mark of violence on it except a bloodstain, which extended from the collar down the seam of the coat to the right-hand pocket. After he had examined this coat he told the police that the man who had worn it was dead.

The police regarded this statement with astonishment. The bloodstain did not indicate an excessive hemorrhage and there was no mark of violence on the coat. They did not understand how the learned professor could make any such conclusive statement. Shauenstein then pointed out that he had found in the dried stain one of the small bones of the tympanum known as the "stapedial bone," which is situated deep in the interior of the skull. Any wound bringing this bone to the surface must necessarily result in death.

Lessons Learned in Cobblers' Shops

IT IS always extremely easy to say from a shod footprint whether the one making it has been standing, walking or running; and also to say, in an approximate degree, the rapidity of the motion.

When one runs rapidly it is always the posterior border of the heel which strikes the earth first. This will be deeply indented. Of all parts of the shoe, in the moving subject, the back portion of the heel and the toe leave the clearest imprints. See Figure 7. One is then able, in nearly every case, to determine the sort of shoe that has been worn; to know whether the toe is round or pointed; whether the heel is flat or narrow, cut out on its inner side or square. And, with a little knowledge of the sorts of shoes worn by different classes of persons, one will be able to say in what class the person making the imprint under inspection belongs.

When the imprint of the shod foot is discovered at the scene of a crime the toe and heel should be first observed to determine the class of shoe to which it belongs. One should notice whether the toe is pointed, round or square; the heel wide and low, or high and narrow; the sole narrow and tapering, or wide, bowed and twisted, as is sometimes the fashion in American shoes.

Then one must examine the track for heelplates or any mending of the sole or heel, such as patches and stitches, and where the peg marks or stitches appear. If there are nails, tacks or pegs in the heel or sole they must be carefully counted and any missing ones indicated.

After the footprint has been thus carefully examined one must study it for the peculiarities of the person who made it. Every man walks in his own way, and he wears out his shoes always in the same peculiar manner. One must look for these peculiarities in the wear of the shoe as indicated in the imprint.

In order to indicate these peculiarities with accuracy Niceforo has formulated a diagram that ought to be studied by everybody who makes any pretension to criminal investigation. The curved lines in Figure 8 show the points on the imprint to be examined for these individual characteristics.

One must not imagine that the Italian criminologist made an arbitrary diagram. It is said that for many years he studied the worn shoes in the shops of the Neapolitan cobblers.

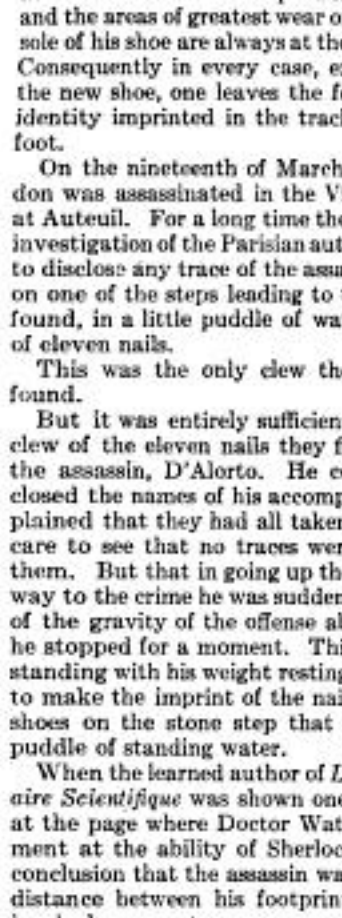
Digitized by Google

He examined and compared a great number of shoes worn by the same individual before he laid down the rule that the personal formula is constant—that is to say, every *man* walks in a manner peculiar to himself, and the areas of greatest wear on the heel and sole of his shoe are always at the same points. Consequently in every case, except that of the new shoe, one leaves the formula of his identity imprinted in the track of his shod foot.

On the nineteenth of March, 1889, Bourdon was assassinated in the Villa Chauvad, at Auteuil. For a long time the most careful investigation of the Parisian authorities failed to disclose any trace of the assassin. Finally on one of the steps leading to the villa they found, in a little puddle of water, the print of eleven nails.

This was the only clew the police ever found.

But it was entirely sufficient. With that clew of the eleven nails they finally located the assassin, D'Alorto. He confessed, disclosed the names of his accomplices, and explained that they had all taken the greatest care to see that no traces were left behind them. But that in going up the steps on the way to the crime he was suddenly so overcome by the fear of the gravity of the offense about to be committed that he stopped for a moment. This pause, while he remained standing with his weight resting on one foot, was sufficient to make the imprint of the nails of the heel of one of the shoes on the stone step that had been softened by the puddle of standing water.



When the learned author of *La Police et l'Enquête Judiciaire Scientifique* was shown one of Conan Doyle's stories, at the page where Doctor Watson expressed his astonishment at the ability of Sherlock Holmes to arrive at the conclusion that the assassin was a tall man because of the distance between his footprints, he made the following ironical comment:

Conan Doyle Outdone

"I WONDER what this friend of Sherlock Holmes would have said if he had been told that, from the study of a footprint, one could determine precisely not only the height of the person who had made it but also the spread of his arms, his height sitting, the distance from the point of his elbow to the end of his fingers, the length of his third finger, and even the length of his little finger!"

One has sometimes read of criminals deceiving the police by walking backward in order to create the impression that two persons instead of one had arrived from the same direction and had gone away in some unknown manner.

The special lecturer at the University of Vienna has explained the manner in which one can always tell whether such a device has been resorted to. He says that when one walks backward the steps are always shorter, the line of march is hesitating and uncertain, and the footprints invariably disclose a "digging in" of the toe, because in attempting to take a long step backward one must commence it by planting the point of the sole on the ground.

Figures 1 and 2

The effort of criminals to mislead the police by fastening on the foot a shoe of a different character from that usually worn by them is also easily detected.

Gross says that the first thing to be observed about footprints evidently made for the purpose of misleading the police is that they are always to be found in a conspicuous and good medium. A well-formed and exact footprint will be found, more perfect than those usually discovered under like conditions.

And it will happen, with these excellent prints, made intentionally, that one will find, just forward of the heel, the mark of a strap by which they were fastened to the foot.

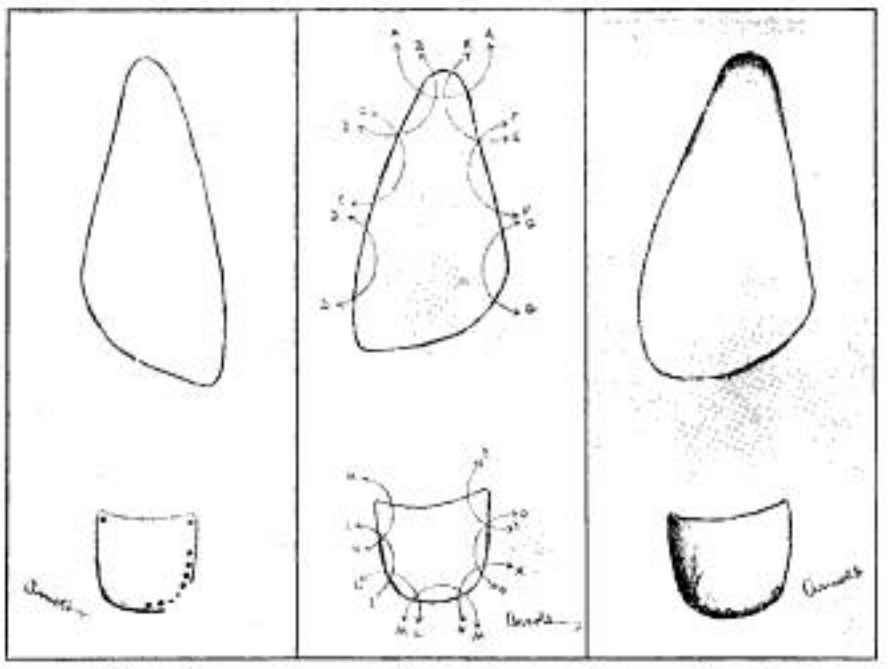


Figure 9 Figure 8 Figure 7

The relative depth of certain portions of the imprint—as, for example, the toe and heel in these manufactured footprints—will not coincide with those made with a similar shoe worn by a person whom it fits. Thus, a man endeavoring to make imprints with a woman's shoe, or a woman with a man's shoe, will rarely succeed in deceiving an experienced inspector. The stride will somewhere be found to be inconsistent with the imprint; the man will step too far and the woman not far enough.

Footprints have often played conspicuous parts in American criminal trials. But an examination of the cases will make it at once apparent that our courts have never had the benefit of anything that could be called an intelligent scientific investigation of such criminal evidences.

One or two obvious peculiarities have been wholly relied upon in American cases. Thus, in Hunter's case, in North Carolina, in the newly plowed earth near the theater of the crime, the police discovered a peculiar track where a man had crossed a field. The left toe of the man's boot was deeply impressed in the earth, while the heel was hardly visible. This was a peculiarity of one of the man's feet. The other was an ordinary track. It was not difficult for even a rural constable to conclude that the man who walked here suffered from some physical defect. And from this conclusion the prisoner, Hunter, was suspected, since his left leg was about two inches shorter than the right, the result of an attack of white swelling. This physical defect caused him to walk on the left toe, the heel of the foot not touching the ground. It was shown that, walking in this manner, he made a track identical with that found in the plowed field.

Footprints were also the controlling factor in Carlton's case, in Illinois.

On the night of Saturday, the nineteenth of April, the barns of a man named Ridenhauer were burned to the ground. On the following day the premises were carefully examined, and finally footprints were found leading south of the barns in a path toward the county road. Mud was found on the fence at the corner of the field, indicating that someone there had climbed the fence.

This led the investigator to examine the field, which had been sowed to oats.

The oats had not yet come up and the field was soft. They found the footprints of someone who had walked across this field. And it appeared that the imprint of one of the feet made a deeper impression than that of the other. There was evidently some physical reason for this difference in these two foot imprints. After a good deal of reflection the investigators concluded that the man was probably lame. This deduction led to the arrest of Carlton, who was lame and walked with what the witnesses called "a kind of hop."

It will be seen from these cases that our courts have considered the footprint as evidence only when it showed some exaggerated peculiarity. It is consequently clear that, in all the great number of cases where this exaggerated peculiarity was absent, the footprint as indicatory evidence has been practically abandoned in American cases. This means that in a vast number of cases, for lack of an intelligent scientific examination, the very best indicatory clews have been neglected in our criminal trials.

Sometimes rough dimensions of a track have been compared with the shoe of the accused, a practice open to the greatest errors and never permitted by any intelligent criminal investigator. Sometimes the track found at the place of a crime has been roughly compared with the imprint of the accused's foot, but never with scientific accuracy; so that one has rarely found an American court willing to convict a criminal on footprint evidence without some strong corroborative testimony.

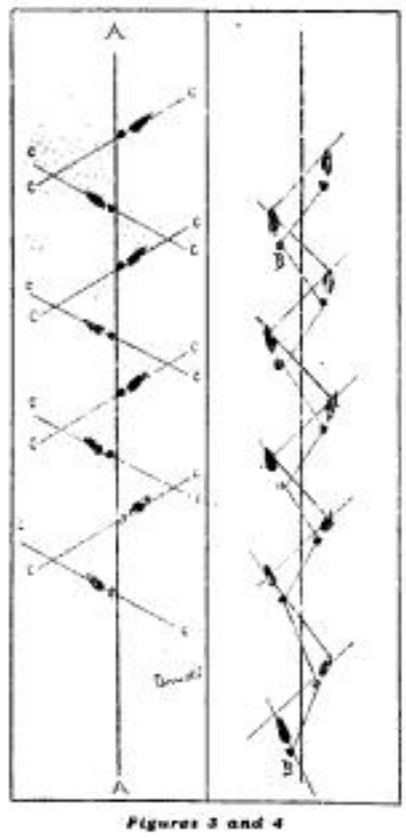
We find nothing to compare with the cases that have been cited by Frecon, where the criminal, in endeavoring to escape, slipped on the edge of a ditch; and from the striations left in the clay by the nails in his shoe he was identified and convicted; or, as in the case at Lyons, where the criminal, who had accomplished an elaborate robbery, was identified because he happened to step on a leather cushion. From this print on the leather cushion the experts were able to arrive at the size and form of shoe worn by the burglar. It was the track of a right foot, with a broad sole of what was then a fashionable form, with an extremely pointed toe and a large heel.

The imprint of this heel showed a nail or peg at the inner corner and eight nails or pegs running in a half row round the outer turn of the heel. The heel was also worn on the posterior border at the curve of this row of pegs or nails. See Figure 9. These accurate data, taken from the mere imprint on a cushion, enabled the police to locate the burglar.

It is true that the shoe of the accused, containing nails, is sometimes considered by an American court. But such a fact has been taken, usually, as a mere crude evidential sign, to be considered only with conclusive evidence from some other quarter. Sometimes in the most conspicuous cases the presence or absence of such important evidence seems to have been wholly overlooked by American courts.

Stofen's case, in California, is a striking example. One day the treasurer of a certain county did not return to his house for luncheon. In the afternoon his wife went over to the treasurer's office in the courthouse to find out what was the matter. The treasurer's office was locked.

She looked up the janitor and got it open. There was no one in the office and the vault door was closed. She knew the combination to the vault and, being by this time alarmed, opened it. When the vault door swung back she found the inner door of the vault closed. But the key to this door, attached to the husband's bunch of keys, was standing in the lock. The janitor pulled the door open and they found the treasurer lying in the vault in a dazed condition.



Did the Treasurer Kick?

WHEN he had recovered he said he had gone to the office in the courthouse at the usual hour on this morning, opened the office and the door of the vault. He entered the vault, but when he came out with the trays he was confronted by a man with a weapon. The robber ordered him to drop the trays. This was the last thing he remembered. He concluded that he was struck down. When he had recovered consciousness he was lying in the vault, with the doors closed. He was there eight hours, and from time to time kicked with all his strength against the sides of the vault in order to attract the attention of any persons who might be in the courthouse.

This story of the mysterious assailant did not seem to be convincing.

In the trial of the treasurer it became important to know whether, in fact, he had kicked against the sheet-iron sides of the vault in order to attract the attention of persons in the courthouse. Lying on the floor and striking out with the feet, the blow would naturally be delivered with the heel. And it would have been easy to determine whether or not there were any heel marks on the sides of the vault. But such an investigation did not seem to occur to the authorities in the case, so far as the report discloses. Fortunately they were able to say that this story of the kicking on the vault lined with sheet iron was fiction, because

BUG HUNTERS OF INDUSTRY

The Problem of Factory Cripples—By James H. Collins

ONE Saturday afternoon your automobile stalled for the first time since you had bought it. Before then it had been absolutely dependable, but on that day you couldn't get it to go again. The family outing was spoiled, you spent two hours waiting in a hot country lane, and it cost five dollars to have a repair man come out and locate the mysterious trouble. He found it in a moment—a small defective part in the ignition apparatus, which was worth fifteen cents.

There you were, with several hundred dollars of automobile that ran perfectly and fifteen cents' worth that wouldn't run at all. That defective fifteen cents' worth cast a cloud on life. According to the repair man this cheap part was defective when it left the factory. As you examined the bit of metal that caused all the trouble you wondered why somebody at the factory couldn't have taken about a minute more to make sure that this particular piece was of better stuff.

In this country there is a big problem, one peculiar to our American scheme for making things—the problem of factory cripples. Our American factory system makes things in enormous quantities, all alike, for a close price, to meet a tremendous demand. Each operation has to be figured down to the last minute of time, the last cent of cost, the last ounce of material. The workers are speeded up by bonus wages, and everything is made as nearly automatic as possible. A good-enough system—it provides commodities on a scale not dreamed of by grandfather and works best where it has the greatest freedom for growth. The chief complaint about it comes from the smaller manufacturers who cannot attain size and hold their own. This seems to prove that the system is satisfactory for getting results.

The bigger, the faster, the more nearly automatic, the cheaper, the better—that's the American idea! But the closer this system is brought to that ideal, the greater is the margin for cripples—defective parts and products that somehow slip through organization, and get out into the world and make trouble for everybody. Men make mistakes, machines make slips, materials have shortcomings. Modern products are complex. One tiny part that wouldn't work on that Saturday afternoon may discredit the whole motor and the system by which it was made. Despite the care to keep everything up to standard, a certain microscopic percentage of the product falls short, and the bigger the output the worse the damage. So every production system needs its force of inspectors, and every product has its peculiar inspection difficulties.

The Cartridge That Lost the Contract

BACK in the old days the Western bad man, with notches on the butt of his gun, was often finicky about his cartridges, so he loaded them himself because he was afraid to trust his life to some half-grown girl in a cartridge factory. The chance of his getting a bad cartridge might have been expressed as one-millionth. But it could have happened, nevertheless, because an American munitions concern once lost a big foreign rifle contract through that one defective cartridge in a million. This contract had been nursed along for months, and about all that was needed to clinch it was the approval of the king. His majesty came to try the rifle himself. It was loaded and put in his hands. He pulled the trigger. There was only a dull metallic "Plink!" He tried again, with the same result; so he threw down the gun in anger, and the contract was lost. Maybe a competitor slipped a dummy cartridge into the gun at the last moment. Nobody knows.

Now if this problem of cripples is followed through a modern ammunition factory, one sees that inspection is a technical job, a human game, a detective story and a bit of a gamble. A rifle cartridge must be made of good stuff, so all materials must first be tested by chemical and mechanical methods to maintain the standard. It must fit the chamber of the gun with great accuracy, especially in these days of rapid-fire machine guns, so the diameter, taper, length, profile and head must be gauged to fine dimensions. The primer is a complicated little device in itself, quite apart from its explosive element, and must be seated with great accuracy. The bullet must be standard weight within a grain or two, and also perfectly balanced as to distribution of weight along its length. When the cartridge is finally loaded there is only one way to be certain that it will really shoot—and that is to shoot it! Of course the whole output of the factory could not be inspected that way. So the product is divided into units, and a certain number of cartridges are drawn from each unit for inspection. Some are torn apart in order that the loading may be examined, and thus destroyed, while others are fired in rifles in order to make certain that the ballistic standard is being kept up. Under the conditions introduced by the present war, with an output running into millions daily, the number of cartridges destroyed by the inspectors is very large.

Another illustration of the complexity of inspection can be taken from the same factory: The breechblock of a shotgun, at the beginning, is a piece of metal weighing twenty-two ounces. When it is finished about fifteen ounces of the metal have been machined and ground away. There have been one hundred and three separate operations upon it, accompanied by fourteen inspections. It is accurate within five one-thousandths of an inch, and yet it is only one part in a shotgun that must go through twelve hundred separate inspections from start to finish.

Along the line of such a process, of course, there are innumerable chances for defects and errors to slip in. A little variation in material or tool, or deficient lubrication of a machine, or momentary oversight on the part of a workman, or even a touch of indigestion in an inspector, and a defect develops. It is built into a shotgun and hidden from sight until the weapon is in the hands of a purchaser, who may write in to say that if the gun had been any good he would have bagged a dozen rabbits.

Our modern factory processes are so largely automatic that some of the details of inspection can be made automatic too. A good illustration of this is to be found in a shot tower, where the cooled shot are sent rolling down a gentle plate-glass incline and made to take a little jump over a gap. The perfect round shot makes this jump easily. But misshapen shot cannot roll fast enough to get impetus, so they fall into the gap and are remelted.

PHOTO. BY PRESS ILLUSTRATING SERVICE, NEW YORK CITY

Products Have Become So Complex, and Promise to Become So Much More So, That the Inspector is Absolutely Necessary

The Human Element in Production

BUT it is the human element that is eventually the chief concern of the inspector. Men make more mistakes than do machines. Almost any inspector will agree with Edison, who once said that he had always been able to improve machinery much more easily than men. The old idea in factory inspection was to set a policeman to catch the erring worker. If the latter made a mistake the inspector was satisfied to detect him, haul him into the front office, and fine him the cost of his error. If the employee made a few more mistakes discharge followed. That was a simple system—so simple that it did not really work.

Inspection for defective production nowadays takes more things into account. A cripple is only a symptom. It must be run down to the real cause. The worker in whose hands it is found may not be responsible at all. Some shortcoming in material or a mistake made in another part of the plant may have been passed along, intentionally or otherwise. Or the defective part may have originated outside the factory altogether.

The treeing department of a certain shoe factory was turning out so many spoiled shoes, which had to be sold at a loss, that the superintendent tried to correct the trouble by imposing penalties on the operators. This made it hard to keep good operators in the treeing room. The man who trees shoes has to clean them up after all the other departments of a factory have completed their work, washing spots from shoes, removing wax and shellac, ironing wrinkles out of the leather, touching up finish and color and correcting surface blemishes. Investigation disclosed that most of the cripples originated with the purchasing department of that factory, which had been making a splendid showing lately. This good record had been attained by the department's substituting cheaper grades of leather, saving a few cents on each pair of shoes. But the color washed out of this leather, so the shoes had to be recolored in the treeing room.

The first step in eliminating defects is to take every precaution in regard to the raw material used by the plant. Unless this material is carefully watched the factory may be purchasing cripples outside, unawares. Therefore the engineering department or the purchasing agents draw up specifications for each kind of material needed, stating what is wanted in the way of quality, strength, weight, color, finish, dimensions and the like, whether it be brass rod, or steel castings, or cotton yarn, or what not. This outline furnishes a measure for materials, like a yardstick for cloth. The specification terms are written into

The Inspector Must Have Human Qualities, for the Mere Faultfinder Doesn't Get Very Far

Digitized by Google

Twenty-Four Hours in June

By SINCLAIR LEWIS

ILLUSTRATED BY CLARENCE F. UNDERWOOD

BERT MICHADO was a very up-and-coming young man. His salary as assistant to the buyer at Grafenheimer Brothers, the notions jobbers, was only eighteen a week; but Bert attended the elegant dancing academy of Monsieur Browne and wore his Alpine hat with cocky amiability. He was going to make his mark in buttons, which are a necessary ware and more poetic than thread or needles. He had his eyes on the Boggs Button Works. In the notions trade George Boggs is the Edison, the Wagner—Hans or Richard—the blue-eyed angora of buttons. Mr. Boggs has reformed the methods of sorting and grinding Mississippi River clamshells, and from Davenport he controls a generous share of the pearl-button market.

Bert, after canvassing his possibilities as aviator, movie actor, Red Cross hero, and district attorney of New York City—for all of which occupations he knew himself to have secret gifts—had decided to become future manager of the Boggs Button Works.

But he could not get nearer to the head offices, at Davenport, than Mercer Street, New York, where the Boggs Eastern Agency occupies a floor in a neat cast-iron Corinthian building. Bert's chief often sent him to the Boggs offices, and he yearned over the rows of buttons in the display cases, but never met anyone more job-bestowing than a young house salesman.

For more than a year Bert did not even see the Boggs Eastern representative, Mr. Everett Vibels. He was excited when Mr. Vibels was at last pointed out to him; he was thrilled by the button viceroy's air of having had a bath, a shave, a shine and a raise in salary—not more than ten minutes before. Bert felt that if he could impress his personality on Mr. Vibels he might be allowed to go out to Davenport and learn the trade.

He ambled up to His Excellency's secretary, handed her a priceless smile, and said:

"I'd like to see Mr. Vibels."

He became aware that this was no ordinary secretary. The young woman was a mitten-minded maid, with large gray eyes, much delicacy of waist and hands, and a quiet nastiness of demeanor. She condescended:

"Why?"

"My dear young lady ——"

"I am not your dear young lady. You come from a jobber, don't you? One of the salesmen will be glad to attend to you. Mr. Vibels does not bother with small individual accounts."

They Talked Great Poetry, Though It Was Couched in "No," and Shy "Yes," and Whispered "Isn't It Corking?"

Bert could not say to the contemptuous fair "I want a job." He looked her over slowly, amusedly, from her shoes to her Bronx coiffure, and observed:

"Well then, somebody's dear young lady, permit me to say that you seem too intelligent not to know how rude you are."

He expected her to throw away her dignity and quarrel interestingly. But she also looked him over, from his shoes to his coiffure, in a manner that made him feel as though his shoes had a large patch and his hair needed cutting; and made answer:

"Ah?" And returned to typing.

Bert left the Boggs offices in love. He was delighted to find a girl who resisted his charms and determined to make her like him, which, at twenty-three, is a sound first step in falling in love. Also, he seemed to be slightly nearer the managership of the Boggs Button Works, being in love with the regal secretary of the imperial Eastern representative of the cosmic Boggs.

Whenever he went to the Boggs offices thereafter he strolled over to Mr. Vibel's secretary and renewed his demand to see the great man. She always had some new manner of insulting him. She was a *grande dame* in sateen sleeve protectors.

All he could learn about her was that her name was Miss Pribble. It is doubtful that she had any first name. She was probably born with a knowledge of stenography, with primly dressed hair, and with the name of Miss Pribble. She didn't mind Bert's hanging about. It gave her the chance to be snippy.

Though Bert presently so impressed the stony heart of the Grafenheimer buyer as to be raised to nineteen dollars a week, and to be assured that he was showing signs of almost human intelligence, he could make no effect on Miss Pribble, not by wearing an aster or by being manicured; not by speaking of belonging to Monsieur Browne's class in ballroom deportment or by mentioning a box party at a regular theater. He had to do something startling. Youth in love is always going to do something startling. It has a preference for rescuing the maiden from large bands of thugs. But if Miss Pribble was ever waylaid by thugs on her way home Bert never knew it, as he was busy in the Grafenheimer office from four to six P. M.

When December came Bert said to Miss Pribble:

"Gosh! Going to be a cold winter! Believe I'll sneak in a vacation and go down to Palm Beach."

"Huh!" said Miss Pribble.

"Well, I guess I could if I wanted to!"

"Sure! That's what they all say."

Every time he went to the Boggs offices Bert mentioned the indisputable fact that the winter was cold and the much less probable fact that he was going South. The fourth time Miss Pribble snapped:

"Well then, why don't you go? I live in a boarding house, and I know all about these ten-a-week Florida visitors. But always they were there last year or are going next."

"But me," said Bert calmly, "I'm going now; next week. I'll send you a picture post card of me there."

"Yes, when you do I'll frame it."

"Well, by golly, I'm going." And he went!

It must not be supposed from a certain lack of wisdom in his admiring Miss Pribble that Bert was a pathetic case of youthful dementia. He was a valuable junior at Grafenheimer Brothers'. He demanded and received a week-end vacation. He had two hundred dollars in the savings bank. He drew out one hundred and one dollars—the dollar was for unexpected expenses—and when a blizzard was edging about New York he started for Palm Beach and June. That is, for one day in June. He had not stipulated to Miss Pribble how long he would be among those present.

II

MR. ALBERT MICHADO, recently "Hey-you-Bert!" of Grafenheimer Brothers, was taking his first gorgeous meal in the land of palms and luxury. He had arrived at Palm Beach at seven P. M. and it was now seven-seven. Though he was thrilled by actually having made this pilgrimage of love, he was decidedly interested in food. Florida is noted for its food, you know. Envy Bert, then, as you follow him, course by course, through his first repast among the millionaires.

He had a wholesome vegetable soup; and when the soup was half consumed, and the waiter's back was turned, he reached for the catsup bottle—and then he had a full plate of soup again, and that soup had become tomato soup. After this Bert indulged in a quite tropical hamburger sandwich, a cup of coffee, and a hunk of apple pie, lighted a cigarette; and on his high stool he lolled as one can loll only in this halcyon land. His check was thirty cents, which shows how economical you can be, even in luxurious surroundings.

Then he left the internationally famous café, which is called the "Seminole Lunch Room—Gents' and Ladies'," and wandered about Palm Beach—that is, about West Palm Beach, which is to the rest of Palm Beach as Hoboken is to New York.

The fact that he had to run down to Florida to warm the heart of Miss Pribble did not imply that he had to buy the place. He had come cheerfully down in the day coach of the train. For meals he had consumed thirteen bananas, two boxes of peanut bars, four apple pies, two ham sandwiches, nine bottles of assorted pop, and a large private can of deviled chicken. And here he was under practically the same buzzards and palm fronds as the people who had come down in private cars; and already he was privileged to send post cards that ought to awe even Miss Pribble.

Though it must be admitted that there were neither palms, Seminole Indians nor girls bathing, to be observed from the West Palm Beach Curio Shop, at it he obtained excellent photographs of all these aristocratic subjects, and informed Miss Pribble that he was "Having nice trip. Wish you were here!"

"Now," said Bert, "I'll pound my ear, and make up for that day-coach seat. To-morrow I s'pose I might as well see something of the place, too, being as I'm here for the day."

He slept the sleep of the up-and-coming at Mrs. Wizzle's Tourist Hotel, in a room that had all the advantages of a room in a high-priced hostelry—that is to say, it contained a bed, a chair, a bureau, and running water—which ran when you tipped the dainty hand-painted pitcher.

III

WHEN he woke to a golden Florida day, with roses at—well, not exactly at his window, but perfectly discernible at the back of a house less than a block away—Bert devoted considerable care to dressing up to his new social station, in white flannel trousers, a blue coat, a three-dollar shirt, a Panama hat—or at least a Nicaragua hat—and canvas-and-leather shoes. Simplicity, he felt, was the thing.

At breakfast at Mrs. Wizzle's hotel Bert wondered whether he had been mistaken about this simplicity motif, when the whole dining room raised its collective head and panted at the entrance of a young man clad after this fashion: A bottle-green coat, with belted back; a Panama, with a parti-colored band; a tie of purple and red and green and orange; striped flannel trousers; liver-colored shoes; tortoise-rimmed amber sun glasses, with a black silk ribbon bearing a monogrammed silver slide; a large rose; a large initial belt buckle; a large bang above the right temple; and a perfectly enormous walking stick.

"Gee-whiz!" Bert worried. "I wonder if I've hit it wrong. Maybe Old Ribbon Counter, there, has the right idea. Hate to admit it to little Pribble, but I've got about as much idea of how millionaires dress as I have of whether the King of England calls his wife 'May' or 'Dearie' when they're playing double solitaire."

He went rather uneasily through Florida streets characterized by such exotic features as houses with porches, stores with glass fronts, and hotels of particularly tasty

Digitized by Google

tin brick. His new flannel trousers suddenly seemed scanty and plain. He wished he had bought that nine-dollar pair instead of these for seven. He took off his Panama and regarded the black band with severity. He thought that two girls on a stoop were laughing at him, and suddenly he became feeble and loose about the knee joints. Just as he was beginning to feel superior again, he came out on Lake Worth. He looked across to Palm Beach proper, and his pride went out of him, his feet became almost useless for walking, and his Panama but a mockery.

A strip of oily water, scattered with white steam yachts, with express cruisers and catboats and silk-curtained launches. Across the water a line of palms and magnolias, from amid which rose a hotel like a range of hills, a palisade of lemon yellow with white pilasters—the Royal Poinciana. While Bert stared, a hydro-aëroplane rose from the opposite shore and casually whirred above the hotel. Bert's eyes drifted from it to a buzzard circling in the dome of the sky. It seemed to him that the bird was an insolent sentinel of this still, glistening luxury; that it was watching him, asking him how he dared intrude.

He took the ferry across to Palm Beach in a state of panic. He wanted to flee back to West Palm Beach and hide in the first train north. He was admitting all the contemptuous things Miss Pribble's look had ever said. He wished he were in his New York furnished room, reading a comic section and gently waving his feet in the air.

Now the ferry was grounding in the chaste slip on the sacred precincts of Palm Beach. The wing of the Poinciana makes a shining court, with shadowy places among the palmettos and avocados, magnolias and wreathed live oaks, and the coconut palms that rise above all. Bert, the New Yorker, tried to be sniffy about a mere six stories, but the hotel ran along in a wall that shut him in—and shut him out; a wall pierced with a thousand windows of the rooms of wealth. On the high roof were perched buzzards. He didn't know they were buzzards. He didn't, he felt, know anything.

He went along the walks muffle-footed and pious of demeanor. Pretty girls in sports coats and striped linen skirts, and altogether delightful silk stockings, went by on bicycles. For Bert the bicycle became an almost too aristocratic conveyance. A foreign-looking man and woman, smooth, brown, passed in a double wheel chair. The man leaned on his stick and surveyed Bert superciliously. He said something to the woman, and laughed. Something about Bert ——? Bert felt like a banana peel.

"Rats!" he growled, utterly without conviction.

With a consciousness that his feet were making an inexcusable racket on the wooden floor, Bert crossed a wide porch, ambled down some miles of hallway, past arcaded shops with cobwebby gowns on display, and came to the lobby and two-thirds of the Social Register. Society was demanding mail, inquiring about baggage, talking in twos and threes about tables, circulating in a colored mob—young men with college air and hair; vivid girls; old, shrewd-looking men and women. They were gossiping, nodding, laughing at one another—and at him no one glanced for more than a second. He felt damp about the hatband. "Must get out of this horse show or some mere duchess will come up and kiss me; and then I'll be queered with all the princesses," he sighed.

A mahogany writing room, a very carpeted and polite writing room, was discernible. He bolted into it.

"I'll write Miss Pribble—good letter; then beat it outdoors, where the Four Hundred can't ambush me," he resolved.

He found a desk; he reached out a hand for stationery in the breezy manner of a well-traveled man who has stayed at hotels in quite important towns in New Jersey. He took his hand back and looked foolish. There was no stationery in the racks. With enormous pains to appear casual, he glanced at the racks on other desks. The only stationery in sight was under the elbows of people writing.

"Course!" he sighed. "They give out the stuff at the office to keep outsiders from butting in and writing to dear Cousin Jenny that they're staying at the Poinciana—X marks my room. And me—Albert J. Outsider is my real name."

He was aware that the man at the next desk, a weighty, outdoorish, amused man, with a round bland face, was watching him sit before a useless desk. Bert scrambled in his pockets for an envelope and made figures upon it; and these were the cryptic figures he made:

$$\begin{array}{r} 2 \\ 2 \\ \hline 4 \end{array}$$

He repeated this accurate but not very valuable calculation several times; rose with pontifical dignity and left the writing room, saying to himself: "There now; I guess old cantaloupe-face realizes I did have some writing to do!"

He crawled out on the porch again. It extended before him, miles long and acres broad, dazzling and dangerous, with throngs of persons who would laugh at him. He made his way past them. He apologized to people for walking in front of them—he almost apologized to the subtropic sun for daring to share its beams without having registered at the hotel—or, at least, wiring to engage a beam. He avoided the shaded and popular sections of the porch, and trotted on till he found a hot stretch where the only view was of a not very enlivening laurel bush. He did not wish to occupy space desired by decent, right-minded people. He felt that the Poinciana did not clasp him to its lemon-colored bosom.

"I Live in a Boarding House, and I Know All About These Ten-a-Week Florida Visitors"

In this deserted hot space of the porch Bert was beginning to feel slightly secure and to expand in the warmth after the long tedium of the Northern cold. He was reaching in his pocket for his last box of cigarettes when he stopped, not daring even to take his hand out of his pocket.

Someone had taken a rocker near him and was observing him. Bert made himself as inconspicuous and innocent as he could. He tacitly assured the observer—he assured the sun, the palms, and the entire management of the Royal Poinciana Hotel—that he hadn't really been thinking of being so bold as to take out a cigarette and light it. He edged his eyes round till he could get a glimpse of this new spy. He remembered. It was that most colorful of tourists, the young man with the green coat and amber sun glasses whom he had seen taking a twenty-five-cent breakfast in West Palm Beach.

"Huh!" considered Bert. "He doesn't belong here any more than poor old Bertie does."

He felt safe again; and, though he did not go so far in recklessness as actually to smoke that cigarette, he looked coldly at the fair young man. He wondered: Was his own costume really less proper than this splendor? He hadn't dared to examine closely any of the genuine guests of the hotel, but he had an impression that they were not gaudy.

"Beastly outsider!" he reflected about the broken colorist. "Regular bourgeois—that's what he is."

Down the line of rockers came a darky servant, straightening the chairs. The green-coated one started from his chair, looked self-consciously at Bert and at the servant, tossed his head and stalked away. His timidity made Bert a very lion. Himself, he wasn't afraid of a servant! He sat still. The servant carefully did not disturb him. Bert was filled with a new consciousness of his own high standing.

"What is that bush?" he said to the servant.

The servant replied that it was a bay—which it wasn't—with such deference, such a prolongation of the "sir," that it occurred to Bert that he didn't wear any large sign saying "I do not belong here. I am a humorous object."

He waggled his head in comfort. He boldly plunged his hand into his pocket again. He brought out his box of cigarettes. He counted them, careless of who might see his system of economy. There were all of seven, and he lighted one as though for more than a hundred years he had done nothing but sit about in large rockers on porches in Palm Beach, the Bahamas, the Riviera, and smoke cigarettes—lots of cigarettes—and scatter ashes on the porch if he felt like it.

When two men drifted to rockers beside his, he did not care, though a glance at their knife-edged faces and Vernon Castle hair told him they were the Accepted—really In. He peeped at them; he listened for the utterances of the Gilded Youth. One of them wore a gray jersey coat and white trousers, and a Panama with a plain blue band; the other a suit of white flannel.

"By golly, dressed simply—like me!" he rejoiced. "Oh, I knew they'd all be copying me! Bet the fashion editors are wiring their newspapers. Oh, they stood out; but they all had to come to it when old Bertie said 'Simplicity, ladies; simplicity!'"

Both of the scions of our new American Nobility produced copies of that aristocratic periodical, Scandal Scrapings, and read with a concentration that showed the advantages of college training in making our Better Classes superior to the common herd.

"Old Tommy will be sore," said one of them—unconscious that his liquid music was being wasted on one of the common herd. "All about his divorce!"

Both of them laid down their papers, completely exhausted by their studious application, and stared moodily at the laurel bush.

"Let's play some tennis before bathing hour."

"Tennis!"

"Well, let's go down to Bradley's and have a drink."

"Oh, well ——"

"I say, I believe I'll engage a wheel chair by the week."

"Oh, d' yuh really think it's worth it?"

"Yes; running clear down to Bradley's, two-three times a day."

Yawn. Tired rising. *Exeunt omnes*, bearing their own corpses.

The common herd, as represented by Bert Michado, stared after them. He had learned that Bradley's, that far-distant point to be reached by wheel chair, was about a hundred feet from the end of the Poinciana.

"Bet they have escalators to get from their motor cars to the sidewalk," he grunted; and again: "Well, old Bertie, you're a fool, as usual! Awed of that! Why, my son, you may be ignorant, but if you couldn't sound more intelligent than those swells, Grafenheimer's would fire you in twenty-four minutes."

He walked blandly, spaciously, down the porch. As he passed the group of initiates who had previously awed him he beheld them with a cold and anarchistic eye. With an air of occupying the royal suite and having four footmen and a court poet awaiting him, he rolled into the lobby and up to the desk. He looked level-eyed at a clerk, a magnificent and highly cynical clerk, and suggested:

"Stationery."

"Yes, sir," implored the clerk, and whisked a whole pile of embossed linen into his hand.

He received it with marked calm, condescended across the lobby to the writing room, and sat happily down to transcribe his heart's young passion for Miss Pribble.

He gradually ceased to keep up an appearance of grandeur. He leaned on his elbow and carefully scratched different places on his scalp. He resolutely crossed his legs, seized a pen, wrote "Dear Miss Pribble," hesitated, laid down the pen, and crossed his legs the other way. He picked up the pen and glared at the nib with surprise and extreme dislike. He tilted his chair and rocked in it tentatively. He uncrossed his legs and squared his shoulders, as though he was done with all this nonsense. He picked up the pen sternly and wrote:

I can hardly believe I am here in Fla., & it is still harder to believe that up in N. Y. it is probably snowing, it is so warm & bright here.

He stopped. He tapped with the pen. At last he really became busy—in drawing, with great attention to details, the portrait of a can of beans. Somewhere about the middle of this study in *genre* he made his discovery.

Having come hundreds of miles to write a letter to Miss Pribble and pour out all the ecstasy he had never been able to voice in her immaculate presence, he had nothing to say to Miss Pribble. He didn't want to write to Miss Pribble. He was bored by the thought of Miss Pribble.

While all the world reeled about him and ancient temples were shaken like clothes on the line, while the sky was darkened and his expenditure of seven dollars for flannel trousers seemed a bitter waste, Bert continued to depict the can of beans. He could not get any picture of Miss Pribble into his mind. She was a gray blur 'way off in a gray New York. He couldn't remember anything she had ever said to him. Had he ever loved her?

He carefully put all of the stationery in his pocket and staggered away, bearing the world's whole burden of disillusion. What was life worth, when he had come clear to Palm Beach, at vast expense to himself and considerable inconvenience to Grafenheimer Brothers, on a pilgrimage of purest love, only to discover that he wasn't interestingly in love at all?

Little did the people about think that the good-looking young man in an ordinary blue coat was the modern Lord Byron, with a heart of ashes and dust!

Despite the blackness of his state of soul, Bert remembered that he had only one day at Palm Beach, and that if he missed the famous bathing period, beginning at

eleven, he might never see it again. He bore his cosmic *sadness* along the pine walk toward the ocean beach. But he walked as one aloof. It is probable that he did not look very carefully at more than six or seven pretty girls on the way over.

He sat on the sand of the bathing beach a little way from *the line* of awning chairs. He tried to forget his unmanning grief in the sight of the splash of indigo sea and a steamer that wallowed down the horizon, bound for magic lands—for Jamaica or Costa Rica. He began to envy the throng—clean-shouldered brown young men in bathing suits, their wet arms shining; girls in satin bathing suits of blue and green, with white collars that cut the outlines of their throats; older men, tanned and deep-breathing, with the assured manner of executives. Laughter and a murmur of happiness came from the crowd on shore; shouts and skippings and tremendous splashing from the crowd bathing.

Suddenly Bert saw the picture as a whole, as joy in blue and gold, and he forgot the hauteur of Miss Pribble, forgot the tragedy of finding that he could forget Miss Pribble, and looked among the kaleidoscopic groups for somebody with whom he could play through the bright end of his adventure in June.

IV

BERT was impressed by a dozen girls in the downy groups, but the girl he most noticed was with none of the groups. She sat alone, even farther than himself from the social precincts in front of the line of hooded chairs. He could not understand why so appealing a person was alone. She was a girl to play with, a light little fairy figure in a white net frock, with a suggestion of slim ankles below frills, head held up, as though she was accustomed to attention, and a small whimsical nose, as though she was accustomed to laugh. But it was a dolorous nose now; its bridge was wrinkling and its little tip was quivering with anger, after the fashion of a cottontail bunny in the presence of a stirring lettuce leaf. She was digging a white lace parasol impatiently into the sand.

Despite her dignity of twenty and a new net frock, Bert wanted to pat her round cheek and ask "What's matter, honey?" He decided that she was waiting for a dilatory suitor. He was sorry for that young man when he should come.

For twenty minutes Bert watched the lone girl—watched her and liked her, and wanted to run and play with her. She became tired of active anger. She sat still and gazed out to sea. She was touching to Bert—she who was made to be the center of laughter, alone and melancholy. He saw her eyes follow enviously a tall girl who came dripping from the surf, slipped into a bathrobe held by a perfect suitor with a monocle, and sat down in the midst of a welcoming group.

"Poor little kid!" thought Bert. "She wants to be mixing, too, like that big bruiser of a girl. I bet she's like me; doesn't know a soul at Palm Beach, even though she is such a swell. Why, the poor little kid!"

He went to sit near the fairy girl. But he was embarrassed. He devoted himself to constructing a sand castle, while he assured an imaginary policeman that his intentions were entirely proper; and if any man said that Albert R. Michado was a masher, that man—by jiminy—lied!

He fancied her repulsing him with "How dare you address me, sir!" He confined himself to a purely mythical conversation, in which he made a number of witty observations on bathing, the opera season in New York, Charlie Chaplin, motor cars, artichokes, and other moral topics. He heard himself inventing startling epigrams, and he was in the midst of the most graceful inquiries about her state of health when a large, serene male, clad in a tight brown bathing suit, swaggered by them.

"The dogs'll get that sausage yet!" Bert said, unconsciously aloud, looking after the plump one.

He discovered that his eyes had met those of the fairy girl. He flushed, and expected to be called "Sir!" directly; but:

"Yes!" she said.

"Wond'ful day!"

"Yes."

"Sea's a beautiful blue here—'course there aren't the cliffs you get on the New England coast." He wished to give her every opportunity to refer to the old family place at Newport or Bar Harbor.

"Oh, is it all cliffs there? This is the first time I've ever seen the ocean—here in Florida."

She didn't seem to intend to call him "Sir!" at all. She looked at him with eyes that were beginning to light up.

"Honestly? Oh, you can't be a Westerner!"

"I am so! You New Yorkers —— You are a New Yorker aren't you?"

"Yes. How can you tell?"

"Because of the way your coat is cut; and you have such nice funny broad *a*'s."

Bert tried to look like a person whose coats and *a*'s were always cut smartly, while she raced on:

"You New Yorkers always think that anyone who comes from west of Pittsburgh must wear chaps and a gun."

"No, we don't, because we see Westerners on every corner. You can't go into a café without running into the California or Wyoming Club singing about how they hate New York and want to be back West; and you expect them all to take the midnight train. But if you go back to the same place a year later there's the same bunch, still talking about the dear old buttes, and still sticking right on in New York. Honestly now, wouldn't you like to see Fifth Avenue?"

She looked angry once more and jabbed the sand with her parasol.

"I used to think I wanted to be naughty and go to a Broadway cabaret, but now I don't ever want to see the East again. The people here are perfectly horrid. So cold ——"

"I knew there was something the matter. Tell me about it."

"Oh, you wouldn't understand; you New Yorkers, with your social cliques ——"

"But I'm very unimportant. I—ch—I go to scarcely any of the smart dances."

"That shows you really are in society—to say that! I can tell that, even if I have been here only a week."

"Only a week here?"

"Yes; that's all daddy could get away for. He and I are going back to-morrow. I suppose you're here till way into March."

"No; I've dropped in just for a day."

"Then you're on your way to Havana or the Bahamas. Worse yet!"

"But what is the matter? Tell me."

"Honestly, do I look like a plague, or a leprosy or something?"

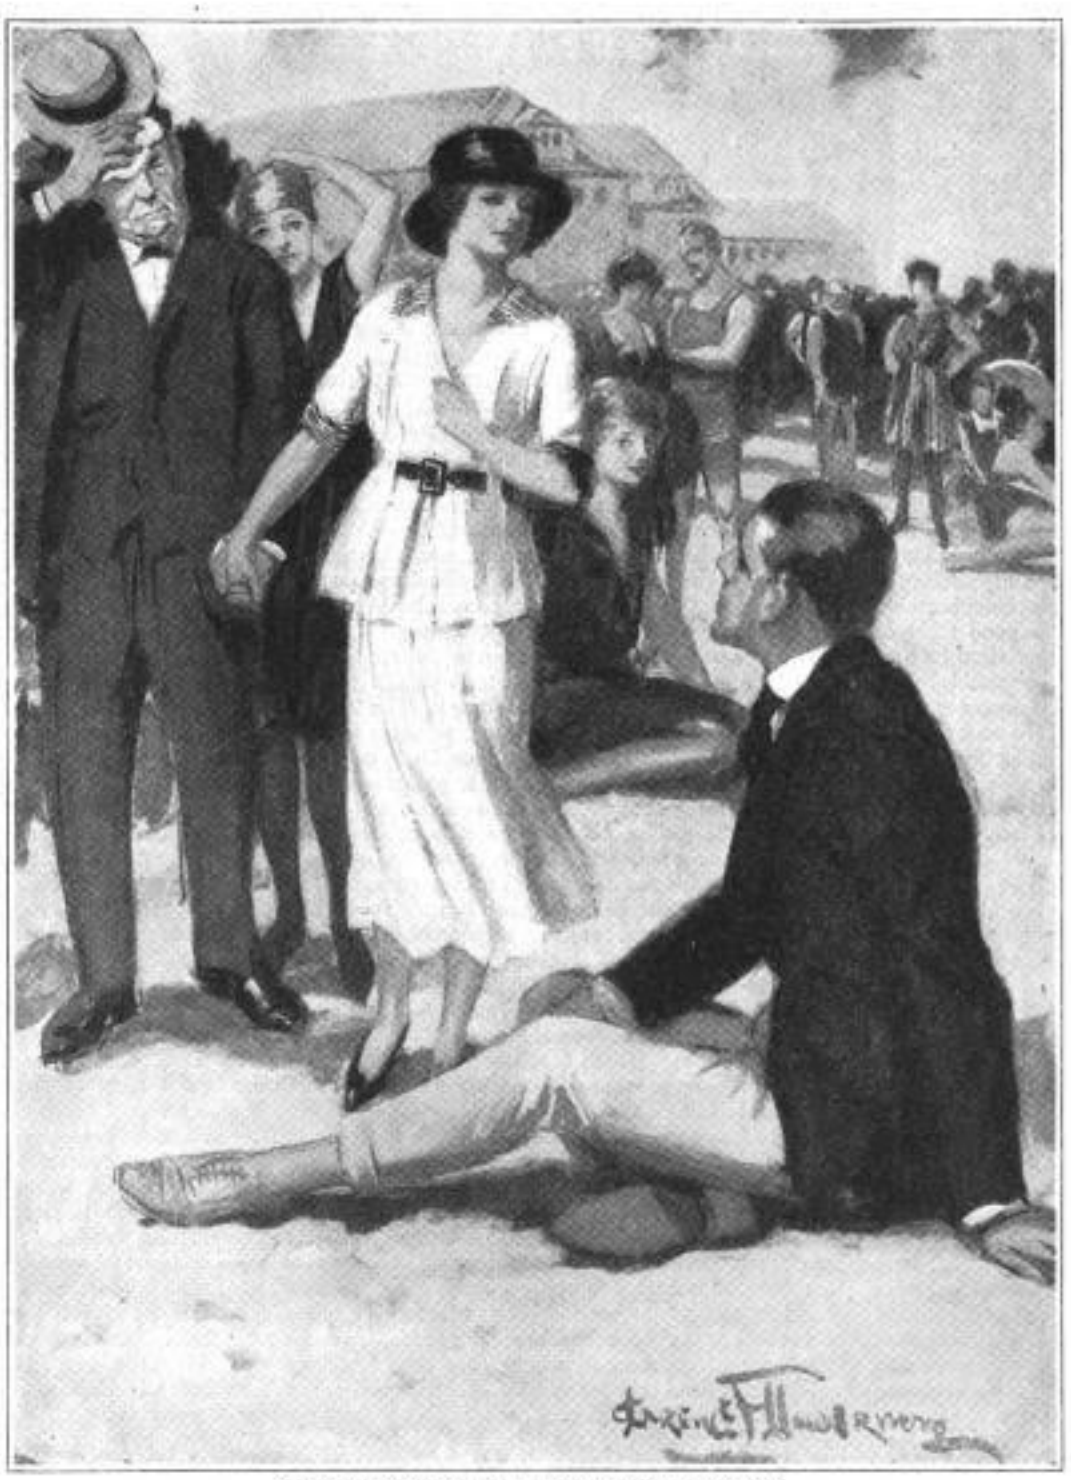
"Not to me!"

"Then why am I a wallflower here? Back home—why, there was sometimes as much as a boy and a half wanted to dance with me in an evening! Here—the dance last night —— Ugh!"

"Yes; I guess you probably managed to dance a few times at home! But here—I know how it must have been. You went to the big dance and nobody looked at you, and you saw nice young men making a fuss over girls that weren't a quarter so pretty or light on their feet as you are; and you were so angry that when your father tried to comfort you, you wouldn't listen, but just flounced up to bed."

"How did you ever guess? Oh, you didn't see me, did you? I don't remember seeing ——"

"No; I wasn't there. I went to bed early. These big crushes at the Poinciana always bore me. I—I just guessed it. But we New Yorkers—you see the beastly town is so big that you can't know all the people, and you get so many invitations that you simply have to protect your precious spare hours; and it's easier to cut out strangers than friends."



"Yes; I suppose so. You must lead a dizzy whirl—my! Still, I'd just like to try it once."

"You won't think I'm presumptuous, will you, if I invite your father and you to lunch? I'm here for such a little while, it really doesn't matter if I pick up the social threads or not; and I sort of feel as though I ought to make it up to you for the rudeness of the other Easterners, and return some of the hospitality you Westerners are so famous for. May I?"

"Why, I guess so. I'm just terribly grateful to anybody that thinks I'm still a good-hearted little fool ——" Her gay voice became tragic. She forgot shyness of the stranger. She dropped her parasol and looked at him imploringly. "Honestly, it's the most terrible week I've ever had! I must look like a horse thief. Out home I did think people liked me—I really did; but here —— Once I was day-dreaming here and I saw a boy who looked so much like Mark Halverson, back home, that I nodded to him; and he just stared at me and cut me dead. And once I was sitting on the piazza beside a girl—why, she was younger than I am, and she wore the most awful tessy dress—and I said 'It's a nice day.' And she said 'Yes'—as though I was awfully fresh in speaking about her friend, the day; and right away she got up and left me.

"Hon-est-lee! I feel as if I had a little bomb hidden in my glove, and they had caught me with it! Oh, I don't want to know their horrid old society! I used to; but now all I want is to play a little. I should like to go to a dance, and have one of your Easterners commit himself about the weather being warm, before I go all that long way back to the West. It's such a long trip—and I was so happy coming down; I just danced on the observation platform, and
